The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_pageseg_mode", mode as string).
(Read and Write computed property)

126.3.39 Constants

126.3.40 kPageSegModeAuto = 3

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants.
Notes: Fully automatic page segmentation, but no OSD.

126.3.41 kPageSegModeAutoOnly = 2

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Automatic page segmentation, but no OSD, or OCR.

126.3.42 kPageSegModeAutoOSD = 1

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Automatic page segmentation with orientation and script detection. (OSD)

126.3.43 kPageSegModeCircleWord = 9

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Treat the image as a single word in a circle.

126.3.44 kPageSegModeOSDOnly = 0

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Orientation and script detection only.

126.3.45 kPageSegModeSingleBlock = 6

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Assume a single uniform block of text. (Default.)

126.3.46 kPageSegModeSingleBlockVerticalText = 5

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Assume a single uniform block of vertically aligned text.

126.3.47 kPageSegModeSingleChar = 10

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Treat the image as a single character.

126.3.48 kPageSegModeSingleColumn = 4

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Assume a single column of text of variable sizes.

126.3.49 kPageSegModeSingleLine = 7

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Treat the image as a single text line.

126.3.50 kPageSegModeSingleWord = 8

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the page segmentation mode constants. **Notes:** Treat the image as a single word.

126.4 class TesseractNotInitializedExceptionMBS

126.4.1 class TesseractNotInitializedExceptionMBS

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception to report about calling tesseract methods without initialization.
Notes: Subclass of the TesseractErrorExceptionMBS class.

126.5 class TesseractResultIteratorMBS

126.5.1 class TesseractResultIteratorMBS

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

126.5.2 Methods

126.5.3 Begin

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the iterator to point to the start of the page to begin an iteration.

126.5.4 BoundingBox(Level as Integer, byref left as Integer, byref top as Integer, byref right as Integer, byref bottom as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the bounding rectangle of the current object at the given level.
Notes:

Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See GetImage.

Coordinate system:
Integer coordinates are at the cracks between the pixels.
The top-left corner of the top-left pixel in the image is at (0,0).
The bottom-right corner of the bottom-right pixel in the image is at (width, height).
Every bounding box goes from the top-left of the top-left contained pixel to the bottom-right of the bottom-right contained pixel, so the bounding box of the single top-left pixel in the image is: (0,0)->(1,1).
If an image rectangle has been set in the API, then returned coordinates relate to the original (full) image, rather than the rectangle.

126.5.5 Confidence(Level as Integer) as Double

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the mean confidence of the current object at the given level.
Notes: The number should be interpreted as a percent probability. (0.0 - 100.0)

126.5.6 Constructor

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

126.5.7 IsAtBeginningOf(Level as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the iterator is at the start of an object at the given level.
Notes: Possible uses include determining if a call to Next(kLevelWord) moved to the start of a kLevelParagraph.

126.5.8 IsAtFinalElement(Level as Integer, element as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns whether the iterator is positioned at the last element in a given level.
Notes: (e.g. the last word in a line, the last line in a block)

126.5.9 NextItem(Level as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
Notes:

NOTE that kLevelSymbol will skip non-text blocks, but all other level values will visit each non-text block once.
Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word.
Calls to Next with different levels may be freely intermixed.
This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded into Tesseract.

126.5.10 SymbolIsDropcap as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the current symbol is a dropcap.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

126.5.11 SymbolIsSubscript as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the current symbol is a subscript.
Notes: If iterating at a higher level object than symbols, e.g. words, then this will return the attributes of the first symbol in that word.

126.5.12 SymbolIsSuperscript as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the current symbol is a superscript.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

126.5.13 Text(Level as Integer) as string

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the text string for the current object at the given level.

126.5.14 WordFontAttributes(byref bold as boolean, byref italic as boolean, byref underlined as boolean, byref monospace as boolean, byref serif as boolean, byref smallcaps as boolean, byref pointsize as Integer, byref fontid as Integer) as string

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the font attributes of the current word.
Notes:

If iterating at a higher level object than words, e.g. textlines, then this will return the attributes of the first word in that textline.
The actual return value is a string representing a font name.
Pointsize is returned in printers points (1/72 inch.)

126.5.15 WordIsFromDictionary as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the current word was found in a dictionary.

126.5.16 WordIsNumeric as boolean

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the current word is numeric.

126.5.17 Properties

126.5.18 Handle as Integer

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal Object reference.
Notes: (Read only property)

126.5.19 Parent as TesseractMBS

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent tesseract object.
Notes: (Read only property)

126.5.20 Constants

126.5.21 kLevelBlock = 0

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the level constants.
Notes: Block of text/image/separator line.

126.5.22 kLevelParagraph = 1

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the level constants.
Notes: Paragraph within a block.

126.5.23 kLevelSymbol = 4

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the level constants. **Notes:** Symbol/character within a word.

126.5.24 kLevelTextline = 2

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the level constants. **Notes:** Line within a paragraph.

126.5.25 kLevelWord = 3

MBS Images Plugin, Plugin Version: 12.3. **Function:** One of the level constants. **Notes:** Word within a textline.

Chapter 127

Open Directory

127.1 class ODNodeMBS

127.1.1 class ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An Open Directory node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

127.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.3
- MBS Xojo Plugins, version 19.3pr2
- OpenDirectory Framework for Xojo

127.1.3 Xojo Developer Magazine

- 17.5, page 9: News

127.1.4 Methods

127.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

127.1.6 nodeDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary containing details about a node.
Notes:

Error: An error reference for error details. Can be nil.

Returns a dictionary containing details.

127.1.7 nodeDetailsForKeys(keys() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary containing details about a node.
Notes:

Keys: An array of keys corresponding to the values returned in the dictionary.
Error: An error reference for error details. Can be nil.

Returns a dictionary containing details about the node corresponding to keys specified by Keys.

127.1.8 nodeWithName(session as ODSessionMBS, name as string, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a node object with a specified session and name.
Notes:

Session: The session.
Name: The name of the node.
Error: An error reference for error details. Can be nil.

Returns the created node object.

127.1.9 nodeWithType(session as ODSessionMBS, type as integer, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a node object with a specified session and type.
Notes:

Session: The session.
Type: The node type.
Error: An error reference for error details.

Returns the created node object.

127.1.10 subnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the names of subnodes for the node.

127.1.11 supportedAttributesForRecordType(RecordType as String, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of attribute types supported by the node's records.
Notes:

RecordType: The record type to list supported attribute types for. Can be nil.
Error: An error reference for error details. Can be nil.

Returns an array of supported attribute types.

127.1.12 supportedRecordTypes(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of the record types supported by the node.
Notes: If the node does not support checking for supported record types, all possible record types are returned.

127.1.13 unreachableSubnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of the subnodes of a given node that are currently unreachable.

127.1.14 Properties

127.1.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

127.1.16 nodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's name.
Notes: (Read only property)

127.1.17 Constants

127.1.18 kODNodeTypeAuthentication = & h2201

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the Open Directory node types.
Notes: A node used for authentication or record lookups.

127.1.19 kODNodeTypeConfigure = & h2202

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the Open Directory node types.
Notes: A node that specifically refers to the Directory Services configuration.

127.1.20 kODNodeTypeContacts = & h2204

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the Open Directory node types.
Notes: A node used for applications that handle contact data.

127.1.21 kODNodeTypeLocalNodes = & h2200

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the Open Directory node types. **Notes:** A node that specifically looks at the local directory.

127.1.22 kODNodeTypeNetwork = & h2205

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the Open Directory node types. **Notes:** A node used for looking up network resource type data.

127.2 class ODQueryMBS

127.2.1 class ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An Open Directory query.
Notes: Currently only partially implemented for Xojo for reading values. If you need more, please contact Monkeybread Software.

127.2.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.3
- MBS Xojo Plugins, version 19.3pr2
- OpenDirectory Framework for Xojo

127.2.3 Xojo Developer Magazine

- 17.5, page 9: News

127.2.4 Methods

127.2.5 Constructor(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an query object created with provided parameters.
Notes:

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.

Error: An error reference for error details.

127.2.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

127.2.7 queryWithNode(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS) as ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an query object created with provided parameters.
Notes:

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

127.2.8 resultsAllowingPartial(AllowPartialResults as Boolean, byref error as NSErrorMBS) as ODRecordMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns results from a query synchronously.
Notes:

AllowPartialResults: If true, only immediately available results are returned; otherwise, the function waits until all results are available.
Error: An error reference for error details. Can be nil.

Returns the results of the query in an array of ODRecordMBS objects.

127.2.9 start

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts asynchronous search.

127.2.10 synchronize

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Restarts a query, disposing of any results it has obtained.
Notes: If the query was originally started asynchronously, the event is called with inResults set to nil, error.code set to kODErrorQuerySynchronize, and error.domain set to kODErrorDomainFramework.

127.2.11 Properties

127.2.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

127.2.13 Constants

127.2.14 kODMatchAny = 1

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is used to search for any records (typically passed with nil search value)

127.2.15 kODMatchBeginsWith = & h2002

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values that begin with the provided value

127.2.16 kODMatchContains = & h2004

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values that contain the provided value

127.2.17 kODMatchEndsWith = & h2003

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values that end with the provided value

127.2.18 kODMatchEqualTo = & h2001

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values that are equal to the provided value

127.2.19 kODMatchGreaterThan = & h2006

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values greater than the provided value

127.2.20 kODMatchLessThan = & h2007

MBS MacFrameworks Plugin, Plugin Version: 19.3. **Function:** One of the match types.
Notes: is searching values less than the provided value

127.3 class ODRecordMBS

127.3.1 class ODRecordMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An Open Directory record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

127.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.3
- MBS Xojo Plugins, version 19.3pr2
- OpenDirectory Framework for Xojo

127.3.3 Xojo Developer Magazine

- 17.5, page 9: News

127.3.4 Methods

127.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

127.3.6 kODAttributeTypeAccessControlEntry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute type which stores directory access control directives.

127.3.7 kODAttributeTypeAddressLine1 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Line one of multiple lines of address data for a user.

127.3.8 kODAttributeTypeAddressLine2 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Line two of multiple lines of address data for a user.

127.3.9 kODAttributeTypeAddressLine3 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Line three of multiple lines of address data for a user.

127.3.10 kODAttributeTypeAdminLimits as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: XML plist indicating what an admin user can edit. Found in kODRecordTypeUsers records.

127.3.11 kODAttributeTypeAdvertisedServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.12 kODAttributeTypeAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Alias attribute, contain pointer to another node/record/attribute.

127.3.13 kODAttributeTypeAllAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used in requesting all attribute types in a search.

127.3.14 kODAttributeTypeAllTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to indicated recommended attribute types for a record type in the Config node.

127.3.15 kODAttributeTypeAltSecurityIdentities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Used to store alternate identities for the record. Values will have standardized form as specified by Microsoft LDAP schema (1.2.840.113556.1.4.867).

Kerberos:user\@REALM

127.3.16 kODAttributeTypeAreaCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Area code of a user's phone number.

127.3.17 kODAttributeTypeAttrListRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute List reference count for a process.

127.3.18 kODAttributeTypeAttrListRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: All the attribute list references for a process.

127.3.19 kODAttributeTypeAttrListValueRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attr List Value reference count for a process.

127.3.20 kODAttributeTypeAttrListValueRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: All the attribute list value references for a process.

127.3.21 kODAttributeTypeAuthCredential as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: An authentication credential, to be used to authenticate to a Directory.

127.3.22 kODAttributeTypeAuthenticationAuthority as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Determines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

Authentication authorities are a multi-part string separated by semi-colons.
One component is the "type" of authority, such as those listed below:

"basic"	- is a crypt password
"ShadowHash"	- is a hashed password stored in a secure location
"ApplePasswordServer"	- is a password server-based account
"Kerberosv5"	- is a Kerberosv5 based
"LocalCachedUser"	- is a cached account based on an account from another node, using a ShadowHash password
"DisabledUser"	- is an account that has been disabled

127.3.23 kODAttributeTypeAuthenticationHint as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to identify the authentication hint phrase.

127.3.24 kODAttributeTypeAuthMethod as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Authentication method for an authentication capable record.

127.3.25 kODAttributeTypeAuthorityRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the authority revocation list.
A certificate revocation list that defines certificate authority certificates which are no longer trusted. No user certificates are included in this list.
Usually found in kODRecordTypeCertificateAuthorities records.

127.3.26 kODAttributeTypeAutomaticSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Automatic search path defined by the search node.

127.3.27 kODAttributeTypeAutomountInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

xDetermines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

127.3.28 kODAttributeTypeBirthday as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Single-valued attribute that defines the user's birthday.
Format is x.208 standard YYYYMMDDHHMMSSZ which we will require as GMT time.

127.3.29 kODAttributeTypeBootParams as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute type in host or machine records for storing boot params.

127.3.30 kODAttributeTypeBuilding as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the building name for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.31 kODAttributeTypeBuildVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Build version for reference.

127.3.32 kODAttributeTypeCACertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the certificate of a certificate authority.
Its corresponding private key is used to sign certificates.
Usually found in kODRecordTypeCertificateAuthority records.

127.3.33 kODAttributeTypeCapacity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type for the capacity of a resource.
found in resource records (kODRecordTypeResources).
Example: 50

127.3.34 kODAttributeTypeCertificateRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the certificate revocation list.
This is a list of certificates which are no longer trusted.
Usually found in kODRecordTypeCertificateAuthority records.

127.3.35 kODAttributeTypeCity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Usually, city for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.36 kODAttributeTypeComment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute used for unformatted comment.

127.3.37 kODAttributeTypeCompany as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines the user's company.
Example: Apple Inc.

127.3.38 kODAttributeTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of computers.

127.3.39 kODAttributeTypeConfigAvailable as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Config avail tag.

127.3.40 kODAttributeTypeConfigFile as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Config file name.

127.3.41 kODAttributeTypeContactGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type for the contact GUID of a group.
Usually found in group records (kODRecordTypeGroups)

127.3.42 kODAttributeTypeContactPerson as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type for the contact person of the machine.
Found in host or machine records.

127.3.43 kODAttributeTypeCopyTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Timestamp used in local account caching.

127.3.44 kODAttributeTypeCoreFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Core FW version for reference.

127.3.45 kODAttributeTypeCountry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents country of a record entry.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.46 kODAttributeTypeCreationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute showing date/time of record creation.
Format is x.208 standard YYYYMMDDHHMMSSZ which should be GMT time.

127.3.47 kODAttributeTypeCrossCertificatePair as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of a pair of certificates which verify each other. Both certificates have the same level of authority.
Usually found in kODRecordTypeCertificateAuthority records.

127.3.48 kODAttributeTypeCustomSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Admin user configured custom search path defined by the search node.

127.3.49 kODAttributeTypeDataStamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute for checksum/meta data

127.3.50 kODAttributeTypeDateRecordCreated as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Date of record creation.

127.3.51 kODAttributeTypeDepartment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the department name of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.52 kODAttributeTypeDirRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Directory reference count for a process.

127.3.53 kODAttributeTypeDirRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: All the directory references for a process.

127.3.54 kODAttributeTypeDNSDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: DNS Resolver domain attribute.

127.3.55 kODAttributeTypeDNSName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

127.3.56 kODAttributeTypeDNSNameServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

127.3.57 kODAttributeTypeEMailAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Email address of usually a user record.

127.3.58 kODAttributeTypeEMailContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute that defines a record's custom email addresses.
found in user records (kODRecordTypeUsers).
Example: home:johndoe\@mymail.com

127.3.59 kODAttributeTypeENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute for hardware Ethernet address (MAC address).
Found in computer records (kODRecordTypeComputers).

127.3.60 kODAttributeTypeExpire as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for expiration date or time depending on association.

127.3.61 kODAttributeTypeFaxNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the FAX numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.62 kODAttributeTypeFirstName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for first name of user or person record.

127.3.63 kODAttributeTypeFullName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Full name of a record (e.g., "John Doe", "John Doe's Computer")

127.3.64 kODAttributeTypeFunctionalState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Functional state of plugin for example.

127.3.65 kODAttributeTypeFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Framework version for reference.

127.3.66 kODAttributeTypeGroup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of groups.

127.3.67 kODAttributeTypeGroupMembers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute type in group records containing lists of GUID values for members other than groups.

127.3.68 kODAttributeTypeGroupMembership as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Usually a list of users that below to a given group record.

127.3.69 kODAttributeTypeGroupServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

xml-plist attribute that defines a group's services.
Found in group records (kODRecordTypeGroups).

127.3.70 kODAttributeTypeGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for 36 character (128 bit) unique ID. An example value is "A579E95E-CDFE-4EBC-B7E7-F2158562170F". The standard format contains 32 uppercase hex characters and four hyphen characters.

127.3.71 kODAttributeTypeHardwareUUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to store hardware UUID in string form for a record. Typically found in kODRecordTypeComputers.

127.3.72 kODAttributeTypeHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Network home directory URL.

127.3.73 kODAttributeTypeHomeDirectoryQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the allowed usage for a user's home directory in bytes.
Found in user records (kODRecordTypeUsers).

127.3.74 kODAttributeTypeHomeDirectorySoftQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to define home directory size limit in bytes when user is notified that the hard limit is approaching.

127.3.75 kODAttributeTypeHomeLocOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the owner of a workgroup's shared home directory.
Typically found in kODRecordTypeGroups records.

127.3.76 kODAttributeTypeHomePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Home telephone number of a user or person.

127.3.77 kODAttributeTypeHTML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: HTML location.

127.3.78 kODAttributeTypeIMHandle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the Instant Messaging handles of a user.
Values should be prefixed with the appropriate IM type
(i.e., AIM:, Jabber:, MSN:, Yahoo:, or ICQ:).
Usually found in user records (kODRecordTypeUsers).

127.3.79 kODAttributeTypeInternetAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to track internet alias.

127.3.80 kODAttributeTypeIPAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: IP address expressed either as domain or IP notation.

127.3.81 kODAttributeTypeIPAddressAndENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: A pairing of IPv4 or IPv6 addresses with Ethernet addresses (e.g., "10.1.1.1/00:16:cb:92:56:41"). Usually found on kODRecordTypeComputers for use by services that need specific pairing of the two values. This should be in addition to kODAttributeTypeIPAddress, kODAttributeTypeIPv6Address and kODAttributeTypeENetAddress. This is necessary because not all directories return attribute values in a guaranteed order.

127.3.82 kODAttributeTypeIPv6Address as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

IPv6 address expressed in the standard notation (e.g., "fe80::236:caff:fcc2:5641")
Usually found on kODRecordTypeComputers and kODRecordTypeHosts.

127.3.83 kODAttributeTypeJobTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the job title of a user.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.84 kODAttributeTypeJPEGPhoto as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Used to store binary picture data in JPEG format.
Usually found in user, people or group records (kODRecordTypeUsers, kODRecordTypePeople, kODRecordTypeGroups).

127.3.85 kODAttributeTypeKDCAuthKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: KDC master key RSA encrypted with realm public key.

127.3.86 kODAttributeTypeKDCConfigData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Contents of the kdc.conf file.

127.3.87 kODAttributeTypeKerberosRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

127.3.88 kODAttributeTypeKerberosServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: This is used to store the principals in host records (i.e., ”host”, ”vnc”, etc.)

127.3.89 kODAttributeTypeKeywords as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Keywords using for searching capability.

127.3.90 kODAttributeTypeLastName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for the last name of user or person record.

127.3.91 kODAttributeTypeLDAPReadReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to read directory data.

127.3.92 kODAttributeTypeLDAPSearchBaseSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Search base suffix for a LDAP server.

127.3.93 kODAttributeTypeLDAPWriteReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to write directory data.

127.3.94 kODAttributeTypeLocaleRelay as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.95 kODAttributeTypeLocaleSubnets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.96 kODAttributeTypeLocalOnlySearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Local only search path defined by the search node.

127.3.97 kODAttributeTypeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the location a service is available from (usually domain name).
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

127.3.98 kODAttributeTypeMailAttribute as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Holds the mail account config data.

127.3.99 kODAttributeTypeMapCoordinates as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines coordinates for a user's location.
found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).
Example: 7.7,10.6

127.3.100 kODAttributeTypeMapGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Represents the GUID for a record's map.

127.3.101 kODAttributeTypeMapURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines the URI of a user's location.
Usually found in user records (kODRecordTypeUsers).
Example: http://example.com/bldg1

127.3.102 kODAttributeTypeMCXFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used by ManagedClient.

127.3.103 kODAttributeTypeMCXSettings as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used by ManagedClient.

127.3.104 kODAttributeTypeMetaAmbiguousName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Searches a configured list of attributes; by default: RecordName, FullName, EMailAddress.

127.3.105 kODAttributeTypeMetaAugmentedAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attributes that have been augmented.

127.3.106 kODAttributeTypeMetaAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to query for kODRecordTypeAutomount entries associated with a specific kODRecordTypeAutomountMap.

127.3.107 kODAttributeTypeMetaNodeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Meta attribute returning registered node name by directory node plugin.

127.3.108 kODAttributeTypeMetaRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Native record name, e.g. LDAP DN

127.3.109 kODAttributeTypeMiddleName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for the middle name of user or person record.

127.3.110 kODAttributeTypeMIME as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Data contained in this attribute type is a fully qualified MIME Type.

127.3.111 kODAttributeTypeMobileNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the mobile numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.112 kODAttributeTypeModificationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute showing date/time of record modification.
Format is x.208 standard YYYYMMDDHHMMSSZ which is required as GMT time.

127.3.113 kODAttributeTypeNamePrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the title prefix of a user or person. ie. Mr., Ms., Mrs., Dr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.114 kODAttributeTypeNameSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the name suffix of a user or person.
i.e., Jr., Sr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.115 kODAttributeTypeNativeOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: Used in requesting all native attribute types in a search.

127.3.116 kODAttributeTypeNestedGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute type in group records for the list of GUID values for nested groups.

127.3.117 kODAttributeTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type that indicates which netgroups its record is a member of.
Found in user and host records.

127.3.118 kODAttributeTypeNetGroupTriplet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute that defines the host, user and domain triplet combinations to support NetGroups. Each attribute value is comma separated string to maintain the triplet (e.g., host,user,domain).

127.3.119 kODAttributeTypeNetworkInterfaces as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.120 kODAttributeTypeNetworkNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute that defines a network number. Usually found in network records (kODRecordTypeNetworks)

127.3.121 kODAttributeTypeNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Defines a user's home directory mount point on the local machine.

127.3.122 kODAttributeTypeNickName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the nickname of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.123 kODAttributeTypeNodeOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Any extended options supported by the node during creation

127.3.124 kODAttributeTypeNodePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute type in Neighborhood records describing the DS Node to search while looking up aliases in this neighborhood.

127.3.125 kODAttributeTypeNodeRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Node reference count for a process.

127.3.126 kODAttributeTypeNodeRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: All the node references for a process.

127.3.127 kODAttributeTypeNodeSASLRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Contains the SASL realm associated with this node (if any)

127.3.128 kODAttributeTypeNote as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Note attribute.

127.3.129 kODAttributeTypeNTDomainComputerAccount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

127.3.130 kODAttributeTypeNumTableList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Summary of the reference table entries presented as attribute values from the Configure node.

127.3.131 kODAttributeTypeOperatingSystem as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Returns the operating system type where the daemon is running, e.g., Mac OS X or Mac OS X Server

127.3.132 kODAttributeTypeOperatingSystemVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: Returns the operating system version where the daemon is running, e.g., 10.6

127.3.133 kODAttributeTypeOrganizationInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Usually the organization info of a user.

127.3.134 kODAttributeTypeOrganizationName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Usually the organization of a user.

127.3.135 kODAttributeTypeOriginalHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Home directory URL used in local account caching.

127.3.136 kODAttributeTypeOriginalNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: NFS home directory used in local account caching.

127.3.137 kODAttributeTypeOriginalNodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Nodename used in local account caching.

127.3.138 kODAttributeTypeOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes:

Attribute type for the owner of a record.
Typically the value is a LDAP distinguished name.

127.3.139 kODAttributeTypeOwnerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type for the owner GUID of a group.
Found in group records (kODRecordTypeGroups).

127.3.140 kODAttributeTypePagerNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the pager numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.141 kODAttributeTypeParentLocales as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.142 kODAttributeTypePassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Holds the password or credential value.

127.3.143 kODAttributeTypePasswordPlus as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: Holds marker data to indicate possible authentication redirection.

127.3.144 kODAttributeTypePasswordPolicyOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Collection of password policy options in single attribute.
Used in user presets record.

127.3.145 kODAttributeTypePasswordServerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Represents the attribute for storing the password server's replication information.

127.3.146 kODAttributeTypePasswordServerLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Specifies the IP address or domain name of the Password Server associated with a given directory node. Found in a config record named PasswordServer.

127.3.147 kODAttributeTypePGPPublicKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Pretty Good Privacy public encryption key.

127.3.148 kODAttributeTypePhoneContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines a record's custom phone numbers.
found in user or people records.

Example: home fax:408-555-4444

127.3.149 kODAttributeTypePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Telephone number of a user.

127.3.150 kODAttributeTypePicture as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the path of the picture for each user displayed in the login window.
Found in user records (kODRecordTypeUsers).

127.3.151 kODAttributeTypePIDValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: PID value.

127.3.152 kODAttributeTypePluginIndex as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Plugin index for reference.

127.3.153 kODAttributeTypePlugInInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Information (version, signature, about, credits, etc.) about the plug-in that is actually servicing a particular directory node.
Has never been supported.

127.3.154 kODAttributeTypePort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the port number a service is available on.
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

127.3.155 kODAttributeTypePostalAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: The postal address usually excluding postal code.

127.3.156 kODAttributeTypePostalAddressContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines a record's alternate postal addresses.
Found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).

127.3.157 kODAttributeTypePostalCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: The postal code such as zip code in the USA.

127.3.158 kODAttributeTypePresetUserIsAdmin as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Flag to indicate whether users created from this preset are administrators by default. Found in kODRecordTypePresetUsers records.

127.3.159 kODAttributeTypePrimaryComputerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

An attribute that defines a primary computer of the computer group.
Added to computer group record type (kODRecordTypeComputerGroups)

127.3.160 kODAttributeTypePrimaryComputerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: The GUID of the computer list with which this computer record is associated.

127.3.161 kODAttributeTypePrimaryGroupID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: This is the 32 bit unique ID that represents the primary group a user is part of, or the ID of a group. Format is a signed 32 bit integer represented as a string.

127.3.162 kODAttributeTypePrimaryLocale as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.163 kODAttributeTypePrimaryNTDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

127.3.164 kODAttributeTypePrinter1284DeviceID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute that defines the IEEE 1284 DeviceID of a printer.
This is used when configuring a printer.

127.3.165 kODAttributeTypePrinterLPRHost as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

127.3.166 kODAttributeTypePrinterLPRQueue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

127.3.167 kODAttributeTypePrinterMakeAndModel as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute for definition of the Printer Make and Model. An example value would be "HP LaserJet 2200". This would be used to determine the proper PPD file to be used when configuring a printer from the Directory. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

127.3.168 kODAttributeTypePrinterType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

127.3.169 kODAttributeTypePrinterURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute that defines the URI of a printer "ipp://address" or "smb://server/queue". This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

127.3.170 kODAttributeTypePrinterXRISupported as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines additional URIs supported by a printer.
This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

127.3.171 kODAttributeTypePrintServiceInfoText as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

127.3.172 kODAttributeTypePrintServiceInfoXML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

127.3.173 kODAttributeTypePrintServiceUserData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute for print quota configuration or statistics (XML data).
Found in user records (kODRecordTypeUsers) or print service statistics records (kODRecordTypePrintServiceUser).

127.3.174 kODAttributeTypeProcessName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Process Name.

127.3.175 kODAttributeTypeProfiles as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Profiles associated with the record.

127.3.176 kODAttributeTypeProfilesTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Timestamp for the profiles associated with the record.

127.3.177 kODAttributeTypeProtocolNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute that defines a protocol number. Usually found in protocol records (kODRecordTypeProtocols)

127.3.178 kODAttributeTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of protocols.

127.3.179 kODAttributeTypePwdAgingPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Contains the password aging policy data for an authentication capable record.

127.3.180 kODAttributeTypeReadOnlyNode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Can be found using dsGetDirNodeInfo and will return one of
ReadOnly, ReadWrite, or WriteOnly strings.
Note that ReadWrite does not imply fully readable or writable

127.3.181 kODAttributeTypeRealUserID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used by Managed Client

127.3.182 kODAttributeTypeRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of names/keys for this record.

127.3.183 kODAttributeTypeRecordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute for a Record or a Directory Node.

127.3.184 kODAttributeTypeRecRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Record reference count for a process.

127.3.185 kODAttributeTypeRecRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: All the record references for a process.

127.3.186 kODAttributeTypeRelationships as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines the relationship to the record type.
found in user records (kODRecordTypeUsers).
Example: brother:John

127.3.187 kODAttributeTypeRelativeDNPrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to map the first native LDAP attribute type required in the building of the Relative Distinguished Name for LDAP record creation.

127.3.188 kODAttributeTypeResourceInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: attribute that defines a resource record's info.

127.3.189 kODAttributeTypeResourceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute type for the kind of resource.
found in resource records (kODRecordTypeResources).
Example: ConferenceRoom

127.3.190 kODAttributeTypeRPCNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute that defines an RPC number. Usually found in RPC records (kODRecordTypeRPC)

127.3.191 kODAttributeTypeSchema as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of attribute types.

127.3.192 kODAttributeTypeSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Search path used by the search node.

127.3.193 kODAttributeTypeSearchPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Search policy for the search node.

127.3.194 kODAttributeTypeServicesLocator as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: the URI for a record's calendar

127.3.195 kODAttributeTypeServiceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Represents the service type for the service. This is the raw service type of the service. For example a service record type of kODRecordTypeWebServer might have a service type of "http" or "https".

127.3.196 kODAttributeTypeSetupAdvertising as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

127.3.197 kODAttributeTypeSetupAutoRegister as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

127.3.198 kODAttributeTypeSetupLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

127.3.199 kODAttributeTypeSetupOccupation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

127.3.200 kODAttributeTypeSMBAcctFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Account control flag.

127.3.201 kODAttributeTypeSMBGroupRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Constant for supporting PDC SMB interaction with DirectoryService.

127.3.202 kODAttributeTypeSMBHome as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: UNC address of Windows homedirectory mount point (\server\sharepoint).

127.3.203 kODAttributeTypeSMBHomeDrive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Drive letter for homedirectory mount point.

127.3.204 kODAttributeTypeSMBKickoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

127.3.205 kODAttributeTypeSMBLogoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

127.3.206 kODAttributeTypeSMBLogonTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: SMB Primary Group Security ID, stored as a string attribute of up to 64 bytes. Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

127.3.207 kODAttributeTypeSMBPrimaryGroupSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

127.3.208 kODAttributeTypeSMBProfilePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Desktop management info (dock, desktop links, etc).

127.3.209 kODAttributeTypeSMBPWDLastSet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

127.3.210 kODAttributeTypeSMBRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

127.3.211 kODAttributeTypeSMBScriptPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Login script path.

127.3.212 kODAttributeTypeSMBSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

SMB Security ID, stored as a string attribute of up to 64 bytes.
Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

127.3.213 kODAttributeTypeSMBUserWorkstations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of workstations user can login from (machine account names).

127.3.214 kODAttributeTypeStandardOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.

Notes: Used in requesting all standard attribute types in a query.

127.3.215 kODAttributeTypeState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: The state or province of a country.

127.3.216 kODAttributeTypeStreet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Represents the street address of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

127.3.217 kODAttributeTypeSubNodes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute of a node which lists the available subnodes of that node.

127.3.218 kODAttributeTypeTimePackage as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Data of Create, Modify, Backup time in UTC.

127.3.219 kODAttributeTypeTimeToLive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute recommending how long to cache the record's attribute values.
Format is an unsigned 32 bit representing seconds. ie. 300 is 5 minutes.

127.3.220 kODAttributeTypeTotalRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Total count of references for a process.

127.3.221 kODAttributeTypeTotalSize as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: checksum/meta data.

127.3.222 kODAttributeTypeTrustInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to describe a node's trust information.

127.3.223 kODAttributeTypeUniqueID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

This is the 32 bit unique ID that represents the user in the legacy manner.
Format is a signed integer represented as a string.

127.3.224 kODAttributeTypeURL as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: List of URLs.

127.3.225 kODAttributeTypeUserCertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the user's certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party.

127.3.226 kODAttributeTypeUserPKCS12Data as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing binary data in PKCS # 12 format.
Usually found in user records. The value can contain keys, certificates, and other related information and is encrypted with a passphrase.

127.3.227 kODAttributeTypeUserShell as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used to represent the user's shell setting.

127.3.228 kODAttributeTypeUserSMIMECertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the user's SMIME certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party. SMIME certificates are often used for signed or encrypted emails.

127.3.229 kODAttributeTypeVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Version label.

127.3.230 kODAttributeTypeVFSDumpFreq as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

127.3.231 kODAttributeTypeVFSLinkDir as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

127.3.232 kODAttributeTypeVFSOpts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Used in support of mount records.

127.3.233 kODAttributeTypeVFSPassNo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

127.3.234 kODAttributeTypeVFSType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

127.3.235 kODAttributeTypeWeblogURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes:

attribute that defines the URI of a user's weblog.
Usually found in user records (kODRecordTypeUsers).

Example: http://example.com/blog/jsmith

127.3.236 kODAttributeTypeXMLPlist as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the attribute type constants.
Notes: XML plist used.

127.3.237 kODRecordTypeAFPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record type of AFP server records.

127.3.238 kODRecordTypeAliases as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Used to represent alias records.

127.3.239 kODRecordTypeAttributeTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies records that represent each possible attribute type.

127.3.240 kODRecordTypeAugments as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Used to store augmented record data.

127.3.241 kODRecordTypeAutomount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Used to store automount record data.

127.3.242 kODRecordTypeAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Used to store automountMap record data.

127.3.243 kODRecordTypeAutoServerSetup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Used to discover automated server setup information.

127.3.244 kODRecordTypeBootp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record in the local node for storing bootp info.

127.3.245 kODRecordTypeCertificateAuthorities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record type that contains certificate authority informatio

127.3.246 kODRecordTypeComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies computer group records.

127.3.247 kODRecordTypeComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Identifies computer list records.

127.3.248 kODRecordTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies computer records.

127.3.249 kODRecordTypeConfiguration as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies configuration records.

127.3.250 kODRecordTypeEthernets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record in the node for storing ethernets.

127.3.251 kODRecordTypeFileMakerServers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: FileMaker servers record type that describes available FileMaker servers, used for service discovery.

127.3.252 kODRecordTypeFTPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies ftp server records.

127.3.253 kODRecordTypeGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Identifies group records.

127.3.254 kODRecordTypeHosts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies host records.

127.3.255 kODRecordTypeHostServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record in the local node for storing host services.

127.3.256 kODRecordTypeLDAPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies LDAP server records.

127.3.257 kODRecordTypeLocations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Location record type.

127.3.258 kODRecordTypeMounts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies mount records.

127.3.259 kODRecordTypeNetDomains as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Record in the local node for storing net domains.

127.3.260 kODRecordTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record in the local node for storing net groups.

127.3.261 kODRecordTypeNetworks as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies network records.

127.3.262 kODRecordTypeNFS as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies NFS records.

127.3.263 kODRecordTypePeople as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Record type that contains "People" records used for contact information.

127.3.264 kODRecordTypePresetComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: The computer group record type used for presets in record creation.

127.3.265 kODRecordTypePresetComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: The computer list record type used for presets in record creation.

127.3.266 kODRecordTypePresetComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: The computer record type used for presets in record creation.

127.3.267 kODRecordTypePresetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: The group record type used for presets in record creation.

127.3.268 kODRecordTypePresetUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: The user record type used for presets in record creation.

127.3.269 kODRecordTypePrinters as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies printer records.

127.3.270 kODRecordTypePrintService as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies print service records.

127.3.271 kODRecordTypePrintServiceUser as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Record in the local node for storing quota usage for a user.

127.3.272 kODRecordTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies protocol records.

127.3.273 kODRecordTypeQTSServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies quicktime streaming server records.

127.3.274 kODRecordTypeQueryInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Specifically to return query information inline such as skipped nodes

127.3.275 kODRecordTypeRecordTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies records that represent each possible record type.

127.3.276 kODRecordTypeResources as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies resources used in group services.

127.3.277 kODRecordTypeRPC as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Identifies remote procedure call records.

127.3.278 kODRecordTypeServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies generic server records.

127.3.279 kODRecordTypeServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies directory based service records.

127.3.280 kODRecordTypeSharePoints as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Share point record type.

127.3.281 kODRecordTypeSMBServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies SMB server records.

127.3.282 kODRecordTypeUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.
Notes: Identifies user records.

127.3.283 kODRecordTypeWebServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the record type constants.

Notes: Identifies web server records.

127.3.284 recordDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary of attributes with their respective values.
Notes:

Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

127.3.285 recordDetailsForAttributes(inAttributes() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary of attributes with their respective values.
Notes:

inAttributes: An array of attributes. Can be nil.
Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

If inAttributes is nil, all currently retrieved attributes are returned.

127.3.286 synchronize(byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Synchronizes the record from the directory to get current data and commit changes.
Notes:

Returns true if the record successfully synchronizes; otherwise, false.

This method only fetches those attributes that have been fetched before.

127.3.287 valuesForAttribute(inAttribute as String, byref error as NSErrorMBS) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the values of an attribute of the record.
Notes:

inAttribute: The attribute.
Error: An error reference for error details. Can be nil.

Returns an array of attribute values. Elements are of type String or MemoryBlock.

127.3.288 Properties

127.3.289 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

127.3.290 recordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The official name of the record.
Notes: (Read only property)

127.3.291 recordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The record's type.
Notes: (Read only property)

127.4 class ODSessionMBS

127.4.1 class ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an Open Directory session.

127.4.4 Methods

127.4.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.
Notes: gets default session.

127.4.6 defaultSession as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a shared instance of the local session.

127.4.7 nodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the node names that are registered with this session.

127.4.8 ODSessionProxyAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for the options dictionary.
Notes: The address to connect to via proxy. The value is of type string.

127.4.9 ODSessionProxyPassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for the options dictionary.
Notes: The password to connect with via proxy. The value is of type string.

127.4.10 ODSessionProxyPort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for the options dictionary.
Notes: The port to connect to via proxy. The value is of type integer.

127.4.11 ODSessionProxyUsername as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for the options dictionary.
Notes: The username to connect with via proxy. The value is of type string.

127.4.12 session(options as dictionary, byref Error as NSErrorMBS) as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a session object directed over proxy to another host.
Notes:

Options: A dictionary of options to associate with the session. Can be nil.
Error: An error reference for error details. Can be nil.

Returns the initialized session object.

127.4.13 UserName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries user name.
Notes: Convenience function to query user name of current user.

127.4.14 Properties

127.4.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

Chapter 128

OpenCL

128.1 class CLCommandQueueMBS

128.1.1 class CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an OpenCL command queue.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

128.1.3 Methods

128.1.4 Constructor(context as CLContextMBS, device as CLDeviceMBS, flags as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Create a command-queue on a specific device.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

Notes:

context: Must be a valid OpenCL context.
device: Must be a device associated with context. It can either be in the list of devices specified when context is created using CLContextMBS Constructor or have the same device type as the device type specified when the context is created.
flags: Specifies a list of properties for the command-queue. This is a bit-field. Only command-queue properties specified in the table below can be set in properties; otherwise the value specified in properties is considered to be not valid.

Command-Queue Properties	Description
kQueueOutOfOrderExecModeEnable	Determines whether the commands queued in the command-queue are executed in-order or out-of-order. If set, the commands in the command-queue are executed out-of-order. Otherwise, commands are executed in-order.
kQueueProfilingEnable	Enable or disable profiling of commands in the command-queue. If set, the profiling of commands is enabled. Otherwise profiling of commands is disabled. See clGetEventProfilingInfo for more information.

The OpenCL functions that are submitted to a command-queue are enqueued in the order the calls are made but can be configured to execute in-order or out-of-order. The properties argument in clCreateCommandQueue can be used to specify the execution order.

If the kQueueOutOfOrderExecModeEnable property of a command-queue is not set, the commands enqueued to a command-queue execute in order. For example, if an application calls EnqueueNDRangeKernel to execute kernel A followed by a EnqueueNDRangeKernel to execute kernel B, the application can assume that kernel A finishes first and then kernel B is executed. If the memory objects output by kernel A are inputs to kernel B then kernel B will see the correct data in memory objects produced by execution of

kernel A. If the kQueueOutOfOrderExecModeEnable property of a commandqueue is set, then there is no guarantee that kernel A will finish before kernel B starts execution.

Applications can configure the commands enqueued to a command-queue to execute out-of-order by setting the kQueueOutOfOrderExecModeEnable property of the command-queue. This can be specified when the command-queue is created or can be changed dynamically using this Constructor. In out-of-order execution mode there is no guarantee that the enqueued commands will finish execution in the order they were queued. As there is no guarantee that kernels will be executed in order, i.e. based on when the EnqueueNDRangeKernel calls are made within a command-queue, it is therefore possible that an earlier EnqueueNDRangeKernel call to execute kernel A identified by event A may execute and/or finish later than a EnqueueNDRangeKernel call to execute kernel B which was called by the application at a later point in time. To guarantee a specific order of execution of kernels, a wait on a particular event (in this case event A) can be used. The wait for event A can be specified in the event_wait_list argument to EnqueueNDRangeKernel for kernel B.

In addition, a wait for events or a barrier command can be enqueued to the command-queue. The wait for events command ensures that previously enqueued commands identified by the list of events to wait for have finished before the next batch of commands is executed. The barrier command ensures that all previously enqueued commands in a command-queue have finished execution before the next batch of commands is executed.

Similarly, commands to read, write, copy or map memory objects that are enqueued after EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel commands are not guaranteed to wait for kernels scheduled for execution to have completed (if the kQueueOutOfOrderExecModeEnable property is set). To ensure correct ordering of commands, the event object returned by EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel can be used to enqueue a wait for event or a barrier command can be enqueued that must complete before reads or writes to the memory object(s) occur.

Lasterror is set.

128.1.5 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the context specified when the command-queue is created.
Notes: Lasterror is set.

128.1.6 Device as CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the device specified when the command-queue is created.
Notes: Lasterror is set.

128.1.7 EnqueueBarrier

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A synchronization point that enqueues a barrier operation.
Notes:

EnqueueBarrier is a synchronization point that ensures that all queued commands in command_queue have finished execution before the next batch of commands can begin execution.

Lasterror is set.

128.1.8 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy a buffer object to another buffer object.
Notes:

sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 128.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18542

128.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy a buffer object to another buffer object.
Notes:

sourceBuffer: the source memory object.

destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 128.1.8 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer) 18542

128.1.10 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy a buffer object to an image object.
Notes:

SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

- 128.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18544

128.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy a buffer object to an image object.
Notes:

SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

- 128.1.10 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer) 18543

128.1.12 EnqueueCopyImage(sourceImage as CLMemMBS, destImage as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy image objects.
Notes:

sourceImage: Source image.
destImage: Dest image.

sourceOrigin: Defines the starting (x, y, z) location in pixels in src_image from where to start the data copy. If src_image is a 2D image object, the z value given by sourceOriginZ must be 0.

sourceOrigin: Defines the starting (x, y, z) location in pixels in dst_image from where to start the data copy. If dst_image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If src_image or dst_image is a 2D image object, the depth value given by RegionDepth must be 1.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CommandQueue must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

It is currently a requirement that the sourceImage and destImage image memory objects for EnqueueCopyImage must have the exact same image format (i.e. the cl_image_format descriptor specified when sourceImage and destImage are created must match).

sourceImage and destImage can be 2D or 3D image objects allowing us to perform the following actions:

- Copy a 2D image object to a 2D image object.
- Copy a 2D image object to a 2D slice of a 3D image object.
- Copy a 2D slice of a 3D image object to a 2D image object.
- Copy a 3D image object to a 3D image object.

Lasterror is set.

128.1.15 EnqueueCopyImageToBuffer(sourceImage as CLMemMBS, destBuffer as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, destOffset as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to copy an image object to a buffer object.
Notes:

sourceImage: A valid image object.
destBuffer: A valid buffer object.

sourceOrigin: Defines the (x, y, z) offset in pixels in the image from where to copy. If sourceImage is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If sourceImage is a 2D image object, the depth value given by RegionDepth must be 1.

destOffset: The offset where to begin copying data into destBuffer. The size in bytes of the region to be copied referred to as dst_cb is computed as width * height * depth * bytes/image element if sourceImage is a 3D image object and is computed as width * height * bytes/image element if sourceImage is a 2D image object.

EventWaitList: Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

- 128.1.14 EnqueueCopyImageToBuffer(sourceImage as CLMemMBS, destBuffer as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, destOffset as Integer) 18547

128.1.16 EnqueueMapBuffer(buffer as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, offset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
Notes:

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.
buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

Lasterror is set.

128.1.17 EnqueueMapBuffer(buffer as CLMemMBS, MapFlags as Integer, offset as Integer, size as Integer) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
Notes:

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.
buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). 128.1.18 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
Notes:

image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which

can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

- 128.1.19 EnqueueMapImage(image as CLMemMBS, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer) as memoryblock 18553

128.1.19 EnqueueMapImage(image as CLMemMBS, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
Notes:

image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

- 128.1.18 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock 18551

128.1.20 EnqueueMarker(byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a marker command.
Notes:

Enqueues a marker command to the command queue. The marker command returns an event which can be used to queue a wait on this marker event i.e. wait for all commands queued before the marker command to complete.

Lasterror is set.

128.1.21 EnqueueNativeKernel(FunctionPtr as ptr, args as memoryblock, argsSize as Integer, NumberOfMemoryObjects as Integer, MemList as memoryblock, ArgsMemoryLocations as memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to execute a native C/C++ function not compiled using the OpenCL compiler.
Notes:

First a warning: Don't use this with Xojo methods. You can point to a function written in C which you made thread safe.

self: A valid command-queue. A native user function can only be executed on a command-queue created on a device that has kExceNativeKernel capability set in ExecutionCapabilities property.

FunctionPtr: A pointer to a host-callable user function.

args: A pointer to the args list that FunctionPtr should be called with.
argsSize: The size in bytes of the args list that args points to.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

NumberOfMemoryObjects: The number of buffer objects that are passed in args.

MemList: A list of valid buffer objects, if NumberOfMemoryObjects is greater than 0. The buffer object values specified in MemList are memory object handles (CLMemMBS.handle values) or nil.

ArgsMemoryLocations: A pointer to appropriate locations that args points to where memory object handles (CLMemMBS.handle values) are stored. Before the user function is executed, the memory object handles are replaced by pointers to global memory.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optionally, Returns an event object that identifies this particular kernel execution instance.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

Lasterror is set.

128.1.23 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event

to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

128.1.25 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueue commands to read from a buffer object to host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.

- 128.1.26 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock) 18560

128.1.26 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueue commands to read from a buffer object to host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated

with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.
See also:

- 128.1.25 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18559

128.1.27 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to read from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer

that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

128.1.28 EnqueueReadImage(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to read from a 2D or 3D image object to host memory..
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

128.1.29 EnqueueReadPicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to read from a 2D or 3D image object to a Xojo picture object.
Example:

```
const size = 500
```

```
// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes:

image: Refers to a valid 2D or 3D image object.

origin: Defines the (x, y) offset in pixels in the image from where to read.
region: Defines the (width, heigh) in pixels of the 2D or 3D rectangle being read.

pic: The Xojo picture object to write pixel data to.

This command is always blocking.
Lasterror is set.

128.1.30 EnqueueTask(kernel as CLKernelMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.

- 128.1.31 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18566

128.1.31 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.

Lasterror is set.
See also:

- 128.1.30 EnqueueTask(kernel as CLKernelMBS) 18566

128.1.32 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes:

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.

- 128.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18568

128.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes:

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.
See also:

- 128.1.32 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock) 18567

128.1.34 EnqueueWaitForEvents(EventWaitList() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a wait for a specific event or a list of events to complete before any future commands queued in the command-queue are executed.
Notes:

EventWaitList: Events specified in EventWaitList act as synchronization points.

The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

Lasterror is set.

128.1.35 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueue commands to write to a buffer object from host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

128.1.36 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueue commands to write to a buffer object from host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.
See also:

- 128.1.35 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18569

128.1.37 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

See also:

- 128.1.38 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock) 18573

128.1.38 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

See also:

- 128.1.37 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 18571

128.1.39 EnqueueWritePicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Enqueues a command to write from a 2D or 3D image object to a Xojo Picture.
Example:

```
const size = 500

// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
```

```
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

origin: Defines the (x, y) offset in pixels in the image from where to write or write.

region: Defines the (width, height) in pixels of the 2D or 3D rectangle being write or written.

pic: The target Xojo picture object. This must match in the image format for the image object and the size you specified in region.

This operation is always performed blocked.
Lasterror is set.

128.1.40 Finish

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Blocks until all previously queued OpenCL commands in a command-queue are issued to the associated device and have completed.

Notes:

Blocks until all previously queued OpenCL commands in command_queue are issued to the associated device and have completed.

Finish does not return until all queued commands in command_queue have been processed and completed. clFinish is also a synchronization point.

Lasterror is set.

128.1.41 Flush

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Issues all previously queued OpenCL commands in a command-queue to the device associated with the command-queue.
Notes:

Issues all previously queued OpenCL commands in command_queue to the device associated with command_queue.

Flush only guarantees that all queued commands to command_queue get issued to the appropriate device. There is no guarantee that they will be complete after Flush returns.

Lasterror is set.

Any blocking commands queued in a command-queue such as EnqueueReadImage or EnqueueReadBuffer with BlockingRead set to true, EnqueueWriteImage or EnqueueWriteBuffer with BlockingWrite set to true, EnqueueMapImage or EnqueueMapBuffer with BlockingMap set to true or WaitForEvents perform an implicit flush of the command-queue.

To use event objects that refer to commands enqueued in a command-queue as event objects to wait on by commands enqueued in a different command-queue, the application must call a Flush or any blocking commands that perform an implicit flush of the command-queue where the commands that refer to these event objects are enqueued.
Lasterror is set.

128.1.42 Properties as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the currently specified properties for the command-queue.
Notes: Lasterror is set.

128.1.43 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the command-queue reference count.
Notes: Lasterror is set.

128.1.44 Properties

128.1.45 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.1.46 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.2 class CLContextMBS

128.2.1 class CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The OpenCL class for a context.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes: Contexts are used by the OpenCL runtime for managing objects such as command-queues, memory, program and kernel objects and for executing kernels on one or more devices specified in the context.

- MBS REALbasic Plugins, version 11.1pr5

128.2.3 Methods

128.2.4 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an OpenCL context.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes:

Platform: Optional, Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is

picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 128.2.5 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 18579
- 128.2.6 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 18580
- 128.2.7 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 18581
- 128.2.8 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 18581

- 128.2.9 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 18582

128.2.6 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Create an OpenCL context from a device type that identifies the specific device(s) to use.
Example:

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)
```

Notes:

Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Constants	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

128.2.10 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the list of devices in context.

Example:

```
// create context for all devices
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

// and query it for it's devices
for each d as CLDeviceMBS in co.Devices
MsgBox d.Name
next
```

128.2.11 GetSupportedImageFormats(flags as UInt64, type as UInt32) as CLImageFormatMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get the list of image formats supported by an OpenCL implementation.
Example:

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

dim formats(-1) as CLImageFormatMBS = co.GetSupportedImageFormats(CLMemMBS.kMemoryReadWrite, CLMemMBS.kMemoryTypeImage2D)
dim lines(-1) as string

for each f as CLImageFormatMBS in formats
// see constants for what this values mean
lines.Append hex(f.ImageChannelOrder)+" - "+hex(f.ImageChannelDataType)
next

MsgBox Join(lines,EndOfLine)
```

Notes:

self: A valid OpenCL context on which the image object(s) will be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created and is described in the List of supported cl_mem_flags values for clCreateBuffer
type: Describes the image type and must be either kMemoryTypeImage2D or kMemoryTypeImage3D.

Returns an array of imageformat objects.

128.2.12 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the context reference count.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

MsgBox str(context.ReferenceCount) // 1

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)

MsgBox str(context.ReferenceCount) // 2 as the command queue points to the context, too.
```

128.2.13 Properties

128.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.2.15 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.2.16 Constants

128.2.17 kErrorModeIgnore = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the error mode constants.

128.2.18 kErrorModeLogMessagesToStderr = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the error mode constants.
Notes: Sends all log messages to the file descriptor stderr.

128.2.19 kErrorModeLogMessagesToStdout = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the error mode constants.
Notes: Sends all log messages to the file descriptor stdout.

128.2.20 kErrorModeLogMessagesToSystemLog = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the error mode constants.
Notes: Fowards on all log messages to the Apple System Logger.

128.3 class CLDeviceMBS

128.3.1 class CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an OpenCL Device.

128.3.2 Methods

128.3.3 AddressBits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default compute device address space size specified as an unsigned integer value in bits.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name+": "+str(p.AddressBits)
next
```

Notes:

Currently supported values are 32 or 64 bits.
Lasterror is set.

128.3.4 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if the device is available and false if the device is not available.
Notes: Lasterror is set.

128.3.5 CompilerAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns false if the implementation does not have a compiler available to compile the program source.
Notes:

Is true if the compiler is available. This can be false for the embededed platform profile only.

Lasterror is set.

128.3.6 DeviceType as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The OpenCL device type.
Notes:

Currently supported values are one of or a combination of: kDeviceTypeCPU, kDeviceTypeGPU, kDeviceTypeAccelerator, or kDeviceTypeDefault.
Lasterror is set.

128.3.7 DeviceVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: OpenCL version string.
Notes:

Returns the OpenCL version supported by the device. This version string has the following format:

OpenCL<space><major_version.minor_version><space><vendor-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

128.3.8 DriverVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: OpenCL software driver version string in the form major_number.minor_number.
Notes: Lasterror is set.

128.3.9 EndianLittle as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if the OpenCL device is a little endian device and false otherwise.
Notes: Lasterror is set.

128.3.10 ErrorCorrectionSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if the device implements error correction for the memories, caches, registers etc. in the device.
Notes:

Returns false if the device does not implement error correction. This can be a requirement for certain clients of OpenCL.
Lasterror is set.

128.3.11 ExecutionCapabilities as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the execution capabilities of the device.
Notes:

This is a bit-field that describes one or more of the following values:

kExecKernel - The OpenCL device can execute OpenCL kernels.
kExceNativeKernel - The OpenCL device can execute native kernels.

The mandated minimum capability is kExecKernel.
Lasterror is set.

128.3.12 Extensions as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a space separated list of extension names.
Example:

```
// show msgbox with all extensions for first device

dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

dim extensions(-1) as string = split(device.Extensions," ")

dim lines(-1) as string

for each extension as string in extensions
lines.append extension
next
```

MsgBox Join(lines,EndOfLine)

Notes:

(the extension names themselves do not contain any spaces).
The list of extension names returned currently can include one or more of the following approved extension names:

cl_khr_fp64
cl_khr_select_fprounding_mode
cl_khr_global_int32_base_atomics
cl_khr_global_int32_extended_atomics
cl_khr_local_int32_base_atomics
cl_khr_local_int32_extended_atomics
cl_khr_int64_base_atomics
cl_khr_int64_extended_atomics
cl_khr_3d_image_writes
cl_khr_byte_addressable_store
cl_khr_fp16

Lasterror is set.

128.3.13 GlobalMemoryCacheLineSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Size of global memory cache line in bytes.
Notes: Lasterror is set.

128.3.14 GlobalMemoryCacheSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Size of global memory cache in bytes.
Notes: Lasterror is set.

128.3.15 GlobalMemoryCacheType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Type of global memory cache supported.
Notes:

See kCacheMemType* constants.
Lasterror is set.

128.3.16 GlobalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Size of global device memory in bytes.
Notes: Lasterror is set.

128.3.17 Image2DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max height of 2D image in pixels.
Notes:

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

128.3.18 Image2DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max width of 2D image in pixels.
Notes:

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

128.3.19 Image3DMaxDepth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max depth of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

128.3.20 Image3DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max height of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

128.3.21 Image3DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max width of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

128.3.22 ImageSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if images are supported by the OpenCL device and false otherwise.
Notes: Lasterror is set.

128.3.23 LocalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Size of local memory arena in bytes.
Notes:

The minimum value is 16 KB.
Lasterror is set.

128.3.24 LocalMemType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Type of local memory supported.
Notes:

This can be set to kMemTypeLocal implying dedicated local memory storage such as SRAM, or kMemTypeGlobal.

Lasterror is set.

128.3.25 MaxClockFrequency as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Maximum configured clock frequency of the device in MHz.
Notes: Lasterror is set.

128.3.26 MaxComputeUnits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of parallel compute cores on the OpenCL device.
Notes:

The minimum value is 1.
Lasterror is set.

128.3.27 MaxConstantArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max number of arguments declared with the __constant qualifier in a kernel.
Notes:

The minimum value is 8.
Lasterror is set.

128.3.28 MaxConstantBufferSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max size in bytes of a constant buffer allocation.
Notes:

The minimum value is 64 KB.
Lasterror is set.

128.3.29 MaxMemoryAllocSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max size of memory object allocation in bytes.

Notes:

The minimum value is max (1/4th of GlobalMemorySize, 128*1024*1024)
Lasterror is set.

128.3.30 MaxParameterSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max size in bytes of the arguments that can be passed to a kernel.
Notes:

The minimum value is 256.
Lasterror is set.

128.3.31 MaxReadImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max number of simultaneous image objects that can be read by a kernel.
Notes:

Lasterror is set.
The minimum value is 128 if ImageSupport is true.

128.3.32 MaxSamplers as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Maximum number of samplers that can be used in a kernel.
Notes:

The minimum value is 16 if ImageSupport is true.
Lasterror is set.

128.3.33 MaxWorkGroupSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Maximum number of work-items in a work-group executing a kernel using the data parallel execution model.
Notes:

(Refer to EnqueueNDRangeKernel). The minimum value is 1.
Lasterror is set.

128.3.34 MaxWorkItemDimensions as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Maximum dimensions that specify the global and local work-item IDs used by the data parallel execution model.
Notes:

(Refer to EnqueueNDRangeKernel). The minimum value is 3.
Lasterror is set.

128.3.35 MaxWriteImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Max number of simultaneous image objects that can be written to by a kernel.
Notes:

The minimum value is 8 if ImageSupport is true.
Lasterror is set.

128.3.36 MemoryBaseAddressAlign as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the alignment in bits of the base address of any allocated memory object.
Notes: Lasterror is set.

128.3.37 MinDataTypeAlignSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The smallest alignment in bytes which can be used for any data type.
Notes: Lasterror is set.

128.3.38 Name as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Device name string.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
```

next

Notes: Lasterror is set.

128.3.39 Platform as CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The platform associated with this device.
Notes: Lasterror is set.

128.3.40 PreferredVectorWidthChar as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

128.3.41 PreferredVectorWidthDouble as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.

If the cl_khr_fp64 extension is not supported, this function must return 0.
Lasterror is set.

128.3.42 PreferredVectorWidthFloat as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

128.3.43 PreferredVectorWidthInt as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

128.3.44 PreferredVectorWidthLong as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

128.3.45 PreferredVectorWidthShort as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

128.3.46 Profile as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: OpenCL profile string.
Notes:

Returns the profile name supported by the device (see note). The profile name returned can be one of the following strings:

FULL_PROFILE - if the device supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the device supports the OpenCL embedded profile.
Lasterror is set.

128.3.47 ProfilingTimerResolution as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the resolution of device timer. This is measured in nanoseconds.
Notes: Lasterror is set.

128.3.48 QueueProperties as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the command-queue properties supported by the device.
Notes:

See kQueueOutOfOrderExecModeEnable and kQueueProfilingEnable.
Lasterror is set.

128.3.49 SingleFPConfig as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes single precision floating-point capability of the device.
Notes:

The mandated minimum floating-point capability is kFPRoundToNearest+kFPInfNAN.
Lasterror is set.

128.3.50 Vendor as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Vendor name string.
Notes: Lasterror is set.

128.3.51 VendorID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A unique device vendor identifier.
Notes:

An example of a unique device identifier could be the PCIe ID.
Lasterror is set.

128.3.52 Properties

128.3.53 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.3.54 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.3.55 Constants

128.3.56 kCacheMemTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the cache memory type constants.

128.3.57 kCacheMemTypeReadOnlyCache = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the cache memory type constants.
Notes: Read Only Cache.

128.3.58 kCacheMemTypeReadWriteCache = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the cache memory type constants.
Notes: Read/Write Cache.

128.3.59 kDeviceTypeAccelerator = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the device type constants.
Notes: Accelerator = some special acceleration device

128.3.60 kDeviceTypeAll = & Hffffffff

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the device type constants.
Notes: This is the bitmask to catch all possible types.

128.3.61 kDeviceTypeCPU = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the device type constants.
Notes: CPU = your processor

128.3.62 kDeviceTypeDefault = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the device type constants.
Notes: Default device.

128.3.63 kDeviceTypeGPU = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the device type constants.
Notes: GPU = your graphics card

128.3.64 kExceNativeKernel = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the execution capabilities constants.
Notes: The OpenCL device can execute native kernels.

128.3.65 kExecKernel = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the execution capabilities constants.
Notes: The OpenCL device can execute OpenCL kernels.

128.3.66 kFPDenorm = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: denorms are supported

128.3.67 kFPFMA = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: IEEE754-2008 fused multiply-add is supported

128.3.68 kFPInfNAN = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: INF and quiet NaNs are supported

128.3.69 kFPRoundToInf = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: Round to +ve and -ve infinity rounding modes supported

128.3.70 kFPRoundToNearest = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: Round to nearest even rounding mode supported

128.3.71 kFPRoundToZero = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the floating point capabilities constants.
Notes: Round to zero rounding mode supported

128.3.72 kMemTypeGlobal = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the memory type constants. **Notes:** Dedicated local memory storage such as SRAM.

128.3.73 kMemTypeLocal = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the memory type constants.

128.3.74 kQueueOutOfOrderExecModeEnable = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the queue properties constants. **Notes:** Out of order execution mode enabled.

128.3.75 kQueueProfilingEnable = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the queue properties constants. **Notes:** Profiling enabled.

128.4 class CLEventMBS

128.4.1 class CLEventMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an OpenCL event.
Notes: You can chain several operations together inside a command queue. With events you can have an item execute after another item.

128.4.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.4.3 Methods

128.4.4 CommandExecutionStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the execution status of the command identified by event.
Notes:

See kCommandExecutionStatus* constants.
Lasterror is set.

128.4.5 CommandQueue as CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the command-queue associated with event.
Notes: Lasterror is set.

128.4.6 CommandType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the command associated with event.
Notes:

See kCommand* constants.
Lasterror is set.

128.4.7 ProfilingCommandEnd as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event has finished execution on the device.
Notes: Lasterror is set.

128.4.8 ProfilingCommandQueued as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event is enqueued in a command-queue by the host.
Notes: Lasterror is set.

128.4.9 ProfilingCommandStart as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event starts execution on the device.
Notes: Lasterror is set.

128.4.10 ProfilingCommandSubmit as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event that has been enqueued is submitted by the host to the device associated with the commandqueue.
Notes: Lasterror is set.

128.4.11 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the event reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

128.4.12 Properties

128.4.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.4.14 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.4.15 Constants

128.4.16 kCommandAcquireGLObjects = & h11FF

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants.
Notes: Acquire GL objects

128.4.17 kCommandCopyBuffer = & h11F5

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants.
Notes: Copy Buffer

128.4.18 kCommandCopyBufferToImage = & h11FA

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants.
Notes: Copy Buffer to Image

128.4.19 kCommandCopyImage = & h11F8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants.
Notes: Copy Image

128.4.20 kCommandCopyImageToBuffer = & h11F9

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants.
Notes: Copy Image to Buffer

128.4.21 kCommandExecutionStatusComplete = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command excecution status constants.
Notes: The command has completed.

128.4.22 kCommandExecutionStatusQueued = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command excecution status constants.
Notes: command has been enqueued in the command-queue.

128.4.23 kCommandExecutionStatusRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command excecution status constants.
Notes: Device is currently executing this command.

128.4.24 kCommandExecutionStatusSubmitted = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command excecution status constants.
Notes: enqueued command has been submitted by the host to the device associated with the command-queue.

128.4.25 kCommandMapBuffer = & h11FB

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Map Buffer

128.4.26 kCommandMapImage = & h11FC

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Map Image

128.4.27 kCommandMarker = & h11FE

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Marker

128.4.28 kCommandNativeKernel = & h11F2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Execute Native Kernel

128.4.29 kCommandNDRangeKernel = & h11F0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Execute a ND Range Kernel

128.4.30 kCommandReadBuffer = & h11F3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Read Buffer

128.4.31 kCommandReadImage = & h11F6

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Read Image

128.4.32 kCommandReleaseGLObjects = & h1200

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Release GL objects

128.4.33 kCommandTask = & h11F1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Execute task

128.4.34 kCommandUnmapMemObject = & h11FD

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Unmap memory object

128.4.35 kCommandWriteBuffer = & h11F4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Write Buffer

128.4.36 kCommandWriteImage = & h11F7

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the command type constants. **Notes:** Write Image

128.5 class CLImageFormatMBS

128.5.1 class CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: the OpenCL class for an image format.

128.5.2 Properties

128.5.3 ImageChannelDataType as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the size of the channel data type.
Notes:

The number of bits per element determined by the ImageChannelDataType and ImageChannelOrder must be a power of two. The list of supported values is described in the table below.

Image Channel Data Type	Description
kChannelTypeSNormInt8	Each channel component is a normalized signed 8-bit integer value.
kChannelTypeSNormInt16	Each channel component is a normalized signed 16-bit integer value.
kChannelTypeUNormInt8	Each channel component is a normalized unsigned 8-bit integer value.
kChannelTypeUNormInt16	Each channel component is a normalized unsigned 16-bit integer value.
kChannelTypeUNormShort565	Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormShort555	Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormInt101010	Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeSignedInt8	Each channel component is an unnormalized signed 8-bit integer value.
kChannelTypeSignedInt16	Each channel component is an unnormalized signed 16-bit integer value.
kChannelTypeSignedInt32	Each channel component is an unnormalized signed 32-bit integer value.
kChannelTypeUnsignedInt8	Each channel component is an unnormalized unsigned 8-bit integer value.
kChannelTypeUnsignedInt16	Each channel component is an unnormalized unsigned 16-bit integer value.
kChannelTypeUnsignedInt32	Each channel component is an unnormalized unsigned 32-bit integer value.
kChannelTypeHalfFloat	Each channel component is a 16-bit half-float value.
kChannelTypeFloat	Each channel component is a single precision floating-point value.

(Read and Write property)

128.5.4 ImageChannelOrder as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the number of channels and the channel layout i.e. the memory layout in which channels are stored in the image.
Notes:

Valid values are described in the table below.

Format	Description
kChannelOrderR, or kChannelOrderA	
kChannelOrderIntensity	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderLuminance	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderRG, or kChannelOrderRA	
kChannelOrderRGB	This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.
kChannelOrderRGBA	
kChannelOrderARGB, kChannelOrderBGRA.	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeSNormInt8, kChannelTypeSignedInt8 or kChannelTypeUnsignedInt8.

(Read and Write property)

128.5.5 Constants

128.5.6 kChannelOrderA = & h10B1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.7 kChannelOrderARGB = & h10B7

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.8 kChannelOrderBGRA = & h10B6

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.9 kChannelOrderIntensity = & h10B8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

128.5.10 kChannelOrderLuminance = & h10B9

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

128.5.11 kChannelOrderR = & h10B0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.12 kChannelOrderRA = & h10B3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.13 kChannelOrderRG = & h10B2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.14 kChannelOrderRGB = & h10B4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.

128.5.15 kChannelOrderRGBA = & h10B5

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel order constants

128.5.16 kChannelTypeFloat = & h10DE

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a single precision floating-point value.

128.5.17 kChannelTypeHalfFloat = & h10DD

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a 16-bit half-float value.

128.5.18 kChannelTypeSignedInt16 = & h10D8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized signed 16-bit integer value.

128.5.19 kChannelTypeSignedInt32 = & h10D9

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized signed 32-bit integer value.

128.5.20 kChannelTypeSignedInt8 = & h10D7

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized signed 8-bit integer value.

128.5.21 kChannelTypeSNormInt16 = & h10D1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a normalized signed 16-bit integer value.

128.5.22 kChannelTypeSNormInt8 = & h10D0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a normalized signed 8-bit integer value.

128.5.23 kChannelTypeUNormInt101010 = & h10D6

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.

128.5.24 kChannelTypeUNormInt16 = & h10D3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a normalized unsigned 16-bit integer value.

128.5.25 kChannelTypeUNormInt8 = & h10D2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is a normalized unsigned 8-bit integer value.

128.5.26 kChannelTypeUNormShort555 = & h10D5

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrderRGB.

128.5.27 kChannelTypeUNormShort565 = & h10D4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrderRGB.

128.5.28 kChannelTypeUnsignedInt16 = & h10DB

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized unsigned 16-bit integer value.

128.5.29 kChannelTypeUnsignedInt32 = & h10DC

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized unsigned 32-bit integer value.

128.5.30 kChannelTypeUnsignedInt8 = & h10DA

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the channel data type constants. **Notes:** Each channel component is an unnormalized unsigned 8-bit integer value.

128.6 class CLKernelMBS

128.6.1 class CLKernelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an OpenCL Kernel.

128.6.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.6.3 Methods

128.6.4 Constructor(Program as CLProgramMBS, KernelName as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a kernal object.
Notes:

Program: A program object with a successfully built executable.
KernelName: A function name in the program declared with the ___kernel qualifier

A kernel is a function declared in a program. A kernel is identified by the ___kernel qualifier applied to any function in a program. A kernel object encapsulates the specific ___kernel function declared in a program and the argument values to be used when executing this ___kernel function.
Lasterror is set.

128.6.5 FunctionName as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the kernel function name.
Notes: Lasterror is set.

128.6.6 GetKernelCompileWorkGroupSize(device as CLDeviceMBS, byref X as Int64, byref Y as Int64, byref Z as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the work-group size specified by the ___attribute___((reqd_work_gr oup_size(X, Y,

Z))) qualifier.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

If the work-group size is not specified using the above attribute qualifier (0, 0, 0) is returned.
Lasterror is set.

128.6.7 GetKernelLocalMemorySize(device as CLDeviceMBS = nil) as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the amount of local memory in bytes being used by a kernel.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

This includes local memory that may be needed by an implementation to execute the kernel, variables declared inside the kernel with the ___local address qualifier and local memory to be allocated for arguments to the kernel declared as pointers with the ___local address qualifier and whose size is specified with clSetKernelArg.

If the local memory size, for any pointer argument to the kernel declared with the ___local address qualifier, is not specified, its size is assumed to be 0.
Lasterror is set.

128.6.8 GetKernelWorkGroupSize(device as CLDeviceMBS = nil) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This provides a mechanism for the application to query the work-group size that can be used to execute a kernel on a specific device given by device.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

The OpenCL implementation uses the resource requirements of the kernel (register usage etc.) to determine what this work-group size should be.

Lasterror is set.

128.6.9 NumberOfArguments as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the number of arguments to kernel.
Notes: Lasterror is set.

128.6.10 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the kernel reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

128.6.11 SetKernelArgDouble(index as Integer, value as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

128.6.12 SetKernelArgFloat(index as Integer, value as Single)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.

value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

128.6.13 SetKernelArgInt32(index as Integer, value as Int32)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

128.6.14 SetKernelArgInt64(index as Integer, value as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

128.6.15 SetKernelArgMem(index as Integer, mem as CLMemMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the memory object to set for argument.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

128.6.16 Properties

128.6.17 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the context associated with kernel.
Notes:

Lasterror is set.
(Read and Write property)

128.6.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.6.19 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.6.20 Program as CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the program object associated with kernel.
Notes:

Lasterror is set.
(Read and Write property)

128.7 class CLMemMBS

128.7.1 class CLMemMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a OpenCL memory block.
Example:

```
const Size = 4096
dim context as CLContextMBS // your context
dim input as new CLMemMBS(context, CLMEMMBS.kMemoryReadOnly, 4096)
```

128.7.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.7.3 Methods

128.7.4 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a 3D image object.
Notes:

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: the image format properties of the image to be allocated.
Width, Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
Depth: The depth of the image in pixels. This must be a value greater than 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
SlicePitch: The size in bytes of each 2D slice in the 3D image. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to RowPitch * Height if HostPtr is not nil. If HostPtr is not nil and SlicePitch equal to 0, SlicePitch is calculated as RowPitch * Height. If SlicePitch is not 0, it must be a multiple of the RowPitch.

HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to SlicePitch * image_depth. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent 2D slices. Each 2D slice is a linear sequence of adjacent scanlines. Each scanline is a linear sequence of image elements.

Lasterror is set.

128.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a 2D image object.
Notes:

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: The format properties of the image to be allocated.
Width and Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to RowPitch * Height. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent scanlines. Each scanline is stored as a linear sequence of image elements.

Lasterror is set.

- 128.7.4 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 18620
- 128.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil) 18622

128.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new buffer object.
Notes:

context: A valid OpenCL context used to create the buffer object.
flags: A bit-field that is used to specify allocation and usage information such as the memory arena that should be used to allocate the buffer object and how it will be used. The following table describes the possible values for flags:
size: The size in bytes of the buffer memory object to be allocated.
HostPtr: A memoryblock that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to the size bytes.

Flags	Description
kMemoryReadWrite	This flag specifies that the memory object will be read and written by a kernel. This is the default.
kMemoryWriteOnly	This flags specifies that the memory object will be written but not read by a kernel. Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.
kMemoryReadOnly	This flag specifies that the memory object is a read-only memory object when used inside a kernel. Writing to a buffer or image object created with kMemoryReadOnly inside a kernel is undefined.
kMemoryUseHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to use memory referenced by HostPtr as the storage bits for the memory object. OpenCL implementations are allowed to cache the buffer contents pointed to by HostPtr in device memory. This cached copy can be used when kernels are executed on a device. The result of OpenCL commands that operate on multiple buffer objects created with the same HostPtr or overlapping host regions is considered to be undefined.
kMemoryAllocHostPtr	This flag specifies that the application wants the OpenCL implementation to allocate memory from host accessible memory. kMemoryAllocHostPtr and kMemoryUseHostPtr are mutually exclusive.
kMemoryCopyHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to allocate memory for the memory object and copy the data from memory referenced by HostPtr. kMemoryCopyHostPtr and kMemoryUseHostPtr are mutually exclusive. kMemoryCopyHostPtr can be used with kMemoryAllocHostPtr to initialize the contents of the cl_mem object allocated using host-accessible (e.g. PCIe) memory.

Lasterror is set.

- 128.7.4 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS,

Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 18620

- 128.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil) 18621

128.7.7 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return context specified when memory object is created.
Notes: Lasterror is set.

128.7.8 Flags as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the flags argument value specified with Constructor.
Notes: Lasterror is set.

128.7.9 ImageDepth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return depth of the image in pixels.
Notes:

For a 2D image, depth equals 0.
Lasterror is set.

128.7.10 ImageElementSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return size of each element of the image memory object given by image.
Notes:

An element is made up of n channels. The value of n is given with image format descriptor.
Lasterror is set.

128.7.11 ImageFormat as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return image format descriptor.

Notes: Lasterror is set.

128.7.12 ImageHeight as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return height of image in pixels.
Notes: Lasterror is set.

128.7.13 ImageRowPitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return size in bytes of a row of elements of the image object given by image.
Notes: Lasterror is set.

128.7.14 ImageSlicePitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return size in bytes of a 2D slice for the 3D image object given by image.
Notes:

For a 2D image object this value will be 0.
Lasterror is set.

128.7.15 ImageWidth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return width of image in pixels.
Notes: Lasterror is set.

128.7.16 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return memory object reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

128.7.17 Size as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return actual size of memory object in bytes.
Notes: Lasterror is set.

128.7.18 Type as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the memory type.
Notes:

Either normal buffer, image 2D or image 3D.
Lasterror is set.

128.7.19 Properties

128.7.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.7.21 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.7.22 Target as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The reference to the memoryblock if you used kMemoryUseHostPtr to create this memory object.

Notes: (Read and Write property)

128.7.23 Constants

128.7.24 kMapRead = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the mapping mode constants.

128.7.25 kMapWrite = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the mapping mode constants.

128.7.26 kMemoryAllocHostPtr = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.

128.7.27 kMemoryCopyHostPtr = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.

128.7.28 kMemoryReadOnly = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.

128.7.29 kMemoryReadWrite = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.

128.7.30 kMemoryTypeBuffer = & h10F0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the memory object types.
Notes: A normal memory buffer.

128.7.31 kMemoryTypeImage2D = & h10F1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the memory object types.
Notes: 2D Image

128.7.32 kMemoryTypeImage3D = & h10F2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the memory object types.
Notes: 3D Image

128.7.33 kMemoryUseHostPtr = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.

128.7.34 kMemoryWriteOnly = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the flag constants for creating a memory block.
Notes:

This flags specifies that the memory object will be written but not read by a kernel.

Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.

128.8 class CLPlatformMBS

128.8.1 class CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The OpenCL class for a platform.

128.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.8.3 Methods

128.8.4 DeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries number of devices with given types.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+str(p.DeviceCount(CLDeviceMBS.kDeviceTypeAll))+" devices"
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

128.8.5 Devices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries devices with given types.
Example:

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

```
// check all platforms
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
dim lines(-1) as string

lines.Append p.Name
lines.Append ""

// and show device names
for each d as CLDeviceMBS in p.Devices(CLDeviceMBS.kDeviceTypeAll)
lines.Append d.name
next

MsgBox Join(lines,EndOfLine)
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

128.8.6 Extensions as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a space-separated list of extension names (the extension names themselves do not contain any spaces) supported by the platform.
Example:

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Extensions
next
```

Notes:

Extensions defined here must be supported by all devices associated with this platform.
Lasterror is set.

128.8.7 Name as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Platform name string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

Notes: Lasterror is set.

128.8.8 Profile as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: OpenCL profile string.

Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Profile
next
```

Notes:

Returns the profile name supported by the implementation. The profile name returned can be one of the following strings:

FULL_PROFILE - if the implementation supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the implementation supports the OpenCL embedded profile. The embedded profile is defined to be a subset for each version of OpenCL.

Lasterror is set.

128.8.9 Vendor as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Platform vendor string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Vendor
next
```

Notes: Lasterror is set.

128.8.10 Version as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: OpenCL version string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Version
next
```

Notes:

Returns the OpenCL version supported by the implementation. This version string has the following format:

OpenCL<space><major_version.minor_version><space><platform-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

128.8.11 Properties

128.8.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.8.13 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.9 class CLProgramMBS

128.9.1 class CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The OpenCL class for a program.

128.9.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.9.3 Methods

128.9.4 Binaries as String()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the program binaries for all devices associated with program.
Notes:

For each device in program, the binary returned can be the binary specified for the device when program is created with Constructor or it can be the executable binary generated by BuildProgram. If program is created with Constructor (with Source code), the binary returned is the binary generated by BuildProgram. The bits returned can be an implementation-specific intermediate representation (a.k.a. IR) or device specific executable bits or both. The decision on which information is returned in the binary is up to the OpenCL implementation.

Each entry in this array is used by the implementation as the location in memory where to copy the program binary for a specific device, if there is a binary available.

Lasterror is set.

128.9.5 BinarySizes as UInt64()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array that contains the size in bytes of the program binary for each device associated with program.
Notes:

The size of the array is the number of devices associated with program. If a binary is not available for a device(s), a size of zero is returned.

Lasterror is set.

128.9.6 BuildLog(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the build log when BuildProgram was called for device.
Notes:

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

128.9.7 BuildOptions(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the build options specified by the options argument in BuildProgram for device.
Notes:

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

128.9.8 BuildProgram(device as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Builds (compiles and links) a program executable from the program source or binary.
Notes: See other BuildProgram method for details
See also:

- 128.9.9 BuildProgram(devices() as CLDeviceMBS, options as string = "") 18634
- 128.9.10 BuildProgram(options as string = "") 18637

128.9.9 BuildProgram(devices() as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Builds (compiles and links) a program executable from the program source or binary.
Notes:

OpenCL allows program executables to be built using the source or the binary.

devices	Optional, a list of devices you want to build for. If you specify no device, you build for all devices.
device	Optional, the device you want to build for. If you specify no device, you build for all devices.
options	A string that describes the build options to be used for building the program executable. The list of supported options is described in "Build Options" below.

The build options are categorized as pre-processor options, options for math intrinsics, options that control optimization and miscellaneous options. This specification defines a standard set of options that must be supported by an OpenCL compiler when building program executables online or offline. These may be extended by a set of vendor- or platform-specific options.

Preprocessor Options

These options control the OpenCL preprocessor which is run on each program source before actual compilation. -D options are processed in the order they are given in the options argument to clBuildProgram.
-D name
Predefine name as a macro, with definition 1.

-D name=definition
The contents of definition are tokenized and processed as if they appeared during translation phase three in a '# define' directive. In particular, the definition will be truncated by embedded newline characters.

-I dir
Add the directory dir to the list of directories to be searched for header files.

Math Intrinsics Options

These options control compiler behavior regarding floating-point arithmetic. These options trade off between speed and correctness.

-cl-single-precision-constant
Treat double precision floating-point constant as single precision constant.

-cl-denorms-are-zero
This option controls how single precision and double precision denormalized numbers are handled. If specified as a build option, the single precision denormalized numbers may be flushed to zero and if the optional extension for double precision is supported, double precision denormalized numbers may also be flushed to zero. This is intended to be a performance hint and the OpenCL compiler can choose not to flush denorms to zero if the device supports single precision (or double precision) denormalized numbers.

This option is ignored for single precision numbers if the device does not support single precision denormalized numbers i.e. kFPDenorm bit is not set in SingleFPConfig.

This option is ignored for double precision numbers if the device does not support double precision or if it does support double precison but CL_FP_DENORM bit is not set in CL_DEVICE_DOUBLE_FP_CONFIG.

This flag only applies for scalar and vector single precision floating-point variables and computations on these floating-point variables inside a program. It does not apply to reading from or writing to image objects.

Optimization Options

These options control various sorts of optimizations. Turning on optimization flags makes the compiler attempt to improve the performance and/or code size at the expense of compilation time and possibly the ability to debug the program.
-cl-opt-disable
This option disables all optimizations. The default is optimizations are enabled.

-cl-strict-aliasing
This option allows the compiler to assume the strictest aliasing rules.

The following options control compiler behavior regarding floating-point arithmetic. These options trade off between performance and correctness and must be specifically enabled. These options are not turned on by default since it can result in incorrect output for programs which depend on an exact implementation of IEEE 754 rules/specifications for math functions.

-cl-mad-enable
Allow a * b + c to be replaced by a mad. The mad computes a * b + c with reduced accuracy. For example, some OpenCL devices implement mad as truncate the result of a * b before adding it to c.

-cl-no-signed-zeros
Allow optimizations for floating-point arithmetic that ignore the signedness of zero. IEEE 754 arithmetic specifies the behavior of distinct +0.0 and -0.0 values, which then prohibits simplification of expressions such as x+0.0 or 0.0*x (even with -clfinite-math only). This option implies that the sign of a zero result isn't significant.

-cl-unsafe-math-optimizations
Allow optimizations for floating-point arithmetic that (a) assume that arguments and results are valid, (b) may violate IEEE 754 standard and (c) may violate the OpenCL numerical compliance requirements as defined in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option includes the -cl-no-signed-zeros and -cl-mad-enable options.

-cl-finite-math-only
Allow optimizations for floating-point arithmetic that assume that arguments and results are not NaNs or $\pm\infty$. This option may violate the OpenCL numerical compliance requirements defined in in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5.

-cl-fast-relaxed-math
Sets the optimization options -cl-finite-math-only and -cl-unsafe-math-optimizations. This allows optimizations for floating-point arithmetic that may violate the IEEE 754 standard and the OpenCL numerical compliance requirements defined in the specification in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option causes the preprocessor macro __FAST_RELAXED_MATH__ to be defined in the OpenCL program.

Options to Request or Suppress Warnings

Warnings are diagnostic messages that report constructions which are not inherently erroneous but which are risky or suggest there may have been an error. The following languageindependent options do not enable specific warnings but control the kinds of diagnostics produced by the OpenCL compiler.
-w
Inhibit all warning messages.

-Werror
Make all warnings into errors.

Lasterror is set.
See also:

- 128.9.8 BuildProgram(device as CLDeviceMBS, options as string = "") 18634
- 128.9.10 BuildProgram(options as string = "") 18637

128.9.10 BuildProgram(options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Builds (compiles and links) a program executable from the program source or binary.
Notes:

See other BuildProgram method for details
Lasterror is set.
See also:

- 128.9.8 BuildProgram(device as CLDeviceMBS, options as string = "") 18634
- 128.9.9 BuildProgram(devices() as CLDeviceMBS, options as string = "") 18634

128.9.11 BuildStatus(device as CLDeviceMBS) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the build status of program for a specific device as given by device.
Notes:

See kBuild* constants.
Lasterror is set.

128.9.12 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a program object for a context, and loads specified binary data into the program object.
Notes:

context: Must be a valid OpenCL context.
devices: a list of devices that are in context. The binaries are loaded for devices specified in this list.

The devices associated with the program object will be the list of devices specified by devices. The list of devices specified by devices must be devices associated with context.

binaries: An array of strings containing the program binaries to be loaded for devices specified by devices. For each device given by devices(i), the string with the program binary for that device is given by binaries(i).

The program binaries specified by binaries contain the bits that describe the program executable that will be run on the device(s) associated with context. The program binary can consist of either or both of device-specific executable(s), and/or implementation-specific intermediate representation (IR) which will be converted to the device-specific executable.

sttaus: Returns whether the program binary for each device specified in devices was loaded successfully or not. It is an array of ubound -1 and is filled by the plugin.

Lasterror is set.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

- 128.9.14 Constructor(context as CLContextMBS, lines() as string) 18639

128.9.13 Constructor(context as CLContextMBS, line as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a program object for a context, and loads the source code specified by the line string into the program object.
Notes:

context: Must be a valid OpenCL context.
line: A string with all the lines of the program.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.

- 128.9.14 Constructor(context as CLContextMBS, lines() as string) 18639

128.9.14 Constructor(context as CLContextMBS, lines() as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a program object for a context, and loads the source code specified by the text strings

in the lines array into the program object.
Notes:

context: Must be a valid OpenCL context.
lines: An array of strings that make up the source code.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.

- 128.9.13 Constructor(context as CLContextMBS, line as string) 18639

128.9.15 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The context for this program.
Notes: Lasterror is set.

128.9.16 CreateKernelsInProgram(maxKernels as Integer = 100) as CLKernelMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates kernel objects for all kernel functions in program.
Notes:

maxKernels: maximum number of kernels to return.

Kernel objects are not created for any ___kernel functions in program that do not have the same function definition across all devices for which a program executable has been successfully built.

Kernel objects can only be created once you have a program object with a valid program source or binary loaded into the program object and the program executable has been successfully built for one or more devices associated with program. No changes to the program executable are allowed while there are kernel objects associated with a program object. This means that calls to BuildProgram return kInvalidOperation (in lasterror) if there are kernel objects attached to a program object. The OpenCL context associated with program will be the context associated with kernel. The list of devices associated with program are the devices associated with kernel. Devices associated with a program object for which a valid program executable has been built can be used to execute kernels declared in the program object.

Lasterror is set.

128.9.17 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the list of devices associated with the program object.
Notes: This can be the devices associated with context on which the program object has been created or can be a subset of devices that are specified when a progam object is created.

128.9.18 NumDevices as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the number of devices associated with program.
Notes: Lasterror is set.

128.9.19 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the program reference count.
Notes: Lasterror is set.

128.9.20 Source as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the program source code specified in the Constructor.
Notes: The source string returned is a concatenation of all source strings specified to Constructor.

128.9.21 Properties

128.9.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.9.23 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.9.24 Constants

128.9.25 kBuildError = -2

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device generated an error.

128.9.26 kBuildInProgress = -3

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device

has not finished.

128.9.27 kBuildNone = -1

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the build status constants
Notes: The build status returned if no build has been performed on the specified program object for device.

128.9.28 kBuildSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device was successful.

128.10 class CLSamplerMBS

128.10.1 class CLSamplerMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a Sampler.

128.10.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr9
- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

128.10.3 Methods

128.10.4 AddressingMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the value specified by addressingmode argument to Constructor.

128.10.5 Constructor(Context as CLContextMBS, NormalizedCoords as Boolean, AddressingMode as UInt32, FilterMode as UInt32)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a sampler object.
Notes:

context: Must be a valid OpenCL context.

NormalizedCoords: Determines if the image coordinates specified are normalized (if normalized_coords is true) or not (if normalized_coords is false).

AddressingMode: Specifies how out-of-range image coordinates are handled when reading from an image. This can be set to kAddressRepeat, kAddressClampToEdge, kAddressClamp, and kAddressNone.

FilterMode: Specifies the type of filter that must be applied when reading an image. This can be kFilterNearest or kFilterLinear.

Lasterror is set.

A sampler object describes how to sample an image when the image is read in the kernel. The built-in functions to read from an image in a kernel take a sampler as an argument. The sampler arguments to the image read function can be sampler objects created using OpenCL functions and passed as argument values to the kernel or can be samplers declared inside a kernel. In this section we discuss how sampler objects are created using OpenCL functions.

128.10.6 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the context specified when the sampler is created.

128.10.7 FilterMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the value specified by filterMode argument to Constructor.

128.10.8 NormalizedCoords as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the value specified by normalizedCoords argument to Constructor.

128.10.9 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the sampler reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.

128.10.10 Properties

128.10.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

128.10.12 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

128.10.13 Constants

128.10.14 kAddressClamp = & h1132

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the address modes.

128.10.15 kAddressClampToEdge = & h1131

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the address modes.

128.10.16 kAddressNone = & h1130

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the address modes.

128.10.17 kAddressRepeat = & h1133

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the address modes.

128.10.18 kFilterLinear = & h1141

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the filter mode constants.

128.10.19 kFilterNearest = & h1140

MBS MacFrameworks Plugin, Plugin Version: 11.1. **Function:** One of the filter mode constants.

128.11 module OpenCLMBS

128.11.1 module OpenCLMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The module for OpenCL.
Notes:

from wikipedia:

OpenCL (Open Computing Language) is a framework for writing programs that execute across heterogeneous platforms consisting of CPUs, GPUs, and other processors. OpenCL includes a language (based on C99) for writing kernels (functions that execute on OpenCL devices), plus APIs that are used to define and then control the platforms. OpenCL provides parallel computing using task-based and data-based parallelism.

- 7.6, page 8: News

128.11.4 Methods

128.11.5 AllDeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries number of devices with given types.
Example:

```
dim c as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeCPU)
dim g as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeGPU)
MsgBox str(c)+" CPU and "+str(g)+" GPU"
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

128.11.6 AllDevices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries devices with given types.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

128.11.7 GetExtensionFunctionAddress(name as string) as ptr

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the address of the extension function named by funcname.
Notes:

The function GetExtensionFunctionAddress returns the address of the extension function named by funcname. The pointer returned should be cast to a function pointer type matching the extension function's definition defined in the appropriate extension specification and header file. A return value of nil indicates that the specified function does not exist for the implementation. A non-nil return value for GetExtensionFunctionAddress does not guarantee that an extension function is actually supported. The application must also make a corresponding query using CLPlatformMBS.Extensions or CLDeviceMBS.Extensions to determine if an extension is supported by the OpenCL implementation.

GetExtensionFunctionAddress may not be queried for core (non-extension) functions in OpenCL. For functions that are queryable with clGetExtensionFunctionAddress, implementations may choose to also export those functions statically from the object libraries implementing those functions. However, portable applications cannot rely on this behavior.

Since there is no way to qualify the query with a device, the function pointer returned must work for all implementations of that extension on different devices. The behavior of calling a device extension function on a device not supporting that extension is undefined.

128.11.8 GetPictureImageFormat(pic as picture, byref RowPitch as Integer) as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the image format this picture would need when creating a storage object with CLMemMBS.
Example:

```
dim p as new Picture(100,100,32)
dim rowbytes as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(p, rowbytes)

MsgBox hex(format.ImageChannelOrder)+" "+hex(format.ImageChannelDataType)+" "+str(rowbytes)
// shows 10B7 and 10D2 and 416 on Mac OS X Carbon
```

Notes: As Xojo uses 4 bytes per pixel on Mac and Windows, the plugin returns ARGB (or other byte order). The alpha channel is not used as Xojo stores

128.11.9 isAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether OpenCL is available.
Example:

```
if not OpenCLMBS.isAvailable then
if TargetMachO and TargetX86 then
MsgBox "OpenCL not available. Please install Mac OS X 10.6 to use it."
else
MsgBox "OpenCL not available. You need a Mac with Intel processor running Mac OS X 10.6."
end if
end if
```

Notes: Should return true on Mac OS X 10.6 and false everywhere else.

128.11.10 PlatformCount as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries number of platforms available.
Example:

```
MsgBox str(OpenCLMBS.PlatformCount)
```

Notes:

Typically you have two with modern Macs as you get both CPU and GPU listed.
Lasterror is set.

128.11.11 Platforms as CLPlatformMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Obtain the list of platforms available.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
```

next

Notes: Lasterror is set.

128.11.12 UnloadCompiler

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Allows the implementation to release the resources allocated by the OpenCL compiler.
Example:

OpenCLMBS.UnloadCompiler
MsgBox OpenCLMBS.LastErrorMessage

Notes:

This is a hint from the application and does not guarantee that the compiler will not be used in the future or that the compiler will actually be unloaded by the implementation. Calls to BuildProgram after UnloadCompiler will reload the compiler, if necessary, to build the appropriate program executable.
Lasterror is set.

128.11.13 WaitForEvents(events() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Waits on the host thread for commands identified by event objects to complete.
Notes:

events: The events specified in event_list act as synchronization points.

Waits on the host thread for commands identified by event objects in event_list to complete. A command is considered complete if its execution status is kCommandExecutionStatusComplete or a negative value.

Lasterror is set.

128.11.14 Properties

128.11.15 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last error code.
Example:

MsgBox str(OpenCLMBS.LastError)

Notes:

All the functions in all the OpenCL classes set this property, too.
(Read only property)

128.11.16 LastErrorMessage as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text message for the last error code.
Example:

MsgBox OpenCLMBS.LastErrorMessage

Notes: (Read only property)

128.11.17 Constants

128.11.18 kBuildProgramFailure = -11

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.19 kCompilerNotAvailable = -3

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.20 kDeviceNotAvailable = -2

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.21 kDeviceNotFound = -1

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.22 kImageFormatMismatch = -9

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.23 kImageFormatNotSupported = -10

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.24 kInvalidArgIndex = -49

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.25 kInvalidArgSize = -51

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.26 kInvalidArgValue = -50

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.27 kInvalidBinary = -42

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.28 kInvalidBufferSize = -61

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.29 kInvalidBuildOptions = -43

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.30 kInvalidCommandQueue = -36

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.31 kInvalidContext = -34

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.32 kInvalidDevice = -33

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.33 kInvalidDeviceType = -31

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.34 kInvalidEvent = -58

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.35 kInvalidEventWaitList = -57

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.36 kInvalidGlobalOffset = -56

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.37 kInvalidGlObject = -60

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.38 kInvalidHostPtr = -37

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.39 kInvalidImageFormatDescriptor = -39

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.40 kInvalidImageSize = -40

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.41 kInvalidKernel = -48

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.42 kInvalidKernelArgs = -52

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.43 kInvalidKernelDefinition = -47

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.44 kInvalidKernelName = -46

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.45 kInvalidMemObject = -38

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.46 kInvalidMipLevel = -62

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.47 kInvalidOperation = -59

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.48 kInvalidPlatform = -32

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.49 kInvalidProgram = -44

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.50 kInvalidProgramExecutable = -45

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.51 kInvalidQueueProperties = -35

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.52 kInvalidSampler = -41

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.53 kInvalidValue = -30

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.54 kInvalidWorkDimension = -53

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.55 kInvalidWorkGroupSize = -54

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.56 kInvalidWorkItemSize = -55

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.57 kMapFailure = -12

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.58 kMemCopyOverlap = -8

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.59 kMemObjectAllocationFailure = -4

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.60 kOutOfHostMemory = -6

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.61 kOutOfResources = -5

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.62 kProfilingInfoNotAvailable = -7

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

128.11.63 kSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 9.6. **Function:** One of the constants for OpenCL errors.

Chapter 129

PDFKit

129.1 class CustomPDFViewMBS

129.1.1 class CustomPDFViewMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a custom PDFView.
Notes: Subclass of the PDFViewMBS class.

129.1.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr2
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Real Studio Plugins, version 12.5pr5
- MBS Real Studio Plugins, version 12.0pr7
- Gestures on Mac OS X
- Have you checked out PDFViewMBS class?
- MBS REALbasic Plugins, version 10.3pr4

129.1.3 Methods

129.1.4 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clear overlay item for this page.

Notes:

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

129.1.5 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

129.1.6 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for a new custom PDFView object.
See also:

- 129.1.7 Constructor(Handle as Integer) 18662
- 129.1.8 Constructor(left as Double, top as Double, width as Double, height as Double) 18662

129.1.7 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.
See also:

- 129.1.6 Constructor 18662
- 129.1.8 Constructor(left as Double, top as Double, width as Double, height as Double) 18662

129.1.8 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for a new custom PDFView object.
See also:

- 129.1.6 Constructor 18662
- 129.1.7 Constructor(Handle as Integer) 18662

129.1.9 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

129.1.10 Properties

129.1.11 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get/Set overlay item.
Notes:

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

129.1.12 Events

129.1.13 acceptsFirstMouse(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Overridden by subclasses to return true if the receiver should be sent a mouseDown event for an initial mouse-down event, false if not.
Notes:

The receiver can either return a value unconditionally or use the location of event e to determine whether or not it wants the event. The default implementation ignores the event and returns false.

Implement this event in a subclass to allow instances to respond to click-through. This allows the user to click on a view in an inactive window, activating the view with one click, instead of clicking first to make the window active and then clicking the view. Most view objects refuse a click-through attempt, so the event simply activates the window. Many control objects, however, such as instances of NSButton and NSSlider, do accept them, so the user can immediately manipulate the control without having to release the mouse button.

129.1.14 acceptsFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether to accept first responder.
Notes: Return true if your control can have the focus and false if not.

129.1.15 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after a page was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.16 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after a page annotations were drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.17 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after something was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.18 becomeFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when the object gets focus.
Notes: Return true to accept.

129.1.19 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a page was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.20 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a page annotations were drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.21 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a something was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.1.22 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that the user has begun a touch gesture.
Notes:

e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.

Return true if you handled this event.

129.1.23 canBecomeKeyView as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the receiver can become key view.
Notes: Returns true if the receiver can become key view, false otherwise.

129.1.24 Close

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the custom NSView is destroyed.

129.1.25 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

129.1.26 draggingEnded(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

129.1.27 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated and draggingExited even if NSDragOperationNone is returned by this method.

129.1.28 draggingExited(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

129.1.29 draggingSessionEndedAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS, operation as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging session has completed.
Notes:

session: The dragging session.
screenPoint: The point where the drag ended, in screen coordinates.
operation: The drag operation. See constants for drag operation types.

Available in OS X v10.7 and later.

129.1.30 draggingSessionMovedToPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the drag moves on the screen.
Notes:

session: The dragging session.
screenPoint: The point where the drag moved to, in screen coordinates.

Available in OS X v10.7 and later.

129.1.31 draggingSessionSourceOperationMaskForDraggingContext(session as NSDraggingSessionMBS, context as Integer) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Declares the types of operations the source allows to be performed. (required)
Notes:

session: The dragging session.
context: The dragging context. See NSDraggingContext constants for the supported values.

Return the appropriate dragging operation as defined in constants.

In the future Apple may provide more specific "within" values in the future. To account for this, for unrecognized localities, return the operation mask for the most specific context that you are concerned with.

129.1.32 draggingSessionWillBeginAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the drag will begin.
Notes:

session: The dragging session.
screenPoint: The point where the drag will begin, in screen coordinates.

Available in OS X v10.7 and later.

129.1.33 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

129.1.34 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that the user has ended a touch gesture.
Notes:

e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

129.1.35 ignoreModifierKeysForDraggingSession(session as NSDraggingSession-MBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the modifier keys will be ignored for this dragging session.
Notes:

session: The dragging session.

Return true if the modifier keys will be ignored, false otherwise.
Available in OS X v10.7 and later.

129.1.36 isOpaque as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether this view is opaque.

129.1.37 keyDown(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the key events.
Notes: Return true if you handled this event.

129.1.38 keyUp(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the key events.
Notes: Return true if you handled this event.

129.1.39 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that the user has begun a pinch gesture.
Notes:

e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

129.1.40 menuForEvent(e as NSEventMBS, defaultMenu as NSMenuMBS) as NSMenuMBS

MBS MacControls Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Overridden by subclasses to return a context-sensitive pop-up menu for a given mouse-down event.
Notes:

theEvent: An object representing a mouse-down event.
defaultMenu: The menu as constructed by super class.

The receiver can use information in the mouse event, such as its location over a particular element of the receiver, to determine what kind of menu to return. For example, a text object might display a text-editing menu when the cursor lies over text and a menu for changing graphics attributes when the cursor lies over an embedded image.

The default implementation returns the default menu.

129.1.41 mouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.42 mouseDownCanMoveWindow as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called so you can decide what happens with mouse down.
Notes:

Return true if you do not need to handle a mouse down and it can pass through to superviews; False if you need to handle the mouse down.

This allows iApp-type applications to determine the region by which a window can be moved. By default, this method returns false if the view is opaque; otherwise, it returns true. Subclasses can override this method to return a different value.

129.1.43 mouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.44 mouseEntered(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.45 mouseExited(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.46 mouseMoved(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.47 mouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.48 Open

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the custom NSView is created.

129.1.49 otherMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

129.1.50 otherMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

129.1.51 otherMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

129.1.52 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

129.1.53 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.
Returns true if the receiver agrees to perform the drag operation and false if not.
This method is invoked only if the most recent draggingEntered or draggingUpdated message returned an acceptable drag-operation value.
If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this method.

129.1.54 pressureChange(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes:

This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

129.1.55 resignFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Focus is going away.

Notes: Return true to accept.

129.1.56 rightMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.57 rightMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.58 rightMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the mouse events.
Notes: Return true if you handled this event.

129.1.59 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that the user has begun a rotation gesture.
Notes:

e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

129.1.60 scrollWheel(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the subclass that the mouse's scroll wheel has moved.
Notes:

e: An object encapsulating information about the wheel-scrolling event.

The default implementation simply passes this message to the next responder.
Return true to not pass the event.

129.1.61 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that the user has begun a swipe gesture.
Notes:

e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

129.1.62 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging images should be changed.
Notes:

sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

129.1.63 viewDidMoveToWindow

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs the receiver that it has been added to a new view hierarchy.
Notes:

The default implementation does nothing; subclasses can implement this event to perform whatever actions are necessary.

window may return nil when this method is invoked, indicating that the receiver does not currently reside in any window. This occurs when the receiver has just been removed from its superview or when the receiver has just been added to a superview that does not itself have a window. Overrides of this method may choose to ignore such cases if they are not of interest.

129.1.64 wantsPeriodicDraggingUpdates as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the destination object whether it wants to receive periodic draggingUpdated messages.
Notes:

Return true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated messages even if nothing changes.

129.2 class PDFActionGoToMBS

129.2.1 class PDFActionGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** PDFActionGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action.
Notes:

A PDFActionGoTo object represents the action of going to a specific location within the PDF document.
Subclass of the PDFActionMBS class.

129.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

129.2.3 Methods

129.2.4 Constructor(destination as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the go-to action.
Notes:

destination: The destination with which to initialize the go-to action.
Available in Mac OS X v10.5 and later.

129.2.5 Properties

129.2.6 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destination associated with the action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.3 class PDFActionMBS

129.3.1 class PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDFAction represents an action that is performed when, for example, a PDF annotation is activated or an outline item is clicked.
Notes:

A PDFAction object represents an action associated with a PDF element, such as an annotation or a link, that the viewer application can perform. See the Adobe PDF Specification for more about actions and action types.

PDFAction is an abstract superclass of the following concrete classes:

- PDFActionGoToMBS
- PDFActionNamedMBS
- PDFActionRemoteGoToMBS
- PDFActionResetFormMBS
- PDFActionURLMBS

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

129.3.2 Methods

129.3.3 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
Notes:

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFActionMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

129.3.4 copy as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the action object.

129.3.5 type as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the type of the action.
Notes:

The PDF action type returned by this method may not correspond precisely to the name of a PDFAction subclass. For example, a PDFActionURL object might return "URI" or "Launch," depending on the original action as defined by the Adobe PDF Specification. In the PDF Kit, these two actions are handled in the single PDFActionURL subclass, and the more familiar term "URL" is used instead.

Available in Mac OS X v10.5 and later.

129.3.6 Properties

129.3.7 Handle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal reference tot he PDF action object.
Notes: (Read and Write property)

129.4 class PDFActionNamedMBS

129.4.1 class PDFActionNamedMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** PDFActionNamed defines methods used to work with actions in PDF documents, some of which are named in the Adobe PDF Specification.
Notes:

A PDFActionNamed object represents an action with a defined name, such as "Go back" or "Zoom in."
Subclass of the PDFActionMBS class.

129.4.2 Methods

129.4.3 Constructor(name as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the PDFActionName object with the specified named action.
Notes: Available in Mac OS X v10.5 and later.

129.4.4 Properties

129.4.5 name as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the named action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.4.6 Constants

129.4.7 kPDFActionNamedFind = 8

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Find action.
Available in Mac OS X v10.5 and later.

129.4.8 kPDFActionNamedFirstPage = 3

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The First Page action.
Available in Mac OS X v10.5 and later.

129.4.9 kPDFActionNamedGoBack = 5

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Go Back action.
Available in Mac OS X v10.5 and later.

129.4.10 kPDFActionNamedGoForward = 6

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Go Forward action.
Available in Mac OS X v10.5 and later.

129.4.11 kPDFActionNamedGoToPage = 7

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Go to Page action.
Available in Mac OS X v10.5 and later.

129.4.12 kPDFActionNamedLastPage = 4

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Last Page action.
Available in Mac OS X v10.5 and later.

129.4.13 kPDFActionNamedNextPage = 1

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Next Page action.
Available in Mac OS X v10.5 and later.

129.4.14 kPDFActionNamedNone = 0

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The action has no name.
Available in Mac OS X v10.5 and later.

129.4.15 kPDFActionNamedPreviousPage = 2

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Previous Page action.
Available in Mac OS X v10.5 and later.

129.4.16 kPDFActionNamedPrint = 9

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Print action.
Available in Mac OS X v10.5 and later.

129.4.17 kPDFActionNamedZoomIn = 10

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Zoom In action.
Available in Mac OS X v10.5 and later.

129.4.18 kPDFActionNamedZoomOut = 11

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the name constants for the action.
Notes:

The Zoom Out action.
Available in Mac OS X v10.5 and later.

129.5 class PDFActionRemoteGoToMBS

129.5.1 class PDFActionRemoteGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDFActionRemoteGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action that targets another document.
Notes:

Available in Mac OS X v10.5 and later.
Subclass of the PDFActionMBS class.

129.5.2 Methods

129.5.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes:

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
file: The file of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 129.5.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string) 18685

129.5.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes:

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
url: The URL of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies

the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 129.5.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem) 18685

129.5.5 Properties

129.5.6 pageIndex as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The zero-based page index referenced by the remote go-to action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.5.7 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The point, in page space, on the page referenced by the remote go-to action.
Notes:

The point on the page of the remote document referenced by the action. If either the x value or the y value of the point is kPDFDestinationUnspecifiedValue, no position on the page is specified.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.5.8 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The URL of the document referenced by the remote go-to action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.6 class PDFActionResetFormMBS

129.6.1 class PDFActionResetFormMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDFActionResetForm, a subclass of PDFAction, defines methods for getting and clearing fields in a PDF form.
Notes:

A PDFActionResetForm object represents an action associated with a PDF form.
Subclass of the PDFActionMBS class.

129.6.2 Methods

129.6.3 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a reset form action.
Notes:

Initially, there are no fields and fieldsIncludedAreCleared returns true.

Available in Mac OS X v10.5 and later.

129.6.4 fields as string()

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of fields associated with the reset action.
Notes:

An array of strings that corresponds to the fieldNames property of widget annotations (such as PDFAnnotationButtonWidget) on the PDF page. This method can return an empty array.

Available in Mac OS X v10.5 and later.

129.6.5 setFields(fields() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the array of fields associated with the reset action.
Notes: Available in Mac OS X v10.5 and later.

129.6.6 Properties

129.6.7 fieldsIncludedAreCleared as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the fields associated with the reset action are cleared when the action is performed.
Notes:

If true, the reset action's fields are cleared when the action is performed. If false, the fields are excluded from the reset action; that is, they are not cleared, but all other fields in the document are cleared.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.7 class PDFActionURLMBS

129.7.1 class PDFActionURLMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** PDFActionURL, a subclass of PDFAction, defines methods for getting and setting the URL associated with a URL action.
Notes: Subclass of the PDFActionMBS class.

129.7.2 Methods

129.7.3 Constructor(url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a URL action with the specified URL.
Notes: Available in Mac OS X v10.5 and later.

129.7.4 Properties

129.7.5 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The URL associated with the URL action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8 class PDFAnnotationButtonWidgetMBS

129.8.1 class PDFAnnotationButtonWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an annotation button widget.
Notes: Subclass of the PDFAnnotationMBS class.

129.8.2 Methods

129.8.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor which creates a new annotation widget.

129.8.4 Properties

129.8.5 allowsToggleToOff as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value indicating whether a radio button behaves in a toggling manner.
Notes:

True if clicking a radio button control that is already in the on state toggles it to the off state; otherwise false.

Available in Mac OS X v10.5 and later.
(Read only property)

129.8.6 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The background color.
Notes: (Read and Write property)

129.8.7 caption as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text of the label on a push button control.
Notes:

This method applies only to the label drawn on a control of type kPDFWidgetPushButtonControl.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.8 controlType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The control type of this widget.
Notes:

Value is one of the following constants:

kPDFWidgetUnknownControl
kPDFWidgetPushButtonControl
kPDFWidgetRadioButtonControl
kPDFWidgetCheckBoxControl
(Read and Write property)

129.8.9 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal name of a field (used for reset-form actions).
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.10 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font used in the control's label.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.11 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font color used in the control's label.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.12 Highlighted as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether the control is highlighted when it is drawn.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.13 onStateValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string associated with the on state of a radio button or checkbox control.
Notes:

This is a required string for controls of types kPDFWidgetRadioButtonControl and kPDFWidgetCheckBoxControl. The off state is always labeled "Off".

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.8.14 state as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The state value.
Notes: (Read and Write property)

129.8.15 Events

129.8.16 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.8.17 Constants

129.8.18 kPDFWidgetCheckBoxControl = 2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the control types for this widget.

129.8.19 kPDFWidgetPushButtonControl = 0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the control types for this widget.

129.8.20 kPDFWidgetRadioButtonControl = 1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the control types for this widget.

129.8.21 kPDFWidgetUnknownControl = -1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the control types for this widget.

129.8.22 NSOffState = 0

MBS MacControls Plugin, Plugin Version: 12.5. **Function:** One of the state constants.
Notes: The corresponding feature is in effect nowhere.

129.8.23 NSOnState = 1

MBS MacControls Plugin, Plugin Version: 12.5. **Function:** One of the state constants.
Notes: The corresponding feature is in effect everywhere.

129.9 class PDFAnnotationChoiceWidgetMBS

129.9.1 class PDFAnnotationChoiceWidgetMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A PDFAnnotationChoiceWidget object provides user interactivity on a page of a PDF document, in the form of pop-up menus and lists.
Notes:

PDFAnnotationChoiceWidget inherits general annotation behavior from the PDFAnnotation class. If you use a PDFAnnotationChoiceWidget object, your application must handle hit testing, unless you are simply using PDFView to display content. This is because PDFView automatically handles hit testing for you.
Subclass of the PDFAnnotationMBS class.

129.9.2 Methods

129.9.3 choices as string()

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of strings that represent the items available in the list or pop-up menu of the choice widget annotation.
Notes: Available in Mac OS X v10.5 and later.

129.9.4 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a PDF annotation object.
Notes:

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.4 and later.

129.9.5 setChoices(choices() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the items available in the list or pop-up menu of the choice widget annotation.
Notes:

choices: Send an array of strings, each of which represents an item in the list or pop-up menu of the choice annotation widget.

Available in Mac OS X v10.5 and later.

129.9.6 Properties

129.9.7 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color of the widget annotation background.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.8 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal field name associated with the widget annotation's value.
Notes:

If the widget annotation is backed by PDF form data, it can associate an optional field name with a value or other data.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.9 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font used to display the text in the widget annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.10 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font color used to display the text in the widget annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.11 isListChoice as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the widget annotation is a list.
Notes:

A choice widget annotation can be either a list or a pop-up menu.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.12 stringValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The selection in the widget annotation.
Notes:

If the widget annotation object is backed by PDF form data, this method returns the value associated with the appropriate field in the form object, if possible.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.9.13 Events

129.9.14 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.10 class PDFAnnotationCircleMBS

129.10.1 class PDFAnnotationCircleMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for an annotation circle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

129.10.2 Methods

129.10.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new annotation circle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.10.4 Properties

129.10.5 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Fill color used for drawing annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)
a.interiorColor = NSColorMBS.magentaColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

129.10.6 Events

129.10.7 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.11 class PDFAnnotationFreeTextMBS

129.11.1 class PDFAnnotationFreeTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a free text annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationFreeTextMBS then
dim ft as PDFAnnotationFreeTextMBS = PDFAnnotationFreeTextMBS(a)
MsgBox ft.contents
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.

129.11.2 Methods

129.11.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new free text annotation.

129.11.4 Properties

129.11.5 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Alignment of text within annotation bounds.
Example:

```
dim a as PDFAnnotationFreeTextMBS // an annotation

if a.alignment=a.NSLeftTextAlignment then
```

```
// left aligned
end if
```

Notes:

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

129.11.6 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Font associated with the text field.
Notes: (Read and Write property)

129.11.7 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font color used in the text field of the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.11.8 Events

129.11.9 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.11.10 Constants

129.11.11 NSCenterTextAlignment=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for center.

129.11.12 NSJustifiedTextAlignment=3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for justified.

129.11.13 NSLeftTextAlignment=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for left.

129.11.14 NSNaturalTextAlignment=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for natural.

129.11.15 NSRightTextAlignment=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for right.

129.12 class PDFAnnotationInkMBS

129.12.1 class PDFAnnotationInkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for an ink annotation.
Notes: Subclass of the PDFAnnotationMBS class.

129.12.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

129.12.3 Methods

129.12.4 addBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a Bezier path to an annotation.

129.12.5 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new ink annotation.

129.12.6 paths as NSBezierPathMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array containing the Bezier paths that make up an annotation.
Example:

```
dim a as new PDFAnnotationInkMBS(0, 0, 100, 100)

dim b1 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(10, 10, 10, 10))
a.addBezierPath b1

dim b2 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(50, 50, 20, 30))
a.addBezierPath b2

dim paths() as NSBezierPathMBS = a.paths
```

break

129.12.7 removeBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes a Bezier path from an annotation.

129.12.8 Events

129.12.9 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.13 class PDFAnnotationLineMBS

129.13.1 class PDFAnnotationLineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for a line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.

129.13.2 Methods

129.13.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for a new annotation line.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
```

129.13.4 Properties

129.13.5 endLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Style used for ornaments at the line end.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes: (Read and Write property)

129.13.6 endPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A point specifying the end point for line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

129.13.7 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color used to fill the ornament at the ends of the line.

Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.13.8 startLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Style used for ornaments at the line start.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleSquare
```

Notes: (Read and Write property)

129.13.9 startPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A point specifying the start pointfor line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

129.13.10 Events

129.13.11 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.13.12 Constants

129.13.13 kPDFLineStyleCircle=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleCircle

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

129.13.14 kPDFLineStyleClosedArrow=5

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleClosedArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

129.13.15 kPDFLineStyleDiamond=3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleDiamond
```

129.13.16 kPDFLineStyleNone=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.

129.13.17 kPDFLineStyleOpenArrow=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)
```

```
dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

129.13.18 kPDFLineStyleSquare=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** On of the constants for the styles used for line end caps.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.endLineStyle = a.kPDFLineStyleSquare
```

129.14 class PDFAnnotationLinkMBS

129.14.1 class PDFAnnotationLinkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for a link annotation.
Example:

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

129.14.2 Methods

129.14.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for a new annotation link.

129.14.4 setHighlighted(value as boolean)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The highlight state dictates how the annotation is drawn.
Notes: If a user has clicked on a "Link" annotation, you should set highlighted to true and redraw it. When the user lets up, set highlighted to false and redraw again.

129.14.5 Properties

129.14.6 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Destination for the link.
Notes: (Read and Write property)

129.14.7 URL as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: URL for the link.
Notes: (Read and Write property)

129.14.8 Events

129.14.9 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.15 class PDFAnnotationMarkupMBS

129.15.1 class PDFAnnotationMarkupMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a markup annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

129.15.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr4
- MBS Real Studio Plugins, version 12.5pr5

129.15.3 Methods

129.15.4 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new markup annotation.
Example:

```
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
```

129.15.5 quadrilateralPoints as NSPointMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get the quadrilateral points.
Example:

```
dim m as new PDFAnnotationMarkupMBS(10, 20, 30, 40)
dim points() as NSPointMBS = m.quadrilateralPoints
break // see points in debugger
```

Notes:

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

129.15.6 setQuadrilateralPoints(points() as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Set the quadrilateral points.
Notes:

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

129.15.7 Properties

129.15.8 markupType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Type of mark-up (highlight, strike-out or underline).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
```

```
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Changing the markup type also changes the annotations type to one of: "Highlight", "Strikeout", or "Underline" (these are three seperate annotation types treated here as three seperate flavors of the one PDFAnnotationMarkup class).
(Read and Write property)

129.15.9 Events

129.15.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.15.11 Constants

129.15.12 kPDFMarkupTypeHighlight=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeHighlight
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.15.13 kPDFMarkupTypeStrikeOut=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeStrikeOut
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.15.14 kPDFMarkupTypeUnderline=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.16 class PDFAnnotationMBS

129.16.1 class PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This is the base class for all annotations.
Notes:

A PDFAnnotation object by itself is not useful, only the subclasses (like PDFAnnotationCircle, PDFAnnotationText) are interesting. In parsing a PDF however, any unknown or unsupported annotations will be represented as this base class. Its drawRect method merely frames the bounds of the annotation and prints the annotation type (like "TrapNet") within the box.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

129.16.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr6
- MBS REALbasic Plugins, version 10.4pr4

129.16.3 Methods

129.16.4 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
Notes:

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFAnnotationMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

129.16.5 copy as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the annotation object.
Notes:

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the annotation.

129.16.6 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

129.16.7 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Draws the annotation on its associated page.
Notes:

The annotation is drawn relative to the origin of box in page space.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

For additional information see the "Constants" section in the PDFPage class.

Available in Mac OS X v10.4 and later.

129.16.8 removeAllAppearanceStreams

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: All appearance streams for the target annotation are removed.
Notes:

Without an appearance stream, annotations are drawn strictly according to their parameters (color, border, font, etc.). When a PDF is saved, PDF Kit will always write out an appearance stream(s) for each annotation. If the PDF is reloaded, you will need to remove the appearance streams in order to continue to edit the annotations parameters.

Requires Mac OS X 10.5.

129.16.9 Properties

129.16.10 border as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Optional border or border style that describes how to draw the annoation border (if any).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

129.16.11 bounds as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The bounding box for the annotation in page space.
Notes:

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
(Read and Write property)

129.16.12 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: For many annotations ("Circle", "Square") the stroke color.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
```

```
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes:

Used for other annotations as well.
(Read and Write property)

129.16.13 contents as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A string of text associated with an annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationTextMBS(100,100,100,100)

a.contents="Hello"
a.colorValue = NSColorMBS.redColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Often to be displayed in a pop-up when the annotation is clicked on ("FreeText" and "Text" especially).
(Read and Write property)

129.16.14 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle used internally for the object reference.

Notes: (Read and Write property)

129.16.15 hasAppearanceStream as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if the annotation has an appearance stream.
Notes:

Annotations with appearance streams are drawn using their stream. As a result, setting many parameters (like 'setColor' above), will have no visible effect.
(Read only property)

129.16.16 modificationDate as date

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The modification date of the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.16.17 mouseUpAction as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The action performed when a user releases the mouse button within an annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.16.18 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the page the annotation is associated with.
Notes: (Read only property)

129.16.19 popup as Variant

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The pop-up annotation associated with an annotation.
Notes:

The variant is a PDFAnnotationPopupMBS.

Pop-up annotations are not used with links or widgets. The bounds and open state of the pop-up annotation indicate the placement and open state of the pop-up window.

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.16.20 shouldDisplay as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies whether it should be drawn to the display or not.
Notes: (Read and Write property)

129.16.21 shouldPrint as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies whether it should be printed or not.
Notes: (Read and Write property)

129.16.22 toolTip as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String used for tooltips.
Notes:

The base class returns contents, sub-classes may override as appropriate.
(Read only property)

129.16.23 type as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the annotation type (called "Subtype" in the PDF specification since "Annot" is the

type).
Example:

```
dim a as new PDFAnnotationTextMBS(100,100,100,100)
MsgBox a.type // Text
```

Notes:

Examples include: "Text", "Link", "Line", etc.
(Read only property)

129.16.24 userName as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the user who created the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.17 class PDFAnnotationPopupMBS

129.17.1 class PDFAnnotationPopupMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A PDFAnnotationPopup object provides user interactivity on a PDF page in the form of a pop-up menu.
Notes: Subclass of the PDFAnnotationMBS class.

129.17.2 Methods

129.17.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new annotation popup annotation with the given size.

129.17.4 Properties

129.17.5 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value indicating whether the pop-up is open.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.17.6 Events

129.17.7 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.18 class PDFAnnotationSquareMBS

129.18.1 class PDFAnnotationSquareMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a square annotation.
Example:

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

129.18.2 Methods

129.18.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a square annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.18.4 Properties

129.18.5 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Fill color used for drawing annotation.
Example:

```
dim a as new PDFAnnotationSquareMBS(100,100,100,100)
a.interiorColor = NSColorMBS.greenColor
```

Notes: (Read and Write property)

129.18.6 Events

129.18.7 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.19 class PDFAnnotationStampMBS

129.19.1 class PDFAnnotationStampMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A PDFAnnotationStamp object allows you to display a word or phrase, such as "Confidential," in a PDF page.
Example:

```
// create new document with blank page
dim doc as new PDFDocumentMBS
dim page as new PDFPageMBS
doc.appendPage page

// make new stamp annotation
dim stamp as new PDFAnnotationStampMBS(100, 100, 100, 100)

// Name of stamp annotation. Standard stamps include names like, "Approved", "Draft", "TopSecret",
etc.
// The name must be representable as ASCII.
// Very little is rendered if the annotation has no appearance stream.
stamp.name = "Approved"

page.addAnnotation stamp

// save to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.Launch
else
MsgBox "write failed"
end if
```

Notes:

A PDFAnnotationStamp object should have an appearance stream associated with it; otherwise, nothing useful is rendered.
Subclass of the PDFAnnotationMBS class.

129.19.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

129.19.3 Methods

129.19.4 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new annotation stamp with the given size.

129.19.5 Properties

129.19.6 name as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name associated with the stamp annotation.
Notes:

The name must be representable in ASCII. You can set a stamp annotation's name to help you identify it, but that name is not displayed on the PDF page. You must provide the string you want displayed on the page, such as "Draft" or "Top Secret", in the appearance stream for the annotation.

Note that the name value of the stamp annotation is not necessarily identical to the user-visible appearance of the stamp annotation. For example, a stamp annotation that displays "Confidential" on a PDF page may not have a name value of "Confidential".

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.19.7 Events

129.19.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.20 class PDFAnnotationTextMBS

129.20.1 class PDFAnnotationTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for an annotation text.
Notes: Subclass of the PDFAnnotationMBS class.

129.20.2 Methods

129.20.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new annotation text.

129.20.4 Properties

129.20.5 iconType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The type of icon displayed in the PDF.
Notes:

Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
(Read and Write property)

129.20.6 Events

129.20.7 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.20.8 Constants

129.20.9 kPDFTextAnnotationIconComment=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.10 kPDFTextAnnotationIconHelp=3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.11 kPDFTextAnnotationIconInsert=6

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.12 kPDFTextAnnotationIconKey=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.13 kPDFTextAnnotationIconNewParagraph=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.14 kPDFTextAnnotationIconNote=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.20.15 kPDFTextAnnotationIconParagraph=5

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for use with the icontype property.

129.21 class PDFAnnotationTextWidgetMBS

129.21.1 class PDFAnnotationTextWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for a text widget annotation.
Notes: Subclass of the PDFAnnotationMBS class.

129.21.2 Methods

129.21.3 Constructor(left as single, top as single, width as single, height as single)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new annotation.

129.21.4 Properties

129.21.5 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Alignment of text.
Notes:

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

129.21.6 attributedStringValue as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Attributed string associated with text field (font / fontColor).
Notes:

Available on Mac OS X 10.8 or newer.
(Read and Write property)

129.21.7 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The background color of the annotation text field.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.21.8 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal name for the annotation text field.
Notes:

Field names are optional, internal names that identify text fields in a PDF form. You use field names with the PDFActionResetForm action.
Note that multiple PDFAnnotationTextWidget objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that field name is changed in all objects. If you need to ensure unique text for a PDFAnnotationTextWidget object, you must give it a unique field name.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.21.9 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Font associated with the text field.
Notes: (Read and Write property)

129.21.10 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font color used for the annotation's text field.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.21.11 maximumLength as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum number of characters allowed in the annotations string.
Notes:

A value of 0 means that there is no specified maximum.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.21.12 rotation as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The rotation angle of the annotation text field in degrees.
Notes:

The rotation angle to be applied to the annotation text field, in degrees. The rotation angle must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example -90 is changed to 270).
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.21.13 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String value associated with text field.
Notes: (Read and Write property)

129.21.14 Events

129.21.15 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

129.21.16 Constants

129.21.17 NSCenterTextAlignment=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for center.

129.21.18 NSJustifiedTextAlignment=3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for justified.

129.21.19 NSLeftTextAlignment=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for left.

129.21.20 NSNaturalTextAlignment=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for natural.

129.21.21 NSRightTextAlignment=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** The Cocoa text alignment constant for right.

129.22 class PDFBorderMBS

129.22.1 class PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for PDFKit borders.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

129.22.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

129.22.3 Methods

129.22.4 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

129.22.5 copy as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the border object.
Notes: Not available in Mac OS X 10.6.

129.22.6 dashPattern as Double()

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

129.22.7 setDashPattern(values() as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

129.22.8 Properties

129.22.9 horizontalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: For rounded-rect borders, the corner radius.
Notes:

Deprecated in Mac OS X 10.7.
(Read and Write computed property)

129.22.10 lineWidth as single

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Width of line used to strok border.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write computed property)

129.22.11 style as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether border is drawn solid, dashed etc.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Use this constants:

```
kPDFBorderStyleSolid      = 0
kPDFBorderStyleDashed     = 1
kPDFBorderStyleBeveled    = 2
kPDFBorderStyleInset      = 3
kPDFBorderStyleUnderline  = 4
```

(Read and Write computed property)

129.22.12 verticalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** For rounded-rect borders, the corner radius.
Notes:

Deprecated in Mac OS X 10.7.
(Read and Write computed property)

129.22.13 Constants

129.22.14 kPDFBorderStyleBeveled = 2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for the border style.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.22.15 kPDFBorderStyleDashed = 1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for the border style.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

129.22.16 kPDFBorderStyleInset = 3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for the border style.

129.22.17 kPDFBorderStyleSolid = 0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for the border style.

129.22.18 kPDFBorderStyleUnderline = 4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants for the border style.

129.23 class PDFDestinationMBS

129.23.1 class PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a pdf destination.

129.23.2 Methods

129.23.3 compare(dest as PDFDestinationMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a comparison result that indicates the location of the destination in the document, relative to the current position.
Notes:

A comparison result, indicating the position of the passed-in destination relative to the current position.

If destination is between the receiver's position and the end of the document, compare returns NSOrderedAscending; if it is between the receiver's position and the beginning of the document, compare returns NSOrderedDescending. Otherwise, if destination matches the receiver's position, compare returns NSOrderedSame.

This method ignores the horizontal component of the destination point (the x value). If the destination's vertical component (or y value) is kPDFDestinationUnspecifiedValue, compare treats the destination as if its y value is the top point on the destination page.

An exception is raised if destination does not have a page associated with it or if its page is associated with a document other than the receiver's document.

Available in Mac OS X v10.5 and later.

129.23.4 Constructor(page as PDFPageMBS, point as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes the destination.
Notes:

page: The page of the destination.
point: The point of the destination, in page space.

Specify point in page space. Typically, there's no need to initialize destinations. Instead, you get them from PDFAnnotationLink, PDFOutline, or PDFView objects.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.

129.23.5 copy as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the destination object.

129.23.6 kPDFDestinationUnspecifiedValue as single

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Value used for unspecified destination.
Example:

MsgBox str(PDFDestinationMBS.kPDFDestinationUnspecifiedValue)

Notes:

Unspecified value used when a destination's actual x or y value is unimportant.
Available in Mac OS X v10.5 and later.

129.23.7 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Page the destination refers to (destination page).

129.23.8 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the point, in page space, that the destination refers to.
Notes:

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.

129.23.9 Properties

129.23.10 Zoom as Double

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specify the scale factor the PDF viewer should assume for this destination.
Notes:

kPDFDestinationUnspecifiedValue indicates the scale factor is unaffected.
Available in Mac OS X 10.7 and later.
(Read and Write computed property)

129.24 class PDFDocumentDelegateMBS

129.24.1 class PDFDocumentDelegateMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a document delegate.
Notes: Subclass this class to handle document events.

129.24.2 Events

129.24.3 Close

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the delegate is destroyed.

129.24.4 didMatchString(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event for an item found.
Notes: If implemented by the delegate, called for every search instance found during a find. PDFDocument's implentation accumulates each PDFSelection in an array.

129.24.5 documentDidBeginDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The search started on the document.

129.24.6 documentDidBeginPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The page search started on this page.
Notes: PageIndex is zero based.

129.24.7 documentDidEndDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The search finished on this document.

129.24.8 documentDidEndPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The page search finished on this page.
Notes: PageIndex is zero based.

129.24.9 documentDidFindMatch(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The search found an item.

129.24.10 documentDidUnlock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The document has been unlocked.

129.24.11 Open

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the delegate is installed.

129.25 class PDFDocumentMBS

129.25.1 class PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for a PDF document.
Notes:

Basicly this is the code used by Preview.app by Apple.

Destructor is dispatched to main thread to avoid bugs in OS X 10.12.

- 6.4, page 33: Creating PDF Files, How to create PDFs using the MBS Plugins by Christian Schmitz

129.25.4 Methods

129.25.5 appendPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Appends a page to the document.

129.25.6 beginFindString(text as string, options as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Begins a find, searching the document for string.
Notes: Search results are handled via a DidFindMatch event in the delegate. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

129.25.7 cancelFindString

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Method to cancel a search.
Notes: Can be called from a user method being serviced by a find notification.

129.25.8 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new pdf document in memory.
Example:

```
dim doc as new PDFDocumentMBS // new empty document
dim page as new PDFPageMBS // new empty page

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

dim f as FolderItem=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

See also:

- 129.25.9 Constructor(data as memoryblock) 18748
- 129.25.10 Constructor(file as folderitem) 18748

129.25.9 Constructor(data as memoryblock)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new pdf document based on a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim b as BinaryStream = f.OpenAsBinaryFile(false)
dim s as string = b.Read(b.Length)

dim doc as new PDFDocumentMBS(s)

MsgBox doc.Title
```

See also:

- 129.25.8 Constructor 18747
- 129.25.10 Constructor(file as folderitem) 18748

129.25.10 Constructor(file as folderitem)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new pdf document based on a file.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

See also:

- 129.25.8 Constructor 18747
- 129.25.9 Constructor(data as memoryblock) 18748

129.25.11 copy as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the document object.

Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a copy
dim c as PDFDocumentMBS = p.copy

// remove second page
c.removePageAtIndex 1

// c has one page less
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

Notes:

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the document.

129.25.12 dataRepresentation(QuartzFilter as Variant = nil) as memoryblock

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Methods to record the current state of the PDFDocument as data string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim o as FolderItem = SpecialFolder.Desktop.Child("out.pdf")
dim b as BinaryStream = o.CreateBinaryFile("")

b.Write doc.dataRepresentation
```

Notes: Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

129.25.13 documentRef as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a CGPDFDocumentRef value for this document.
Notes:

This is the CGPDFDocument associated with the PDFDocument object. With this object you can call many

CoreGraphics API. May return 0 if the document was not created from an existing PDF file or data.

Use CGPDFDocumentMBS with Constructor taking a handle to call functions on this CGPDFDocument object.

129.25.14 exchangePageAtIndexWithPageAtIndex(indexA as Integer, indexB as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Exchanges the two pages with the given index.
Notes: Index is zero based.

129.25.15 findString(text as string, options as Integer) as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Searches entire document for string and returns an array of PDFSelections representing all instances found.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem
dim sa() as PDFSelectionMBS
dim i,c as Integer
dim s as PDFSelectionMBS

const NSCaseInsensitiveSearch=1

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

if p.pageCount=0 then
MsgBox "Failed to load the PDF."
Return
end if

sa=p.findString("Plugin",NSCaseInsensitiveSearch)

if ubound(sa)<0 then
MsgBox "no item found."
else
MsgBox str(ubound(sa)+1)+" items found."
end if
```

```
s=sa(0)
s.extendSelectionAtEnd(50)
s.extendSelectionAtStart(50)

MsgBox s.stringValue // shows a bit more text before and after the location found
```

Notes:

May return an empty array if nothing is found.
Returns nil on any error.

Supported options are:
NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

129.25.16 findStringFromSelection(text as string, selection as PDFSelectionMBS, options as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches for only the next instance of string beginning after the last character of selection with options (or preceding the first character of the selection if NSBackwardsSearch is specified as a search option).
Notes: Returns next instance as a PDFSelection or nil if the end of the document is reached. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch. Passing in nil for selection will start the search from the beginning of the document (or end if NSBackwardsSearch is specified).

129.25.17 indexForPage(page as PDFPageMBS) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Given a PDFPage, returns the pages index within the document.
Notes: Indicees are zero-based.

129.25.18 insertPage(page as PDFPageMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Inserts a page in the pdf on the given index.
Example:

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
```

```
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture

page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

Notes: Index is zero based.

129.25.19 Keywords as string()

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Array of Strings containing document keywords.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox join(doc.Keywords)
```

129.25.20 outlineItemForSelection(selection as PDFSelectionMBS) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a PDFSelection, this method returns the child outline item the selection most closely falls beneath.
Notes:

Since a selection may span multiple outline items, only the point representing the first character of the PDFSelection is considered. Typically, outline's indicate things like chapters for the PDF. Therefore, this method would help you identify the chapter the selection falls within.

For some PDFs this method returns nil.

129.25.21 pageAtIndex(index as Integer) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a PDFPage object representing the page at index.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes: Will raise an exception if index is out of bounds. Indicees are zero-based.

129.25.22 PrintOperation(PrintInfo as Variant, AutoRotate as boolean = true, scalingMode as Integer = 0) as Variant

MBS MacControls Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates print operation for PDF document.
Example:

```
// select a PDF
dim f as FolderItem = GetOpenFolderItem("")
if f = nil then Return

// open PDF
```

```
dim doc as new PDFDocumentMBS(f)

// define some print setting via PrintInfo
dim PrintInfo as new NSPrintInfoMBS

// start print operation
dim printOperation as NSPrintOperationMBS = doc.PrintOperation(printinfo)

printOperation.showsPrintPanel = true
printOperation.showsProgressPanel = true

call printOperation.runOperation
```

Notes: Returns NSPrintOperationMBS object.

129.25.23 removePageAtIndex(index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes a page in the pdf on the given index.
Notes: Index is zero based.

129.25.24 selectionForEntireDocument as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a selection representing text for the entire document.

129.25.25 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a selection representing text from page startPage and point StartCharacterIndex to page endPage and to point EndCharacterIndex on that page.
Notes: Start and end page can be the same.
See also:

- 129.25.26 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS

129.25.26 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a selection representing text from page startPage and point startPt to page endPage and to point endPt on that page.
Notes: Points are in page-space and relative to their respective pages. Start and end page can be the same (and are then equivalent to calling selectionFromPointToPoint).
See also:

- 129.25.25 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS 18754

129.25.27 SetDelegate(d as PDFDocumentDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: If a PDFDocument has a delegate, delegate methods may be called for this document.

129.25.28 SetKeywords(keywords() as string)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the array of strings containing document keywords.

129.25.29 unlockWithPassword(password as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Unlocks an encrypted PDF with the given password.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

if doc.unlockWithPassword("mypassword") then
MsgBox "OK"
end if
```

Notes: Means of passing in a password to unlock encrypted PDF's. Calling unlockWithPassword will attempt to unlock the PDF. If successful, a DidUnlockDocument event is sent to the delegate. You cannot "re-lock" a PDF by passing in a bogus password. Returns true if the document is now unlocked, false oth-

erwise (isLocked = false).

129.25.30 write(file as folderitem, QuartzFilter as Variant = nil) as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Methods to record the current state of the PDFDocument as a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

// modify here

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes:

Returns true on success and false on failure.

There is a bug known in Mac OS X 10.4 that this function may return true even if the saving failed. So you may prefer to check the file whether it exists after write.

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

129.25.31 writeWithOptions(file as folderitem, options as dictionary) as boolean

MBS MacControls Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Writes PDF to file with options.
Notes:

Returns true on success and false on failure.

Some keys to use include:
CGPDFContextMBS.kCGPDFContextUserPassword
CGPDFContextMBS.kCGPDFContextTitle
CGPDFContextMBS.kCGPDFContextSubject
CGPDFContextMBS.kCGPDFContextOwnerPassword
CGPDFContextMBS.kCGPDFContextOutputIntents
CGPDFContextMBS.kCGPDFContextOutputIntent
CGPDFContextMBS.kCGPDFContextKeywords
CGPDFContextMBS.kCGPDFContextEncryptionKeyLength

CGPDFContextMBS.kCGPDFContextCreator
CGPDFContextMBS.kCGPDFContextAuthor
CGPDFContextMBS.kCGPDFContextAllowsPrinting
CGPDFContextMBS.kCGPDFContextAllowsCopying

129.25.32 Properties

129.25.33 allowsCopying as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether copying is allowed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsCopying)
```

Notes:

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

129.25.34 allowsPrinting as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether printing is allowed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsPrinting)
```

Notes:

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

129.25.35 Author as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String containing document author.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Author
```

Notes: (Read and Write property)

129.25.36 CreationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Date representing document creation date.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.CreationDate.LongDate
```

Notes: (Read and Write property)

129.25.37 Creator as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String containing name of app that created document content.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Creator
```

Notes: (Read and Write property)

129.25.38 documentURL as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The document location.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.documentURL
```

Notes:

May return nil if the document was created from data.
(Read only property)

129.25.39 Handle as Integer

MBS MacControls Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal reference to the PDF Document.
Notes: (Read and Write property)

129.25.40 isEncrypted as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the PDF is encrypted.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.isEncrypted)
```

Notes:

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

129.25.41 isFinding as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if document is currently searching for a string.
Notes: (Read only property)

129.25.42 isLocked as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the PDF is locked.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.isLocked)
```

Notes:

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

129.25.43 majorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

129.25.44 minorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

129.25.45 ModificationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Date representing last document modification date.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.ModificationDate.LongDate
```

Notes: (Read and Write property)

129.25.46 outlineRoot as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the root outline object for the PDF (or nil if none).
Notes: (Read and Write property)

129.25.47 pageCount as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of pages in the document.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(Doc.pageCount)
```

Notes: (Read only property)

129.25.48 permissionsStatus as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the permissions status of the PDF document.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

Notes:

You have kPDFDocumentPermissionsNone status for an encrypted document that you have not supplied either a valid user or owner password. For a document with no encryption, you automatically have kPDF-DocumentPermissionsOwner status.

Requires Mac OS X 10.6.
(Read only property)

129.25.49 Producer as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String containing name of app that produced PDF data.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Producer
```

Notes: (Read and Write property)

129.25.50 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text of the document.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from PDF Document:"+EndOfLine+EndOfLine+p.stringValue
```

Notes:

Convenience method. Returns a string representing the entire document (each page's string concatenated with line feeds between pages).

If you need to extract the text of a PDF document cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

129.25.51 Subject as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String containing document subject.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Subject
```

Notes: (Read and Write property)

129.25.52 Title as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** String containing document title.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Title
```

Notes: (Read and Write property)

129.25.53 documentAttributes as Dictionary

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The PDF meta data as a Xojo Dictionary object.
Notes:

Returns a dictionary with PDF metadata. Metadata is optional for PDF's and so some of the keys may be missing or the entire dictionary may be empty.
(Read and Write computed property)

129.25.54 Constants

129.25.55 kPDFDocumentPermissionsNone=0

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

Notes: Document permissions status. For encrypted PDF's, supplying the owner password will enable owner permission status.

129.25.56 kPDFDocumentPermissionsOwner=2

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

129.25.57 kPDFDocumentPermissionsUser=1

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

129.25.58 kPDFPrintPageScaleDownToFit=2

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants for printing page-scaling modes.

129.25.59 kPDFPrintPageScaleNone=0

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants for printing page-scaling modes.

129.25.60 kPDFPrintPageScaleToFit=1

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants for printing page-scaling modes.

129.25.61 NSBackwardsSearch=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the Cocoa search modes.
Notes: Performs searching from the end of the range toward the beginning.

129.25.62 NSCaseInsensitiveSearch=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the Cocoa search modes.
Notes: Ignores case distinctions among characters.

129.25.63 NSLiteralSearch=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the Cocoa search modes.
Notes: Performs a byte-for-byte comparison. Differing literal sequences (such as composed character sequences) that would otherwise be considered equivalent are considered not to match. Using this option can speed some operations dramatically.

129.26 class PDFOutlineMBS

129.26.1 class PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a pdf outine object.

129.26.2 Methods

129.26.3 childAtIndex(index as Integer) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PDFOutline child at index.
Notes: Will throw exception if index is out of range.

129.26.4 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a PDFOutline object.
Notes:

If you want the PDFOutline object returned by this method to be the outline root, you must add additional PDFOutline objects to create the outline hierarchy you desire. Then, you must add the root outline object to your PDF document by assigning it to the PDFDocument OutlineRoot.

If you want the PDFOutline object returned by this method to be a child of an existing outline, you must use setLabel: to give it a label and give it either a destination or action using setDestination: or setAction:, respectively. In addition, you must add this outline object to the existing PDFOutline object as a new child, using insertChild.

Available in Mac OS X v10.4 and later.

129.26.5 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFDocument the outline is asscoiated with.

129.26.6 index as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the index of the outline.
Notes:

The index of the outline object is relative to its siblings and from the perspective of the parent of the outline object. The root outline object, and any outline object without a parent, has an index value of 0.

Available in Mac OS X v10.5 and later.

129.26.7 insertChild(child as PDFOutlineMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Inserts the specified outline object at the specified index.
Notes:

To build a PDF outline hierarchy, use this method to add child outline objects. Before you call this method on a PDFOutline object that already has a parent, you should retain the object and call removeFromParent on it first.

Available in Mac OS X v10.5 and later.

129.26.8 numberOfChildren as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Number of PDFOutline children this PDFOutline has.

129.26.9 parent as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The parent outline object of the outline.
Notes:

Can be nil for the root object.
Available in Mac OS X v10.5 and later.

129.26.10 removeFromParent

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes the outline object from its parent (does nothing if outline object is the root outline object).
Notes: Available in Mac OS X v10.5 and later.

129.26.11 Properties

129.26.12 action as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The action performed when users click the outline.
Notes:

The root outline serves only as a container for the outlines it owns; it does not have an action. Note that a PDFOutline object can have either an action or a destination, not both.

If the PDFOutline object has a destination, instead of an action, action returns a PDFActionGoTo object (this is equivalent to calling destination on the PDFOutline object). For other action types, action returns the appropriate PDF Kit action type object, such as PDFActionURL.

Available in Mac OS X v10.5 and later.
(Read and Write computed property)

129.26.13 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destination asscoiated with the outline item.
Notes:

The root PDFOutline has no destination.
(Read and Write computed property)

129.26.14 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the outline object is initially disclosed.
Notes:

Calling isOpen on an outline object that has no children always returns false. Calling isOpen on the root

outline object always returns true.

Available in Mac OS X v10.5 and later.
(Read and Write computed property)

129.26.15 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The label for the outline.
Notes:

The root PDFOutline has no label and is only a container for children PDFOutlines.
(Read and Write computed property)

129.27 class PDFPageMBS

129.27.1 class PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for a page in a pdf document.
Example:

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture

page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

129.27.4 Methods

129.27.5 addAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Methods allowing annotations to be added.

129.27.6 annotationAtPoint(x as single, y as single) as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Hit-testing method returns the annotation at point (or nil if none).
Notes: The point is in page-space.

129.27.7 annotations as PDFAnnotationMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array containing the page's annotations.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations
```

```
// show a msgbox with the types of all annotations
dim types(-1) as string

for each a as PDFAnnotationMBS in annotations
types.Append a.type
next

MsgBox Join(types)
```

Notes:

The elements of the array will most likely be typed to subclasses of the PDFAnnotation class.

Available in Mac OS X v10.4 and later.

129.27.8 CalcTransformForBox(box as Integer) as Variant

MBS MacControls Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An utility function to calculate the transform needed to draw into a page.
Notes: Returns NSAffineTransformMBS object.

129.27.9 CGPDFPageHandle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The CoreGraphics PDFPage handle.

129.27.10 characterBoundsAtIndex(index as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the bounds in page-space of the character at index.
Notes: In the unlikely event that more than one character are at the specified point, only the first character encountered is returned.

129.27.11 characterIndexAtPoint(x as single, y as single) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the index of the character at point (in page space).

Notes: Returns -1 if no character at point.

129.27.12 Constructor

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a custom PDF page.
Example:

```
dim doc as new PDFDocumentMBS
dim page as PDFPageMBS
dim f as FolderItem

page=new MyPDFPageMBS

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

f=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

Notes: You draw the content using drawRect event.
See also:

- 129.27.13 Constructor(image as NSImageMBS) 18774

129.27.13 Constructor(image as NSImageMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a PDFPage for the NSImage passed in.
Notes:

An easy way to create a PDFPage from an image to add to a PDFDocument.

Mac OS X 10.5 only.
See also:

- 129.27.12 Constructor 18774

129.27.14 copy as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the page object.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a new PDF
dim c as new PDFDocumentMBS

// get first page
dim page as PDFPageMBS = p.pageAtIndex(0)

// add copy of page to new pdf
c.insertPage page.copy, 0

// c now has one page
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

129.27.15 Destructor

MBS MacControls Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

129.27.16 Draw(g as NSGraphicsMBS, box as Integer = 0)

MBS MacControls Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Draws PDF page into graphics environment.
Notes: Use kPDFDisplay*Box constants for box parameter.

129.27.17 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Draws the page within the specified box.
Notes: This method takes into account the page rotation and draws clipped to the specified box. If the page is set to display annotations, this method also draws them. This method does not clear the background. To clear the background before drawing, use NSRectFill with NSColor set (typically) to white.

129.27.18 removeAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Methods allowing annotations to be removed.

129.27.19 Render(dpi as Double = 72.0, box as Integer = 0, background as NSColorMBS = nil) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Renders a PDF Page into an image.
Example:

```
dim f as FolderItem = GetFolderItem("Castles.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim image as NSImageMBS = page.Render

Backdrop = image.CopyPicture
```

Notes:

dpi: The resolution you want to have on the image. Default 72.0. To get a scaled image with factor x, pass 72.0*x.
box: The display box. Use one of the kPDFDisplayBox* constants.
background: optional NSColorMBS object to fill the background before drawing the PDF. This will affect only PDFs with transparent background.

Returns nil on any error.

Version 11.1pr8 adds code here to handle rotation better.
Due to bugs in Apple's PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

129.27.20 selectionForLineAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a point in page-space, returns a selection representing a whole line at that point.
Notes: May return nil if no character (and by extension no line) under point.

129.27.21 selectionForRange(position as Integer, length as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a range, returns a selection representing text within that range.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes: Will raise an exception if the range length is zero or if the range is outside the range of the characters on the page.

129.27.22 selectionForRect(left as single, top as single, width as single, height as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a rect in page-space, returns a selection representing enclosed text on page.

129.27.23 selectionForWordAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a point in page-space, returns a selection representing a whole word at that point.
Notes: May return nil if no character (and by extension no word) under point.

129.27.24 selectionFromPointToPoint(startleft as single, starttop as single, endleft as single, endtop as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a selection representing text between startPt and endPt.
Notes: Point are sorted first top to bottom, left to right.

129.27.25 transformContextForBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Given a display box, will transform the current context to take into account the rotation of the page as well as the origin of the box with repect to the page's base coordinates system.
Notes:

This is a convenient method to call from within drawPage or from within the draw method a PDFAnnotation subclass.

Mac OS X 10.5 only.

129.27.26 Properties

129.27.27 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Notes: (Read only property)

129.27.28 dataRepresentation as memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns PDF data (a proper PDF document) consisting of a single page (this page).
Notes:

Note, external page links are not preserved.
(Read only property)

129.27.29 displaysAnnotations as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Method to turn on or off the display of annotations when the page is drawn.
Notes: (Read and Write property)

129.27.30 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFDocument the page is associated with.

Notes: (Read only property)

129.27.31 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The page label. Usually "1" for the first page, "2" for the second, etc.
Notes: (Read only property)

129.27.32 numberOfCharacters as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Number of characters on the page (including linefeeds and spaces inserted).
Notes: (Read only property)

129.27.33 rotation as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Rotation on a page.
Notes:

Must be 0, 90, 180 or 270 (negative rotations will be "normalized" to one of 0, 90, 180 or 270).
Some PDF's have an inherent rotation and so rotation may be non-zero when a PDF is first opened.
(Read and Write property)

129.27.34 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes:

If you need to extract the text of a PDF document page cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

129.27.35 boundsForBox(box as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the bounds for the specified PDF display box.
Notes:

The PDFDisplayBox enumeration defines the various box types.

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

boundsForBox throws a range exception if box is not in range.
(Read and Write computed property)

129.27.36 Events

129.27.37 drawRect(box as Integer, g as NSGraphicsMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the PDFPage needs to be drawn.
Example:

```
Sub drawRect(box as Integer, g as NSGraphicsMBS)

if g.Valid then
System.DebugLog "is valid"
else
System.DebugLog "not valid"
end if
```

```
g.SetColorRGB 0,1,0

g.drawRect 200,200,200,200

g.SetColorRGB 1,0,0

g.fillRect 100,100,100,100
End Sub
```

Notes:

Do not store the graphics reference as it is only valid in this event.
Use the kPDFDisplayBox* constants for the box value.
You can draw another PDF page here with Draw command.

129.27.38 Constants

129.27.39 kPDFDisplayBoxArtBox=4

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants to use for page boxes.

129.27.40 kPDFDisplayBoxBleedBox=2

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants to use for page boxes.

129.27.41 kPDFDisplayBoxCropBox=1

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants to use for page boxes.

129.27.42 kPDFDisplayBoxMediaBox=0

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants to use for page boxes.

129.27.43 kPDFDisplayBoxTrimBox=3

MBS MacControls Plugin, Plugin Version: 8.0. **Function:** One of the constants to use for page boxes.

129.28 class PDFSelectionMBS

129.28.1 class PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFKit class for selections.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

129.28.2 Methods

129.28.3 addSelection(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Add a selection to this selection.
Notes: Selections do not have to be contiguous. If the selection added overlaps with this selection, overlaps are removed.

129.28.4 addSelections(selection() as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds the specified array of selections to the receiving selection.
Notes:

This method provides better performance than multiple calls to addSelection if you need to add several selections to an existing selection. This is because the normalization of the selection (the removal of any overlaps between selections) occurs only once, after all selections have been added.
Available in Mac OS X v10.5 and later.

129.28.5 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String representing the text covered by the selection.
Notes: May contain line-feeds.

129.28.6 boundsForPage(page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the bounds of the selection on the specified page.
Notes:

The selection rectangle is given in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

129.28.7 Constructor(doc as PDFDocumentMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an empty PDFSelection object.
Notes:

Typically, you don't need to create a PDFSelection object, but you can use an empty PDFSelection object as a container into which you can place selections, using addSelection: and addSelections.
Available in Mac OS X v10.5 and later.

129.28.8 copy as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the selection object.

129.28.9 drawForPage(page as PDFPageMBS, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Calls drawForPage with a default value for box parameter.
Notes: The default value is kPDFDisplayBoxCropBox. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor.
See also:

- 129.28.10 drawForPage(page as PDFPageMBS, box as Integer, active as boolean) 18784

129.28.10 drawForPage(page as PDFPageMBS, box as Integer, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Draws the selection relative to the origin of the specified box in page space.
Notes:

The selection is drawn using the current highlight color. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor. Refer to the PDFPage class for the list of

available box types.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
See also:

- 129.28.9 drawForPage(page as PDFPageMBS, active as boolean) 18784

129.28.11 extendSelectionAtEnd(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Extends the selection at either end.
Example:

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtEnd(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

129.28.12 extendSelectionAtStart(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Extends the selection at either end.
Example:

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtStart(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

129.28.13 numberOfTextRangesOnPage(page as PDFPageMBS) as UInt32

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of contiguous ranges of text on the specified page.
Notes:

Returns zero if page is not in selection.
A typical, simple selection will contain a single range of text.

Available in Mac OS X 10.7 and later.

129.28.14 pages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Array of pages covered by the selection.
Notes:

These are sorted by page index.
Returns nil on any error.

129.28.15 rangeAtIndex(page as PDFPageMBS, index as Integer) as NSRangeMBS

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a range of contiguous text at index on the specified page.
Notes:

A simple selection. A typical, simple selection will contain a single range of text.
Available in Mac OS X 10.7 and later.

129.28.16 selectionsByLine as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of selections, one for each line of text covered by the receiver.
Notes:

If you call this method on a PDFSelection object that represents a paragraph, for example, selectionsByLine returns an array that contains one PDFSelection object for each line of text in the paragraph.
Available in Mac OS X v10.5 and later.

129.28.17 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String representing the text covered by the selection.
Notes: May contain line-feeds.

129.28.18 Properties

129.28.19 Handle as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle used internally for the object reference.
Notes: (Read and Write property)

129.28.20 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color used to draw the selection.
Notes:

Note that when no color has been specified for the PDFSelection objects in a document, the selections are drawn using NSColorMBS.selectedTextBackgroundColor for the active state and NSColorMBS.secondarySelectedControlColor for the inactive state.
(Read and Write computed property)

129.29 control PDFThumbnailViewControlMBS

129.29.1 control PDFThumbnailViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a PDFThumbnailView.
Notes:

This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

129.29.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr7

129.29.3 Properties

129.29.4 View as PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

129.29.5 Events

129.29.6 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

129.29.7 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

129.29.8 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

129.29.9 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

129.29.10 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

129.29.11 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

129.29.12 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.

- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

129.29.13 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

129.29.14 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

129.29.15 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

129.30 class PDFThumbnailViewMBS

129.30.1 class PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A PDFThumbnailView object contains a set of thumbnails, each of which represents a page in a PDF document.
Notes:

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

129.30.2 Methods

129.30.3 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new PDF thumbnail view with size 100/100 and position 0/0
Example:

```
dim t as new PDFThumbnailViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 129.30.4 Constructor(Handle as Integer) 18791
- 129.30.5 Constructor(left as Double, top as Double, width as Double, height as Double) 18792

129.30.4 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given PDFThumbnailView handle.
Example:

```
dim t as new PDFThumbnailViewMBS(0, 0, 100, 100)
dim v as new PDFThumbnailViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a PDFThumbnailView and the plugin retains this handle.
See also:

- 129.30.3 Constructor 18791
- 129.30.5 Constructor(left as Double, top as Double, width as Double, height as Double) 18792

129.30.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new PDF thumbnail view with the given size and position.
Example:

```
dim x as new PDFThumbnailViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 129.30.3 Constructor 18791
- 129.30.4 Constructor(Handle as Integer) 18791

129.30.6 selectedPages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of PDF pages that correspond to the selected thumbnails in the thumbnail view.
Notes:

If the thumbnail view allows multiple selections (if allowsMultipleSelection returns true), you can use this method to get the PDF pages that correspond to the selected thumbnails.
Available in Mac OS X v10.5 and later.

129.30.7 Properties

129.30.8 allowsDragging as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether users can drag thumbnails within the thumbnail view; that is, re-order pages in the document.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.9 allowsMultipleSelection as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the thumbnail view allows users to select more than one thumbnail at a time.
Notes:

By default, PDFThumbnailView allows only a single thumbnail to be selected at one time. When this is the case, you can get the PDF page that corresponds to the selected thumbnail using the PDFView method currentPage.

If you use setAllowsMultipleSelection to enable multiple selections, however, you must use selectedPages to get the pages that correspond to the set of selected thumbnails.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.10 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color used in the background of the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.11 Bezeled as Boolean

MBS MacControls Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether to use bezel for control.
Notes: (Read and Write property)

129.30.12 labelFont as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font used to label the thumbnails.
Notes:

Typically, the label of a thumbnail is the page number of the page it represents.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.13 maximumNumberOfColumns as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the maximum number of columns of thumbnails the thumbnail view can display.
Notes:

The thumbnail displays as many columns of thumbnails as fit in its size.
Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.14 PDFView as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDFView object associated with the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.30.15 thumbnailSize as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum width and height of the thumbnails in the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

129.31 control PDFViewControlMBS

129.31.1 control PDFViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a PDFView.
Notes:

This control embeds a special PDFView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

129.31.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1
- MBS Xojo Plugins, version 17.6pr5
- MBS Xojo Plugins, version 17.5pr2
- MBS Xojo / Real Studio Plugins, version 17.0pr1
- MBS Xojo / Real Studio Plugins, version 13.4pr7

129.31.3 Methods

129.31.4 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Clear overlay item for this page.
Notes:

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

129.31.5 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

129.31.6 Properties

129.31.7 View as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

129.31.8 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Get/Set overlay item.
Notes:

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

129.31.9 Events

129.31.10 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after something was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.31.11 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.31.12 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called after a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.31.13 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.31.14 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

129.31.15 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The draw event called before a something was drawn.

129.31.16 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

129.31.17 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

129.31.18 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

129.31.19 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

129.31.20 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

129.31.21 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

129.31.22 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.

Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

129.31.23 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

129.31.24 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

129.31.25 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

129.32 class PDFViewMBS

129.32.1 class PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A PDFView object encapsulates the functionality of PDF Kit into a single widget that you can add to your application.
Notes:

PDFView may be the only class you need to deal with for adding PDF functionality to your application. It lets you display PDF data and allows users to select content, navigate through a document, set zoom level, and copy textual content to the Pasteboard. PDFView also keeps track of page history.

You can subclass PDFView to create a custom PDF viewer or better use our CustomPDFViewMBS class.

You can also create a custom PDF viewer by using the PDF Kit utility classes directly and not using PDFView at all.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

129.32.2 Blog Entries

- Have you checked out PDFViewMBS class?
- MBS REALbasic Plugins, version 10.6pr2
- MBS REALbasic Plugins, version 10.3pr8
- MBS REALbasic Plugins, version 10.3pr4

129.32.3 Methods

129.32.4 annotationsChangedOnPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tells the PDF view that an annotation on the specified page has changed.
Notes:

When the PDFView object receives this message, it rescans for tool tips and pop-ups and informs the PDFThumbailView objects so the thumbnail images can be redrawn.
Available in Mac OS X v10.5 and later.

129.32.5 areaOfInterestForMouse(e as NSEventMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the type of area the mouse cursor is over.
Notes: The PDFAreaOfInterest enumeration defines the various area types. This method is for custom subclasses of the PDFView class. Use it if you override the NSResponder class's mouseMoved: method or related methods.

129.32.6 canGoBack as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the previous page in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

129.32.7 canGoForward as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the next page in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

129.32.8 canGoToFirstPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the first page of the document.
Notes: The return value will be true unless the view is already displaying the first page.

129.32.9 canGoToLastPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the last page of the document.
Notes: The return value will be true unless the view is already displaying the last page.

129.32.10 canGoToNextPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the next page of the document. **Notes:** The return value will be true unless the view is displaying the last page.

129.32.11 canGoToPreviousPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can navigate to the previous page of the document.
Notes: The return value will be true unless the view is displaying the first page.

129.32.12 canZoomIn as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can magnify the view—that is, zoom in.

129.32.13 canZoomOut as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value indicating whether the user can view an expanded area—that is, zoom out.

129.32.14 clearSelection

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Clears the selection.
Notes: The view redraws as necessary but does not scroll. This call is equivalent to setting CurrentSelection=nil.

129.32.15 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new PDF view with size 100/100 and position 0/0
Example:

```
dim t as new PDFViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 129.32.16 Constructor(Handle as Integer) 18803
- 129.32.17 Constructor(left as Double, top as Double, width as Double, height as Double) 18803

129.32.16 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given PDFView handle.
Example:

```
dim t as new PDFViewMBS(0, 0, 100, 100)
dim v as new PDFViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a NSButton and the plugin retains this handle.
See also:

- 129.32.15 Constructor 18802
- 129.32.17 Constructor(left as Double, top as Double, width as Double, height as Double) 18803

129.32.17 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new PDF view with the given size and position.
Example:

```
dim x as new PDFViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 129.32.15 Constructor 18802
- 129.32.16 Constructor(Handle as Integer) 18803

129.32.18 convertPointFromPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a point from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

129.32.19 convertPointToPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a point from view space to page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

129.32.20 convertRectFromPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a rectangle from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

129.32.21 convertRectToPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a rectangle from view space to page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

129.32.22 copy

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Copies the text in the selection, if any, to the Pasteboard.

129.32.23 currentDestination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a PDFDestination object representing the current page and the current point in the view specified in page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

129.32.24 currentPage as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current page.
Notes: When there are two pages in the view in a two-up mode, "current page" is the left page. For continuous modes, returns the page crossing a horizontal line halfway between the view's top and bottom bounds.

129.32.25 documentView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the innermost view used by PDFView or by your PDFView subclass.
Notes: The innermost view is the one displaying the visible document pages. This method is useful when converting coordinates from one view to another.

129.32.26 drawPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: For use by subclasses of PDFView for custom rendering of pages.
Notes:

Do not invoke this method, except by invoking it on super from a subclass.

The PDFView class calls drawPage: as necessary for each visible page that requires rendering. In the PDFView class, this method erases page to white, calls page.drawInRect(pageRect,self.displayBox), and then draws the selection, if any.

You can override this method to draw on top of a PDF page or to control how pages are drawn. In these cases, invoke this method on super and then perform custom drawing on top of the PDF page.

129.32.27 drawPagePost(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: For use by subclasses of PDFView for post-page rendering.
Notes:

The default implementation of this method draws the text highlighting (if any) for the page. This method does not apply scaling or rotating to the current context to map to page space; instead, the context is in view-space coordinates (in which the origin is at the lower-left corner of the current PDF view).
Available in Mac OS X v10.5 and later.

129.32.28 goBack

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates back one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

129.32.29 goForward

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates forward one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

129.32.30 goToDestination(page as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the specified destination.
Notes:

Destinations include a page and a point on the page specified in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

129.32.31 goToFirstPage

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the first page of the document.
Notes: PDF Kit records the move in its page history.

129.32.32 goToLastPage

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the last page of the document.
Notes: PDF Kit records the move in its page history.

129.32.33 goToNextPage

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the next page of the document.
Notes: PDF Kit records the move in its page history.

129.32.34 goToPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Scrolls to the specified page.
Notes: PDF Kit records the move in its page history.

129.32.35 goToPreviousPage

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the previous page of the document.
Notes: PDF Kit records the move in its page history.

129.32.36 goToRect(rect as NSRectMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Navigates to the specified rectangle on the specified page.
Notes:

If the specified rectangle is already visible, this method does nothing. This allows you to scroll the PDFView object to a specific PDFAnnotation or PDFSelection object, because both of these objects have bounds methods that return an annotation or selection position in page space.

Note that rect is specified in page-space coordinates. Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.5 and later.

129.32.37 goToSelection(page as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Scrolls to the first character of the specified selection.
Notes: PDF Kit records the move in its page history.

129.32.38 layoutDocumentView

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs layout of the inner views.
Notes:

The PDFView actually contains several subviews, such as the document view (where the PDF is actually drawn) and a "matte view" (which may appear as a gray area around the PDF content, depending on the scaling). Changes to the PDF content may require changes to these inner views, so you must call this method explicitly if you use PDF Kit utility classes to add or remove a page, rotate a page, or perform other operations affecting visible layout.

This method is called automatically from PDFView methods that affect the visible layout (such as setDocument, setDisplayBox or zoomIn).

129.32.39 pageForPoint(point as NSPointMBS, nearest as boolean) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the page containing a point specified in view coordinates.
Notes: Returns nil if there's no page at the specified point and nearest is set to false.

129.32.40 PDFViewAnnotationHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes:

Posted when the user clicks on an annotation.

Use the "PDFAnnotationHit" key to obtain userinfo of type PDFAnnotation.

129.32.41 PDFViewAnnotationWillHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes:

Posted before the user clicks an annotation.
Available in Mac OS X v10.5 and later.

129.32.42 PDFViewChangedHistoryNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when the page history changes.

129.32.43 PDFViewCopyPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to copy to the pasteboard without the appropriate permissions.

129.32.44 PDFViewDisplayBoxChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes:

Posted when the display box has changed.
Available in Mac OS X v10.5 and later.

129.32.45 PDFViewDisplayModeChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes:

Posted when the display mode has changed.
Available in Mac OS X v10.5 and later.

129.32.46 PDFViewDocumentChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when a new document is associated with the view.

129.32.47 PDFViewPageChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when a new page becomes the current page.

129.32.48 PDFViewPrintPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to print without the appropriate permissions.

129.32.49 PDFViewScaleChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes: Posted when the scale factor changes.

129.32.50 PDFViewSelectionChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names used with the PDF view.
Notes:

Posted when the current selection has changed.
Available in Mac OS X v10.5 and later.

129.32.51 performAction(action as PDFActionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs the specified action.

Notes: Available in Mac OS X v10.5 and later.

129.32.52 rowSizeForPage(page as PDFPageMBS) as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the size needed to display a row of the current document page.
Notes: The size is dependent on the current scale factor and display attributes.

129.32.53 scrollSelectionToVisible

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Scrolls the view until the selection is visible.

129.32.54 selectAll

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Selects all text in the document.

129.32.55 setCurrentSelection(selection as PDFSelectionMBS, animate as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the selection, in an animated way, if desired.
Notes:

This method behaves as setCurrentSelection, but with the addition of animation, if animate is true. The animation serves to draw the user's attention to the new selection, which can be useful when implementing search.
Available in Mac OS X v10.5 and later.

129.32.56 setCursorForAreaOfInterest(area as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the type of mouse cursor according to the type of area the mouse cursor is over.
Notes: This method is especially useful for custom subclasses of the PDFView class.

129.32.57 visiblePages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of PDFPageMBS objects that represent the currently visible pages.
Notes: Available in Mac OS X v10.5 and later.

129.32.58 zoomIn

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Zooms in by increasing the scaling factor.
Notes:

Each invocation of zoomIn muliplies the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

129.32.59 zoomOut

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Zooms out by decreasing the scaling factor.
Notes:

Each invocation of zoomOut divides the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

129.32.60 Properties

129.32.61 allowsDragging as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines whether the view can accept new PDF documents dragged into it by the user.
Notes: (Read and Write computed property)

129.32.62 autoScales as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value indicating whether autoscaling is set.
Notes: (Read and Write computed property)

129.32.63 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the view's background color.
Notes:

A view's background is the area displayed to either side of a PDF document's pages. The background also appears between pages when page breaks are enabled. The default color is a 50% gray.
(Read and Write computed property)

129.32.64 currentSelection as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current selection.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes:

Returns NULL if no selection exists.

Note that this method returns the actual instance of the current PDFSelectionMBS object. Therefore, if you want to modify it, you should make a copy of the returned selection and modify that, instead.
(Read and Write computed property)

129.32.65 displayBox as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The current style of display box.
Notes:

The available values for display boxes are defined in the Constants section in the PDFPageMBS class.
(Read and Write computed property)

129.32.66 displayMode as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current display mode.
Notes:

Value can be kPDFDisplaySinglePage, kPDFDisplaySinglePageContinuous, kPDFDisplayTwoUp and kPDFDisplayTwoUpContinuous.
(Read and Write computed property)

129.32.67 displaysAsBook as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value indicating whether the view will display the first page as a book cover (meaningful only when the document is in two-up or two-up continuous display mode).
Notes: (Read and Write computed property)

129.32.68 displaysPageBreaks as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value indicating whether the view is displaying page breaks.
Notes: (Read and Write computed property)

129.32.69 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the document associated with a PDFView object.
Notes: (Read and Write computed property)

129.32.70 enableDataDetectors as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether data detection is enabled.
Notes:

If enabled, page text will be scanned for URL's as the page becomes visible. Where
// URL's are found, Link annotations are created in place. These are temporary annotations and are not saved.

Requires Mac OS X 10.6.
(Read and Write computed property)

129.32.71 greekingThreshold as Double

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The greeking threshold to use for displaying text.
Notes:

The default threshold is 3.0.
(Read and Write computed property)

129.32.72 interpolationQuality as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The interpolation quality for images drawn into the PDFView context.
Notes:

Available in Mac OS X 10.7 or later.
(Read and Write computed property)

129.32.73 scaleFactor as Double

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The scale factor for the view.
Notes:

The default value is 1.0, corresponding to actual size.
(Read and Write computed property)

129.32.74 shouldAntiAlias as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether to use anti-aliasing in the view.
Notes: (Read and Write computed property)

129.32.75 Constants

129.32.76 kPDFAnnotationArea=4

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over an annotation.

129.32.77 kPDFControlArea=16

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a control.

129.32.78 kPDFDisplaySinglePage=0

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the PDF view display mode constants.
Notes: The document displays one page at a time horizontally and vertically. Vertical and horizontal scrolling apply only to the current page.

129.32.79 kPDFDisplaySinglePageContinuous=1

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the PDF view display mode constants.
Notes: he document displays in continuous mode vertically, with single-page width horizontally. Vertical scrolling applies to the entire document.

129.32.80 kPDFDisplayTwoUp=2

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the PDF view display mode constants.
Notes: The document displays two pages side-by-side. Vertical and horizontal scrolling apply only to the pair of displayed pages.

129.32.81 kPDFDisplayTwoUpContinuous=3

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the PDF view display mode constants.
Notes: The document displays in continuous mode vertically and displays two pages side-by-side horizon-

tally. Vertical scrolling applies to the entire document.

129.32.82 kPDFIconArea=64

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes:

The mouse is over an icon.
Available in Mac OS X v10.5 and later.

129.32.83 kPDFInterpolationQualityHigh = 2

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the interpolation quality constants.
Notes: high

129.32.84 kPDFInterpolationQualityLow = 1

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the interpolation quality constants.
Notes: low

129.32.85 kPDFInterpolationQualityNone = 0

MBS MacControls Plugin, Plugin Version: 11.2. **Function:** One of the interpolation quality constants.

129.32.86 kPDFLinkArea=8

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a link.

129.32.87 kPDFNoArea=0

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.

Notes: The mouse is over an undefined area.

129.32.88 kPDFPageArea=1

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a page.

129.32.89 kPDFPopupArea=128

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a popup menu.

129.32.90 kPDFTextArea=2

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over text.

129.32.91 kPDFTextFieldArea=32

MBS MacControls Plugin, Plugin Version: 9.6. **Function:** One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a text field.

Chapter 130

Phidgets

130.1 class PhidgetAccelerometerMBS

130.1.1 class PhidgetAccelerometerMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the phidget accelerometer.
Notes:

The PhidgetAccelerometer is a component that provides a high-level programmer interface to control a PhidgetAccelerometer device connected through a USB port. The product is available as a dual axis or a 3-axis module. With this component, the programmer can:

- Measure up to 5 Gravity (9.8 m/s2) change per axis, depending on unit purchased.
- Measures both dynamic acceleration (e.g., vibration) and static acceleration (e.g., gravity or tilt) on 2 or 3 axis.

Subclass of the PhidgetMBS class.

130.1.2 Methods

130.1.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: On success the handle value is not zero.

130.1.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last acceleration value received from the PhidgetAccelerometer for a particular axis.
Notes: Lasterror is set.

130.1.5 getAccelerationChangeTrigger(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the amount of change that should exist between the last reported value and the current value before an OnAccelerationChange event is fired.
Notes: Lasterror is set.

130.1.6 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum accleration supported by an axis.
Notes: The Lasterror property is set.

130.1.7 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum acceleraiton supported by an axis.
Notes: The Lasterror property is set.

130.1.8 getAxisCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of acceleration axes supported by this accelerometer.
Notes: The Lasterror property is set.

130.1.9 setAccelerationChangeTrigger(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the amount of change that should exist between the last reported value and the current value before an AccelerationChange event is fired.
Notes:

If the AccelerationChangeTrigger is set to 0, an event will be triggered for every measurement of acceleration taken.

Lasterror is set.

130.1.10 Events

130.1.11 AccelerationChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for each change on the Acceleration.
Notes:

Index: Index of the Accelerometer posting event
Value: Value of the Accelerometer

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.2 class PhidgetAdvancedServoMBS

130.2.1 class PhidgetAdvancedServoMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a phidget advanced servo device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

130.2.2 Methods

130.2.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: On success the handle value is not zero.

130.2.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the acceleration for the given index.
Notes: The Lasterror property is set.

130.2.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

130.2.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

130.2.7 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current value.
Notes: The Lasterror property is set.

130.2.8 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the engaged state of a motor.
Notes:

This is whether the motor is powered or not.
The Lasterror property is set.

130.2.9 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

130.2.10 getPosition(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current position of an encoder.
Notes: The Lasterror property is set.

130.2.11 getPositionMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum position that a motor can go to.
Notes: The Lasterror property is set.

130.2.12 getPositionMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum position that a motor can go to.

Notes: The Lasterror property is set.

130.2.13 getServoType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

130.2.14 getSpeedRampingOn(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

130.2.15 getStopped(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the stopped state of a motor.
Notes:

This is true when the motor is not moving and there are no outstanding commands.
The Lasterror property is set.

130.2.16 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current velocity.
Notes: The Lasterror property is set.

130.2.17 getVelocityLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last set velocity limit for a motor.

Notes: The Lasterror property is set.

130.2.18 getVelocityMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

130.2.19 getVelocityMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

130.2.20 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the acceleration.
Notes: The Lasterror property is set.

130.2.21 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes: The Lasterror property is set.

130.2.22 setPosition(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current position of a motor.
Notes: The Lasterror property is set.

130.2.23 setPositionMax(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the maximum position that a motor can go to.

Notes: The Lasterror property is set.

130.2.24 setPositionMin(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

130.2.25 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double, velocity_max as Double)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the servo parameters of a motor.
Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.
velocity_max	The maximum velocity in degrees/second.

130.2.26 setServoType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

130.2.27 setSpeedRampingOn(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

130.2.28 setVelocityLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the velocity limit for a motor.
Notes: The Lasterror property is set.

130.2.29 Events

130.2.30 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.2.31 PositionChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The position changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.2.32 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The velocity changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.

Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.2.33 Constants

130.2.34 PHIDGET_SERVO_DEFAULT = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.35 PHIDGET_SERVO_FIRGELLI_L12_100_100_06_R = 17

MBS USB Plugin, Plugin Version: 12.1. **Function:** One of the servo type constants.

130.2.36 PHIDGET_SERVO_FIRGELLI_L12_100_50_06_R = 16

MBS USB Plugin, Plugin Version: 12.1. **Function:** One of the servo type constants.

130.2.37 PHIDGET_SERVO_FIRGELLI_L12_30_50_06_R = 13

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.38 PHIDGET_SERVO_FIRGELLI_L12_50_100_06_R = 14

MBS USB Plugin, Plugin Version: 12.1. **Function:** One of the servo type constants.

130.2.39 PHIDGET_SERVO_FIRGELLI_L12_50_210_06_R = 15

MBS USB Plugin, Plugin Version: 12.1. **Function:** One of the servo type constants.

130.2.40 PHIDGET_SERVO_HITEC_805BB = 5

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.41 PHIDGET_SERVO_HITEC_815BB = 12

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.42 PHIDGET_SERVO_HITEC_HS322HD = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.43 PHIDGET_SERVO_HITEC_HS422 = 6

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.44 PHIDGET_SERVO_HITEC_HS485HB = 10

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.45 PHIDGET_SERVO_HITEC_HS5245MG = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.46 PHIDGET_SERVO_HITEC_HS645MG = 11

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.47 PHIDGET_SERVO_HITEC_HS785HB = 9

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.48 PHIDGET_SERVO_HITEC_HSR1425CR = 8

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.49 PHIDGET_SERVO_RAW_us_MODE = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.2.50 PHIDGET_SERVO_SPRINGRC_SM_S2313M = 18

MBS USB Plugin, Plugin Version: 12.1. **Function:** One of the servo type constants.

130.2.51 PHIDGET_SERVO_SPRINGRC_SM_S3317M = 19

MBS USB Plugin, Plugin Version: 13.4. **Function:** One of the servo type constants.

130.2.52 PHIDGET_SERVO_SPRINGRC_SM_S3317SR = 20

MBS USB Plugin, Plugin Version: 13.4. **Function:** One of the servo type constants.

130.2.53 PHIDGET_SERVO_TOWERPRO_MG90 = 7

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the servo type constants.

130.3 class PhidgetAnalogMBS

130.3.1 class PhidgetAnalogMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Class specific to the Phidget Analog.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.3.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.3.3 Methods

130.3.4 Constructor

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new analog device instance.
Notes: Lasterror is set.

130.3.5 getEnabled(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the enabled state for an output.
Notes: Lasterror is set.

130.3.6 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of outputs supported by this phidget analog.
Notes: Lasterror is set.

130.3.7 getVoltage(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently set voltage for an output, in V.
Notes: Lasterror is set.

130.3.8 getVoltageMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum settable output voltage, in V.
Notes: Lasterror is set.

130.3.9 getVoltageMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum settable output voltage, in V.
Notes: Lasterror is set.

130.3.10 setEnabled(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the enabled state for an output.
Notes: Lasterror is set.

130.3.11 setVoltage(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the voltage of an output, in V.
Notes: Lasterror is set.

130.4 class PhidgetBridgeMBS

130.4.1 class PhidgetBridgeMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class specific to the Phidget Bridge.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.4.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.4.3 Methods

130.4.4 Constructor

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new instance.
Notes: Lasterror is set.

130.4.5 getBridgeMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

130.4.6 getBridgeMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

130.4.7 getBridgeValue(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current value of a bridge input, in mV/V.
Notes: Lasterror is set.

130.4.8 getDataRate as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

130.4.9 getDataRateMax as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the the maximum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

130.4.10 getDataRateMin as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the the minimum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

130.4.11 getEnabled(index as Integer) as Boolean

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the enabled state for an input.
Notes: Lasterror is set.

130.4.12 getGain(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the the Gain for an input.
Notes: Lasterror is set.

130.4.13 getInputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of inputs supported by this phidget bridge.
Notes: Lasterror is set.

130.4.14 setDataRate(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

130.4.15 setEnabled(index as Integer, value as Boolean)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the enabled state for an input.
Notes: Lasterror is set.

130.4.16 setGain(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the the Gain for an input.
Notes: Lasterror is set.

130.4.17 Events

130.4.18 BridgeDataReceived(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bridge data event handler.
Notes: This is called at a set rate as defined by data rate.

130.4.19 Constants

130.4.20 PHIDGET_BRIDGE_GAIN_1 = 1

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 1.

130.4.21 PHIDGET_BRIDGE_GAIN_128 = 6

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 128.

130.4.22 PHIDGET_BRIDGE_GAIN_16 = 3

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 16.

130.4.23 PHIDGET_BRIDGE_GAIN_32 = 4

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 32.

130.4.24 PHIDGET_BRIDGE_GAIN_64 = 5

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 64.

130.4.25 PHIDGET_BRIDGE_GAIN_8 = 2

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Gain of 8.

130.4.26 PHIDGET_BRIDGE_GAIN_UNKNOWN = 7

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the gain constants.
Notes: Unknown Gain.

130.5 class PhidgetDictionaryMBS

130.5.1 class PhidgetDictionaryMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Phidget Dictionary is a service provided by the Phidget Webservice.
Notes:

The Webservice maintains a centralized dictionary of key-value pairs that can be accessed and changed from any number of clients through the CPhidgetDictionary interface available in phidget21.

Note that the Webservice uses this dictionary to control access to Phidgets through the openRemote and openRemoteIP interfaces, and as such, you should never add or modify a key that starts with /PSK/ or /PCK/, unless you want to explicitly modify Phidget specific data – and this is highly discouraged, as it's very easy to break things. Listening to these keys is fine if so desired.

The intended use for the dictionary is as a central repository for communication and persistent storage of data between several client applications. As an example - a higher level interface exposed by one application – which controls the Phidgets, for others to access – rather then every client talking directly to the Phidgets themselves.

The dictionary makes use of extended regular expressions for key matching. See the end of this document for the rules of regular expressions.

See the Phidget manuals for help on regular expressions.

130.5.2 Methods

130.5.3 addKey(key as string, value as string, persistent as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new key to the Dictionary, or modifies the value of an existing key.
Notes:

The key can only contain numbers, letters, '/', '.', '-', '_', and must begin with a letter, '_' or '/'.
The value can contain any value.
The persistent value controls whether a key will stay in the dictionary after the client that created it disconnects. If persistent == 0, the key is removed when the connection closes. Otherwise the key remains in the dictionary until it is explicitly removed.

Lasterror is set.

130.5.4 Close

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the file handles for this device.
Notes:

You should always call this when finished with a Dictionary.
Lasterror is set.

130.5.5 Constructor

MBS USB Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A dummy constructor doing nothing.
See also:

- 130.5.6 Constructor(pattern as string) 18839

130.5.6 Constructor(pattern as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

The Lasterror property is set.
Pattern is a regular expression that matches the keys you want to listen for in the keychange event.
See also:

- 130.5.5 Constructor 18839

130.5.7 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

130.5.8 getServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the address and port.
Notes: The Lasterror property is set.

130.5.9 getServerID as string

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the server ID.
Notes: The Lasterror property is set.

130.5.10 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

130.5.11 openRemote(serverID as string, password as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: The Lasterror property is set.

130.5.12 openRemoteIP(addr as string, port as Integer, password as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a connection to a remote Phidget Dictionary.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code.

If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.

Lasterror is set.

130.5.13 removeKey(pattern as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a key, or set of keys, from the Dictionary.
Notes:

The key name is a regular expressions pattern, and so care must be taken to only have it match the specific keys you want to remove.
Lasterror is set.

130.5.14 Properties

130.5.15 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal used CPhidgetDictionaryHandle.
Notes: (Read and Write property)

130.5.16 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

130.5.17 Events

130.5.18 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This error event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.

Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.5.19 KeyChanged(key as string, value as string, reason as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** These event will be called on key add, remove, and change.
Notes:

The Lasterror property is set.
It will also fire once to give an initial key value as soon as it is registered, if the key already exists.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Reason values:

PHIDGET_DICTIONARY_VALUE_CHANGED	1
PHIDGET_DICTIONARY_ENTRY_ADDED	2
PHIDGET_DICTIONARY_ENTRY_REMOVING	3
PHIDGET_DICTIONARY_CURRENT_VALUE	4

130.5.20 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.5.21 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.6 class PhidgetEncoderMBS

130.6.1 class PhidgetEncoderMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the phidget encoder device.
Notes:

The PhidgetEncoder is a component that provides a high-level programmer interface to control a PhidgetEncoder device connected through a USB port.
With this component, the programmer can:

- Detect changes in position of incremental and absolute encoders.
- Easily track the changes with respect to time.

Subclass of the PhidgetMBS class.

130.6.2 Methods

130.6.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.6.4 getEnabled(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

130.6.5 getEncoderCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of encoder inputs supported by this board.
Notes: The Lasterror property is set.

130.6.6 getIndexPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries index position.
Notes:

Gets the position of the last index pulse, as referenced to getPosition.
This will return EPHIDGET_UNKNOWN if there hasn't been an index event, or if the encoder doesn't support index.

The Lasterror property is set.

130.6.7 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

130.6.8 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of a digital input.
Notes: The Lasterror property is set.

130.6.9 getPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current position of an encoder.
Notes: The Lasterror property is set.

130.6.10 setEnabled(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

130.6.11 setPosition(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current position of an encoder.
Notes: The Lasterror property is set.

130.6.12 Events

130.6.13 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event for a change in the input.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.6.14 PositionChanged(index as Integer, position as Integer, time as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for every position change.
Notes:

Index: Index of the Encoder firing the Event
Position: Position of the Encoder
Time: Time of change

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.7 class PhidgetFrequencyCounterMBS

130.7.1 class PhidgetFrequencyCounterMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Class specific to the Phidget Frequency Counter.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.7.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.7.3 Methods

130.7.4 Constructor

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new instance.
Notes: Lasterror is set.

130.7.5 getEnabled(index as Integer) as Boolean

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the enabled state for an input.
Notes: Lasterror is set.

130.7.6 getFilter(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the filter type for an input.
Notes: Lasterror is set.

130.7.7 getFrequency(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the measured frequency of an input, in Hz.
Notes: Lasterror is set.

130.7.8 getFrequencyInputCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of inputs supported by this phidget frequency counter.
Notes: Lasterror is set.

130.7.9 getTimeout(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the timeout value for an input, in microseconds. This controls the lowest measurable frequency.
Notes: Lasterror is set.

130.7.10 getTotalCount(index as Integer) as Int64

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the total number of ticks that have happened since the last reset on this input.
Notes: Lasterror is set.

130.7.11 getTotalTime(index as Integer) as Int64

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the total time that has passed since the last reset on this input, in microseconds.
Notes: Lasterror is set.

130.7.12 reset(index as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets total count and total time for an input.
Notes: Lasterror is set.

130.7.13 setEnabled(index as Integer, value as Boolean)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the enabled state for an input.
Notes: Lasterror is set.

130.7.14 setFilter(index as Integer, filter as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the filter type for an input.
Notes: Lasterror is set.

130.7.15 setTimeout(index as Integer, filter as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the timeout value for an input, in microseconds.
Notes: Lasterror is set.

130.7.16 Events

130.7.17 Counted(index as Integer, time as Integer, counts as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when ticks have been counted on an input, or when the timeout has passed.

130.7.18 Constants

130.7.19 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_LOGIC_LEVEL = 2

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Filter Type Constants.
Notes: Logic level signal filter.

130.7.20 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_UNKNOWN = 3

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Filter Type Constants.
Notes: Filter type unknown.

130.7.21 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_ZERO_CROSSING = 1

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Filter Type Constants.
Notes: Zero crossing signal filter.

130.8 class PhidgetGPGGAMBS

130.8.1 class PhidgetGPGGAMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a NMEA GGA Sentence.

130.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.8.3 Properties

130.8.4 altitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The altitude value.
Notes: (Read only property)

130.8.5 fixQuality as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fix Quality.
Notes: (Read and Write property)

130.8.6 heightOfGeoid as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of GEO ID.
Notes: (Read only property)

130.8.7 horizontalDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal dilution.

Notes: (Read only property)

130.8.8 latitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The latitude value.
Notes: (Read only property)

130.8.9 longitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The longitude value.
Notes: (Read only property)

130.8.10 numSatellites as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of satellites.
Notes: (Read and Write property)

130.8.11 time as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time value.
Notes: (Read and Write property)

130.9 class PhidgetGPGSAMBS

130.9.1 class PhidgetGPGSAMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The NMEA GSA Sentence class.

130.9.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.9.3 Methods

130.9.4 satUsed(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** IDs of used sats in no real order, 0 means nothing.

130.9.5 Properties

130.9.6 fixType as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fix type.
Notes: (Read and Write property)

130.9.7 horizDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Horizontal dilution.
Notes: (Read only property)

130.9.8 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mode.
Notes: (Read and Write property)

130.9.9 posnDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Position dilution.
Notes: (Read only property)

130.9.10 vertDilution as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Vertical dilution.
Notes: (Read only property)

130.9.11 Constants

130.9.12 kFixType2D = 2

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Fix Type values.
Notes: 2D

130.9.13 kFixType3D = 3

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Fix Type values.
Notes: 3D

130.9.14 kFixTypeNo = 1

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the Fix Type values.
Notes: no fix.

130.9.15 kModeAuto = 65

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the mode constants.
Notes: Auto

130.9.16 kModeForced = 77

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the mode constants.
Notes: Forced

130.10 class PhidgetGPGSVMBS

130.10.1 class PhidgetGPGSVMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The NMEA GSV Sentence class.

130.10.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.10.3 Methods

130.10.4 satInfo(index as Integer) as PhidgetGPSSatInfoMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query the satellite information with the given index.
Notes: Index from 0 to 11.

130.10.5 Properties

130.10.6 satsInView as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of satellites in view.
Notes: (Read and Write property)

130.11 class PhidgetGPRMCMBS

130.11.1 class PhidgetGPRMCMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for NMEA RMC Sentence

130.11.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.11.3 Properties

130.11.4 date as PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The date value.
Notes: (Read and Write property)

130.11.5 heading as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The heading value.
Notes: (Read only property)

130.11.6 latitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The latitude value.
Notes: (Read only property)

130.11.7 longitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The longitude value.

Notes: (Read only property)

130.11.8 magneticVariation as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The magnetic variation.
Notes: (Read only property)

130.11.9 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mode value.
Notes: (Read and Write property)

130.11.10 speedKnots as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The speed in knots.
Notes: (Read only property)

130.11.11 status as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The status value.
Notes: (Read and Write property)

130.11.12 time as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time value.
Notes: (Read and Write property)

130.12 class PhidgetGPSDateMBS

130.12.1 class PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GPS Date in UTC.

130.12.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.12.3 Properties

130.12.4 Day as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Day of the month (1-31).
Notes: (Read and Write property)

130.12.5 Month as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Month (1-12).
Notes: (Read and Write property)

130.12.6 Year as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Year.
Notes: (Read and Write property)

130.13 class PhidgetGPSMBS

130.13.1 class PhidgetGPSMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Class specific to the Phidget GPS.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.13.3 Methods

130.13.4 Constructor

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an GPS instance.
Notes: Lasterror is set.

130.13.5 getAltitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current altitude, in meters.
Notes: Lasterror is set.

130.13.6 getDate as PhidgetGPSDateMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current GPS date, in UTC
Notes: Lasterror is set.

130.13.7 getHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current heading, in degrees.
Notes: Lasterror is set.

130.13.8 getLatitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current latitude.
Notes: Lasterror is set.

130.13.9 getLongitude as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current longitude.
Notes: Lasterror is set.

130.13.10 getNMEAData as PhidgetNMEADataMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets Raw NMEA Data.
Notes: Lasterror is set.

130.13.11 getPositionFixStatus as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the position fix status.
Notes: Lasterror is set.

130.13.12 getTime as PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current GPS time, in UTC.
Notes: Lasterror is set.

130.13.13 getVelocity as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current velocity, in km/h.
Notes: Lasterror is set.

130.13.14 Events

130.13.15 PositionChanged(latitude as Double, longitude as Double, altitude as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The position change event.
Notes: Called when any of latitude, longitude, or altitude change.

130.13.16 PositionFixStatusChanged(status as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The position fix status change event.
Notes: Called when a position fix is aquired or lost.

130.14 class PhidgetGPSSatInfoMBS

130.14.1 class PhidgetGPSSatInfoMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for Satellite info - used in GSV sentence.

130.14.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.14.3 Properties

130.14.4 Azimuth as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The azimuth value.
Notes: (Read and Write property)

130.14.5 Elevation as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The elevation value.
Notes: (Read and Write property)

130.14.6 ID as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ID.
Notes: (Read and Write property)

130.14.7 SNR as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The serial number.

Notes: (Read and Write property)

130.15 class PhidgetGPSTimeMBS

130.15.1 class PhidgetGPSTimeMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GPS Time in UTC.

130.15.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.15.3 Properties

130.15.4 Hour as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hour value.
Notes: (Read and Write property)

130.15.5 Millisecond as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Milliseconds value.
Notes: (Read and Write property)

130.15.6 Minute as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minutes value.
Notes: (Read and Write property)

130.15.7 Second as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds value.

Notes: (Read and Write property)

130.16 class PhidgetGPVTGMBS

130.16.1 class PhidgetGPVTGMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a NMEA VTG Sentence.

130.16.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.16.3 Properties

130.16.4 magneticHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The magnetic heading.
Notes: (Read only property)

130.16.5 mode as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mode.
Notes: (Read and Write property)

130.16.6 speed as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The speed in km/hour.
Notes: (Read only property)

130.16.7 speedKnots as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The speed in knots.

Notes: (Read only property)

130.16.8 trueHeading as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The true heading.
Notes: (Read only property)

130.17 class PhidgetInterfaceKitMBS

130.17.1 class PhidgetInterfaceKitMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget interface kit.
Notes:

The PhidgetInterfaceKit is a component that provides a high-level programmer interface to control a PhidgetInterfaceKit device connected through a USB port.
With this component, the programmer can:

- Turn particular outputs on and off.
- Get notified of changes of state of the inputs as events.
- Configure events to fire when the analog inputs change.

The PhidgetInterfaceKit devices provide a combination of:

- Digital outputs.
- Digital inputs.
- Analog inputs.

Subclass of the PhidgetMBS class.

130.17.2 Methods

130.17.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.17.4 getDataRate(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the Data Rate for an analog input in milliseconds.
Notes:

The Lasterror property is set.

This is the event rate. Since we're not going to run an extra thread, the accuracy of the data rate is limited by the interrupt endpoint data rate (>=8ms).

130.17.5 getDataRateMax(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

130.17.6 getDataRateMin(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

130.17.7 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

130.17.8 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of a digital input.
Notes: The Lasterror property is set.

130.17.9 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of digital outputs supported by this board.
Notes: The Lasterror property is set.

130.17.10 getOutputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of a digital output.
Notes: The Lasterror property is set.

130.17.11 getRatiometric as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the ratiometric state for this board.
Notes: The Lasterror property is set.

130.17.12 getSensorChangeTrigger(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes:

To receive all events, set the SensorChangeTrigger to zero.
The Lasterror property is set.

130.17.13 getSensorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of sensor (analog) inputs supported by this board.
Notes: The Lasterror property is set.

130.17.14 getSensorRawValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the reported actual value of the sensor between 0 - 4095.
Notes:

This is directly proportional to the analog input, ranging from 0-5V (or 0-Vcc if Ratiometric is set to True). Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

130.17.15 getSensorValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last reported sensor value for the given index as a value from 0-1000
Notes:

Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

130.17.16 setDataRate(index as Integer, milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the Data Rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

130.17.17 setOutputState(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the state of a digital output.
Notes: The Lasterror property is set.

130.17.18 setRatiometric(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the ratiometric state for this board.
Notes: The Lasterror property is set.

130.17.19 setSensorChangeTrigger(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes: Lasterror is set.

130.17.20 Events

130.17.21 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called on any input change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.17.22 OutputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of digital outputs on this particular Phidget device.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.17.23 SensorChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called on any sensor change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.18 class PhidgetIRCodeInfoMBS

130.18.1 class PhidgetIRCodeInfoMBS

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a code info for the IR receiver/sender.
Notes:

The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Some values can be set to null to select defaults. See the product manual for more information.

130.18.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

130.18.3 Properties

130.18.4 bitCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bits in the code.
Notes: (Read and Write property)

130.18.5 carrierFrequency as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Carrier frequency in Hz - defaults to 38kHz.
Notes: (Read and Write property)

130.18.6 dutyCycle as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Duty Cycle in percent (10-50).
Notes:

Defaults to 33.
(Read and Write property)

130.18.7 encoding as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encoding used to encode the data.
Notes:

See the PHIDGET_IR_ENCODING_* constants.
(Read and Write property)

130.18.8 gap as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gap time in us.
Notes: (Read and Write property)

130.18.9 length as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length of the code.
Notes:

Constant or Variable length encoding.
See PHIDGET_IR_LENGTH_* constants.
(Read and Write property)

130.18.10 minRepeat as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Minium number of times to repeat a code on transmit.
Notes: (Read and Write property)

130.18.11 trail as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trail time in us - can be 0 for none.
Notes: (Read and Write property)

130.18.12 header(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header value.
Notes:

Header pulse and space - can be 0 for none
Index from 0 to 1.
(Read and Write computed property)

130.18.13 one(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The one array.
Notes:

Pulse and Space times to represent a '1' bit, in us
Index from 0 to 1.
(Read and Write computed property)

130.18.14 repeat(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A series or pulse and space times to represent the repeat code.
Notes:

Start and end with pulses and null terminate. Set to 0 for none.
Index from 0 to 25.
(Read and Write computed property)

130.18.15 toggleMask(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Bit toggles, which are applied to the code after each transmit.
Notes: (Read and Write computed property)

130.18.16 zero(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the arrays.
Notes:

Index from 0 to 1.
Pulse and Space times to represent a '0' bit, in us.
(Read and Write computed property)

130.18.17 Constants

130.18.18 PHIDGET_IR_ENCODING_BIPHASE = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: Bi-Phase, or Manchester encoding.

130.18.19 PHIDGET_IR_ENCODING_PULSE = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: Pulse encoding, or Pulse Width Modulation.

130.18.20 PHIDGET_IR_ENCODING_RC5 = 5

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: RC5 - a type of Bi-Phase encoding.

130.18.21 PHIDGET_IR_ENCODING_RC6 = 6

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: RC6 - a type of Bi-Phase encoding.

130.18.22 PHIDGET_IR_ENCODING_SPACE = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: Space encoding, or Pulse Distance Modulation.

130.18.23 PHIDGET_IR_ENCODING_UNKNOWN = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the encoding constants.
Notes: Unknown - the default value.

130.18.24 PHIDGET_IR_LENGTH_CONSTANT = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the length constants.
Notes: Constant - the bitstream + gap length is constant.

130.18.25 PHIDGET_IR_LENGTH_UNKNOWN = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the length constants.
Notes: Unknown - the default value.

130.18.26 PHIDGET_IR_LENGTH_VARIABLE = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the length constants.
Notes: Variable - the bitstream has a variable length with a constant gap.

130.19 class PhidgetIRMBS

130.19.1 class PhidgetIRMBS

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an IR receiver/sender.
Notes:

Calls specific to the Phidget IR. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.19.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

130.19.3 Methods

130.19.4 Constructor

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

130.19.5 getLastCode(byref bitCount as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last code that was received.
Notes:

The Lasterror property is set.

bitCount: set to the bit count of the code.

130.19.6 getLastLearnedCode(byref codeInfo as PhidgetIRCodeInfoMBS) as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last code that was learned.
Notes: The Lasterror property is set.

130.19.7 getRawData as MemoryBlock

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read any available raw data.
Notes:

This should be polled continuously (every 20ms) to avoid missing data. Read data always starts with a space and ends with a pulse.
The Lasterror property is set.

130.19.8 Transmit(data as MemoryBlock, codeInfo as PhidgetIRCodeInfoMBS)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transmits a code according to the settings in a CodeInto object.
Notes:

The Lasterror property is set.

data: The code to send. Data is transmitted MSBit first. MSByte is in array index 0. LSBit is right justified, so MSBit may be in bit positions 0-7 in array index 0 depending on the bit count.
codeInfo: The CodeInfo structure specifying to to send the code. Anything left as null to select default is filled in for the user.

130.19.9 TransmitRaw(data as MemoryBlock, length as Integer, carrierFrequency as Integer, dutyCycle as Integer, gap as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transmits RAW data as a series of pulses and spaces.
Notes:

The Lasterror property is set.

data: The data to send. The array (Int32) must start and end with a pulse and each element is a positive time in us.

length: The length of the data array. Maximum length is 1024, but streams should be kept much shorter, ie. <100ms between gaps.
carrierFrequency: The Carrier Frequency in Hz. leave as 0 for default.
dutyCycle: The Duty Cycle (10-50). Leave as 0 for default.
gap: The gap time in us. This guarantees a gap time (no transmitting) after the data is sent, but can be set to 0.

130.19.10 TransmitRepeat

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transmits a repeat of the last transmited code.
Notes:

The Lasterror property is set.
Depending of the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

130.19.11 Events

130.19.12 Code(data as memoryblock, bitcount as Integer, repeat as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A code was received.
Notes:

This is called when a code has been received that could be automatically decoded.
Data is return as an array with MSB in index 0. Bit count and a repeat flag are also returned. (Int32 values)
Repeats are detected as either the same code repeated in <100ms or as a special repeat code.

130.19.13 Learn(data as memoryblock, code as PhidgetIRCodeInfoMBS)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The learn event.
Notes:

This is called when a code has been received for long enough to be learned.
The returned CodeInfo object can be used to retransmit the same code.

130.19.14 RawData(tag as memoryblock)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is called when raw data has been read from the device.
Notes:

Raw data always starts with a space and ends with a pulse.
tag contains 4 byte integer values.

130.20 class PhidgetLEDMBS

130.20.1 class PhidgetLEDMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget LED device.
Notes:

The PhidgetLED is a component that provides a high-level programmer interface to control a PhidgetLED device connected through a USB port.

With this component, the programmer can:

- Control each led individually, On/Off and Brightness.

Subclass of the PhidgetMBS class.

130.20.2 Methods

130.20.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

130.20.4 getCurrentLimit as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current limit.
Notes:

This is for all outputs.
Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

130.20.5 getDiscreteLED(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

130.20.6 getLEDCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of LED positions available in this Phidget.
Notes:

The Lasterror property is set.
This property does not return the number of LEDs actually attached.

130.20.7 getVoltage as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

130.20.8 setCurrentLimit(currentLimit as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current limit.
Notes:

Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

130.20.9 setDiscreteLED(index as Integer, Brightness as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

130.20.10 setVoltage(Voltage as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

130.20.11 Constants

130.20.12 PHIDGET_LED_CURRENT_LIMIT_20mA = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the limit constants.
Notes: 20mA

130.20.13 PHIDGET_LED_CURRENT_LIMIT_40mA = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the limit constants.
Notes: 40mA

130.20.14 PHIDGET_LED_CURRENT_LIMIT_60mA = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the limit constants.
Notes: 60mA

130.20.15 PHIDGET_LED_CURRENT_LIMIT_80mA = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the limit constants.
Notes: 80mA

130.20.16 PHIDGET_LED_VOLTAGE_1_7V = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the voltage constants.
Notes: 1.7V

130.20.17 PHIDGET_LED_VOLTAGE_2_75V = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the voltage constants.
Notes: 2.75V

130.20.18 PHIDGET_LED_VOLTAGE_3_9V = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the voltage constants.
Notes: 3.9V

130.20.19 PHIDGET_LED_VOLTAGE_5_0V = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the voltage constants.
Notes: 5.0V

130.21 class PhidgetManagerMBS

130.21.1 class PhidgetManagerMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Phidget manager is an interface that allows for monitoring of all phidgets connected to a system, without opening them.

130.21.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

130.21.3 Methods

130.21.4 Close

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the file handles for this device. You should always call this when finished with a Manager.
Notes: Lasterror is set.

130.21.5 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

130.21.6 Device(index as Integer) as PhidgetMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The array of the attached devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.

130.21.7 getAttachedDevices

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the list of attached devices into the Device and Count properties.
Notes: Lasterror is set.

130.21.8 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

130.21.9 getServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the address and port.
Notes: The Lasterror property is set.

130.21.10 getServerID as string

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the server ID.
Notes: The Lasterror property is set.

130.21.11 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

130.21.12 Open

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a connection to the local Phidget Manager.
Notes: Lasterror is set.

130.21.13 openRemote(serverID as string, password as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

130.21.14 openRemoteIP(addr as string, port as Integer, password as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a connection to a remote Phidget Manager.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active.

If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown.

Lasterror is set.

Address is the address of the computer running the Phidget Webservice.
This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice.
If authentication is not active, this can be set to "".

130.21.15 Properties

130.21.16 Count as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.
(Read and Write property)

130.21.17 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal used CPhidgetManagerHandle.
Notes: (Read and Write property)

130.21.18 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes: (Read and Write property)

130.21.19 Events

130.21.20 Attach(devicehandle as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when a device is attached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.21.21 Detach(devicehandle as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when a device is detached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.21.22 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.21.23 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.21.24 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

130.22 class PhidgetMBS

130.22.1 class PhidgetMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The base class of all Phidget device classes.
Notes:

Check phidgets.com for information on this devices.
http://www.phidgets.com/

130.22.2 Methods

130.22.3 Close

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the file handles for this device.
Notes:

You can call this while reads and writes are still outstanding; they will fail quickly.
Lasterror is set.
The destructor does a close if you forget it.

130.22.4 disableLogging

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Disables logging on the library.
Notes: The Lasterror property is set.

130.22.5 enableLogging(level as Integer, outputFile as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables logging on the library.
Notes:

The Lasterror property is set.
Data is written to the file specified with the output file path.
Not sure how the path must be specified. This is depending on the library used.

The levels:

PHIDGET_LOG_CRITICAL	1
PHIDGET_LOG_ERROR	2
PHIDGET_LOG_WARNING	3
PHIDGET_LOG_DEBUG	4
PHIDGET_LOG_INFO	5
PHIDGET_LOG_VERBOSE	6

130.22.6 GetDeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the class of a Phidget.
Notes: See the PHIDCLASS_* constants.

130.22.7 GetDeviceID as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the device ID of a Phidget.
Notes: See the PHIDID_* constants.

130.22.8 GetDeviceLabel as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Label for the Phidget.
Notes:

The Label is a user programmable serial number stored on the Phidget - it can be used to implement a serial numbering scheme, or describe the functionality of the Phidget in a specific application.

Lasterror is set.

130.22.9 GetDeviceName as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns string describing the name of the Phidget.
Notes:

For example, ”Phidget InterfaceKit 8/8/8”, ”Phidget InterfaceKit 0/0/4”, etc.
The Lasterror property is set.

130.22.10 GetDeviceStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

130.22.11 GetDeviceType as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string describing the type of the Phidget.
Notes:

All PhidgetInterfaceKits will return "PhidgetInterfaceKit", PhidgetRFID returns "PhidgetRFID" and so on.

Lasterror is set.

130.22.12 GetDeviceVersion as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string describing the Device Version of the Phidget.
Notes: Lasterror is set.

130.22.13 GetErrorDescription(errorcode as Integer) as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a string describing the ErrorCode passed.
Notes:

Lasterror is set.

The list of the error codes:

0 EPHIDGET_OK
1 EPHIDGET_NOTFOUND

2 EPHIDGET_NOMEMORY
3 EPHIDGET_UNEXPECTED
4 EPHIDGET_INVALIDARG
5 EPHIDGET_NOTATTACHED
6 EPHIDGET_INTERRUPTED
7 EPHIDGET_INVALID
8 EPHIDGET_NETWORK
9 EPHIDGET_UNKNOWNVAL
10 EPHIDGET_BADPASSWORD
11 EPHIDGET_UNSUPPORTED
12 EPHIDGET_DUPLICATE
13 EPHIDGET_TIMEOUT
14 EPHIDGET_OUTOFBOUNDS
15 EPHIDGET_EVENT
16 EPHIDGET_NETWORK_NOTCONNECTED
17 EPHIDGET_WRONGDEVICE

130.22.14 GetLibraryVersion as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** returns a string providing the version number of the API library.
Notes: Lasterror is set.

130.22.15 GetSerialNumber as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the unique serial number of this Phidget.
Notes:

Lasterror is set.
This number is set during manufacturing, and is unique across all Phidgets.

130.22.16 GetServerAddress(byref port as Integer) as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the IP Address and Port of a remote Phidget device.
Notes:

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
Lasterror is set.

130.22.17 GetServerID as string

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Server ID for a remote Phidget device.
Notes:

This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
The Lasterror property is set.

130.22.18 GetServerStatus as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

130.22.19 Open(serialNumber as Integer = -1)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a connection between an PhidgetMBS object and a physical Phidget.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Open is pervasive. What this means is that you can call open on a device before it is plugged in, and keep the device opened across device dis- and re-connections.
Open is Asynchronous. What this means is that open will return immediately - before the device being opened is actually available.
What this means is that you need to either poll getDeviceStatus for an attached status, or handle the attach

event, in order to wait for the device to become available before trying to use it.

SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Lasterror is set.

130.22.20 OpenLabel(label as string = "")

MBS USB Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a Phidget by label.
Notes:

Available with phidget library from December 2011.
Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
Lasterror is set.

130.22.21 openLabelRemote(label as string, serverID as string, password as string = "")

MBS USB Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a Phidget remotely by ServerID. Note that this requires Bonjour (mDNS) to be running on both the host and the server.
Notes:

Available with phidget library from December 2011.
label: The label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
serverID: Server ID. Specify "" to open any.
password: The Password. Can be "" if the server is running unsecured.
Lasterror is set.

130.22.22 openLabelRemoteIP(label as string, addr as string, port as Integer, password as string = "")

MBS USB Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a Phidget remotely by address and port, with optional label.
Notes:

Available with phidget library from December 2011.
Lasterror is set.

label: Label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.

address: The Address. This can be a hostname or IP address.
port: The Port number. Default is 5001.
password: The Password. Can be NULL if the server is running unsecured.

130.22.23 openRemote(serial as Integer, serverID as string, password as string = "")

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

130.22.24 openRemoteIP(serial as Integer, addr as string, port as Integer, password as string = "")

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to open a connection to a Phidget Webservice, and waits for a phidget on that connection.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.
As with the regular open, openRemoteIP is pervasive and asynchronous – so long as the connection to the Webservice remains active.
SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Address is the address of the computer running the Phidget Webservice. This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice. If authentication is not active, this can be set to "".
Lasterror is set.

130.22.25 PUNK_DBL as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value used for unknown values (Double).

130.22.26 PUNK_FLT as single

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value used for unknown values (Float).

130.22.27 SetDeviceLabel(label as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a Label – a string up to 10 characters long – to the Phidget associated with this handle.
Notes:

SetDeviceLabel may not be available on all operating systems.
Currently it is available on MacOS X, Linux, and Windows CE.
Calling this on Windows will return EPHIDGET_UNSUPPORTED
Lasterror is set.

130.22.28 waitForAttachment(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Waits the given time till a device has been attached.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Lasterror is set to EPHIDGET_OK when the device is available, or to EPHIDGET_TIMEOUT if the device is not attached before the timeout expires.
Timeouts below about 300ms cannot be trusted because of initialization time, and sometimes an even larger timeout is required – ie. the first time a device is plugged into a windows machine.
A timeout of 0 is infinite.
This function can be used in conjunction with (or instead of) an attach event handler.
The Lasterror property is set.

130.22.29 Properties

130.22.30 Handle as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal used CPhidgetHandle.
Notes: (Read and Write property)

130.22.31 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes:

EPHIDGET_NOTFOUND	1	"A Phidget matching the type and or serial number could not be found." This indicates that a Phidget being searched for (ie. via Open) could not be located.
EPHIDGET_NOMEMORY	2	"Memory could not be allocated." This indicates that there is not enough memory for the Phidgets library to create the object requested.
EPHIDGET_UNEXPECTED	3	"Unexpected Error. Contact Phidgets Inc. for support." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_INVALIDARG	4	"Invalid argument passed to function." An argument is not valid to the requirements of the function. In many cases this refers to an invalid Phidget Handle.
EPHIDGET_NOTATTACHED	5	"Phidget not physically attached." Indicates the function requires an attached Phidget to operate.
EPHIDGET_INTERRUPTED	6	"Read/Write operation was interrupted" An error occurred while attempting to communicate with the Phidget over USB.
EPHIDGET_INVALID	7	"The Error Code is not defined." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_NETWORK	8	"Network Error." Attempting to communicate with the Phidget via the Network has failed.
EPHIDGET_UNKNOWNVAL	9	"Value is Unknown (State not yet received from device)." A query to a value on the Phidget device has failed as the Phidget has not returned data yet.
EPHIDGET_BADPASSWORD	10	"Authorization Failed." The remote access method has failed it's authorization.
EPHIDGET_UNSUPPORTED	11	"Not Supported" This is a bad or unsupported function call.
EPHIDGET_DUPLICATE	12	"Duplicated request" A previous request to the device has already performed this function, and it is not valid to perform twice.
EPHIDGET_TIMEOUT	13	"Given timeout has been exceeded" A synchronous request has failed it's time limits. Usually this is returned when attempting WaitForConnect.
EPHIDGET_OUTOFBOUNDS	14	"Index out of Bounds" An index into the function is above or below the recognized bounds of the device. ie. when accessing a single sensor on a multisensor device.
EPHIDGET_EVENT	15	"A non-null error code was returned from an event handler" An error code was passed to a function handler. Note that correct decoding of the actual error would have to be done within the event handler itself.
EPHIDGET_NETWORK_NOTCONNECTED	16	"A connection to the server does not ex-ist." An attempt to connect to a remotely connected device or service failed due to network connectivity problems.
EPHIDGET_WRONGDEVICE	17	"Function is not applicable for this device." The wrong type of device handle was passed as an argument to a function. (ie. calling CPhidgetWeightSensor_getWeight with an Accelerometer handle)

(Read and Write property)

130.22.32 Events

130.22.33 Attach

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when a device is attached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.22.34 Detach

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when a device is detached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.22.35 Error(errorCode as Integer, errorDescription as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

This event is used for reporting asynchronous errors - mostly related to opening
remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.22.36 ServerConnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is used for opening Phidgets remotely, and is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.22.37 ServerDisconnect

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is used for opening Phidgets remotely, and is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.22.38 Wakeup

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when the device wakes up.

130.22.39 WillSleep

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when the device will go to sleep.

130.22.40 Constants

130.22.41 EPHIDGET_BADPASSWORD=10

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Authorization exception. "No longer used. Replaced by EEPHIDGET_BADPASSWORD"

130.22.42 EPHIDGET_BADVERSION=19

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Version Mismatch. "No longer used. Replaced by EEPHIDGET_BADVERSION"

130.22.43 EPHIDGET_CLOSED=18

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Phidget Closed. "Phidget handle was closed."

130.22.44 EPHIDGET_DUPLICATE=12

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Duplicate request. "Duplicated request."

130.22.45 EPHIDGET_EVENT=15

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Event. "A non-null error code was returned from an event handler." This code is not currently used.

130.22.46 EPHIDGET_INTERRUPTED=6

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Interrupted. "Read/Write operation was interrupted." This code is not currently used.

130.22.47 EPHIDGET_INVALID=7

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Invalid error code. "The Error Code is not defined."

130.22.48 EPHIDGET_INVALIDARG=4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Invalid argument. "Invalid argument passed to function."

130.22.49 EPHIDGET_NETWORK=8

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Network. "Network Error."

130.22.50 EPHIDGET_NETWORK_NOTCONNECTED=16

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Network not connected. "A connection to the server does not exist."

130.22.51 EPHIDGET_NOMEMORY=2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: No memory. "Memory could not be allocated."

130.22.52 EPHIDGET_NOTATTACHED=5

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Phidget not attached. "Phidget not physically attached."

130.22.53 EPHIDGET_NOTFOUND=1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Phidget not found. "A Phidget matching the type and or serial number could not be found."

130.22.54 EPHIDGET_OK=0

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Function completed successfully.

130.22.55 EPHIDGET_OUTOFBOUNDS=14

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Out of bounds. "Index out of Bounds."

130.22.56 EPHIDGET_TIMEOUT=13

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Timeout. "Given timeout has been exceeded."

130.22.57 EPHIDGET_UNEXPECTED=3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Unexpected. "Unexpected Error. Contact Phidgets Inc. for support."

130.22.58 EPHIDGET_UNKNOWNVAL=9

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Value unknown. "Value is Unknown (State not yet received from device, or not yet set by user)."

130.22.59 EPHIDGET_UNSUPPORTED=11

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Unsupported. "Not Supported."

130.22.60 EPHIDGET_WRONGDEVICE=17

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the error constants.
Notes: Wrong device. "Function is not applicable for this device."

130.22.61 PHIDCLASS_ACCELEROMETER = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the HID class constants.

130.22.62 PHIDCLASS_ADVANCEDSERVO = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the HID class constants.

130.22.63 PHIDCLASS_ANALOG = 22

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the HID class constants.

130.22.64 PHIDCLASS_BRIDGE = 23

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the HID class constants.

130.22.65 PHIDCLASS_ENCODER = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the HID class constants.

130.22.66 PHIDCLASS_FREQUENCYCOUNTER = 21

MBS USB Plugin, Plugin Version: 11.1. **Function:** The value used for unknown values (Boolean).

130.22.199 PUNK_INT = & H7FFFFFFF

MBS USB Plugin, Plugin Version: 11.1. **Function:** The value used for unknown values (Integer).

130.22.200 PUNK_INT64 = & h7FFFFFFFFFFFFFFF

MBS USB Plugin, Plugin Version: 11.1. **Function:** The value used for unknown values (Int64).

130.22.201 PUNK_SHRT = & h7FFF

MBS USB Plugin, Plugin Version: 11.1. **Function:** The value used for unknown values (Short).

130.23 class PhidgetMissingFunctionExceptionMBS

130.23.1 class PhidgetMissingFunctionExceptionMBS

MBS USB Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class used to report that a given phidget function was not loaded from the library.
Notes:

Check the message property.
Subclass of the RuntimeException class.

130.24 class PhidgetMotorControlMBS

130.24.1 class PhidgetMotorControlMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the phidget motor control device.
Notes:

The PhidgetMotorControl is a component that provides a high-level programmer interface to control a PhidgetMotorControl device connected through a USB port.

With this component, the programmer can:

- Control direction, and start and stop DC motors.
- Control the velocity and acceleration of each DC motor.
- Read the limit switch.

Subclass of the PhidgetMBS class.

130.24.2 Methods

130.24.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

130.24.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current acceleration.
Notes:

Note that this value defaults to 10 upon initialisation.
The Lasterror property is set.

130.24.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

130.24.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

130.24.7 getBackEMF(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the Back EMF voltage for a motor.
Notes: Lasterror is set.

130.24.8 getBackEMFSensingState(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

130.24.9 getBraking(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the Braking value for a motor.
Notes:

Lasterror is set.
Returns the braking value, in percent.

130.24.10 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** get the current motor current consumption.

Notes: The Lasterror property is set.

130.24.11 getEncoderCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of encoder inputs supported by this board.
Notes: Lasterror is set.

130.24.12 getEncoderPosition(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the position of an encoder. This position starts at 0 every time the phidget is opened.
Notes: Lasterror is set.

130.24.13 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

130.24.14 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of a digital input.
Notes: The Lasterror property is set.

130.24.15 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

130.24.16 getRatiometric as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the ratiometric state.

Notes: Lasterror is set.

130.24.17 getSensorCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of sensor inputs supported by this board.
Notes: Lasterror is set.

130.24.18 getSensorRawValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the raw value of a sensor (12-bit).
Notes: Lasterror is set.

130.24.19 getSensorValue(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of a sensor.
Notes: Lasterror is set.

130.24.20 getSupplyVoltage as Double

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the Supply voltage for the motors.
Notes:

This could be higher then the actual supply voltage.
Returns the supply voltage, in volts.
Lasterror is set.

130.24.21 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current velocity of a motor.
Notes: The Lasterror property is set.

130.24.22 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the Motor's Maximum accesleration.
Notes:

Valid values are 0-100.
The Lasterror property is set.

130.24.23 setBackEMFSensingState(index as Integer, EMFState as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

130.24.24 setBraking(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the Braking value for a motor.
Notes:

This is applied when velocity is 0. Default is 0% .
value: The braking value, in percent.
Lasterror is set.

130.24.25 setEncoderPosition(index as Integer, position as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the encoder position.
Notes:

This can be used to set the position to a known value, and should only be called when the encoder is not moving.
Lasterror is set.

130.24.26 setRatiometric(value as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the ratiometric state.
Notes:

This control the voltage reference used for sampling the analog sensors.
Lasterror is set.

130.24.27 setVelocity(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the velocity of a motor.
Notes: The Lasterror property is set.

130.24.28 Events

130.24.29 BackEMFUpdated(index as Integer, voltage as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called at a constant rate; every 16ms, when back EMF sensing is enabled for that motor.

130.24.30 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current motor current consumption changed.
Notes:

Index: Index of the Motor firing the Event
Value: Value of the Motor Current

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.24.31 CurrentUpdated(index as Integer, current as Double)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current update event.
Notes: This is called at a constant rate; every 8ms.

130.24.32 EncoderPositionChanged(index as Integer, time as Integer, positionChange as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The encoder position change event.
Notes: This is called when the encoder position changes.

130.24.33 EncoderPositionUpdated(index as Integer, positionChange as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The encoder position update event.
Notes: This is called at a constant rate; every 8ms, whether the encoder position has changed or not.

130.24.34 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input value changed.
Notes:

Index: Index of the Input firing the Event
State: State of the Input

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.24.35 SensorUpdated(index as Integer, sensorValue as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sensor update event.
Notes: This is called at a constant rate; every 8ms.

130.24.36 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.25 class PhidgetNMEADataMBS

130.25.1 class PhidgetNMEADataMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** NMEA Data Structure. Contains a set of supported NMEA sentences.

130.25.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

130.25.3 Properties

130.25.4 GGA as PhidgetGPGGAMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GPS Fix and position data.
Notes: (Read and Write property)

130.25.5 GSA as PhidgetGPGSAMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GPS DOP and active satellites.
Notes: (Read and Write property)

130.25.6 GSV as PhidgetGPGSVMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Detailed satellite information.
Notes: (Read and Write property)

130.25.7 RMC as PhidgetGPRMCMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Recommended minimum data.

Notes: (Read and Write property)

130.25.8 VTG as PhidgetGPVTGMBS

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Heading and Speed over the Ground.
Notes: (Read and Write property)

130.26 class PhidgetNotInitialzedExceptionMBS

130.26.1 class PhidgetNotInitialzedExceptionMBS

MBS USB Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class used to report that a given phidget object was not initialized properly.
Notes:

Check the message property.
Subclass of the RuntimeException class.

130.27 class PhidgetPHSensorMBS

130.27.1 class PhidgetPHSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget PH sensor device.
Notes:

The PhidgetPHSensor is a component that provides a high-level programmer interface to control a PhidgetPHSensor device connected through a USB port.

With this component, the programmer can:

- Read the pH of a liquid with a pH sensor.

Subclass of the PhidgetMBS class.

130.27.2 Methods

130.27.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.27.4 getPH as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current pH.
Notes:

The Lasterror property is set.
Valid range is -10 to 10.
Note that this value defaults to -20. Applications not wishing to encounter this value should use Change Handlers instead of polling the device for data.

130.27.5 getPHChangeTrigger as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the amount of change that should exist between the last reported value and the current value before an PHChange event is fired.
Notes: The Lasterror property is set.

130.27.6 getPHMax as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum PH that the sensor could report.
Notes: The Lasterror property is set.

130.27.7 getPHMin as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum PH that the sensor could report.
Notes: The Lasterror property is set.

130.27.8 getPotential as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current potential in volts.
Notes:

The Lasterror property is set.
Range is 0-5v.
2.5v corresponds to a pH of 7.0.

130.27.9 getPotentialMax as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum potential that can be sensed.
Notes: The Lasterror property is set.

130.27.10 getPotentialMin as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum potential that can be sensed.
Notes: The Lasterror property is set.

130.27.11 setPHChangeTrigger(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the amount of change that should exist between the last reported value and the current value before an OnPHChange event is fired.
Notes: The Lasterror property is set.

130.27.12 setTemperature(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the ambient temperature of the PH sensor for increased accuracy.
Notes:

This value defaults to 20 degrees celcius which is applicable for most applications.
The Lasterror property is set.

130.27.13 Events

130.27.14 PHChanged(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called if the pH changes by more than the PH trigger.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.28 class PhidgetRFIDMBS

130.28.1 class PhidgetRFIDMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget RFID device.
Notes:

The PhidgetRFID is a component that provides a high-level programmer interface to control a PhidgetRFID device connected through a USB port.
With this component, the programmer can:

- Read Radio Frequency Identification tags.

Radio Frequency Identification or RFID, is a non-contact identification technology which uses a reader to read data stored on low cost tags.

The particular instance of the technology we use stores a 40-bit number on the tag. Every tag that is purchased from Phidgets Inc. is guaranteed unique.

When a RFID tag is read, the component returns the unique number contained in the RFID tag.
Subclass of the PhidgetMBS class.

130.28.2 Methods

130.28.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.28.4 getAntennaOn as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of the antenna.
Notes: The Lasterror property is set.

130.28.5 getLastTag(m as memoryblock) as memoryblock

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Stores the last tag in a memoryblock.
Notes:

You need to pass in a memoryblock of the correct size for your tags.
For convenience the memoryblock is returned.

The Lasterror property is set.

130.28.6 getLEDOn as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of the onboard LED.
Notes: The Lasterror property is set.

130.28.7 getOutputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of outputs supported by this board.
Notes: The Lasterror property is set.

130.28.8 getOutputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of an output.
Notes: The Lasterror property is set.

130.28.9 getTagStatus as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the tag present status.
Notes:

This is whether or not a tag is being read by the reader.
The Lasterror property is set.

130.28.10 setAntennaOn(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the state of the antenna.
Notes:

Note that the antenna must be enabled before tags will be read.
The Lasterror property is set.

130.28.11 setLEDOn(value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the state of the onboard LED.
Notes: The Lasterror property is set.

130.28.12 setOutputState(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the state of an output.
Notes: The Lasterror property is set.

130.28.13 Events

130.28.14 OutputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called if an output changes.
Notes:

Index: Index of the Output firing the Event
Value: State of the Output.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.28.15 Tag(tag as memoryblock)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An RFID Tag is read.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.28.16 TagLost(tag as memoryblock)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A RFID Tag is removed from the field.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.29 Globals

130.29.1 LoadPhidgetFrameworkMBS(framework as folderitem) as boolean

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the phidget framework.
Notes:

Returns true on success and false on failure.
Path a folderitem for the phidget.framework in /library/frameworks.
Deprecated in plugin version 10.4.

130.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 130.29.3 LoadPhidgetLibraryMBS(path as string) as boolean 18944

130.29.3 LoadPhidgetLibraryMBS(path as string) as boolean

MBS USB Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 130.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean 18944

130.29.4 LoadPhidgetLinuxLibraryMBS(path as string) as boolean

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the phidget library.
Notes:

Returns true on success and false on failure.
Pass in the path to a .so file.
Deprecated in plugin version 10.4.

130.29.5 LoadPhidgetWindowsDLLMBS(dllpath as string) as boolean

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the windows dll.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.
Deprecated in plugin version 10.4.

130.30 class PhidgetServoMBS

130.30.1 class PhidgetServoMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget servo device.
Notes:

The PhidgetServo is a component that provides a high-level programmer interface to control a PhidgetServo device connected through a USB port.

With this component, the programmer can:

- Set the desired position for a servo motor, ranging from 0 to 180 degrees.

Subclass of the PhidgetMBS class.

130.30.2 Methods

130.30.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.30.4 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

The Lasterror property is set.

index: The motor index.

130.30.5 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of motors supported by this controller
Notes: The Lasterror property is set.

130.30.6 getPosition(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.30.7 getPositionMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

130.30.8 getPositionMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

130.30.9 getServoType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

130.30.10 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

130.30.11 setPosition(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current position of a motor.
Notes:

The Lasterror property is set.

index: The motor index.
position: The motor position.

130.30.12 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the servo parameters of a motor.
Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.

130.30.13 setServoType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

130.30.14 Events

130.30.15 MotorPositionChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called if the motor position is changed.

Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.31 class PhidgetSpatialEventDataMBS

130.31.1 class PhidgetSpatialEventDataMBS

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for event data on a spatial device.
Notes: Timestamped position data returned by the PhidgetSpatialMBS.SpatialData event.

130.31.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

130.31.3 Properties

130.31.4 TimestampMicroseconds as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The microseconds part of the Hardware timestamp.
Notes: (Read and Write property)

130.31.5 TimestampSeconds as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds part of the Hardware timestamp.
Notes: (Read and Write property)

130.31.6 acceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Acceleration data for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

130.31.7 angularRate(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Angular rate data (Gyroscope) for up to 3 axes.

Notes:

Index from 0 to 2.
(Read and Write computed property)

130.31.8 magneticField(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Magnetic field data (Compass) for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

130.32 class PhidgetSpatialMBS

130.32.1 class PhidgetSpatialMBS

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to control the spatial phidget device.
Notes:

Calls specific to the Phidget Spatial. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the PhidgetMBS class.

130.32.2 Blog Entries

- MBS REALbasic Plugins, version 11.1pr2
- MBS REALbasic Plugins, version 10.6pr7

130.32.3 Methods

130.32.4 Constructor

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

130.32.5 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current acceleration of an axis.
Notes:

index: The acceleration index.
Returns the acceleration in gs.
Lasterror is set.

130.32.6 getAccelerationAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of acceleration axes supplied by this board.

130.32.7 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum accleration supported by an axis.
Notes:

index: The acceleration index.
Lasterror is set.

130.32.8 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum acceleration supported by an axis.
Notes: index: The acceleration index.

130.32.9 getAngularRate(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current angular rate of an axis.
Notes:

Returns the angular rate in degrees/second.
index: The angular rate index.
Lasterror is set.

130.32.10 getAngularRateMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum angular rate supported by an axis.
Notes:

index: The angular rate index.
Lasterror is set.

130.32.11 getAngularRateMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum angular rate supported by an axis.
Notes:

index: The angular rate index.
Lasterror is set.

130.32.12 getCompassAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of compass axes supplied by this board.
Notes: Lasterror is set.

130.32.13 getDataRate as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the data rate in milliseconds.
Notes: Lasterror is set.

130.32.14 getDataRateMax as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum supported data rate in milliseconds.
Notes: Lasterror is set.

130.32.15 getDataRateMin as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum supported data rate in milliseconds.
Notes: Lasterror is set.

130.32.16 getGyroAxisCount as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of gyroscope axes supplied by this board.

Notes: Lasterror is set.

130.32.17 getMagneticField(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current magnetic field stregth of an axis.
Notes:

index: The magnetic field index.
Returns the magnetic field strength in Gauss.
Lasterror is set.

130.32.18 getMagneticFieldMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

130.32.19 getMagneticFieldMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

130.32.20 resetCompassCorrectionParameters

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the compass correction factors.
Notes:

Magnetic field data will be presented directly as reported by the sensor.
Lasterror is set.

130.32.21 setCompassCorrectionParameters(magField as Double, offset0 as Double, offset1 as Double, offset2 as Double, gain0 as Double, gain1 as Double, gain2 as Double, T0 as Double, T1 as Double, T2 as Double, T3 as Double, T4 as Double, T5 as Double)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the compass correction factors. This can be used to correcting any sensor errors, including hard and soft iron offsets and sensor error factors.
Notes:

Lasterror is set.

magField: Local magnetic field strength.
offset0: Axis 0 offset correction.
offset1: Axis 1 offset correction.
offset2: Axis 2 offset correction.
gain0: Axis 0 gain correction.
gain1: Axis 1 gain correction.
gain2: Axis 2 gain correction.
T0: Non-orthogonality correction factor 0.
T1: Non-orthogonality correction factor 1.
T2: Non-orthogonality correction factor 2.
T3: Non-orthogonality correction factor 3.
T4: Non-orthogonality correction factor 4.
T5: Non-orthogonality correction factor 5.

130.32.22 setDataRate(milliseconds as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the data rate in milliseconds.
Notes:

Lasterror is set.
Note that data at rates faster then 8ms will be delivered to events as an array of data.

130.32.23 zeroGyro

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Zeroes the gyroscope.
Notes:

This takes about two seconds and the gyro zxes will report 0 during the process.
This should only be called when the board is not moving.

Lasterror is set.

130.32.24 Events

130.32.25 SpatialData(data() as PhidgetSpatialEventDataMBS, dataCount as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when new data has been received.
Notes:

This is called at getDataRate, up to 8ms, for faster then 8ms data, multiple sets of data are supplied in a single event.
Lasterror is set.

130.33 class PhidgetStepperMBS

130.33.1 class PhidgetStepperMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a phidget stepper device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

130.33.2 Methods

130.33.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: On success the handle value is not zero.

130.33.4 getAcceleration(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the acceleration value.
Notes: The Lasterror property is set.

130.33.5 getAccelerationMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.6 getAccelerationMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.7 getCurrent(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current value.
Notes: The Lasterror property is set.

130.33.8 getCurrentLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum position that a motor can go to.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.9 getCurrentMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.10 getCurrentMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.11 getCurrentPosition(index as Integer) as int64

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current position of a motor.
Notes: The Lasterror property is set.

130.33.12 getEngaged(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.13 getInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

130.33.14 getInputState(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of a digital input.
Notes: The Lasterror property is set.

130.33.15 getMotorCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

130.33.16 getPositionMax(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

130.33.17 getPositionMin(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

130.33.18 getStopped(index as Integer) as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the stopped state of a motor. This is true when the motor is not moving and there are no outstanding commands.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.19 getTargetPosition(index as Integer) as int64

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last set target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.20 getVelocity(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current velocity of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.21 getVelocityLimit(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the last set velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.22 getVelocityMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum velocity that can be set for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.23 getVelocityMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

130.33.24 setAcceleration(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the acceleration.
Notes: The Lasterror property is set.

130.33.25 setCurrentLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the current limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.26 setCurrentPosition(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current position of a motor.
Notes:

This will not move the motor, just update the position value.

index: The motor index.
value: The position.

The Lasterror property is set.

130.33.27 setEngaged(index as Integer, value as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.
value: The engaged state. Possible values are true and false.

The Lasterror property is set.

130.33.28 setTargetPosition(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.29 setVelocityLimit(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

130.33.30 Events

130.33.31 CurrentChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.33.32 InputChanged(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

130.33.33 ServoChanged(index as Integer, value as int64)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The servo value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.33.34 VelocityChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.34 class PhidgetTemperatureSensorMBS

130.34.1 class PhidgetTemperatureSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget temperature sensor.
Notes:

The PhidgetTemperatureSensor is a component that provides a high-level programmer interface to control a PhidgetTemperatureSensor device connected through a USB port.

With this component, the programmer can:

- Read the temperature of Thermocouple device.
- Read cold junction temperature.
- Get notification of temperature change.

Subclass of the PhidgetMBS class.

130.34.2 Methods

130.34.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: On success the handle value is not zero.

130.34.4 getAmbientTemperature as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the ambient (board) temperature.
Notes: The Lasterror property is set.

130.34.5 getAmbientTemperatureMax as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

130.34.6 getAmbientTemperatureMin as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

130.34.7 getPotential(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the potential value for the temperature sender with the given index.
Notes: The Lasterror property is set.

130.34.8 getPotentialMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

130.34.9 getPotentialMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

130.34.10 getTemperature(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current temperature in Celsius or Fahrenheit (depending on UseImperial property).
Notes:

Index = 0 returns the temperature of the cold junction.
Index = 1 returns the temperatrue of the thermocouple.

Note that this value defaults to -500. Applications that do not wish to see this value should use Change Handlers instead of polling the device for data.

The Lasterror property is set.

130.34.11 getTemperatureChangeTrigger(index as Integer) as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

130.34.12 getTemperatureInputCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of thermocouple inputs supported by this board.
Notes: The Lasterror property is set.

130.34.13 getTemperatureMax(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the maximum temperature that can be measured by a thermocouple input. This depends on the type of thermocouple attached.
Notes: The Lasterror property is set.

130.34.14 getTemperatureMin(index as Integer) as Double

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the minimum temperature that can be measured by a thermocouple input.
Notes:

This depends on the type of thermocouple attached.
The Lasterror property is set.

130.34.15 getThermocoupleType(index as Integer) as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the type of thermocouple set to be at a thermocouple input. By default this is K-Type.
Notes:

The Lasterror property is set.
type: The thermocouple type.

130.34.16 setTemperatureChangeTrigger(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

130.34.17 setThermocoupleType(index as Integer, value as Integer)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the type of thermocouple plugged into a thermocouple input. By default this is K-Type.
Example:

```
dim t as PhidgetTemperatureSensorMBS

const PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1 // K-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2 // J-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3 // E-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4 // T-Type thermocouple

t.setThermocoupleType 0, PHIDGET_TEMPERATURE_SENSOR_T_TYPE
```

Notes: The Lasterror property is set.

130.34.18 Events

130.34.19 TemperatureChanged(index as Integer, value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The temperatur changed.
Notes:

Index: Index of the Temperature Sensor firing the Event
Value: Value of the Temperature Sensor

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

130.34.20 Constants

130.34.21 PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the sensor type constants.
Notes: E-Type thermocouple

130.34.22 PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the sensor type constants.
Notes: J-Type thermocouple

130.34.23 PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the sensor type constants.
Notes: K-Type thermocouple

130.34.24 PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4

MBS USB Plugin, Plugin Version: 11.0. **Function:** One of the sensor type constants.
Notes: T-Type thermocouple

130.35 class PhidgetTextLCDMBS

130.35.1 class PhidgetTextLCDMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the phidget text LCD.
Notes:

The PhidgetTextLCD is a component that provides a high-level programmer interface to control a PhidgetTextLCD device connected through a USB port.

With this component, the programmer can:

- Display text on a PhidgetTextLCD module.

Subclass of the PhidgetMBS class.

130.35.2 Methods

130.35.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

130.35.4 getBacklight as boolean

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the state of the backlight.
Notes: The Lasterror property is set.

130.35.5 getBrightness as Integer

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

130.35.6 getColumnCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

130.35.7 getContrast as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the contrast value from 0-255.
Notes:

Note that this defaults to 0.
The Lasterror property is set.

130.35.8 getCursorBlink as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determines if the cursor's blinking is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

130.35.9 getCursorOn as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determines if the cursor is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

130.35.10 getRowCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

130.35.11 getScreen as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the active screen.
Notes: Lasterror is set.

130.35.12 getScreenCount as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of Display supported by this TextLCD.
Notes: Lasterror is set.

130.35.13 getScreenSize as Integer

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the screen size.
Notes:

See PHIDGET_TEXTLCD_SCREEN_* constants.
Lasterror is set.

130.35.14 initialize

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the active screen.
Notes:

Only supported on the TextLCD adapter.
This should be called if a screen is attached after power up, or to clear the screen after setting the size.
Lasterror is set.

130.35.15 setBacklight(backlightState as boolean)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the state of the backlight.
Notes: The Lasterror property is set.

130.35.16 setBrightness(Brightness as Integer)

MBS USB Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

130.35.17 setContrast(Contrast as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the contrast from 0-255.
Notes: The Lasterror property is set.

130.35.18 setCursorBlink(CursorBlink as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the cursor's blinking on or off.
Notes: The Lasterror property is set.

130.35.19 setCursorOn(CursorOn as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the cursor on or off.
Notes:

This cursor is displayed at the last location that was changed.

The Lasterror property is set.

130.35.20 setCustomCharacter(index as Integer, val1 as Integer, val2 as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a custom character.
Notes:

With existing hardware, there is space for 8 custom characters : Index can range from 8 to 15.
Each character is described by a set of integers.
For more information, have a look at the TextLCD example in the examples.zip for Phidget21.

The Lasterror property is set.

130.35.21 setDisplayCharacter(index as Integer, column as Integer, character as Integer)

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a single character on the display.
Notes:

index: The row index.
column: The column index.
character: The character to display.

The Lasterror property is set.

130.35.22 setDisplayString(row as Integer, displayString as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the text to display on a particular row of the display.
Notes:

Row: Row to set on display
DisplayString: String to set on display. The text will be clipped at the right edge of the display.
The Lasterror property is set.

130.35.23 setScreen(screenIndex as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the active screen.
Notes:

This is the screen that all subsequent API calls will apply to.
Lasterror is set.

130.35.24 setScreenSize(screenSize as Integer)

MBS USB Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the active screen size. Only supported on the TextLCD Adapter.
Notes: Lasterror is set.

130.35.25 Constants

130.35.26 PHIDGET_TEXTLCD_SCREEN_1x16 = 4

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 16 column screen

130.35.27 PHIDGET_TEXTLCD_SCREEN_1x40 = 10

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 40 column screen

130.35.28 PHIDGET_TEXTLCD_SCREEN_1x8 = 2

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 8 column screen

130.35.29 PHIDGET_TEXTLCD_SCREEN_2x16 = 5

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 16 column screen

130.35.30 PHIDGET_TEXTLCD_SCREEN_2x20 = 7

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 20 column screen

130.35.31 PHIDGET_TEXTLCD_SCREEN_2x24 = 9

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 24 column screen

130.35.32 PHIDGET_TEXTLCD_SCREEN_2x40 = 11

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 40 column screen

130.35.33 PHIDGET_TEXTLCD_SCREEN_2x8 = 3

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 8 column screen

130.35.34 PHIDGET_TEXTLCD_SCREEN_4x16 = 6

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 16 column screen

130.35.35 PHIDGET_TEXTLCD_SCREEN_4x20 = 8

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 20 column screen

130.35.36 PHIDGET_TEXTLCD_SCREEN_4x40 = 12

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 40 column screen (special case, requires both screen connections)

130.35.37 PHIDGET_TEXTLCD_SCREEN_NONE = 1

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: no screen attached

130.35.38 PHIDGET_TEXTLCD_SCREEN_UNKNOWN = 13

MBS USB Plugin, Plugin Version: 11.1. **Function:** One of the screen size constants for the Phidget TextLCD Adapter.
Notes: Unknown

130.36 class PhidgetTextLEDMBS

130.36.1 class PhidgetTextLEDMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget text LED.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

130.36.2 Methods

130.36.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: On success the handle value is not zero.

130.36.4 getBrightness as Integer

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current brightness.
Notes: The Lasterror property is set.

130.36.5 getColumnCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

130.36.6 getRowCount as Integer

MBS USB Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

130.36.7 setBrightness(Brightness as Integer)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the brightness.
Notes: The Lasterror property is set.

130.36.8 setDisplayString(row as Integer, displayString as string)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the display string for the given row.
Notes: The Lasterror property is set.

130.37 class PhidgetWeightSensorMBS

130.37.1 class PhidgetWeightSensorMBS

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a phidget weight sensor.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the PhidgetMBS class.

130.37.2 Methods

130.37.3 Constructor

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

130.37.4 getWeight as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current weight.
Notes: The Lasterror property is set.

130.37.5 getWeightChangeTrigger as Double

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.
Notes: The Lasterror property is set.

130.37.6 setWeightChangeTrigger(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the amount of change that should exist between the last reported value and the current value before an

WeightChange event is fired.
Notes: The Lasterror property is set.

130.37.7 Events

130.37.8 WeightChanged(value as Double)

MBS USB Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The weight changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Chapter 131

PHP

131.1 class PHPMBS

131.1.1 class PHPMBS

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for the PHP library.
Notes:

For Linux and Mac OS X the PHP library is included in the plugin.
Plugin version 15.3 is built for PHP 5.6.12.

131.1.2 Blog Entries

131.1.3 Xojo Developer Magazine

- 13.6, page 10: News

131.1.4 Methods

131.1.5 CallbackArgumentCount as Integer

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of arguments to the callback event.
Notes: Returns 0 on any error.

131.1.6 CallbackArgumentDouble(index as Integer) as Double

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the parameter with the given index to double and returns it.
Notes: Returns 0 on any error.

131.1.7 CallbackArgumentInteger(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the parameter with the given index to integer and returns it.
Notes: Returns 0 on any error.

131.1.8 CallbackArgumentString(index as Integer) as string

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the parameter with the given index to string and returns it.
Notes: Returns an empty string on any error.

131.1.9 Constructor

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the PHP engine.
Example:

```
const path="php.dll"
call PHPMBS.LoadLibrary(path) // load the dll
dim p as new PHPMBS // initialize

if p.inited then // worked?
msgbox "ok"
end if
```

Notes: In older plugins this work was done by the method Init.

131.1.10 Execute(code as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs php code.
Example:

```
dim p as PHPMBS

p=new PHPMBS
MsgBox p.Execute("echo ""Hello"";")
```

Notes: Same as run, but does not call the write event, but return the whole output as one big string.

131.1.11 existsVariable(name as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether variable exists or not.
Notes: getVariable returns "" for variables which don't exist, but your variable may just be an empty string so this function lets you know whether the variable actually exists.

131.1.12 getVariable(name as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns value of the variable with the given name.
Notes: Returns an empty string if the variable name is wrong.

131.1.13 LoadExtension(Path as string) as boolean

MBS Tools Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an extension.
Notes:

Returns true on success.
Will write errors to stderr which you see in console apps.

131.1.14 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 131.1.15 LoadLibrary(path as string) as boolean 18986

131.1.15 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 131.1.14 LoadLibrary(file as folderitem) as boolean 18986

131.1.16 Run(code as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs PHP code.
Example:

```
dim php as PHPMBS // your php object

if php.run("echo 1+2;") then
// ok
else
// failed
end if
```

Notes:

Returns true on success.
Returns false on any compilation error or the library is not loaded/available.

You need to wrap your code into exception handlers as the plugin will ignore all exceptions and if you want to find errors, you need to catch them yourself.

131.1.17 setVariable(name as string, value as string)

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the variable with the given name to the given value.

131.1.18 Properties

131.1.19 Inited as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the PHP library has been initialized.
Notes:

Returns true on success.
(Read only property)

131.1.20 LastErrorFile as String

MBS Tools Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error file name.
Notes: (Read and Write property)

131.1.21 LastErrorLine as Integer

MBS Tools Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error line.
Notes: (Read and Write property)

131.1.22 LastErrorMessage as String

MBS Tools Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message.
Notes: (Read and Write property)

131.1.23 LastExitStatus as Integer

MBS Tools Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last exit status.
Notes: (Read and Write property)

131.1.24 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the PHP library has been loaded.
Notes:

Returns true on success.
(Read only property)

131.1.25 UseUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to use UTF-8 text encoding.
Notes:

By default we use ISO Latin1 encoding.
But you can ask for passing UTF-8 to/from PHP.

If enabled and a text is passed back from PHP which is not valid UTF-8, we still returned it marked as Latin1.
(Read and Write property)

131.1.26 INI as String

MBS Tools Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The PHP Ini to use.
Notes:

Must be called before initialization.

Default is:
html_errors=0
register_argc_argv=1
implicit_flush=1
output_buffering=0
max_execution_time=0
max_input_time=-1
(Read and Write computed property)

131.1.27 Events

131.1.28 Callback(ArgumentCount as Integer) as Variant

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when you call the php function callXojo()
Notes:

Return a variant with double, float, string or integer value.
Parameters are available using CallbackArgument* functions.

131.1.29 LogMessage(message as string)

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A message for the log file.
Notes: Normally written by apache to the log files.

131.1.30 Write(data as string)

MBS Tools Plugin, Plugin Version: 12.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** PHP wants to write some data.
Notes:

This text is normally the result, e.g. the content of the website the php code produces.

If php.ini file is used, you need to disable the output_buffering option to have this callback working.

Chapter 132

Pictures Import and Export

132.1 Globals

132.1.1 BitRotateMBS(Degree as Integer, InputData as Ptr, OutputData as Ptr, Width as Integer, Height as Integer, InputRowBytes as Integer = -1, OutputRowBytes as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates 1bit image in memory.
Notes:

Degree can be -360, -270, -180, -90, 0, 90, 180 or 270 to rotate counter clockwise.
InputData points to an 1bit image with given width and height. InputRowBytes if defined tells how many bytes per row are used in the input image. If <= 0, we calculate it. OutputRowBytes defines row bytes for output image, which is different for 90/270 rotation.
Returns true on success or false on failure.
The function is optimized for 180 degree to be quicker if image size is multiply of 8.
For 90 and 270 degree, there is an optimization if width and height are a multiply of 8.

132.1.2 BMPStringtoPictureMBS(data as string) as picture

MBS Picture Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a BMP picture from a string.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = p.BMPDataMBS
dim q as Picture = BMPStringtoPictureMBS(s)
window1.Backdrop = q
```

Notes:

This function is endian safe and supports 1, 4, 8, 16, 24, 32 bit BMP images.
For 32bit images the alpha value is ignored.
Returns nil on any error.
Only uncompressed BMP files are supported.

132.1.3 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

Errorcodes:

See also:

- 132.1.4 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 18992

132.1.4 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

ReadLines and WriteLines define how many rows to read in one I/O operation.

Errorcodes:

See also:

- 132.1.3 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer 18992

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed

15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

132.2 class PNGOptimizerMBS

132.2.1 class PNGOptimizerMBS

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This class is a wrapper for the OptiPNG command line tool.
Example:

```
dim p as Picture = LogoMBS(500)

dim fi as FolderItem = SpecialFolder.Desktop.Child("test unoptimized.png")
if not fi.SaveAsPNGMBS(p,0) then
MsgBox "Failed to save PNG file."
Return
end if

dim fo as FolderItem = SpecialFolder.Desktop.Child("test optimized.png")
fo.Delete // delete if existed before

dim o as new PNGOptimizerMBS

o.YieldTicks=10 // give time for other threads
```

```
o.InputFile=fi
o.OutputFile=fo

if o.Optimize then
MsgBox "OK: Saved "+str(o.BytesSaved)
fo.Launch
else
MsgBox "failed"
end if
```

Notes:

OptiPNG: Advanced PNG optimization program.
http://optipng.sourceforge.net/

Copyright (C) 2001-2008 Cosmin Truta.
OptiPNG is open-source software, and is distributed under the same licensing and warranty terms as libpng.

PNG optimization is described in detail in the PNG-Tech article "A guide to PNG optimization"
http://www.cs.toronto.edu/
textasciitilde cosmin/pngtech/optipng.html

The idea of running multiple compression trials with different PNG filters and zlib parameters is inspired from the pngcrush program by Glenn Randers-Pehrson.
The idea of performing lossless image reductions is inspired from the pngrewrite program by Jason Summers.

132.2.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr3
- MBS REALbasic Plugins, version 10.4pr3

132.2.3 Methods

132.2.4 Optimize as boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The main optimization function.
Notes: Returns true on success and false on failure.

132.2.5 Properties

132.2.6 BytesSaved as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** After the optimization this property shows how many bytes were saved.
Notes: (Read and Write property)

132.2.7 Debug as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables debug output.
Notes: (Read and Write property)

132.2.8 Fix as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable error recovery.
Notes: (Read and Write property)

132.2.9 Force as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enforce writing of a new output file.
Notes:

If the input image has a digital signature, the library will not optimize the file unless force=true.
(Read and Write property)

132.2.10 full as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to produce a full report on IDAT (might reduce speed).
Notes: (Read and Write property)

132.2.11 InputFile as Folderitem

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The file to process.
Notes: (Read and Write property)

132.2.12 interlace as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The interlace type (0-1).
Notes:

Set by default to -1 for undefined.
(Read and Write property)

132.2.13 KeepBackup as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to keep a backup of the modified files.
Notes:

If the file exists and KeepBackup=false an error is reported. If you set KeepBackup=True the old file is renamed.
(Read and Write property)

132.2.14 NoBitDepthReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not do a bit depth reduction.
Notes:

Reducing the bit depth of the image data can reduce the file size.
(Read and Write property)

132.2.15 NoColorTypeReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not do a color type reduction.
Notes:

If your PNG file has only 256 colors in use, the optimizer can use a color palette to save space.

(Read and Write property)

132.2.16 NoIDATRecompression as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not recompress the image data.
Notes: (Read and Write property)

132.2.17 NoPaletteReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to not reduce the palette.
Notes:

If not all colors are used, the palette can be reduced in its size.
(Read and Write property)

132.2.18 OptimizationLevel as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The optimization level.
Notes:

A value between 0 and 7.
Default is 2.
(Read and Write property)

132.2.19 OutputFile as Folderitem

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output file.
Notes: (Read and Write property)

132.2.20 Overwrite as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Overwrite existing files.
Notes: (Read and Write property)

132.2.21 Preserve as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to preserve file attributes if possible.
Notes: (Read and Write property)

132.2.22 Quiet as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Run in quiet mode.
Notes: (Read and Write property)

132.2.23 simulate as Boolean

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the optimization runs only in simulation mode.
Notes:

No file is written in simulation mode.
(Read and Write property)

132.2.24 Snip as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cut one image out of multi-image or animation files.
Notes: (Read and Write property)

132.2.25 StripAll as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Strip metadata objects .
Notes: (Read and Write property)

132.2.26 Verbose as Boolean

MBS Images Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Run in verbose mode / show copyright and version info.

Notes: (Read and Write property)

132.2.27 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to Xojo for other ticks.
Example:

```
dim p as new PNGOptimizerMBS
p.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

132.2.28 Events

132.2.29 Log(message as string)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to output a message to the log file.
Notes: You may want to show that to your advantaged users.

132.2.30 Panic(message as string)

MBS Images Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Called if something really bad happend and the app needs to quit.

132.2.31 Progress(index as Integer, count as Integer)

MBS Images Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for reporting ongoing process in the trials.
Notes: The library will try several PNG settings and report progress so you can update a progress bar.

132.2.32 ProgressBegin

MBS Images Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called before the library starts to optimize.
Notes: You may want to show a progress dialog here.

132.2.33 ProgressEnd

MBS Images Plugin, Plugin Version: 8.7, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called after the library finished.
Notes: You may want to hide your progress dialog here.

Chapter 133

PNG

133.1 Globals

133.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture to a PNG string.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Returns "" on any error.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 133.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19004

- 133.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19004

- 133.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19005

133.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a palette based RGB picture as a PNG file.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 133.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19003
- 133.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19004
- 133.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19005

133.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 133.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19003
- 133.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19004
- 133.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19005

133.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

See also:

- 133.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 19003
- 133.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 19004

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

- 133.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 19004

133.1.5 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads PNG data from a string variable.
Notes:

If the picture has an alpah channel the returned picture will have a mask.

Returns picture on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

133.1.6 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads PNG data from a string variable.
Notes:

Returns PNGPictureMBS object on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

133.2 class PNGpictureMBS

133.2.1 class PNGpictureMBS

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** A class for a PNG picture.
Notes: Based on LibPNG.

133.2.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

133.2.3 Methods

133.2.4 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

133.2.5 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PNG library compiled into the plugin.
Notes: Please ask if you need a newer version.

133.2.6 Properties

133.2.7 height as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture.
Notes: (Read and Write property)

133.2.8 mask as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mask of the picture.
Notes:

May be nil.
(Read and Write property)

133.2.9 pict as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture data of the picture.
Notes:

If this image is all black, you may use a different gamma setting.
(Read and Write property)

133.2.10 width as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture.
Notes: (Read and Write property)

133.2.11 Constants

133.2.12 kDefaultGamma = 0

MBS Images Plugin, Plugin Version: 11.3. **Function:** The default gamma constant.
Notes: Pass this value to get the default gamma.

133.3 class PNGReaderMBS

133.3.1 class PNGReaderMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for reading PNG files.
Example:

```
dim Current as PictureMBS // global
dim f as FolderItem

f=GetopenFolderItem(FileTypes.Png)

if f<>Nil then
Current=nil

dim p as new PNGReaderMBS

if p.OpenFile(f) then
if p.ApplyOptions(0) then

Current=new PictureMBS(p.Width,p.Height,PictureMBS.ImageFormatRGB)

dim i,c as Integer

c=p.Height-1
for i=0 to c
Current.RowInFormat(i, PictureMBS.ImageFormatRGBA)=p.ReadRow
next

end if
end if
end if
```

Notes:

Use this class to read PNG files row by row as memoryblock.

Based on LibPNG.

133.3.4 Methods

133.3.5 ApplyOptions(gamma as double = 0.0, ScreenGamma as double = -1.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies various options.
Notes:

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Added ScreenGamma parameter in plugin version 15.2. If you set both gamma and Screengamma to a value >0.0, the plugin will use those gamma values. If both are equal, no gamma correction is made.

16-bit images are always reduced to 8-bit images.

Returns true on success and false on failure. Calls ReadHeader method if needed.

133.3.6 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines the pict and the mask property to a picture with mask.

133.3.7 Open(file as folderitem, data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens either the data string or the file.
Notes: Returns true on success.

133.3.8 OpenData(data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a PNG file from the data string.
Notes: Returns true on success.

133.3.9 OpenFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")

If p.OpenFile(f) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 133.3.10 OpenFile(Path as String) as boolean 19012

133.3.10 OpenFile(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = f.NativePath

If p.OpenFile(path) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 133.3.9 OpenFile(file as folderitem) as boolean 19011

133.3.11 OpenSpecialData(data as string) as boolean

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Same as OpenData but with special handling of the png data.
Example:

```
dim f as FolderItem = getfolderitem("mbs.png")
dim b as BinaryStream = f.OpenAsBinaryFile(false) // BinaryStream.Open(f) in newer RB versions
dim s as string = b.Read(B.Length)

dim p as new PNGReaderMBS
if p.OpenSpecialData(s) then
if p.ApplyOptions(0) then
if p.ReadPicture then
Backdrop = p.Pict
Title = "OK"
else
Title = "Failed to read picture."
end if
else
Title = "Failed to apply options."
end if
else
```

```
Title = "Failed to open picture."
end if
```

Notes:

This function can be used to read PNG files made for the Apple iPhone. The PNG is converted from the Apple format to the normal PNG format and passed to OpenData. In the SourceData property you can get the modified PNG data. Still this modified PNG data has the channels swapped, so you should read the image with the pict property.

On Mac OS X 10.8, the NSImage class also reads iOS optimized PNG files.

133.3.12 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PNG library compiled into the plugin.

133.3.13 ReadEXIF(byref exif as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the EXIF data block.
Notes: Returns true on success or false on failure.

133.3.14 ReadHeader as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads header of PNG.
Notes:

This reads header and fill properties Width, Height, ColorType, OriginalColorType, InterlaceType and BitDepth.
Returns true on success and false on failure.

133.3.15 ReadICCProfile(byref name as string, byref compression as Integer, byref profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the ICC Profile from the PNG file.

Notes:

Name is the profile name, compression the method used to compress the profile data and profile a string with the content of the profile as binary data.
Returns true on success.

133.3.16 ReadPicture as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the picture into the pict and mask properties.
Notes: Returns true on success.

133.3.17 ReadRow as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next row as a memoryblock.
Example:

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes:

Returns nil on any error.
Format is RGBA as in the example with 4 bytes per pixel.
See also:

- 133.3.18 ReadRow(mem as memoryblock) as boolean 19015

133.3.18 ReadRow(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is RGBA as in the example with 4 bytes per pixel.
Make sure the memoryblock is big enough. Else you risk a crash.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.
See also:

- 133.3.17 ReadRow as memoryblock 19014

133.3.19 ReadRowAlphaOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is alpha channel as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.

133.3.20 ReadRowMaskOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is mask (inverse alpha) as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.
ReadRow with reusing memoryblock is faster than allocating a new one for each row.

133.3.21 ReadsRGBTag(byref file_srgb_intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the sRGB tag.
Notes: Returns true if the value was read into the given variable.

133.3.22 RowBytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length of each row in bytes.

133.3.23 Properties

133.3.24 AllowDamaged as Boolean

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to return picture for files with damaged content.
Notes:

e.g. a half downloaded PNG file can still be processed and may give you a preview for the file.
(Read and Write property)

133.3.25 BitDepth as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bit depth of the PNG file.

Notes:

The original value from file headers, not updated by ApplyOptions, even if we convert e.g. 1 bit to gray for you.
(Read and Write property)

133.3.26 ColorType as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

133.3.27 ExpandGrayToRGB as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether grayscale images are expanded to RGB.
Notes:

Set before ApplyOptions if you need this option.
Default is true.

Shall set transformations such that the grayscale image is converted to 24-bit RGB.

see png_set_gray_to_rgb function in libpng documentation.
(Read and Write property)

133.3.28 HasTransparency as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether a transparency block is included for palette images (tRNS).
Notes:

Set by ReadHeader or ApplyOptions.
(Read only property)

133.3.29 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture in pixels.
Notes: (Read and Write property)

133.3.30 InterlaceType as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The interlace setting.
Notes: (Read and Write property)

133.3.31 Interlacing as Integer

MBS Images Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the png file is interlaced.
Notes:

Value is 1 if not interlaced and 7 if interlaced.
(Read and Write property)

133.3.32 InvertAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether alpha values should be inverted.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_invert_alpha function in libpng documentation.

(Read and Write property)

133.3.33 Mask as Picture

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mask of the picture.
Notes: (Read and Write property)

133.3.34 OriginalColorType as Integer

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

133.3.35 Pict as Picture

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture read.
Notes: (Read and Write property)

133.3.36 RGBToGray as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to convert RGB to grayscale.
Example:

```
dim png as PNGReaderMBS

// ask for gray only
png.RGBToGray = True

// avoid extra filler bytes for missing alpha channel
png.UseFiller = false
```

Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_rgb_to_gray function in libpng documentation.
(Read and Write property)

133.3.37 RGBToGrayErrorAction as Integer

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Error handling option for Reduce RGB to grayscale.
Notes:

Can be 1 for none, 2 for warn or 3 for error.
Default is 1.
(Read and Write property)

133.3.38 RGBToGrayGreen as Double

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

133.3.39 RGBToGrayRed as Double

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

133.3.40 SourceData as String

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source data used in Open functions.
Example:

```
dim p as PNGReaderMBS // your reader

// write data to file
dim fo as FolderItem = SpecialFolder.Desktop.Child("mbsout.png")
dim bo as BinaryStream = fo.CreateBinaryFile("") // BinaryStream.Create(fo,true) in newer RB Versions

bo.Write p.SourceData
```

Notes:

If you used OpenSpecialData, the data here is the PNG without the Apple modifications, but still with swapped colors.
This property is set by the OpenSpecialData, Open and OpenData functions.
(Read and Write property)

133.3.41 SourceFile as FolderItem

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The folderitem passed to the Open functions.
Notes:

This property is set by the Open and OpenFile functions.
(Read and Write property)

133.3.42 SourcePath as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source file path.
Notes: (Read and Write property)

133.3.43 StripAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to strip alpha.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_strip_alpha function in libpng documentation.
(Read and Write property)

133.3.44 SwapRB as Boolean

MBS Images Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to swap red and blue channels.
Example:

```
dim p as new PNGReaderMBS
p.SwapRB = true
```

Notes:

The PNG files for the iPhone have swapped channels so the iPhone does not need to swap them for display.
One of the tricks Apple uses for making the iPhone faster.
This flag is set to true by OpenSpecialData.
(Read and Write property)

133.3.45 UseFiller as Boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether filler byte is used for RGB.
Notes:

Set by ApplyOptions if needed.
Defines whether RGB is extended to 4 bytes with an extra filler byte if needed.

see png_set_filler function in libpng documentation.
(Read and Write property)

133.3.46 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture in pixels.
Notes: (Read and Write property)

133.3.47 Events

133.3.48 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The PNG library has an error message for you.
Notes: Processing will stop soon.

133.3.49 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The PNG library has a warning for you.

133.4 class PNGWriterMBS

133.4.1 class PNGWriterMBS

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to write a PNG file.
Example:

```
dim Current as PictureMBS // your picture
dim f as FolderItem

f=GetsaveFolderItem(FileTypes.Png,"test.png")

if f<>Nil then
const PNG_COLOR_MASK_PALETTE = 1
const PNG_COLOR_MASK_COLOR = 2
const PNG_COLOR_MASK_ALPHA = 4

dim p as new PNGWriterMBS

p.Width=Current.Width
p.Height=Current.Height
p.Type=PNG_COLOR_MASK_COLOR
p.bpc=3
p.Rowbytes=p.Width*p.bpc

if p.OpenWriteDestination(f) then
if p.SetHeader(false, -1) then
if p.SetGamma(0) then
if p.WriteInfo then
dim i,c as Integer

c=p.Height-1
for i=0 to c
p.WriteRow current.RowInFormat(i, Current.ImageFormatRGB)
next

if p.WriteEnd then
MsgBox "OK"
end if
end if
end if
end if
end if
end if
```

Notes:

You can use this class to write PNG files by row.

Based on LibPNG.

133.4.4 Methods

133.4.5 CloseDestination

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the file.

133.4.6 Finish as string

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes the PNG file and returns the PNG file content as string.
Notes: Returns "" on any error.

133.4.7 OpenWriteDestination(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the file to write.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(f) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass nil for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 133.4.8 OpenWriteDestination(Path as String) as boolean 19026

133.4.8 OpenWriteDestination(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the file to write.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = file.NativePath

Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(path) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
```

```
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass "" for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 133.4.7 OpenWriteDestination(file as folderitem) as boolean 19025

133.4.9 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PNG library compiled into the plugin.

133.4.10 SetAlphaData(alphas() as Integer, colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the alpha data and the color palette.
Notes:

The array can have up to 256 colors.
The color and the alpha arrays must have the same size.
Returns true on success.

133.4.11 SetAlphas as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the alpha data to the file.
Notes:

You must call SetAlphaData before.
Returns true on success.

133.4.12 SetEXIF(EXIFData as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the EXIF data block.
Notes: Returns true on success or false on failure.

133.4.13 SetGamma(gamma as Double = 0.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the gamma value and other options for the PNG file.
Notes:

Returns on success.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Default for Mac is 1.8 and for Windows 2.2.
If you use SRGB, the Gamma must be 2.2.

133.4.14 SetGrayPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies a picture into the internal buffers for writing a Grayscale image file.
Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

133.4.15 SetHeader(Interlace as boolean = false, Filter as Integer = -1, Compression as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the header options for the PNG file.
Notes:

Interlace is true the Adam7 interlacing is used.

FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

Compression can be between 0 (none) to 9 (max). Default is 6. Value -1 means the plugin will not change from default of PNG library. Normally you have no better compression for setting higher than 6, but only burn more CPU power.

133.4.16 SetICCProfile(name as string, CompressionType as Integer, Profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a ICC Profile to the PNG.
Notes:

Name is the profile name as an ASCII string.
CompressionType is always 0 (PNG_COMPRESSION_TYPE_BASE).

133.4.17 SetPalette as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the palette data.
Notes: Returns true on success.

133.4.18 SetPaletteData(colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the color palette.
Notes:

The array can have up to 256 colors.
Returns true on success.

133.4.19 SetPalettePicture(pict as picture) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies a picture into the internal buffers.
Notes:

You need to define the color palette before calling this method.

This method sets width, height, type and bpc properties.
Returns true on success.

133.4.20 SetResolution(ResolutionHorizontal as Integer, ResolutionVertical as Integer, Unit as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the resolution of the PNG.
Notes:

Unit is ResolutionUnknown, ResolutionMeter or ResolutionDPI.
Internally the PNG saves only in dots per meter, so the plugin converts DPI to DPM for you.

133.4.21 SetRGBPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies a picture into the internal buffers.
Example:

```
// Write a RGBA PNG file
dim current as Picture = LogoMBS(500)

// create a mask
dim g as Graphics = current.Mask.Graphics
g.ForeColor = & cFFFFFF
g.FillRect 0,0,500,500
g.ForeColor = & c000000
g.FillOval 0,0,500,500

// show in window
window1.Backdrop = current

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS
```

```
if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current, current.mask) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

133.4.22 SetRows(rows() as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Uses the given memoryblocks for row data.
Notes:

The memory is not copied, so keep the array alive!
This method sets height. You need to set width, bpc, type and rowbytes.
Returns true on success.

133.4.23 SetsRGB(intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the sRGB intent.
Notes:

Possible values:

```
const PNG_sRGB_INTENT_PERCEPTUAL   = 0
const PNG_sRGB_INTENT_RELATIVE     = 1
const PNG_sRGB_INTENT_SATURATION   = 2
const PNG_sRGB_INTENT_ABSOLUTE     = 3
```

133.4.24 WriteEnd as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes the writing.
Notes:

Returns true on success.

Do not call if you use WriteRows.

133.4.25 WriteInfo as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the PNG file header.
Notes:

Returns true on success.

Do not call if you use WriteRows.

133.4.26 WriteRow(row as memoryblock)

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes one row of image data.
Notes:

The data must be in the RGBA format with one byte per value.
(4 bytes per Pixel)

Returns true on success.

Do not call if you use WriteRows.

133.4.27 WriteRows as boolean

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the picture from memory to the file.
Example:

```
// Write a RGB PNG file
dim current as Picture = LogoMBS(500)
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

Notes: If you call this method, you need to call SetRGBPicture or SetPalettePicture before and you can't call WriteInfo, WriteRow and WriteEnd.

133.4.28 Properties

133.4.29 bpc as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bytes per pixel.
Notes:

Should be 3 for RGB, 1 for palette pictures and 4 for RGB with Alpha.
(Read and Write property)

133.4.30 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture to write.
Notes: (Read and Write property)

133.4.31 Rowbytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bytes per row.
Notes: (Read and Write property)

133.4.32 Type as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color type.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

(Read and Write property)

133.4.33 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture to write.
Notes: (Read and Write property)

133.4.34 Events

133.4.35 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The PNG library has an error message for you.

Notes: Processing will stop soon.

133.4.36 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The PNG library has a warning for you.

133.4.37 Constants

133.4.38 ResolutionDPI = 2

MBS Images Plugin, Plugin Version: 10.1. **Function:** One of the resolution unit type constants.
Notes: The unit for points per inch.

133.4.39 ResolutionMeter = 1

MBS Images Plugin, Plugin Version: 10.1. **Function:** One of the resolution unit type constants.
Notes: The unit for points per meter.

133.4.40 ResolutionUnknown = 0

MBS Images Plugin, Plugin Version: 10.1. **Function:** One of the resolution unit type constants.

133.4.41 TypeGray = 0

MBS Images Plugin, Plugin Version: 12.5. **Function:** One of the type constants.
Notes: Gray

133.4.42 TypeGrayA = 4

MBS Images Plugin, Plugin Version: 12.5. **Function:** One of the type constants.
Notes: Gray with Alpha

133.4.43 TypePalette = 1

MBS Images Plugin, Plugin Version: 12.5. **Function:** One of the type constants.
Notes: Palette

133.4.44 TypeRGB = 2

MBS Images Plugin, Plugin Version: 12.5. **Function:** One of the type constants.
Notes: RGB

133.4.45 TypeRGBA = 6

MBS Images Plugin, Plugin Version: 12.5. **Function:** One of the type constants.
Notes: RGB with Alpha.

Chapter 134

Power

134.1 class IOPMAssertionMBS

134.1.1 class IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for PowerManagement assertions.
Notes: You use this class to block a Mac from sleeping display, disk or whole machine.

134.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

134.1.3 Methods

134.1.4 AssertionsByProcess as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a dictionary listing all assertions, grouped by their owning process.
Notes:

Notes: One process may have multiple assertions. Several processes may have asserted the same assertion to different levels.

On success, this returns a dictionary of assertions per process. At the top level, keys to the Dictionary are pids stored as Integer. The value associated with each pid is an array of active assertions. Each entry in the array is an assertion represented as a Dictionary. See the keys kIOPMAssertionTypeKey and kIOPMAssertionLevelKey.

134.1.5 AssertionsStatus as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list of available assertions and their system-wide levels.
Notes:

The system-wide level is the maximum of all individual assertions' levels.

On success, this returns a Dictionary of all assertions currently available.
The keys in the dictionary are the assertion types, and the value of each is a CFNumber that represents the aggregate level for that assertion.

134.1.6 Constructor(type as string, level as Integer, name as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calls internally CreateWithName function.

134.1.7 CreateWithDescription(AssertionType as string, Name as string, Details as string = "", HumanReadableReason as string = "", LocalizationBundlePath as string = "", Timeout as Double = 0, TimeoutAction as string = "") as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an IOPMAssertion.
Notes:

This is the preferred API to call to create an assertion. It allows the caller to specify the Name, Details, and HumanReadableReason at creation time. There are other keys that can further describe an assertion, but most developers don't need to use them. Use SetProperty or CreateWithProperties if you need to specify properties that aren't available here.

AssertionType: An assertion type constant. Caller must specify this argument.
Name: A String value to correspond to key kIOPMAssertionNameKey. Caller must specify this argument.
Details: A String value to correspond to key kIOPMAssertionDetailsKey. Caller my pass "", but it helps power users and administrators identify the reasons for this assertion.
HumanReadableReason: A String value to correspond to key kIOPMAssertionHumanReadableReasonKey. Caller may pass "", but if it's specified OS X may display it to users to describe the active assertions on their system.
LocalizationBundlePath: A String value to correspond to key kIOPMAssertionLocalizationBundlePathKey. This bundle path should include a localization for the string HumanReadableReason. Caller may pass "",

but this argument is required if caller specifies HumanReadableReason.
Timeout: Specifies a timeout for this assertion. Pass 0 for no timeout.
TimeoutAction: Specifies a timeout action. Caller my pass "". If a timeout is specified but a TimeoutAction is not, the default timeout action is kIOPMAssertionTimeoutActionTurnOff.

On success this function returns a new assertion.

134.1.8 CreateWithHandle(Handle as Integer) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new object with retaining given handle.

134.1.9 CreateWithName(type as string, level as Integer, name as string) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dynamically requests a system behavior from the power management system.
Notes:

Create is deprecated in favor of CreateWithProperties. Please use that version of this API instead.

No special privileges are necessary to make this call - any process may activate a power assertion. Caller must specify an AssertionName - "" is not a valid input.

Type	The String assertion type to request from the PM system.
Level	Pass kIOPMAssertionLevelOn or kIOPMAssertionLevelOff.
Name	A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.

On success, returns an IOPMAssertionMBS object.

134.1.10 CreateWithProperties(AssertionProperties as Dictionary) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an IOPMAssertion with more flexibility than CreateWithDescription.
Notes:

AssertionProperties: Dictionary providing the properties of the assertion that need to be created.
On successful return, returns the assertion.

Create a new PM assertion - the caller must specify the type of assertion, initial level, and its properties as IOPMAssertionDictionaryKeys keys in the AssertionProperties dictionary. The following keys are recommend and/or required to be specified in the AssertionProperties dictionary argument.

- Required kIOPMAssertionTypeKey define the assertion type.
- Required kIOPMAssertionValueKey define an inital value.
- Required kIOPMAssertionNameKey Caller must describe the name for the activity that requires the change in behavior provided by the assertion.
- Optional kIOPMAssertionDetailsKey Caller may describe context-specific data about the assertion.
- Optional kIOPMAssertionHumanReadableReasonKey Caller may describe the reason for creating the assertion in a localizable String. This should be a human readable phrase that describes the actions the calling process is taking while the assertion is held, like "Downloading TV episodes", or "Compiling Projects"
- Optional kIOPMAssertionLocalizationBundlePathKey Caller may provide its bundle's path, where OS X can localize for GUI display the String specified by kIOPMAssertionHumanReadableReasonKey.
- Optional kIOPMAssertionPlugInIDKey if the caller is a plugin with a different identity than the process it's loaded in.
- Optional kIOPMAssertionFrameworkIDKey if the caller is a framework acting on behalf of a process.
- Optional The caller may specify a timeout.

134.1.11 DeclareUserActivity(AssertionName as string, userType as Integer, byref AssertionID as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Declares that the user is active on the system.
Notes:

This causes the display to power on and postpone display sleep up to the user's display sleep Energy Saver settings. If you prefer to hold the display awake for a longer period and you know how long you'd like to hold it, consider taking assertion kIOPMAssertionTypePreventUserIdleDisplaySleep using CreateWithDescription instead.

No special privileges are necessary to make this call - any process may call this API. Caller must specify an AssertionName.

AssertionName: A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.
userType: This parameter specifies if the active user is located locally in front of the system or connected to the system over the network. Various components of the system are maintained at different power levels depending on user location.

On Success, unique id will be returned in this parameter. Caller may call this function again with the unique id retured previously to report continous user activity. The unique id returned by this function may change on each call depending on how frequently this function call is repeated and the current display sleep timer value. If you make this call more than once, track the returned value for assertionID, and pass it in as an argument on each call.

Returns kIOReturnSuccess (0) on success, any other return indicates PM could not successfully activate the specified assertion.

134.1.12 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Copies details about an IOPMAssertion.
Notes: Returns a dictionary describing an IOPMAssertion's specifications and current state.

134.1.13 SetProperty(key as string, value as Variant) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets a property in the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
if a.SetProperty(IOPMAssertionMBS.kIOPMAssertionNameKey, "test") then
MsgBox a.name
end if
```

Notes:

Only the process that created an assertion may change its properties.
key: The string key to modify.
Value: The property to set. It must be a number or string, as specified by the property key named in key.
Returns false on any error and true on success.

134.1.14 Properties

134.1.15 Details as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The details for this assertion.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

134.1.16 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the assertion.
Notes:

Zero is not a valid ID.
(Read only property)

134.1.17 HumanReadableReason as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Optional valie that provides a localizable string for OS X to display PM Assertions in the GUI.
Notes:

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.

(Read and Write property)

134.1.18 Level as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The assertion level.
Notes: (Read and Write property)

134.1.19 LocalizationBundlePath as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Refers to a string, identifying the path to the caller's bundle, which contains localization info.
Notes: (Read and Write property)

134.1.20 Name as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

Notes:

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

134.1.21 RetainCount as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The retain count of the object.
Notes: (Read only property)

134.1.22 Timeout as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies an outer bound, in seconds, that this assertion should be asserted.
Notes:

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.
(Read and Write property)

134.1.23 TimeoutAction as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the action to take upon timeout expiration.
Notes:

Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey.
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff.
(Read and Write property)

134.1.24 Type as String

MBS MacOSX Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The assertion type.
Notes:

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.
(Read and Write property)

134.1.25 Constants

134.1.26 kIOPMAssertionDetailsKey = "Details"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Optional kIOPMAssertionNameKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

134.1.27 kIOPMAssertionFrameworkIDKey = "FrameworkBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.

134.1.28 kIOPMAssertionHumanReadableReasonKey = "HumanReadableReason"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes:

Optional key that provides a localizable string for OS X to display PM Assertions in the GUI.

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system

behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey. The bundle at that path should contain localization info for the specified string.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Required kIOPMAssertionNameKey
- Optional kIOPMAssertionDetailsKey

134.1.29 kIOPMAssertionLevelKey = "AssertLevel"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes:

The Dictionary key for assertion level in an assertion info dictionary.

The value for this key will be an integer with value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn. The level reflects the assertion's level set at creation, or adjusted via IOPMAssertionSetLevel.

134.1.30 kIOPMAssertionLevelOff = 0

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** Level for a disabled assertion, passed as an argument to Create.

134.1.31 kIOPMAssertionLevelOn = 255

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** Level for an enabled assertion, passed as an argument to Create.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

134.1.32 kIOPMAssertionLocalizationBundlePathKey = "BundlePath"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary. **Notes:** Refers to a string, identifying the path to the caller's bundle, which contains localization info.

134.1.33 kIOPMAssertionNameKey = "AssertName"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary. **Example:**

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionNameKey)
MsgBox v
```

Notes:

The Dictionary key for assertion name. Setting this key is required when you're creating an assertion.

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can also set to add explanation to an assertion:

- Optional kIOPMAssertionDetailsKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

134.1.34 kIOPMAssertionPlugInIDKey = "PlugInBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.

134.1.35 kIOPMAssertionRetainCountKey = "RetainCount"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes: The retain count of the object.

134.1.36 kIOPMAssertionTimeoutActionKey = "TimeoutAction"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes:

Specifies the action to take upon timeout expiration.
Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

134.1.37 kIOPMAssertionTimeoutActionLog = "TimeoutActionLog"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When this timeout action is specified, PM will log the timeout event but will not turn off or affect the setting of the assertion in any way.

134.1.38 kIOPMAssertionTimeoutActionRelease = "TimeoutActionRelease"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will release the assertion.

134.1.39 kIOPMAssertionTimeoutActionTurnOff = "TimeoutActionTurnOff"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will set the assertion's level to kIOPMAssertionLevelOff.

134.1.40 kIOPMAssertionTimeoutKey = "TimeoutSeconds"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Notes:

Specifies an outer bound, in seconds, that this assertion should be asserted.

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

134.1.41 kIOPMAssertionTypeKey = "AssertType"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the keys for the properties dictionary.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionTypeKey)
MsgBox v
```

Notes:

The dictionary key for assertion type in an assertion info dictionary.

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.

134.1.42 kIOPMAssertionTypePreventSystemSleep = "PreventSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the assertion types.
Notes:

Prevents the system from sleeping and allows the system to reside in Dark Wake for an arbitrary length of time.

When asserted and set to level kIOPMAssertionLevelOn, the system will prefer to enter the Dark Wake state, or remain in Dark Wake if already there, rather than go to sleep.

Assertions are just suggestions to the OS, and the OS can only honor them to the best of its ability. In the case of low power or a thermal emergency, the system may sleep anyway despite the assertion.

An assertion must publish the AssertionType in its assertion properties dictionary.
The AssertionType should be a key in the properties dictionary, with a value of a CFNumber containing the kCFNumberIntegerType value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn.

134.1.43 kIOPMAssertionTypePreventUserIdleDisplaySleep = "PreventUserIdleDisplaySleep"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the assertion types.
Notes:

Prevents the display from dimming automatically.

When asserted and set to level kIOPMAssertionLevelOn, will prevent the display from turning off due to a period of idle user activity. Note that the display may still sleep from other reasons, like a user closing a portable's lid or the machine sleeping. If the display is already off, this assertion does not light up the display. If display needs to be turned on, then consider calling function IOPMAssertionDeclareUserActivity.
While the display is prevented from dimming, the system cannot go into idle sleep.
This assertion has no effect if the system is in Dark Wake.

134.1.44 kIOPMAssertionTypePreventUserIdleSystemSleep = "PreventUserIdleSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the assertion types.
Notes:

Prevents the system from sleeping automatically due to a lack of user activity.
When asserted and set to level kIOPMAssertionLevelOn, will prevent the system from sleeping due to a period of idle user activity.

The display may dim and idle sleep while kIOPMAssertionTypePreventUserIdleSystemSleep is enabled, but the system may not idle sleep. The system may still sleep for lid close, Apple menu, low battery, or other sleep reasons.

This assertion has no effect if the system is in Dark Wake.

134.1.45 kIOPMAssertPreventDiskIdle = "PreventDiskIdle"

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the assertion types.
Notes:

Prevent attached disks from idling into lower power states.

When asserted and set to level kIOPMAssertionLevelOn, will prevent attached disks and optical media from idling into lower power states.
Apps who rely on real-time access to disks should create this assertion to avoid latencies caused by disks changing power states. For example, audio and video performance or recording apps may benefit from this assertion. Most Apps should not take this assertion; preventing disk idle consumes battery life, and most apps don't require the low latency disk access that this provides.
This assertion doesn't increase a disk's power state (it just prevents that device from idling). After creating this assertion, the caller should perform disk I/O on the necessary drives to ensure that they're in a usable power state.
The system may still sleep while this assertion is active. Callers should also take kIOPMAssertionTypePreventUserIdleSystemSleep if necessary, to prevent idle system sleep.

134.1.46 kIOPMUserActiveLocal = 0

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the user activity constants.
Notes: User is local on the system

134.1.47 kIOPMUserActiveRemote = 1

MBS MacOSX Plugin, Plugin Version: 13.2. **Function:** One of the user activity constants.
Notes: Remote User connected to the system.

134.2 class IOPMMBS

134.2.1 class IOPMMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Mac OS X class which can control the energy settings.
Example:

```
dim p as new IOPMMBS

Listbox1.AddRow "EthernetWakeOnLANSettings: "+str(p.EthernetWakeOnLANSettings)
Listbox1.AddRow "GeneralAggressiveness: "+str(p.GeneralAggressiveness)
Listbox1.AddRow "MinutesToDim: "+str(p.MinutesToDim)
Listbox1.AddRow "MinutesToSleep: "+str(p.MinutesToSleep)
Listbox1.AddRow "MinutesToSpinDown: "+str(p.MinutesToSpinDown)
Listbox1.AddRow "MotionSensor: "+str(p.MotionSensor)
Listbox1.AddRow "PowerSource: "+str(p.PowerSource)
Listbox1.AddRow "SetProcessorSpeed: "+str(p.SetProcessorSpeed)
```

Notes: The functions and properties are not described from Apple.

134.2.2 Properties

134.2.3 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference for the power manager.
Notes:

If this value is zero, the properties will not work.
(Read and Write property)

134.2.4 EthernetWakeOnLANSettings as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The setting for whether ethernet wake on LAN.
Notes:

Value is 1 if you enable this option in the energy system control panel and 0 if you disable it.
(Read and Write computed property)

134.2.5 GeneralAggressiveness as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The general aggressiveness.
Notes: (Read and Write computed property)

134.2.6 MinutesToDim as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minutes until the display is dimmed.
Example:

```
dim p as new IOPMMBS
p.MinutesToDim=10 // dim display in 10 minutes
```

Notes:

This value is the same as in the energy system control panel.
(Read and Write computed property)

134.2.7 MinutesToSleep as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The time in minutes until the Mac goes to sleep.
Example:

```
dim p as new IOPMMBS
p.MinutesToSleep=10 // sleep display in 10 minutes
```

Notes: (Read and Write computed property)

134.2.8 MinutesToSpinDown as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The time in minutes until the hard discs spin down.
Notes:

If you enable the spin down option in the energy system control panel, this value is 10 and if you disable it, it is 180.

(Read and Write computed property)

134.2.9 MotionSensor as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The setting for the motion sensor.
Notes: (Read and Write computed property)

134.2.10 PowerSource as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The power source settings.
Notes:

Constants for this property:

const kIOPMInternalPower = 1
const kIOPMExternalPower = 2
(Read and Write computed property)

134.2.11 SetProcessorSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The setting for the processor speed.
Notes: (Read and Write computed property)

134.3 class IOPowerSourcesMBS

134.3.1 class IOPowerSourcesMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to look on all the power sources on a Mac OS X based computer.
Example:

```
dim i as IOPowerSourcesMBS
dim j,n as Integer

i=new IOPowerSourcesMBS

n=i.Count-1
for j=0 to n
CFShowMBS i.Item(j) // Print battery info to console.
next
```

Notes: Requires Mac OS X.

134.3.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr9

134.3.3 Methods

134.3.4 ExternalPowerAdapterDetails as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a CFDictionary that describes the attached (AC) external power adapter (if any external power adapter is attached.
Example:

```
dim d as CFDictionaryMBS = IOPowerSourcesMBS.ExternalPowerAdapterDetails
dim dic as Dictionary = d.Dictionary

dim lines() as string
lines.Append "AdapterRevision: "+dic.Lookup("AdapterRevision", "")
lines.Append "AdapterID: "+dic.Lookup("AdapterID", "")
lines.Append "FamilyCode: "+dic.Lookup("FamilyCode", "")
lines.Append "SerialNumber: "+dic.Lookup("SerialNumber", "")
lines.Append "Watts: "+dic.Lookup("Watts", "")
```

MsgBox Join(lines, EndOfLine)

Notes:

Returns a CFDictionary on success.
If no adapter is attached, or if there's an error, returns nil.

134.3.5 Item(index as Integer) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Ask for the power source description with the given index.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox i.Item(0).XML.Str // shows dictionary for first power source
```

Notes: Indes is from 0 to count-1.

134.3.6 Update

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries for new power sources and updates the item array.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

134.3.7 Properties

134.3.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of registered power sources.
Example:

```
dim i as new IOPowerSourcesMBS
i.Update
MsgBox str(i.Count)
```

Notes: (Read only property)

134.3.9 Events

134.3.10 Changed

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The state of one power source changed.
Notes: Whenever something changes around the power sources, you are notified with this event.

134.4 class SleepNotificationMBS

134.4.1 class SleepNotificationMBS

MBS MacOSX Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to listen for sleep notifications on Mac OS X .
Notes:

Uses IOKit.

Your application can use the sleep event to deny idle sleep, i.e. sleep after a period of inactivity. Applications should not deny idle sleep unless absolutely necessary.

The kIOMessage* constants in this class are declared in the Mac OS X headers, but they are not all used by the system.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

134.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

134.4.3 Properties

134.4.4 running as Boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this notification class is working.
Notes:

Value is true on MachO targets.
(Read and Write property)

134.4.5 Events

134.4.6 Sleep(message as int64) as boolean

MBS MacOSX Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A message was received.
Notes:

Use the constants to check what message you got.

Return true to deny or false to allow.

On the Can Messages the plugin informs the system about Deny or Allow, but on the Will messages, it will not answer if you return true, so the system will wait for an answer and delay sleep. There seems to be no way to delay more than 30 seconds when the user selects the sleep menu command.

The message parameter is an int64 in Plugin version 9.7 so the integer comparison to the constants works better.

134.4.7 Constants

134.4.8 kIOMessageCanSystemPowerOff = & he0000240

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.9 kIOMessageCanSystemSleep = & he0000270

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.
Notes:

Idle sleep is about to kick in.
Applications have a chance to prevent sleep by returning true in the sleep event. Most applications should not prevent idle sleep.

Power Management waits up to 30 seconds for you to either allow or deny idle sleep. If you don't acknowledge this power change by returning true or false, the system will wait 30 seconds then go to sleep.

134.4.10 kIOMessageSystemHasPoweredOn = & he0000300

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.11 kIOMessageSystemWillNotPowerOff = & he0000260

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.12 kIOMessageSystemWillNotSleep = & he0000290

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.13 kIOMessageSystemWillPowerOff = & he0000250

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.14 kIOMessageSystemWillPowerOn = & he0000320

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.15 kIOMessageSystemWillRestart = & he0000310

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.4.16 kIOMessageSystemWillSleep = & he0000280

MBS MacOSX Plugin, Plugin Version: 8.0. **Function:** One of the message constants.

134.5 class WakeNotifierMBS

134.5.1 class WakeNotifierMBS

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Notification and statistics about sleeping off a Mac.
Notes:

For Mac OS X 10.5.6 you see the SleepDemand and the WakeUp events when your Mac sleeps and wakes up.

In the plugins is the WakeNotifierMBS class and the SleepNotificationMBS class. WakeNotifierMBS uses the API coming from Mac OS and it can delay sleep. SleepNotificationMBS works on the lower Next APIs.

134.5.2 Properties

134.5.3 CallEvents as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: whether or not to call the events of this class.
Notes:

Default is false.
(Read and Write property)

134.5.4 DisableSleep as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Diabled sleep if a sleep request comes?
Notes:

Not used if you have code in the SleepRequest event handler.
(Read and Write property)

134.5.5 HadSleeped as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sleeped since last reset?
Notes:

You can set this value to false to reset it.
(Read and Write property)

134.5.6 LastSleepTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Last time in absolute seconds when falled asleep.
Notes:

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

134.5.7 LastWakeTime as Double

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Last time in absolute seconds when waken up.
Notes:

Changed type from integer to double in version 4.2.
Value is the same as in date.totalseconds.
(Read and Write property)

134.5.8 SleepCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of sleep demands.
Notes: (Read only property)

134.5.9 SleepEventCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Counts how often the Power Manager calls the sleep notification function.
Notes:

For debugging so you know that sleep requests are handled.
(Read and Write property)

134.5.10 Valid as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns True if the sleep event handler could be installed.
Notes:

False, if no Power Manager is installed.
(Read only property)

134.5.11 WakeCount as Integer

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of waking up.
Notes: (Read only property)

134.5.12 Events

134.5.13 SleepDemand

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called just before falling asleep.

134.5.14 SleepRequest as boolean

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Can be go sleeping?
Notes:

Return true to deny sleeping.
Returning nothing or false will put the Mac to sleep.

134.5.15 SleepRevoke

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when a sleep request was denied by an application or a device driver.

134.5.16 WakeUp

MBS MacClassic Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the Mac wakes up.

134.6 class WindowsPowerStateMBS

134.6.1 class WindowsPowerStateMBS

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to watch for power changes on a computer using Microsoft Windows as operation system.
Notes:

Not all Windows versions call the same/all events.

This function listens for WM_POWERBROADCAST sent to all applications.

see
https://msdn.microsoft.com/en-us/library/windows/desktop/aa373247(v=vs.85).aspx

134.6.2 Events

134.6.3 BatteryLow

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The BatteryLow event is broadcast to notify applications that battery power is low.
Notes: Support for this event was removed in Windows Vista bei Microsoft.

134.6.4 OEMEvent(eventcode as Integer)

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The OEMEvent event is broadcast when an APM BIOS signals an APM OEM event.
Notes:

eventcode: A DWORD value that specifies the OEM-defined event code that was signaled by the system's APM BIOS. OEM event codes are in the range & h0200 - & h02FF.

Because not all APM BIOS implementations provide OEM event notifications, this event may never be broadcast on some computers.

Support for this event was removed in Windows Vista bei Microsoft.

134.6.5 PowerStatusChange

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The PowerStatusChange event is broadcast when a change in the power status of the computer is detected, such as a switch from battery power to A/C.
Notes: The system also broadcasts this event when remaining battery power slips below the threshold specified by the user or if the battery power changes by a specified percentage.

134.6.6 QueryStandby(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The QueryStandby event is broadcast to request permission to set the computer into standby mode.
Notes:

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to go to standby mode can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QueryStandby event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during standby processing.

134.6.7 QueryStandbyFailed

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The QueryStandbyFailed event is broadcast as a notification that permission to go to standby mode was denied.
Notes: This event is broadcast if any application or driver returned false to a previous QueryStandby event.

134.6.8 QuerySuspend(PromptUser as boolean) as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The QuerySuspend event is broadcast to request permission to suspend the computer.
Notes:

An application that grants permission should carry out preparations for the suspension before returning.

PromptUser: If true, the application can prompt the user for directions on how to prepare for the suspension; otherwise, the application must prepare without user interaction.

Return true to deny the request, false to grant the request.

An application should process this event by first determining whether permission to suspend can be granted. It must not grant permission if doing so would cause a loss of data. The application can prompt the user for directions on how to prepare for suspension only if PromptUser is set.

The system allows approximately 20 seconds for an application to remove the message that is sending the QuerySuspend event from the application's message queue. If an application does not remove the message from its queue in less then 20 seconds, the system will assume that the application is in a non-responsive state, and that the application agrees to the sleep request. Applications that do not process their message queues may have their operations interrupted. After it removes the message from the message queue, an application can take as much time as needed to perform any required operations before entering the sleep state. Any operations that could take longer then 20 seconds should be performed at this time, since the system allows only 20 seconds for operations to complete during Suspend processing.

Support for this event was removed in Windows Vista bei Microsoft.

134.6.9 QuerySuspendFailed

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The QuerySuspendFailed event is broadcast as a notification that permission to suspend the computer was denied.
Notes:

This event is broadcast if any application or driver returned false to a previous QuerySuspend event.

Support for this event was removed in Windows Vista bei Microsoft.

134.6.10 ResumeAutomatic

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The ResumeAutomatic event is broadcast when the computer wakes up automatically to handle an event.
Notes: An application will not generally respond unless it is handling the event, because the user is not present.

134.6.11 ResumeCritical

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The ResumeCritical event is broadcast as a notification that the system has resumed operation.
Notes:

This event can indicate that some or all applications did not receive a Suspend event. For example, this event can be broadcast after a critical suspension caused by a failing battery.

Support for this event was removed in Windows Vista bei Microsoft.

134.6.12 ResumeStandby

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The ResumeStandby event is broadcast as a notification that the system has resumed operation after being put to standby.

134.6.13 ResumeSuspend

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The ResumeSuspend event is broadcast as a notification that the system has resumed operation after being suspended.

134.6.14 Standby

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The Standby event is broadcast immediately before the computer enters a standby state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QueryStandby event.

134.6.15 Suspend

MBS Win Plugin, Plugin Version: 6.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The Suspend event is broadcast immediately before the computer enters a suspended state.
Notes: This event is typically broadcast when all applications and installable drivers have returned okay to a previous QuerySuspend event.

Chapter 135

Printing

135.1 Globals

135.1.1 NewCPMPageFormatMBS as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new page format object.
Notes: Returns nil on any error.

135.1.2 NewCPMPrintSessionMBS as CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new print session object.
Example:

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")

dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings
```

```
'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes: Returns nil on any error.

135.1.3 NewCPMPrintSettingsMBS as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new print settings object.
Notes: Returns nil on any error.

135.2 class CPMLanguageInfoMBS

135.2.1 class CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a language info.
Notes: Only a data class.

135.2.2 Properties

135.2.3 Level as String

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The level string of the printer.
Notes: (Read and Write property)

135.2.4 Release as String

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The release string of the printer.
Notes: (Read and Write property)

135.2.5 Version as String

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The version string of the printer.
Notes: (Read and Write property)

135.3 class CPMPageFormatMBS

135.3.1 class CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a page format.

135.3.2 Methods

135.3.3 AdjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The adjusted page size.
Notes: Lasterror is set.

135.3.4 AdjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The adjusted page size.
Notes: Lasterror is set.

135.3.5 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new page format object.

135.3.6 CopySettings(Destination as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Copies the settings to another pageformat object.

135.3.7 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a data representation of a PMPageFormat object as a data string.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation
break // check in debugger
```

Notes:

Use CreateWithDataRepresentation to create a CPMPageFormatMBS from a string created by this call. Format can be kPMDataFormatXMLDefault, kPMDataFormatXMLMinimal or kPMDataFormatXMLCompressed.

135.3.8 CreateWithDataRepresentation(Data as String) as CPMPageFormatMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
dim d as string = p.CreateDataRepresentation

dim other as CPMPageFormatMBS = CPMPageFormatMBS.CreateWithDataRepresentation(d)
MsgBox str(other.Orientation)
```

Notes: Returns nil in case of error.

135.3.9 PrinterID as String

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Obtains the formatting printer for the pageformat.
Notes: Will either return the formatting printer for the pageformat or will return nil if the pageformat doesn't have that information.

135.3.10 UnadjustedPageSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The unadjusted page size.
Notes: Lasterror is set.

135.3.11 UnadjustedPaperSize as CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The unadjusted page size.
Notes: Lasterror is set.

135.3.12 Properties

135.3.13 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The handle for the page format.
Notes:

It's a PMPageFormat which you find in CMTypes.h in the Toolbox.
(Read and Write property)

135.3.14 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

135.3.15 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether the destructor will release the handle.
Notes: (Read and Write property)

135.3.16 Orientation as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The page orientation.
Example:

```
dim p as new CPMPageFormatMBS
p.orientation = p.kPMLandscape
```

Notes:

Lasterror is set.

Possible values:

kPMPortrait	1	
kPMLandscape	2	
kPMReversePortrait	3	will revert to kPortrait for current drivers
kPMReverseLandscape	4	will revert to kLandscape for current drivers

(Read and Write computed property)

135.3.17 Scale as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The page scaling.
Notes:

Lasterror is set.
Value is 100 for 100% .
(Read and Write computed property)

135.3.18 Constants

135.3.19 kPMDataFormatXMLCompressed = 2

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the data formats constants.
Notes: kPMDataFormatXMLCompressed is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate PMXXXCreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLCompressed is approximately 20 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and the minimum data size is important.

135.3.20 kPMDataFormatXMLDefault = 0

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the data formats constants.
Notes: Specifies a data format that is compatible with all Mac OS X versions. Data in this format can be used with the PMUnflattenXXX routines present in all versions of Mac OS X prior to 10.5. However, this data representation is much larger than the more modern data representations described below.

135.3.21 kPMDataFormatXMLMinimal = 1

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the data formats constants.
Notes: XMLMinimal is only compatible and usable with Mac OS X version 10.5 and later. Data in this format can be only be reconsistuted into the equivalent printing manager object with the appropriate CreateWithDataRepresentation function. The data representation produced when using kPMDataFormatXMLMinimal is approximately 3-5 times smaller than kPMDataFormatXMLDefault. This format is a good choice when execution on versions of Mac OS X prior to 10.5 is not necessary and an uncompressed XML representation of the data is needed.

135.3.22 kPMLandscape = 2

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the orientation constants.
Notes: Landscape

135.3.23 kPMPortrait = 1

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the orientation constants.
Notes: Portrait

135.3.24 kPMReverseLandscape = 4

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the orientation constants.
Notes: Reverse Landscape

135.3.25 kPMReversePortrait = 3

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the orientation constants.
Notes: Reverse Portrait

135.4 class CPMPrinterMBS

135.4.1 class CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a printer.

135.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

135.4.3 Methods

135.4.4 Constructor(name as string)

MBS MacCG Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a new printer object given the printer name.
Notes:

Raises exception if lookup fails.
This accepts both CUPS names and the Mac GUI names in printing control panel.

135.4.5 CreateFromPrinterID(PrinterID as String) as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Create a PMPrinter instance from the supplied printerID.
Example:

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox p.name
```

135.4.6 CreateGenericPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a generic PMPrinter.

135.4.7 CreateLocalPrinterList as CPMPrinterMBS()

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries list of local printers.
Example:

```
dim a() as CPMPrinterMBS = CPMPrinterMBS.CreateLocalPrinterList
for each p as CPMPrinterMBS in a
MsgBox p.Name
next
```

135.4.8 DescriptionURL as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the description URL for this printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DescriptionURL
```

Notes:

Should be the path to a PPD file for a laser printer.
Lasterror is set.

135.4.9 DeviceURI as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Hand back the URI of the printer's device.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.DeviceURI
```

Notes:

On success returns a CFURLMBS object describing the printer's device.

Lasterror is set.

135.4.10 DriverCreator as String

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a 4 letter code for the creator of the printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "DriverCreator: "+str(printer.DriverCreator)
```

Notes: Lasterror is set.

135.4.11 DriverReleaseInfo as CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries printer driver version.

135.4.12 HostName as string

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Hand back the host name of the print server hosting the printer's print queue.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "HostName: "+str(printer.HostName)
```

Notes: Lasterror is set.

135.4.13 ID as string

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the ID of the string.

135.4.14 IndexedPrinterResolution(index as Integer) as CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a printer resolution.
Notes:

Lasterror is set.
Index is from 1 to ResolutionCount.

135.4.15 IsDefault as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether this printer is the default printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsDefault: "+str(printer.IsDefault)
```

135.4.16 IsFavorite as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return true if the printer is in the user's favorite printer list.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsFavorite: "+str(printer.IsFavorite)
```

135.4.17 IsPostScriptCapable as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Can this printer do postscript?
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptCapable: "+str(printer.IsPostScriptCapable)
```

Notes: Lasterror is set.

135.4.18 IsPostScriptPrinter as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** If the result is true if the printer is a PostScript printer.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsPostScriptPrinter: "+str(printer.IsPostScriptPrinter)
```

Notes: A PostScript printer is one whose driver takes PostScript directly.

135.4.19 IsRemote as boolean

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Hand back a boolean indicating whether the printer is hosted by remote print server.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox "IsRemote: "+str(printer.IsRemote)
```

Notes:

If result is true, the print queue represents a printer hosted and managed by a remote print server.

If result is false, the print queue represents a directly connected printer, a network printer, or a remote printer that is locally managed. Consult the queue's device URI to determine the type of connection that is used to communicate with the printer.

Whether a printer is remote is derived from the CUPS printer-type attribute for the print queue.

135.4.20 LanguageInfo as CPMLanguageInfoMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns language information about the printer.
Notes: Lasterror is set.

135.4.21 Location as string

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the location of the printer.

135.4.22 MakeAndModelName as string

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A string with the name for the model and the maker.
Notes:

Lasterror is set.
Returns "" on any error.

135.4.23 Name as string

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the name of the string.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS
dim printer as CPMPrinterMBS = session.CurrentPrinter

MsgBox printer.name
```

135.4.24 ResolutionCount as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much resolutions are supported by the printer.

Notes: Lasterror is set.

135.4.25 SetDefault

MBS MacCG Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Set the default printer for the current user.
Notes:

It is not typical for an application to set the current default printer for the user; the printing system itself takes care of managing the default printer.
This function should be used only in rare circumstances.

Requires Mac OS X 10.5.

135.4.26 State as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries printer state.
Example:

```
dim p as CPMPrinterMBS = CPMPrinterMBS.CreateFromPrinterID("Brother_DCP_8085DN")
MsgBox str(p.State)
```

Notes: Can be kPMPrinterIdle, kPMPrinterProcessing or kPMPrinterStopped.

135.4.27 Properties

135.4.28 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The handle for the printer.
Notes:

It's a PMPrinter which you find in CMTypes.h in the Toolbox.
(Read and Write property)

135.4.29 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code. (Read and Write property)

135.4.30 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether the destructor will release the handle.
Notes: (Read and Write property)

135.4.31 Constants

135.4.32 kPMPrinterIdle = 3

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the printer state constants.
Notes: Printer is idle.

135.4.33 kPMPrinterProcessing = 4

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the printer state constants.
Notes: Printer is processing.

135.4.34 kPMPrinterStopped = 5

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the printer state constants.
Notes: Printer is stopped.

135.5 class CPMPrintSessionMBS

135.5.1 class CPMPrintSessionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a print session.
Notes: Works only in Carbon Stuff and can only be used with CGContext which works only on Mac OS X.

135.5.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr5

135.5.3 Methods

135.5.4 BeginDocument(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Begins a new document with the given settings.
Notes: Lasterror is set.

135.5.5 BeginDocumentNoDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Begins a new document with the given settings.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

135.5.6 BeginPage(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Begins a new page.
Notes: Lasterror is set.

135.5.7 BeginPageNoDialog(pageformat as CPMPageFormatMBS, rect as CPMRectMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Begins a new page.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

135.5.8 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new print session object.

135.5.9 CreatePrinterList(list() as string)

MBS MacCG Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a list of all printers.
Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
session.CreatePrinterList(list)

MsgBox join(list, EndOfLine)
```

Notes:

List is an array of strings with the names of the printers.
Lasterror is set.
See also:

- 135.5.10 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS) 19088

135.5.10 CreatePrinterList(list() as string, byref index as Integer, byref currentprinter as CPMPrinterMBS)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a list of all printers.

Example:

```
dim session as CPMPrintSessionMBS = NewCPMPrintSessionMBS

dim list() as string
dim currentprinter as CPMPrinterMBS
dim index as Integer
session.CreatePrinterList(list, index, currentprinter)

MsgBox join(list, EndOfLine)
```

Notes:

List is an array of strings with the names of the printers.
Index is the index of the current printer inside this list.
CurrentPrinter is the current printer selected.
Lasterror is set.
See also:

- 135.5.9 CreatePrinterList(list() as string) 19088

135.5.11 DefaultPageFormat(pageformat as CPMPageFormatMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the page format object to the default settings.
Notes: Lasterror is set.

135.5.12 DefaultPrintSettings(printsettings as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the settings object to the default settings.
Notes: Lasterror is set.

135.5.13 EndDocument

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Ends the current document.
Notes: Lasterror is set.

135.5.14 EndDocumentNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Ends the current document.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

135.5.15 EndPage

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Ends the current page.
Notes: Lasterror is set.

135.5.16 EndPageNoDialog

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Ends the current page.
Notes:

Doesn't use the print progress dialog.
Lasterror is set.

135.5.17 GetDestinationFormat(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the destination format value.
Notes: Lasterror is set.

135.5.18 GetDestinationLocation(printsettings as CPMPrintSettingsMBS) as String

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the destination location value.
Notes: Lasterror is set.

135.5.19 GetDestinationType(printsettings as CPMPrintSettingsMBS) as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the destination type value.
Notes: Lasterror is set.

135.5.20 kPMDocumentFormatDefault as String

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the document format.

135.5.21 kPMDocumentFormatPDF as String

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the document format.

135.5.22 kPMDocumentFormatPostScript as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the document format.

135.5.23 kPMGraphicsContextCoreGraphics as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the graphics context.

135.5.24 kPMGraphicsContextDefault as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the graphics context.

135.5.25 PageContext as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new CGContext object for the current page.

Notes: Lasterror is set.

135.5.26 PageSetupDialog(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Shows the page setup dialog.
Notes: Lasterror is set.

135.5.27 PrintDialog(settings as CPMPrintSettingsMBS, pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Shows the print dialog.
Notes: Lasterror is set.

135.5.28 SetDestination(printsettings as CPMPrintSettingsMBS, desttype as Integer, destformat as String, desturl as String)

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets a new destination.
Notes:

Some destinations so you may need to specify a format, else you can pass "" for the default format. Some destinations require a URL to a file.

Destination type codes:

kPMDestinationInvalid	0
kPMDestinationPrinter	1
kPMDestinationFile	2
kPMDestinationFax	3
kPMDestinationPreview	4

Destformat strings:

Lasterror is set.

kPMDocumentFormatPDF	application/pdf
kPMDocumentFormatPICT	application/vnd.apple.printing-pict
kPMDocumentFormatPICTPS	application/vnd.apple.printing-pict-ps
kPMDocumentFormatPostScript	application/postscript

135.5.29 UseSheets(docWindow as window)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Specifies that a printing dialog should be displayed as a sheet.
Notes:

docWindow: The window to which the sheet dialog should be attached.
Lasterror is set. (-1 for the docWindow parameter being nil)

135.5.30 ValidatePageFormat(pageformat as CPMPageFormatMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Validates the page format.
Notes: Lasterror is set.

135.5.31 ValidatePrintSettings(printsettings as CPMPrintSettingsMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Validates the print settings.
Notes: Lasterror is set.

135.5.32 Properties

135.5.33 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The handle for the print session.
Notes:

It's a PMPrintSession which you find in CMTypes.h in the Toolbox.
(Read and Write property)

135.5.34 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

135.5.35 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether the destructor will release the handle.
Notes: (Read and Write property)

135.5.36 SheetTarget as Window

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The window set by UseSheets.
Notes:

This property is to reference the window used for the sheets so Xojo does not destroy the window too early.
(Read and Write property)

135.5.37 CurrentPrinter as CPMPrinterMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current printer for this session.
Notes:

Lasterror is set.
Setting this can only be done on Mac OS X.
(Read and Write computed property)

135.5.38 CurrentPrinterName as string

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current printer for this session by name.
Notes:

Lasterror is set.

(Read and Write computed property)

135.5.39 Events

135.5.40 SheetDone(WindowHandle as Integer, accepted as boolean)

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called for a finished print sheet.
Notes: Accepted is false if the cancel button was used. True if OK was clicked.

135.5.41 Constants

135.5.42 kPMDestinationFax = 3

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Fax

135.5.43 kPMDestinationFile = 2

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: File

135.5.44 kPMDestinationInvalid = 0

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Invalid

135.5.45 kPMDestinationPreview = 4

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Preview

135.5.46 kPMDestinationPrinter = 1

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Printer

135.5.47 kPMDestinationProcessPDF = 5

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Process to PDF

135.5.48 kPMDestinationTypeDefault = 1

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the destination types.
Notes: Default is printer.

135.6 class CPMPrintSettingsMBS

135.6.1 class CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a print session.

135.6.2 Methods

135.6.3 Constructor

MBS MacCG Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new print settings object.

135.6.4 CopyPrintSettings(dest as CPMPrintSettingsMBS)

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Copes the settings to the other settings.

135.6.5 CreateDataRepresentation(Format as Integer = 0) as String

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a data representation of a PMPageFormat object as a data string.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim data as string = p.CreateDataRepresentation
Break // check in debugger
```

135.6.6 CreateWithDataRepresentation(Data as String) as CPMPrintSettingsMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a PMPageFormat object from a data representation created with CreateDataRepresentation.

135.6.7 Dictionary as Dictionary

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Represent these print settings as a dictionary.

135.6.8 GetPageRange(byref minPage as UInt32, byref maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries the page range to print.
Notes:

Obtains the valid range of pages that can be printed.
The default page range is 1 - (all pages). The page range is something that is set by the application. It is NOT the first and last page to print. It serves as limits for setting the first and last page.

135.6.9 Keys as String()

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries list of keys.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
p.Duplex = p.kPMDuplexTumble
dim keys() as string = p.keys
Break // check in debugger
```

135.6.10 SetPageRange(minPage as UInt32, maxPage as UInt32)

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the page range to print.

135.6.11 Properties

135.6.12 handle as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The handle for the print settings.
Notes:

It's a PMPrintSettings which you find in CMTypes.h in the Toolbox.
(Read and Write property)

135.6.13 Lasterror as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last command.
Notes:

0 if successfull, -1 if function is not available or a required parameter was not set. Else a Mac OS error code.
(Read and Write property)

135.6.14 release as boolean

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether the destructor will release the handle.
Notes: (Read and Write property)

135.6.15 Collate as boolean

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The collate setting.
Notes: (Read and Write computed property)

135.6.16 Copies as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The number of copies that the user requests to be printed.
Notes:

Lasterror is set.
(Read and Write computed property)

135.6.17 Duplex as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The duplex setting.
Notes: (Read and Write computed property)

135.6.18 FirstPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The number of the first page to print.
Notes:

Lasterror is set.
(Read and Write computed property)

135.6.19 JobName as String

MBS MacCG Plugin, Plugin Version: 12.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the name of a print job.
Notes:

Lasterror is set.
(Read and Write computed property)

135.6.20 LastPage as Integer

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The number of the last page to print.
Example:

```
'get a print session

// print this PDF
dim pathPrinted as FolderItem=GetFolderItem("test.pdf")

dim thePrintSession as CPMPrintSessionMBS = NewCPMPrintSessionMBS
if thePrintSession = nil then Return

'get default page format and print settings and attach it to the print settings
dim thePageFormat as CPMPageFormatMBS = NewCPMPageFormatMBS
dim thePrintSettings as CPMPrintSettingsMBS = NewCPMPrintSettingsMBS
thePrintSession.DefaultPageFormat thePageFormat
thePrintSession.DefaultPrintSettings thePrintSettings

'show the print dialog
if not thePrintSession.PrintDialog(thePrintSettings,thePageFormat) then return

'open the file which will be printed
dim thePdfDocument as CGPDFDocumentMBS = pathPrinted.OpenAsCGPDFDocumentMBS

' limit page counts to the one we have
```

```
dim LastPage as Integer = thePdfDocument.PageCount
if thePrintSettings.LastPage<lastpage then
lastpage=thePrintSettings.LastPage
end if

' you get better progress bar if you tell how many pages will come
thePrintSettings.LastPage=lastpage

'begin the printing
thePrintSession.BeginDocument(thePrintSettings, thePageFormat)

'loop over the number of copies
for currentCopy as Integer = 1 to thePrintSettings.Copies

'loop over the pages
for currentPage as Integer = thePrintSettings.FirstPage to LastPage

'prepage the page
dim PrintRect as CPMRectMBS =thePageFormat.AdjustedPageSize
dim CGRect as CGRectMBS =CGMakeRectMBS(PrintRect.left, PrintRect.top, PrintRect.Width, Print-
Rect.Height)
thePrintSession.BeginPage(thePageFormat, nil)
dim thePrintContext as CGContextMBS = thePrintSession.PageContext
if thePrintContext = Nil then return

'print the page
thePrintContext.DrawCGPDFDocument thePdfDocument, CGRect, currentPage

'end the page
thePrintContext = nil
thePrintSession.EndPage
next

next

'end the printing
thePrintSession.EndDocument
```

Notes:

Lasterror is set.
(Read and Write computed property)

135.6.21 Value(key as String) as Variant

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The value in settings.
Example:

```
dim p as new CPMPrintSettingsMBS
p.Collate = true
dim value as Variant = p.value("com.apple.print.PrintSettings.PMCopyCollate")
Break // check in debugger
```

Notes: (Read and Write computed property)

135.6.22 Constants

135.6.23 kPMDuplexNone = 1

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the duplex mode constants.
Notes: Duplex off.

135.6.24 kPMDuplexNoTumble = 2

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the duplex mode constants.
Notes: Duplex with no tumble.

135.6.25 kPMDuplexTumble = 3

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the duplex mode constants.
Notes: Duplex with tumble.

135.6.26 kPMSimplexTumble = 4

MBS MacCG Plugin, Plugin Version: 15.1. **Function:** One of the duplex mode constants.
Notes: No duplex.

135.7 class CPMRectMBS

135.7.1 class CPMRectMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a rectangle.
Notes: Only a data class.

135.7.2 Properties

135.7.3 Bottom as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The bottom distance to the border.
Notes: (Read and Write property)

135.7.4 Height as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The height of the rectangle.
Notes:

Setting the height changes the bottom property.
(Read and Write property)

135.7.5 Left as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The left distance to the border.
Notes: (Read and Write property)

135.7.6 Right as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The right distance to the border.
Notes: (Read and Write property)

135.7.7 Top as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The top distance to the border.
Notes: (Read and Write property)

135.7.8 Width as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The width of the rectangle.
Notes:

Setting the height changes the right property.
(Read and Write property)

135.8 class CPMResolutionMBS

135.8.1 class CPMResolutionMBS

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a resolution.
Notes: Only a data class.

135.8.2 Properties

135.8.3 Horizontal as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The horizontal resolution.
Notes: (Read and Write property)

135.8.4 Vertical as Double

MBS MacCG Plugin, Plugin Version: 2.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The vertical resolution.
Notes: (Read and Write property)

135.9 class CPMVersionMBS

135.9.1 class CPMVersionMBS

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for version information.

135.9.2 Properties

135.9.3 CountryCode as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The country code.
Notes: (Read and Write property)

135.9.4 LongVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The long version string.
Notes: (Read and Write property)

135.9.5 ShortVersion as String

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The short version string.
Notes: (Read and Write property)

135.9.6 VersionMajor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The major version number.
Notes: (Read and Write property)

135.9.7 VersionMinor as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The minor version number.

Notes: (Read and Write property)

135.9.8 VersionRevision as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The reversion number.
Notes: (Read and Write property)

135.9.9 VersionStage as Integer

MBS MacCG Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The version stage.
Notes: (Read and Write property)

135.10 class WindowsAddPrintJobMBS

135.10.1 class WindowsAddPrintJobMBS

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to send raw data to a printer.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

Perfect for printing postscript data to a postscript printer.
You can use this class in several ways:

1. OpenPrinter, AddJob, WriteJob and ScheduleJob.
2. OpenPrinter, StartDocPrinter, StartPagePrinter, WritePrinter, EndPagePrinter, EndDocPrinter and ClosePrinter.
3. OpenPrinter, StartDocPrinter, WritePrinter, EndDocPrinter and ClosePrinter.

135.10.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.2pr1
- More on printing on Windows

135.10.3 Methods

135.10.4 AddJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new print job.
Notes: Returns true on success and false on failure.

135.10.5 ClosePrinter

MBS Win Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes printer connection.

135.10.6 EndDocPrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The EndDocPrinter function ends a print job for the specified printer.
Notes:

If the function succeeds, the return value is a true.

The EndDocPrinter function returns an error if the print job was not started by calling the StartDocPrinter function.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.

4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it may fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.7 EndPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The EndPagePrinter function notifies the print spooler that the application is at the end of a page in a print job.
Notes:

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.8 OpenPrinter(PrinterName as string) as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens the printer for printing.
Notes:

Returns true on success and false on failure.
PrinterName can be "" for the default printer.

135.10.9 ScheduleJob as boolean

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Schedules the printing.
Notes: Returns true on success and false on failure.

135.10.10 StartDocPrinter(DocName as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

if not w.StartDocPrinter("My Document", w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rect-
fill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.11 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
```

```
end if

const DocName = "My Document"

// output to a file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.ps")

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)

MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.12 StartDocPrinter(DocName as string, OutputFilePath as string, Datatype as string) as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The StartDocPrinter function notifies the print spooler that a document is to be spooled for printing.
Example:

```
// Print Postscript directly to Postscript printer
const PrinterName = "Brother DCP-8085DN"

dim w as new WindowsAddPrintJobMBS

if not w.OpenPrinter(PrinterName) then
MsgBox "OpenPrinter failed. Is the printer name correct in the source code?"
Return
end if

const DocName = "My Document"

// output to a file
dim file as string = "C:\test.ps"

if not w.StartDocPrinter("My Document", file, w.kDataFormatRAW) then
MsgBox "StartDocPrinter failed."
Return
end if

MsgBox "Print Job ID: "+str(w.JobID)

call w.StartPagePrinter

dim PostScript as string = "% !PS"+EndOfLine.UNIX+".1 setgray"+EndOfLine.UNIX+"0 0 100 100 rectfill"+EndOfLine.UNIX+"showpage"+EndOfLine.UNIX

dim BytesSent as Integer = w.WritePrinter(PostScript)
```

```
MsgBox str(BytesSent)+" bytes of "+str(lenb(PostScript))+" bytes sent."

call w.EndPagePrinter
call w.EndDocPrinter

w = nil // close printer
```

Notes:

DocName: A string that specifies the name of the document.
OutputFile: Optional a path string or a folderitem that specifies the name of an output file. To print to a printer, set this to "" or nil or leave away.
Datatype: A string that identifies the type of data used to record the document.

If the function succeeds, the return value is true and the JobID property is set.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

- 135.10.11 StartDocPrinter(DocName as string, OutputFile as folderitem, Datatype as string) as boolean 19112

135.10.13 StartPagePrinter as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The StartPagePrinter function notifies the spooler that a page is about to be printed on the specified printer.
Notes:

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.
4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.14 WriteJob(data as string) as Integer

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds data to the spool file.
Notes:

You need to pass raw data for the printer, e.g. postscript data.
Returns the number of bytes written.
So lenb(data) should be equal to the result.
Only available between a call to AddJob and ScheduleJob.

135.10.15 WritePrinter(data as string) as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WritePrinter function notifies the print spooler that data should be written to the specified printer.
Notes:

data: The data that should be written to the printer.

If the function succeeds, the return value is a true.

The sequence for a print job is as follows:

1. To begin a print job, call StartDocPrinter.
2. To begin each page, call StartPagePrinter.
3. To write data to a page, call WritePrinter.

4. To end each page, call EndPagePrinter.
5. Repeat 2, 3, and 4 for as many pages as necessary.
6. To end the print job, call EndDocPrinter.

When a high-level document (such as an Adobe PDF or Microsoft Word file) or other printer data (such PCL, PS, or HPGL) is sent directly to a printer, the print settings defined in the document take precedent over Windows print settings.

When a page in a spooled file exceeds approximately 350 MB, it can fail to print and not send an error message. For example, this can occur when printing large EMF files. The page size limit depends on many factors including the amount of virtual memory available, the amount of memory allocated by calling processes, and the amount of fragmentation in the process heap.

135.10.16 Properties

135.10.17 JobID as Integer

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The JobID of this print.
Notes:

For information only.
Maybe be useful for the user to find this print job later.
(Read and Write property)

135.10.18 JobPath as String

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file name of the temporary file used.
Notes:

Just for information and only available between a call to AddJob and ScheduleJob.
(Read and Write property)

135.10.19 lastError as Integer

MBS Win Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

Zero for no error.
-1 if the plugin has a problem like invalid parameter or called on Mac/Linux.

others are Windows error codes.
(Read and Write property)

135.10.20 lastErrorMessage as String

MBS Win Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The localized text message for LastError property.
Notes: (Read and Write property)

135.10.21 PrinterHandle as Integer

MBS Win Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the printer.
Notes: (Read and Write property)

135.10.22 Constants

135.10.23 kDataFormatRAW = "RAW"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the data format constants.
Notes: Use this constant if you send to both local and networked printers that use GDI-based printer drivers.

135.10.24 kDataFormatXPS_PASS = "XPS_PASS"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the data format constants.
Notes: Use this constant to send printer control data directly to printers that use XPSDrv printer drivers.

135.11 class WindowsDeviceModeMBS

135.11.1 class WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for device modue information for a Windows printer.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Basicly this class wraps the Windows DEVMODE structure.

For more information on the DEVMODE structure, visit this website:
http://msdn.microsoft.com/en-us/library/dd183565(VS.85).aspx

135.11.4 Methods

135.11.5 ApplyToSetupString(SetupString as String) as string

MBS Win Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Applies current device mode to the given setup string.
Example:

```
dim p as new PrinterSetup

if p.PageSetupDialog then

dim w as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(s)

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)

dim s as string = w.SetupString
dim t as string = w.ApplyToSetupString(s)

Break // check

end if
```

Notes:

The setup string contains a device mode and we replace the one from Xojo with our own.
The other information is kept the same.

135.11.6 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new empty device mode.
Notes: Size is set for you to default name of the data structure.

135.11.7 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new WindowsDeviceModeMBS object with given data.
Notes:

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 135.11.8 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS 19121

135.11.8 FromRawData(data as string, Unicode as boolean = true) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new WindowsDeviceModeMBS object with given data.
Notes:

The data is expected to the in format of DEVMODEW structure with some extra data and the right values inside.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.
See also:

- 135.11.7 FromRawData(data as memoryblock, Unicode as boolean = true) as WindowsDeviceModeMBS 19121

135.11.9 FromSetupString(SetupString as String) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initialized DevMode object from setup string.
Example:

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)
```

```
// duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// change printer
d.DeviceName = "Deskjet 2540 series# :2"

// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes:

You can pass string from PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.

135.11.10 RawData(Unicode as boolean = true) as memoryblock

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Copies the raw data of the WindowsDeviceModeMBS class.

Notes:

Returns nil on any error.
If Unicode is true, we use DEVMODEW and if Unicode is false, we use DEVMODEA structure.

135.11.11 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500, MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string

MBS Win Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a setup string from devmode.
Notes:

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Please pass reasonable flags.
Check existing SetupStrings from Xojo for possible values.
Resolution parameters can e.g. bei 72.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 135.11.12 SetupString(Margin as Integer = 2500) as string 19123

135.11.12 SetupString(Margin as Integer = 2500) as string

MBS Win Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a setup string from devmode.
Example:

```
dim p as new PrinterSetup

// setup something
call p.PageSetupDialog

// now we have nice setupstring
dim ss as string = p.SetupString

// parse it in device mode
```

```
dim d as WindowsDeviceModeMBS = WindowsDeviceModeMBS.FromSetupString(ss)

// duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// change printer
d.DeviceName = "Deskjet 2540 series# :2"

// enable duplex
d.Fields = BitwiseOr(d.Fields, d.DM_DUPLEX)
d.Duplex = d.DMDUP_HORIZONTAL

// now duplex is?
MsgBox "Duplex: "+str(d.Duplex)

// get back as setup string
dim da as string = d.SetupString

if da = "" then
MsgBox "failed to create setup string"
Return
end if

// assign back
p.SetupString = da

// take a look
call p.PageSetupDialog

// and print something
dim g as Graphics = OpenPrinter(p)

g.DrawString "Page 1", 20, 20
g.NextPage
g.DrawString "Page 2", 20, 20
```

Notes:

This setupstring is empty on error.
If not empty, you can assign to PrinterSetup.SetupString.

Supports Xojo 2017r1 with 17.3 plugins.
See also:

- 135.11.11 SetupString(ActualHorizontalResolution as integer, ActualVerticalResolution as integer, MaxHorizontalResolution as integer, MaxVerticalResolution as integer, MarginLeft as integer = 2500,

MarginRight as integer = 2500, MarginTop as integer = 2500, MarginBottom as integer = 2500, MinMarginLeft as integer = 0, MinMarginRight as integer = 0, MinMarginTop as integer = 0, MinMarginBottom as integer = 0, PageSetupFlags as integer = 8) as string 19123

135.11.13 Properties

135.11.14 Collate as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies whether collation should be used when printing multiple copies.
Notes:

(This member is ignored unless the printer driver indicates support for collation by setting the dmFields member to DM_COLLATE.) This member can be one of the following values.

Value	Meaning
DMCOLLATE_TRUE	Collate when printing multiple copies.
DMCOLLATE_FALSE	Do not collate when printing multiple copies.

(Read and Write property)

135.11.15 Color as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Switches between color and monochrome on color printers.
Notes:

The following are the possible values:
DMCOLOR_COLOR
DMCOLOR_MONOCHROME
(Read and Write property)

135.11.16 Copies as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Selects the number of copies printed if the device supports multiple-page copies.
Example:

```
dim w as WindowsDeviceModeMBS // your device mode object

w.Copies = 3
w.Fields = BitwiseOr(w.Fields, w.DM_COPIES)
```

Notes: (Read and Write property)

135.11.17 Data as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The raw data pointer to the DEVMODEW structure.
Notes: (Read only property)

135.11.18 DefaultSource as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the paper source.
Notes:

Use the DMBIN_* constants.
(Read and Write property)

135.11.19 DeviceName as String

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the "friendly" name of the printer or display; for example, "PCL/HP LaserJet" in the case of PCL/HP LaserJet.
Notes:

This string is unique among device drivers. Note that this name may be truncated to fit in the dmDeviceName field.
(Read and Write property)

135.11.20 DitherType as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies how dithering is to be done.
Notes:

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMDITHER_USER.

Value	Meaning
DMDITHER_NONE	No dithering.
DMDITHER_COARSE	Dithering with a coarse brush.
DMDITHER_FINE	Dithering with a fine brush.
DMDITHER_LINEART	Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.
DMDITHER_GRAYSCALE	Device does gray scaling.

(Read and Write property)

135.11.21 DriverExtra as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Contains the number of bytes of private driver-data that follow this structure. If a device driver does not use device-specific information, set this member to zero.
Notes: (Read and Write property)

135.11.22 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The driver version number assigned by the driver developer.
Notes: (Read and Write property)

135.11.23 Duplex as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Selects duplex or double-sided printing for printers capable of duplex printing.
Notes:

Following are the possible values.

Value	Meaning
DMDUP_SIMPLEX	Normal (nonduplex) printing.
DMDUP_HORIZONTAL	Short-edge binding, that is, the long edge of the page is horizontal.
DMDUP_VERTICAL	Long-edge binding, that is, the long edge of the page is vertical.

(Read and Write property)

135.11.24 Fields as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies whether certain properties have been initialized.
Notes:

If a property is initialized, its corresponding bit is set, otherwise the bit is clear. A driver supports only those properties that are appropriate for the printer or display technology.

Use the DM_* constants which match by name their property. So the DM_ORIENTATION bit value is related to the Orientation property.
(Read and Write property)

135.11.25 FormName as String

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string array that specifies the name of the form to use; for example, "Letter" or "Legal".
Notes:

A complete set of names can be retrieved by using the GetPrinterFormats function on the WindowsPrinterListMBS class.
(Read and Write property)

135.11.26 ICMIntent as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies which color matching method, or intent, should be used by default.
Notes:

This member is primarily for non-ICM applications. ICM applications can establish intents by using the ICM functions. This member can be one of the following predefined values, or a driver defined value greater than or equal to the value of DMICM_USER.

Value	Meaning
DMICM_ABS_COLORIMETRIC	Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.
DMICM_COLORIMETRIC	Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.
DMICM_CONTRAST	Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.
DMICM_SATURATE	Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

(Read and Write property)

135.11.27 ICMMethod as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies how ICM is handled.
Notes:

For a non-ICM application, this member determines if ICM is enabled or disabled. For ICM applications, the system examines this member to determine how to handle ICM support. This member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMICMMETHOD_USER.

Value	Meaning
DMICMMETHOD_NONE	Specifies that ICM is disabled.
DMICMMETHOD_SYSTEM	Specifies that ICM is handled by Windows.
DMICMMETHOD_DRIVER	Specifies that ICM is handled by the device driver.
DMICMMETHOD_DEVICE	Specifies that ICM is handled by the destination device.

The printer driver must provide a user interface for setting this member. Most printer drivers support only the DMICMMETHOD_SYSTEM or DMICMMETHOD_NONE value. Drivers for PostScript printers support all values.
(Read and Write property)

135.11.28 LogPixels as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of pixels per logical inch.
Notes:

Printer drivers do not use this member.
(Read and Write property)

135.11.29 MediaType as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the type of media being printed on.
Notes:

The member can be one of the following predefined values, or a driver-defined value greater than or equal to the value of DMMEDIA_USER.

Value	Meaning
DMMEDIA_STANDARD	Plain paper.
DMMEDIA_GLOSSY	Glossy paper.
DMMEDIA_TRANSPARENCY	Transparent film.

(Read and Write property)

135.11.30 Nup as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies where the NUP is done.
Notes:

It can be one of the following.

Value	Meaning
DMNUP_SYSTEM	The print spooler does the NUP.
DMNUP_ONEUP	The application does the NUP.

(Read and Write property)

135.11.31 Orientation as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printer devices only, selects the orientation of the paper.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

This member can be either DMORIENT_PORTRAIT (1) or DMORIENT_LANDSCAPE (2).
(Read and Write property)

135.11.32 PaperLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printer devices only, overrides the length of the paper specified by the PaperSize member, either for custom paper sizes or for devices such as dot-matrix printers that can print on a page of arbitrary length.
Notes:

These values, along with all other values in this structure that specify a physical length, are in tenths of a millimeter.
(Read and Write property)

135.11.33 PaperSize as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printer devices only, selects the size of the paper to print on.
Notes:

This member can be set to zero if the length and width of the paper are both set by the PaperLength and PaperWidth members. Otherwise, the PaperSize member can be set to a device specific value greater than or equal to DMPAPER_USER or to one of the following predefined values with DMPAPER_* constants.
(Read and Write property)

135.11.34 PaperWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printer devices only, overrides the width of the paper specified by the PaperSize member.
Notes:

Unit is tenths of a millimeter.
(Read and Write property)

135.11.35 PrintQuality as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the printer resolution.
Notes:

There are four predefined device-independent values:

DMRES_HIGH
DMRES_MEDIUM
DMRES_LOW
DMRES_DRAFT

If a positive value is specified, it specifies the number of dots per inch (DPI) and is therefore device dependent.
(Read and Write property)

135.11.36 Scale as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the factor by which the printed output is to be scaled.
Notes:

The apparent page size is scaled from the physical page size by a factor of Scale /100. For example, a letter-sized page with a dmScale value of 50 would contain as much data as a page of 17- by 22-inches because the output text and graphics would be half their original height and width.
(Read and Write property)

135.11.37 Size as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the size, in bytes, of the DEVMODE structure, not including any private driver-specific data that might follow the structure's public members.
Notes:

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

135.11.38 SpecVersion as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The version number of the initialization data specification on which the structure is based.

Notes:

You don't need to set this field normally as the plugin does that for you.
(Read and Write property)

135.11.39 TTOption as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies how TrueType fonts should be printed.
Notes:

This member can be one of the following values:

Value	Meaning
DMTT_BITMAP	Prints TrueType fonts as graphics. This is the default action for dot-matrix printers.
DMTT_DOWNLOAD	Downloads TrueType fonts as soft fonts. This is the default action for Hewlett-Packard printers that use Printer Control Language (PCL).
DMTT_DOWNLOAD_OUTLINE	Downloads TrueType fonts as outline soft fonts.
DMTT_SUBDEV	Substitutes device fonts for TrueType fonts. This is the default action for PostScript printers.

(Read and Write property)

135.11.40 YResolution as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the y-resolution, in dots per inch, of the printer.
Notes:

If the printer initializes this member, the PrintQuality member specifies the x-resolution, in dots per inch, of the printer.
(Read and Write property)

135.11.41 Constants

135.11.42 DMBIN_AUTO = 7

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Auto

135.11.43 DMBIN_CASSETTE = 14

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Cassette

135.11.44 DMBIN_ENVELOPE = 5

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Envelope

135.11.45 DMBIN_ENVMANUAL = 6

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Envelope Manual.

135.11.46 DMBIN_FORMSOURCE = 15

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Form Source.

135.11.47 DMBIN_LARGECAPACITY = 11

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Large Capacity

135.11.48 DMBIN_LARGEFMT = 10

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Large Format

135.11.49 DMBIN_LOWER = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Lower

135.11.50 DMBIN_MANUAL = 4

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Manual

135.11.51 DMBIN_MIDDLE = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Middle

135.11.52 DMBIN_ONLYONE = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Only One.

135.11.53 DMBIN_SMALLFMT = 9

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Small Format

135.11.54 DMBIN_TRACTOR = 8

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Tractor

135.11.55 DMBIN_UPPER = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: Upper

135.11.56 DMBIN_USER = 256

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the source bin constants.
Notes: User

135.11.57 DMCOLLATE_FALSE = 0

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the collate mode constants.
Notes: Do not collate when printing multiple copies.

135.11.58 DMCOLLATE_TRUE = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the collate mode constants.
Notes: Collate when printing multiple copies.

135.11.59 DMCOLOR_COLOR = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the color mode constants.
Notes: Color

135.11.60 DMCOLOR_MONOCHROME = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the color mode constants.
Notes: Monochrome.

135.11.61 DMDITHER_COARSE = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.
Notes: Dithering with a coarse brush.

135.11.62 DMDITHER_ERRORDIFFUSION = 5

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.63 DMDITHER_FINE = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.
Notes: Dithering with a fine brush.

135.11.64 DMDITHER_GRAYSCALE = 10

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.
Notes: Device does gray scaling.

135.11.65 DMDITHER_LINEART = 4

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.
Notes: Line art dithering, a special dithering method that produces well defined borders between black, white, and gray scaling. It is not suitable for images that include continuous graduations in intensity and hue, such as scanned photographs.

135.11.66 DMDITHER_NONE = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.
Notes: No dithering.

135.11.67 DMDITHER_RESERVED6 = 6

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.68 DMDITHER_RESERVED7 = 7

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.69 DMDITHER_RESERVED8 = 8

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.70 DMDITHER_RESERVED9 = 9

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.71 DMDITHER_USER = 256

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the dither constants.

135.11.72 DMDUP_HORIZONTAL = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the duplex mode constants.
Notes: Horizontal duplex.

135.11.73 DMDUP_SIMPLEX = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the duplex mode constants.
Notes: No duplex = simplex.

135.11.74 DMDUP_VERTICAL = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the duplex mode constants.
Notes: Vertical duplex.

135.11.75 DMICMMETHOD_DEVICE = 4

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM method constants.
Notes: Specifies that ICM is handled by the destination device.

135.11.76 DMICMMETHOD_DRIVER = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM method constants.
Notes: Specifies that ICM is handled by the device driver.

135.11.77 DMICMMETHOD_NONE = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM method constants.
Notes: Specifies that ICM is disabled.

135.11.78 DMICMMETHOD_SYSTEM = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM method constants.
Notes: Specifies that ICM is handled by Windows.

135.11.79 DMICMMETHOD_USER = 256

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM method constants.

135.11.80 DMICM_ABS_COLORIMETRIC = 4

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM intent constants.
Notes: Color matching should optimize to match the exact color requested without white point mapping. This value is most appropriate for use with proofing.

135.11.81 DMICM_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM intent constants.
Notes: Color matching should optimize to match the exact color requested. This value is most appropriate for use with business logos or other images when an exact color match is desired.

135.11.82 DMICM_CONTRAST = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM intent constants.
Notes: Color matching should optimize for color contrast. This value is the most appropriate choice for scanned or photographic images when dithering is desired.

135.11.83 DMICM_SATURATE = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM intent constants.
Notes: Color matching should optimize for color saturation. This value is the most appropriate choice for business graphs when dithering is not desired.

135.11.84 DMICM_USER = 256

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the ICM intent constants.

135.11.85 DMMEDIA_GLOSSY = 3

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the media type constants.
Notes: Glossy paper.

135.11.86 DMMEDIA_STANDARD = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the media type constants.
Notes: Plain paper.

135.11.87 DMMEDIA_TRANSPARENCY = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the media type constants.
Notes: Transparent film.

135.11.88 DMMEDIA_USER = 256

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the media type constants.

135.11.89 DMNUP_ONEUP = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the NUP constants.
Notes: The application does the NUP.

135.11.90 DMNUP_SYSTEM = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the NUP constants.
Notes: The print spooler does the NUP.

135.11.91 DMORIENT_LANDSCAPE = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the orientation constants.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_LANDSCAPE

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Landscape mode.

135.11.92 DMORIENT_PORTRAIT = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the orientation constants.
Example:

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Portrait mode.

135.11.93 DMPAPER_10x11 = 45

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 10- by 11-inch sheet

135.11.94 DMPAPER_10x14 = 16

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 10- by 14-inch sheet

135.11.95 DMPAPER_11X17 = 17

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 11- by 17-inch sheet

135.11.96 DMPAPER_12X11 = 90

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 12- by 11-inch sheet

135.11.97 DMPAPER_15X11 = 46

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 15- by 11-inch sheet

135.11.98 DMPAPER_9X11 = 44

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: 9- by 11-inch sheet

135.11.99 DMPAPER_A2 = 66

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A2 sheet, 420 x 594-millimeters

135.11.100 DMPAPER_A3 = 8

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A3 sheet, 297- by 420-millimeters

135.11.101 DMPAPER_A3_EXTRA = 63

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A3 Extra 322 x 445-millimeters

135.11.102 DMPAPER_A3_EXTRA_TRANSVERSE = 68

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A3 Extra Transverse 322 x 445-millimeters

135.11.103 DMPAPER_A3_ROTATED = 76

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A3 rotated sheet, 420- by 297-millimeters

135.11.104 DMPAPER_A3_TRANSVERSE = 67

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A3 Transverse 297 x 420-millimeters

135.11.105 DMPAPER_A4 = 9

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 sheet, 210- by 297-millimeters

135.11.106 DMPAPER_A4_EXTRA = 53

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 sheet, 9.27 x 12.69 inches

135.11.107 DMPAPER_A4_PLUS = 60

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 Plus 210 x 330-millimeters

135.11.108 DMPAPER_A4_ROTATED = 77

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 rotated sheet, 297- by 210-millimeters

135.11.109 DMPAPER_A4_SMALL = 10

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 small sheet, 210- by 297-millimeters

135.11.110 DMPAPER_A4_TRANSVERSE = 55

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A4 Transverse 210 x 297 millimeters

135.11.111 DMPAPER_A5 = 11

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A5 sheet, 148- by 210-millimeters

135.11.112 DMPAPER_A5_EXTRA = 64

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A5 Extra 174 x 235-millimeters

135.11.113 DMPAPER_A5_ROTATED = 78

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A5 rotated sheet, 210- by 148-millimeters

135.11.114 DMPAPER_A5_TRANSVERSE = 61

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A5 Transverse 148 x 210-millimeters

135.11.115 DMPAPER_A6 = 70

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A6 sheet, 105- by 148-millimeters

135.11.116 DMPAPER_A6_ROTATED = 83

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: A6 rotated sheet, 148- by 105-millimeters

135.11.117 DMPAPER_A_PLUS = 57

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: SuperA/A4 227 x 356 -millimeters

135.11.118 DMPAPER_B4 = 12

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B4 sheet, 250- by 354-millimeters

135.11.119 DMPAPER_B4_JIS_ROTATED = 79

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B4 (JIS) rotated sheet, 364- by 257-millimeters

135.11.120 DMPAPER_B5 = 13

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B5 sheet, 182- by 257-millimeter paper

135.11.121 DMPAPER_B5_EXTRA = 65

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B5 (ISO) Extra 201 x 276-millimeters

135.11.122 DMPAPER_B5_JIS_ROTATED = 80

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B5 (JIS) rotated sheet, 257- by 182-millimeters

135.11.123 DMPAPER_B5_TRANSVERSE = 62

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.

135.11.124 DMPAPER_B6_JIS = 88

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B6 (JIS) sheet, 128- by 182-millimeters

135.11.125 DMPAPER_B6_JIS_ROTATED = 89

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: B6 (JIS) rotated sheet, 182- by 128-millimeters

135.11.126 DMPAPER_B_PLUS = 58

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: SuperB/A3 305 x 487-millimeters

135.11.127 DMPAPER_CSHEET = 24

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: C Sheet, 17- by 22-inches

135.11.128 DMPAPER_DBL_JAPANESE_POSTCARD = 69

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: Double Japanese Postcard, 200- by 148-millimeters

135.11.129 DMPAPER_DBL_JAPANESE_POSTCARD_ROTATED = 82

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: Double Japanese Postcard Rotated, 148- by 200-millimeters

135.11.130 DMPAPER_DSHEET = 25

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.
Notes: D Sheet, 22- by 34-inches

135.11.131 DMPAPER_ENV_10 = 20

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the paper format constants.

135.11.132 DMPAPER_ENV_11 = 21

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property.
Notes: This value is related to the BitsperPel property.

135.11.221 DM_COLLATE = & h00008000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property.
Notes: This value is related to the Collate property.

135.11.222 DM_COLOR = & h00000800

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property.
Notes: This value is related to the Color property.

135.11.223 DM_COPIES = & h00000100

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property.
Notes: This value is related to the Copies property.

135.11.224 DM_DEFAULTSOURCE = & h00000200

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property.
Notes: This value is related to the DefaultSource property.

135.11.225 DM_DISPLAYFLAGS = & h00200000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the DisplayFlags property.

135.11.226 DM_DISPLAYFREQUENCY = & h00400000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the DisplayFrequency property.

135.11.227 DM_DITHERTYPE = & h04000000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the DitherType property.

135.11.228 DM_DUPLEX = & h00001000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Duplex property.

135.11.229 DM_FORMNAME = & h00010000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Formname property.

135.11.230 DM_ICMINTENT = & h01000000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the ICMIntent property.

135.11.231 DM_ICMMETHOD = & h00800000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the ICMMethod property.

135.11.232 DM_LOGPIXELS = & h00020000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the LogPixels property.

135.11.233 DM_MEDIATYPE = & h02000000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the MediaType property.

135.11.234 DM_NUP = & h00000040

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the NUP property.

135.11.235 DM_ORIENTATION = & h00000001

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Example:**

```
dim d as new WindowsDeviceModeMBS
dim name as string = "My printer"

// here we define which values we want to change
d.Fields = d.DM_ORIENTATION
// and change value
d.Orientation = d.DMORIENT_PORTRAIT

dim w as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
if w.ChangePrinterSettings(d, 2) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: This value is related to the Orientation property.

135.11.236 DM_PANNINGHEIGHT = & h10000000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Panningheight property.

135.11.237 DM_PANNINGWIDTH = & h08000000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Panningwidth property.

135.11.238 DM_PAPERLENGTH = & h00000004

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Paperlength property.

135.11.239 DM_PAPERSIZE = & h00000002

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Papersize property.

135.11.240 DM_PAPERWIDTH = & h00000008

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Paperwidth property.

135.11.241 DM_PELSHEIGHT = & h00100000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Pelsheight property.

135.11.242 DM_PELSWIDTH = & h00080000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Pelswidth property.

135.11.243 DM_POSITION = & h00000020

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Position property.

135.11.244 DM_PRINTQUALITY = & h00000400

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the PrintQuality property.

135.11.245 DM_SCALE = & h00000010

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the Scale property.

135.11.246 DM_TTOPTION = & h00004000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the TTOption property.

135.11.247 DM_YRESOLUTION = & h00002000

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants to use with the fields property. **Notes:** This value is related to the YResolution property.

135.12 class WindowsGraphicsInfoMBS

135.12.1 class WindowsGraphicsInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This class gives information for Windows Device contexts.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox _
"Printer physical page size: "+str(info.PhysicalWidth)+" "+str(info.PhysicalHeight)+_
EndOfLine+_
"Useable paper size: "+str(info.ResolutionX)+ " x "+str(info.ResolutionY)+_
EndOfLine+_
"Paper size: "+str(info.SizeX)+" x "+str(info.Sizey)+" mm"
```

Notes: Main use currently is to learn about native resolution of a printer graphics object.

135.12.10 Properties

135.12.11 AspectX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Relative width of a device pixel used for line drawing.
Notes: (Read and Write property)

135.12.12 AspectXY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Diagonal width of the device pixel used for line drawing.
Notes: (Read and Write property)

135.12.13 AspectY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Relative height of a device pixel used for line drawing.
Notes: (Read and Write property)

135.12.14 BitsPerPixel as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of adjacent color bits for each pixel.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)
```

```
MsgBox "Color Depth: "+str(info.BitsPerPixel)
```

Notes:

As example gives a display device context, the bits per pixel is the screen depth.
(Read and Write property)

135.12.15 BrushesCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of device-specific brushes.
Notes: (Read and Write property)

135.12.16 ColorCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of entries in the device's color table, if the device has a color depth of no more than 8 bits per pixel.
Notes:

For devices with greater color depths, 1 is returned.
(Read and Write property)

135.12.17 DesktopResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Horizontal width of entire desktop in pixels.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

135.12.18 DesktopResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Vertical height of entire desktop in pixels.
Example:

```
dim p as new Picture(200, 200, 32)
dim info as new WindowsGraphicsInfoMBS(p.Graphics)

MsgBox "Size of Windows Desktop: "+str(info.DesktopResolutionX)+ " x "+str(info.DesktopResolutionY)
```

Notes: (Read and Write property)

135.12.19 DriverVersion as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The device driver version.
Notes: (Read and Write property)

135.12.20 FontCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of device-specific fonts.
Notes: (Read and Write property)

135.12.21 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of pixels per logical inch along the screen width.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes:

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

135.12.22 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of pixels per logical inch along the screen height.
Example:

```
dim g as Graphics = OpenPrinter
dim info as WindowsGraphicsInfoMBS = g.WindowsGraphicsInfoMBS

MsgBox "Printer resolution: "+str(info.LogPixelsX)+" x "+str(info.LogPixelsY)
```

Notes:

In a system with multiple display monitors, this value is the same for all monitors.
(Read and Write property)

135.12.23 MakersCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of markers the device has.
Notes: (Read and Write property)

135.12.24 PenCount as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of device-specific pens.
Notes: (Read and Write property)

135.12.25 PhysicalHeight as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printing devices: the height of the physical page, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper has a physical height value of 6600 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.

(Read and Write property)

135.12.26 PhysicalOffsetX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printing devices: the distance from the left edge of the physical page to the left edge of the printable area, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the leftmost 0.25-inch of paper, has a horizontal physical offset of 150 device units.
(Read and Write property)

135.12.27 PhysicalOffsetY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printing devices: the distance from the top edge of the physical page to the top edge of the printable area, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-by-11-inch paper, that cannot print on the topmost 0.5-inch of paper, has a vertical physical offset of 300 device units.
(Read and Write property)

135.12.28 PhysicalWidth as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For printing devices: the width of the physical page, in device units.
Notes:

For example, a printer set to print at 600 dpi on 8.5-x11-inch paper has a physical width value of 5100 device units. Note that the physical page is almost always greater than the printable area of the page, and never smaller.
(Read and Write property)

135.12.29 Planes as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of color planes.
Notes: (Read and Write property)

135.12.30 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Width, in pixels, of the screen; or for printers, the width, in pixels, of the printable area of the page.
Notes: (Read and Write property)

135.12.31 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Height, in raster lines, of the screen; or for printers, the height, in pixels, of the printable area of the page.
Notes: (Read and Write property)

135.12.32 ScalingFactorX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Scaling factor for the x-axis of the printer.
Notes: (Read and Write property)

135.12.33 ScalingFactorY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Scaling factor for the y-axis of the printer.
Notes: (Read and Write property)

135.12.34 SizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Width, in millimeters, of the physical screen.
Notes: (Read and Write property)

135.12.35 SizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Height, in millimeters, of the physical screen.
Notes: (Read and Write property)

135.12.36 Technology as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Device technology. It can be any one of the kTechnology* constants.
Notes: (Read and Write property)

135.12.37 VRefresh as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For display devices: the current vertical refresh rate of the device, in cycles per second (Hz).
Notes: (Read and Write property)

135.12.38 Constants

135.12.39 kTechnologyCharStream = 4

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Character stream

135.12.40 kTechnologyDisplayFile = 6

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Display file

135.12.41 kTechnologyMetaFile = 5

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Metafile

135.12.42 kTechnologyPlotter = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Vector plotter

135.12.43 kTechnologyRasterCamera = 3

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Raster camera

135.12.44 kTechnologyRasterDisplay = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Raster display

135.12.45 kTechnologyRasterPrinter = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the technology constants.
Notes: Raster printer

135.13 class WindowsPageFormatMBS

135.13.1 class WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a page format.
Example:

```
// change the printer name to your printer's name
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim formats(-1) as WindowsPageFormatMBS = w.GetPrinterFormats

for each p as WindowsPageFormatMBS in formats
MsgBox p.Name
next
```

Notes:

This class wraps the FORM_INFO_1 structure. You can find more information here:
http://msdn.microsoft.com/en-us/library/dd144836(v=VS.85).aspx

135.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

135.13.3 Properties

135.13.4 DisplayName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The form's display name in the language specified by LangId.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.5 Flags as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The flags for this page format.
Notes:

The following values are defined.

Value	Meaning
FORM_USER	If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.
FORM_BUILTIN	If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.
FORM_PRINTER	If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

(Read and Write property)

135.13.6 ImageableAreaBottom as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.7 ImageableAreaHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.8 ImageableAreaLeft as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.9 ImageableAreaRight as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.10 ImageableAreaTop as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.11 ImageableAreaWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The imageable area, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.12 Keyword as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A non-localizable string identifier of the form.
Notes:

When passed to AddForm or SetForm, this gives the caller a means of identifying the form in all locales.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.13 LangId as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The language of the DisplayName.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.14 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The mode.
Notes:

Value can be 1 (Windows 2000 and newer) or 2 (Windows Vista and newer).
(Read and Write property)

135.13.15 MuiDll as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Multilingual User Interface localized resource DLL that contains the localized display name.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.16 Name as String

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the form.
Notes: (Read and Write property)

135.13.17 ResourceId as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The resource ID of the form's display name in MuiDll.
Notes:

Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.18 SizeHeight as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.19 SizeWidth as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width, in thousandths of millimeters, of the form.
Notes: (Read and Write property)

135.13.20 StringType as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies how a localized display name for the form is obtained at runtime.
Notes:

The following values are defined. Only one can be set in any given call to AddForm or SetForm. Both STRING_MUIDLL and STRING_LANGPAIR can be set in the WindowsPageFormatMBS (s) returned by GetForm or GetPrinterFormats.

Can be STRING_LANGPAIR, STRING_MUIDLL or STRING_NONE.
Only available in Windows Vista and newer and only valid if mode = 2.
(Read and Write property)

135.13.21 Constants

135.13.22 FORM_BUILTIN = 1

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants.
Notes: If this bit-flag is set, the form is part of the spooler. Form definitions with this flag set do not appear in the registry.

135.13.23 FORM_PRINTER = 2

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants.
Notes: If this bit flag is set, the form is associated with a certain printer, and its definition appears in the registry.

135.13.24 FORM_USER = 0

MBS Win Plugin, Plugin Version: 10.4. **Function:** One of the flag constants.
Notes: If this bit flag is set, the form has been defined by the user. Forms with this flag set are defined in the registry.

135.13.25 STRING_LANGPAIR = 4

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the StringType property.
Notes: The display name and language ID are provided directly by DisplayName and the language is spec-

ified by LangId.

135.13.26 STRING_MUIDLL = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the StringType property. **Notes:** The display name is extracted from the Multilingual User Interface localized resources DLL specified in MuiDll. The ID is in the ResourceId member.

135.13.27 STRING_NONE = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the StringType property. **Notes:** There is no localized display name.

135.14 class WindowsPageSetupDialogMBS

135.14.1 class WindowsPageSetupDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to run the Windows Page Setup dialog.

135.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

135.14.3 Methods

135.14.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

135.14.5 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

135.14.6 PageSetupDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a Page Setup dialog box that enables the user to specify the attributes of a printed page.
Notes:

These attributes include the paper size and source, the page orientation (portrait or landscape), and the width of the page margins.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.
If the user cancels or closes the Page Setup dialog box or an error occurs, the return value is false. To get extended error information, use the lasterror property.

Starting with Windows Vista, the PageSetupDialog does not contain the Printer button. To switch printer selection other functions.

135.14.7 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

135.14.8 Properties

135.14.9 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The device mode object.
Notes:

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

135.14.10 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A set of bit flags that you can use to initialize the Page Setup dialog box.
Notes:

When the dialog box returns, it sets these flags to indicate the user's input.
See the PSD_* constants for possible values.
(Read and Write property)

135.14.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

135.14.12 MarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The widths of the bottom margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

135.14.13 MarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The widths of the left margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

135.14.14 MarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The widths of the right margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

135.14.15 MarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The widths of the top margin.
Notes:

If you set the PSD_MARGINS flag, rtMargin specifies the initial margin values. When PageSetupDlg returns, rtMargin contains the margin widths selected by the user. The PSD_INHUNDREDTHSOFMILLIMETERS or PSD_INTHOUSANDTHSOFINCHES flag indicates the units of measurement.
(Read and Write property)

135.14.16 MinMarginBottom as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The minimum allowable widths for the bottom margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.

(Read and Write property)

135.14.17 MinMarginLeft as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The minimum allowable widths for the left margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

135.14.18 MinMarginRight as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The minimum allowable widths for the right margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

135.14.19 MinMarginTop as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The minimum allowable widths for the top margin.
Notes:

The system ignores this member if the PSD_MINMARGINS flag is not set. These values must be less than or equal to the values specified in the Margin* member. The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

135.14.20 PaperSizeX as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The dimensions of the paper selected by the user.
Notes:

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

135.14.21 PaperSizeY as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The dimensions of the paper selected by the user.
Notes:

The PSD_INTHOUSANDTHSOFINCHES or PSD_INHUNDREDTHSOFMILLIMETERS flag indicates the units of measurement.
(Read and Write property)

135.14.22 Parent as Window

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The window that owns the dialog box.
Notes:

This member can be any valid window, or it can be nil if the dialog box has no owner.
(Read and Write property)

135.14.23 Constants

135.14.24 DN_DEFAULTPRN = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** The flag for default printer on the SetDevNames/GetDevNames flag parameter.

135.14.25 PSD_DEFAULTMINMARGINS = & h00000000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Sets the minimum values that the user can specify for the page margins to be the minimum margins allowed by the printer. This is the default. This flag is ignored if the PSD_MARGINS and PSD_MINMARGINS flags are also specified.

135.14.26 PSD_DISABLEMARGINS = & h00000010

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Disables the margin controls, preventing the user from setting the margins.

135.14.27 PSD_DISABLEORIENTATION = & h00000100

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Disables the orientation controls, preventing the user from setting the page orientation.

135.14.28 PSD_DISABLEPAPER = & h00000200

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Disables the paper controls, preventing the user from setting page parameters such as the paper size and source.

135.14.29 PSD_DISABLEPRINTER = & h00000020

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes:

Obsolete.
Windows XP/2000: Disables the Printer button, preventing the user from invoking a dialog box that contains additional printer setup information.

135.14.30 PSD_INHUNDREDTHSOFMILLIMETERS = & h00000008

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Indicates that hundredths of millimeters are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in hundredths of millimeters. You can set this flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

135.14.31 PSD_INTHOUSANDTHSOFINCHES = & h00000004

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Indicates that thousandths of inches are the unit of measurement for margins and paper size. The values in the Margin, MinMargin, and PaperSize members are in thousandths of inches. You can set this

flag on input to override the default unit of measurement for the user's locale. When the function returns, the dialog box sets this flag to indicate the units used.

135.14.32 PSD_MARGINS = & h00000002

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Causes the system to use the values specified in the Margin members as the initial widths for the left, top, right, and bottom margins. If PSD_MARGINS is not set, the system sets the initial widths to one inch for all margins.

135.14.33 PSD_MINMARGINS = & h00000001

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Causes the system to use the values specified in the MinMargin members as the minimum allowable widths for the left, top, right, and bottom margins. The system prevents the user from entering a width that is less than the specified minimum. If PSD_MINMARGINS is not specified, the system sets the minimum allowable widths to those allowed by the printer.

135.14.34 PSD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Hides and disables the Network button.

135.14.35 PSD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Prevents the system from displaying a warning message when there is no default printer.

135.14.36 PSD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: PageSetupDialog does not display the dialog box. Instead, it sets the DevNames and DevMode members to objects that are initialized for the system default printer. PageSetupDlg returns an error if either DevNames or DevMode is not nil.

135.14.37 PSD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the flag constants.
Notes: Causes the dialog box to display the Help button. The hwndOwner member must specify the window to receive the HELPMSGSTRING registered messages that the dialog box sends when the user clicks the Help button.

135.15 class WindowsPrintDialogMBS

135.15.1 class WindowsPrintDialogMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for showing the windows print dialog.

135.15.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr7

135.15.3 Methods

135.15.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

135.15.5 GetDevNames(byref DriverName as string, byref DeviceName as string, byref OutputName as string, byref flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true if values are available and false if not.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

135.15.6 getPageRange(index as Integer, byref fromPage as Integer, byref toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries a page range entry.

135.15.7 PrintDialog as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Displays a Print Dialog Box or a Print Setup dialog box.
Notes:

The Print dialog box enables the user to specify the properties of a particular print job.

If the user clicks the OK button, the return value is true. The members of the object indicate the user's selections.

If the user canceled or closed the Print or Printer Setup dialog box or an error occurred, the return value is zero. To get extended error information, use the lasterror property. If the user canceled or closed the dialog box, lasterror returns zero.

This is the older function. PrintDialogEx is the newer function.
see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms646940(v=vs.85).aspx

135.15.8 PrintDialogEx as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Displays a Print property sheet that enables the user to specify the properties of a particular print job.
Notes:

A Print property sheet has a General page that contains controls similar to the Print dialog box. The property sheet can also have additional application-specific and driver-specific property pages as well as the General page.
If the function succeeds, the return value is S_OK (0) and the ResultAction member contains one of the following values.

Lasterror is set.
The values of DevMode and DevNames in WindowsPrintDialogMBS may change when they are passed into PrintDialog. This is because these members are filled on both input and output.
If PD_RETURNDC is set but PD_USEDEVMODECOPIESANDCOLLATE flag is not set, the PrintDialog functions return incorrect number of copies. To get the correct number of copies, ensure that the calling

Constant	Value	Description
PD_RESULT_APPLY	2	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	0	The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.
PD_RESULT_PRINT	1	The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

application always uses PD_USEDEVMODECOPIESANDCOLLATE with PD_RETURNDC.

http://msdn.microsoft.com/en-us/library/windows/desktop/ms646942(v=vs.85).aspx

135.15.9 SetDevNames(DriverName as string, DeviceName as string, OutputName as string, flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the strings that identify the driver, device, and output port names for a printer.
Notes:

Returns true on success and false on failure.

DriverName: The file name (without the extension) of the device driver. On input, this string is used to determine the printer to display initially in the dialog box.
OutputName: The device name for the physical output medium (output port).
Flags: Indicates whether the strings here identify the default printer. This string is used to verify that the default printer has not changed since the last print operation. If any of the strings do not match, a warning message is displayed informing the user that the document may need to be reformatted. On output, the Flags member is changed only if the Print Setup dialog box was displayed and the user chose the OK button. The DN_DEFAULTPRN flag is used if the default printer was selected. If a specific printer is selected, the flag is not used. All other flags in this member are reserved for internal use by the dialog box procedure for the Print property sheet or Print dialog box.

135.15.10 setPageRange(index as Integer, fromPage as Integer, toPage as Integer)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets a page range entry.
Notes: Index from 0 to 19.

135.15.11 Properties

135.15.12 Copies as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Contains the initial number of copies for the Copies edit control if DevMode is nil; otherwise, the Copies member of the DEVMODE contains the initial value.
Notes:

When PrintDlgEx returns, nCopies contains the actual number of copies the application must print. This value depends on whether the application or the printer driver is responsible for printing multiple copies. If the PD_USEDEVMODECOPIESANDCOLLATE flag is set in the Flags member, nCopies is always 1 on return, and the printer driver is responsible for printing multiple copies. If the flag is not set, the application is responsible for printing the number of copies specified by nCopies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
(Read and Write property)

135.15.13 DC as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The device context or an information context, depending on whether the Flags member specifies the PD_RETURNDC or PC_RETURNIC flag.
Notes:

If neither flag is specified, the value of this member is undefined. If both flags are specified, PD_RETURNDC has priority.
(Read and Write property)

135.15.14 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The device mode object.
Notes:

On input, if an object is specified, the values in the corresponding DEVMODE structure are used to initialize the controls in the dialog box. On output, the dialog box sets DevMode to a new object that contains values specifying the user's selections. If the user's selections are not available, the dialog box sets DevMode to nil.
(Read and Write property)

135.15.15 ExclusionFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A set of bit flags that can exclude items from the printer driver property pages in the Print property sheet.

Notes:

This value is used only if the PD_EXCLUSIONFLAGS flag is set in the Flags member. Exclusion flags should be used only if the item to be excluded will be included on either the General page or on an application-defined page in the Print property sheet. This member can specify the following flag.
PD_EXCL_COPIESANDCOLLATE: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.
(Read and Write property)

135.15.16 Flags as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A set of bit flags that you can use to initialize the Print property sheet.
Notes:

When the PrintDialog function returns, it sets these flags to indicate the user's input. This member can be one or more of the following values.

To ensure that PrintDialog returns the correct values in the Copies and Collate members of the DeviceMode, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = TRUE. In so doing, the Copies member of the PRINTDLG structure is always 1 and PD_COLLATE is always false.

To ensure that PrintDialog returns the correct values in nCopies and PD_COLLATE, set PD_RETURNDC = TRUE and PD_USEDEVMODECOPIESANDCOLLATE = FALSE. In so doing, dmCopies is always 1 and dmCollate is always FALSE.
Starting with Windows Vista, when you call PrintDlg or PrintDlgEx with PD_RETURNDC set to TRUE and PD_USEDEVMODECOPIESANDCOLLATE set to FALSE, the PrintDlg or PrintDlgEx function sets the number of copies in the nCopies member of the PRINTDLG structure, and it sets the number of copies in the structure represented by the hDC member of the PRINTDLG structure.
When making calls to GDI, you must ignore the value of nCopies, consider the value as 1, and use the returned hDC to avoid printing duplicate copies.
(Read and Write property)

135.15.17 FromPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The initial value for the starting page edit control.
Notes:

When PrintDialog returns, nFromPage is the starting page specified by the user. If the Pages radio button is selected when the user clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters a starting page value that is within the minimum to maximum page range.

If the input value for either FromPage or nToPage is outside the minimum/maximum range, PrintDlg returns an error only if the PD_PAGENUMS flag is specified; otherwise, it displays the dialog box but changes the out-of-range value to the minimum or maximum value.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

135.15.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

Typical errors:
E_OUTOFMEMORY = & h8007000E // Insufficient memory.
E_INVALIDARG = & h80070057 // One or more arguments are invalid.
E_POINTER = & h80000005 // Invalid pointer.
E_HANDLE = & h80000006 // Invalid handle.
E_FAIL = & h80000008 // Unspecified error.
(Read and Write property)

135.15.19 MaxPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The maximum value for the page ranges specified in the Pages edit control.
Notes:

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

135.15.20 MaxPageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The size, in array elements, of the PageRanges buffer.
Notes:

This value indicates the maximum number of page ranges that can be stored in the array. If the PD_NOPAGENUMS flag is specified, this value is not valid. If the PD_NOPAGENUMS flag is not specified, this value must be greater than zero.
The plugin supports up to 20 page ranges.
(Read and Write property)

135.15.21 MinPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The minimum value for the page ranges specified in the Pages edit control.
Notes:

If the PD_NOPAGENUMS flag is specified, this value is not valid.
(Read and Write property)

135.15.22 PageRanges as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** On input, set this member to the initial number of page ranges specified.
Notes:

When the PrintDialog function returns, PageRanges indicates the number of user-specified page ranges. If the PD_NOPAGENUMS flag is specified, this value is not valid. Use getPageRange to query page ranges or setPageRange to set them.
(Read and Write property)

135.15.23 Parent as Window

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The window that owns the dialog box.
Notes:

The window that owns the property sheet. This member must be a valid window handle; it cannot be nil.
(Read and Write property)

135.15.24 ResultAction as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** If the PrintDlgEx function returns S_OK (0), ResultAction contains the outcome of the dialog.
Notes:

If PrintDialog returns an error, this member should be ignored. The ResultAction member can be one of the following values:

(Read and Write property)

PD_RESULT_APPLY	The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not want to print yet. The PRINTDLGEX structure contains the information specified by the user at the time the Apply button was clicked.
PD_RESULT_CANCEL	The user clicked the Cancel button. The information in the PRINTDLGEX structure is unchanged.
PD_RESULT_PRINT	The user clicked the Print button. The PRINTDLGEX structure contains the information specified by the user.

135.15.25 StartPanel as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The property page that is initially displayed.
Notes:

To display the General page, specify START_PAGE_GENERAL. For consistency, it is recommended that the property sheet always be started on the General page.
The plugin sets START_PAGE_GENERAL for default value.
(Read and Write property)

135.15.26 ToPage as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The initial value for the ending page edit control.
Notes:

When PrintDialog returns, ToPage is the ending page specified by the user. If the Pages radio button is selected when the use clicks the Okay button, PrintDialog sets the PD_PAGENUMS flag and does not return until the user enters an ending page value that is within the minimum to maximum page range.
This is only for PrintDialog, not for PrintDialogEx.
(Read and Write property)

135.15.27 Constants

135.15.28 PD_ALLPAGES = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

The default flag that indicates that the All radio button is initially selected.
This flag is used as a placeholder to indicate that the PD_PAGENUMS, PD_SELECTION, and PD_CURRENTPAGE flags are not specified.

135.15.29 PD_COLLATE = & h00000010

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

If this flag is set, the Collate check box is selected.
If this flag is set when the PrintDlgEx function returns, the application must simulate collation of multiple copies. For more information, see the description of the PD_USEDEVMODECOPIESANDCOLLATE flag.
See PD_NOPAGENUMS.

135.15.30 PD_CURRENTPAGE = & h00400000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: If this flag is set, the Current Page radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

135.15.31 PD_DISABLEPRINTTOFILE = & h00080000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Disables the Print to File check box.

135.15.32 PD_EXCLUSIONFLAGS = & h01000000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

Indicates that the ExclusionFlags member identifies items to be excluded from the printer driver property pages.
If this flag is not set, items will be excluded by default from the printer driver property pages. The exclusions prevent the duplication of items among the General page, any application-specified pages, and the printer driver pages.

135.15.33 PD_EXCL_COPIESANDCOLLATE = & h00008100

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Excludes the Copies and Collate controls from the printer driver property pages in a Print property sheet. This flag should always be set when the application uses the default Copies and Collate controls provided by the lower portion of the General page of the Print property sheet.

135.15.34 PD_HIDEPRINTTOFILE = & h00100000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Hides the Print to File check box.

135.15.35 PD_NOCURRENTPAGE = & h00800000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Disables the Current Page radio button.

135.15.36 PD_NONETWORKBUTTON = & h00200000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Hides and disables the Network button.

135.15.37 PD_NOPAGENUMS = 8

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

Disables the Pages radio button and the associated edit controls.
Also, it causes the Collate check box to appear in the dialog.

135.15.38 PD_NOSELECTION = 4

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Disables the Selection radio button.

135.15.39 PD_NOWARNING = & h00000080

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Prevents the warning message from being displayed when an error occurs.

135.15.40 PD_PAGENUMS = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: If this flag is set, the Pages radio button is selected. If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected. If this flag is set when the PrintDialog function returns, the PageRanges member indicates the page ranges specified by the user.

135.15.41 PD_PRINTSETUP = & h00000040

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Causes the system to display the Print Setup dialog box rather than the Print dialog box.

135.15.42 PD_PRINTTOFILE = & h00000020

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

If this flag is set, the Print to File check box is selected.
If this flag is set when PrintDialog returns, the OutputName of DevNames contains the string "FILE:". When you call the StartDoc function to start the printing operation, specify this "FILE:" string in the Output parameter member of the DOCINFO structure. Specifying this string causes the print subsystem to query the user for the name of the output file.
StartDoc is available in our plugins through StartDocPrinter in WindowsAddPrintJobMBS class.

135.15.43 PD_RESULT_APPLY = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the ResultAction value constants.
Notes: The user clicked the Apply button and later clicked the Cancel button. This indicates that the user wants to apply the changes made in the property sheet, but does not yet want to print. The WindowsPrintDialogMBS contains the information specified by the user at the time the Apply button was clicked.

135.15.44 PD_RESULT_CANCEL = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the ResultAction value constants.
Notes: The user clicked the Cancel button. The information in the WindowsPrintDialogMBS is unchanged.

135.15.45 PD_RESULT_PRINT = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the ResultAction value constants.
Notes: The user clicked the Print button. The WindowsPrintDialogMBS contains the information specified by the user.

135.15.46 PD_RETURNDC = & h00000100

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

Causes PrintDialog to return a device context matching the selections the user made in the property sheet. The device context is returned in DC property.

135.15.47 PD_RETURNDEFAULT = & h00000400

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

If this flag is set, the PrintDialog function does not display the property sheet.
Instead, it sets the DevNames and DevMode members to the default for the system default printer. Both DevNames and DevMode must be empty, or PrintDialog returns an error.

135.15.48 PD_RETURNIC = & h00000200

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

Similar to the PD_RETURNDC flag, except this flag returns an information context rather than a device context.
If neither PD_RETURNDC nor PD_RETURNIC is specified, hDC is undefined on output.

135.15.49 PD_SELECTION = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

If this flag is set, the Selection radio button is selected.
If none of the PD_PAGENUMS, PD_SELECTION, or PD_CURRENTPAGE flags is set, the All radio button is selected.

135.15.50 PD_SHOWHELP = & h00000800

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Causes the dialog box to display the Help button.

135.15.51 PD_USEDEVMODECOPIES = & h00040000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes: Same as PD_USEDEVMODECOPIESANDCOLLATE.

135.15.52 PD_USEDEVMODECOPIESANDCOLLATE = & h00040000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the constants for the flags property.
Notes:

This flag indicates whether your application supports multiple copies and collation.
Set this flag on input to indicate that your application does not support multiple copies and collation. In this case, the Copies member of the class always returns 1, and PD_COLLATE is never set in the Flags member.
If this flag is not set, the application is responsible for printing and collating multiple copies. In this case, the Copies property indicates the number of copies the user wants to print, and the PD_COLLATE flag in the Flags member indicates whether the user wants collation.
Regardless of whether this flag is set, an application can determine from Copies and PD_COLLATE how many copies to render and whether to print them collated.
If this flag is set and the printer driver does not support multiple copies, the Copies edit control is disabled. Similarly, if this flag is set and the printer driver does not support collation, the Collate check box is disabled.

The Copies and Collate members of the WindowsDeviceModeMBS object contain the copies and collate information used by the printer driver. If this flag is set and the printer driver supports multiple copies, the Copies member indicates the number of copies requested by the user. If this flag is set and the printer driver supports collation, the Collate member of the WindowsDeviceModeMBS object indicates whether the user wants collation. If this flag is not set, the dmCopies member always returns 1, and the Collate member is always zero.

In Windows versions prior to Windows Vista, if this flag is not set by the calling application and the dmCopies member of the WindowsDeviceModeMBS object is greater than 1, use that value for the number of copies; otherwise, use the value of the Copies member of this class.

135.15.53 START_PANEL_GENERAL = & hffffffff

MBS Win Plugin, Plugin Version: 12.1. **Function:** Special value for StartPanel property to select general panel.

135.16 class WindowsPrinterInfoMBS

135.16.1 class WindowsPrinterInfoMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for details on printer information.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes:

This class wraps the PRINTER_INFO_2 structure on windows which you find documented here:
http://msdn.microsoft.com/en-us/library/dd162845(VS.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

135.16.2 Blog Entries

- Print to Printer in Xojo on Windows
- MBS Xojo / Real Studio Plugins, version 15.2pr6
- MBS Real Studio Plugins, version 12.1pr6

135.16.3 Methods

135.16.4 Constructor

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

135.16.5 LocalPrinters as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the printers as an array.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters
```

```
for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes: On any error the array will be empty.

135.16.6 OpenPrinter(admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens the printer so you can operate on it.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes:

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

135.16.7 Printers(flags as Integer, Name as Variant = nil) as WindowsPrinterInfoMBS()

MBS Win Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Printers function enumerates available printers, print servers, domains, or print providers.
Notes:

If you call this with flags = kPrinterFlagsLocal + kPrinterFlagsConnections and name = nil, you get same as LocalPrinters function.

https://msdn.microsoft.com/en-us/library/windows/desktop/dd162692(v=vs.85).aspx

135.16.8 Properties

135.16.9 AttributeFlags as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the printer attributes.
Notes:

This member can be one of the following values:

PRINTER_ATTRIBUTE_QUEUED	& h00000001	
PRINTER_ATTRIBUTE_DIRECT	& h00000002	
PRINTER_ATTRIBUTE_DEFAULT	& h00000004	(Windows 95)
PRINTER_ATTRIBUTE_SHARED	& h00000008	
PRINTER_ATTRIBUTE_NETWORK	& h00000010	
PRINTER_ATTRIBUTE_HIDDEN	& h00000020	
PRINTER_ATTRIBUTE_LOCAL	& h00000040	
PRINTER_ATTRIBUTE_ENABLE_DEVQ	& h00000080	
PRINTER_ATTRIBUTE_KEEPPRINTEDJOBS	& h00000100	
PRINTER_ATTRIBUTE_DO_COMPLETE_FIRST	& h00000200	
PRINTER_ATTRIBUTE_WORK_OFFLINE	& h00000400	(Windows 95)
PRINTER_ATTRIBUTE_ENABLE_BIDI	& h00000800	(Windows 95)
PRINTER_ATTRIBUTE_RAW_ONLY	& h00001000	
PRINTER_ATTRIBUTE_PUBLISHED	& h00002000	(Windows 2000) Indicates whether the printer is published in the directory service.

Renamed Attributes parameter to AttributeFlags in plugin version 8.2.
(Read and Write property)

135.16.10 AveragePPM as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the average number of pages per minute that have been printed on the printer.
Notes: (Read and Write property)

135.16.11 Comment as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that provides a brief description of the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.Comment
next
```

Notes: (Read and Write property)

135.16.12 CountJobs as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the number of print jobs that have been queued for the printer.
Notes: (Read and Write property)

135.16.13 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the data type used to record the print job.
Notes: (Read and Write property)

135.16.14 DefaultPriority as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the default priority value assigned to each print job.
Notes: (Read and Write property)

135.16.15 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WindowsDeviceModeMBS object that defines default printer data such as the paper orientation and the resolution.
Notes: (Read and Write property)

135.16.16 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the name of the printer driver.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters
```

```
for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.DriverName
next
```

Notes: (Read and Write property)

135.16.17 Location as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the physical location of the printer.
Notes:

for example, "Bldg. 38, Room 1164".
(Read and Write property)

135.16.18 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the default print-processor parameters.
Notes: (Read and Write property)

135.16.19 PortName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that identifies the port(s) used to transmit data to the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.PortName
next
```

Notes:

If a printer is connected to more than one port, the names of each port must be separated by commas (for example, "LPT1:,LPT2:,LPT3:").
(Read and Write property)

135.16.20 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the name of the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName
next
```

Notes: (Read and Write property)

135.16.21 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the name of the print processor used by the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrintProcessor
next
```

Notes: (Read and Write property)

135.16.22 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a priority value that the spooler uses to route print jobs.
Notes:

Possible values:

(Read and Write property)

NO_PRIORITY	0
MAX_PRIORITY	99
MIN_PRIORITY	1
DEF_PRIORITY	1

135.16.23 SeparatorPageFile as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the name of the file used to create the separator page.
Notes:

This page is used to separate print jobs sent to the printer.
(Read and Write property)

135.16.24 ServerName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string identifying the server that controls the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ServerName
next
```

Notes:

If this string is "", the printer is controlled locally.
(Read and Write property)

135.16.25 ShareName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that identifies the sharepoint for the printer.
Example:

```
dim printers(-1) as WindowsPrinterInfoMBS = WindowsPrinterInfoMBS.LocalPrinters

for each p as WindowsPrinterInfoMBS in printers
MsgBox p.PrinterName+": "+p.ShareName
next
```

Notes:

This string is used only if the PRINTER_ATTRIBUTE_SHARED constant was set for the Attributes member.
(Read and Write property)

135.16.26 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the earliest time at which the printer will print a job.
Notes:

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
(Read and Write property)

135.16.27 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the printer status.
Notes:

This member can be one of the following values:

Windows 95: The PRINTER_STATUS_PAGE_PUNT value specifies that the page is being "punted" (that is, not printed) because it is too complex for the printer to print.
(Read and Write property)

135.16.28 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the latest time at which the printer will print a job.
Notes:

This value is expressed as minutes elapsed since 12:00 A.M. GMT (Greenwich Mean Time).
Status
(Read and Write property)

PRINTER_STATUS_PAUSED	& h00000001
PRINTER_STATUS_ERROR	& h00000002
PRINTER_STATUS_PENDING_DELETION	& h00000004
PRINTER_STATUS_PAPER_JAM	& h00000008
PRINTER_STATUS_PAPER_OUT	& h00000010
PRINTER_STATUS_MANUAL_FEED	& h00000020
PRINTER_STATUS_PAPER_PROBLEM	& h00000040
PRINTER_STATUS_OFFLINE	& h00000080
PRINTER_STATUS_IO_ACTIVE	& h00000100
PRINTER_STATUS_BUSY	& h00000200
PRINTER_STATUS_PRINTING	& h00000400
PRINTER_STATUS_OUTPUT_BIN_FULL	& h00000800
PRINTER_STATUS_NOT_AVAILABLE	& h00001000
PRINTER_STATUS_WAITING	& h00002000
PRINTER_STATUS_PROCESSING	& h00004000
PRINTER_STATUS_INITIALIZING	& h00008000
PRINTER_STATUS_WARMING_UP	& h00010000
PRINTER_STATUS_TONER_LOW	& h00020000
PRINTER_STATUS_NO_TONER	& h00040000
PRINTER_STATUS_PAGE_PUNT	& h00080000
PRINTER_STATUS_USER_INTERVENTION	& h00100000
PRINTER_STATUS_OUT_OF_MEMORY	& h00200000
PRINTER_STATUS_DOOR_OPEN	& h00400000
PRINTER_STATUS_SERVER_UNKNOWN	& h00800000
PRINTER_STATUS_POWER_SAVE	& h01000000

135.16.29 Constants

135.16.30 kPrinterFlagsConnections = 4

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: The function enumerates the list of printers to which the user has made previous connections.

135.16.31 kPrinterFlagsDefault = 1

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: Default printer.

135.16.32 kPrinterFlagsLocal = 2

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: If the kPrinterFlagsName flag is not also passed, the function ignores the Name parameter, and enumerates the locally installed printers. If kPrinterFlagsName is also passed, the function enumerates the local printers on Name.

135.16.33 kPrinterFlagsName = 8

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: The function enumerates the printer identified by Name. This can be a server, a domain, or a print provider. If Name is nil, the function enumerates available print providers.

135.16.34 kPrinterFlagsNetwork = 64

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: Network printers?

135.16.35 kPrinterFlagsRemote = 16

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: Remote (non Local) printers?

135.16.36 kPrinterFlagsShared = 32

MBS Win Plugin, Plugin Version: 15.2. **Function:** One of the flags for Printer function.
Notes: The function enumerates printers that have the shared attribute. Cannot be used in isolation; use an OR operation to combine with another constants.

135.17 class WindowsPrinterJobMBS

135.17.1 class WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for Windows print job information.

135.17.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr4

135.17.3 Properties

135.17.4 Datatype as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The type of data used to record the print job.
Notes: (Read and Write property)

135.17.5 DevMode as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The device-initialization and environment data for the printer driver.
Notes: (Read and Write property)

135.17.6 Document as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the user who owns the print job.
Notes: (Read and Write property)

135.17.7 DriverName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the printer driver that should be used to process the print job.
Notes: (Read and Write property)

135.17.8 JobID as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A job identifier value.
Notes: (Read and Write property)

135.17.9 MachineName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the machine that created the print job.
Notes: (Read and Write property)

135.17.10 NotifyName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the user who should be notified when the job has been printed or when an error occurs while printing the job.
Notes: (Read and Write property)

135.17.11 PagesPrinted as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of pages that have printed.
Notes:

This value may be zero if the print job does not contain page delimiting information.
(Read and Write property)

135.17.12 Parameters as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Print-processor parameters.
Notes: (Read and Write property)

135.17.13 Position as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The job's position in the print queue.

Notes: (Read and Write property)

135.17.14 PrinterName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the printer for which the job is spooled.
Notes: (Read and Write property)

135.17.15 PrintProcessor as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the print processor that should be used to print the job.
Notes: (Read and Write property)

135.17.16 Priority as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The job priority.
Notes:

This member can be one of the following values or in the range between 1 through 99 (kPriorityMin through kPriorityMax).
(Read and Write property)

135.17.17 Size as Int64

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size, in bytes, of the job.
Notes: (Read and Write property)

135.17.18 StartTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The earliest time that the job can be printed.
Notes: (Read and Write property)

135.17.19 Status as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The job status.
Notes:

Check kJobStatus* constants for possible values.
(Read and Write property)

135.17.20 StatusString as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The status of the print job.
Notes:

This member should be checked prior to Status and, if StatusString is "", the status is defined by the contents of the Status member.
(Read and Write property)

135.17.21 Submitted as Date

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The time when the job was submitted.
Notes:

This time value is in Universal Time Coordinate (UTC) format.
(Read and Write property)

135.17.22 Time as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The total time, in milliseconds, that has elapsed since the job began printing.
Notes: (Read and Write property)

135.17.23 TotalPages as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of pages required for the job.
Notes:

This value may be zero if the print job does not contain page delimiting information.

(Read and Write property)

135.17.24 UntilTime as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The latest time that the job can be printed.
Notes: (Read and Write property)

135.17.25 UserName as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the user who owns the print job.
Notes: (Read and Write property)

135.17.26 Constants

135.17.27 kJobStatusBlockedDeviceQueue = & h200

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: The driver cannot print the job.

135.17.28 kJobStatusComplete = & h1000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes:

The job is sent to the printer, but may not be printed yet.
(Windows XP and later)

135.17.29 kJobStatusDeleted = & h100

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: Job has been deleted.

135.17.30 kJobStatusDeleting = 4

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Job is being deleted.

135.17.31 kJobStatusError = 2

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** An error is associated with the job.

135.17.32 kJobStatusOffline = & h20

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Printer is offline.

135.17.33 kJobStatusPaperOut = & h40

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Printer is out of paper.

135.17.34 kJobStatusPaused = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Job is paused.

135.17.35 kJobStatusPrinted = & h80

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Job has printed.

135.17.36 kJobStatusPrinting = & h10

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants. **Notes:** Job is printing.

135.17.37 kJobStatusRenderingLocally = & h4000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: Rendering.

135.17.38 kJobStatusRestart = & h800

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: Job has been restarted.

135.17.39 kJobStatusRetained = & h2000

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes:

The job has been retained in the print queue following printing.
(Windows XP and later)

135.17.40 kJobStatusSpooling = 8

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: Job is spooling.

135.17.41 kJobStatusUserIntervention = & h400

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the job status constants.
Notes: Printer has an error that requires the user to do something.

135.17.42 kPriorityDefault = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the priority constants.
Notes: Default priority.

135.17.43 kPriorityMax = 99

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the priority constants. **Notes:** Maximum priority.

135.17.44 kPriorityMin = 1

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the priority constants. **Notes:** Minimum priority.

135.17.45 kPriorityNo = 0

MBS Win Plugin, Plugin Version: 12.1. **Function:** One of the priority constants. **Notes:** No priority.

135.18 class WindowsPrinterMBS

135.18.1 class WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for an open connection to a windows printer.
Notes:

Objects of this class can operate on printers.
Some operations need administrative permissions. If you don't have them, lasterror is set to 5.

135.18.3 Methods

135.18.4 AddForm(form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The AddForm function adds a form to the list of available forms that can be selected for the specified printer.
Example:

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

dim form as new WindowsPageFormatMBS

form.Mode = 1
form.Name = "MyTest"
form.DisplayName = "MyTest"
form.Flags = 0
form.SizeHeight = 100000
form.SizeWidth = 100000
form.ImageableAreaLeft = 0
```

```
form.ImageableAreaTop = 0
form.ImageableAreaRight = 100000
form.ImageableAreaBottom = 100000

if w.AddForm(form) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Form.Mode gives level of the data. Must be either 1 (old version) or 2 (newer version).

Form: The form details.

Returns true if the function succeeds and false if the function fails.

Note: This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

An application can determine which forms are available for a printer by calling the GetPrinterFormats function.
If form points to a Mode 2 form, then AddForm will fail if either a form with the specified name already exists or the Keyword value already exists.

135.18.5 AdvancedDocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a printer-configuration dialog box for the specified printer, allowing the user to configure that printer.
Notes:

This function is a special case of the DocumentProperties function.

parent: The parent window of the printer-configuration dialog box.

OutputDevMode: The device mode structure that will contain the configuration data specified by the user. InputDevMode: The device mode structure that contains the configuration data used to initialize the controls of the printer-configuration dialog box.

If the DocumentProperties function with these parameters is successful, the return value of AdvancedDocumentProperties is 1. Otherwise, the return value is zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

This function can only display the printer-configuration dialog box so a user can configure it. For more control, use DocumentProperties.

135.18.6 AllJobs as WindowsPrinterJobMBS()

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries all jobs for the printer.
Example:

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"
```

Notes: PrinterName property must be set, so the function knows which printer.

135.18.7 CanPrinterPassThroughPostScript as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this printer can pass through postscript data.
Notes:

Returns true for Postscript printers and false for other printers.

For more information on this function, visit this website:
http://msdn.microsoft.com/en-us/library/dd162831(v=VS.85).aspx

135.18.8 ChangePrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Changes printer settings.
Notes:

This function opens the printer, queries current settings using GetPrinter, applies all your changes, calls DocumentProperties to verify those settings are valid for the printer and uses SetPrinter to apply the changes. To indicate which fiels in the WindowsDeviceModeMBS object are set by you, use the fields integer value with a combination of the DM_* constants.
Returns true on success and false on failure.

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

For more information on the SetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(VS.85).aspx

For more information on the DocumentProperties function, check this website:
http://msdn.microsoft.com/en-us/library/dd183576(VS.85).aspx

Even if you change printer settings, other parts of the application, e.g. Xojo framework may not care.

135.18.9 ConfigurePort(name as string = "", parent as window = nil, PortName as string = "") as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays the port-configuration dialog box for a port on the specified server.
Notes:

Name: The name of the server on which the specified port exists. If this parameter is "", the port is local.
parent: The parent window of the port-configuration dialog box.
PortName: The name of the port to be configured.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a

thread that manages interaction with the user interface could make the application appear to be unresponsive.

Before calling the ConfigurePort function, an application should call the EnumPorts function to determine valid port names.

135.18.10 ConnectToPrinterDialog(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box that lets users browse and connect to printers on a network.
Notes:

If the user selects a printer, the function attempts to create a connection to it; if a suitable driver is not installed on the server, the user is given the option of creating a printer locally.

parent: Specifies the parent window of the dialog box.

If the function succeeds and the user selects a printer, this object points to the new printer and return value is true.
If the function fails, or the user cancels the dialog box without selecting a printer, the return value is true.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The ConnectToPrinterDialog function attempts to create a connection to the selected printer. However, if the server on which the printer resides does not have a suitable driver installed, the function offers the user the option of creating a printer locally.

An application should call DeletePrinter to delete a local printer. An application should call DeletePrinterConnection to delete a connection to a printer.

135.18.11 Constructor(PrinterName as string, admin as boolean = false)

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens the printer so you can operate on it.
Notes:

Admin: whether you want to get permissions to administrate.
Raises exception if printer can't be opened. Use OpenPrinter function to avoid exception.

135.18.12 DeleteForm(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The DeleteForm function removes a form name from the list of supported forms.
Notes:

name: The form name to be removed.

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

DeleteForm can only delete form names that were added by using the AddForm function.

135.18.13 DeleteJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Delete the print job.
Notes: Returns true on success and false on failure.

135.18.14 DeletePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes the specified printer object.
Notes:

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If there are print jobs remaining to be processed for the specified printer, DeletePrinter marks the printer for pending deletion, and then deletes it when all the print jobs have been printed. No print jobs can be added to a printer that is marked for pending deletion.
A printer marked for pending deletion cannot be held, but its print jobs can be held, resumed, and restarted. If the printer is held and there are jobs for the printer, DeletePrinter fails with ERROR_ACCESS_DENIED.

Lasterror is set.

135.18.15 DeletePrinterConnection(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes a connection to a printer that was established by a call to AddPrinterConnection or ConnectToPrinterDialog.
Notes:

name: The name of the printer connection to delete.
Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

The DeletePrinterConnection function does not delete any printer driver files that were copied to the server to which the printer is attached.

135.18.16 DocumentProperties(InputDevMode as WindowsDeviceModeMBS, byref OutputDevMode as WindowsDeviceModeMBS, Prompt as boolean = false, parent as window = nil) as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The DocumentProperties function retrieves or modifies printer initialization information or displays a printer-configuration property sheet for the specified printer.
Example:

```
// get default printer
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(WindowsPrinterMBS.GetDefaultPrinter)

// ask for printer settings
dim s as new WindowsDeviceModeMBS
dim n as Integer = p.DocumentProperties(nil, s, true, window1)
```

Notes:

Printername property must be set.

parent: The parent window of the printer-configuration property sheet. Can be nil.
Prompt: Whether to show dialog.

OutputDevMode: Devmode variable that receives the printer configuration data specified by the user.
InputDevMode: Optional input data which the operating system uses to initialize the property sheet controls.
Prompt: Whether the function presents the printer driver's Print Setup property sheet and then changes the settings in the printer's DeviceMode data structure to those values specified by the user.

If you provide object for InputDevMode, the function will read settings from there. If you don't pass an object (nil) or you pass incomplete settings, default settings are used to complete.
If prompt is true, the dialog is shown and user can change settings.
On the end, the current new data is stored in OutputDevMode where you can find it.

If the function displays the property sheet, the return value is either IDOK (1) or IDCANCEL (2), depending on which button the user selects.
If the function does not display the property sheet and is successful, the return value is IDOK (1).
If the function fails, the return value is less than zero.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation-factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd183576(v=vs.85).aspx

135.18.17 GetDefaultPrinter as string

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetDefaultPrinter function retrieves the printer name of the default printer for the current user on the local computer.
Example:

msgbox WindowsPrinterMBS.GetDefaultPrinter

Notes:

For more details on the GetDefaultPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144876(VS.85).aspx

Returns an empty string on any error.

135.18.18 GetForm(name as string) as WindowsPageFormatMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetForm function retrieves information about a specified form.
Example:

```
// query default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// get a page format
dim f as WindowsPageFormatMBS = w.GetForm("Letter")

// and show details
MsgBox f.DisplayName+" "+str(F.SizeWidth/10000,"0.0")+" x "+str(f.SizeHeight/10000,"0.0")
```

Notes:

name: The string that specifies the name of the form. To get the names of the forms supported by the printer, call the GetPrinterFormats function.

On failure returns nil, on success the form details.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

If the caller is remote, and the Form Mode is 2, the StringType value of the returned WindowsPageFormatMBS will always be STRING_LANGPAIR.

135.18.19 GetJob(JobID as Integer) as WindowsPrinterJobMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Query job with given ID from printer.
Notes:

Returns nil on any error.
PrinterName property must be set, so the function knows which printer.

135.18.20 GetPrinterFormats as WindowsPageFormatMBS()

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the page formats supported by this printer.
Notes:

On failure the array is empty.

This function uses the EnumForms for which you can find more information on this website:
http://msdn.microsoft.com/en-us/library/dd162624(v=VS.85).aspx

135.18.21 GetPrinterSettings(Mode as Integer=2) as WindowsDeviceModeMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries printer settings.
Example:

```
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)
dim dm as WindowsDeviceModeMBS = w.GetPrinterSettings
```

Notes:

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd144911(VS.85).aspx

135.18.22 GetPrinterTechnology as string

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the printer technology.
Example:

```
dim w as new WindowsPrinterMBS("my printer")
msgbox w.GetPrinterTechnology
```

Notes:

Opens the printer, queries the print technology and returns that string.
For postscript printers the string should contain the word "postscript".
Returns an empty string on any error.

For details on this function, check the following website:
http://msdn.microsoft.com/en-us/library/dd144931(VS.85).aspx

135.18.23 OpenPrinter(PrinterName as string, admin as boolean = false) as WindowsPrinterMBS

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens the printer so you can operate on it.
Notes:

Admin: whether you want to get permissions to administrate.
Returns nil on any error.

135.18.24 PauseJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pause the print job.
Notes: Returns true on success and false on failure.

135.18.25 PausePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PausePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

135.18.26 PrinterProperties(parent as window = nil) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The PrinterProperties function displays a printer-properties property sheet for the specified printer.
Example:

```
// get default printer
dim w as new WindowsPrinterMBS(WindowsPrinterMBS.GetDefaultPrinter)

// open properties dialog
if w.PrinterProperties(window1) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

Returns true on success (dialog shows) or false on error.
Parent is the parent window for the new dialog. Can be nil.

135.18.27 PurgePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Purges the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.PurgePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

135.18.28 ResumeJob(JobID as Integer) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resume a paused print job.
Notes: Returns true on success and false on failure.

135.18.29 ResumePrinter as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resumes the printer.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, true)

if p.ResumePrinter then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage+" "+str(p.Lasterror)
end if
```

Notes:

Requires application to be run by administrator and printer opened with admin option. Else you get error 5.
Returns true on success and false on failure.

135.18.30 SetDefaultPrinter(PrinterName as string) as Integer

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Changes the default printer to the given one.
Example:

```
call WindowsPrinterMBS.SetDefaultPrinter("My Printer")
```

Notes:

Returns a Windows error code. (0 for success)

For details on the Windows SetDefaultPrinter method, check here:
http://msdn.microsoft.com/en-us/library/dd162971(VS.85).aspx

135.18.31 SetForm(name as string, form as WindowsPageFormatMBS) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetForm function sets the form information for the specified printer.
Notes:

name: The string that specifies the form name for which the form information is set.
Form: The form data. Mode property must be either 1 (older format) or 2 (newer format).

Returns true on success and false on failure.

This is a blocking or synchronous function and might not return immediately. How quickly this function returns depends on run-time factors such as network status, print server configuration, and printer driver implementation—factors that are difficult to predict when writing an application. Calling this function from a thread that manages interaction with the user interface could make the application appear to be unresponsive.

SetForm can be called multiple times for an existing WindowsPageFormatMBS, each call adding additional pairs of DisplayName and LangId values. All languages versions of the form will get the Size and ImageableArea values of the WindowsPageFormatMBS in the most recent call to SetForm.
If the caller is remote and the form's Mode is 2, the StringType value of the WindowsPageFormatMBS cannot be STRING_MUIDLL.

135.18.32 SetJob(JobID as Integer, job as WindowsPrinterJobMBS) as boolean

MBS Win Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets job parameters.
Example:

```
dim w as new WindowsPrinterMBS( WindowsPrinterMBS.GetDefaultPrinter, true)
dim jobs() as WindowsPrinterJobMBS = w.AllJobs
MsgBox str(UBound(jobs)+1)+" jobs"

// pick first
dim j as WindowsPrinterJobMBS = jobs(0)
j.Document = "Hello World"

// write back values
call w.SetJob(j.JobID, j)

// error?
if w.Lasterror<>0 then
MsgBox w.LasterrorMessage
```

```
end if
```

Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd162978(v=vs.85).aspx

135.18.33 SetPrinterSettings(value as WindowsDeviceModeMBS, Mode as Integer=2) as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets printer settings.
Example:

```
// switch default printer to A5 landscape paper

dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name, false)
dim d as WindowsDeviceModeMBS = p.GetPrinterSettings(9)

if d = nil then
MsgBox p.LasterrorMessage
else
d.PaperSize = d.DMPAPER_A5
d.Fields = BitwiseOr(d.Fields, d.DM_PAPERSIZE)
d.Orientation = d.DMORIENT_LANDSCAPE
d.Fields = BitwiseOr(d.Fields, d.DM_ORIENTATION)

if p.SetPrinterSettings(d, 9) then
MsgBox "OK"
else
MsgBox "Failed: "+p.LasterrorMessage
end if
end if
```

Notes:

Mode can be 2 (general printer information), 8 (global settings) or 9 (user settings).

For more information on the GetPrinter function, check this website:
http://msdn.microsoft.com/en-us/library/dd145082(v=vs.85).aspx

135.18.34 Properties

135.18.35 Handle as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal handle to the printer.
Notes: (Read and Write property)

135.18.36 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last windows error code.
Notes: (Read and Write property)

135.18.37 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The text message for the last error code.
Notes: (Read and Write property)

135.18.38 PrinterName as String

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the open printer in this object.
Example:

```
dim name as string = WindowsPrinterMBS.GetDefaultPrinter
dim p as WindowsPrinterMBS = WindowsPrinterMBS.OpenPrinter(name)
MsgBox p.PrinterName
```

Notes: (Read and Write property)

Chapter 136

Process

136.1 class Application

136.1.1 class Application

Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Extends the Application class inside Xojo.

136.1.2 Methods

136.1.3 ApplicationCreatorCodeMBS as string

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Creator Code of the application.
Example:

msgbox "Hi. This application has the creator code "+app.ApplicationCreatorCodeMBS

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only useful on Mac OS.
If you run your app inside the Xojo IDE it will return "RBv2" which is Xojo's Creator code sind Xojo 2.0.

136.1.4 ApplicationFileMBS as folderitem

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Gives a folderitem to the applications file.

Example:

msgbox "Hi. The file of this application is named "+app.ApplicationFileMBS.name

Deprecated: This item is deprecated and should no longer be used. You can use ExecutableFile instead.
Notes:

Inside Xojo points to the Xojo application.

This item may go in the future. Please use app.executablefile in new Xojo versions.

136.1.5 ApplicationNameMBS as string

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the name of the application.
Example:

msgbox "Hi. This application is named "+app.ApplicationNameMBS

Notes: This may not be the exact same name than the filename.

136.1.6 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries arguments of process.
Notes:

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

136.1.7 BundleFolderMBS as folderitem

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to the bundle's mail folder.

136.1.8 BundleLocalizedStringMBS(key as string) as string

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the localized string for the given key from the default table.
Notes: A short version for BundleLocalizedString which uses the default table.
See also:

- 136.1.9 BundleLocalizedStringMBS(key as string,fromtable as string) as string 19241

136.1.9 BundleLocalizedStringMBS(key as string,fromtable as string) as string

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the localized string for the given key and table.
Example:

```
// You may make yourself a function to look up for the key and return
// This function was not tested in a real application. May contain a bug.

function Localize(key as string, default as string) as string
dim s as string

s=app.BundleLocalizedStringMBS(key)
if s="" then
s=default // For Mac OS Classic and Windows
elseif s=key then // returns key for not localized items
msgbox "For developer: the key """+key+""" was not localized for any language."
end if

return s
end sub

// use like this
FileOpen.text=Localize("FileOpenLabel", "Open...")
```

Notes:

The table parameter is optional to specify which ".strings"-file to use.
without table or table="" the "Localizable.strings" file is used by Mac OS X.

Returns "" (empty string) on Mac OS Classic or Windows.
See also:

- 136.1.8 BundleLocalizedStringMBS(key as string) as string 19241

136.1.10 BundleResourceFolderItemLocalizedMBS(ResourceName as string, ResourceType as string, SubDirectory as string) as folderitem

MBS Util Plugin, Plugin Version: 4.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Searches inside the application bundle for a file.
Example:

```
dim f as FolderItem
f=app.BundleResourceFolderItemLocalizedMBS("logo","jpg","")
MsgBox f.NativePath
```

Notes:

ResourceName is the filename of the resource file.
ResourceType is the file extension.
SubDirectory is the name of the directory.
This function will take care for localization folders.

136.1.11 BundleResourceFolderMBS as folderitem

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to the resource file inside the bundle.

136.1.12 HideMeMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Hides the current application.
Notes:

Returns true if the current application was hidden.
Returns false on Carbon running on Mac OS 9 or Windows.

136.1.13 HideOthersMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Hides all applications except the current one.
Notes:

Returns true if the other applications were hidden.
Returns false on Carbon running on Mac OS 9 of Windows.

136.1.14 LaunchTimeMBS as Double

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the the ticks value at launch time.
Example:

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes:

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

136.1.15 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** If your application is a bundle, this function returns your own bundle.
Notes:

Returns nil on any error.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.1.16 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the shared NSApplication object.
Notes:

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.1.17 OverlayApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Adds a picture on top of the application dock title.
Example:

```
static n as Integer // global property
dim p as picture
dim m as picture
dim g as graphics
dim s as string
dim w,h,x as Integer

n=n+1 // add one
s=str(n)
m=New Picture(128,128,32)
p=New Picture(128,128,32)

g=p.graphics
g.textsize=24
w=g.stringwidth(s)
h=g.stringheight(s,0)
x=125-w-10
g.foreColor=rgb(255,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20
g.foreColor=rgb(0,0,0)
g.drawstring s,x+5,15+g.textascent

g=m.graphics
g.foreColor=rgb(0,0,0)
g.fillRoundRect x,10,10+w,10+h,20,20

if app.OverlayApplicationDockTileImageMBS(CGCreateImageMBS(p,m)) then
end if
```

Notes:

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

136.1.18 ProcessTimeMBS as Double

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current CPU time for the process.
Example:

msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."

Notes:

On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

136.1.19 RestoreApplicationDockTileImageMBS as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Restores the application dock tile image.
Example:

```
if app.RestoreApplicationDockTileImageMBS then
// ok
end if
```

Notes: Added support for 64-bit in plugin version 16.0.

136.1.20 SetApplicationDockTileImageMBS(pic as CGImageMBS) as boolean

MBS MacCG Plugin, Plugin Version: 2.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the application dock tile image.

Example:

```
dim p as CGImageMBS = CGImageMBS.CreateImage(LogoMBS(500))

if app.SetApplicationDockTileImageMBS(p) then
// ok
end if
```

Notes:

Changed in MBS Plugin 2.7 to use CGImages directly.
Added support for 64-bit in plugin version 16.0.

136.1.21 Properties

136.1.22 FrontmostMBS as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns true if the application is frontmost.
Example:

```
app.frontmostmbs=True 'bring app to front
```

Notes:

This property is for read and write. Writing to it brings the app to front.
Setting this property to false does nothing.

If you need to make some other application frontmost, you can use app.HideMeMBS or use the ProcessMBS class.

Implemented for Windows in version 19.2. When querying, we check if the front window belongs to our application. When setting the plugin builds a list of all FileMaker windows. Than we activate the top most of them and move all other windows in z order behind.
(Read and Write computed property)

136.2 class BackgroundThreadMBS

136.2.1 class BackgroundThreadMBS

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The thread subclass we use for the CallMethodOnThreadMBS functions.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Subclass of the Thread class.

136.3 module CallDelegatesMBS

136.3.1 module CallDelegatesMBS

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The module for the call delegate methods.
Notes: Only supported on Xojo 2013r1 and newer.

136.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.0

136.3.3 Methods

136.3.4 CallDelegateOnMainThreadMBS(m as _delegateMBS)

MBS Util Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a delegate on the main thread.
Example:

```
CallDelegateOnMainThreadMBS AddressOf testString, "Hello"
CallDelegateOnMainThreadMBS AddressOf testNumbers, 5, 6
CallDelegateOnMainThreadMBS AddressOf TestNoParameters
CallDelegateOnMainThreadMBS AddressOf Test, "4th call", 4
```

Notes:

We call the delegate on the main thread later with passing a parameter
Our plugin supports various combinations of up to 2 parameters of type string, variant, boolean, double, integer and object.
If you need more, please contact us.
Only supported on Xojo 2013r1 and newer.

If the method you call has optional parameters, you must pass all values or Xojo will throw a compile error.

136.4 Globals

136.4.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 5.0) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with no parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 136.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean 19249
- 136.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 19250
- 136.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19251

136.4.2 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 4.0, "Hello") then
msgbox "OK"
```

```
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with one variant parameter and no return values.

The method will be called later (Asyncronously) on the main thread after the given delay in seconds. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 136.4.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean 19249
- 136.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 19250
- 136.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19251

136.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with two variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.
See also:

- 136.4.1 CallMethodLaterMBS(target as object, name as string, afterDelay as Double) as boolean 19249

- 136.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19251

136.4.4 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on the main thread after the given delay in seconds.
Example:

```
if CallMethodLaterMBS(window1, "Test", 3.0, "Hello", "World", 5) then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with three variant parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread after the given delay in seconds.

Returns true on success and false on failure.
The time given is just a roughly suggestions. Actual time on the method call depends on how busy your application is.

- 136.4.3 CallMethodLaterMBS(target as object, name as string, afterDelay as Double, value1 as Variant, value2 as Variant) as boolean 19250

136.4.5 CallMethodMBS(target as object, name as string) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object.
Example:

```
if CallMethodMBS(window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with no parameters and no return values.

Returns true on success and false on failure.
See also:

- 136.4.6 CallMethodMBS(target as object, name as string, value1 as Variant) as boolean 19252
- 136.4.7 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant) as boolean 19253
- 136.4.8 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19254

136.4.6 CallMethodMBS(target as object, name as string, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object.
Example:

```
if CallMethodMBS(window1, "Test", "Hello") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with one variant parameter and no return values.

Returns true on success and false on failure.
See also:

- 136.4.5 CallMethodMBS(target as object, name as string) as boolean 19252

- 136.4.8 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19254

136.4.7 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object.
Example:

```
if CallMethodMBS(window1, "Test", "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with two variant parameters and no return values.

Returns true on success and false on failure.
See also:

- 136.4.5 CallMethodMBS(target as object, name as string) as boolean 19252

- 136.4.7 CallMethodMBS(target as object, name as string, value1 as Variant, value2 as Variant) as boolean 19253

136.4.9 CallMethodOnMainThreadMBS(target as object, name as string) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on the main thread.
Example:

```
if CallMethodOnMainThreadMBS(window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with no parameters and no return values.

The method will be called later (Asyncronously) on the main thread. Useful for performing non thread safe stuff like GUI functions on the main thread.

Returns true on success and false on failure.
Deprecated, please use CallDelegatesMBS.CallDelegateOnMainThreadMBS instead.

- 136.4.11 CallMethodOnMainThreadMBS(target as object, name as string, value1 as Variant, value2 as Variant) as boolean 19256

136.4.13 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with no parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 136.4.14 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean 19258
- 136.4.15 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean 19259
- 136.4.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19259

136.4.14 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with one variant parameter and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 136.4.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19259

136.4.15 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World") then
msgbox "OK"
else
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with two variant parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 136.4.13 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean 19257
- 136.4.14 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean 19258
- 136.4.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean 19259

136.4.16 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant, value3 as Variant) as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a method on the target object on a new thread.
Example:

```
if CallMethodOnThreadMBS(new BackgroundThreadMBS, window1, "Test", "Hello", "World", 5) then
msgbox "OK"
else
```

```
msgbox "Failed"
end if
```

Notes:

The method must be declared on the given class for the target object with three variant parameters and no return values.

Pass in "new BackgroundThreadMBS" for the thread to use. Execution will be done later (Asynchronously) on that thread. Useful for perform some code in the background without creating a thread yourself.

Returns true on success and false on failure.
See also:

- 136.4.13 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string) as boolean 19257
- 136.4.14 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant) as boolean 19258
- 136.4.15 CallMethodOnThreadMBS(BackgroundThread as BackgroundThreadMBS, target as object, name as string, value1 as Variant, value2 as Variant) as boolean 19259

136.4.17 GetDarwinVMStatisticsMBS as DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about the current memory status on Mac OS X.
Example:

```
dim d as DarwinVMStatisticsMBS

d=GetDarwinVMStatisticsMBS

if d=nil then
msgBox "No Darwin running :-("
quit
else
dim lines(-1) as string

lines.Append format(d.pageins,"0")+" pageins"
lines.Append format(d.pageouts,"0")+" pageouts"
lines.Append format(d.pagesize,"0")+" pagesize"
lines.Append format(d.freepages,"0")+" freepages"
lines.Append format(d.activepages,"0")+" activepages"
lines.Append format(d.inactivepages,"0")+" inactivepages"
lines.Append format(d.wiredpages,"0")+" wiredpages"
```

```
lines.Append format(d.zerofillpages,"0")+" zerofillpages"
lines.Append format(d.reactivations,"0")+" reactivations"
lines.Append format(d.faults,"0")+" faults"
lines.Append format(d.cowfaults,"0")+" cowfaults"
lines.Append format(d.lookups,"0")+" lookups"
lines.Append format(d.hits,"0")+" hits"

MsgBox Join(lines,EndOfLine)
end if
```

136.4.18 GetDarwinResourceUsageMBS as DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get information about resource utilization.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

Notes:

Returns nil on any error.
For more information type "man getrusage" in the Mac OS X Terminal.

136.4.19 SetThreadNameMBS(name as string)

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the name of current thread.
Example:

```
SetThreadNameMBS "SQL Query Thread"
```

Notes: This is useful to see thread name in crash reports or sample reports.

136.4.20 CountProcessesMBS as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Counts how many processes are running.
Notes:

Short for this function:

```
function CountProcesses as Integer
dim n as Integer
dim p as ProcessMBS

p=new ProcessMBS
p.getfirstProcess
n=1
while p.getnextProcess
n=n+1
wend

return n
end if
```

136.4.21 GetWindowsVMStatisticsMBS as WindowsVMStatisticsMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns information about the current memory status on Windows.
Example:

```
dim w as WindowsVMStatisticsMBS

w=GetWindowsVMStatisticsMBS
if w<>nil then

list.AddRow format(w.pagesize,"0")
list.AddRow format(w.memoryLoad,"0")
list.AddRow format(w.availablePageFileMemory,"0")
list.AddRow format(w.availablePhysicalMemory,"0")
list.AddRow format(w.availableVirtualMemory,"0")
list.AddRow format(w.totalPageFileMemory,"0")
list.AddRow format(w.totalPhysicalMemory,"0")
list.AddRow format(w.totalVirtualMemory,"0")

else

msgBox "No Windows memory statistics..."
quit
end if
```

136.5 class ConsoleApplication

136.5.1 class ConsoleApplication

Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extends the ConsoleApplication class inside Xojo.

136.5.2 Methods

136.5.3 ArgumentsMBS as String()

MBS Util Plugin, Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries arguments of process.
Notes:

Returns nil in case of any error (low memory).
First entry in result is path to current app.
Other entries are parameters, without any quotes.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.5.4 LaunchTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: No, Linux: No. **Function:** Returns the the ticks value at launch time.
Example:

```
dim d as date

d=new date
d.totalSeconds=d.totalSeconds-(ticks-app.launchTimeMBS)/60

msgbox d.longdate+" "+d.longtime
```

Notes:

This value must be converted to the secondsvalue like in the example.
-1 on Windows.
For Mac OS X see the DarwinResourceUsageMBS class.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.5.5 MainBundleMBS as CFBundleMBS

MBS MacCF Plugin, Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: No, Linux: No. **Function:** If your application is a bundle, this function returns your own bundle.
Notes:

Returns nil on any error.
For console application, returns the bundle referencing the console app file.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.5.6 NSApplicationMBS as NSApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: No, Linux: No. **Function:** Returns the shared NSApplication object.
Notes:

This method gives easy access to the NSApplicationMBS class.

The plugin makes sure that there is only one application object by returning the same object each time.
Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.5.7 ProcessTimeMBS as double

MBS Util Plugin, Plugin Version: 19.4, Console & Web: Only, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current CPU time for the process.
Example:

```
msgbox "I got "+format(app.ProcessTimeMBS/100,"0.00")+" seconds CPU time till now."
```

Notes:

On Mac OS X, the OS counts how much CPU time in given to the current process.
On Mac OS 9 you can get this information for any process using the ProcessMBS class.
Returns -1 in case of an error.

You can do this function yourself if you like:

```
dim s as SoftDeclareMBS

s=new SoftDeclareMBS

if s.LoadLibrary("System.Framework") then
if s.LoadFunction("clock") then
if s.Call(0,nil) then
MsgBox "clock: "+str(s.Result)+chr(13)+"app.ProcessTime: "+str(app.ProcessTime)
end if
end if
end if
```

You may need to add Error Checking code.

Works for Console, Desktop and Web projects. Version 19.4 declares this method for ConsoleApplication and Application class.

136.6 class DarwinGroupListMBS

136.6.1 class DarwinGroupListMBS

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The list of Groups on a Mac OS X system.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

136.6.2 Methods

136.6.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The effective user ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.6.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real group ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

136.6.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real user ID of the calling process.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.6.6 Group(index as Integer) as DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Group with the given index.
Example:

```
dim l as new DarwinGroupListMBS
dim c as Integer = l.Count-1
dim names(-1) as string
for i as Integer = 0 to c
dim g as DarwinGroupMBS = l.Group(i)
names.Append g.Name
next
MsgBox Join(names,EndOfLine)
```

136.6.7 Properties

136.6.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of Groups on this Mac OS X system.
Example:

```
dim l as new DarwinGroupListMBS
MsgBox str(l.Count)+" groups"
```

Notes: (Read only property)

136.7 class DarwinGroupMBS

136.7.1 class DarwinGroupMBS

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class with information about a Group on Mac OS X.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

136.7.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr1

136.7.3 Methods

136.7.4 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The effective user ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentEffectiveUserID: "+str(G.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.7.5 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real group ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentGroupID: "+str(G.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

136.7.6 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real user ID of the calling process.
Example:

```
dim g as new DarwinGroupMBS
MsgBox "CurrentUserID: "+str(G.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.7.7 LoadGroupByID(Groupid as Integer)

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the properties of this class with the values for the Group with the given ID.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox g.Name
```

136.7.8 LoadGroupByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the properties of this class with the values for the given Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByName "staff"
MsgBox g.Name
```

136.7.9 UserName(index as Integer) as string

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Group ID of this Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID

dim c as Integer = g.UserCount-1
for i as Integer = 0 to c
MsgBox g.UserName(i)
next
```

136.7.10 Properties

136.7.11 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The group ID of the Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "GroupID: "+str(G.GroupID)
```

Notes: (Read only property)

136.7.12 Name as string

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the Group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "Name: "+g.Name
```

Notes: (Read only property)

136.7.13 Password as string

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The password for this group.
Notes: (Read only property)

136.7.14 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the values in this class were filled correctly.
Notes: (Read only property)

136.7.15 UserCount as Integer

MBS MacCF Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of users in this group.
Example:

```
dim g as new DarwinGroupMBS
g.LoadGroupByID g.CurrentGroupID
MsgBox "UserCount: "+str(G.UserCount)
```

Notes: (Read only property)

136.8 class DarwinResourceUsageMBS

136.8.1 class DarwinResourceUsageMBS

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for information about resource utilization.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralMaxResidentSetSize)
```

Notes: For more information type "man getrusage" in the Mac OS X Terminal.

136.8.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

- MBS REALbasic Plugins, version 10.6pr2

136.8.3 Properties

136.8.4 BlockInputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of block input operations.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockInputOperations)
```

Notes: (Read only property)

136.8.5 BlockOutputOperations as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of block output operations.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.BlockOutputOperations)
```

Notes: (Read only property)

136.8.6 IntegralMaxResidentSetSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Integral max resident set size.
Example:

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

Notes: (Read only property)

136.8.7 IntegralSharedTextMemorySize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Integral shared text memory size.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralSharedTextMemorySize)
```

Notes: (Read only property)

136.8.8 IntegralUnsharedDataSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Integral unshared data size.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedDataSize)
```

Notes: (Read only property)

136.8.9 IntegralUnsharedStackSize as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Integral unshared stack size.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.IntegralUnsharedStackSize)
```

Notes: (Read only property)

136.8.10 InvoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of involuntary context switches.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.InvoluntaryContextSwitches)
```

Notes: (Read only property)

136.8.11 MessagesReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of messages received.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read only property)

136.8.12 MessagesSent as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of messages sent.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read only property)

136.8.13 PageFaults as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of page faults.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageFaults)
```

Notes: (Read only property)

136.8.14 PageReclaims as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of page reclaims.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.PageReclaims)
```

Notes: (Read only property)

136.8.15 SignalsReceived as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of signals received.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SignalsReceived)
```

Notes: (Read only property)

136.8.16 Swaps as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of swaps.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.Swaps)
```

Notes: (Read only property)

136.8.17 SystemTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Seconds of system time used.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.SystemTimeUsed)
```

Notes: (Read only property)

136.8.18 UserTimeUsed as Double

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Seconds of user time used.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.UserTimeUsed)
```

Notes: (Read only property)

136.8.19 VoluntaryContextSwitches as Int64

MBS MacCF Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of voluntary context switches.
Example:

```
dim d as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
MsgBox str(d.VoluntaryContextSwitches)
```

Notes: (Read only property)

136.9 class DarwinTaskInfoMBS

136.9.1 class DarwinTaskInfoMBS

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for your applications memory/resource usage.
Example:

```
dim u as DarwinResourceUsageMBS = GetDarwinResourceUsageMBS
dim t as new DarwinTaskInfoMBS

MsgBox "Application Resident Size: "+str(t.ResidentSize)+EndOfLine+_
"Application Virtual Size: "+str(t.VirtualSize)+EndOfLine+_
"Application Integral Max Resident Size: "+str(u.IntegralMaxResidentSetSize)
```

136.9.2 Xojo Developer Magazine

- 3.6, page 6: News

136.9.3 Methods

136.9.4 Update as boolean

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the values and returns true on success.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.UserTime)
call d.Update
MsgBox str(d.UserTime)
```

Notes: The constructor updates the values on creation of the object.

136.9.5 Properties

136.9.6 ContextSwitches as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of context switches.

Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.ContextSwitches)
```

Notes: (Read and Write property)

136.9.7 COWFaults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of copy-on-write faults.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.COWFaults)
```

Notes: (Read and Write property)

136.9.8 Faults as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of page faults.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.Faults)
```

Notes: (Read and Write property)

136.9.9 MessagesReceived as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of messages received.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesReceived)
```

Notes: (Read and Write property)

136.9.10 MessagesSent as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of messages sent.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.MessagesSent)
```

Notes: (Read and Write property)

136.9.11 PageIns as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of actual pageins.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.PageIns)
```

Notes: (Read and Write property)

136.9.12 ResidentSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of resident pages.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.ResidentSize,"0")+" Bytes of physical memory."
```

Notes: (Read and Write property)

136.9.13 SuspendCount as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Suspend count for task.
Example:

```
dim d as new DarwinTaskInfoMBS
MsgBox str(d.SuspendCount)
```

Notes: (Read and Write property)

136.9.14 SystemCallsMach as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of mach system calls.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsMach,"0")+" system calls using the Mach Interface."
```

Notes: (Read and Write property)

136.9.15 SystemCallsUnix as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of unix system calls.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has done so far "+Format(d.SystemCallsUnix,"0")+" system calls using the Unix Interface."
```

Notes: (Read and Write property)

136.9.16 SystemTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Total system run time.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.SystemTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

136.9.17 UserTime as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Total user run time.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS

MsgBox "This application has used so far "+Format(d.UserTime,"0")+" seconds of CPU time."
```

Notes: (Read and Write property)

136.9.18 VirtualSize as Double

MBS MacCF Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of virtual pages.
Example:

```
dim d as DarwinTaskInfoMBS

d=new DarwinTaskInfoMBS
MsgBox "This application uses "+Format(d.VirtualSize,"0")+" Bytes of the 4 GB address space."
```

Notes: (Read and Write property)

136.10 class DarwinUserListMBS

136.10.1 class DarwinUserListMBS

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The list of users on a Mac OS X system.
Example:

```
// find the short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer

// requires MachO target
declare function getuid lib "System" () as Integer

uid=getuid

d=new DarwinUserListMBS

c=d.Count-1
for I=0 to c
p=d.User(i)
if p.UserID=uid then
MsgBox p.Name
end if
next
```

136.10.2 Methods

136.10.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The effective user ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentEffectiveUserID: "+str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.10.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real group ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentGroupID: "+str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

136.10.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real user ID of the calling process.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "CurrentUserID: "+str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.10.6 User(index as Integer) as DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the user with the given index.
Example:

```
// find short user name
dim d as DarwinUserListMBS
dim u as string
dim p as DarwinUserMBS
dim uid,i,c as Integer

u=SystemInformationMBS.Username
d=new DarwinUserListMBS
```

```
c=d.Count-1
for I=0 to c
p=d.User(i)
if p.LongName=u then
MsgBox p.Name
end if
next
```

136.10.7 Properties

136.10.8 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of users on this Mac OS X system.
Example:

```
dim l as new DarwinUserListMBS
MsgBox "Number of users: "+str(l.Count)
```

Notes: (Read only property)

136.11 class DarwinUserMBS

136.11.1 class DarwinUserMBS

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class with information about a user on Mac OS X.
Example:

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox l.Name+": "+l.LongName
```

136.11.2 Methods

136.11.3 CurrentEffectiveUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The effective user ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentEffectiveUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.11.4 CurrentGroupID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real group ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentGroupID)
```

Notes: The real group ID is specified at login time.

136.11.5 CurrentUserID as Integer

MBS MacCF Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The real user ID of the calling process.
Example:

```
dim l as new DarwinUserMBS
MsgBox str(l.CurrentUserID)
```

Notes: The real user ID is that of the user who has invoked the program. As the effective user ID gives the process additional permissions during execution of 'set-user-ID' mode processes, getuid() is used to determine the real-user-id of the calling process.

136.11.6 LoadUserByID(userid as Integer)

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the properties of this class with the values for the user with the given ID.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Name
```

136.11.7 LoadUserByName(name as string)

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the properties of this class with the values for the given user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

136.11.8 Properties

136.11.9 AccountExpireTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The time when the account will expire.
Notes: (Read only property)

136.11.10 GroupID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The group ID of the user.
Example:

```
dim l as new DarwinUserMBS
l.LoadUserByID l.CurrentUserID
MsgBox str(l.GroupID)
```

Notes: (Read only property)

136.11.11 HomePath as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The home path of the user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.HomePath
```

Notes: (Read only property)

136.11.12 LastPasswordChangeTime as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last time when the user changed the password.

Notes: (Read only property)

136.11.13 LongName as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The long name of the user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByName "cs"

MsgBox l.LongName
```

Notes: (Read only property)

136.11.14 Name as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The short name of the user.
Example:

```
dim l as new DarwinUserListMBS

dim c as Integer = l.Count-1
for i as Integer = 0 to c
dim u as DarwinUserMBS = l.User(i)
if u.UserID = l.CurrentUserID then
MsgBox "our user name: "+u.Name
end if
next
```

Notes: (Read only property)

136.11.15 Ready as Boolean

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the values in this class were filled correctly.
Notes: (Read only property)

136.11.16 Shell as string

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The path to the default shell for this user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox l.Shell
```

Notes: (Read only property)

136.11.17 UserID as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user ID of this user.
Example:

```
dim l as new DarwinUserMBS

l.LoadUserByID l.CurrentUserID

MsgBox str(l.UserID)
```

Notes: (Read only property)

136.12 class DarwinVMStatisticsMBS

136.12.1 class DarwinVMStatisticsMBS

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Holds information about the current Mac OS X memory status.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)+" page ins"
```

136.12.2 Properties

136.12.3 ActivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of pages currently in use and pageable.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ActivePages)
```

Notes: (Read only property)

136.12.4 CowFaults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of faults that caused a page to be copied (generally caused by copy-on-write faults).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CowFaults)
```

Notes: (Read only property)

136.12.5 CPUTicksIdle as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of time slices used by the Idle process.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksIdle)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

136.12.6 CPUTicksNice as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of time slices used by the task switcher process.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksNice)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

136.12.7 CPUTicksSystem as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of time slices used by the system processes.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksSystem)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

136.12.8 CPUTicksUser as Integer

MBS MacCF Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of time slices used by the user application processes.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.CPUTicksUser)
```

Notes:

Calculate deltas like in the example to see usage of CPU time.
(Read only property)

136.12.9 Faults as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of times the "vm_fault" routine has been called.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Faults)
```

Notes: (Read only property)

136.12.10 FreePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of free pages in the system.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.FreePages)
```

Notes: (Read only property)

136.12.11 Hits as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The hit count.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Hits)
```

Notes: (Read only property)

136.12.12 InactivePages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of pages on the inactive list.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.InactivePages)
```

Notes: (Read only property)

136.12.13 Lookups as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The count of lookups.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Lookups)
```

Notes: (Read only property)

136.12.14 PageIns as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of requests for pages from a pager (such as the inode pager).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.pageins)
```

Notes: (Read only property)

136.12.15 PageOuts as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of pages that have been paged out.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.PageOuts)
```

Notes: (Read only property)

136.12.16 Pagesize as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size of one memory page in memory.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Pagesize)
```

Notes:

On PowerPC CPUs, it should be 4096 Bytes.
(Read only property)

136.12.17 Reactivations as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** the total number of pages that have been moved from the inactive list to the active list (reactivated).
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.Reactivations)
```

Notes: (Read only property)

136.12.18 WiredPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of pages wired down. That is, pages that cannot be paged out.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.WiredPages)
```

Notes: (Read only property)

136.12.19 ZeroFillPages as Integer

MBS MacCF Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The total number of pages that have been zero-filled on demand.
Example:

```
dim d as DarwinVMStatisticsMBS = GetDarwinVMStatisticsMBS
MsgBox str(d.ZeroFillPages)
```

Notes: (Read only property)

136.13 class EnvironmentMBS

136.13.1 class EnvironmentMBS

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Allows you to access system wide environment properties.

136.13.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr3

136.13.3 Methods

136.13.4 Add(name as string,value as string) as boolean

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Add a property to the list.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
if e.add("authorname","Christian") then
msgbox "ok"
else
msgbox "fail"
end if
```

Notes: Setting this value to some new value will currently only change this value for your application and all child applications.

136.13.5 Get(name as string) as string

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value for a named property.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox e.get("windir") // normally c:\windows
```

136.13.6 Lines as string()

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns array of definition lines of environment variables.
Example:

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

Notes: Returned strings are in format "name=value".

136.13.7 Name(Index as Integer) as string

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name of the environment propertie number n.

136.13.8 Names as string()

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns array of names of environment variables.
Example:

```
dim e as new EnvironmentMBS
msgbox join(e.lines, endofline)
```

136.13.9 Update

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Updates the object to the current environment properties.
Notes: This method is called by the constructor and the methods which change the environment properties.

136.13.10 Properties

136.13.11 Count as Integer

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of environment properties.
Example:

```
dim e as EnvironmentMBS

e=new EnvironmentMBS
msgbox str(e.count)
```

Notes: (Read only property)

136.13.12 Value(Index as Integer) as string

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value of the environment propertie number n.
Notes:

Setting this value to some new value will currently only change this value for your application and all child applications.
(Read and Write computed property)

136.14 class MutexMBS

136.14.1 class MutexMBS

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a mutex.
Notes:

This is the mutex class the threadMBS class is using internally.
A mutex is not locked by default.

136.14.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr3
- MBS REALbasic Plugins, version 10.4pr8

136.14.3 Methods

136.14.4 Lock

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Locks the mutex.
Example:

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."

m.Unlock
MsgBox "Released mutex."
```

Notes:

The function returns as soon as it has access to the mutex.

Always use Lock and Unlock in a pair.

136.14.5 TryLock as boolean

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Locks the mutex if possible.
Example:

```
dim m as new MutexMBS

if m.TryLock then
MsgBox "Got mutex."

m.Unlock
else
MsgBox "Failed to get mutex."
end if
```

Notes:

Returns true if we got a lock and false if not.
Always use Lock and Unlock in a pair.

136.14.6 Unlock

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unlocks the mutex.
Example:

```
dim m as new MutexMBS

m.Lock
MsgBox "Got mutex."

m.Unlock
MsgBox "Released mutex."
```

Notes: Always use Lock and Unlock in a pair.

136.14.7 Properties

136.14.8 Handle as Integer

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal used reference to the native mutex object.
Example:

```
dim m as new MutexMBS
MsgBox "Handle: "+hex(m.Handle)
```

Notes:

Windows Mutex or PThread Mutex.
(Read and Write property)

136.14.9 Tag as Variant

MBS Util Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object reference for your use.
Notes:

Just for convenience.
This property was added so you can use this property for a reference so you won't need to subclass this class and add custom properties.
(Read and Write property)

136.15 class NSProcessInfoActivityMBS

136.15.1 class NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for an activity.
Example:

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.15.2 Methods

136.15.3 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Private constructor.

136.15.4 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
Notes: If you missed to call endActivity, the destructor will do it.

136.15.5 Properties

136.15.6 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

136.15.7 Options as Integer

MBS MacCocoa Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The options used to create activity.
Notes: (Read and Write property)

136.15.8 Reason as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The reason used to create the activity.
Notes: (Read and Write property)

136.16 class NSProcessInfoMBS

136.16.1 class NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSProcessInfo class provides methods to access information about the current process.
Notes:

Each process has a single, shared NSProcessInfo object, known as process information agent.

The process information agent can return such information as the arguments, environment variables, host name, or process name. The processInfo class method returns the shared agent for the current process—that is, the process whose object sent the message. For example, the following line returns the NSProcessInfo object, which then provides the name of the current process:

```
dim processInfo as new NSProcessInfoMBS
dim processName as string = processInfo.processName
```

The NSProcessInfo class also includes the operatingSystem method, which returns an enum constant identifying the operating system on which the process is executing.

NSProcessInfo objects attempt to interpret environment variables and command-line arguments in the user's default C string encoding if they cannot be converted to Unicode as UTF-8 strings. If neither conversion works, these values are ignored by the NSProcessInfo object.

136.16.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3
- MBS Xojo / Real Studio Plugins, version 16.4pr6
- MBS Real Studio Plugins, version 11.2pr9

136.16.3 Methods

136.16.4 argument(index as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the command-line argument for the process with the given index.
Example:

```
dim p as new NSProcessInfoMBS
```

```
dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

136.16.5 arguments as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the command-line arguments for the process.
Notes: Returns array of strings with the process's command-line arguments.

136.16.6 beginActivity(options as Integer, reason as string) as NSProcessInfoActivityMBS

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Begin an activity using the given options and reason.
Example:

```
dim Activity as NSProcessInfoActivityMBS // property in your window, control, thread, app
dim AllowAppNap as boolean // allow or not?

dim ProcessInfo as NSProcessInfoMBS = NSProcessInfoMBS.processInfo
if AllowAppNap then
Activity = nil
else
// disable sleep to let us make something...
Activity = ProcessInfo.beginActivity(NSProcessInfoMBS.NSActivityBackground, "Backup running")
end if
```

Notes:

options: Options for the activity. See constants for possible values.
reason: A string used in debugging to indicate the reason the activity began.

Returns an object token representing the activity.

Indicate completion of the activity by calling endActivity passing the returned object as the argument.
Available in OS X v10.9 and later.

136.16.7 Constructor

MBS MacCocoa Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

136.16.8 disableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Decrement the counter tracking the number of automatic quit opt-out requests.
Notes:

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic termination.
An example of using this would be disabling autoquitting when the user of an instant messaging application signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive.
Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

136.16.9 disableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables the application for quickly klling using sudden termination.
Notes:

This method increments the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

136.16.10 enableAutomaticTermination(Reason as string)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Increment the counter tracking the number of automatic quit opt-out requests.
Notes:

When this counter is greater than zero, the app will be considered 'active' and ineligible for automatic termination.

An example of using this would be disabling autoquitting when the user of an instant messaging application signs on, due to it requiring a background connection to be maintained even if the app is otherwise inactive.
Each pair of calls should have a matching "reason" argument, which can be used to easily track why an application is or is not automatically terminable.
A given reason can be used more than once at the same time (for example: two files are transferring over the network, each one disables automatic termination with the reason "file transfer in progress")

136.16.11 enableSuddenTermination

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Enables the application for quick killing using sudden termination.
Notes:

This method decrements the sudden termination counter. When the termination counter reaches 0 the application allows sudden termination.

By default the sudden termination counter is set to 1. This can be overriden in your application Info.plist. See "Sudden Termination" for more information and debugging suggestions.

Available in Mac OS X v10.6 and later.

136.16.12 endActivity(activity as NSProcessInfoActivityMBS)

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Ends the given activity.
Notes:

activity: An activity object returned by beginActivity.
Available in OS X v10.9 and later.

136.16.13 NSActivityLatencyCritical as UInt64

MBS MacCocoa Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the activity option constants.
Notes:

Flag to indicate the activity requires the highest amount of timer and I/O precision available.
Important: Very few applications should need to use this constant.
Available in OS X v10.9 and later.
Value is & hFF00000000.

136.16.14 NSProcessInfoThermalStateDidChangeNotification as String

MBS MacCocoa Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification name to use with NSNotificationObserverMBS.
Notes:

This notification is posted once the thermal state of the system has changed. Once the notification is posted, use the thermalState property to retrieve the current thermal state of the system.

You can use this opportunity to take corrective action in your application to help cool the system down. Work that could be done in the background or at opportunistic times should be using the Quality of Service levels in NSOperation or the NSBackgroundActivityScheduler API.

This notification is posted on the global dispatch queue. Register for it using the default notification center. The object associated with the notification is NSProcessInfoMBS.processInfo.

136.16.15 operationSystemVersion(byref Major as Integer, byref Minor as Integer, byref Patch as Integer)

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries operation system version.
Notes: One call to get all three parts.

136.16.16 processInfo as NSProcessInfoMBS

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the process information agent for the process.

136.16.17 Properties

136.16.18 activeProcessorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides the number of active processing cores available on the computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.activeProcessorCount)
```

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

136.16.19 argumentsCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of the command-line arguments.
Example:

```
dim p as new NSProcessInfoMBS

dim i,c as Integer

c=p.argumentCount-1
for i=0 to c
MsgBox p.argument(i)
next
```

Notes: (Read only property)

136.16.20 automaticTerminationSupportEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Marks the calling app as supporting automatic termination.
Notes:

Without calling this or setting the equivalent Info.plist key (NSSupportsAutomaticTermination), the above methods (disableAutomaticTermination/enableAutomaticTermination) have no effect, although the counter tracking automatic termination opt-outs is still kept up to date to ensure correctness if this is called later. Currently, passing false has no effect.
This should be called during applicationDidFinishLaunching or earlier.
(Read and Write property)

136.16.21 environment as dictionary

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the variable names and their values in the environment from which the process was launched.
Example:

```
dim p as new NSProcessInfoMBS
dim d as Dictionary = p.environment
MsgBox str(d.Count)
```

Notes: (Read only property)

136.16.22 globallyUniqueString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a global unique identifier for the process.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.globallyUniqueString // shows for example "072EC09A-4825-11DD-BDC0-001D4F46F5E0-18405-00000CA853EB5B46"
```

Notes:

Returns the Global ID for the process. The ID includes the host name, process ID, and a time stamp, which ensures that the ID is unique for the network.

This method generates a new string each time it is invoked, so it also uses a counter to guarantee that strings created from the same process are unique.
(Read only property)

136.16.23 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSProcessInfo object.
Notes: (Read and Write property)

136.16.24 hostName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the name of the host computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.hostName // for example "iMac.local"
```

Notes: (Read only property)

136.16.25 operatingSystem as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a constant to indicate the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

Notes:

Operating system identifier. See "Constants" for a list of possible values. In Mac OS X, it's NSMACHOperatingSystem.
(Read only property)

136.16.26 operatingSystemName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a string containing the name of the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemName // shows "NSMACHOperatingSystem"
```

Notes:

Operating system name. In Mac OS X, it's "NSMACHOperatingSystem"
(Read only property)

136.16.27 operatingSystemVersionString as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a string containing the version of the operating system on which the process is executing.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.operatingSystemVersionString // "Version 10.5.4 (Build 9E17)"
```

Notes:

Returns the Operating system version. This string is human readable, localized, and is appropriate for displaying to the user. This string is not appropriate for parsing.
(Read only property)

136.16.28 operationSystemVersionMajor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries major OS version.
Notes: (Read only property)

136.16.29 operationSystemVersionMinor as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries minor OS version.
Notes: (Read only property)

136.16.30 operationSystemVersionPatch as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries OS version patch level.
Notes: (Read only property)

136.16.31 physicalMemory as UInt64

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides the amount of physical memory on the computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.physicalMemory)
```

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

136.16.32 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the identifier of the process.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.processIdentifier)
```

Notes: (Read only property)

136.16.33 processName as string

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the process.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox p.processName
```

Notes:

The process name is used to register application defaults and is used in error messages. It does not uniquely identify the process.

You can assign a new value, but:
User defaults and other aspects of the environment might depend on the process name, so be very careful if you change it. Setting the process name in this manner is not thread safe.
(Read and Write property)

136.16.34 processorCount as Integer

MBS MacCocoa Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides the number of processing cores available on the computer.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.processorCount)
```

Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

136.16.35 systemUptime as Double

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the how long it has been since the computer has been restarted.
Notes:

Returns an NSTimeInterval indicating how long system the computer has been restarted.
Available in Mac OS X v10.6 and later.
(Read only property)

136.16.36 thermalState as Integer

MBS MacCocoa Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retrieve the current thermal state of the system.
Example:

```
dim n as NSProcessInfoMBS = NSProcessInfoMBS.processInfo

Select case n.thermalState
case n.NSProcessInfoThermalStateNominal
MsgBox "Thermal State: Nominal"
case n.NSProcessInfoThermalStateFair
MsgBox "Thermal State: Fair"
case n.NSProcessInfoThermalStateSerious
MsgBox "Thermal State: Serious"
case n.NSProcessInfoThermalStateCritical
```

```
MsgBox "Thermal State: Critical"
else
MsgBox "Thermal State: Unknown"
end Select
```

Notes:

On systems where thermal state is unknown or unsupported, the value returned from the thermalState property is always NSProcessInfoThermalStateNominal.

Available in Mac OS X 10.10.3 and newer.
Returns -1 if function is called on older Mac OS X versions, Linux or Windows.
(Read only property)

136.16.37 Constants

136.16.38 NSActivityAutomaticTerminationDisabled = & h8000

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to prevent automatic termination.
Available in OS X v10.9 and later.

136.16.39 NSActivityBackground = & h000000FF

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to indicate the app has initiated some kind of work, but not as the direct result of user request.
Available in OS X v10.9 and later.

136.16.40 NSActivityIdleDisplaySleepDisabled = & h10000000000

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to require the screen to stay powered on.
Available in OS X v10.9 and later.

136.16.41 NSActivityIdleSystemSleepDisabled = & h100000

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to prevent idle sleep.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

136.16.42 NSActivitySuddenTerminationDisabled = & h4000

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to prevent sudden termination.
This is included in NSActivityUserInitiatedAllowingIdleSystemSleep.
Available in OS X v10.9 and later.

136.16.43 NSActivityUserInitiated = & h00FFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to indicate the app is performing a user-requested action.
Available in OS X v10.9 and later.

136.16.44 NSActivityUserInitiatedAllowingIdleSystemSleep = & h00EFFFFF

MBS MacCocoa Plugin, Plugin Version: 13.5. **Function:** One of the activity option constants.
Notes:

Flag to indicate the app is performing a user-requested action, but that the system can sleep on idle.
Available in OS X v10.9 and later.

136.16.45 NSHPUXOperatingSystem=4

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the HP UX operating system.

136.16.46 NSMACHOperatingSystem=5

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Example:

```
dim p as new NSProcessInfoMBS

MsgBox str(p.operatingSystem) // shows 5 = NSMACHOperatingSystem
```

Notes: Indicates the Mac OS X operating system.

136.16.47 NSOSF1OperatingSystem=7

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the OSF/1 operating system.

136.16.48 NSProcessInfoThermalStateCritical = 3

MBS MacCocoa Plugin, Plugin Version: 15.1. **Function:** One of the constants describing the current thermal state of the system.
Notes: System performance is significantly impacted and the Mac needs to cool down. Recommendation: reduce application's usage of CPU, GPU, and I/O to the minimum level needed to respond to user actions. Consider stopping use of camera and other peripherals if your application is using them.

136.16.49 NSProcessInfoThermalStateFair = 1

MBS MacCocoa Plugin, Plugin Version: 15.1. **Function:** One of the constants describing the current thermal state of the system.
Notes: The system has reached a state where fans may become audible.

136.16.50 NSProcessInfoThermalStateNominal = 0

MBS MacCocoa Plugin, Plugin Version: 15.1. **Function:** One of the constants describing the current thermal state of the system.
Notes: No corrective action is needed.

136.16.51 NSProcessInfoThermalStateSerious = 2

MBS MacCocoa Plugin, Plugin Version: 15.1. **Function:** One of the constants describing the current thermal state of the system.
Notes: Fans are running at maximum speed, system performance maybe impacted. Recommendation: reduce application's usage of CPU, GPU and I/O, if possible. Switch to lower quality visual effects, reduce frame rates.

136.16.52 NSSolarisOperatingSystem=3

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Solaris operating system.

136.16.53 NSSunOSOperatingSystem=6

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Sun OS operating system.

136.16.54 NSWindows95OperatingSystem=2

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Windows 95 operating system.

136.16.55 NSWindowsNTOperatingSystem=1

MBS MacCocoa Plugin, Plugin Version: 8.4. **Function:** One of the following constants are provided by the NSProcessInfo class as return values for operatingSystem.
Notes: Indicates the Windows NT operating system.

136.17 class NSRunningApplicationMBS

136.17.1 class NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** NSRunningApplication is a class to manipulate and provide information for a single instance of an application.
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

Only user applications are tracked; this does not provide information about every process on the system.
Some properties of an application are fixed, such as the bundle identifier. Other properties may vary over time, such as whether the app is hidden. Properties that vary can be observed with key-value observing, in which case the description comment for the method notes this capability.
Properties that vary over time are inherently race-prone. For example, a hidden app may unhide itself at any time. To ameliorate this, properties persist until the next turn of the main run loop in a common mode. For example, if you repeatedly poll an unhidden app for its hidden property without allowing the run loop to run, it will continue to return false, even if the app hides, until the next turn of the run loop.
NSRunningApplication is thread safe, in that its properties are returned atomically. However, it is still subject to the main run loop policy described above. If you access an instance of NSRunningApplication from a background thread, be aware that its time-varying properties may change from under you as the main run loop runs (or not).
An NSRunningApplication instance remains valid after the application exits. However, most properties lose their significance, and some properties may not be available on a terminated application.

Requires Mac OS X 10.6.

136.17.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr5

- MBS Real Studio Plugins, version 11.3pr9

136.17.3 Methods

136.17.4 activateWithOptions(options as Integer) as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to activate the application using the specified options.
Notes:

options: The options to use when activating the application. See "NSApplicationActivationOptions" for the possible values.

Returns true if the application was activated successfully, otherwise false.

This method will return false if the application has quit, or is not a type of application than can be activated.

Available in Mac OS X v10.6 and later.

136.17.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

Initializes the object with the current application.
Available in Mac OS X v10.6 and later.

136.17.6 currentApplication as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an NSRunningApplication representing this application.
Example:

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication

MsgBox n.localizedName
```

Notes: Available in Mac OS X v10.6 and later.

136.17.7 forceTerminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to force the receiver to quit.
Notes:

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the forceTerminate message is sent to the receiver.

This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

136.17.8 hide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to hide or the application.
Example:

```
dim n as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication

MsgBox str(n.hide) // hide me
```

Notes:

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.
Available in Mac OS X v10.6 and later.

136.17.9 runningApplications as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of NSRunningApplication representing the running applications.
Example:

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplications
dim s(-1) as string

for each r as NSRunningApplicationMBS in n
s.Append r.localizedName
next

MsgBox Join(s,EndOfLine)
```

Notes:

Returns an array of NSRunningApplication instances.

The order of the array is unspecified, but it is stable, meaning that the relative order of particular applications will not change across multiple calls to runningApplications. See NSRunningApplication Class Reference for more information on NSRunningApplication.
Similar to the NSRunningApplication classes's properties, this property will only change when the main run loop is run in a common mode. Instead of polling, use key-value observing to be notified of changes to this array property.
This property is thread safe, in that it may be called from background threads and the result is returned atomically.

This list is not updated in a tight loop. For receiving updates, you need to have the runloop run (e.g. check regularly in a timer).

136.17.10 runningApplicationsWithBundleIdentifier(bundleID as string) as NSRunningApplicationMBS()

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of currently running applications with the specified bundle identifier.
Example:

```
dim n(-1) as NSRunningApplicationMBS = NSRunningApplicationMBS.runningApplicationsWithBundleIdentifier("com.apple.iTunes")

if UBound(n)>=0 then
MsgBox n(0).localizedName
else
```

```
MsgBox "iTunes is not running?"
end if
```

Notes:

An array of NSRunningApplications, or an empty array if no applications match the bundle identifier.
Available in Mac OS X v10.6 and later.

136.17.11 runningApplicationWithProcessIdentifier(pid as Integer) as NSRunningApplicationMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the running application with the given process identifier, or nil if no application has that pid.
Example:

```
dim n as NSRunningApplicationMBS
dim pid as Integer

while n=nil
pid=pid+1
n=NSRunningApplicationMBS.runningApplicationWithProcessIdentifier(pid)
wend

MsgBox n.localizedName+" has PID "+str(pid)
```

Notes:

pid: The process identifier.

Returns an instance of NSRunningApplication for the specified pid, or nil if the application has no process identifier.

Applications that do not have PIDs cannot be returned from this method.
Available in Mac OS X v10.6 and later.

136.17.12 terminate as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to quit the receiver normally.
Notes:

Returns true if the application successfully terminated, otherwise false.

This method will return false if the application is no longer running when the terminate message is sent to the receiver.
This method may return before the receiver exits; you should observe the terminated property to determine when the application terminates.

Available in Mac OS X v10.6 and later.

136.17.13 unhide as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to unhide or the application.
Notes:

Returns true if the application was successfully shown, otherwise false.

The property of this value will be false if the application has already quit, or if of a type that is unable to be hidden.

Available in Mac OS X v10.6 and later.

136.17.14 Properties

136.17.15 activationPolicy as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the activation policy of the application. (read-only)
Notes:

The value returned by this property is usually fixed, but it may change through a call to activateWithOptions.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.16 active as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the application is currently frontmost. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.active)
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.17 bundleIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the CFBundleIdentifier of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleIdentifier
```

Notes:

The value of this property will be nil if the application does not have an Info.plist.
(Read only property)

136.17.18 bundleURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the URL to the application's bundle. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.bundleURL
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.19 executableArchitecture as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the URL to the application's executable. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.executableArchitecture) // shows 7
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.20 executableURL as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the URL to the application's executable. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.executableURL
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.21 finishedLaunching as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the receiver's process has finished launching, (read-only)
Notes:

The value of this property corresponds to the running application having received an NSApplicationDidFinishLaunchingNotification notification internally. Some applications do not post this notification (applications that do not rely on NSApplication) and so are never reported as finished launching.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.22 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSRunningApplication object.
Notes: (Read and Write property)

136.17.23 hidden as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the application is currently hidden. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.hidden)
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.24 icon as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the icon for the receiver's application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

dim i as NSImageMBS = n.icon

// without this call the size is 32x32 Pixel
i.setSize 512,512

Backdrop = i.CopyPictureWithMask
```

Notes:

Available in Mac OS X v10.6 and later.
(Read only property)

136.17.25 launchDate as date

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the date when the application was launched. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.launchDate.ShortTime
```

Notes:

This property is not available for all applications. Specifically, it is not available for applications that were launched not launched by LaunchServices.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.26 localizedName as string

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the localized name of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox n.localizedName
```

Notes:

The value of this property is dependent on the current localization of the application and is suitable for presentation to the user.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.27 ownsMenuBar as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the application owns the current menu bar.
Example:

```
// put in a timer...
dim r as NSRunningApplicationMBS = NSRunningApplicationMBS.currentApplication
```

window1.Title = str(r.ownsMenuBar)

Notes:

Available in Mac OS X v10.7 and later.
(Read only property)

136.17.28 processIdentifier as Integer

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates the process identifier (pid) of the application. (read-only)
Example:

```
dim n as new NSRunningApplicationMBS

MsgBox str(n.processIdentifier)
```

Notes:

Not all applications have a pid. Applications without a return a value of -1.
Do not rely on this for comparing processes, instead compare NSRunningApplication instances using isEqual:.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.29 terminated as boolean

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates that the receiver's application has terminated. (read-only)
Notes:

The value of terminated is true if the receiver's application has terminated, otherwise false.
This property is observable using key-value observing.
Available in Mac OS X v10.6 and later.
(Read only property)

136.17.30 Constants

136.17.31 NSApplicationActivateAllWindows = 1

MBS MacCocoa Plugin, Plugin Version: 9.7. **Function:** One of the flag constants for activateWithOptions.
Notes:

By default, activation brings only the main and key windows forward. If you specify NSApplicationActivateAllWindows, all of the application's windows are brought forward.
Available in Mac OS X v10.6 and later.

136.17.32 NSApplicationActivateIgnoringOtherApps = 2

MBS MacCocoa Plugin, Plugin Version: 9.7. **Function:** One of the flag constants for activateWithOptions.
Notes:

By default, activation deactivates the calling app (assuming it was active), and then the new app is activated only if there is no currently active application. This prevents the new app from stealing focus from the user, if the app is slow to activate and the user has switched to a different app in the interim. However, if you specify NSApplicationActivateIgnoringOtherApps, the application is activated regardless of the currently active app, potentially stealing focus from the user. You should rarely pass this flag because stealing key focus produces a very bad user experience.
Available in Mac OS X v10.6 and later.

136.17.33 NSApplicationActivationPolicyAccessory = 1

MBS MacCocoa Plugin, Plugin Version: 9.7. **Function:** One of the constants used for following activation policies.
Notes:

The application does not appear in the Dock and does not have a menu bar, but it may be activated programmatically or by clicking on one of its windows. This corresponds to value of the LSUIElement key in the application's Info.plist being 1.
Available in Mac OS X v10.6 and later.

136.17.34 NSApplicationActivationPolicyProhibited = 2

MBS MacCocoa Plugin, Plugin Version: 9.7. **Function:** One of the constants used for following activation policies.
Notes:

The application does not appear in the Dock and may not create windows or be activated. This corresponds to the value of the LSBackgroundOnly key in the application's Info.plist being 1. This is also the default for

unbundled executables that do not have Info.plists.
Available in Mac OS X v10.6 and later.

136.17.35 NSApplicationActivationPolicyRegular = 0

MBS MacCocoa Plugin, Plugin Version: 9.7. **Function:** One of the constants used for following activation policies.
Notes:

The application is an ordinary app that appears in the Dock and may have a user interface. This is the default for bundled apps, unless overridden in the Info.plist.
Available in Mac OS X v10.6 and later.

136.18 class NSXPCConnectionMBS

136.18.1 class NSXPCConnectionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSXPCConnection class provides a bi-directional communication channel between two processes.
Notes:

This class is the primary means of creating and configuring the communication mechanism between two processes. Each process has one instance of this class to represent the endpoint in the communication channel.

Requires a setup with info.plist entries, correct permissions and code signing.

136.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

136.18.3 Methods

136.18.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.

136.18.5 CallMethod(name as string, tag as Variant, params() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calls method and passes parameters.
Notes: Returns array of variant.

136.18.6 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Closes the connection.

136.18.7 Constructor(endpoint as NSXPCListenerEndpointMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an NSXPCConnection object to connect to an NSXPCListener object in another process, identified by an NSXPCListenerEndpoint object.
Notes:

endpoint: The desired listener endpoint for the service.
Available in OS X v10.8 and later.
See also:

- 136.18.8 Constructor(MachOServiceName as string, flags as Integer) 19336
- 136.18.9 Constructor(ServiceName as string) 19336

136.18.8 Constructor(MachOServiceName as string, flags as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an NSXPCConnection object to connect to a LaunchAgent or LaunchDaemon with a name advertised in a launchd.plist.
Notes:

For example, if an agent is managed with launchd and has a launchd.plist in
textasciitilde /Library/LaunchAgents, this method would create a connection to that agent. The agent should use NSXPCListener to wait for new connections.

If the connection is being made to a process that is running in a privileged Mach bootstrap context (for example, a daemon started by a launchd property list in /Library/LaunchDaemons), then pass the NSXPC-ConnectionPrivileged option.

Available in OS X v10.8 and later.
See also:

- 136.18.7 Constructor(endpoint as NSXPCListenerEndpointMBS) 19336
- 136.18.9 Constructor(ServiceName as string) 19336

136.18.9 Constructor(ServiceName as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an NSXPCConnection object to connect to an NSXPCListener object in an XPC service, identified by a service name.
Notes:

XPC services are helper processes that are usually part of your application bundle. The service should use NSXPCListener to wait for new connections.

Available in OS X v10.8 and later.
See also:

- 136.18.7 Constructor(endpoint as NSXPCListenerEndpointMBS) 19336
- 136.18.8 Constructor(MachOServiceName as string, flags as Integer) 19336

136.18.10 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

136.18.11 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Invalidates the connection.
Notes: When you call this method, all outstanding reply blocks, error handling blocks, and invalidation blocks are called on the message handling queue. The connection must be invalidated before it is deallocated. After a connection is invalidated, no more messages may be sent or received.

136.18.12 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts or resumes handling of messages on a connection.
Notes:

All connections start suspended. You must resume them before they start processing received messages or sending messages through the remoteObjectProxy object.
Available in OS X v10.8 and later.

136.18.13 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Suspends the connection.
Notes:

Suspends and resumes must be balanced before the connection may be invalidated.
Available in OS X v10.8 and later.

136.18.14 Properties

136.18.15 auditSessionIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The BSM audit session identifier for the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

136.18.16 effectiveGroupIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The effective group ID (EGID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

136.18.17 effectiveUserIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The effective user ID (EUID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
(Read only property)

136.18.18 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: If the connection was created with an NSXPCListenerEndpoint object, returns the endpoint object used.
Notes: (Read only property)

136.18.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.

Notes: (Read and Write property)

136.18.20 processIdentifier as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The process ID (PID) of the connecting process.
Notes:

This attribute may be used by the listener delegate to accept or reject connections.
Available in OS X v10.8 and later.
(Read only property)

136.18.21 serviceName as String

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the XPC service that this connection was configured to connect to.
Notes: (Read only property)

136.18.22 Events

136.18.23 CallMethodReturned(name as string, tag as Variant, Parameters() as Variant, Results() as Variant)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when method returns.

136.18.24 ErrorHandler(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The error event for errors happening when calling method.

136.18.25 InterruptionHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event is called if the remote process exits or crashes.
Notes: It may be possible to re-establish the connection by simply sending another message. The handler is invoked on the same queue as reply messages and other handlers, and it is always executed after any other

messages or reply block handlers (except for the invalidation handler).

136.18.26 InvalidationHandler

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is invoked on the same queue as reply messages and other handlers, and is always executed last (after the interruption handler, if required).
Notes: You may not send messages over the connection from within an invalidation handler block.

136.18.27 Constants

136.18.28 NSXPCConnectionPrivileged = 1

MBS MacFrameworks Plugin, Plugin Version: 14.2. **Function:** One of the options that you can pass to a connection.
Notes:

Use this option if connecting to a service in the privileged Mach bootstrap (for example, a daemon with a launchd.plist in /Library/LaunchDaemons).
Available in OS X v10.8 and later.

136.19 class NSXPCListenerEndpointMBS

136.19.1 class NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Class that "names" a specific NSXPCListener object.
Notes:

An instance may be retrieved from an NSXPCListener and sent over existing NSXPCConnections. A process may then use it to create a new NSXPCConnection to the original NSXPCListener.

This pattern is useful if you have a service which multiplexes work to other services. The service can act as an intermediate helper. The requesting application does not need to know specifically which service it is connecting to, just that it implements a known NSXPCInterface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

136.19.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

136.19.3 Methods

136.19.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this class is available.

136.19.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

136.19.6 Properties

136.19.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

136.20 class NSXPCListenerMBS

136.20.1 class NSXPCListenerMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSXPCListener class and its delegate are responsible for waiting for new incoming connections, configuring them, and accepting or rejecting them.
Notes:

Each XPC service, launchd agent, or launchd daemon typically has at least one NSXPCListener object that listens for connections to a specified service name.
When the listener receives a new connection request, it creates a new NSXPCConnection object, then asks the delegate to inspect, configure, and resume the connection object by calling the delegate's shouldAcceptNewConnection event.

136.20.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr1

136.20.3 Methods

136.20.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.

136.20.5 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Closes listener.

136.20.6 Constructor(Anonymous as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new listener connection.
Notes:

If Anonymous is true: Initializes with a new anonymous listener connection.
If false: Initializes with the singleton listener used to listen for incoming connections in an XPC service.

see also:
https://developer.apple.com/library/mac/documentation/Foundation/Reference/NSXPCListener_reference/translated_content/NSXPCListener.html
See also:

- 136.20.7 Constructor(Name as string) 19343

136.20.7 Constructor(Name as string)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a listener in a LaunchAgent or LaunchDaemon which has a name advertised in a launchd.plist file.
Notes:

For example, you might use this in an agent launched by launchd with a launchd.plist contained in textasciitilde /Library/LaunchAgents, or a daemon launched by launchd with a launchd.plist contained in /Library/LaunchDaemons.

Available in OS X v10.8 and later.
See also:

- 136.20.6 Constructor(Anonymous as boolean = false) 19342

136.20.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

136.20.9 invalidate

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Invalidates the listener.
Notes:

After calling this method, no more connections are created. Once a listener is invalidated it may not be resumed or suspended.
Available in OS X v10.8 and later.

136.20.10 resume

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts processing of incoming requests.

Notes:

All listeners start suspended and must be resumed before they begin processing incoming requests.

If called on the serviceListener object, this method never returns. Therefore, you should call it as the last step inside the XPC service's main function after setting up any desired initial state and configuring the listener itself.

If called on any other NSXPCListener, the connection is resumed, and the method returns immediately.
Available in OS X v10.8 and later.

136.20.11 suspend

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Suspends the listener.
Notes:

Suspends and resumes must be balanced before the listener may be invalidated.
Available in OS X v10.8 and later.

136.20.12 Properties

136.20.13 endpoint as NSXPCListenerEndpointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an endpoint object that may be sent over an existing connection.
Notes:

The receiver of the endpoint can use this object to create a new connection to this NSXPCListener object. The resulting NSXPCListenerEndpoint object uniquely names this listener object across connections.
(Read only property)

136.20.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

136.20.15 Events

136.20.16 CallMethod(Name as string, Parameters() as Variant) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called on the listener side when a method was called on the connection.
Notes: Return array of variant for the results.

136.20.17 shouldAcceptNewConnection(newConnection as NSXPCConnectionMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Accepts or rejects a new connection to the listener.
Notes:

To accept the connection, first configure the connection if desired, then call resume on the new connection, then return true.
To reject the connect, return a value of false. This causes the connection object to be invalidated.
In this method, you can also set up properties on the connection object, such as its exported object and interfaces. Be sure to call resume when you are finished configuring the connection object and are ready for it to receive messages.

136.21 class ProcessMBS

136.21.1 class ProcessMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Adds the class ProcessMBS to Xojo to get details about all running applications.
Example:

```
// Shows how to use the processInformationCFDictionary function to
// decide on Mac OS X whether an application is a background only one.

dim myProcess as ProcessMBS
dim myCFDictionary as CFDictionaryMBS
dim myCFBoolean as CFBooleanMBS
dim myCFObject as CFObjectMBS

myProcess=new ProcessMBS
myProcess.GetCurrentProcess
myCFDictionary = CFDictionaryMBS(myProcess.processInformationCFDictionary)
myCFObject = myCFDictionary.Value(newcfstringmbs("LSBackgroundOnly"))
myCFBoolean=CFBooleanMBS(myCFObject)

if myCFBoolean.Value then
MsgBox "is background"
else
MsgBox "is not background"
end if
```

Notes:

Requires Windows 95 or Windows 2000 to run on Windows.

To find all windows on Windows, use the WindowsListMBS class.
To find all windows on Mac OS X, use the CGSWindowListMBS class.

For newer code on Mac, please check NSRunningApplicationMBS class.

136.21.2 Blog Entries

- Notes on Windows 8
- MBS Real Studio Plugins, version 12.1pr2

- MBS REALbasic Plugins, version 10.4pr6

136.21.3 Methods

136.21.4 Bundle as folderitem

MBS Util Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the bundle path.
Notes:

Maybe nil if not available.
Returns on Mac OS X the path to the main bundle of the process.

136.21.5 BundleID as string

MBS Util Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the bundle identifier.
Notes:

Maybe "" if not available.
Returns on Mac OS X the identifier to the main bundle of the process.

136.21.6 CurrentProcessID as Integer

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the process ID of the application.
Example:

MsgBox str(ProcessMBS.CurrentProcessID)

136.21.7 GetCurrentProcess

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Load the current Process' information into the class.
Notes: This should always be your Xojo application.

136.21.8 GetfirstProcess

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Load the first Process into the class.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

136.21.9 GetFrontProcess

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Load the frontmost Process' information into the class.

136.21.10 GetNextProcess as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Load the next Process into the class.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.GetfirstProcess ' get first
do
msgBox p.name
loop until not p.GetNextProcess ' get next till no more
```

Notes: Returns true if successfull.

136.21.11 GetProcess(serial as memoryblock)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Load the process information for the process with the given serial.

136.21.12 KillProcess as Integer

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Kills a Process on Mac OS X or Windows.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 136.21.13 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 19349
- 136.21.14 KillProcess(timeoutms as Integer) as Integer 19350

136.21.13 KillProcess(ProcessID as Integer, timeout as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Kills a Process on Mac OS X or Windows.
Example:

```
const pid = 12345 // put the PID here
call ProcessMBS.KillProcess pid, 100
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Returns on Windows:

0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 136.21.12 KillProcess as Integer 19349
- 136.21.14 KillProcess(timeoutms as Integer) as Integer 19350

136.21.14 KillProcess(timeoutms as Integer) as Integer

MBS Util Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Kills a Process on Mac OS X or Windows.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.killprocess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".

Sets the lasterror property.

Lasterror codes on Windows:
0 - failed
1 - normal exit
2 - forced exit

The timeout is in milliseconds. If you don't specify a timeout, 1000 ms are used.
If you kill the main process of a task, this can kill the sub processes, too.
See also:

- 136.21.12 KillProcess as Integer 19349
- 136.21.13 KillProcess(ProcessID as Integer, timeout as Integer) as Integer 19349

136.21.15 MacProcessSerial as memoryblock

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the serial number for this process as a memoryblock with binary content.
Notes:

On Mac OS every process as its own unique ID. (If you launch one application two times, they may have everything equal except the process serial.)

The serial itself is a 8byte long memoryblock (two integer).

Returns nil on any error.

136.21.16 ProcessInformationCFDictionary as object

MBS Util Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a CFDictionaryMBS object with the properties of the process.
Example:

```
dim p as ProcessMBS
dim d as CFDictionaryMBS

p=new ProcessMBS

p.GetCurrentProcess

d=CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d=nil then
MsgBox "This example works only on Mac OS X 10.2!"
else
// use information in dictionary
end if
```

Notes:

Only available on Mac OS X 10.2 or newer.
(And in Mac OS X 10.2 is a bug which may lead into a crash by using this function. Fixed in Mac OS X 10.3)
The function returns a CFDictionaryMBS, but to avoid plugin dependencies, the function is declared as Object, so RB 4.5 don't crash when an application uses the process plugin and dosn't use the CF Plugin.

Result:

An immutable CFDictionary containing these keys and their values. Keys marked with an '*' are optional. Over time more keys may be added.

Key Name	Type
"PSN"	CFNumber, kCFNumberLongLongType
"Flavor"	CFNumber, kCFNumberSInt32
"Attributes"	CFNumber, kCFNumberSInt32
"ParentPSN"	CFNumber, kCFNumberLongLong
"FileType"	CFString, file type
"FileCreator"	CFString, file creator
"pid"	CFNumber, kCFNumberLongType
"LSBackgroundOnly"	CFBoolean
"LSUIElement"	CFBoolean
"IsHiddenAttr"	CFBoolean
"IsCheckedInAttr"	CFBoolean
"RequiresClassic"	CFBoolean
"RequiresCarbon"	CFBoolean
"LSUserQuitOnly"	CFBoolean
"LSUIPresentationMode"	CFNumber, kCFNumberShortType
"BundlePath"	CFString
kIOBundleExecutableKey	CFString
kIOBundleNameKey	CFString
kIOBundleIdentifierKey	CFString

136.21.17 QuitProcess as Integer

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Quits a Process on Mac OS.
Example:

```
dim p as ProcessMBS
p=new ProcessMBS
p.getcurrentprocess
msgbox str(p.QuitProcess)
```

Notes:

Returns -1 if function is not available. Else returns a Mac OS error code where 0 equals "no error".
Sets the lasterror property.

136.21.18 SameAs(other as ProcessMBS) as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if two ProcessMBS objects have the same Process.

136.21.19 SetFrontProcessWithOptions(options as Integer)

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the current process to the front.
Example:

```
dim p as ProcessMBS

// move my front window to the front
p=new ProcessMBS
p.GetCurrentProcess
p.SetFrontProcessWithOptions 1
```

Notes:

If you pass 0 in the options parameter, the process is activated and all process windows are brought forward.

If you pass kSetFrontProcessFrontWindowOnly (value 1), the process is activated and the frontmost non-floating window is brought forward. (Mac OS X only)

136.21.20 SetServiceMode(ismode as boolean) as boolean

MBS Util Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** If an application is a service, it is not listed inside the Windows force quit window.
Notes: Works only on Windows 95, 98 and ME.

136.21.21 TransformProcessType(mode as Integer) as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the 'type' of the process specified in the psn parameter.
Notes:

Given a psn for an application, this call transforms that application into the given type. Foreground applications have a menu bar and appear in the Dock. Background applications do not appear in the Dock, do not have a menu bar (and should not have windows or other user interface). UIElement applications do not have a menu bar, do not appear in the dock, but may in limited circumstances present windows and

user interface. If a foreground application is frontmost when transformed into a background application, it is first hidden and another application is made frontmost. A UIElement or background-only application which is transformed into a foreground application is not brought to the front (use SetFrontProcess() after the transform if this is required) nor will it be shown if it is hidden (even if hidden automatically by being transformed into a background-only application), so the caller should use ShowHideProcess() to show the application after it is transformed into a foreground application. Applications can only transform themselves; this call cannot change the type of another application.

Returns error code (0 for success).

136.21.22 TransformToForegroundApplication as Integer

MBS Util Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transforms a background application to a foreground application.
Notes:

Returns a Mac OS error code. Returns -1 if the function is not available. You need to select a process first with Get*Process functions.
Requires Mac OS X 10.3.

You can use this call to transform a background-only application into a foreground application. A foreground application appears in the Dock (and in the Force Quit dialog) and contains a menu bar. This function does not cause the application to be brought to the front; you must set FrontProcess=true to do so.

While available starting in 10.3 "Panther," calling TransformProcessType on a UIElement application in 10.3 or 10.4 will return paramErr (-50), rendering it only usable on a full BackgroundOnly? application. Leopard supports foregrounding both UIElement and BackgroundOnly? applications.

136.21.23 Update

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the classes information.
Notes: Use it if you want the current CPUTime value after some time.

136.21.24 WinFullProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the full name of the executable image for the specified process.
Notes:

Returns empty string on any error like missing permissions.

The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows Vista or Windows Server 2008 or newer.

136.21.25 WinGetPriorityClass(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the priority class for the specified process.
Notes:

You can pass ProcessID -1 to get the current process.
This value, together with the priority value of each thread of the process, determines each thread's base priority level.

If the function succeeds, the return value is the priority class of the specified process.

The process's priority class is one of the following values:

Name	Value	Description
ABOVE_NORMAL_PRIORITY_CLASS	& h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	& h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.
HIGH_PRIORITY_CLASS	& h00000080	Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles.
IDLE_PRIORITY_CLASS	& h00000040	Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes.
NORMAL_PRIORITY_CLASS	& h00000020	Process with no special scheduling needs.
REALTIME_PRIORITY_CLASS	& h00000100	Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower level take place.
For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

For Mac and Linux, please use Priority.

136.21.26 WinModulePath as string

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the path the first code file in this process.
Notes:

Returns empty string on any error like missing permissions.
The path is in the typical style "C:\path\name.exe".

136.21.27 WinProcessImagePath as string

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the name of the executable file for the specified process.
Notes:

Returns empty string on any error like missing permissions.
The path is in the device style "Device\Harddisk0\Partition1\WINNT\System32\test.exe".

Requires Windows XP or Windows Server 2003 or newer.

136.21.28 WinSetPriorityClass(ProcessID as Integer, PriorityClass as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the priority class for the specified process.
Notes:

You can pass ProcessID -1 to get the current process.
This value together with the priority value of each thread of the process determines each thread's base priority level.

The process's priority class is one of the following values:

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The operating system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. Threads are scheduled in a round-robin fashion at each priority level, and only when there are no executable threads at a higher level will scheduling of threads at a lower

Name	Value	Description
ABOVE_NORMAL_PRIORITY_CLASS	& h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	& h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.
HIGH_PRIORITY_CLASS	& h00000080	Process that performs time-critical tasks that must be executed immediately for it to run correctly. The threads of a high-priority class process preempt the threads of normal or idle priority class processes. An example is the Task List, which must respond quickly when called by the user, regardless of the load on the operating system. Use extreme care when using the high-priority class, because a high-priority class CPU-bound application can use nearly all available cycles.
IDLE_PRIORITY_CLASS	& h00000040	Process whose threads run only when the system is idle and are preempted by the threads of any process running in a higher priority class. An example is a screen saver. The idle priority class is inherited by child processes.
NORMAL_PRIORITY_CLASS	& h00000020	Process with no special scheduling needs.
REALTIME_PRIORITY_CLASS	& h00000100	Process that has the highest possible priority. The threads of a real-time priority class process preempt the threads of all other processes, including operating system processes performing important tasks. For example, a real-time process that executes for more than a very brief interval can cause disk caches not to flush or cause the mouse to be unresponsive.

level take place.
For a table that shows the base priority levels for each combination of priority class and thread priority value, see Scheduling Priorities.
Priority class is maintained by the executive, so all processes have a priority class that can be queried.

Every thread has a base priority level determined by the thread's priority value and the priority class of its process. The system uses the base priority level of all executable threads to determine which thread gets the next slice of CPU time. The SetThreadPriority function enables setting the base priority level of a thread relative to the priority class of its process. For more information, see Scheduling Priorities.
The *_PRIORITY_CLASS values affect the CPU scheduling priority of the process. For processes that perform background work such as file I/O, network I/O, or data processing, it is not sufficient to adjust the CPU scheduling priority; even an idle CPU priority process can easily interfere with system responsiveness when it uses the disk and memory. Processes that perform background work should use the PROCESS_MODE_BACKGROUND_BEGIN and PROCESS_MODE_BACKGROUND_END values to adjust their resource scheduling priorities; processes that interact with the user should not use PROCESS_MODE_BACKGROUND_BEGIN.
If a process is in background processing mode, the new threads it creates will also be in background processing mode. When a thread is in background processing mode, it should minimize sharing resources such as critical sections, heaps, and handles with other threads in the process, otherwise priority inversions can occur. If there are threads executing at high priority, a thread in background processing mode may not be scheduled promptly, but it will never be starved.
Each thread can enter background processing mode independently using SetThreadPriority. Do not call SetPriorityClass to enter background processing mode after a thread in the process has called SetThreadPriority to enter background processing mode. After a process ends background processing mode, it resets all threads in the process; however, it is not possible for the process to know which threads were already in background processing mode.

On any error the value is zero.

For Mac and Linux, please use Priority.

136.21.29 Properties

136.21.30 CPUTime as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of the ticks this Process did get to calculate.
Notes:

Unit is 1/60 of a second.
On Mac OS X this value is not available and normally 0.
(Read only property)

136.21.31 CurrentProcess as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the application is in the current Process.
Notes:

This should always be true because you are running Xojo as the current ProcessMBS while you ask for this.
(Read only property)

136.21.32 flags as Integer

MBS Util Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The flags for this process on Mac OS.
Example:

```
Sub Open()
// List all visible processes

dim s as string
dim p as ProcessMBS
dim d As CFDictionaryMBS
dim LSBackgroundOnly, LSUIElement As CFStringMBS
dim b As CFBooleanMBS
dim obj As CFObjectMBS
dim visible as Boolean

const modeOnlyBackground=& h00000400

LSUIElement=NewCFStringMBS("LSUIElement")
```

```
LSBackgroundOnly = NewCFStringMBS("LSBackgroundOnly")

p = new ProcessMBS
p.getfirstProcess

do
visible=True

// Mac OS X
d = CFDictionaryMBS(p.ProcessInformationCFDictionary)

if d <>nil Then
obj = d.Value(LSBackgroundOnly)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)

if b.value Then
visible=false
end
end if

obj= d.Value(LSUIElement)
if obj isa CFBooleanMBS then
b=CFBooleanMBS(obj)

if b.value Then
visible=false
end
end if
end if

// Mac OS 9

if BitwiseAnd(p.Flags,modeOnlyBackground)<>0 then
visible=False
end if

if visible then
ListBox1.AddRow p.Name
end if

loop until not p.GetNextProcess
End Sub
```

Notes:

Returns 0 on any error.

Process mode flags. These flags indicate whether the process is an application or desk accessory. For applications, this field also returns information specified in the application's 'SIZE' resource. This information is returned as flags. You can refer to these flags by using these constants:

modeDeskAccessory	& h00020000
modeMultiLaunch	& h00010000
modeNeedSuspendResume	& h00004000
modeCanBackground	& h00001000
modeDoesActivateOnFGSwitch	& h00000800
modeOnlyBackground	& h00000400
modeGetFrontClicks	& h00000200
modeGetAppDiedMsg	& h00000100
mode32BitCompatible	& h00000080
modeHighLevelEventAware	& h00000040
modeLocalAndRemoteHLEvents	& h00000020
modeStationeryAware	& h00000010
modeUseTextEditServices	& h00000008

(Read only property)

136.21.33 FrontProcess as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the application is in the front of all others.
Example:

```
dim p as new ProcessMBS
p.GetCurrentProcess
p.FrontProcess=true 'bring app to front
```

Notes:

This property is for read and write. Writing to it brings the Process to front.
(Read and Write property)

136.21.34 lasterror as Integer

MBS Util Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.
Notes:

As this property is introduced with MBS Plugin 3.1, only a few functions set it.
0 means no error, -1 means not available and anything else is a Mac OS error code.
(Read and Write property)

136.21.35 LaunchProcess as ProcessMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the application which launched the current one.
Notes:

For some applications like the "loginwindow" it is nil, because there was no app to launch it other than the system itself.
(Read only property)

136.21.36 MacCreator as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Mac Creator code for the application.
Notes: (Read only property)

136.21.37 MacType as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Mac Type code for the application.
Notes:

Possible values:

"APPL"	normal application
"appe"	background application (Classic)
"APPC"	Control panel application (Classic)
"APPD"	Desktop Accessory (Classic)
"FNDR"	Finder

others may be possible.
(Read only property)

136.21.38 MemoryFree as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the size of the free space in the Process' memory partition.
Notes:

On Mac OS X normally 0.
(Read only property)

136.21.39 MemorySize as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns size of the Process' memory partition.
Notes:

On Mac OS X normally 0.
(Read only property)

136.21.40 Name as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the name of this application.
Notes:

Added Windows support in MBS Plugin 2.7 for this property.
(Read only property)

136.21.41 Path as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the path of the Process' executable file.
Notes:

Maybe nil if not available.
Use this folderitem to get an icon for the Process.
(and this icon may be nil!)
(Read only property)

136.21.42 ProcessID as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the PID of the process for use in unix command line tools.
Example:

```
Function LoginWindowPID() as Integer
// returns Process ID of Loginwindow on Mac OS X.
// or 0 on error

dim p as ProcessMBS

p=new ProcessMBS
p.GetFirstProcess

do
if p.Name="loginwindow" then
Return p.ProcessID
end if
loop until not p.GetNextProcess
End Function
```

Notes:

Works only on Mac OS X.
See the "CPU Focus" application for an example.

Note that this call does not make sense for Classic applications, since they all share a single UNIX process ID.
(Read only property)

136.21.43 Visible as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the application is visible.
Example:

```
// hide iTunes

dim p as new ProcessMBS

p.GetFirstProcess
do
if p.BundleID="com.apple.iTunes" then
p.Visible=false
```

```
exit
end if
loop until not p.GetNextProcess
```

Notes:

Works only on Mac OS X.
Returns false if not supported.

Sets the lasterror property.
(Read and Write property)

136.21.44 Priority as Integer

MBS Util Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The priority of the process.
Example:

```
dim p as new ProcessMBS

p.GetCurrentProcess

MsgBox str(p.priority) // shows 0

p.priority = 5

MsgBox str(p.priority) // shows 5
```

Notes:

20 (least) to -20 (max). Setting the value may be limited due to permissions.
(Read and Write computed property)
See also:

- 136.21.45 Priority(ProcessID as Integer) as Integer 19364

136.21.45 Priority(ProcessID as Integer) as Integer

MBS Util Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Sets or gets priority for a process on Mac and Linux.
Notes:

Value is in the range -20 to 20. The default priority is 0; lower priorities cause more favorable scheduling.

For Windows, please use WinSetPriorityClass and WinGetPriorityClass.
(Read and Write computed property)
See also:

- 136.21.44 Priority as Integer 19364

136.21.46 Constants

136.21.47 kProcessTransformToBackgroundApplication = 2

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the process transformation types.
Notes:

Turn application in a background application.
functional in Mac OS X 10.7 and later

136.21.48 kProcessTransformToForegroundApplication = 1

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the process transformation types.
Notes: Turn application in a foreground application.

136.21.49 kProcessTransformToUIElementApplication = 4

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the process transformation types.
Notes:

Turn application in a user interface element application.
functional in Mac OS X 10.7 and later

136.22 class WindowsProcessMemoryInfoMBS

136.22.1 class WindowsProcessMemoryInfoMBS

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to get information about the memory usage of a process on Windows.

136.22.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr2

136.22.3 Methods

136.22.4 Constructor

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor which fills the values into the properties.
Example:

```
dim w as new WindowsProcessMemoryInfoMBS
msgbox "This application uses currently "+str(w.WorkingSetSize)+" Bytes of memory."
```

Notes: Queries the current process memory information.
See also:

- 136.22.5 Constructor(ProcessID as Integer) 19366

136.22.5 Constructor(ProcessID as Integer)

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor which fills the values into the properties.
Notes: Queries the process memory information of the process with the given ID.
See also:

- 136.22.4 Constructor 19366

136.22.6 Properties

136.22.7 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of page faults.
Notes: (Read only property)

136.22.8 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
Notes: (Read only property)

136.22.9 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak space allocated for the pagefile, in bytes.
Notes: (Read only property)

136.22.10 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak working set size, in bytes.
Notes: (Read only property)

136.22.11 ProcessID as Integer

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The process ID of the process queried.
Notes:

Value is 0 if the query failed.
(Read only property)

136.22.12 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak nonpaged pool usage, in bytes.
Notes: (Read only property)

136.22.13 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current paged pool usage, in bytes.
Notes: (Read only property)

136.22.14 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current nonpaged pool usage, in bytes.
Notes: (Read only property)

136.22.15 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak paged pool usage, in bytes.
Notes: (Read only property)

136.22.16 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current working set size, in bytes.
Notes:

This is the memory your application uses.
(Read only property)

136.23 class WindowsProcessStatisticsMBS

136.23.1 class WindowsProcessStatisticsMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to get information about process statistics on Windows.
Example:

```
dim c as new WindowsProcessStatisticsMBS
MsgBox str(C.PeakWorkingSetSize)
```

136.23.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr6
- MBS Real Studio Plugins, version 11.2pr4
- MBS REALbasic Plugins, version 10.3pr7

136.23.3 Methods

136.23.4 Constructor(ProcessID as Integer = -1, Mode as Integer = 255)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new object for given process and with given mode.
Example:

```
dim pid as Integer = -1
dim c as new WindowsProcessStatisticsMBS(pid, WindowsProcessStatisticsMBS.ModeMemoryCounters)
MsgBox str(C.PeakWorkingSetSize)
```

Notes:

If ProcessID is -1, the current process is queried.
Mode can be a combination of the Mode* constants you want to query. The Mode property will later contain the Mode* constants combination of the values which are valid.

136.23.5 Properties

136.23.6 CreationTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A file time that receives the creation time of the process.
Notes:

Property is valid if Mode contains ModeTimes.
(Read only property)

136.23.7 CycleTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The sum of the cycle time of all threads of the specified process.
Notes:

Property is valid if Mode contains ModeTimes.
This value can only be queried on Windows Vista or newer.
(Read only property)

136.23.8 ExitTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A file time that receives the exit time of the process. If the process has not exited, the content of this structure is undefined.
Notes:

Property is valid if Mode contains ModeTimes.
(Read only property)

136.23.9 HandleCount as Integer

MBS Win Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of handles in use by the process.
Example:

```
dim w as new WindowsProcessStatisticsMBS
dim n1 as Integer = w.HandleCount

dim x as new window1 // make a new window

w = new WindowsProcessStatisticsMBS
```

```
dim n2 as Integer = w.HandleCount

MsgBox str(n2)+" handles in used, "+str(n2-n1)+" used by second window"
```

Notes:

Value is -1 on an error.
(Read only property)

136.23.10 KernelTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A file time structure that receives the amount of time that the process has executed in kernel mode.
Notes:

The time that each of the threads of the process has executed in kernel mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeTimes.
(Read only property)

136.23.11 Mode as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Which values have been queried.
Notes:

This value is a combination of the Mode* constants.
(Read only property)

136.23.12 OtherOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of I/O operations performed, other than read and write operations.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.13 OtherTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of bytes transferred during operations other than read and write operations.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.14 PageFaultCount as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of page faults.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.15 PagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current space allocated for the pagefile, in bytes. Those pages may or may not be in memory.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.16 PeakPagefileUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak space allocated for the pagefile, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.17 PeakWorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak working set size, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.18 ProcessID as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The process ID of the process queried.
Notes: (Read only property)

136.23.19 QuotaNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak nonpaged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.20 QuotaPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current paged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.21 QuotaPeakNonPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current nonpaged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.22 QuotaPeakPagedPoolUsage as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The peak paged pool usage, in bytes.
Notes:

Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.23 ReadOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of read operations performed.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.24 ReadTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of bytes read.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.25 TotalIdleTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The amount of time that the system has been idle.
Notes: (Read only property)

136.23.26 TotalKernelTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The amount of time that the system has spent executing in Kernel mode (including all threads in all processes, on all processors).
Notes:

This time value also includes the amount of time the system has been idle. So you may want to subtract

idle time to get real kernel time.
(Read only property)

136.23.27 TotalUserTime as UInt64

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The amount of time that the system has spent executing in User mode (including all threads in all processes, on all processors).
Notes:

If you need to know what is the percentage of the CPU time spent for user applications, you need to read this value two times and calculate the delta.
(Read only property)

136.23.28 UserTime as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A file time structure that receives the amount of time that the process has executed in user mode.
Notes:

The time that each of the threads of the process has executed in user mode is determined, and then all of those times are summed together to obtain this value.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.29 WorkingSetSize as Int64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current working set size, in bytes.
Notes:

This is the memory your application uses.
Property is valid if Mode contains ModeMemoryCounters.
(Read only property)

136.23.30 WriteOperationCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of write operations performed.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.31 WriteTransferCount as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of bytes written.
Notes:

Property is valid if Mode contains ModeIOCounters.
(Read only property)

136.23.32 Constants

136.23.33 ModeCycleTime = 8

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants.
Notes: Whether to query the cycle time.

136.23.34 ModeHandles = 32

MBS Win Plugin, Plugin Version: 12.5. **Function:** One of the mode constants.
Notes: Whether to query the handle count.

136.23.35 ModeIOCounters = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants.
Notes: Whether to query the IOCounters.

136.23.36 ModeMemoryCounters = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants.
Notes: Whether to query the memory counters.

136.23.37 ModeTimes = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants.
Notes: Whether to query the time values.

136.23.38 ModeTotalTime = 16

MBS Win Plugin, Plugin Version: 11.2. **Function:** One of the mode constants.
Notes:

Whether to query the total CPU time values.
Requires Windows XP with SP1.

136.24 class WindowsVMStatisticsMBS

136.24.1 class WindowsVMStatisticsMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Holds information about the current Windows memory status.

136.24.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2
- MBS REALbasic Plugins, version 10.3pr7

136.24.3 Methods

136.24.4 Constructor

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new statistics object with current values.
Example:

```
// show values in a listbox:
dim w as new WindowsVMStatisticsMBS

list.AddRow "Pagesize: "+format(w.Pagesize,"0")
list.AddRow "MemoryLoad: "+format(w.MemoryLoad,"0")
list.AddRow "AvailablePageFileMemory: "+format(w.AvailablePageFileMemory,"0")
list.AddRow "AvailablePhysicalMemory: "+format(w.AvailablePhysicalMemory,"0")
list.AddRow "AvailableVirtualMemory: "+format(w.AvailableVirtualMemory,"0")
list.AddRow "TotalPageFileMemory: "+format(w.TotalPageFileMemory,"0")
list.AddRow "TotalPhysicalMemory: "+format(w.TotalPhysicalMemory,"0")
list.AddRow "TotalVirtualMemory: "+format(w.TotalVirtualMemory,"0")
```

136.24.5 Properties

136.24.6 AllocationGranularity as Integer

MBS Win Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The granularity for the starting address at which virtual memory can be allocated.
Notes:

Typically 64 KB.
(Read only property)

136.24.7 AvailablePageFileMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the number of bytes available in the paging file.
Notes: (Read only property)

136.24.8 AvailablePhysicalMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the number of bytes of physical memory available.
Notes: (Read only property)

136.24.9 AvailableVirtualMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the number of bytes of unreserved and uncommitted memory in the user mode portion of the virtual address space of the calling process.
Notes: (Read only property)

136.24.10 Memoryload as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a number between 0 and 100 that gives a general idea of current memory utilization, in which 0 indicates no memory use and 100 indicates full memory use.
Notes: (Read only property)

136.24.11 Pagesize as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size of one memory page in memory.
Notes:

On Intel 80386 or newer CPUs, it should be 4096 Bytes.
(Read only property)

136.24.12 TotalPageFileMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the total number of bytes that can be stored in the paging file. Note that this number does not represent the actual physical size of the paging file on disk.
Notes: (Read only property)

136.24.13 TotalPhysicalMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the total number of bytes of physical memory.
Notes: (Read only property)

136.24.14 TotalVirtualMemory as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the total number of bytes that can be described in the user mode portion of the virtual address space of the calling process.
Notes:

Value is 0 on any error.
(Read only property)

Chapter 137

Quartz Composer

137.1 class QCCompositionMBS

137.1.1 class QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The composition class.
Notes:

The QCComposition class represents a Quartz Composer composition that either:

- comes from the system-wide composition repository (/Library/Compositions and textasciitilde /Library/Compositions) where it can be accessed by any application through the methods of the QCCompositionRepository class
- is created from an arbitrary source (typically a file on disk) using one of its methods

This class cannot be subclassed.

A QCComposition object has the following information associated with it and that you can obtain by using the appropriate method of the QCComposition class:

- Attributes include the name and description of the composition, copyright information, and whether or not its provided by OS X (built-in).
- The protocols that the composition conforms to. A composition protocol defines a set of required and optional input parameters and output results.

Many methods of the QCRenderer, QCCompositionLayer, and QCView classes take a QCComposition object as a parameter.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

137.1.3 Methods

137.1.4 compositionWithData(data as MemoryBlock) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a composition object initialized with the contents of a Quartz Composer composition file.
Example:

```
dim data as MemoryBlock // composition file content in MemoryBlock variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

Notes:

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 137.1.5 compositionWithData(data as string) as QCCompositionMBS 19382

137.1.5 compositionWithData(data as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a composition object initialized with the contents of a Quartz Composer composition file.
Example:

```
dim data as string // composition file content in string variable
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithData(data)
```

Notes:

data: The contents of a file created with the Quartz Composer developer tool.

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 137.1.4 compositionWithData(data as MemoryBlock) as QCCompositionMBS 19382

137.1.6 compositionWithFile(file as folderitem) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a composition object initialized with a Quartz Composer composition file.
Example:

```
dim file as folderitem // your folderitem
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(file)
```

Notes:

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 137.1.7 compositionWithFile(path as string) as QCCompositionMBS 19383

137.1.7 compositionWithFile(path as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a composition object initialized with a Quartz Composer composition file.
Example:

```
dim path as string = "/System/Library/Compositions/Rollercoaster.qtz" // your path
dim q as QCCompositionMBS = QCCompositionMBS.compositionWithFile(path)
```

Notes:

file: A path to a file created with the Quartz Composer developer tool (.qtz extension).

Returns a Quartz Composer composition object or nil if there is an error.
See also:

- 137.1.6 compositionWithFile(file as folderitem) as QCCompositionMBS 19383

137.1.8 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

137.1.9 copy as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the composition.

137.1.10 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the attributes of the composition.

137.1.11 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array listing the keys that identify the input ports of the root patch of the composition.

137.1.12 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array listing the keys that identify the output ports of the root patch of the composition.

137.1.13 protocols as string()

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of protocols to which the composition conforms.

137.1.14 QCCompositionAttributeBuiltInKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the standard attribute names.

Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as Boolean = d.Value(c.QCCompositionAttributeBuiltInKey)
MsgBox str(b)
```

Notes:

The key for the composition origin. The associated value is a Boolean value.
True indicates the composition is built-in (provided by OS X).

137.1.15 QCCompositionAttributeCategoryKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Lookup(c.QCCompositionAttributeCategoryKey, "?")
MsgBox b
```

Notes: The composition category. The associated value is a category constant. See Categories.

137.1.16 QCCompositionAttributeCopyrightKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
dim b as string = d.Value(c.QCCompositionAttributeCopyrightKey)
MsgBox b
```

Notes:

The key for composition copyright information.
The associated value is a string.

137.1.17 QCCompositionAttributeDescriptionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Notes:

The key for the composition description.
The associated value is a string.

137.1.18 QCCompositionAttributeHasConsumersKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Notes:

The key for a composition that has consumer patches. The associated value is a Boolean value.
True indicates that the composition has consumers.

137.1.19 QCCompositionAttributeIsTimeDependentKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Notes: The key for the composition time dependency. The associated value is a Boolean value. True indicates that the composition is time dependent.

137.1.20 QCCompositionAttributeNameKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard attribute names.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
dim d as Dictionary = c.getattributes
MsgBox d.Value(c.QCCompositionAttributeNameKey)
```

Notes:

The key for the composition name.
The associated value is a string.

137.1.21 QCCompositionCategoryDistortion as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the category names.
Notes: A composition that produces a distortion effect.

137.1.22 QCCompositionCategoryStylize as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the category names.
Notes: A composition that produces a stylize effect.

137.1.23 QCCompositionCategoryUtility as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the category names.
Notes: A utility composition.

137.1.24 QCCompositionInputAudioPeakKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A number input port whose key is inputAudioPeak. The value must be in the [0,1] range as a mono signal with no decay applied.

137.1.25 QCCompositionInputAudioSpectrumKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A structure input port whose key is inputAudioSpectrum. The structure must contain 16 values in the [0,1] range representing 16 spectrum bands of the mono signal from low to high frequencies with no decay applied.

137.1.26 QCCompositionInputDestinationImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: An image input port whose key is inputDestinationImage.

137.1.27 QCCompositionInputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: An image input port whose key is inputImage.

137.1.28 QCCompositionInputPaceKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A number input port whose key is inputPace. The value must be in the [0,1] range.

137.1.29 QCCompositionInputPreviewModeKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A Boolean input port whose key is inputPreviewMode. When the value of this input port is set to TRUE, the composition that provides this port must be able to run in a low-quality mode that produces a preview of the composition.

137.1.30 QCCompositionInputPrimaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A color input port whose key is inputPrimaryColor.

137.1.31 QCCompositionInputScreenImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: An image input port whose key is inputScreenImage.

137.1.32 QCCompositionInputSecondaryColorKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A color input port whose key is inputSecondaryColor.

137.1.33 QCCompositionInputSourceImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: An image input port whose key is inputSourceImage.

137.1.34 QCCompositionInputTrackInfoKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A structure input port whose key is inputTrackInfo. The structure contains optional entries, such as "name", "artist", "album", "duration", "artwork", and so on.

137.1.35 QCCompositionInputTrackPositionKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A number input port whose key is inputTrackPosition. The value must be expressed in seconds.

137.1.36 QCCompositionInputTrackSignalKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A Boolean input port whose key is inputTrackSignal.

137.1.37 QCCompositionInputXKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A number input port whose key is inputX. The value must be normalized to the image width with the origin on the left.

137.1.38 QCCompositionInputYKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard input key names.
Notes: A number input port whose key is inputY. The value must be normalized to the image height with the origin at the bottom.

137.1.39 QCCompositionOutputImageKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard output key names.
Notes: An image output port whose key is outputImage.

137.1.40 QCCompositionOutputWebPageURLKey as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard output key names.
Notes: A string output port whose key is outputWebPageURL.

137.1.41 QCCompositionProtocolGraphicAnimation as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard protocol names.
Notes:

A composition that renders a generic graphical animation. It has the option to use QCCompositionInputPrimaryColorKey for the primary color of the animation, QCCompositionInputSecondaryColorKey for the secondary color of the animation, QCCompositionInputPaceKey for the global pace of the animation, and QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

Available in OS X v10.5 and later.

137.1.42 QCCompositionProtocolGraphicTransition as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard protocol names.
Notes: A composition that performs a transition between two images, using a transition time in range of 0 to 1. A conforming composition must use the input keys QCCompositionInputSourceImageKey for the

starting image and QCCompositionInputDestinationImageKey for the image to transition to. The composition can optionally use QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

137.1.43 QCCompositionProtocolImageFilter as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard protocol names.
Notes: A composition that applies an effect to a source image. A conforming composition must use the input key QCCompositionInputImageKey for the source image and QCCompositionOutputImageKey for the output image. The composition can optionally use QCCompositionInputXKey to specify the X position of the center point of the effect, QCCompositionInputYKey to specify the Y position of the center point of the effect, andQCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes.

137.1.44 QCCompositionProtocolMusicVisualizer as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard protocol names.
Notes:

A composition that acts as a visualizer for music. A conforming composition must use the input key QCCompositionInputAudioPeakKey for the instantaneous audio peak and the QCCompositionInputAudioSpectrumKey for the instantaneous audio spectrum. It can optionally use the QCCompositionInputTrackInfoKey to indicate it receives information about the current track and the QCCompositionInputTrackSignalKey to indicate the start of a new track.

Available in OS X v10.5 and later.

137.1.45 QCCompositionProtocolScreenSaver as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the standard protocol names.
Notes:

A composition that can be used as a screen saver. The composition has the option to use QCCompositionInputScreenImageKey for a screenshot image of the screen that the screen saver runs on, QCCompositionInputPreviewModeKey to indicate if the animation should run in lower-quality for preview purposes, and QCCompositionOutputWebPageURLKey for a URL to open in the default web browser when screen saver exits (only allowed if screen saver password is disabled).

Available in OS X v10.5 and later.

137.1.46 Properties

137.1.47 Description as String

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The description for the composition.
Notes: (Read only property)

137.1.48 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

137.1.49 identifier as String

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The identifier for the composition.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox a(0).identifier
```

Notes:

The unique identifier for the composition if it comes from the composition repository; "" otherwise.
(Read only property)

137.1.50 Name as String

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name for the composition.
Example:

```
dim c as QCCompositionMBS = QCCompositionMBS.compositionWithFile("/System/Library/Compositions/Rollercoaster.qtz")
```

MsgBox c.name

Notes: (Read only property)

137.2 class QCCompositionRepositoryMBS

137.2.1 class QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The system-wide Quartz Composer composition repository.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

Notes:

The QCCompositionRepository class represents a system-wide centralized repository of built-in and installed Quartz Composer compositions (/Library/Compositions and
textasciitilde /Library/Compositions). The QCCompositionRepository class cannot be subclassed.

Compositions in the repository are represented by the QCComposition class. You can use the methods of the QCCompositionRepository class to fetch all compositions or only those that meet specific criteria.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr6
- MBS Xojo / Real Studio Plugins, version 15.1pr2

137.2.3 Methods

137.2.4 allCompositions as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array that contains all compositions currently in the composition repository.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.allCompositions
MsgBox str(a.Ubound+1)+" compositions installed"
```

137.2.5 Compositions(protocols() as String = nil, attributes as Dictionary = nil) as QCCompositionMBS()

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array of compositions that match a set of criteria.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim a() As QCCompositionMBS = r.Compositions( array( QCCompositionMBS.QCCompositionProtocolImageFilter))
MsgBox str(a.Ubound+1)+" compositions found"
```

Notes:

protocols: The protocols that you want compositions to conform to. Pass nil if you don't want to filter based on the protocol. You can pass any of these protocols: QCCompositionProtocolAnimation, QCCompositionProtocolImageProducer, QCCompositionProtocolImageFilter, QCCompositionProtocolImageCompositor, QCCompositionProtocolImageTransition, and QCCompositionProtocolScreenSaverRSS.
attributes: A dictionary that contains the attributes, and their associated values, that you want compositions to match. Pass nil if you don't want to filter based on the attributes. For example, you can pass any of these attributes: QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, QCCompositionAttributeCopyrightKey, QCCompositionAttributeBuiltInKey, and QCCompositionAttributeTimeDependentKey.

Returns an array of QCComposition objects that meet the supplied criteria.

137.2.6 compositionWithIdentifier(identifier as string) as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the composition that corresponds to the identifier.
Example:

```
dim r as QCCompositionRepositoryMBS = QCCompositionRepositoryMBS.sharedCompositionRepository
dim c as QCCompositionMBS = r.compositionWithIdentifier("/swing")
MsgBox c.Name
```

Notes:

identifier: A string that uniquely identifies the composition to retrieve.

Returns the composition identified by the provided string, or nil if there is no composition with that identifier in the composition repository.

137.2.7 Constructor

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

137.2.8 loadPlugIn(file as folderitem) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.plugin")
dim r as Boolean = QCCompositionRepositoryMBS.loadPlugIn(f)

if r then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: This method will do nothing if the plug-in was already loaded.
See also:

- 137.2.9 loadPlugIn(path as string) as Boolean 19396

137.2.9 loadPlugIn(path as string) as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Attempts to load a Quartz Composer plug-in from a .plugin bundle at the specified path and returns true on success.
Notes: This method will do nothing if the plug-in was already loaded.
See also:

- 137.2.8 loadPlugIn(file as folderitem) as Boolean 19396

137.2.10 QCCompositionRepositoryDidUpdateNotification as string

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The new of the notification which is posted whenever the list of compositions in the composition repository is updated.

137.2.11 sharedCompositionRepository as QCCompositionRepositoryMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the shared instance of the composition repository.

137.2.12 Properties

137.2.13 Handle as Integer

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

137.3 control QCViewControlMBS

137.3.1 control QCViewControlMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control to host a QCView properly.

137.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr2

137.3.3 Properties

137.3.4 View as QCViewMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The QCView in use by this control.
Notes:

Please use this property to access the actual view and make your settings and load the data to render.
(Read only property)

137.3.5 Events

137.3.6 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

137.3.7 DidStartRendering

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Rendering did start notification.

137.3.8 DidStopRendering

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Rendering did stop notification.

137.3.9 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

137.3.10 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

137.3.11 GotFocus

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

137.3.12 LostFocus

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

137.3.13 MenuAction(HitItem as MenuItem) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

137.3.14 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

137.3.15 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

137.3.16 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

137.3.17 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

137.4 class QCViewMBS

137.4.1 class QCViewMBS

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The QCView class is a custom NSView class that loads, plays, and controls Quartz Composer compositions.
Notes:

It is an autonomous view that is driven by an internal timer running on the main thread.

The view can be set to render a composition automatically when it is placed onscreen. The view stops rendering when it is placed offscreen. When not rendering, the view is filled with the current erase color. The rendered composition automatically synchronizes to the vertical retrace of the monitor.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

137.4.3 Methods

137.4.4 Constructor

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new Quartz composer view with size 100/100 and position 0/0
Example:

```
dim t as new QCViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 137.4.5 Constructor(Handle as Integer) 19402
- 137.4.6 Constructor(left as Double, top as Double, width as Double, height as Double) 19402

137.4.5 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given QCView handle.
Example:

```
dim t as new QCViewMBS(0, 0, 100, 100)
dim v as new QCViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QCView and the plugin retains this handle.
See also:

- 137.4.4 Constructor 19401
- 137.4.6 Constructor(left as Double, top as Double, width as Double, height as Double) 19402

137.4.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new Quartz composer view with the given size and position.
Example:

```
dim x as new QCViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 137.4.4 Constructor 19401
- 137.4.5 Constructor(Handle as Integer) 19402

137.4.7 erase

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clears the view using the current erase color.

137.4.8 getAttributes as dictionary

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the attributes of the composition associated with the renderer.
Notes:

Returns a dictionary that contains the attributes that describe the composition, including the input and output ports of the root patch.

The dictionary can define any of the attributes that are specified by the composition attribute keys. See QCCompositionAttributeNameKey, QCCompositionAttributeDescriptionKey, and QCCompositionAttributeCopyrightKey.

The dictionary can also contain dictionaries that correspond to the keys that identify the input and output ports of the root patch of the composition. See QCPortAttributeTypeKey, QCPortAttributeNameKey, QCPortAttributeMinimumValueKey, QCPortAttributeMaximumValueKey, and QCPortAttributeMenuItemsKey.

Available in Mac OS X v10.4 and later.

137.4.9 inputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array that contains the keys that identify the input ports of the root patch of the composition.

137.4.10 loadComposition(composition as QCCompositionMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a QCComposition object into the view.
Notes:

Returns true if successful; otherwise false.
If unsuccessful, any composition that's already loaded in the view remains loaded.

137.4.11 loadCompositionFromData(data as MemoryBlock) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the composition from memoryblock.
Notes:

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

- 137.4.12 loadCompositionFromData(data as string) as boolean 19404

137.4.12 loadCompositionFromData(data as string) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the composition from data string.
Notes:

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.
Available in Mac OS X v10.4 and later.
See also:

- 137.4.11 loadCompositionFromData(data as MemoryBlock) as boolean 19403

137.4.13 loadCompositionFromFile(file as folderitem) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the composition file located at the specified path.
Notes:

file: A folderitem that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

- 137.4.14 loadCompositionFromFile(filepath as string) as boolean 19404

137.4.14 loadCompositionFromFile(filepath as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the composition file located at the specified path.
Notes:

filepath: A string that specifies the location of a Quartz Composer composition file.

If unsuccessful, returns false; any composition that's already loaded in the view remains loaded.

Available in Mac OS X v10.4 and later.
See also:

• 137.4.13 loadCompositionFromFile(file as folderitem) as boolean 19404

137.4.15 outputKeys as string()

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an array that contains the keys that identify the output ports of the root patch of the composition.

137.4.16 pauseRendering

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Pauses rendering in the view.
Notes:

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

137.4.17 resumeRendering

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Resumes rendering a paused composition.
Notes:

You can nest calls to this method.
Available in Mac OS X v10.5 and later.

137.4.18 setValueForInputKey(value as Variant, key as string) as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the value for an input port of a composition.
Notes:

value: The value to set for the input port. The input port must be at the root patch of the composition. The data type of the value argument must match the input port.
key: The key associated with the input port of the composition. This method throws an exception if key is invalid.

Returns false if it cannot set the value.
Available in Mac OS X v10.4 and later.

137.4.19 startRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts rendering the composition that is in the view.
Notes:

Returns false if the composition fails to start rendering; true otherwise.
Available in Mac OS X v10.4 and later.

137.4.20 stopRendering

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Stops rendering the composition that is in the view.
Notes: Available in Mac OS X v10.4 and later.

137.4.21 unloadComposition

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Unloads the composition from the view.
Notes:

If necessary, this method calls stopRendering prior to unloading the composition.
Available in Mac OS X v10.5 and later.

137.4.22 valueForInputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the value for an input port of a composition.
Notes:

key: The key associated with an input port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value. The data type of returned value depends on the type of the input port.
Available in Mac OS X v10.4 and later.

137.4.23 valueForOutputKey(key as string) as Variant

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the value for an output port of a composition.

Notes:

key
The key associated with an output port for the root patch of a composition. This method throws an exception if key is invalid.

Returns the value as Xojo variant. The data type of returned value depends on the type of the output port.

137.4.24 Properties

137.4.25 autostartsRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the composition that is in the view starts rendering automatically when the view is put on the screen.
Notes:

Available in Mac OS X v10.4 and later.
(Read and Write property)

137.4.26 eraseColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color used to erase the view.
Notes:

Available in Mac OS X v10.4 and later.
(Read and Write property)

137.4.27 eventForwardingMask as Integer

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mask used to filter which types of events are forwarded from the view to the composition during rendering.
Notes:

mask: An event filtering mask. The mask can be a combination of any of the mask constants listed in Table below (defined in NSEventMBS) or the constant NSAnyEventMask.

(Read and Write property)

Constant	Description
NSLeftMouseDownMask	The user pressed the left button.
NSLeftMouseDraggedMask	The user moved the mouse with the left button down.
NSLeftMouseUpMask	The user released the left button.
NSRightMouseDownMask	The user pressed the right button.
NSRightMouseDraggedMask	The user moved the mouse with the right button down.
NSRightMouseUpMask	The user released the right button.
NSOtherMouseDownMask	The user pressed the middle button, or some button other than the left or right button.
NSOtherMouseDraggedMask	The user moved the mouse with the middle button down, or some button other than the left or right button.
NSOtherMouseUpMask	The user released the middle button, or some button other than the left or right button.
NSMouseMovedMask	The user moved the mouse without holding down a mouse button.
NSScrollWheelMask	The user moved the mouse scroll wheel.
NSKeyDownMask	The user generated a character or characters by pressing a key.
NSKeyUpMask	The user released a key.
NSFlagsChangedMask	The user pressed or released a modifier key, or toggled the Caps Lock key.

137.4.28 isPausedRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns whether or not the rendering in the view is paused.
Notes:

True if the rendering is paused; otherwise false.
Available in Mac OS X v10.5 and later.
(Read only property)

137.4.29 isRendering as boolean

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks whether a composition is rendering in the view.
Notes:

Returns true if a composition is rendering in the view; false otherwise.
Available in Mac OS X v10.5 and later.
(Read only property)

137.4.30 loadedComposition as QCCompositionMBS

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the composition loaded in the view.
Notes: (Read only property)

137.4.31 maxRenderingFrameRate as Double

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum rendering frame rate.
Notes:

Pass 0.0 to specify that there is no limit.
Available in Mac OS X v10.4 and later.
(Read and Write property)

137.4.32 snapshotImage as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an NSImage object of the current image in the view.
Notes:

Available in Mac OS X v10.5 and later.
(Read only property)

Chapter 138

QuickLook

138.1 class QLPreviewPanelMBS

138.1.1 class QLPreviewPanelMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The QLPreviewPanel class implements the Preview Panel - a user interface object that displays the preview of a list of items.
Notes:

Every application only has on instance of QLPreviewPanel.
Subclass of the NSPanelMBS class.

138.1.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr7
- MBS Real Studio Plugins, version 11.2pr7

138.1.3 Methods

138.1.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether this panel is available.
Notes: Returns true on Snow Leopard.

138.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The constructor for a new panel.

138.1.6 currentPreviewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The currently previewed item in the preview panel or nil if there is none.

138.1.7 enterFullScreenMode(screen as NSScreenMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Enters full screen mode.
Notes: If panel is not on-screen, the panel will go directly to full screen mode.

138.1.8 exitFullScreenMode

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Exits full screen mode.

138.1.9 refreshCurrentPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the Preview Panel to recompute the preview of the currently previewed item.

138.1.10 reloadData

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the Preview Panel to reload its data from its data source.
Notes: This method does not refresh the visible item if it has not changed.

138.1.11 updateController

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the Preview Panel to update its current controller.

Notes: The Preview Panel automatically updates its controller (by searching the responder chain) whenever the main or key window changes. Invoke updateController if the responder chain changes without explicit notice.

138.1.12 Properties

138.1.13 currentPreviewItemIndex as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The index of the currently previewed item in the preview panel or NSNotFound (-1) if there is none.
Notes: (Read and Write property)

138.1.14 inFullScreenMode as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: True if the panel is currently open and in full screen mode.
Notes: (Read only property)

138.1.15 PreviewView as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the preview view in the panel.
Notes: (Read only property)

138.1.16 Events

138.1.17 didLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called after an item has been loaded.

138.1.18 handleEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked by the preview panel when it receives an event it doesn't handle.

Notes: Returns true if you did not handle this event.

138.1.19 numberOfPreviewItems as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called to ask you for the number of items that the preview panel should preview.

138.1.20 previewItemAtIndex(index as Integer) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event is called to ask you for the item with the given index.

138.1.21 sourceFrameOnScreenForPreviewItem(file as folderitem) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the preview panel opens or closes to provide a zoom effect.
Notes: Return a zero rect if there is no origin point, this will produce a fade of the panel. The coordinates are screen based.

138.1.22 transitionImageForPreviewItem(file as folderitem, byref contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called to ask you for the transition image for a given preview item.
Notes:

Invoked when the preview panel opens or closes to provide a smooth transition when zooming.

contentRect: The rect within the image that actually represents the content of the document. For example, for icons the actual rect is generally smaller than the icon itself.

Return an image the panel will crossfade with when opening or closing. You can specify the actual "document" content rect in the image in contentRect.

138.1.23 willLoadPreviewItem(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called before an item is loaded.

138.2 control QLPreviewViewControlMBS

138.2.1 control QLPreviewViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a QLPreviewViewMBS.

138.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr8

138.2.3 Properties

138.2.4 View as QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 15.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The view this control shows.
Notes: (Read only property)

138.2.5 Events

138.2.6 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

138.2.7 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

138.2.8 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

138.2.9 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

138.2.10 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

138.2.11 MenuAction(HitItem as MenuItem) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

138.2.12 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

138.2.13 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

138.2.14 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

138.2.15 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

138.3 class QLPreviewViewMBS

138.3.1 class QLPreviewViewMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The class for using a preview view from QuickLook in Xojo.
Notes:

If you want to show previews of files in your application, use this view. For example if you not just want to show previews of pictures, but also from Movies, PDF, Office and iWork files.
Requires Mac OS X 10.6 or newer.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

138.3.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr8

138.3.3 Methods

138.3.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.6 or newer.

138.3.5 close

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Closes the receiver, releasing the current preview item.
Notes:

Once the receiver has closed, it will no longer accept preview items.

The application is required to call close when the receiver is no longer needed if shouldCloseWithWindow is false.
The close method will be called automatically when the window closes if shouldCloseWithWindow is true.

138.3.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new quicklook preview view with size 100/100 and position 0/0
Example:

```
dim t as new QLPreviewViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 138.3.7 Constructor(Handle as Integer) 19420
- 138.3.8 Constructor(left as Double, top as Double, width as Double, height as Double) 19420
- 138.3.9 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 19421

138.3.7 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given QLPreviewView handle.
Example:

```
dim t as new QLPreviewViewMBS(0, 0, 100, 100)
dim v as new QLPreviewViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a QLPreviewView and the plugin retains this handle.
See also:

- 138.3.6 Constructor 19420
- 138.3.8 Constructor(left as Double, top as Double, width as Double, height as Double) 19420
- 138.3.9 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 19421

138.3.8 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new QuickLook preview view with the given size and position.
Example:

```
dim x as new QLPreviewViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 138.3.6 Constructor 19420
- 138.3.7 Constructor(Handle as Integer) 19420
- 138.3.9 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer) 19421

138.3.9 Constructor(left as Double, top as Double, width as Double, height as Double, style as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new QuickLook preview view with the given size and position.
Example:

```
dim view as new QLPreviewViewMBS(0, 0, 200, 200, QLPreviewViewMBS.StyleCompact)
```

Notes:

On success the handle property is not zero.

On Mac OS X 10.7 or later we use the new style parameter to create a Preview view with the given style.
See also:

- 138.3.6 Constructor 19420
- 138.3.7 Constructor(Handle as Integer) 19420
- 138.3.8 Constructor(left as Double, top as Double, width as Double, height as Double) 19420

138.3.10 refreshPreviewItem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the Preview view to recompute the preview of the currently previewed item.

138.3.11 Properties

138.3.12 autostarts as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether playback of audio/video files automatically starts.
Notes: (Read and Write computed property)

138.3.13 previewItem as folderitem

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The current visible item in the view.
Notes: (Read and Write computed property)

138.3.14 shouldCloseWithWindow as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Set whether the receiver closes when its window closes.
Notes:

See close method.
(Read and Write computed property)

138.3.15 Constants

138.3.16 StyleCompact = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the style constants.
Notes: Use in inspectors.

138.3.17 StyleNormal = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2. **Function:** One of the style constants.
Notes: Use in full previews.

Chapter 139

QuickTime

139.1 class QTAudioChannelDescriptionMBS

139.1.1 class QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The description for an audio channel.

139.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

139.1.3 Properties

139.1.4 ChannelFlags as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Flags that control the interpretation of Coordinates.
Notes: (Read and Write property)

139.1.5 ChannelLabel as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The AudioChannelLabel that describes the channel.
Notes: (Read and Write property)

139.1.6 Coordinates(index as Integer) as Double

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** An ordered triple that specifies a precise speaker location.
Notes:

Index from 0 to 2.
(Read and Write computed property)

139.1.7 Constants

139.1.8 kAudioChannelCoordinates_Azimuth = 0

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, 0 is front center, positive is right, negative is left. This is measured in degrees.

139.1.9 kAudioChannelCoordinates_BackFront = 1

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is back and positive is front.

139.1.10 kAudioChannelCoordinates_Distance = 2

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, the units are described by flags.

139.1.11 kAudioChannelCoordinates_DownUp = 2

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is below ground level, 0 is ground level, and positive is above ground level.

139.1.12 kAudioChannelCoordinates_Elevation = 1

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For spherical coordinates, +90 is zenith, 0 is horizontal, -90 is nadir. This is measured in degrees.

139.1.13 kAudioChannelCoordinates_LeftRight = 0

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for indexing the Coordinates array.
Notes: For rectangulare coordinates, negative is left and positive is right.

139.1.14 kAudioChannelFlags_AllOff = 0

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for the ChannelFlags property.
Notes: All flags off.

139.1.15 kAudioChannelFlags_Meters = 4

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for the ChannelFlags property.
Notes: Set to indicate the units are in meters, clear to indicate the units are relative to the unit cube or unit sphere.

139.1.16 kAudioChannelFlags_RectangularCoordinates = 1

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for the ChannelFlags property.
Notes: The channel is specified by the cartesioan coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_SphericalCoordinates.

139.1.17 kAudioChannelFlags_SphericalCoordinates = 2

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the constants for the ChannelFlags property.
Notes: The channel is specified by the spherical coordinates of the speaker position. This flag is mutally exclusive with kAudioChannelFlags_RectangularCoordinates.

139.1.18 kAudioChannelLabel_Ambisonic_W = 200

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.19 kAudioChannelLabel_Ambisonic_X = 201

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.20 kAudioChannelLabel_Ambisonic_Y = 202

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.21 kAudioChannelLabel_Ambisonic_Z = 203

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.22 kAudioChannelLabel_Center = 3

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.23 kAudioChannelLabel_CenterSurround = 9

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: WAVE: "Back Center" or plain "Rear Surround"

139.1.24 kAudioChannelLabel_CenterSurroundDirect = 44

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: back center, non diffuse

139.1.25 kAudioChannelLabel_ClickTrack = 304

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.26 kAudioChannelLabel_DialogCentricMix = 43

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.27 kAudioChannelLabel_Discrete = 400

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.28 kAudioChannelLabel_Discrete_0 = & h10000

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.29 kAudioChannelLabel_Discrete_1 = & h10001

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.30 kAudioChannelLabel_Discrete_10 = & h1000A

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.31 kAudioChannelLabel_Discrete_11 = & h1000B

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.32 kAudioChannelLabel_Discrete_12 = & h1000C

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.33 kAudioChannelLabel_Discrete_13 = & h1000D

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.34 kAudioChannelLabel_Discrete_14 = & h1000E

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.35 kAudioChannelLabel_Discrete_15 = & h1000F

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.36 kAudioChannelLabel_Discrete_2 = & h10002

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.37 kAudioChannelLabel_Discrete_3 = & h10003

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Example:

```
// build 2 channels to go on channel 3& 4
dim d1 as new QTAudioChannelDescriptionMBS
dim d2 as new QTAudioChannelDescriptionMBS

d1.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d1.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_3
d2.ChannelFlags = QTAudioChannelDescriptionMBS.kAudioChannelFlags_AllOff
d2.ChannelLabel = QTAudioChannelDescriptionMBS.kAudioChannelLabel_Discrete_4

dim a as new QTAudioChannelLayoutMBS

a.NumberChannelDescriptions = 2
a.ChannelDescriptions(0) = d1
a.ChannelDescriptions(1) = d2
a.ChannelLayoutTag = QTAudioChannelLayoutMBS.kAudioChannelLayoutTag_DiscreteInOrder + 2
```

139.1.38 kAudioChannelLabel_Discrete_4 = & h10004

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.39 kAudioChannelLabel_Discrete_5 = & h10005

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.40 kAudioChannelLabel_Discrete_6 = & h10006

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.41 kAudioChannelLabel_Discrete_65535 = & h1FFFF

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.42 kAudioChannelLabel_Discrete_7 = & h10007

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.43 kAudioChannelLabel_Discrete_8 = & h10008

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.44 kAudioChannelLabel_Discrete_9 = & h10009

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.45 kAudioChannelLabel_ForeignLanguage = 305

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.46 kAudioChannelLabel_Haptic = 45

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.47 kAudioChannelLabel_HeadphonesLeft = 301

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.48 kAudioChannelLabel_HeadphonesRight = 302

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.49 kAudioChannelLabel_HearingImpaired = 40

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.50 kAudioChannelLabel_Left = 1

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.51 kAudioChannelLabel_LeftCenter = 7

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.52 kAudioChannelLabel_LeftSurround = 5

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: WAVE: "Back Left"

139.1.53 kAudioChannelLabel_LeftSurroundDirect = 10

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: WAVE: "Side Left"

139.1.54 kAudioChannelLabel_LeftTotal = 38

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: matrix encoded 4 channels

139.1.55 kAudioChannelLabel_LeftWide = 35

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.56 kAudioChannelLabel_LFE2 = 37

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.57 kAudioChannelLabel_LFEScreen = 4

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.58 kAudioChannelLabel_Mono = 42

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.59 kAudioChannelLabel_MS_Mid = 204

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.60 kAudioChannelLabel_MS_Side = 205

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.61 kAudioChannelLabel_Narration = 41

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.62 kAudioChannelLabel_RearSurroundLeft = 33

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.63 kAudioChannelLabel_RearSurroundRight = 34

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.64 kAudioChannelLabel_Right = 2

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: WAVE: "Top Front Left"

139.1.79 kAudioChannelLabel_VerticalHeightRight = 15

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.
Notes: WAVE: "Top Front Right"

139.1.80 kAudioChannelLabel_XY_X = 206

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.1.81 kAudioChannelLabel_XY_Y = 207

MBS Main Plugin, Plugin Version: 11.3. **Function:** One of the channel label constants.

139.2 class QTAudioChannelLayoutMBS

139.2.1 class QTAudioChannelLayoutMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The class is used to specify channel layouts in files and hardware.
Notes:

This class does not use QuickTime functions as it only wraps data structures. And it can be used with Mac App Store and AVFoundation.

Some channel abbreviations used for the constants:

- L - left
- R - right
- C - center
- Ls - left surround
- Rs - right surround
- Cs - center surround
- Rls - rear left surround
- Rrs - rear right surround
- Lw - left wide
- Rw - right wide
- Lsd - left surround direct
- Rsd - right surround direct
- Lc - left center
- Rc - right center
- Ts - top surround
- Vhl - vertical height left
- Vhc - vertical height center
- Vhr - vertical height right
- Lt - left matrix total. for matrix encoded stereo.
- Rt - right matrix total. for matrix encoded stereo.

139.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr8

139.2.3 Methods

139.2.4 GetNumberOfChannels(layoutTag as UInt32) as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Function to get the number of channels out of an AudioChannelLayoutTag.
Notes: The low 16 bits of an AudioChannelLayoutTag gives the number of channels except for kAudioChannelLayoutTag_UseChannelDescriptions and kAudioChannelLayoutTag_UseChannelBitmap.

139.2.5 Memory as Memoryblock

MBS Main Plugin, Plugin Version: 13.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the audio channel layout as memoryblock, so you can pass it for declares.

139.2.6 Properties

139.2.7 ChannelBitmap as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** If ChannelLayoutTag is set to kAudioChannelLayoutTag_UseChannelBitmap, this field is the channel usage bitmap.
Notes: (Read and Write property)

139.2.8 ChannelLayoutTag as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The AudioChannelLayoutTag that indicates the layout.
Notes: (Read and Write property)

139.2.9 NumberChannelDescriptions as UInt32

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The number of items in the ChannelDescriptions array.

Notes: (Read and Write property)

139.2.10 ChannelDescriptions(index as Integer) as QTAudioChannelDescriptionMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** An array of AudioChannelDescriptions that describe the layout.
Notes:

Index from 0 to NumberChannelDescriptions-1.
(Read and Write computed property)

139.2.11 Constants

139.2.12 kAudioChannelBit_Center = 4

Notes: Coincident mic pair (often 2 figure 8's)

139.3 class QTSoundStreamMBS

139.3.1 class QTSoundStreamMBS

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for the QTSoundOutput component which outputs sound using a given AudioUnit.
Notes: Not supported for 64 bit targets.

139.3.2 Blog Entries

- MBS Real Studio Plugins, version 11.4pr2

139.3.3 Methods

139.3.4 AttachToAudioUnitComponent(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attaches the Sound Output component to a given Audio Unit component.
Notes:

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 139.3.5 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer 19460

139.3.5 AttachToAudioUnitComponent(componenthandle as Integer, element as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attaches the Sound Output component to a given Audio Unit component.
Notes:

Returns the error code. (0 for success)
You may call AudioUnitInitialize and AudioOutputUnitStart after this to start the output unit.
See also:

- 139.3.4 AttachToAudioUnitComponent(componenthandle as Integer) as Integer 19460

139.3.6 AudioOutputUnitStart(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Starts the output unit.
Notes: Returns a Mac OS errro code (0 for success).

139.3.7 AudioUnitInitialize(componenthandle as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 4.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the output unit.
Notes: Returns a Mac OS errro code (0 for success).

139.3.8 closeComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Closes the Sound Output component.

139.3.9 InitComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the sound output component.
Notes: Allocates memory for example.

139.3.10 OpenComponent

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Opens the SoundOutput component.

139.3.11 OpenDefaultAudioUnitOutputComponent as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Opens the default audio unit component and returns the handle.
Notes:

Returns 0 on any error.
The component is only available on Mac OS X, so this function will return 0 on all other platforms.

139.3.12 Properties

139.3.13 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The component handle.
Notes: (Read and Write property)

139.3.14 IsOpen as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the sound output component has been opened yet.
Notes:

Returns false on any error.
(Read only property)

139.3.15 IsStreamActive as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** True in case the stream is active.
Notes:

Returns false on any error.
(Read only property)

139.3.16 PostsStatusNotifications as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether status notificiations should be posted.
Notes: (Read and Write property)

139.3.17 Release as Boolean

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the constructor should release the handle.
Notes: (Read and Write property)

139.3.18 SoundOutputComponentHandle as Integer

MBS MacOSX Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle of the used component instance.
Notes: (Read only property)

Chapter 140

RAMStream

140.1 class RAMStreamMBS

140.1.1 class RAMStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allows you to use a memory bases stream.
Notes:

If you need to concat lot's of streams, just make a RAMstream and write to it.

In the example folder is a project called "test ramstream speed" which tests the speed on concating 10000 strings which each 1000 bytes in length.

On my G4 Dual 1000 Mhz, I get this result:
String only: 22063 ticks
RAMStream: 18 ticks

140.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

140.1.3 Methods

140.1.4 close

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

140.1.5 Constructor(InitialSize as Integer=0)

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new RAMStream.
Example:

```
dim r as RAMStreamMBS
r=new RAMStreamMBS(1000000)
r.write "Hello"
```

Notes:

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
On low memory, the initial resize will fail and length will be 0.

140.1.6 Look(count as Integer) as string

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes, but does not move the current position.
Example:

```
dim r as RamStreamMBS // your stream
dim s as string
s=r.look(100)
```

Notes: Like the lookahead property in a socket.

140.1.7 LookBlock(count as Integer) as memoryblock

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes into a memoryblock, but leaves the current position untouched.
Example:

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.LookBlock(5)
```

140.1.8 LookByte as Integer

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a byte, but leaves the current position untouched.

140.1.9 LookLong as Integer

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads an integer, but leaves the current position untouched.

140.1.10 LookShort as Integer

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a short, but leaves the current position untouched.

140.1.11 Read(count as Integer) as string

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes into a string.
Example:

```
dim b as RAMStreamMBS
dim s as string
```

```
'...
s=b.read(5)
```

140.1.12 ReadBlock(count as Integer) as memoryblock

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads bytes into a memoryblock.
Example:

```
dim b as RAMStreamMBS
dim s as memoryblock
'...
s=b.ReadBlock(5)
```

140.1.13 Readbyte as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads an 8bit Byte from the stream.
Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readbyte
```

140.1.14 ReadLong as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a signed 32bit Integer from the stream.
Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readlong
```

Notes: This function is affected by the LittleEndian Setting.

140.1.15 ReadShort as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a signed 16bit Integer from the stream.
Example:

```
dim b as RAMStreamMBS
dim i as Integer
'...
i=B.readshort
```

Notes: This function is affected by the LittleEndian Setting.

140.1.16 Write(data as string)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes bytes from a string to file.

140.1.17 WriteBlock(data as memoryblock,count as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes count bytes from a memoryblock to file.
Example:

```
dim b as RAMStreamMBS
dim m as memoryblock
'...
b.writeblock m,m.size
```

140.1.18 WriteByte(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a byte to file.

140.1.19 WriteLong(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes an 32bit integer to file.

Notes: This method is affected by the LittleEndian Setting.

140.1.20 WriteShort(data as Integer)

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes an 16bit integer to file.
Notes: This method is affected by the LittleEndian Setting.

140.1.21 Properties

140.1.22 EOF as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if you are at the end of the stream.
Notes: (Read only property)

140.1.23 GrowSize as Integer

MBS Util Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size in bytes used to grow the ramstream backbuffer.
Notes:

Default is 32 Kilobytes.
If the value is bigger than zero, it will be used as the allocation increase. Else the default value is used.
(Read and Write property)

140.1.24 Length as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the current length of the stream.
Notes:

You can truncate the stream by setting this property.
(Read and Write property)

140.1.25 LittleEndian as boolean

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decides whether to convert integers read or wrote to the file.
Notes:

See Xojos binarystream for more details.
For native platform you may set "littleendian=targetwin32".
(Read and Write property)

140.1.26 MemoryUsed as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much memory is currently used for this Stream.
Notes: (Read and Write property)

140.1.27 Position as Integer

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns current position.
Notes:

You can set the current file stream position using this property.
(Read and Write property)

140.2 Globals

140.2.1 CreateRamStreamMBS(InitialSize as Integer = 0) as RamStreamMBS

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new RAMStream.
Example:

```
dim r as RAMStreamMBS
r=CreateRamStreamMBS(1000000)
r.write "Hello"
```

Notes:

To avoid memory fragmentation the memory grows in 32 KByte chunks.

The parameter you give is the size for the first allocation. So if you only need 2 KByte, you just pass 2048. If you don't know the size, you can pass 0 or a negative number to get the default initial size which is 32 KByte.

You can change the GrowSize property to use a different growing size.
Performance is better if resizing the memory buffer is minimized.

The stream can grow to around 2 GB.
Returns nil on low memory.

Chapter 141

RaspberryPiCamera

141.1 class RaspberryPiCameraFormatDescriptionMBS

141.1.1 class RaspberryPiCameraFormatDescriptionMBS

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class for a format description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.1.2 Methods

141.1.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

141.1.4 Properties

141.1.5 Description as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The format description.
Notes: (Read only property)

141.1.6 Flags as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The flags.
Notes:

Currently can be 1 for compressed and 2 for emulated.
(Read only property)

141.1.7 Index as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Format number.
Notes: (Read only property)

141.1.8 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format.
Notes: (Read only property)

141.1.9 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format as text.
Notes: (Read only property)

141.1.10 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The buffer type.
Notes:

Usually 1 for video capture.
(Read only property)

141.2 class RaspberryPiCameraFormatMBS

141.2.1 class RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class for format settings.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

141.2.2 Methods

141.2.3 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

141.2.4 Properties

141.2.5 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The number of bytes per row.
Notes:

For padding, zero if unused.
(Read and Write property)

141.2.6 ColorSpace as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The colorspace.
Example:

```
// ITU-R 601 – broadcast NTSC/PAL
const V4L2_COLORSPACE_SMPTE170M = 1

// 1125-Line (US) HDTV
const V4L2_COLORSPACE_SMPTE240M = 2

// HD and modern captures.
const V4L2_COLORSPACE_REC709 = 3
```

```
// broken BT878 extents (601, luma range 16-253 instead of 16-235)
const V4L2_COLORSPACE_BT878 = 4

// These should be useful. Assume 601 extents.
const V4L2_COLORSPACE_470_SYSTEM_M = 5
const V4L2_COLORSPACE_470_SYSTEM_BG = 6

// I know there will be cameras that send this. So, this is
// unspecified chromaticities and full 0-255 on each of the
// Y'CbCr components
const V4L2_COLORSPACE_JPEG = 7

// For RGB colourspaces, this is probably a good start.
const V4L2_COLORSPACE_SRGB = 8
```

Notes:

Normally zero for default.
(Read and Write property)

141.2.7 Field as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The field.
Example:

```
const V4L2_FIELD_ANY = 0
// driver can choose from none, top, bottom, interlaced
// depending on whatever it thinks is approximate ...
const V4L2_FIELD_NONE = 1
// this device has no fields ...
const V4L2_FIELD_TOP = 2
// top field only
const V4L2_FIELD_BOTTOM = 3
// bottom field only
const V4L2_FIELD_INTERLACED = 4
// both fields interlaced
const V4L2_FIELD_SEQ_TB = 5
// both fields sequential into one
// buffer, top-bottom order
const V4L2_FIELD_SEQ_BT = 6
// same as above + bottom-top order
const V4L2_FIELD_ALTERNATE = 7
// both fields alternating into separate buffers
```

```
const V4L2_FIELD_INTERLACED_TB = 8
// both fields interlaced, top field
// first and the top field is transmitted first
const V4L2_FIELD_INTERLACED_BT = 9
// both fields interlaced, top field
// first and the bottom field is transmitted first
```

Notes: (Read and Write property)

141.2.8 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The height of image in pixels.
Notes: (Read and Write property)

141.2.9 Pixelformat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format.
Notes: (Read and Write property)

141.2.10 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format as text.
Notes: (Read only property)

141.2.11 SizeImage as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The size of image.
Notes: (Read and Write property)

141.2.12 Type as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The type of data stream.
Notes:

With plugin we always use 1 for video capture (V4L2_BUF_TYPE_VIDEO_CAPTURE).
(Read and Write property)

141.2.13 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The width of image in pixels.
Notes: (Read and Write property)

141.3 class RaspberryPiCameraMBS

141.3.1 class RaspberryPiCameraMBS

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The class to get pictures from Raspberry Pi camera and similar Linux cameras.

141.3.2 Blog Entries

- MBS Plugin classes for use on Raspberry Pi
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 17.6pr3
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

141.3.3 Methods

141.3.4 AvailableFormats as RaspberryPiCameraFormatDescriptionMBS()

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries available formats.
Notes:

Lasterror and ErrorMessage are set.
Can return nil in case of error.

141.3.5 Capture(WithPicture as boolean = true) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Captures a new picture.
Notes:

If WithPicture is true and pixel format is compatible (RGB 24 or 32bit), we set the picture property.
If capturing JPEG, we copy the JPEG data into the JPEG property.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.6 Close

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Closes camera device.
Notes: Lasterror and ErrorMessage are set.

141.3.7 Constructor

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The constructor.

141.3.8 CurrentFormat as RaspberryPiCameraFormatMBS

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries current format.
Notes:

Returns nil in case of error.
Lasterror and ErrorMessage are set.

141.3.9 InitBuffer as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Initializes buffer.
Notes:

This is done automatically if you capture.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.10 Open(Device as string = "/dev/video0") as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Opens the camera device.
Notes:

You need

- a Raspberry Pi computer
- to attach the camera module
- to enable the video camera
- run a command: sudo modprobe bcm2835-v4l2
- to check if you see /dev/video0 in file system.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.11 SetCurrentFormat(format as RaspberryPiCameraFormatMBS) as boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sets current format.
Notes:

This allows to use any format, even if we can't transform it to picture for you.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.12 SetJPEGSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sets size and format to capture.
Notes:

Sets JPEG format with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.13 SetSize(Width as Integer, Height as Integer) as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sets size and format to capture.
Notes:

Sets to capture RGB picture with given size.

Returns true on success.
Lasterror and ErrorMessage are set.

141.3.14 Properties

141.3.15 AutoExposureBias as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
e.g. 12.
(Read and Write property)

141.3.16 AutoFocusRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kAutoFocusRange* constants
(Read and Write property)

141.3.17 AutoFocusStart as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.18 AutoFocusStatus as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kAutoFocusStatus* constants
(Read and Write property)

141.3.19 AutoFocusStop as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.20 AutoNPresetWhiteBalance as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kWhiteBalance* constants.
e.g. value is 1 for kWhiteBalanceAuto.
(Read and Write property)

141.3.21 Buffer as Ptr

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pointer to the buffer.
Notes:

For the case you want to convert yourself pixel values to a picture.
(Read only property)

141.3.22 BufferLength as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The length of the buffer.
Notes: (Read only property)

141.3.23 BusInfo as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The device bus info.

Notes:

e.g. "PCI:test"
(Read only property)

141.3.24 BytesPerRow as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The bytes per row for current image.
Notes: (Read only property)

141.3.25 CanCapture as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether the device can capture video.
Notes:

This is queried by checking if bitwiseAnd(capabilities,1) = 1.
(Read only property)

141.3.26 Capabilities as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Device capabilities bitmap.
Notes: (Read only property)

141.3.27 Card as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The name of the card.
Notes:

e.g. "Hauppauge WinTV"
(Read only property)

141.3.28 Driver as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The name of the driver.

Notes:

e.g. "bttv"
(Read only property)

141.3.29 ErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The error message for lasterror property.
Notes: (Read only property)

141.3.30 ExposureAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
e.g. 1000
(Read and Write property)

141.3.31 ExposureAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kExposure* constants.
Value is e.g. 0 for kExposureAuto.
(Read and Write property)

141.3.32 ExposureAutoPriority as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.33 ExposureMetering as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kExposureMetering* constants
(Read and Write property)

141.3.34 FocusAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

141.3.35 FocusAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

141.3.36 FocusRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable focus on the camera.
(Read and Write property)

141.3.37 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The internal file handle.
Notes: (Read only property)

141.3.38 Height as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The height in pixel used for capture.
Notes: (Read only property)

141.3.39 ImageStabilization as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.40 IrisAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

141.3.41 IrisRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
May not work if you don't have a controllable iris on the camera.
(Read and Write property)

141.3.42 IsoSensitivity as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.43 IsoSensitivityAuto as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kISOSensitivity* constants.
Usually set to kISOSensitivityAuto for auto mode (1).
(Read and Write property)

141.3.44 JPEG as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last JPEG image data block.
Notes: (Read only property)

141.3.45 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last error code.
Notes: (Read only property)

141.3.46 Lock3A as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kLock* constants.
(Read and Write property)

141.3.47 Opened as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether device is opened.
Notes: (Read only property)

141.3.48 PanAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.49 PanRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.50 PanReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.51 PanSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.52 Picture as Picture

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last captured picture.
Notes: (Read only property)

141.3.53 PixelFormat as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format.
Notes: (Read only property)

141.3.54 PixelformatString as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The pixel format as text.
Notes: (Read only property)

141.3.55 Privacy as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.56 Recording as Boolean

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Whether we are recording currently.
Notes: (Read only property)

141.3.57 SceneMode as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

See kSceneMode* constants
(Read and Write property)

141.3.58 TiltAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.59 TiltRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.60 TiltReset as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.61 TiltSpeed as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.62 Version as String

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The version of the driver.
Notes: (Read only property)

141.3.63 WideDynamicRange as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.64 Width as Integer

MBS Linux Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The width in pixel used for capture.
Notes: (Read only property)

141.3.65 ZoomAbsolute as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.66 ZoomContinuous as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.67 ZoomRelative as Integer

MBS Linux Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** One of the camera configuration propertires.
Notes:

Lasterror is set.
(Read and Write property)

141.3.68 Constants

141.3.69 kAutoFocusRangeAuto = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusRange property.

141.3.70 kAutoFocusRangeInfinity = 3

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusRange property.

141.3.71 kAutoFocusRangeMacro = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusRange property.

141.3.72 kAutoFocusRangeNormal = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusRange property.

141.3.73 kAutoFocusStatusBusy = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusStatus property.

141.3.74 kAutoFocusStatusFailed = 4

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusStatus property.

141.3.75 kAutoFocusStatusIdle = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusStatus property.

141.3.76 kAutoFocusStatusReached = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoFocusStatus property.

141.3.77 kExposureAperturePriority = 3

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureAuto property.

141.3.78 kExposureAuto = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureAuto property.

141.3.79 kExposureManual = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureAuto property.

141.3.80 kExposureMeteringAverage = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureMetering property.

141.3.81 kExposureMeteringCenterWeighted = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureMetering property.

141.3.82 kExposureMeteringMatrix = 3

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureMetering property.

141.3.83 kExposureMeteringSpot = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureMetering property.

141.3.84 kExposureShutterPriority = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ExposureAuto property.

141.3.85 kISOSensitivityAuto = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for IsoSensitivityAuto property.

141.3.86 kISOSensitivityManual = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for IsoSensitivityAuto property.

141.3.87 kLockExposure = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for Lock3A property.

141.3.88 kLockFocus = 4

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for Lock3A property.

141.3.89 kLockWhiteBalance = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for Lock3A property.

141.3.90 kSceneModeBacklight = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.91 kSceneModeBeachSnow = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.92 kSceneModeCandleLight = 3

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.93 kSceneModeDawnDusk = 4

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.94 kSceneModeFallColors = 5

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.95 kSceneModeFireworks = 6

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.96 kSceneModeLandscape = 7

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.97 kSceneModeNight = 8

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.98 kSceneModeNone = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.99 kSceneModePartyIndoor = 9

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.100 kSceneModePortrait = 10

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.101 kSceneModeSports = 11

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.102 kSceneModeSunset = 12

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.103 kSceneModeText = 13

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for ScreenMode property.

141.3.104 kWhiteBalanceAuto = 1

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.105 kWhiteBalanceCloudy = 8

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.106 kWhiteBalanceDaylight = 6

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.107 kWhiteBalanceFlash = 7

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.108 kWhiteBalanceFluorescent = 3

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.109 kWhiteBalanceFluorescentH = 4

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.110 kWhiteBalanceHorizon = 5

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.111 kWhiteBalanceIncandescent = 2

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.112 kWhiteBalanceManual = 0

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

141.3.113 kWhiteBalanceShade = 9

MBS Linux Plugin, Plugin Version: 18.0. **Function:** One of the constants for AutoNPresetWhiteBalance property.

Chapter 142

Registration

142.1 module MBS

142.1.1 module MBS

MBS Main Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The module with version details.

142.1.2 Methods

142.1.3 Target as string

MBS Main Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the target where the plugin was compiled for.
Example:

MsgBox mbs.Target

Notes: Can be Win32, Linux, Carbon, Carbon-PPC or Cocoa.

142.1.4 Constants

142.1.5 BuildNumber = 20195

MBS Main Plugin, Plugin Version: 9.5. **Function:** The build number of the plugins.
Example:

```
# if mbs.BuildNumber>15000 then

// use some new MBS feature

MsgBox "OK"

# endif
```

Notes: The constant value is not in this documentation as it changes too often.

142.1.6 CompileDate = "Mar 7 2020"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The compilation date of the plugin.
Notes: The constant value is not in this documentation as it changes too often.

142.1.7 CompileTime = "20:25:38"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The compilation time of the plugin.
Example:

```
MsgBox mbs.CompileTime
```

Notes: The constant value is not in this documentation as it changes too often.

142.1.8 ComputerName = "MyMac"

MBS Main Plugin, Plugin Version: 14.0. **Function:** The computer the IDE was launched on for building an app.
Example:

```
MsgBox mbs.ComputerName
```

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

142.1.9 Copyright = "© 2019 by Monkeybread Software"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The plugin copyright string.
Example:

```
MsgBox mbs.Copyright
```

142.1.10 HasAudioPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Audio plugin is installed.
Example:

```
# if MBS.HasAudioPlugin then
MsgBox "Audio Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.11 HasAVFoundationPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the AVFoundation plugin is installed.
Example:

```
# if MBS.HasAVFoundationPlugin then
MsgBox "AVFoundation Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be

missing.

142.1.12 HasBarcodePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Barcode plugin is installed.
Example:

```
# if MBS.HasBarcodePlugin then
MsgBox "Barcode Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.13 HasCanonEOSDigitalPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CanonEOSDigital plugin is installed.
Example:

```
# if MBS.HasCanonEOSDigitalPlugin then
MsgBox "CanonEOSDigital Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.14 HasChartDirectorPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ChartDirector plugin is installed.
Example:

```
# if MBS.HasChartDirectorPlugin then
MsgBox "ChartDirector Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed.

This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.15 HasCocoaBasePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaBase plugin is installed.
Example:

```
# if MBS.HasCocoaBasePlugin then
MsgBox "CocoaBase Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.16 HasCocoaControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaControls plugin is installed.
Example:

```
# if MBS.HasCocoaControlsPlugin then
MsgBox "CocoaControls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.17 HasCocoaExtrasPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaExtras plugin is installed.
Example:

```
# if MBS.HasCocoaExtrasPlugin then
MsgBox "CocoaExtras Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.18 HasCocoaPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Cocoa plugin is installed.
Example:

```
# if MBS.HasCocoaPlugin then
MsgBox "Cocoa Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.19 HasCompressionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Compression plugin is installed.
Example:

```
# if MBS.HasCompressionPlugin then
MsgBox "Compression Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.20 HasComputerControlPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ComputerControl plugin is installed.
Example:

```
# if MBS.HasComputerControlPlugin then
MsgBox "ComputerControl Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.21 HasControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Controls plugin is installed.
Example:

```
# if MBS.HasControlsPlugin then
MsgBox "Controls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.22 HasCUPSPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CUPS plugin is installed.
Example:

```
# if MBS.HasCUPSPlugin then
MsgBox "CUPS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.23 HasCURLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CURL plugin is installed.
Example:

```
# if MBS.HasCURLPlugin then
MsgBox "CURL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.24 HasDataTypesPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DataTypes plugin is installed.
Example:

```
# if MBS.HasDataTypesPlugin then
MsgBox "DataTypes Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.25 HasDirectShowPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DirectShow plugin is installed.
Example:

```
# if MBS.HasDirectShowPlugin then
MsgBox "DirectShow Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.26 HasDonglePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Dongle plugin is installed.
Example:

```
# if MBS.HasDonglePlugin then
MsgBox "Dongle Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.27 HasDynaPDFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DynaPDF plugin is installed.
Example:

```
# if MBS.HasDynaPDFPlugin then
MsgBox "DynaPDF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.28 HasEncryptionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Encryption plugin is installed.
Example:

```
# if MBS.HasEncryptionPlugin then
MsgBox "Encryption Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.29 HasGIFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the GIF plugin is installed.
Example:

```
# if MBS.HasGIFPlugin then
MsgBox "GIF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.30 HasGraphicsMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the GraphicsMagick plugin is installed.
Example:

```
# if MBS.HasGraphicsMagickPlugin then
MsgBox "GraphicsMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.31 HasImageMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ImageMagick plugin is installed.
Example:

```
# if MBS.HasImageMagickPlugin then
MsgBox "ImageMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.32 HasJavaPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Java plugin is installed.
Example:

```
# if MBS.HasJavaPlugin then
MsgBox "Java Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.33 HasJPEGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the JPEG plugin is installed.
Example:

```
# if MBS.HasJPEGPlugin then
MsgBox "JPEG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.34 HasLargePicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LargePicture plugin is installed.
Example:

```
# if MBS.HasLargePicturePlugin then
MsgBox "LargePicture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.35 HasLCMS2Plugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LCMS2 plugin is installed.
Example:

```
# if MBS.HasLCMS2Plugin then
MsgBox "LCMS2 Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.36 HasLCMSPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LCMS plugin is installed.
Example:

```
# if MBS.HasLCMSPlugin then
MsgBox "LCMS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.37 HasLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Leopard plugin is installed.
Example:

```
# if MBS.HasLeopardPlugin then
MsgBox "Leopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.38 HasLinuxPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Linux plugin is installed.
Example:

```
# if MBS.HasLinuxPlugin then
MsgBox "Linux Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.39 HasLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Lion plugin is installed.
Example:

```
# if MBS.HasLionPlugin then
MsgBox "Lion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.40 HasMac64bitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mac64bit plugin is installed.
Example:

```
# if MBS.HasMac64bitPlugin then
MsgBox "Mac64bit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.41 HasMacOSXCFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSXCF plugin is installed.
Example:

```
# if MBS.HasMacOSXCFPlugin then
MsgBox "MacOSXCF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.42 HasMacOSXCGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSXCG plugin is installed.
Example:

```
# if MBS.HasMacOSXCGPlugin then
MsgBox "MacOSXCG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.43 HasMacOSXPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSX plugin is installed.
Example:

```
# if MBS.HasMacOSXPlugin then
MsgBox "MacOSX Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.44 HasMacPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mac plugin is installed.
Example:

```
# if MBS.HasMacPlugin then
MsgBox "Mac Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.45 HasMainPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Main plugin is installed.
Example:

```
# if MBS.HasMainPlugin then
MsgBox "Main Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.46 HasMarkDownPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MarkDown plugin is installed.
Example:

```
# if MBS.HasMarkDownPlugin then
MsgBox "MarkDown Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.47 HasMavericksPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mavericks plugin is installed.
Example:

```
# if MBS.HasMavericksPlugin then
MsgBox "Mavericks Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.48 HasMountainLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MountainLion plugin is installed.
Example:

```
# if MBS.HasMountainLionPlugin then
MsgBox "MountainLion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.49 HasNetworkPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Network plugin is installed.
Example:

```
# if MBS.HasNetworkPlugin then
MsgBox "Network Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.50 HasNikonCameraPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the NikonCamera plugin is installed.
Example:

```
# if MBS.HasNikonCameraPlugin then
MsgBox "NikonCamera Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.51 HasOCRPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the OCR plugin is installed.
Example:

```
# if MBS.HasOCRPlugin then
MsgBox "OCR Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.52 HasOverlayPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Overlay plugin is installed.
Example:

```
# if MBS.HasOverlayPlugin then
MsgBox "Overlay Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.53 HasPHPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the PHP plugin is installed.
Example:

```
# if MBS.HasPHPPlugin then
MsgBox "PHP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.54 HasPicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Picture plugin is installed.
Example:

```
# if MBS.HasPicturePlugin then
MsgBox "Picture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.55 HasPNGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the PNG plugin is installed.
Example:

```
# if MBS.HasPNGPlugin then
MsgBox "PNG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.56 HasQTKitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the QTKit plugin is installed.
Example:

```
# if MBS.HasQTKitPlugin then
MsgBox "QTKit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.57 HasQuickTimePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the QuickTime plugin is installed.
Example:

```
# if MBS.HasQuickTimePlugin then
MsgBox "QuickTime Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.58 HasRegExPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the RegEx plugin is installed.
Example:

```
# if MBS.HasRegExPlugin then
MsgBox "RegEx Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.59 HasSmartCardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SmartCard plugin is installed.
Example:

```
# if MBS.HasSmartCardPlugin then
MsgBox "SmartCard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.60 HasSnowLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SnowLeopard plugin is installed.
Example:

```
# if MBS.HasSnowLeopardPlugin then
MsgBox "SnowLeopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.61 HasSQLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SQL plugin is installed.
Example:

```
# if MBS.HasSQLPlugin then
MsgBox "SQL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.62 HasTAPIPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the TAPI plugin is installed.
Example:

```
# if MBS.HasTAPIPlugin then
MsgBox "TAPI Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.63 HasTidyPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tidy plugin is installed.
Example:

```
# if MBS.HasTidyPlugin then
MsgBox "Tidy Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.64 HasTiffPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tiff plugin is installed.
Example:

```
# if MBS.HasTiffPlugin then
MsgBox "Tiff Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.65 HasTwainPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Twain plugin is installed.
Example:

```
# if MBS.HasTwainPlugin then
MsgBox "Twain Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.66 HasUSBPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the USB plugin is installed.
Example:

```
# if MBS.HasUSBPlugin then
MsgBox "USB Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.67 HasUtilPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Util plugin is installed.
Example:

```
# if MBS.HasUtilPlugin then
MsgBox "Util Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.68 HasVLCPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the VLC plugin is installed.
Example:

```
# if MBS.HasVLCPlugin then
MsgBox "VLC Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.69 HasWIAPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WIA plugin is installed.
Example:

```
# if MBS.HasWIAPlugin then
MsgBox "WIA Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.70 HasWinDragDropPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WinDragDrop plugin is installed.
Example:

```
# if MBS.HasWinDragDropPlugin then
MsgBox "WinDragDrop Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.71 HasWinICMPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WinICM plugin is installed.
Example:

```
# if MBS.HasWinICMPlugin then
MsgBox "WinICM Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.72 HasWinPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Win plugin is installed.
Example:

```
# if MBS.HasWinPlugin then
MsgBox "Win Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.73 HasXLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XL plugin is installed.
Example:

```
# if MBS.HasXLPlugin then
MsgBox "XL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.74 HasXMPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XMP plugin is installed.
Example:

```
# if MBS.HasXMPPlugin then
MsgBox "XMP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

142.1.75 HostName = "MyMac"

MBS Main Plugin, Plugin Version: 14.0. **Function:** The host the IDE was launched on for building an app.
Example:

MsgBox mbs.HostName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

142.1.76 IsPrerelease = false

MBS Main Plugin, Plugin Version: 20.0. **Function:** Wether this is a prerelease version of the plugin.
Notes: Value is true for beta versions and false for release.

142.1.77 UserName = "Christian Schmitz"

MBS Main Plugin, Plugin Version: 14.0. **Function:** The user name of the user who launched the IDE.
Example:

MsgBox mbs.UserName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

142.1.78 Version = "MBS Xojo Plugin 20.1 (build 20195) Sat Mar 7 09:10:12 2020 (GMT)"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The plugin version string.
Example:

MsgBox mbs.Version

142.1.79 VersionNumber = 20.1

MBS Main Plugin, Plugin Version: 19.5. **Function:** The plugin version as number.
Example:

// use newer code

Notes: // use older code

142.1.80 VersionString = "20.1"

MBS Main Plugin, Plugin Version: 11.1. **Function:** The plugin version string (only, the number part).
Example:

MsgBox mbs.VersionString

Notes: e.g. "11.1"

142.1.81 Website = "http://www.monkeybreadsoftware.de"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The URL for the Monkeybread Software website.
Notes: ShowURL mbs.Website

142.1.82 Year = 2020

MBS Main Plugin, Plugin Version: 9.5. **Function:** The year of the plugin.
Example:

MsgBox str(mbs.Year)

142.2 Globals

142.2.1 LogoMBS(size as Integer = 0, WithAlphaChannel as boolean = false) as Picture

MBS Main Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the MBS logo picture.
Example:

window1.Backdrop = LogoMBS(500)

Notes:

Best size is 500 pixel.
This function exists to provide a sample picture for examples.
If WithAlphaChannel is true and alpha channel pictures are supported, the plugin returns a picture with alpha channel. (Cocoa, Windows or Linux target on Xojo 2011r4).

Due to a bug in console runtime from Real Software this function can only produce useful pictures with 500 pixel size in console or web applications.

142.2.2 MBSPluginCompileDate as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation date of the plugins.
Example:

MsgBox MBSPluginCompileDate

Notes:

e.g. "Aug 27 2006"
Actually the compilation date of the Version Plugin part which defines this function.

142.2.3 MBSPluginCompileTime as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation Time of the plugins.
Example:

```
MsgBox MBSPluginCompileTime
```

Notes:

e.g. "19:40:16"
Actually the compilation date of the Version Plugin part which defines this function.

142.2.4 MBSPluginVersion as string

MBS Main Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a version string from the plugin.
Example:

```
MsgBox "Build with Xojo "+RBVersionString+" and "+MBSPluginVersion
```

Notes: You can show that in your about box so your users can tell you which plugin they use.

142.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean

MBS Main Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function to register the plugins.
Example:

```
const name = "Joe Smith"
const serialnumber = 123456789
const enddate = 200710

if not RegisterMBSPlugin(name,"MBS2007", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

Notes:

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2007 and newer serial numbers.
See also:

- 142.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean 19530

142.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

MBS Main Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function to register the plugins.
Example:

```
const name = "Joe Smith"
const serialnumber = "123456"
const enddate = 200710

if not RegisterMBSPlugin(name, "MBS Complete", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

Notes:

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2015 and newer serial numbers.
See also:

- 142.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean 19529

142.2.7 SetRegistrationMessageMBS(ID as Integer, message as string)

MBS Main Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines what messages to show.
Example:

SetRegistrationMessageMBS(0, "This application is broken. Please reinstall!")

Notes:

ID currently can only be 0 and is reserved for future flags.

Currently this changes the message which is shown if plugins of different versions are found.
This typically happens if installers mix old and new libraries in an app and the user should be asked to reinstall the application.

142.3 class RegistrationEngineMBS

142.3.1 class RegistrationEngineMBS

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An engine to add serial number generation to your application.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If you want to add serial numbers to your application, you can use this class to write yourself a serial number generator application.
You can later in your application use this class to verify the serial number.

You may want to design your application that the serial number is written to your preferences file so you can verify it every time your application is launched. But if you do this, also save some computer related value there so you can avoid people cloning the system. For example the MAC ID, the user name, the systemfolder creation date. This way you detect whenever a preferences file is copied to another machine.

For generate and later verify serial numbers the setup of the class must match. So carefully check how your serial number should look like. A format like "MA-1234-5678-9012-V1" can be good. Use a prefix and suffix so make serial numbers from different products and different major versions look different. 12 letters are normally enough for a serial number. Especially if you use alpha numeric characters. You can of course change the alphabet string and use lower case letters.

142.3.2 Blog Entries

142.3.3 Methods

142.3.4 Calc as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the serial number.

142.3.5 Verify(s as string) as boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Verifies the serial number.
Notes:

If you only use upper case letter for your serial numbers, use a function like uppercase before calling verify. This way you avoid that a serial number "abc" is invalid because it is not "ABC".
Returns true on success and false on failure.

142.3.6 Properties

142.3.7 Alphabet as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The characters to use for serial numbers.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.Alphabet="ABC123"
MsgBox r.Calc // shows: A1AC-2312-12CC

r.Alphabet="0123456789"
MsgBox r.Calc // shows: 4308-2905-4013
```

Notes:

Must have at least two characters.
Characters must be unique.
Default is "0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ".
(Read and Write property)

142.3.8 BlockLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Length of the blocks in the serial number.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If this value is 0, no delimeters are used.
(Read and Write property)

142.3.9 Delimiter as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The delimiter string to use for separating blocks in the serial number.
Notes:

Default is "-".
(Read and Write property)

142.3.10 Mode as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mode of operation.
Notes:

Currently always 0.
Set to 1 to use 128bit instead of 64bit number.
(Read and Write property)

142.3.11 NumberLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum length of the number.

Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes: (Read and Write property)

142.3.12 Platform as Integer

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which platform to use for platform specific keys.
Notes:

Value is set in the constructor to current platform, but you can change it if you want to run the key generator on a different platform.

Values are:

1 Mac
2 Windows
3 Linux

All other values behave like PlatformSpecificKeys is false.
This value is only used if PlatformSpecificKeys is true.
(Read and Write property)

142.3.13 PlatformSpecificKeys as Boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether you want platform specific keys.

Notes:

Set to false if you want to have Windows, Mac OS X and Linux all use the same serial numbers.
Set to true if you want to different serial numbers depending on the platform.

Default is false.
(Read and Write property)

142.3.14 Prefix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The prefix for the serial number string.
Notes: (Read and Write property)

142.3.15 Seed as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A seed value you can set to get your serial number more unique.
Notes: (Read and Write property)

142.3.16 Suffix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The suffix for the serial number string.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="Xojo"
r.suffix="-RB600CPFUSA-MAC"

r.BlockLength=8
r.NumberLength=32

MsgBox r.Calc
// shows: EV6GG9P2-DI533EV6-GG9P2DI5-33EV6GG9-RB600CPFUSA-MAC
// looks like a Xojo serial number ;-)
```

Notes: (Read and Write property)

142.3.17 Field(index as Integer) as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data fields you can use for personalized serial numbers.
Notes:

Fill this fields with all the values you want to use for personalized serial numbers. You should use the name of the user, maybe the postal address. You can use hardware values like the MAC address or software values like the system folder creation date.
Also you may have serial numbers different between version 1.x and 2.x of your application. So you pass version information like "1" or "2". Do not pass values like "1.2.3" as this serial number won't work on "1.2.4".

Index is from 0 to 7.
(Read and Write computed property)

Chapter 143

Regular Expressions

143.1 class RegExMBS

143.1.1 class RegExMBS

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for fast Regular Expression Search in a perl compatible way.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="Hello World"

dim start as Integer = 0
while r.Execute(s,start)>0

dim p as Integer = r.OffsetCharacters(0)
dim l as Integer = r.OffsetCharacters(1)-r.OffsetCharacters(0)

MsgBox "Found "+searchString+" on position "+str(p)+" with length "+str(l)+" in """+s+"""

start = r.Offset(1)
wend

else
MsgBox "failed to compile"
end if
```

Notes:

uses the PCRE library. You may check the PCRE documentation.

The RegExMBS class has different defaults as the built in RegEx class in Xojo.

You may want to set options like this:

RB: CaseSensitive = false
MBS: CompileOptionCaseLess = true

RB: DotMatchAll = false
MBS: CompileOptionDotAll = false

RB: Greedy = true
MBS: CompileOptionUngreedy = false

RB: LineEndType = 0
MBS: CompileOptionNewLineAnyCRLF = true and ExecuteOptionNewLineAnyCRLF = true

RB: MatchEmpty = true
MBS: ExecuteOptionNotEmpty = false

and you want to set CompileOptionMultiline to true for multi line match.

143.1.4 Methods

143.1.5 Compile(pattern as string) as boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compiles a pattern.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then
msgbox "OK"
else
MsgBox "failed to compile"
end if
```

Notes:

Some predefined patterns like \b do not support Unicode well, so you may work around that by using your own pattern.

Returns true on success and false on failure.
ErrorMessage, Lasterror, ErrorOffset and Handle are set.

The following table lists the error codes than may be returned by Compile(), along with the error messages that may be returned by both compiling functions.

143.1.6 CompileMemory(pattern as memoryblock, ByteOffset as Integer) as boolean

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compiles a pattern.
Notes:

Same as Compile, but the text is stored in a memoryblock and must be a 0 terminated C string.
Be careful to use valid UTF8 input and provide offset in byte units and not in characters.

143.1.7 ConfigBSR as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer whose value indicates what character sequences the \R escape sequence matches by default.
Notes: A value of 0 means that \R matches any Unicode line ending sequence; a value of 1 means that \R matches only CR, LF, or CRLF. The default can be overridden when a pattern is compiled or matched.

143.1.8 ConfigLinkSize as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that contains the number of bytes used for internal linkage in compiled regular expressions.
Notes: The value is 2, 3, or 4. Larger values allow larger regular expressions to be compiled, at the expense of slower matching. The default value of 2 is sufficient for all but the most massive patterns, since it allows the compiled pattern to be up to 64K in size.

143.1.9 ConfigMallocThreshold as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output is an integer that contains the threshold above which the POSIX interface uses malloc() for output vectors.

143.1.10 ConfigMatchLimit as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that gives the default limit for the number of internal matching function calls in a Execute execution.

143.1.11 ConfigMatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that gives the default limit for the depth of recursion when calling the internal matching function in a Execute() execution.

143.1.12 ConfigNewLine as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What newline character is used as default.
Notes: The output is an integer whose value specifies the default character sequence that is recognized as meaning "newline". The four values that are supported are: 10 for LF, 13 for CR, 3338 for CRLF, -2 for ANYCRLF, and -1 for ANY. Though they are derived from ASCII, the same values are returned in EBCDIC environments. The default should normally correspond to the standard sequence for your operating system.

143.1.13 ConfigStackRecurse as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that is set to one if internal recursion when running Execute() is implemented by recursive function calls that use the stack to remember their state.
Notes: This is the usual way that PCRE is compiled. The output is zero if PCRE was compiled to use blocks of data on the heap instead of recursive function calls. In this case, malloc and free are called to manage memory blocks on the heap, thus avoiding the use of the stack.

143.1.14 ConfigUnicodeProperties as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if unicode properties are available.
Notes: Should be true for the plugin.

143.1.15 ConfigUTF8 as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether UTF8 is supported.
Notes: If this ever is false, please complain. This plugin is designed to work only on UTF8 strings for best performance.

143.1.16 Constructor(VecSize as Integer = 0)

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

You pass here the internal vector size which limits how many substrings you can find.
For 20 substrings, you need to pass (20+1)*3 for vector size.

143.1.17 Escape(text as string) as string

MBS Tools Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Escapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

143.1.18 Execute(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern again.
Notes: You can use this variant of execute to continue a search in the same string/memoryblock at a new starting offset.
See also:

- 143.1.19 Execute(text as string, start as Integer = 0) as Integer 19544

143.1.19 Execute(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 ABC 456"

r=new RegExMBS
if r.Compile(" \D+ ") then
```

```
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 3 8
// 1 for number of results
// 3 for 3 bytes before the matched pattern
// 8 for the 8 bytes before the end of the matched pattern
end if
```

Notes:

Returns the number of found offsets.
text must be in UTF-8 text encoding.
Start must be 0 for the first character and the byte offset for other chacters. Do not pass values from OffsetCharacters here!

Return values from Execute:
If Execute() fails, it returns a negative number. The following are defined in the header file:

See also:

- 143.1.18 Execute(start as Integer = 0) as Integer 19544

143.1.20 ExecuteMemory(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but the text is stored in a memoryblock.
Be careful to use valid UTF8 input and provide offset and length in byte units and not in characters.
If ByteLength is zero, we take the length of the memoryblock.

143.1.21 ExecuteMemoryMT(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as ExecuteMemory, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

143.1.22 ExecuteMT(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 143.1.23 ExecuteMT(text as string, start as Integer = 0) as Integer 19546

143.1.23 ExecuteMT(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 143.1.22 ExecuteMT(start as Integer = 0) as Integer 19546

143.1.24 InfoNameEntry(Index as Integer) as string

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a name entry in the list of captures.
Notes: Only valid after pattern was compiled.

143.1.25 Match(text as string) as boolean

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text.
Example:

```
dim r as new RegExMBS

if r.Compile("e.l") then

if r.Match("Hello") then
MsgBox "match"
end if

if r.Match("Helro") then
MsgBox "wrong match"
end if
end if
```

Notes:

Returns true if text matches.

Does not set properties like Execute, so subString() won't work.
See also:

- 143.1.26 Match(text() as string, inverse as boolean = false) as string() 19547
- 143.1.27 Match(text() as Variant, inverse as boolean = false) as string() 19548

143.1.26 Match(text() as string, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim t() as string = array("Hello", "World", "Xojo", "test")

dim match1() as string = r.Match(t)
dim match2() as string = r.Match(t, true)
```

```
MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 143.1.25 Match(text as string) as boolean 19547
- 143.1.27 Match(text() as Variant, inverse as boolean = false) as string() 19548

143.1.27 Match(text() as Variant, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given variant array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim dic as new Dictionary
dic.Value("Hello") = 1
dic.Value("World") = 2
dic.Value("Xojo") = 3
dic.Value("Test") = 4

dim match1() as string = r.Match(dic.keys)
dim match2() as string = r.Match(dic.keys, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

The variant array should have entries which convert well to string.
Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 143.1.25 Match(text as string) as boolean 19547

- 143.1.26 Match(text() as string, inverse as boolean = false) as string() 19547

143.1.28 Offset(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the offset in the offset list with given index in bytes.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 äöü ABC 456"

r=new RegExMBS
if r.Compile(".ö.") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(".\xF6.") then // finds ö using Unicode codepoint
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if
```

Notes:

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

143.1.29 OffsetCharacters(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the offset in the offset list with given index in characters.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

Notes:

This function is identical to Offset(), but returns characters instead of bytes.
Works only with valid UTF-8 strings as input.
Value is calculated on each function call based on Offset(index) and current text.

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

Please note that if you just need offsets for calling Mid() function, you can get better performance by using just Offset and MidB function. Than neither Mid and OffsetCharacters need to calculate the character offset.

143.1.30 Replace(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces the text on the current found position and returns the complete new text.
Notes:

You need to call Execute before.
Lasterror is set.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

143.1.31 ReplaceAll(Target as string, NewText as string = "") as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the target string for current pattern and replaces all occurrences with the new text.
Notes:

You need to call Compile before to initialize the pattern and you should call Study before to optimize the pattern.
Lasterror is set.
Target and NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

143.1.32 ReplaceSelection(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces the text on the current found position and returns new text for that selection.
Notes:

This method is for text editors where you will store result in editfield.seltext to replace the current selection.
Lasterror is set.
You need to call Execute before.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

143.1.33 StringNumber(name as string) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This convenience function finds the number of a named substring capturing parenthesis in a compiled pattern.
Notes:

name: Name whose number is required
The yield of the function is the number of the parenthesis if the name is found, or PCRE_ERROR_NOSUBSTRING otherwise.

143.1.34 Study as boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** After you compiled a pattern study can optimize it.
Notes:

Only useful if you use Execute several times.
In that case you call one time Compile, one time Study and several times Execute.
Errormessage is set.

143.1.35 Substring(index as Integer) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given index.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 143.1.36 Substring(name as string) as string 19552

143.1.36 Substring(name as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given name.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 143.1.35 Substring(index as Integer) as string 19552

143.1.37 Unescape(text as string) as string

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unescapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

143.1.38 Version as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PCRE library as an ASCII string.

143.1.39 Properties

143.1.40 CompileOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Force pattern anchoring
Notes: (Read and Write property)

143.1.41 CompileOptionAutoCallOut as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Compile automatic callouts
Notes: (Read and Write property)

143.1.42 CompileOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

143.1.43 CompileOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.CompileOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default

is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

143.1.44 CompileOptionCaseLess as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Do caseless matching
Example:

```
dim r as new RegExMBS
dim searchString as string = "hello"

r.CompileOptionCaseLess=True

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

143.1.45 CompileOptionDollarEndOnly as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: $ not to match newline at end
Notes: (Read and Write property)

143.1.46 CompileOptionDotAll as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: . matches anything including endofline

Example:

```
dim r as new RegExMBS
dim searchString as string = "<.+>"

r.CompileOptionDotAll = false // finds only if true

if r.Compile(searchString) then

dim s as string="<Step enable=""True""+EndOfLine.unix+"id=""93"" name=""Beep""/>"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

143.1.47 CompileOptionDuplicateNames as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this bit is set, names used to identify capturing subpatterns need not be unique.
Notes:

This can be helpful for certain types of pattern when it is known that only one instance of the named subpattern can ever be matched. There are more details of named subpatterns below; see also the pcrepattern documentation.
(Read and Write property)

143.1.48 CompileOptionExtended as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Ignore whitespace and # comments
Notes: (Read and Write property)

143.1.49 CompileOptionFirstLine as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Force matching to be before newline
Notes: (Read and Write property)

143.1.50 CompileOptionJavaScriptCompat as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this option is set, PCRE's behaviour is changed in some ways so that it is compatible with JavaScript rather than Perl.
Notes:

The changes are as follows:

(1) A lone closing square bracket in a pattern causes a compile-time error, because this is illegal in JavaScript (by default it is treated as a data character). Thus, the pattern AB] CD becomes illegal when this option is set.

(2) At run time, a back reference to an unset subpattern group matches an empty string (by default this causes the current matching alternative to fail). A pattern such as (\1)(a) succeeds when this option is set (assuming it can find an "a" in the subject), whereas it fails by default, for Perl compatibility.
(Read and Write property)

143.1.51 CompileOptionMultiline as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: ^and $ match newlines within data
Example:

```
dim r as RegExMBS
dim n,i,c as Integer
dim s as string

s=ReplaceLineEndings(EditField1.text,EndOfLine.UNIX)

r=new RegExMBS

'r.CompileOptionFirstLine=True
r.CompileOptionMultiline=True

if r.Compile("^....$ ") then
n=0
```

```
do
c=r.Execute(s,n)

if c>0 then
MsgBox r.Substring(0)
n=r.Offset(1)
end if

loop until c=0
end if
```

Notes: (Read and Write property)

143.1.52 CompileOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting CompileOptionNewLineCR or CompileOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting CompileOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting CompileOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting CompileOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, CompileOptionNewLineCR with CompileOptionNewLineLF is equivalent to CompileOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

143.1.53 CompileOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

143.1.54 CompileOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

143.1.55 CompileOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

143.1.56 CompileOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

143.1.57 CompileOptionNoAutoCapture as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Disable numbered capturing parentheses (named ones available)

Notes: (Read and Write property)

143.1.58 CompileOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is an option that acts at matching time; that is, it is really an option for Execute.
Notes:

If it is set at compile time, it is remembered with the compiled pattern and assumed at matching time.
(Read and Write property)

143.1.59 CompileOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Do not check the pattern for UTF-8 validity.
Notes: (Read and Write property)

143.1.60 CompileOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the compile options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

143.1.61 CompileOptionUngreedy as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Invert greediness of quantifiers.
Notes:

Basicly this is about whether to find the next matching item or the last matching item in the whole string. Matching the next item is always much faster.
(Read and Write property)

143.1.62 CompileOptionUnicodeCodePoints as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to support unicode code points for character classes.
Notes:

This option changes the way PCRE processes \B, \b, \D, \d, \S, \s, \W, \w, and some of the POSIX character classes. By default, only ASCII characters are recognized, but if PCRE_UCP is set, Unicode properties are used instead to classify characters. More details are given in the section on generic character types in the pcrepattern page. If you set PCRE_UCP, matching one of the items it affects takes much longer. The option is available only if PCRE has been compiled with Unicode property support.
(Read and Write property)

143.1.63 CompileOptionUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Run in UTF-8 mode.
Notes: (Read and Write property)

143.1.64 Count as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of offsets found.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
```

```
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read only property)

143.1.65 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last message reported.
Notes:

Set by Study and Compile.
(Read only property)

143.1.66 ErrorOffset as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error offset from the compile function.
Notes: (Read only property)

143.1.67 ExecuteOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Match only at the first position
Notes: (Read and Write property)

143.1.68 ExecuteOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

143.1.69 ExecuteOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.ExecuteOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

143.1.70 ExecuteOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting ExecuteOptionNewLineCR or ExecuteOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting ExecuteOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting ExecuteOptionNewLineAnyCRLF specifies that

any of the three preceding sequences should be recognized. Setting ExecuteOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, ExecuteOptionNewLineCR with ExecuteOptionNewLineLF is equivalent to ExecuteOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

143.1.71 ExecuteOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

143.1.72 ExecuteOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

143.1.73 ExecuteOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.

(Read and Write property)

143.1.74 ExecuteOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

143.1.75 ExecuteOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** There are a number of optimizations that Execute uses at the start of a match, in order to speed up the process.
Notes:

For example, if it is known that an unanchored match must start with a specific character, it searches the subject for that character, and fails immediately if it cannot find it, without actually running the main matching function. This means that a special item such as (*COMMIT) at the start of a pattern is not considered until after a suitable starting point for the match has been found. When callouts or (*MARK) items are in use, these "start-up" optimizations can cause them to be skipped if the pattern is never actually used. The start-up optimizations are in effect a pre-scan of the subject that takes place before the pattern is run.
The ExecuteOptionNoStartOptimize option disables the start-up optimizations, possibly causing performance to suffer, but ensuring that in cases where the result is "no match", the callouts do occur, and that items such as (*COMMIT) and (*MARK) are considered at every possible starting position in the subject string. If ExecuteOptionNoStartOptimize is set at compile time, it cannot be unset at matching time.

Setting ExecuteOptionNoStartOptimize can change the outcome of a matching operation. Consider the pattern

(*COMMIT)ABC
When this is compiled, PCRE records the fact that a match must start with the character "A". Suppose the subject string is "DEFABC". The start-up optimization scans along the subject, finds "A" and runs the first match attempt from there. The (*COMMIT) item means that the pattern must match the current starting position, which in this case, it does. However, if the same match is run with ExecuteOptionNoStartOptimize set, the initial scan along the subject string does not happen. The first match attempt is run starting from "D" and when this fails, (*COMMIT) prevents any further matches being tried, so the overall result is "no match". If the pattern is studied, more start-up optimizations may be used. For example, a minimum length for the subject may be recorded. Consider the pattern
(*MARK:A)(X | Y)

The minimum length for a match is one character. If the subject is "ABC", there will be attempts to match "ABC", "BC", "C", and then finally an empty string. If the pattern is studied, the final attempt does not take place, because PCRE knows that the subject is too short, and so the (*MARK) is never encountered. In this case, studying the pattern does not affect the overall match result, which is still "no match", but it does affect the auxiliary information that is returned.
(Read and Write property)

143.1.76 ExecuteOptionNotBOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the beginning of a line
Notes: (Read and Write property)

143.1.77 ExecuteOptionNotEmpty as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: An empty string is not a valid match
Notes: (Read and Write property)

143.1.78 ExecuteOptionNotEmptyAtStart as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the options.
Notes:

This is like ExecuteOptionNotEmpty, except that an empty string match that is not at the start of the subject is permitted. If the pattern is anchored, such a match can occur only if the pattern contains \K.
Perl has no direct equivalent of ExecuteOptionNotEmpty or ExecuteOptionNotEmptyAtStart, but it does make a special case of a pattern match of the empty string within its split() function, and when using the /g modifier. It is possible to emulate Perl's behaviour after matching a null string by first trying the match again at the same offset with ExecuteOptionNotEmptyAtStart and ExecuteOptionAnchored, and then if that fails, by advancing the starting offset (see below) and trying an ordinary match again. There is some code that demonstrates how to do this in the pcredemo sample program. In the most general case, you have to check to see if the newline convention recognizes CRLF as a newline, and if so, and the current character is CR followed by LF, advance the starting offset by two characters instead of one.
(Read and Write property)

143.1.79 ExecuteOptionNotEOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the end of a line
Notes: (Read and Write property)

143.1.80 ExecuteOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Do not check the subject for UTF-8 validity
Notes: (Read and Write property)

143.1.81 ExecuteOptionPartial as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Return PCRE_ERROR_PARTIAL for a partial match
Notes: (Read and Write property)

143.1.82 ExecuteOptionPartialHard as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option (and ExecuteOptionPartial) turn on the partial matching feature.
Notes:

A partial match occurs if the end of the subject string is reached successfully, but there are not enough subject characters to complete the match. If this happens when ExecuteOptionPartial (but not ExecuteOptionPartialHard) is set, matching continues by testing any remaining alternatives. Only if no complete match can be found is ErrorPartial returned instead of PCRE_ERROR_NOMATCH. In other words, ExecuteOptionPartial says that the caller is prepared to handle a partial match, but only if no complete match can be found.
If ExecuteOptionPartialHard is set, it overrides ExecuteOptionPartial. In this case, if a partial match is found, Execute() immediately returns ErrorPartial, without considering any other alternatives. In other words, when ExecuteOptionPartialHard is set, a partial match is considered to be more important that an alternative complete match.

In both cases, the portion of the string that was inspected when the partial match was found is set as the first matching string. There is a more detailed discussion of partial and multi-segment matching, with examples, in the pcrepartial documentation.
(Read and Write property)

143.1.83 ExecuteOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the execute options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

143.1.84 Handle as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle to the pattern data structure.
Notes: (Read only property)

143.1.85 InfoCaptureCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of captures defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

143.1.86 InfoNameCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of names defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

143.1.87 InfoSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the size of the compiled pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

143.1.88 InfoStudySize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the study details size.
Notes:

Only valid after calling Study.
(Read only property)

143.1.89 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes:

0 is no error and -1 is some parameter error.
See Error* constants for other values.
(Read only property)

143.1.90 MatchLimit as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The match limit.
Notes:

You can set it to a limit value. If set to zero, the plugin will use the default.

The default value for the limit can be set when PCRE is built; the default default is 10 million, which handles all but the most extreme cases. You can override the default by setting this property.
(Read and Write property)

143.1.91 MatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The limit for recursion.
Notes:

The MatchLimitRecursion field is similar to MatchLimit, but instead of limiting the total number of times that match() is called, it limits the depth of recursion. The recursion depth is a smaller number than the total number of calls, because not all calls to match() are recursive. This limit is of use only if it is set

smaller than MatchLimit.

Limiting the recursion depth limits the amount of stack that can be used.

The default value for MatchLimitRecursion can be set when PCRE is built; the default default is the same value as the default for MatchLimit. You can override the default by setting this property. If value is zero, the plugin uses the default.
(Read and Write property)

143.1.92 Text as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compile call.
Notes: (Read only property)

143.1.93 TextMemory as Memoryblock

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compiletext call.
Notes: (Read only property)

143.1.94 VectorSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal vector size.
Notes: (Read only property)

143.1.95 Constants

143.1.96 ErrorBadCount = -15

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This error is given if the value of the ovecsize argument is negative.

143.1.97 ErrorBadMagic = -4

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: PCRE stores a 4-byte "magic number" at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.

143.1.98 ErrorBadNewLine = -23

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An invalid combination of Newline options was given.

143.1.99 ErrorBadOffset = -24

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The value of startoffset was negative or greater than the length of the subject, that is, the value in length.

143.1.100 ErrorBadOption = -3

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An unrecognized bit was set in the options argument.

143.1.101 ErrorBadPartial = -13

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This code is no longer in use. It was formerly returned when the PCRE_PARTIAL option was used with a compiled pattern containing items that were not supported for partial matching. From release 8.00 onwards, there are no restrictions on partial matching.

143.1.102 ErrorBadUTF8 = -10

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: A string that contains an invalid UTF-8 byte sequence was passed as a subject. However, if PCRE_PARTIAL_HARD is set and the problem is a truncated UTF-8 character at the end of the subject, ErrorShortUTF8 is used instead.

143.1.103 ErrorBadUTF8Offset = -11

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character or the end of the subject.

143.1.104 ErrorCallOut = -9

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.105 ErrorDFARecurse = -20

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.106 ErrorDFAUCond = -17

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

0 no error
1 \at end of pattern
2 \c at end of pattern
3 unrecognized character follows \
4 numbers out of order in { } quantifier
5 number too big in { } quantifier
6 missing terminating] for character class
7 invalid escape sequence in character class
8 range out of order in character class
9 nothing to repeat
10 operand of unlimited repeat could match the empty string
11 internal error: unexpected repeat
12 unrecognized character after (?
13 POSIX named classes are supported only within a class
14 missing)
15 reference to non-existent subpattern
16 erroffset passed as NULL
17 unknown option bit(s) set
18 missing) after comment
19 parentheses nested too deeply
20 regular expression too large
21 failed to get memory
22 unmatched parentheses
23 internal error: code overflow
24 unrecognized character after (?<
25 lookbehind assertion is not fixed length
26 malformed number after (?(
27 conditional group contains more than two branches
28 assertion expected after (?(
29 (?R or (?digits must be followed by)
30 unknown POSIX class name
31 POSIX collating elements are not supported
32 this version of PCRE is not compiled with PCRE_UTF8 support
33 spare error
34 character value in \x { ... } sequence is too large
35 invalid condition (?(0)
36 \C not allowed in lookbehind assertion
37 PCRE does not support \L, \l, \N, \U, or \u
38 number after (?C is >255
39 closing) for (?C expected
40 recursive call could loop indefinitely
41 unrecognized character after (?P
42 syntax error after (?P
43 two named groups have the same name
44 invalid UTF-8 string
45 support for \P, \p, and \X has not been compiled
46 malformed \P or \p sequence
47 unknown property name after \P or \p

PCRE_ERROR_NOMATCH	-1	The subject string did not match the pattern.
PCRE_ERROR_NULL	-2	Either code or subject was passed as ””.
PCRE_ERROR_BADOPTION	-3	An unrecognized bit was set in the options argument.
PCRE_ERROR_BADMAGIC	-4	PCRE stores a 4-byte ”magic number” at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.
PCRE_ERROR_UNKNOWN_NODE	-5	While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_NOMEMORY	-6	If a pattern contains back references, but the ovector that is passed to Execute() is not big enough to remember the referenced substrings, PCRE gets a block of memory at the start of matching to use for this purpose. If the call via pcre_malloc() fails, this error is given. The memory is automatically freed at the end of matching.
PCRE_ERROR_MATCHLIMIT	-8	The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_RECURSIONLIMIT	-21	The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_CALLOUT	-9	This error is never generated by Execute() itself. It is provided for use by callout functions that want to yield a distinctive error code. See the pcrecallout documentation for details.
PCRE_ERROR_BADUTF8	-10	A string that contains an invalid UTF-8 byte sequence was passed as a subject.
PCRE_ERROR_BADUTF8_OFFSET	-11	The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character.
PCRE_ERROR_PARTIAL	-12	The subject string did not match, but it did match partially. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_BADPARTIAL	-13	The PCRE_PARTIAL option was used with a compiled pattern containing items that are not supported for partial matching. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_INTERNAL	-14	An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_BADCOUNT	-15	This error is given if the value of the ovecsize argument is negative.

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

143.1.107 ErrorDFAUItem = -16

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.108 ErrorDFAUMLimit = -18

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.109 ErrorDFAWSSize = -19

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.110 ErrorInternal = -14

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

143.1.111 ErrorMatchLimit = -8

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.

143.1.112 ErrorNoMatch = -1

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string did not match the pattern.

143.1.113 ErrorNoSubstring = -7

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This error is used by the substring functions.

143.1.114 ErrorNull = -2

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: Either code or subject was passed as "", or ovector was "" and ovecsize was not zero.

143.1.115 ErrorNullWSLimit = -22

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.116 ErrorPartial = -12

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string did not match, but it did match partially.

143.1.117 ErrorPlugin = -99

MBS Tools Plugin, Plugin Version: 13.1. **Function:** One of the RegEx error constants.
Notes:

Generic error for something wrong with the plugin state.
Like no current regex object internally or wrong function parameters.

143.1.118 ErrorRecursionLimit = -21

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. See the description above.

143.1.119 ErrorShortUTF8 = -25

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string ended with an incomplete (truncated) UTF-8 character, and the PCRE_PARTIAL_HARD option was set. Without this option, ErrorBadUTF8 is returned in this situation.

143.1.120 ErrorUnknownNode = -6

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

143.1.121 ErrorUnknownOpcode = -5

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

Chapter 144

Remote Control

144.1 class GammaFadeMBS

144.1.1 class GammaFadeMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class to perform gamma fades on Mac OS X and Windows.
Notes: On Mac OS X a system API is used. On Windows the GammaMBS class is used internally.

144.1.2 Methods

144.1.3 Constructor

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma fade class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 144.1.4 Constructor(mainwindow as window) 19579

144.1.4 Constructor(mainwindow as window)

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma fade class and queries the current gamma values.

Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 144.1.3 Constructor 19579

144.1.5 GammaFadeIn(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Fades back to the normal screen.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.3 seconds.
Returns true on success and false on failure.

144.1.6 GammaFadeOut(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Fades to a solid color.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.5 seconds.
Returns true on success and false on failure.

144.1.7 Properties

144.1.8 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if there is another gamma fade running.
On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

144.1.9 FadeColor as Color

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The color to use for the fade.
Example:

```
dim g as new GammaFadeMBS
g.FadeColor=& c0000FF // blue
```

Notes:

Default is black.
(Read and Write property)

144.2 class GammaMBS

144.2.1 class GammaMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class to change the gamma settings of the display.
Notes:

You can use that class to change the gamma table. For example to invert the screen or increase/decrease one of the colors.

Works on Mac OS X and Windows.

144.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

144.2.3 Xojo Developer Magazine

- 6.6, page 8: News

144.2.4 Methods

144.2.5 Constructor(mainwindow as window = nil, displayIndex as Integer = 0)

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

144.2.6 SetGamma(gammaScale as Double = 1.0) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Sets the gamma values.
Notes:

The current table assigned to the main screen.
All values are multiplied with gammaScale

144.2.7 Properties

144.2.8 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if it does not find a display with gamma controls.

On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

144.2.9 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last error code.
Notes: (Read and Write property)

144.2.10 Size as Integer

MBS ComputerControl Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The number of entries in the gamma table.
Notes:

Should be 256 for Windows.
And 256 or 1024 for Mac.
(Read only property)

144.2.11 Blue(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The blue value with the given index.

Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

144.2.12 Green(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The green value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

144.2.13 Red(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The red value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

144.3 class KeyCodesMBS

144.3.1 class KeyCodesMBS

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class for translating between key codes and ASCII characters.
Notes:

This class is outdated, please use RemoteControlMBS module.

The list of key codes on a Mac is the same as the one used in the RB documentation for the sprite surface. Some special keys:

Modifier keys

kVirtualCapsLockKey	& h039
kVirtualShiftKey	& h038
kVirtualControlKey	& h03B
kVirtualOptionKey	& h03A
kVirtualCommandKey	& h037

Editing/utility keys

kVirtualHelpKey	& h072
kVirtualDeleteKey	& h033
kVirtualTabKey	& h030
kVirtualEnterKey	& h04C
kVirtualReturnKey	& h024
kVirtualEscapeKey	& h035
kVirtualForwardDeleteKey	& h075

Navigation keys

kVirtualHomeKey	& h073
kVirtualEndKey	& h002
kVirtualPageUpKey	& h074
kVirtualPageDownKey	& h079
kVirtualLeftArrowKey	& h07B
kVirtualRightArrowKey	& h07C
kVirtualUpArrowKey	& h07E
kVirtualDownArrowKey	& h07D

Key codes for Windows:

144.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

- MBS Real Studio Plugins, version 11.3pr14

144.3.3 Methods

144.3.4 AsciiToKeyCode(ascii as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the keycode which is needed to be pressed to create this ASCII character.
Notes: You get the main key, not any modifier which may also be pressed.

144.3.5 KeyCodeToAscii(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the ASCII code which matches the key code.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

// makes a big A on a german keyboard:
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0+512))
```

Notes:

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.
See MacTextForKeyCode method in RemoteControlMBS module.

144.3.6 KeyCodeToAsciiWithSecondKeyCode(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the ASCII code which matches the key code with the current state.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

MsgBox str(k.KeyCodeToAscii(& h0A))
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0))

// gives â on a German Keyboard
```

Notes:

On the first call of KeyCodeToAscii you get the ASCII char, but if you call KeyCodeToAsciiWithSecondKeyCode and the state property is not changed, you can get what the user gets if he presses several keys.
KeyCodeToAscii resets state to 0 before calling.
On Windows, KeyCodeToAscii and KeyCodeToAsciiWithSecondKeyCode are equal.

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.

144.3.7 TestForAsciiKeyDown(ascii as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns true if the key with the given ascii code is pressed.

144.3.8 TestForKeyDown(keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns true if the key with the given key code is pressed.
Example:

```
Dim k As New KeyCodesMBS

Const VK_SHIFT = & h10 // for Windows
If k.TestForKeyDown(VK_SHIFT) Then
MsgBox "shift"
Else
```

```
MsgBox "no shift"
End If
```

144.3.9 Update

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Updates the layout so it is the current one.

144.3.10 Properties

144.3.11 LastError as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last error code.
Notes:

The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

144.3.12 Name as String

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The name for the current keyboard layout.
Notes:

On Mac OS 9 e.g. "Deutsch".
On Mac OS X e.g. "German".
On Windows 98 e.g. "00020407".
(Read only property)

144.3.13 State as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last state.
Notes:

The function KeyCodeToAscii stores a code here which the function KeyCodeToAsciiWithSecondKeyCode will use on further calls.

(Read and Write property)

VK_LBUTTON	& h01
VK_RBUTTON	& h02
VK_CANCEL	& h03
VK_MBUTTON	& h04
VK_XBUTTON1	& h05 (Windows 2000 and newer)
VK_XBUTTON2	& h06 (Windows 2000 and newer)
VK_BACK	& h08
VK_TAB	& h09
VK_CLEAR	& h0C
VK_RETURN	& h0D
VK_SHIFT	& h10
VK_CONTROL	& h11
VK_MENU	& h12
VK_PAUSE	& h13
VK_CAPITAL	& h14
VK_KANA	& h15
VK_HANGUL	& h15
VK_JUNJA	& h17
VK_FINAL	& h18
VK_HANJA	& h19
VK_KANJI	& h19
VK_ESCAPE	& h1B
VK_CONVERT	& h1C
VK_NONCONVERT	& h1D
VK_ACCEPT	& h1E
VK_MODECHANGE	& h1F
VK_SPACE	& h20
VK_PRIOR	& h21
VK_NEXT	& h22
VK_END	& h23
VK_HOME	& h24
VK_LEFT	& h25
VK_UP	& h26
VK_RIGHT	& h27
VK_DOWN	& h28
VK_SELECT	& h29
VK_PRINT	& h2A
VK_EXECUTE	& h2B
VK_SNAPSHOT	& h2C
VK_INSERT	& h2D
VK_DELETE	& h2E
VK_HELP	& h2F
VK_0 - VK_9	are the same as ASCII "0" - "9" (& h30 - & h39)
VK_A - VK_Z	are the same as ASCII "A" - "Z" (& h41 - & h5A)
VK_LWIN	& h5B
VK_RWIN	& h5C
VK_APPS	& h5D
VK_SLEEP	& h5F
VK_NUMPAD0	& h60
VK_NUMPAD1	& h61
VK_NUMPAD2	& h62
VK_NUMPAD3	& h63
VK_NUMPAD4	& h64
VK_NUMPAD5	& h65

shiftKey	512	shift key down?
alphaLock	1024	alpha lock down?
optionKey	2048	option key down?
controlKey	4096	control key down?
rightShiftKey	8192	right shift key down?
rightOptionKey	16384	right Option key down?
rightControlKey	32768	right Control key down?

shiftKey	512	shift key down?
alphaLock	1024	alpha lock down?

144.4 class PresskeyMBS

144.4.1 class PresskeyMBS

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This class allows you to simulate keyboard activity.
Deprecated: This item is deprecated and should no longer be used. You can use RemoteControlMBS instead. **Notes:** This class is deprecated, please use RemoteControlMBS module.

144.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

144.4.3 Methods

144.4.4 clear

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Resets this object.

144.4.5 mouseclick(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse button.
Notes:

Clicks the mouse at current position.
Left button is used.
If you forget the mouseup you may loose control about a Mac with Mac OS X, but if you have enabled external terminal login you can login via SSH and quit Xojo from outside.

The Mac version sets the lasterror property.
See also:

- 144.4.6 MouseClick(down as boolean, rightdown as boolean) 19592

144.4.6 MouseClick(down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse with the given buttons.

Notes: Same as MouseClick, but with an additional rightdown parameter.
See also:

- 144.4.5 mouseclick(down as boolean) 19592

144.4.7 MouseMove(globalx as Integer,globaly as Integer)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the mouse.
Example:

```
dim x,y as Integer
dim p as PresskeyMBS
p=new PresskeyMBS
x=system.mousex
y=system.mousey+10 // move ten pixels down
p.mousemove x,y
```

Notes:

Moves the mouse on screen.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

144.4.8 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean)

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Moves the mouse.
Notes:

Moves the mouse on screen and clicks.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

The Mac version sets the lasterror property.

Mac OS X only:
Based on the values entered, the appropriate mouse-down, mouse-up, mouse-move, or mouse-drag events are generated, by comparing the new state with the current state.
See also:

- 144.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean) 19594

144.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Moves the mouse cursor and clicks the mouse with the given buttons.
Notes: Same as MouseMoveClick, but with an additional rightdown parameter.
See also:

- 144.4.8 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean) 19593

144.4.10 press

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Presses a key.
Example:

```
' example for Mac OS X:
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.keycode=4
p.press 'press H
p.shift=false
p.charcode=asc("e")
p.keycode=14
p.press 'press e
p.charcode=asc("l")
p.keycode=37
p.press 'press l
p.press 'press l
p.charcode=asc("o")
p.keycode=31
p.press 'press o

' example for Windows:

editfield1.setfocus 'so we get something in it!

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.virtualCode=-1 'automatically try to get this code
p.press 'press H
p.shift=false
p.virtualCode=-1 'after a call you find the virtualCode there
```

```
p.charcode=asc("e")
p.press 'press e
p.virtualCode=-1
p.charcode=asc("l")
p.press 'press l
p.press 'press l
p.virtualCode=-1
p.charcode=asc("o")
p.press 'press o
```

Notes:

Simulates a keypress and handles the Settings for Shift, Control, Command and Option key.
Command shows no reaction in my tests for Mac OS Classic
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

144.4.11 pressraw(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Presses a key.
Example:

```
' Works perfectly on Mac OS X but Shift can't be done Raw on Mac OS 9:
dim p as PresskeyMBS

p=new PresskeyMBS

p.charcode=0
p.keycode=& h38
p.pressraw true 'shift down

p.charcode=asc("H")
p.keycode=4
p.pressraw true 'press H
p.pressraw false

p.charcode=0
p.keycode=& h38
p.pressraw false 'shift up

p.charcode=asc("e")
p.keycode=14
```

```
p.pressraw true 'press e
p.pressraw false
p.charcode=asc("l")
p.keycode=37
p.pressraw true 'press l
p.pressraw false
p.pressraw true 'press l
p.pressraw false
p.charcode=asc("o")
p.keycode=31
p.pressraw true 'press o
p.pressraw false
```

Notes:

Simulates a keypress and doesn't handle the Settings for Shift, Control, Command and Option key.
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

144.4.12 Properties

144.4.13 Charcode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The character you want to press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.charcode=8
p.keycode=& h33
p.press // press backspace on Mac OS
```

Notes:

On Mac OS Classic the final printed charcode inside an editfield is the one you pass.
(Read and Write property)

144.4.14 Command as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down command key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.command=True
```

Notes:

It looks like the command key is not working for Mac OS Classic.
On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

144.4.15 Control as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down control key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.Control=True
```

Notes:

On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

144.4.16 Keycode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** For Mac OS the number of the key on the keyboard which is pressed.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.keycode=2
p.charcode=asc("d")
p.press 'shows a "d" on Mac OS
```

Notes:

You find this codes in that nice tables for the codes of the Spritesurface in the Xojo books.
(Read and Write property)

144.4.17 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

Not all functions of this class fill this property!
(Read and Write property)

144.4.18 Option as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down option key before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS
p.option=True
```

Notes: (Read and Write property)

144.4.19 Shift as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down shift before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("1")
p.keycode=18
p.press 'press !
```

Notes: (Read and Write property)

144.4.20 VirtualCode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The virtual keycode to press.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.charcode=asc("m")
p.virtualcode=-1
p.press ' makes a "m" on Windows.
```

Notes:

If you don't know this code, just pass -1 and this value will be filled automatically using the charcode property.
After you call press or pressraw you'll find the matching virtualcode in this property.
(Read and Write property)

144.5 module RemoteControlMBS

144.5.1 module RemoteControlMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This module collects methods for simulating user input with mouse and keyboard.
Notes:

You can use this class for GUI scripting.
Requires libXtst.so.6 on Linux to be installed.

144.5.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr4
- MBS Xojo Plugins, version 19.4pr1
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.2

- MBS Real Studio Plugins, version 12.0pr6

144.5.3 Methods

144.5.4 LinuxConvertCase(keysymbol as Integer, byref lowerSymbol as Integer, byref upperSymbol as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Converts the case of the given keysymbol.
Notes:

In lowerSymbol you will receive the key symbol for a lower case key and in upperSymbol the uppercase keys.

So passing in the key symbol of "a" or "A" will both return "a" and "A".

144.5.5 LinuxKeyCodeToKeySymbol(keycode as Integer, index as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Returns from the keyboard mapping tables the key symbol for the given key code.
Notes: Index is the offset in the tables. 0 for the first key symbol and 1 for the second. If the user presses shift the keyboard driver uses index=1 to access the capital letters.

144.5.6 LinuxKeyNameToKeySymbol(keyname as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Searches the key mapping list for the key symbol for a given name.
Notes: Returns 0 on failure.

144.5.7 LinuxKeySymbolToKeyCode(keysymbol as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Searches the hardware dependend key code for the given key symbol.
Notes: Returns 0 on any error.

144.5.8 LinuxKeySymbolToKeyName(keysymbol as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Returns the name of the key symbol.
Notes: Can return "" on an invalide keysymbol value.

144.5.9 LinuxMouseClick(ButtonID as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Simulates a mouse click with the given button.
Notes:

ButtonID=1 is the left mouse button.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

144.5.10 LinuxMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Queries the current mouse position.

144.5.11 LinuxMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Queries the current mouse position.

144.5.12 LinuxMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Moves the mouse to the given position.
Notes: Returns true on success.

144.5.13 LinuxPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.14 LinuxPressKey(Keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the key with the given keycode.
Notes:

Performs a key down and a key up event.
Returns true on success.
See also:

- 144.5.15 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

144.5.15 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Performs a key event.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 144.5.14 LinuxPressKey(Keycode as Integer) as boolean 19602

144.5.16 LinuxPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.17 LinuxPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.18 LinuxSupported as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Whether the functions are available for simulation of keyboard and mouse events.
Notes: Returns true if the Xtest extension is installed.

144.5.19 MacCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

144.5.20 MacCurrentProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the name of the current process.
Example:

msgbox RemoteControlMBS.MacCurrentProcessName

Notes: This is the name of your application.

144.5.21 MacDescriptionForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string for displaying.
Notes: Keycodes which match a special key like "Return", "F1" or "Backspace" are returned as descriptive strings.

144.5.22 MacDisplayNameForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string for displaying.
Notes: Same as MacTextForKeyCode(keycode, 4)

144.5.23 MacForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the process ID of the application in the foreground.
Notes: Returns 0 on any error.

144.5.24 MacFrontProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the front process.
Example:

```
RemoteControlMBS.MacFrontProcessName="iChat" // move iChat to front
```

Notes: (Read and Write computed property)

144.5.25 MacKeyboardLocalizedName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The localized name of the current keyboard layout.
Notes: Returns "" on any error.

144.5.26 MacKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the current keyboard layout.
Notes:

Returns "" on any error.

Added 64-bit support for version 17.0.

144.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Example:

```
// doing a context menu click with control key:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.PressControlKey true
```

```
call RemoteControlMBS.MacMouseClick x, y, true, true
call RemoteControlMBS.MacMouseClick x, y, true, false
call RemoteControlMBS.PressControlKey false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 19606
- 144.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 19607

144.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Example:

```
// do a right click:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.MacMouseClick x, y, true, false, true
call RemoteControlMBS.MacMouseClick x, y, true, false, false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 19605
- 144.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 19607

144.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 19605
- 144.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 19606

144.5.30 MacMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the current mouse position.

144.5.31 MacMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the current mouse position.

144.5.32 MacMouseWheel(wheel1 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs a wheel event.
Example:

call RemoteControlMBS.MacMouseWheel 1

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 144.5.33 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean 19608

144.5.33 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs a wheel event.
Example:

call RemoteControlMBS.MacMouseWheel 10,5

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 144.5.32 MacMouseWheel(wheel1 as Integer) as boolean 19607

144.5.34 MacMoveMouse(x as Double, y as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves the mouse to the given position.
Example:

call RemoteControlMBS.MacMoveMouse(100,100)

Notes:

Returns true on success.
On Mac does not generate mouse events.

144.5.35 MacPressCommandKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the command key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.36 MacPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.37 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.
Peforms a key down and a key up event.
See also:

- 144.5.38 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean 19609

144.5.38 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 144.5.37 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean 19609

144.5.39 MacPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the option key. (labeled with alt)
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.40 MacPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.41 MacProcessCount as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Counts the high level processes.
Example:

msgBox str(remoteControlMBS.macprocessCount)

144.5.42 MacProcessName(index as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the process with the given index.
Example:

```
dim i,c as Integer

// search iChat and make it visible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="iChat" then
remoteControlMBS.macprocessVisible(i)=true
end if
next
```

Notes: Index is from 0 to MacProcessCount-1.

144.5.43 MacProcessVisible(index as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether a process is visible or not.
Example:

```
dim i,c as Integer

// search Safari and make it invisible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="Safari" then
remoteControlMBS.macprocessVisible(i)=false
end if
next
```

Notes:

Index is from 0 to MacProcessCount-1.
(Read and Write computed property)

144.5.44 MacTextForKeyCode(keycode as Integer, KeyAction as Integer, ModifierState as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string.
Example:

```
// try some keycodes like e, E, € or é
dim key as string = "@"

const kCommandKey = 1
const kShift = 2
const kCapsLock = 4
const kOption = 8
const kControl = 16

// with no modifiers
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, 0)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)
Return
end if

next

// with shift
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kShift)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Shift"
Return
end if

next

// with option
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kOption)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Option"
Return
```

```
end if

next
```

Notes:

Works only with Unicode keyboard layouts which need Mac OS X 10.5.

Modifier values:

Command Key	1
Shift	2
CapsLock	4
Option	8
Control	16

Possible constants for the Key Action:

kUCKeyActionDown	0	The user is pressing the key.
kUCKeyActionUp	1	The user is releasing the key.
kUCKeyActionAutoKey	2	The user has the key in an "auto-key" pressed state that is, the user is holding down the key for an extended period of time and is thereby generating multiple key strokes from the single key.
kUCKeyActionDisplay	3	The user is requesting information for key display, as in the Key Caps application.

144.5.45 MouseClick(x as Integer, y as Integer, down as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a mouse click.
Notes:

The mouse cursor is moved to the given position and the first mouse button is pressed.
Returns true on success.

144.5.46 MousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries the current mouse position.

144.5.47 MousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries the current mouse position.

144.5.48 MoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Moves the mouse to the given location.
Notes:

Returns true on success.
On Mac does not generate mouse events.

144.5.49 PressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the ctrl key.
Notes: Returns true on success.

144.5.50 PressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the option key.
Notes: Returns true on success.

144.5.51 PressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the shift key.
Notes: Returns true on success.

144.5.52 WinBringProcessToTop(ProcessID as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Brings all windows of process to the front.
Notes: Returns true if function found at least one window.

144.5.53 WinBringWindowToTop(WindowHandle as Integer, SetFocus as boolean = true) as boolean

MBS ComputerControl Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Brings a given window to front.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("", "Calculator")
call RemoteControlMBS.WinBringWindowToTop h
```

Notes:

Pass any window handle, including windows from other applications.
If SetFocus is true, we also set the focus.
Returns true on success.

144.5.54 WinCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

144.5.55 WinFindWindow(ClassName as string, WindowName as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Finds a window based on the classname and/or the window name.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")
msgbox hex(h)
```

Notes:

One of the names can be an empty string so only the other name is used. Normally you should prefer the class name as it is not localized. The WindowsListMBS class can help you finding the class name of a window.
Returns 0 on any error.

144.5.56 WinForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the process ID of the application which owns the foreground window.
Notes: Returns 0 on any error.

144.5.57 WinFrontWindowTitle as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: The title of the window which has the focus.
Example:

title=remoteControlMBS.winfrontWindowTitle

Notes: May return "" on any error.

144.5.58 WinIsWindowMinimized(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Checks whether the specified window is minimized.
Notes:

Returns true if minimized.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

144.5.59 WinIsWindowVisible(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Checks the visibility state of the specified window.
Notes:

Returns true if visible or false if not.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

144.5.60 WinKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the name of the current Windows keyboard layout.

144.5.61 WinKeyIsDown(virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Tests whether a given key is currently pressed.

144.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 19617
- 144.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 19618

144.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 19617
- 144.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 19618

144.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 144.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 19617
- 144.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 19617

144.5.65 WinMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the current mouse position.

144.5.66 WinMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the current mouse position.

144.5.67 WinMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Moves the mouse cursor to the given position.
Notes:

Returns true on success.
Internally the coordinates are converted to normalized absolute coordinates which can lead to have the mouse one pixel off the requested position due to rounding.

144.5.68 WinPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.69 WinPressKey(ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 144.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 19619
- 144.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 19620
- 144.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 19620

144.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 144.5.69 WinPressKey(ScanCode as Integer) as boolean 19619
- 144.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 19620
- 144.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 19620

144.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 144.5.69 WinPressKey(ScanCode as Integer) as boolean 19619
- 144.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 19619
- 144.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 19620

144.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 144.5.69 WinPressKey(ScanCode as Integer) as boolean 19619
- 144.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 19619
- 144.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 19620

144.5.73 WinPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.74 WinPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

144.5.75 WinScanCodeToVirtualKeyCode(ScanCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Searches the virtual key code for the given scancode.
Notes:

Each key has a hardware dependend scan code. For each scancode you can get the virtual key code which is hardware independend.

Returns 0 on failure.

144.5.76 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: No, Mac: No, Win: Yes, Linux: No.
Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010

call RemoteControlMBS.WinSendMessage(window1, WM_CLOSE, 0, 0)
```

Notes: The result depends on the message command.
See also:

- 144.5.77 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

144.5.77 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")

call RemoteControlMBS.WinSendMessage(h, WM_CLOSE, 0, 0) // Closes Calc
```

Notes: The result depends on the message command.
See also:

- 144.5.76 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 19621

144.5.78 WinShowWindow(WindowHandle as Integer, CmdShow as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Shows or hides a window.
Notes:

CmdShow can be:

0	Hide
1	Show normal
2	Show minimized
3	Maximize
4	Show without activating
5	Show
6	Minimize
7	Show minimized without activating
8	Show normal without activating
9	Restore
10	Show default
11	Force minimized

Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

144.5.79 WinVirtualKeyCodeToCharCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the char code for a virtual key code.
Notes: Returns 0 on failure.

144.5.80 WinVirtualKeyCodeToScanCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Finds the scan code to match the given virtual key code.
Notes: Returns 0 on failure.

144.5.81 WinVirtualKeyForASCII(Character as Integer, byref VirtualKeyCode as Integer, Byref ShiftKey as boolean, byref ControlKey as Boolean, byref AltKey as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns for a given character which combination of key code and modifiers created the character.
Notes:

For Character, you should use asc(string), but you may need to convert the string to Windows ANSI text encoding.

Returns 0 on failure.

Chapter 145

Resolution

145.1 class DisplayMBS

145.1.1 class DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the displays of the screen.

145.1.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo Plugins, version 17.2pr6

- MBS REALbasic Plugins, version 10.4pr4

145.1.3 Xojo Developer Magazine

- 17.5, page 43: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

145.1.4 Methods

145.1.5 CanDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns true if the monitor supports the given color depth at the current ResolutionMBS.

Notes: none.

145.1.6 FadeGamma(intensity as Integer, col As Color)

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Sets the gamma of the DisplayMBS
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole DisplayMBS is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.

See the NativeGamma documentation for more details on Windows Gamma details.

145.1.7 FadeGammaTo(intensity as Integer, col As Color, ticks as Integer)

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Fades the intensity and color of the gamma slowly in the given number of milliseconds.
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole display is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

145.1.8 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the given depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 145.1.9 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS 19627

145.1.9 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the highest depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 145.1.8 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS 19626

145.1.10 GetCurrentResolution As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the current resolution.
Notes: Returns the resolution the display is currently set to. This is useful if you want to switch back to the old resolution after you switched to another resolution.

145.1.11 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution with the given depth.
Notes:

The same as GetBestResolution(width, height, depth, safe), the only difference is that it does not search for the smallest resolution but for the biggest one.
On Mac OS X till now no resolution can be called safe.
See also:

- 145.1.12 GetLargestResolution(safe As Boolean) As ResolutionMBS 19627

145.1.12 GetLargestResolution(safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution.
Notes:

If safe is true, this method returns only safe resolutions.
On Mac OS X till now no resolution can be called safe.
See also:

- 145.1.11 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS 19627

145.1.13 GetResolution(num as Integer) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a resolution.
Notes: Num has to be between 0 and ResolutionCount(safe)-1.

145.1.14 ResolutionCount(depth as Integer, safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions for a given depth.
Notes:

This method returns the number of resolutions that have the given depth and, if safe is true, which are safe.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 145.1.15 ResolutionCount(safe As Boolean) as Integer 19628

145.1.15 ResolutionCount(safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions.
Notes:

This method returns the total number of resolutions this monitor supports and, if safe is true, which are safe. Safe resolutions are resolutions which will always work.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 145.1.14 ResolutionCount(depth as Integer, safe As Boolean) as Integer 19628

145.1.16 SetDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches the color depth to the depth given. Returns true if attempt was successful.
Notes: none.

145.1.17 SwitchTo(width as Integer, height as Integer, depth as Integer, safe As Boolean) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches to the given ResolutionMBS if possible.
Notes:

This method tries to switch directly to the best ResolutionMBS which size is bigger or the same as the given dimensions and which depth is the same as the given parameter. It returnes true if it was successful. Try this function first with safe set to true. If that fails, try again with false, but after that show a dialog asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS.
On Mac OS X till now no ResolutionMBS can be called safe.

145.1.18 Update

MBS Util Plugin, Plugin Version: 3.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Updates the properties in this class.
Notes:

Call it whenever you detect a screen resolution change to update the content of this class.
In general you should not keep DisplayMBS classes around too long because the display described may go away (one a Powerbook the external display).

145.1.19 Properties

145.1.20 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the DisplayMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

145.1.21 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

145.1.22 GammaColor as color

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The color for fading the DisplayMBS.
Notes:

This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

145.1.23 GammaIntensity as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** GammaIntensity is the intensity of the monitor.
Notes:

1000 is normal, if it is 0, the whole DisplayMBS is in the color GammaColor.
This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

145.1.24 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the monitor.
Notes: (Read only property)

145.1.25 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that DisplayMBS
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)

msgBox str(d.Hz)
```

Notes:

On Windows:
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
The value should never be greater as the real frequency, so you can just ignore this.
(Read only property)

145.1.26 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

145.1.27 Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

145.1.28 Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this screen.
Notes: (Read only property)

145.1.29 NativeGamma as memoryblock

MBS Util Plugin, Plugin Version: 3.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The native gamma values.
Example:

```
dim d as DisplayMBS // your display
d.nativegamma=newmemoryblock(3072) // all black
```

Notes:

3072 bytes big is this array a 256 RGB values saved in 3 single properties.

Some notes for SetDeviceGammaRamp, which is the Windows function used by the plugin:

SetDeviceGammaRamp doesn't allow all gamma ramps. It checks the gamma ramp; if it is too complex, such as the red flash when the player is shot in Quake, it rejects it.
SetDeviceGammaRamp will not currently make use of a gamma calibrator. This may change in future versions of Image Color Management (ICM), but for Windows 2000, only the DirectDraw API supports the gamma calibrators.
The existing gamma entry points is already used by GetDeviceGammaRamp and SetDeviceGammaRamp. Therefore, the display driver doesn't need to do anything special to support this new interface, as long as it already supports the Win32 Get/SetDeviceGammaRamp functions.
In addition to getting and setting gamma ramps, the new DirectDraw interface allows the new gamma ramp to be calibrated—if a gamma calibrator is installed. The mechanism that DirectDraw uses to register and communicate with the gamma calibrator is an interim mechanism that will be changed in future releases.
DirectDraw looks for an installed software calibrator and passes the gamma value to the software calibrator; the software calibrator in turn adjusts the gamma ramp according to the measured response of the monitor. The calibrator passes the gamma ramp back to DirectDraw, which passes it to the SetDeviceGammaRamp device driver interface (DDI). The result is that the game looks as intended.
For DirectDraw to use the gamma calibrator, the calibrator must register itself with DirectDraw using a registry key; DirectDraw will call it if the application wants the gamma ramp to be calibrated.
In the future, both the method by which DirectDraw communicates with the gamma calibrator, through the DDI, and the method gamma calibrators use to register themselves in the registry will change. But every part of the DirectDraw API is permanent.
ICM is the color management system in Windows; all system-level color management should be handled by ICM. For this reason, downloadable gamma ramp support will be rolled into ICM in the future, making current solutions for gamma calibrators obsolete. Until such time, we have provided a method by which applications can take advantage of the installed base of software calibrators and graphics adapters that support downloadable gamma ramps.
(Read and Write computed property)

145.2 Globals

145.2.1 DisplayCountMBS as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayCount returns the number of displays connected.
Example:

```
msgbox "You have "+str(DisplayCountMBS)+" screens."
```

145.2.2 GetDisplayMBS(num as Integer) As DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns an object of class DisplayMBS for the given DisplayMBS.
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)
msgBox str(d.width)+" x "+str(d.height)+" @ "+str(pow(2,d.depth))+" colors"
```

Notes: num must be: 0 <= num <displaycount

145.2.3 ResolutionLibraryPresentMBS as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the DisplayManager library file was found.
Example:

```
if not ResolutionLibraryPresentMBS then
msgbox "I'm missing the shared library 'DisplayManager'."
end if
```

Notes:

This library should be present on all Mac OS Classic versions. (It is in the system suitcase.)
Returns always true on Windows.

145.2.4 UpdateDisplayCountMBS

MBS Util Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Rebuilds the display list.
Notes: If new displays are attached or removed, this method needs to be called.

145.3 class ResolutionMBS

145.3.1 class ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the resolutions a screen.

145.3.2 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

145.3.3 Methods

145.3.4 Switch As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** This function switches the DisplayMBS to the ResolutionMBS and returns true if the attempt was successful.
Notes:

If IsSafe is false, show a dialog after the switch asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS. Especially on VGA-Monitors not all listed frequencies work.
On Mac OS X till now no ResolutionMBS can be called safe.

145.3.5 Properties

145.3.6 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the ResolutionMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

145.3.7 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

145.3.8 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the ResolutionMBS.
Notes: (Read only property)

145.3.9 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that ResolutionMBS
Notes:

Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
(Read only property)

145.3.10 issafe as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Is it a safe ResolutionMBS?
Notes:

On Mac OS X till now no ResolutionMBS can be called safe.
(Read only property)

145.3.11 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to that ResolutionMBS.

Notes:

Should be 0 for the main monitor.
(Read only property)

145.3.12 ResolutionNum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS.
Notes:

ResolutionNum is the number of the DisplayMBS which always is between 0 and GetDisplayMBS(DisplayNum).ResolutionCount(false)-1.

On Windows: dis.GetCurrentResolution.resolutionNum is sometimes also -1.
(Read only property)

145.3.13 Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

145.3.14 Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this ResolutionMBS.
Notes: (Read only property)

Chapter 146

SATSolver

146.1 class LGLMBS

146.1.1 class LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the SAT Solver from lingeling.
Notes:

Based on lingeling project here:
https://github.com/arminbiere/lingeling
and
http://fmv.jku.at/lingeling/

146.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 19.6pr2

146.1.3 Methods

146.1.4 Add(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value.

146.1.5 Assume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assume single units.

146.1.6 CAssume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assume clause (at most one)

146.1.7 Clone as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the object.
Notes: Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

146.1.8 Constructor

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: Creates new empty object.

146.1.9 DefaultOption(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries default value for an option.

146.1.10 Deref(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries value.
Notes:

neg=false, pos=true
Returns -1 if lit is bigger then MaxVar.

146.1.11 Failed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks failed flag for given item.
Notes:

neg=false, pos=true
for assumptions.

146.1.12 Fixate

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add assumptions as units

146.1.13 Fixed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks fixed flag.
Notes:

neg=false, pos=true
Toplevel

146.1.14 FlushCache

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flush all learned clauses.

146.1.15 FlushTimers

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flush timers.

146.1.16 Fork as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forks the object.
Notes:

'Forking' copies only irredundant clauses and also uses internal variable indices of the parent as external variable indices. Thus 'parent' and the forked off 'child' do neither exactly work the same way, nor do they use from the API point of view the same set of variables. They are satisfiability equivalent. If the child becomes unsatisfiable the parent can be assumed to be unsatisfiable too and thus 'join' would just add the empty clause to the parent. If the child produces a satisfying assignment, this assignment is turned into an assignment of the parent by 'join'. Parents can be forked multiple times. A child has exactly one parent. Parents and children can be released independently. Between 'Fork' and 'Join' no other operations but further 'Fork' are allowed. The effect ot multiple 'Join' with the same parent is unclear at this point. The same memory manager is use for the child and the parent. Options, prefix, output file and the callbacks for 'getime' and 'Abort' are copied too (if set).

Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

146.1.17 Freeze(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Freezes the given item.

146.1.18 Frozen(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries frozen state.

146.1.19 GetOptionMinMax(Name as String, byref min as Integer, byref max as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current value, minimum and maximum values.

146.1.20 HasOption(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if the given option is set.

146.1.21 IncVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Increases variables by one.

146.1.22 Join(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Joins back forked child.

146.1.23 LibVersion as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries library version.
Example:

```
Print "LGL "+LGLMBS.LibVersion
```

146.1.24 Lookahead as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a good look ahead literal or zero if all potential literals have been eliminated or have been used as blocking literals in blocked clause elimination.
Notes: Zero is also returned if the formula is already inconsistent. The lookahead literal is made usable again, for instance if it was not frozen during a previous SAT call and thus implicitly became melted. Therefore it can be added in a unit clause.

146.1.25 Melt(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Melts a literal.

146.1.26 MeltAll

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Melt all literals.

146.1.27 ParseFile(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 146.1.28 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 19642

146.1.28 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 146.1.27 ParseFile(File as FolderItem, force as boolean = false) as String 19642

146.1.29 ParsePath(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.
On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

See also:

- 146.1.30 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 19643

146.1.30 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given by path.
Notes: Returns empty text on success or error message from parser.
See also:

- 146.1.29 ParsePath(Path as String, force as boolean = false) as String 19642

146.1.31 ParseString(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 146.1.32 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 19643

146.1.32 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 146.1.31 ParseString(Data as String, force as boolean = false) as String 19643

146.1.33 Print(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print system to file or stdout.
Notes:

Pass nil to use stdout.
Remaining in DIMACS format

146.1.34 PrintAll(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints all values.
Notes:

Including units & equivs.
Pass nil to use stdout.

146.1.35 PrintBanner(Name as String, Prefix as String, File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints banner including version of library.
Notes:

Pass nil to use stdout.

see lglbnr function.

146.1.36 PrintOptions(prefix as string, IgnoreSome as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print all options to stdout.

146.1.37 PrintPCS(mixed as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints PCS file.

146.1.38 PrintRangeOptions

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print range options to stdout.

146.1.39 PrintSizes

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints data structure sizes.

146.1.40 PrintStats

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints statistics to stdout.

146.1.41 PrintUsage

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print usage "-h".

146.1.42 ReadOptionFile(File as FolderItem) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the option file.

146.1.43 Reconstk(byref Start as Ptr, byref Top as Ptr)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set Start and Top to the 'start' and 'top' of the reconstruction stack, which is used in BCE, BVE and CCE for reconstructing a solution after eliminating variables or clauses.
Notes: These pointers are only valid until the next Sat or Simp call.

146.1.44 ReduceCache

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reset cache size.

146.1.45 Representative(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return representative from equivalence class if literal is not top-level assigned nor eliminated.

146.1.46 ResetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set default phase of a literal.
Notes: Stop forcing phase in decisions.

146.1.47 Reusable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if item can be reused.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

146.1.48 Reuse(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reuses an item.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

146.1.49 Sat as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the system.
Notes: May output messages to stdout.

146.1.50 SetAPITraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a text file and let the library output to this file.

Notes: Logs API calls to the library.

146.1.51 SetID(tid as Integer, tids as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set individual ids for logging and statistics.

146.1.52 SetImportant(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prefer decisions on 'important' variables.

146.1.53 SetOutputFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an output file and let the library output to this file.
Notes: Sets output file for report.

146.1.54 SetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set default phase of a literal.
Notes: Any decision on this literal will always try this phase. Note, that this function does not have any effect on eliminated variables. Further equivalent variables share the same forced phase and thus if they are set to different default phases, only the last set operation will be kept.

146.1.55 SetPhases

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the phases.
Notes: Assume the solver is in the SATISFIABLE state (after Sat or Simp), then calling SetPhases will copy the current assignment as default phases.

146.1.56 SetTraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a text file and let the library output to this file.
Notes:

Set trace output file.
Logs trace calls to the library.

146.1.57 Simp(iterations as integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the system.
Notes: Iterations must be >= 0.

146.1.58 TraverseAllClauses

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over all clauses and calls TraverseAllClauses event for each.
Notes: Internally calls TraverseUnits, TraverseEquivalences and TraverseRemainingClauses.
See also:

- 146.1.84 TraverseAllClauses(Lit as Integer) 19652

146.1.59 TraverseEquivalences

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over equivalences and calls TraverseEquivalences event for each.
See also:

- 146.1.85 TraverseEquivalences(Lit as Integer, Representation as Integer) 19653

146.1.60 TraverseRemainingClauses

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over remaining clauses and calls TraverseRemainingClauses event for each.
See also:

- 146.1.86 TraverseRemainingClauses(Lit as Integer) 19653

146.1.61 TraverseUnits

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over units and calls TraverseUnits event for each.
See also:

- 146.1.87 TraverseUnits(Unit as Integer) 19653

146.1.62 Unclone(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unclones the object.

146.1.63 Usable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether an item is usable.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

146.1.64 Properties

146.1.65 Aborted as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The aborted status.
Notes:

We set this to true when the processing is aborted due to an error.
See AbortMessage property for the message.
(Read and Write property)
See also:

- 146.1.83 Aborted 19652

146.1.66 AbortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The abort reason message.
Notes: (Read only property)

146.1.67 Bytes as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current size in bytes.
Notes: (Read only property)

146.1.68 Changed as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Model changed.
Notes: (Read only property)

146.1.69 Confs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of conflicts.
Notes: (Read only property)

146.1.70 Decs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of decisions.
Notes: (Read only property)

146.1.71 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

146.1.72 Inconsistent as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Contains empty clause?
Notes: (Read only property)

146.1.73 MaxMegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum memory usage in megabytes.
Notes: (Read only property)

146.1.74 MaxVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum index of variables.
Notes: (Read only property)

146.1.75 MegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current size in memory as megabytes.
Notes: (Read only property)

146.1.76 Options as Dictionary

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries all options with values.
Notes: (Read only property)

146.1.77 Prefix as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The prefix for messages.
Notes: (Read and Write property)

146.1.78 ProcessTime as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries CPU usage time used.
Notes:

Value is -1 on Windows as we don't have the unix functions there.
(Read only property)

146.1.79 Props as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of propagations.
Notes: (Read only property)

146.1.80 Seconds as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns time needed.
Notes: (Read only property)

146.1.81 Option(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries or sets option value.
Notes: (Read and Write computed property)

146.1.82 Events

146.1.83 Aborted

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when processing is aborted due to an error.
Notes:

Errors are printed to stdout.
See AbortMessage property for the message.
See also:

- 146.1.65 Aborted as Boolean 19649

146.1.84 TraverseAllClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseAllClauses method.
See also:

- 146.1.58 TraverseAllClauses 19648

146.1.85 TraverseEquivalences(Lit as Integer, Representation as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseEquivalences method.
See also:

- 146.1.59 TraverseEquivalences 19648

146.1.86 TraverseRemainingClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseRemainingClauses method.
See also:

- 146.1.60 TraverseRemainingClauses 19648

146.1.87 TraverseUnits(Unit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseUnits method.
See also:

- 146.1.61 TraverseUnits 19649

146.1.88 Constants

146.1.89 LGL_SATISFIABLE = 10

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: The system is satisfiable.

146.1.90 LGL_UNKNOWN = 0

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: It is not known whether it is satisfiable.

146.1.91 LGL_UNSATISFIABLE = 20

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: The system is not satisfiable.

Chapter 147

SceneKit

147.1 class SCNAccelerationConstraintMBS

147.1.1 class SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNAccelerationConstraint caps the acceleration and velocity of a node.

147.1.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.1.3 Methods

147.1.4 accelerationConstraint as SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAccelerationConstraint object.

147.1.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAccelerationConstraint object.

147.1.6 Properties

147.1.7 damping as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the damping factor of the receiver.
Notes:

Optionally reduce the body's linear velocity each frame to simulate fluid/air friction. Value should be zero or greater. Defaults to 0.1. Animatable.
(Read and Write property)

147.1.8 decelerationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the distance at which the node should start decelerating.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

147.1.9 maximumLinearAcceleration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the maximum linear acceleration. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear acceleration is in m.s^-2
(Read and Write property)

147.1.10 maximumLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the maximum linear velocity. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear velocity is in m.s
(Read and Write property)

147.2 class SCNActionMBS

147.2.1 class SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A simple, reusable animation that changes attributes of any node you attach it to.
Notes:

You use actions most often to change the structure and content of the SCNNodeMBS object to which they are attached, but you can also use actions make other changes to the scene. In SceneKit, actions provide an easy way to implement animated behaviors that frequently change in response to user input.

see also
https://developer.apple.com/documentation/scenekit/scnaction
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.2.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.2.3 Methods

147.2.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.2.5 copy as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the action.

147.2.6 fadeIn(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that changes the opacity of the node to 1.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 1.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOut(Duration)

147.2.7 fadeOpacityBy(factor as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that adjusts the opacity of a node by a relative value.
Notes:

factor: The amount to change the node's opacity by.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOpacityBy(-factor, duration)

147.2.8 fadeOpacityTo(opacity as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that adjusts the opacity of a node to a new value.
Notes:

opacity: The new opacity value of the node.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

147.2.9 fadeOut(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that changes the opacity of the node to 0.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 0.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeIn(duration)

147.2.10 group(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that runs a collection of actions in parallel.
Notes:

actions: An array of SCNActionMBS objects.

Returns a new group action object.

When the action executes, the actions that make up the group all start immediately and run in parallel. The duration of the group action is the longest duration among the collection of actions. If an action in the group has a duration less than the group's duration, the action completes and then idles until the group completes the remaining actions. This matters most when creating a repeating action that repeats a group. This action is reversible; it creates a new group action that contains the reverse of each action specified in the group.

147.2.11 hide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that hides a node.
Notes:

When the action executes, the node's hidden property is set to true.
This action is reversible; the reverse is equivalent to the unhide action.

147.2.12 javaScriptActionWithScript(script as string, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that executes a JavaScript script periodically over a specified duration.
Notes:

script: A string containing JavaScript source code.
seconds: The duration of the action, in seconds.

SceneKit exposes its classes, methods, and functions in the JavaScript context that runs the script—see the SCNJavaScript.h header file for details.

When the action executes, SceneKit runs the script repeatedly until the action's duration expires. Each time SceneKit runs the script, it computes the elapsed time since the action began executing (as a fraction of the action's duration between 0.0 and 1.0) and makes it available to the script as a variable named elapsedTime. The script can also reference the SCNNode object running the action as a variable named node.
This action is not reversible; the reverse action executes the same script.

147.2.13 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node relative to its current position.
Notes:

delta: A vector that describes the change to be applied to the node's position.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

dim reverseDelta as SCNVector3MBS = SCNVector3MBS.Vector(-delta.x, -delta.y, -delta.z)
SCNActionMBS.moveBy(reverseDelta, duration)
See also:

- 147.2.14 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS

147.2.14 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node relative to its current position.
Notes:

deltaX: The distance to move the node in the X direction of its parent node's local coordinate space.
deltaY: The distance to move the node in the Y direction of its parent node's local coordinate space.
deltaZ: The distance to move the node in the Z direction of its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.moveBy(-deltaX, -deltaY, -deltaZ, duration)
See also:

- 147.2.13 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS 19660

147.2.15 moveTo(location as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node to a new position.
Notes:

location: The coordinates for the node's new position in its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is not reversible; the reverse of this action has the same duration but does not move the node.

147.2.16 removeFromParentNode as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that removes the node from its parent.
Notes:

When the action executes, the node is immediately removed from its parent.
This action is not reversible; the reverse of this action is the same action.

147.2.17 repeatAction(action as SCNActionMBS, count as integer) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that repeats another action a specified number of times.
Notes:

action: The action to be executed.
count: The number of times to execute the action.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats, until the count is reached.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it the same number of times.

147.2.18 repeatActionForever(action as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that repeats another action forever.
Notes:

action: The action to execute.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it forever.
Note
The action to be repeated must have a non-instantaneous duration.

147.2.19 reversedAction as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that reverses the behavior of another action.
Notes: This method always returns an action object; however, not all actions are reversible. When reversed, some actions return an object that either does nothing or performs the same action as the original action. For details on how an action is reversed, see the description of the class method used to create that action.

147.2.20 rotateBy(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that rotates the node in each of the three principal axes by angles relative to its current orientation.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateBy(-xAngle, -yAngle, -zAngle, duration)

147.2.21 rotateByAngle(angle as double, axis as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that rotates the node by an angle around a specified axis.
Notes:

angle: The amount to rotate the node counterclockwise around the specified axis, in radians.
axis: A vector in the node's local coordinate space whose direction specifies the axis of rotation.
duration: The duration, in seconds, of the animation.

Return a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateByAngle(-angle, axis, duration)

147.2.22 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle. Calling this method is equivalent to calling rotateTo() and passing false for the shortestUnitArc parameter.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 147.2.23 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS 19664

147.2.23 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.

zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.
shortestUnitArc: If false (the default), the animation interpolates each component of the node's rotation between its current value and the new value. If true, the animation makes the most direct rotation possible from the node's current orientation to the new orientation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 147.2.22 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS 19664

147.2.24 rotateToAxisAngle(axisAngle as SCNVector4MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to an absolute angle around a specified axis.
Notes:

axisAngle: A four-component vector whose first three components are a vector in the node's local coordinate space specifying an axis and whose fourth component is the amount to rotate the node counterclockwise around that axis, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

147.2.25 runBlock(del as SCNActionRunBlockMBS, tag as variant = nil) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that executes run the given method.
Notes:

When the action executes, SceneKit calls the delegate method. This action takes place instantaneously.
This action is not reversible; the reverse action executes the same delegate method.

147.2.26 scaleBy(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that uniformly changes the scale factor of a node by a relative value.
Notes:

scale: The amount of change to make to all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.scaleBy(-scale, duration)

147.2.27 scaleTo(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that uniformly changes the scale factor of a node to an absolute value.
Notes:

scale: The new value for all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

147.2.28 sequence(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that runs a collection of actions sequentially.
Notes:

actions: An array of SCNActionMBS objects.
Returns a new sequence action object.

When the action executes, the first action in the sequence starts and runs to completion. Subsequent actions in the sequence run in a similar fashion until all of the actions in the sequence have executed. The duration

of the sequence action is the sum of the durations of the actions in the sequence.

This action is reversible; it creates a new sequence action that reverses the order of the actions. Each action in the reversed sequence is itself reversed.

147.2.29 unhide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that ensures a node is not hidden.
Notes:

When the action executes, the node's hidden property is set to false.
This action is reversible; the reverse is equivalent to the hide action.

147.2.30 wait(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that idles for a specified period of time.
Notes:

When the action executes, the action waits for the specified amount of time and then ends. This is typically used as part of a sequence of actions to insert a delay between two other actions. You might also use it in conjunction with the runAction method to trigger code that needs to run at a later time.
This action is not reversible; the reverse of this action is the same action.

147.2.31 Properties

147.2.32 duration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The duration required to complete an action.
Notes:

This is the expected duration of an action's animation. The actual time an action takes to complete is modified by the action's timingMode property.
(Read and Write property)

147.2.33 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object references.
Notes: (Read and Write property)

147.2.34 speed as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A speed factor that modifies how fast an action runs.
Notes:

The speed factor adjusts how fast an action's animation runs. For example, a speed factor of 2.0 means the animation runs twice as fast.
(Read and Write property)

147.2.35 timingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timing mode used to execute an action.
Notes:

For possible values, see TimingMode constants. The default value is TimingModeLinear.
(Read and Write property)

147.2.36 Constants

147.2.37 TimingModeEaseIn = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in pacing. The animation begins slowly, and then speeds up as it progresses.

147.2.38 TimingModeEaseInEaseOut = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in ease-out pacing. The animation begins slowly, accelerates through the middle of its duration, and then slows again before completing.

147.2.39 TimingModeEaseOut = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-out pacing. The animation begins quickly, and then slows as it completes.

147.2.40 TimingModeLinear = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Linear pacing. The animation progresses evenly throughout its duration.

147.2.41 Delegates

147.2.42 SCNActionRunBlockMBS(node as SCNNodeMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the runBlock method.

147.3 class SCNAvoidOccluderConstraintMBS

147.3.1 class SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNAvoidOccluderConstraint constraints place the receiver at a position that prevent nodes with the specified category to occlude the target.
Notes: The target node and it's children are ignored as potential occluders.

147.3.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.3.3 Methods

147.3.4 avoidOccluderConstraintWithTarget(target as SCNNodeMBS) as SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAvoidOccluderConstraint object.

147.3.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAvoidOccluderConstraint object.

147.3.6 Properties

147.3.7 bias as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the bias the apply after moving the receiver to avoid occluders.
Notes:

Defaults to 10e-5.
A positive bias will move the receiver closer to the target.
(Read and Write property)

147.3.8 occluderCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the category of node to consider as occluder.
Notes:

Defaults to 1.
(Read and Write property)

147.3.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node.
Notes: (Read and Write property)

147.4 class SCNBillboardConstraintMBS

147.4.1 class SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A constraint that orients a node to always point toward the current camera.
Notes:

An SCNBillboardConstraint object automatically adjusts a node's orientation so that its local z-axis always points toward the pointOfView node currently being used to render the scene. For example, you can use a billboard constraint to efficiently render parts of a scene using two-dimensional sprite images instead of three-dimensional geometry—by mapping sprites onto planes affected by a billboard constraint, the sprites maintain their orientation with respect to the viewer. To attach constraints to an SCNNodeMBS object, use its constraints property.
Subclass of the SCNConstraintMBS class.

147.4.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.4.3 Methods

147.4.4 billboardConstraint as SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

147.4.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

147.4.6 Properties

147.4.7 freeAxes as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the axes on which the billboarding orientation operates. Defaults to SCNBillboardAxisAll.

Notes: (Read and Write property)

147.4.8 Constants

147.4.9 SCNBillboardAxisAll = 7

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes:

Align an affected node such that its orientation always matches that of the view.
This is the default option for newly created billboard constraints.

147.4.10 SCNBillboardAxisX = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its x-axis is always parallel to that of the view, leaving it free to rotate otherwise.

147.4.11 SCNBillboardAxisY = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its y-axis is always parallel to that of the view, leaving it free to rotate otherwise.

147.4.12 SCNBillboardAxisZ = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its z-axis is always perpendicular to the viewing plane, leaving it free to rotate otherwise.

147.5 class SCNBoxMBS

147.5.1 class SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNBox represents a box with rectangular sides and optional chamfers.
Notes: Subclass of the SCNGeometryMBS class.

147.5.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.5.3 Methods

147.5.4 box(width as double, height as double, length as double, chamferRadius as double) as SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

147.5.5 Constructor(width as double, height as double, length as double, chamferRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

147.5.6 Properties

147.5.7 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

147.5.8 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

147.5.9 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.5.10 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.5.11 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The length of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.5.12 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.5.13 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The width of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.5.14 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.6 class SCNCameraControllerMBS

147.6.1 class SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a camera controller.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.6.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

147.6.3 Methods

147.6.4 clearRoll

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Clear the camera roll if any.

147.6.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.6.6 dollyToTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Zoom by moving the camera along the axis from the camera position to the target.

147.6.7 rollAroundTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotate the camera around the axis from the camera position to the target.
Notes: Delta is in degrees.

147.6.8 rotate(deltaX as double, deltaY as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotate delta is in degrees.

147.6.9 stopInertia

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stop current inertia.

147.6.10 translateInCameraSpace(x as double, y as double, z as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Translate the camera along the local X/Y/Z axis.

147.6.11 Properties

147.6.12 automaticTarget as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Automatically update the target in beginInteraction.
Notes:

Defaults to false.
(Read and Write property)

147.6.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.6.14 inertiaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set to YES to enable inertia on endInteraction.
Notes:

Defaults to false.
(Read and Write property)

147.6.15 inertiaFriction as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The friction coefficient applied to the inertia.
Notes:

Defaults to 0.05.
(Read and Write property)

147.6.16 inertiaRunning as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if inertia is running.
Notes: (Read only property)

147.6.17 maximumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .
Defaults to 0.0.
(Read and Write property)

147.6.18 maximumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.

The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

147.6.19 minimumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .
Defaults to 0.0.
(Read and Write property)

147.6.20 minimumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

147.6.21 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node describing the point of view.
Notes: (Read and Write property)

147.6.22 target as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera target in world space for orbit rotation.
Notes: (Read and Write property)

147.6.23 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The up vector in world space used as reference for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable camera modes.
Notes:

Defaults to (0, 1, 0).
(Read and Write property)

147.7 class SCNCameraMBS

147.7.1 class SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A set of camera attributes that can be attached to a node to provide a point of view for displaying the scene.
Notes:

To display a scene, you must designate a node whose camera property contains a camera object as the point of view.

The SCNNode object containing a camera defines a point of view—that is, the position and orientation of the camera. A camera's direction of view is always along the negative z-axis of the node's local coordinate system. To point the camera at different parts of your scene, use the position, rotation, or transform property of the node containing it. (Alternatively, to ensure that a camera always points at a particular element of your scene even when that element moves, attach a SCNLookAtConstraint object to the node containing the camera.)

An SCNCamera object itself defines the shape and, in part, the appearance of the rendered scene as seen from its point of view. By default, a camera defines a perspective projection, whose field of view (FOV) and near and far visibility limits you control using the properties listed in Adjusting Camera Perspective and illustrated below.

- MBS Xojo Plugins, version 18.5pr3

147.7.3 Methods

147.7.4 camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new camera object.
Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

147.7.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new camera object.

Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

147.7.6 copy as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the camera.

147.7.7 Properties

147.7.8 ApertureBladeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of physical camera aperture blades simulated by SceneKit for depth-of-field effects. **Notes:**

When the wantsDepthOfField setting is enabled, SceneKit renders scenes using the camera with a depth-of-field blur (also called bokeh) effect modeled after those created by a real-world physical camera. One feature of real-world camera bokeh effects is the tendency of distant bright points to blur into larger shapes based on the shape of the aperture between the camera's lens and its imaging plane (film or sensor). Physical cameras control aperture using a mechanism that moves several flat blades in or out to create a smaller or larger opening, so the natural bokeh effect in traditional photography produces polygon-shaped blur effects. This property controls the number of blades in the simulated camera aperture, and thus the polygon shape seen in the resulting bokeh effect. For example, a blade count of 6 (the default) causes distant bright points to blur into hexagon shapes. Increasingly large blade counts result in the bokeh effect appearing more circular, as shown below.
(Read and Write property)

147.7.9 AutomaticallyAdjustsZRange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the camera automatically adjusts its zNear and zFar depth limits.
Notes:

The default value of this property is false, specifying that the camera's zNear and zFar properties control its depth limits. If you change this property's value to true, SceneKit automatically adjusts the depth limits at render time to fit the bounding box of the scene. Changing the values of the zNear and zFar properties automatically resets this property's value to false.
(Read and Write property)

147.7.10 averageGray as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The luminance level to use as the midpoint of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with this property which serves as a constant estimate of scene luminance.
The default value is 0.18. By setting this property to a higher or lower value, you can compensate for scenes with darker or brighter content. Alternatively, by setting the wantsExposureAdaptation property, you can allow SceneKit to automatically adjust exposure as the visible contents of the scene change.
This property has no effect if the wantsHDR value is false. If the exposureAdaptationDarkeningSpeedFactor value is true, SceneKit ignores this property, and instead computes the average luminance currently visible to the camera during rendering.
(Read and Write property)

147.7.11 bloomBlurRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius, in pixels, for the blurring portion of the bloom effect applied to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. The bloom effect combines selective brightening and blurring effects; this property controls the blur portion of the effect. A value of zero effectively disables the bloom effect, and higher values result in a broader, softer glow. The default value is 4.0 pixels.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.12 bloomIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of bloom effect to apply to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the strength of the bloom effect; lower values result in a subtle effect, and higher values create very bright glow. The default value is 0.0, resulting in no bloom effect.

You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.13 bloomThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The brightness threshold at which to apply a bloom effect to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the brightness level required to trigger the bloom effect; lower values apply the effect to more of the scene, and higher values apply the effect only to the brightest white areas. The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.14 colorFringeIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The blend factor for fading the color fringing effect applied to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values for this property result in brighter, more vivid color fringing, and lower values create a subtler effect. The default value of 1.0 leaves the color fringing effect at its most vivid.
This property controls a fade between the color fringing effect and the otherwise-normally-rendered image. The colorFringeStrength property controls the breadth of the color fringing effect.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.15 colorFringeStrength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of color fringing effect to apply to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values create a more pronounced color shift, creating wider rainbow fringes; lower

values spread colors across shorter distances, creating a subtler effect. The default value of 0.0 disables the color fringing effect entirely.
This property controls the breadth of color fringing. The colorFringeIntensity property controls the blend factor between the color-fringed and the otherwise-normally-rendered image.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.16 colorGrading as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A texture for applying color grading effects to the entire rendered scene.
Notes:

The contents value for this material property must be a 3D color lookup table, or a 2D texture image that represents such a table arranged in a horizontal strip.

see also
https://developer.apple.com/documentation/scenekit/scncamera/1644114-colorgrading
(Read only property)

147.7.17 contrast as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An adjustment factor to apply to the overall visual contrast of the rendered scene.
Notes:

A value of 0.0 (the default) leaves the rendered scene unchanged. Positive values increase contrast between bright and dark areas, and negative values reduce contrast, shifting the rendered scene towards a uniform gray.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.18 exposureAdaptationBrighteningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The relative duration of automatically animated exposure transitions from dark to bright areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates

automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.4, resulting in brightening animations that are slightly faster than darkening animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

147.7.19 exposureAdaptationDarkeningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The relative duration of automatically animated exposure transitions from bright to dark areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.6, resulting in darkening animations that are slightly faster than brighting animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

147.7.20 exposureOffset as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A logarithmic bias that adjusts the results of SceneKit's tone mapping operation, brightening or darkening the visible scene.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Use this property to bias the tone mapping curve. The default exposure offset is zero, specifying no bias. Positive values result in a brighter scene, and negative values result in a darker scene.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

147.7.21 FieldOfView as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The vertical or horizontal viewing angle of the camera.
Notes:

The projectionDirection property determines whether this fieldOfView property measures the camera's vertical or horizontal viewing angle, and SceneKit automatically calculates the viewing angle in the other direction to match the aspect ratio of the view displaying the scene. For example, a fieldOfView of 60 and the default SCNCameraProjectionDirectionVertical projection, presented fullscreen on a 16:9 display in portrait orientation, results in a vertical viewing angle of 60° and a horizontal viewing angle of 33.75°.
You can choose to specify viewing angle either directly, using this fieldOfView property, or in terms that model a physical camera, using the sensorHeight and focalLength properties. Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

147.7.22 FocalBlurSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of pixel samples SceneKit uses to create depth-of-field blur effects.
Notes:

When the wantsDepthOfField setting is enabled, SceneKit renders depth-of-field blur (also called bokeh) effects using a blur filter that samples multiple points in the image. Sampling a larger number of points produces a higher quality visual effect at a higher performance cost, and vice versa. The default sample count is 25.
(Read and Write property)

147.7.23 FocalLength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera's focal length, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

147.7.24 focusDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distance from the camera at which objects appear in sharp focus. Animatable.
Notes:

Objects at this distance from the camera appear perfectly focused. Objects nearer to or farther from the camera than this distance appear increasingly blurred, with the behavior of the blur effect depending on the fStop, apertureBladeCount and focalBlurSampleCount properties. The default focus distance is 2.5.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.7.25 fStop as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physical camera aperture simulated by SceneKit for depth-of-field effects. Animatable.
Notes:

F-stop numbers describe the light-gathering area of a physical camera's imaging system, and are typically expressed as the denominator of a ratio including the camera's focal length f, such as f/2 or f/5.6. A larger denominator indicates a smaller aperture, allowing less light to pass from the camera's lens through to the imaging plane (sensor or film), and a smaller denominator indicates a larger aperture that lets more light through.
SceneKit uses aperture measurements to simulate depth-of-field blur effects (also called bokeh) approximating those produced by a physical camera. A larger fStop number (or aperture denominator) causes most of the scene to appear in focus, with extremely close or far depths showing slight blurring; a smaller number results in only a narrow range of depths appearing in focus, and a more pronounced blur effect for the rest of the scene. The default fStop value is 5.6.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.7.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.7.27 maximumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is 15.0. Decreasing the value causes brighter portions of the scene to become over-exposed (uniformly white, losing definition). Increasing the value adds more dynamic range for brighter portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

147.7.28 minimumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is -15.0. Increasing the value causes darker portions of the scene to become under-exposed (uniformly black, losing definition). Decreasing the value adds more dynamic range for darker portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

147.7.29 motionBlurIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor that determines the intensity of motion blur effects. Animatable.
Notes:

The default intensity of zero results in no motion blur effect. Higher values (toward a maximum of 1.0) create more pronounced motion blur effects.
Motion blur is not supported when wide-gamut color rendering is enabled. Wide-gamut rendering is enabled by default on supported devices; to opt out, set the SCNDisableWideGamut key in your app's Info.plist file.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.7.30 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the camera object.
Notes:

You can provide a descriptive name for a camera object to make managing your scene graph easier. Cameras loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine cameras in a scene file without loading its scene graph.
(Read and Write property)

147.7.31 orthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the camera's magnification factor when using an orthographic projection.
Notes:

In an orthographic projection, equally sized objects appear equally sized regardless of their distance from the camera. To switch between orthographic and perspective projections, see the usesOrthographicProjection property.
(Read and Write property)

147.7.32 ProjectionDirection as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The axis used to determine field of view or orthographic scale.
Notes:

The fieldOfView property measures view angle in a single primary direction, determined by this projectionDirection property. For the other direction, SceneKit automatically adjusts field of view depending on the aspect ratio of the view presenting the scene.
For example, with the default projection direction of SCNCameraProjectionDirectionVertical, setting fieldOfView to 60 results in a vertical view angle of 60°. If the scene appears on a display with a 4:3 aspect ratio, the horizontal view angle is 80°. However, if the scene appears on a 16:9 display, the horizontal view angle is 106°.
This property has a similar effect on scaling for orthographic projections. The orthographicScale property measures the scale factor in the direction of the projectionDirection property, and SceneKit automatically calculates scale factor in the other direction according to aspect ratio.
(Read and Write property)

147.7.33 projectionTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera's projection transformation.
Notes:

This transformation expresses the combination of all the camera's geometric properties: projection type (perspective or orthographic), field of view, depth limits, and orthographic scale (if applicable). SceneKit uses this transformation to convert points in the camera node's coordinate space to the renderer's 2D space when rendering and processing events.
You can use this transformation directly if your app needs to convert between view and renderer coordinates for other purposes. Alternatively, if you compute your own projection transform matrix, you can set this property to override the transformation synthesized from the camera's geometric properties.
(Read and Write property)

147.7.34 saturation as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An adjustment factor to apply to the overall color saturation of the rendered scene.
Notes:

A value of 1.0 (the default) leaves scene colors unchanged. Greater values result in oversaturated colors, and a value of 0.0 makes the rendered scene entirely grayscale.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.35 screenSpaceAmbientOcclusionBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An offset for modulating ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionBias value is used in an intermediate stage of calculating the SSAO effect, and measures a distance in scene units. Increasing or decreasing this value from its default of 0.03 can help to offset unrealistic effects produced by changing other SSAO settings.
(Read and Write property)

147.7.36 screenSpaceAmbientOcclusionDepthThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum depth difference, in units of scene space, at which to apply ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionDepthThreshold property controls the effect of relative distance from the camera on SSAO effects. Higher values create more shadowing effects between foreground and background elements of the scene, but this can result in unrealistic dark halos around foreground elements that are far from the background. Lower values avoid dark halo effects, but create less visual separation between scene elements at different distances from the camera. The default value is 0.2 units.
(Read and Write property)

147.7.37 screenSpaceAmbientOcclusionIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The intensity of the screen-space ambient occlusion effect applied in camera rendering.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
The default value of this property is zero, disabling SSAO effects. Increasing the intensity value creates deeper, bolder shadows.
(Read and Write property)

147.7.38 screenSpaceAmbientOcclusionNormalThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of the blur effect applied to create ambient occlusion shadows.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.

SSAO shadowing includes a blur effect to realistically soften differences in shadow between adjacent pixels, which depends on both the smoothness of scene geometry and this factor. Larger blur factors create a softer, more spread-out blur; smaller factors create coarser shadowing effects.
(Read and Write property)

147.7.39 screenSpaceAmbientOcclusionRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance, in units of scene space, at which ambient occlusion takes effect.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO effects work by storing relevant scene geometry information for each pixel, and using that information to produce per-pixel shading effects. This screenSpaceAmbientOcclusionRadius property determines the area in scene space to consider around each pixel for determining the amount of incoming ambient light blocked by surrounding geometry (and thus the amount of shadow effect to apply). The default value is 5; smaller values cause SSAO effects to apply only to finer geometry details, while larger values affect coarser details.
(Read and Write property)

147.7.40 SensorHeight as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The vertical size of the camera's imaging plane, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

147.7.41 UsesOrthographicProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the camera uses an orthographic projection.
Notes:

The default value of this property is false, specifying a perspective projection. In a perspective projection, equally sized objects nearer to the camera appear larger than those farther away.
Set the value of this property to true to specify an orthographic projection. In an orthographic projection, equally sized objects appear equally sized regardless of distance from the camera.
To control the magnification factor of an orthographic camera, use its orthographicScale property.
(Read and Write property)

147.7.42 vignettingIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of vignette (darkening around edges) effect to apply to the rendered scene.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result in more darkening, and lower values result in a subtler effect. The default value of 0.0 results in no vignetting effect.
This property controls the level of darkening applied; the vignettingPower property controls the area of the rendered image to be darkened.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.43 vignettingPower as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of the rendered scene to darken with a vignette effect.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result apply the darkening effect to a broader area around the edges of the rendered image, and lower values apply the effect to a smaller area, leaving more of the rendered image at full brightness. The default value of 0.0 results in no vignetting effect.
This property controls the area of the rendered image to be darkened; the vignettingIntensity property controls the level of darkening applied to those areas.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

147.7.44 WantsDepthOfField as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit renders depth-of-field blur effects for the camera.
Notes:

This value is NO by default, disabling depth-of-field effects.
Enabling this property causes SceneKit to render blur effects that model those created by a physical camera device (also known as bokeh). That is, objects in the scene appear more or less blurry depending on their distance from the camera and the camera's focusDistance, and the intensity and style of the blur effect depend on the fStop and apertureBladeCount properties.

Note
For best results, also enable the wantsHDR property when using depth-of-field effects. High Dynamic Range rendering provides high contrast for distant bright points in the scene, creating more pronounced bokeh effects.
(Read and Write property)

147.7.45 WantsExposureAdaptation as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit automatically adjusts the exposure level.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. One measure of tone mapping is the exposure value, whose effect on the output is similar to that of the shutter speed (or exposure time) of a real-world camera—lower exposure values result in a darker image, and higher exposures result in a brighter image. You cannot adjust exposure value directly—instead, SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance.

If this property's value is YES (the default), SceneKit automatically measures the current luminance visible to the camera during rendering, and adjusts the exposure level accordingly. Additionally, when the scene luminance changes, SceneKit automatically animates a transition to the new exposure level (see the exposureAdaptationBrighteningSpeedFactor and exposureAdaptationDarkeningSpeedFactor properties).

Note
The visual effect of automatic exposure is similar to how human visual perception adjusts to changes in environmental lighting. For example, consider a game scene where the player moves from a darkened area into full daylight. At first, the exposure value is low, allowing for visible detail in the darkened area, but no detail in the white daylight outside. As the player moves into the daylight, the entire view becomes blindingly bright, but over a brief time the player's vision adapts: detail becomes visible in the bright area, and the darkened area loses detail.

If this property's value is NO, SceneKit's tone mapping effect is constant. Instead of responding to scene luminance, SceneKit uses the averageGray property to determine the tone mapping curve.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

147.7.46 WantsHDR as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit applies High Dynamic Range (HDR) postprocessing effects to a scene.
Notes:

When this property's value is NO (the default), SceneKit performs lighting calculations in a color space whose brightness range is similar to that of the output display. This approach limits the ability to perform realistic rendering of scenes with fine details in brightness levels.
When you enable HDR rendering for a camera, SceneKit calculates lighting in a much deeper color space, preserving fine details in contrast regardless of brightness, then applies a post-processing effect called tone mapping to translate luminance values from that space to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance. The wantsExposureAdaptation property determines whether tone mapping effects are static or dynamically respond when the luminance visible to the camera changes.
The default value is false.
(Read and Write property)

147.7.47 whitePoint as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The luminance level to use as the upper end of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
The default value is 1.0. By setting this property to a higher or lower value, you can produce more gradual or more abrupt transitions between shadows and highlights.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

147.7.48 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera's far depth limit. Animatable.
Notes:

The far value determines the maximal distance between the camera and a visible surface. If a surface is

farther from the camera than this distance, the surface is clipped and does not appear. The default far value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.7.49 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera's near depth limit. Animatable.
Notes:

The near value determines the minimal distance between the camera and a visible surface. If a surface is closer to the camera than this distance, the surface is clipped and does not appear. The near value must not be zero. The default near value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.7.50 Constants

147.7.51 kProjectionDirectionHorizontal = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured horizontally.

147.7.52 kProjectionDirectionVertical = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured vertically.

147.8 class SCNCapsuleMBS

147.8.1 class SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCapsule represents a capsule with controllable height and cap radius.
Notes: Subclass of the SCNGeometryMBS class.

147.8.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.8.3 Methods

147.8.4 capsule(capRadius as double, height as double) as SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

147.8.5 Constructor(capRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

147.8.6 Properties

147.8.7 capRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The cap radius of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

147.8.8 capSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions in the cap. Animatable.
Notes:

If the value is less than 2, the behavior is undefined. The default value is 24.
(Read and Write property)

147.8.9 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 2.
(Read and Write property)

147.8.10 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.8.11 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.9 class SCNConeMBS

147.9.1 class SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCone represents a cone with controllable height, top radius and bottom radius.
Notes: Subclass of the SCNGeometryMBS class.

147.9.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.9.3 Methods

147.9.4 cone(topRadius as double, bottomRadius as double, height as double) as SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

147.9.5 Constructor(topRadius as double, bottomRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

147.9.6 Properties

147.9.7 bottomRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius at the bottom of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

147.9.8 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the cone. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.9.9 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.9.10 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.9.11 topRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius at the top of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

147.10 class SCNConstraintMBS

147.10.1 class SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The abstract superclass for objects that automatically adjust the position, rotation, or scale of a node based on specified rules.
Notes:

To control the transform (position, rotation, and scale) of one or more SCNNodeMBS objects with constraints, create and configure instances of the SCNConstraint subclass that provides the behavior you want, then add those constraint objects to each node's constraints array.

When SceneKit prepares to render a scene, it examines the list of constraints attached to each node to determine the transform for that node, then applies the new transformation before displaying the scene.

147.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.10.3 Methods

147.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.10.5 copy as SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the constraint object.

147.10.6 Properties

147.10.7 Enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines whether the constraint is enabled or not.
Notes:

Defaults to true.
(Read and Write property)

147.10.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.10.9 Incremental as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies whether or not the contraint should applies incrementally and have it's effect being cumulated over the rendered frames.
Notes:

Defaults to true on macOS 10.13, iOS 11, tvOS 11 and watchOS 4. Defaults to false in earlier versions.
(Read and Write property)

147.10.10 influenceFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The influence of the constraint on the node's transformation.
Notes:

Use this property to relax the effect of a constraint on the nodes it applies to. For example, consider a node containing a spotlight, constrained by an SCNLookAtConstraintMBS object to point toward another node containing a moving game character. If the constraint's influence factor is 1.0, SceneKit adjusts the spotlight node to point directly at the game character each time it renders a frame. If you reduce the influence factor to 0.5, each time SceneKit renders a frame it moves the spotlight halfway from its current orientation to the target orientation. As a result, the spotlight continues to follow the moving character, but with a slight lag.

The default influence factor is 1.0, specifying that SceneKit apply the full effect of the constraint every frame. An influence factor of 0.0 means the constraint has no effect.

This property has no effect on SCNTransformConstraintMBS objects.
(Read and Write property)

147.11 control SCNControlMBS

147.11.1 control SCNControlMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Xojo control for a SCNViewMBS.
Notes:

This control embeds a special SCNView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

147.11.4 Properties

147.11.5 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

147.11.6 Events

147.11.7 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the bounds, but not the frame, changed.

147.11.8 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event where you can enable menu items.

147.11.9 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the frame changed.

147.11.10 GotFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

147.11.11 LostFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

147.11.12 MenuAction(HitItem as MenuItem) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

147.11.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.

Return True if you are going to handle the MouseDown.
If you return False, the system handles the MouseDown so the above event handlers do not get called.

147.11.14 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

147.11.15 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

147.11.16 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

147.12 class SCNCylinderMBS

147.12.1 class SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCylinder represents a cylinder with controllable height and radius.
Notes: Subclass of the SCNGeometryMBS class.

147.12.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.12.3 Methods

147.12.4 Constructor(radius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cylinder with given radius and height.

147.12.5 cylinder(radius as double, height as double) as SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cylinder with given radius and height.

147.12.6 Properties

147.12.7 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The height of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.12.8 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.12.9 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.12.10 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

147.13 class SCNDistanceConstraintMBS

147.13.1 class SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNDistanceConstraint ensure a minimum/maximum distance with a target node.
Notes: Subclass of the SCNConstraintMBS class.

- MBS Xojo Plugins, version 19.1pr1

147.13.3 Methods

147.13.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNDistanceConstraint constraint.

147.13.5 distanceConstraintWithTarget(target as SCNNodeMBS) as SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNDistanceConstraint constraint.

147.13.6 Properties

147.13.7 maximumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance.
Notes:

Defaults to MAXFLOAT. Animatable.
(Read and Write property)

147.13.8 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

147.13.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to keep distance with.
Notes: (Read and Write property)

147.14 class SCNFloorMBS

147.14.1 class SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNFloor represents an infinite plane geometry.
Notes: Subclass of the SCNGeometryMBS class.

147.14.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.14.3 Methods

147.14.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a floor.
Notes: A floor is an infinite plane.

147.14.5 floor as SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a floor.
Notes: A floor is an infinite plane.

147.14.6 Properties

147.14.7 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The floor extent along the Z axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the Z axis. The default value is 0.
(Read and Write property)

147.14.8 reflectionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the node categories to reflect. Defaults to all bits set.
Notes: (Read and Write property)

147.14.9 reflectionFalloffEnd as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the distance from the floor where the falloff finishes. Animatable.
Notes:

If the value is 0 then there is no falloff. The default value is 0.
(Read and Write property)

147.14.10 reflectionFalloffStart as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the distance from the floor where the falloff begins. Animatable.
Notes:

The default value is 0.
(Read and Write property)

147.14.11 reflectionResolutionScaleFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the resolution scale factor of the buffer used to render the reflection.
Notes:

Defaults to 1.0.
(Read and Write property)

147.14.12 reflectivity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the reflectivity of the floor. Animatable.
Notes:

If the value is greater than zero then the surface will reflect other objects in the scene. The default value is 0.25.

(Read and Write property)

147.14.13 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The floor extent along the X axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the X axis. The default value is 0.
(Read and Write property)

147.15 class SCNGeometryElementMBS

147.15.1 class SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A container for index data describing how vertices connect to define a three-dimensional object, or geometry.
Notes:

You use geometry elements together with SCNGeometrySourceMBS objects to define custom SCNGeometryMBS objects or to inspect the data that composes an existing geometry. You create a custom geometry using a three-step process:

1. Create one or more SCNGeometrySource objects, each of which defines per-vertex information such as position, surface normal, or texture coordinates for all vertices in the geometry.
2. Create at least one SCNGeometryElement object, containing an array of indices identifying vertices in the geometry sources and describing the drawing primitive that SceneKit uses to connect the vertices when rendering the geometry.
3. Create an SCNGeometry instance from the geometry sources and geometry elements.

When SceneKit renders a geometry, each geometry element corresponds to a drawing command sent to the GPU. Because different rendering states require separate drawing commands, you can define a geometry using multiple geometry elements. For example, the teapot geometry shown below has four geometry elements, so you can assign up to four SCNMaterial objects in order to render each element with a different appearance. But because each drawing command incurs a CPU time overhead when rendering, minimizing the number of elements in a custom geometry can improve rendering performance.

147.15.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

147.15.3 Methods

147.15.4 Constructor(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.

primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

147.15.5 geometryElementWithData(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

147.15.6 Properties

147.15.7 bytesPerIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of bytes that represent each index value in the element's data.
Notes:

An element's data property holds an array of index values identifying vertices in a geometry source. SceneKit

interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

147.15.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The data describing the geometry element.
Notes:

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

147.15.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.15.10 maximumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The largest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

147.15.11 minimumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The smallest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

147.15.12 pointSize as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The width of each point in the geometry element, as measured in the geometry's local 3D coordinate space.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
(Read and Write property)

147.15.13 primitiveCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of primitives in the element.

Notes: (Read only property)

147.15.14 primitiveRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The range of primitives from the geometry element to render.
Notes:

The default value for this property is an NSRangeMBS whose location is NSNotFound (-1) and length is zero, indicating that, by default, SceneKit renders the entire set of primitives specified by a geometry element's data buffer.
You can change a geometry without redefining it by choosing to render only a subset of the primitives specified by a geometry element. To do so, set this property to a subrange of primitive indexes.
(Read and Write property)

147.15.15 primitiveType as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The drawing primitive that connects vertices when rendering the geometry element.
Notes: (Read only property)

147.15.16 Constants

147.15.17 PrimitiveTypeLine = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of line segments, with each line segment described by two new vertices.

147.15.18 PrimitiveTypePoint = 3

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of unconnected points.

147.15.19 PrimitiveTypePolygon = 4

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes:

The geometry element's data is a sequence of arbitrary polygons.
see
https://developer.apple.com/documentation/scenekit/scngeometryprimitivetype/scngeometryprimitivetype-polygon?language=objc

147.15.20 PrimitiveTypeTriangles = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by three new vertices.

147.15.21 PrimitiveTypeTriangleStrip = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by one new vertex and two vertices from the previous triangle.

147.16 class SCNGeometryMBS

147.16.1 class SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A three-dimensional shape (also called a model or mesh) that can be displayed in a scene, with attached materials that define its appearance.
Notes:

In SceneKit, geometries attached to SCNNode objects form the visible elements of a scene, and SCNMaterial objects attached to a geometry determine its appearance.

Working with Geometry Objects

You control a geometry's appearance in a scene with nodes and materials. A geometry object provides only the form of a visible object rendered by SceneKit. You specify color and texture for a geometry's surface, control how it responds to light, and add special effects by attaching materials (for details, see the methods in Managing a Geometry's Materials). You position and orient a geometry in a scene by attaching it to an SCNNode object. Multiple nodes can reference the same geometry object, allowing it to appear at different positions in a scene.

You can easily copy geometries and change their materials. A geometry object manages the association between immutable vertex data and a mutable assignment of materials. To make a geometry appear more than once in the same scene with a different set of materials, use its inherited copy method. The copy shares the underlying vertex data of the original, but can be assigned materials independently. You can thus make many copies of a geometry without incurring a significant cost to rendering performance.

You can animate a geometry object. The vertex data associated with a geometry is immutable, but SceneKit provides several ways to animate geometry. You can use a SCNMorpher or SCNSkinner object to deform a geometry's surface, or run animations created in an external 3D authoring tool and loaded from a scene file. You can also use methods in the SCNShadable protocol to add custom GLSL shader programs that alter SceneKit's rendering of a geometry.

Obtaining a Geometry Object

SceneKit provides several ways to introduce geometry objects to your app:

Action	For further information
Load from a scene file created using external 3D authoring tools	SCNScene, SCNSceneSource
Use and customize SceneKit's built-in primitive shapes	SCNPlane, SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, SCNCapsule, SCNTube, and SCNTorus
Create 3D geometry from 2D text or Bézier curves	SCNText, SCNShape
Create a custom geometry from vertex data	SCNGeometrySource, SCNGeometryElement, geometryWithSources.

147.16.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr8

147.16.3 Methods

147.16.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

147.16.5 copy as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the geometry.

147.16.6 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

147.16.7 geometryElementAtIndex(index as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the geometry element at a specified index.
Notes: Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.

147.16.8 geometryElements as SCNGeometryElementMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of geometry elements that describe the geometry's shape.
Notes:

Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.
For geometries with multiple elements, you can use the materials property to attach different materials to each element.

147.16.9 geometrySources as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of geometry sources that provide vertex data for the geometry.
Notes: Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source (for the SCNGeometrySourceSemanticVertex semantic), typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.

147.16.10 geometrySourcesForSemantic(semantic as String) as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the geometry sources for a specified semantic.
Notes:

semantic: A constant identifying a semantic for which to return geometry sources. See Geometry Semantic Identifiers for possible values.

Returns an array of SCNGeometrySource objects, or nil if the geometry has no source for the specified semantic.

Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex

position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source, for the SCNGeometrySourceSemanticVertex semantic, typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.
The vertex, normal, and color semantics each refer to at most one source. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—in this case, indices in the returned array correspond to values for the mappingChannel property used when attaching textures to materials.

147.16.11 geometryWithSources(sources() as SCNGeometrySourceMBS, elements() as SCNGeometryElementMBS) as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new geometry built from the specified geometry sources and elements.
Notes:

sources: An array of SCNGeometrySourceMBS objects describing vertices in the geometry and their attributes.
elements: An array of SCNGeometryElementMBS objects describing how to connect the geometry's vertices.

A geometry's visible content comes from the combination of geometry sources, which contain data describing its vertices, with geometry elements, which contain data describing how the vertices connect to form a surface.
Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. To create a custom geometry you must provide at least one source, for the SCNGeometrySourceSemanticVertex semantic. Typically, you also provide sources for normals and texture coordinates for use in lighting and shading.
Sources for the vertex, normal, and color semantics must be unique—if multiple objects in the sources array have the same semantic, SceneKit uses only the first. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—the order of texture coordinate sources in the sources array determines the value to use for the mappingChannel property when attaching materials.
Each SCNGeometryElementMBS object describes how vertices from the geometry sources are combined into polygons to create the geometry's shape. Creating a custom geometry requires at least one element. If the elements array contains multiple objects, their order determines the arrangement of the geometry's materials—for details, see the discussion of the materials property.

147.16.12 insertMaterial(Material as SCNMaterialMBS, Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Insert a material in the materials array at the specified index.
Notes:

material: The material to insert.
index: Index in the materials array to insert the new material.

147.16.13 levelsOfDetail as SCNLevelOfDetailMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Because rendering a complex geometry incurs a performance cost, you can use level-of-detail objects to substitute simpler geometries in its place as its distance from the point of view camera increases (or its apparent size decreases). For details, see SCNLevelOfDetailMBS.

147.16.14 materials as SCNMaterialMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the receiver's materials array.
Notes: Each geometry element can be rendered using a different material. The index of the material used for a geometry element is equal to the index of that element modulo the number of materials.

147.16.15 materialWithName(name as string) as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the first material from the materials array of the receiver with the specified name.
Notes: name: The name of the material to retrieve.

147.16.16 removeMaterial(Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Remove the material at the specified index from the materials array.
Notes: index: The index of the material to remove from the 'materials' array.

147.16.17 replaceMaterial(Index as Integer, Material as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Remove the material at the index 'index' from the materials array of the receiver and insert 'material' in its position.
Notes:

index: The index of the material to replace in the materials array.
material: The new material that will replace the previous one.

147.16.18 setLevelsOfDetail(LevelsOfDetails() as SCNLevelOfDetailMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets an array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Value can be nil to clear it.

147.16.19 setMaterials(materials() as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the materials.

147.16.20 Properties

147.16.21 edgeCreasesElement as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry element identifying which edges of the geometry's surface should remain sharp after subdivision.
Notes:

This geometry element's primitiveType value must be SCNGeometryPrimitiveTypeLine. The geometry element's data is an array of vertex indices, each pair of which defines a line segment identifying an edge to be treated as a crease during subdivision. Use the edgeCreasesSource property to specify the smoothness or sharpness of each crease.
(Read and Write property)

147.16.22 edgeCreasesSource as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry source specifying the smoothness or sharpness of edges after surface subdivision.
Notes:

This geometry source's semantic value must be SCNGeometrySourceSemanticEdgeCrease. Its data is an array of scalar values (that is, the source's componentsPerVector value is 1). The value at an index in the geometry source determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the edgeCreasesElement geometry element: a value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.

(Read and Write property)

147.16.23 firstMaterial as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the first material of the geometry. Returns nil if the geometry has no material.
Notes:

This method is here for convenience. It is equivalent to the first object in the "materials" array above.
(Read and Write property)

147.16.24 geometryElementCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of geometry elements owned by the geometry.
Notes: (Read only property)

147.16.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.16.26 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A name associated with the geometry object.
Notes:

You can provide a descriptive name for a geometry object to make managing your scene graph easier. Geometries loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine geometries in a scene file without loading its scene graph.

Geometry names are saved when you export a scene to a file using its writeToURL method. They also appear in the Xcode scene editor.
(Read and Write property)

147.16.27 subdivisionLevel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the subdivision level of the receiver.
Notes:

Defaults to 0.
A subdivision level of 0 means no subdivision. When the ‘tessellator‘ property of the receiver is not nil, the refinement is done on the GPU.
(Read and Write property)

147.16.28 tessellator as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies how the geometry should be tessellated at render time on the GPU.
Notes:

Defaults to nil.
(Read and Write property)

147.16.29 wantsAdaptiveSubdivision as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies if the subdivision is adaptive or uniform.
Notes:

Defaults to true.
Adaptive subdivision requires that the ‘tessellator‘ property of the receiver is not nil.
(Read and Write property)

147.17 class SCNGeometrySourceMBS

147.17.1 class SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for vertex data forming part of the definition for a three-dimensional object, or geometry.
Notes:

You use geometry sources together with SCNGeometryElement objects to define custom SCNGeometry objects or to inspect the data that composes an existing geometry.

see
https://developer.apple.com/documentation/scenekit/scngeometrysource

- MBS Xojo Plugins, version 19.3pr6
- MBS Xojo Plugins, version 19.3pr5

147.17.3 Methods

147.17.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.17.5 geometrySourceWithData(data as MemoryBlock, Semantic as String, vectorCount as Integer, floatComponents as boolean, componentsPerVector as Integer, bytesPerComponent as Integer, dataOffset as Integer, dataStride as Integer) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a geometry source from the specified data and options.
Notes:

data: The data for the geometry source.
semantic: The semantic value (or attribute) that the geometry source describes for each vertex. See Geometry Semantic Identifiers for available values.
vectorCount: The number of geometry source vectors.

floatComponents: A Boolean value that indicates whether vector components are floating-point values. Specify true for floating-point values, or false for integer values.
componentsPerVector: The number of scalar components in each vector.
bytesPerComponent: The size, in bytes, of each vector component.
offset: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
stride: The number of bytes from each vector to the next in the data.

Returns a new geometry source object.

sA geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other parameters determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector. You can use the offset and stride parameters together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

147.17.6 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of normal vectors.
Notes:

normals: An array of three-component vectors, each of which represents a surface normal for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticNormal.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.
See also:

- 147.17.7 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS 19732

147.17.7 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of texture coordinate points.
Notes:

texcoord: An array of points, each of which represents a texture coordinate pair for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticTexcoord.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources:elements: method.
See also:

- 147.17.6 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS 19731

147.17.8 geometrySourceWithVertices(vertices() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of vertex positions.
Notes:

vertices: An array of three-component vectors, each of which represents a vertex position for the geometry source.

Returns a new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticVertex.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

147.17.9 SCNGeometrySourceSemanticBoneIndices as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for bone index data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine which bone nodes in the skeleton affect the behavior of each vertex.
For a custom shader program, you use this semantic to bind SceneKit's bone index data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

147.17.10 SCNGeometrySourceSemanticBoneWeights as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for bone weight data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine how much a vertex's position is influenced by the positions of bone nodes in the skeleton.
For a custom shader program, you use this semantic to bind SceneKit's bone weight data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

147.17.11 SCNGeometrySourceSemanticColor as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for per-vertex color data.
Notes:

For a geometry source, this semantic identifies data containing a color for each vertex in the geometry. SceneKit interpolates per-vertex colors across a surface to produce smooth shading. Per-vertex colors modulate those produced by lighting and a geometry's materials, if applicable.
For a custom shader program, you use this semantic to bind SceneKit's vertex color data to an input attribute of the shader.
Vertex color data is typically an array of three- or four-component vectors.

147.17.12 SCNGeometrySourceSemanticEdgeCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for edge crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of edges and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's edge crease data to an input attribute

of the shader.
Edge crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the geometry's SceneKit Constants geometry element: A value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.

147.17.13 SCNGeometrySourceSemanticNormal as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for surface normal data.
Notes:

For a geometry source, this semantic identifies data containing the surface normal vector at each vertex in the geometry. SceneKit uses this information to compute lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex normal data to an input attribute of the shader.
Vertex normal data is typically an array of three- or four-component vectors.

147.17.14 SCNGeometrySourceSemanticTangent as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for surface tangent vector data.
Notes:

For a geometry source, this semantic identifies data containing the surface tangent vector at each vertex in the geometry. SceneKit uses this information to compute advanced lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex tangent data to an input attribute of the shader.
Vertex tangent data is typically an array of three- or four-component vectors.

147.17.15 SCNGeometrySourceSemanticTexcoord as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for texture coordinate data.
Notes:

For a geometry source, this semantic identifies data containing texture mapping coordinates for each vertex in the geometry. Unlike other semantics, a geometry may contain multiple sources for texture coordinates—each corresponds to a separate mappingChannel number that you can use when associating textured materials.
For a custom shader program, you use this semantic to bind SceneKit's texture coordinate data to one or more input attributes of the shader.
Texture coordinate data is typically an array of two-component vectors.

147.17.16 SCNGeometrySourceSemanticVertex as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic for vertex position data.
Notes:

For a geometry source, this semantic identifies data containing the positions of each vertex in the geometry. If you create a custom geometry using the geometryWithSources method, you must provide a geometry source for this semantic.
For a custom shader program, you use this semantic to bind SceneKit's vertex position data to an input attribute of the shader.
Vertex position data is typically an array of three- or four-component vectors.

147.17.17 SCNGeometrySourceSemanticVertexCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic for vertex crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of corners and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's vertex crease data to an input attribute of the shader.
Vertex crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the corresponding vertex: A value of 0.0 specifies a completely smoothed corner, and a value of 10.0 or greater specifies an infinitely sharp point.

147.17.18 Properties

147.17.19 bytesPerComponent as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size, in bytes, of each vector component.
Notes: (Read only property)

147.17.20 componentsPerVector as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of scalar components in each vector.
Notes: (Read only property)

147.17.21 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The data for the geometry source.
Notes:

A geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other properties of the geometry source determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector.
(Read only property)

147.17.22 dataOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

147.17.23 dataStride as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of bytes from a vector to the next one in the data.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

147.17.24 floatComponents as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether vector components are floating-point values.
Notes:

If true, SceneKit interprets the geometry source's data as an array of vectors whose components are floating-point values. The type of floating-point value is determined by the SCNGeometrySourceMBS property: 4

bytes for float values or 8 bytes for double values.
If false, SceneKit interprets the geometry source's data as an array of vectors whose components are integer values. The type of integer value is determined by the SCNGeometrySourceMBS property; for example, 2 bytes for unsigned short values or 4 bytes for unsigned int values.
(Read only property)

147.17.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.17.26 semantic as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic value (or attribute) the geometry source describes for each vertex.
Notes:

A semantic describes an attribute for each vertex, such as position, color, surface normal vector, or texture coordinates.
See Geometry Semantic Identifiers for available values.
(Read only property)

147.17.27 vectorCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of vectors in the data.
Notes: (Read only property)

147.18 class SCNGeometryTessellatorMBS

147.18.1 class SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A geometry tessellator describes how a more detailed surface is calculated from the geometry's initial surface.

147.18.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

147.18.3 Methods

147.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

147.18.5 copy as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the object.

147.18.6 Properties

147.18.7 Adaptive as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the tessellation should be uniform or adaptive.
Notes:

Defaults to false.
(Read and Write property)

147.18.8 edgeTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the edge tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision.
(Read and Write property)

147.18.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.18.10 insideTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the inside tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision
(Read and Write property)

147.18.11 maximumEdgeLength as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the maximum edge length.
Notes:

Defaults to 1.
This has no effect for non-adaptive subdivision
(Read and Write property)

147.18.12 ScreenSpace as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the level of tessellation should be adapted in screenSpace.
Notes:

Defaults to false.
(Read and Write property)

147.18.13 smoothingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The smoothing mode.
Notes:

Defaults to SmoothingModeNone.
(Read and Write property)

147.18.14 tessellationFactorScale as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the scale factor applied to the per-patch tessellation factors.
Notes:

Defaults to 1.
(Read and Write property)

147.18.15 tessellationPartitionMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the tessellation partition mode.
Notes:

Defaults to TessellationPartitionModeInteger.

see also
https://developer.apple.com/documentation/metal/mtltessellationpartitionmode?language=objc
(Read and Write property)

147.18.16 Constants

147.18.17 SmoothingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

147.18.18 SmoothingModePhong = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

147.18.19 SmoothingModePNTriangles = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

147.18.20 TessellationPartitionModeFractionalEven = 3

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional even partitioning mode.

147.18.21 TessellationPartitionModeFractionalOdd = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional odd partitioning mode.

147.18.22 TessellationPartitionModeInteger = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: An integer partitioning mode.

147.18.23 TessellationPartitionModePow2 = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A power of two partitioning mode.

147.19 class SCNIKConstraintMBS

147.19.1 class SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constraint that applies inverse kinematics to make a chain of nodes "reach" toward a target point.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnikconstraint
Subclass of the SCNConstraintMBS class.

147.19.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.19.3 Methods

147.19.4 Constructor(chainRootNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

147.19.5 inverseKinematicsConstraintWithChainRootNode(chainRootNode as SCNNodeMBS) as SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

147.19.6 Properties

147.19.7 chainRootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the root node of the kinematic chain.
Notes: (Read only property)

147.19.8 targetPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the target position (in world space coordinates) of the end joint (i.e the node that owns the IK constraint).
Notes:

Defaults to (0,0,0). Animatable.
(Read and Write property)

147.20 class SCNLevelOfDetailMBS

147.20.1 class SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An alternate resolution for a geometry that SceneKit automatically substitutes to improve rendering performance.
Notes:

You use level-of-detail objects when you have a detailed geometry that appears at several apparent sizes in a scene. For example, the teapot model on the the left in the figure below has 256 polygons, the model at center has 1024 polygons, and the model on the right has 14,400 polygons. If all three models appear close to the camera, filling most of the rendered view, the difference in detail between them is clearly visible—but if they appear far away, taking up a small area of the view, the difference is much less obvious. Rendering higher-resolution geometries incurs a higher performance cost.

When you associate one or more level-of-detail objects with a SCNGeometryMBS object using its levelsOfDetail property, SceneKit automatically substitutes alternate geometries when appropriate. For example, the two lower-resolution teapot models seen above can be added as levels of detail for the high-resolution model. For each level of detail, you specify either a world-space distance or a screen-space radius. The measure you specify determines the threshold where SceneKit automatically renders that level of detail's alternate geometry instead of the original geometry. If you specify a distance, the alternate geometry appears when the node containing the geometry is moved that distance away from the camera. If you specify a radius, the alternate geometry appears when the pixel area covered by the rendered by the geometry is smaller than a circle of that radius.
The geometries associated with lower levels of detail need not share all attributes of the original geometry. For example, you can use different materials for levels of detail that only appear when far away from the camera, disabling expensive features such as per-pixel lighting, reflection mapping, or custom shader programs.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.20.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

147.20.3 Methods

147.20.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.20.5 copy as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the object.

147.20.6 levelOfDetailWithGeometryAndScreenSpaceRadius(geo as SCNGeometryMBS, screenSpaceRadius as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a level of detail with the specified geometry and threshold pixel radius.
Notes:

geometry: The geometry to render for this level of detail.
radius: The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the largest radius parameter smaller than that circle.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

147.20.7 levelOfDetailWithGeometryAndWorldSpaceDistance(geo as SCNGeometryMBS, worldSpaceDistance as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a level of detail with the specified geometry and threshold camera distance.
Notes:

geometry: The geometry to render for this level of detail, or nil if SceneKit should render no geometry at this level of detail.
distance: The minimum distance from the current point of view for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetail object with the smallest distance parameter greater than that distance.

If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

147.20.8 Properties

147.20.9 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry associated with this level of detail.
Notes:

SceneKit renders this geometry instead of the original geometry when the level of detail is appropriate. Generally, levels of detail with larger worldSpaceDistance values or smaller screenSpaceRadius values should contain less complex geometries.
If the value of this property is nil, SceneKit renders no geometry at this level of detail.
(Read only property)

147.20.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

147.20.11 screenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.
Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the smallest radius parameter larger than that circle.
(Read only property)

147.20.12 worldSpaceDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance from the current point of view for this level of detail to appear.

Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetailMBS object with the largest distance parameter less than that distance.
(Read only property)

147.21 class SCNLightMBS

147.21.1 class SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A light source that can be attached to a node to illuminate the scene.
Notes:

You illuminate your scene by attaching lights to SCNNode objects using their light property.

You set a light's type using its type property. Depending on a light's type, its position and direction may affect its behavior—you control the light's position and direction through the node that the light is attached to. The direction of a light, if applicable to its type, is along the negative z-axis of its node's local coordinate system.

A light's other properties affect how it illuminates a scene. All lights have a color property, which interacts with SCNMaterial objects to produce the pixel colors in a rendered scene. Other properties, such as attenuation, shadowing, and spot angle, can affect the behavior of certain types of lights.

The number and type of lights in a scene is a key factor in SceneKit's rendering performance. For efficient rendering, follow these tips:

- Use SceneKit lights only for dynamic light sources or lights that affect moving objects. For statically lit portions of your scene, create a light map texture in an external 3D authoring tool (also known as baked lighting) and apply it to objects in the scene using the multiply material property.

- Minimize the number of lights on each element of the scene. You can achieve most common lighting effects using no more than three lights, and you only need a single ambient light source. SceneKit only uses up to eight light sources per node when rendering, ignoring any additional lights. If you set the attenuationEndDistance property on a spotlight or omnidirectional light to limit its area of effect, SceneKit ignores the light (and its performance cost) when rendering objects outside that area. You can also use the categoryBitMask property to choose which nodes are illuminated by a light.

Requires MacOS 10.8 or newer.

147.21.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

147.21.3 Methods

147.21.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new light object.

147.21.5 copy as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the light.

147.21.6 light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new light object.

147.21.7 SCNLightTypeAmbient as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light that illuminates all objects in the scene from all directions.
Notes: Because the intensity of light from an ambient source is the same everywhere in the scene, its position and direction have no effect. Attenuation, spotlight angle, and shadow attributes do not apply to ambient lights.

147.21.8 SCNLightTypeDirectional as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source with a uniform direction and constant intensity.
Notes: Because a directional light illuminates all objects in the scene from the same direction and with the same intensity, so the position of the node containing the light has no effect. Attenuation and spotlight angle attributes do not apply to directional lights.

147.21.9 SCNLightTypeIES as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source whose shape, direction, and intensity of illumination is determined by a photometric

profile.
Notes:

The intensity of a photometric light varies in different directions from the light source, much like the illumination from a real-world light source. The position of the containing node determines the location of the light source, and the orientation of the node determines the relative directions specified by the photometric profile. Spotlight angle attributes do not apply to photometric lights.
For more information about photometric lights, see the IESProfileURL property.

147.21.10 SCNLightTypeOmni as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An omnidirectional light, also known as a point light.
Notes: Because an omnidirectional light casts equal illumination in all directions, the orientation of the node containing the light has no effect. Spotlight angle and shadow attributes do not apply to directional lights.

147.21.11 SCNLightTypeProbe as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A sample of the environment around a point in a scene to be used in environment-based lighting.
Notes:

A light probe describes a point in a scene in terms of the variations in color and intensity of the illumination it receives from all directions. This information can then be used in shading of materials based on their location in the scene. For example, a white object placed near blue and red walls will appear bluish on surfaces facing the blue wall and reddish on surfaces facing the red wall.
You can place light probes in a scene and generate their lighting contributions using the Xcode scene editor, or import light probes from scene file formats that support them. Lighting-related properties of the SCNLight class do not apply to light probes; their contribution to scene rendering depends entirely on the light probe content generated in Xcode.

147.21.12 SCNLightTypeSpot as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source that illuminates a cone-shaped area.
Notes: The position and orientation of the node containing the light determines the area lit by the spotlight, and all lighting attributes affect its appearance.

147.21.13 Properties

147.21.14 attenuationEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from the light at which its intensity is completely diminished. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.15 attenuationFalloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transition curve for the light's intensity between its attenuation start and end distances. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances in between the start and end distance, the light's intensity transitions from full to no illumination according to the value of this property.
A value of 0.0 specifies no attenuation—the light's intensity is the same at all distances. A value of 1.0 specifies a linear transition, and a value of 2.0 (the default) specifies a quadratic transition curve. Higher values have little visible effect.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.16 attenuationStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from the light at which its intensity begins to diminish. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).

You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.17 automaticallyAdjustsShadowProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the shadow map projection should be done automatically or manually by the user.
Notes:

Defaults to true.
(Read and Write property)

147.21.18 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the light casts shadows.
Notes:

Geometries illuminated by the light cast shadows only if the value of this property is YES and the type property of the light is SCNLightTypeSpot or SCNLightTypeDirectional. The default value is false.
(Read and Write property)

147.21.19 Color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The color of the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. The default color is white.
You can animate changes to this property's value.

See Animating SceneKit Content:
https://developer.apple.com/documentation/scenekit/animation/animating_scenekit_content
(Read and Write property)

147.21.20 ForcesBackFaceCasters as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.

Notes: (Read and Write property)

147.21.21 gobo as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An image or other visual content affecting the shape and color of a light's illuminated area.
Notes:

In photographic and stage lighting terminology, a gobo (also known as a flag or cookie) is a stencil, gel, or other object placed just in front of a light source, shaping or coloring the beam of light.
You alter the appearance of a spotlight by changing the contents property of the object permanently assigned to this property. As with other material properties, you can use a color or image, or a Core Animation layer containing animated content, as a lighting gobo.
This property applies only to lights whose type property is spot.
(Read only property)

147.21.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.21.23 Intensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The luminous flux, in lumens, or total brightness of the light. Animatable.
Notes:

When working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased), you can leave the color property at its default white color and use the intensity and temperature to control the light using realistic parameters. When working with physically-based materials, this value the luminous flux of the light source. The default value is 1000 lumens.
When not using physically-based rendering, this value (divided by 1000) serves as a multiplier for the the color property. The default value of of 1000 leaves the light color unmodulated; you can use higher values, for example, to brighten a light whose color is already the maximum red value.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.24 maximumShadowDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the maximum distance from the viewpoint from which the shadows for the receiver light won't be computed.
Notes:

Defaults to 100.0.
(Read and Write property)

147.21.25 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the light.
Notes:

You can provide a descriptive name for a light to make managing your scene graph easier. Lights loaded from a scene file may have names assigned by an artist using a 3D authoring tool. To examine lights in a scene file without loading its scene graph, use the SCNSceneSourceMBS class.
(Read and Write property)

147.21.26 OrthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The orthographic scale SceneKit uses when rendering the shadow map for a directional light.
Notes:

SceneKit draws a shadow map image by rendering the scene from the point of view of the node containing the light. Directional lights ignore the position property of the node containing them because their light has a constant direction. Therefore, rendering a shadow map for a directional light requires an orthographic projection. Like the orthographicScale property of a camera object, this property specifies the extent of the scene "visible to" the light when rendering the shadow map.
This property applies only if the light's type property is SCNLightTypeDirectional.
(Read and Write property)

147.21.27 SampleDistributedShadowMaps as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Use the sample distribution of the main rendering to better fit the shadow frusta.
Notes:

Defaults to false.
(Read and Write property)

147.21.28 ShadowBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of correction to apply to the shadow to prevent rendering artifacts.
Notes:

Rendering shadows from a shadow map can result in artifacts where the shadow color does not appear on all pixels in a shadowed surface as intended. (This effect is typically called shadow acne.) This property specifies the error margin SceneKit uses to correct such artifacts.
The default value is 1.0.
(Read and Write property)

147.21.29 ShadowCascadeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the number of distinct shadow maps that will be computed for the receiver light.
Notes:

Defaults to 1. Maximum is 4.
(Read and Write property)

147.21.30 ShadowCascadeSplittingFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies a factor to interpolate between linear splitting (0) and logarithmic splitting (1).
Notes:

Defaults to 0.15.
(Read and Write property)

147.21.31 shadowColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color of shadows cast by the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. SceneKit blends the light's color with other colors in the rendered image to produce a shadow effect. The color's opacity (alpha value) determines the intensity of the shadows. The default shadow color is black with 50% opacity.
You can animate changes to this property's value. See Animating SceneKit Content.

(Read and Write property)

147.21.32 ShadowMode as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode SceneKit uses to render shadows.
Notes:

The default mode is SCNShadowModeForward in iOS and in macOS 10.10 or later. In OS X v10.9 or earlier, the default mode is SCNShadowModeDeferred.
(Read and Write property)

147.21.33 ShadowRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A number that specifies the amount of blurring around the edges of shadows cast by the light. Animatable.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the radius of shadow map sampling. Lower numbers result in shadows with sharply defined, pixelated edges; higher numbers result in blurry shadows.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.34 ShadowSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of samples from the shadow map that SceneKit uses to render each pixel.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of scene geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the number of samples from the shadow map used to render each pixel. Higher numbers result in smoother edges; lower numbers increase rendering performance. The default value is 16 in macOS and 1 on iOS.
(Read and Write property)

147.21.35 spotInnerAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The angle, in degrees, of the area fully lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the fully illuminated area.
The default value is 0.0, specifying that only the center of the area illuminated by the spotlight is lit at full intensity.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.36 spotOuterAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The angle, in degrees, of the area partially lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and with an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the transition area.
The default value is 45.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.37 Temperature as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color temperature, in degrees Kelvin, of the light source. Animatable.
Notes:

SceneKit determines the actual color of the light by multiplying the color value by a color corresponding to the light's temperature. The default value of 6500 K represents a pure white light (leaving the color unmodulated); lower values (down to a minimum of zero) add a "warmer" yellow or orange effect to the light source, and higher values (up to a maximum of 40000) add a "cooler" blue effect.
This property affects all light types, but is especially useful when working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased). You can leave the color property at its default white color and use the intensity and temperature properties to control the light using realistic parameters.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.38 Type as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constant identifying the general behavior of the light.
Notes:

A light's type determines the shape and directionality of illumination provided by the light, as well as the set of attributes available for modifying the light's behavior. For example, light types include omnidirectional lights and spotlights. See Light Types for the full set of types and their behaviors.

see also
https://developer.apple.com/documentation/scenekit/scnlighttype
(Read and Write property)

147.21.39 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum distance between the light and a visible surface for casting shadows.
Notes:

A spotlight casts shadows if its castsShadow property is YES. If a surface is farther from the light than this distance, shadows are not cast against the surface.
The default value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.40 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum distance between the light and a visible surface for casting shadows. Animatable.
Notes:

A spotlight casts shadows if its castsShadow property is YES. If a surface is closer to the light than this distance, shadows are not cast against the surface.
The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.21.41 Constants

147.21.42 kShadowModeDeferred = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows in a postprocessing pass.
In the mode, SceneKit blends shadows into the final image after the main rendering pass, so shadows can be of any color.

147.21.43 kShadowModeForward = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows during lighting computations.
In this mode, the color components of the light's shadowColor property do not apply. The color's alpha component determines the intensity of shadows.

147.21.44 kShadowModeModulated = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows by projecting the light's gobo image. The light does not illuminate the scene.

Typically, you use this mode to create a low-accuracy, high-performance shadow under a game character or similar scene element: Use an image of a radial gradient (black to white) for the light's gobo property, and use categoryBitMask properties to prevent the shadow image from appearing on the character.

147.22 class SCNLookAtConstraintMBS

147.22.1 class SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNLookAtConstraint applies on a node's orientation so that it always look at another node.
Notes: Subclass of the SCNConstraintMBS class.

147.22.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.22.3 Methods

147.22.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

147.22.5 lookAtConstraintWithTarget(target as SCNNodeMBS) as SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

147.22.6 Properties

147.22.7 gimbalLockEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies whether the receiver enables the gimbal lock. Defaults to false.
Notes:

Enabling the gimbal lock prevents the receiver from rotating the constrained node around to roll axis.
(Read and Write property)

147.22.8 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Front direction in the constraint owner local space. Defaults to - [SCNNode localFront] . Animatable
Notes: (Read and Write property)

147.22.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to look at.
Notes: (Read and Write property)

147.22.10 targetOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Offset look at position in target space. Defaults to zero. Animatable
Notes: (Read and Write property)

147.22.11 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Up reference direction in world space. Defaults to - [SCNNode localUp] . Animatable
Notes: (Read and Write property)

147.23 class SCNMaterialMBS

147.23.1 class SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A set of shading attributes that define the appearance of a geometry's surface when rendered. **Notes:**

When you create a material, you define a collection of visual attributes and their options, which you can then reuse for multiple geometries in a scene.

A material has several visual properties, each of which defines a different part of SceneKit's lighting and shading process. Each visual property is an instance of the SCNMaterialPropertyMBS class that provides a solid color, texture, or other 2D content for that aspect of SceneKit's rendering. The material's lightingModelName property then determines the formula SceneKit uses to combine the visual properties with the lights in the scene to produce the final color for each pixel in the rendered scene. For more details on the rendering process, see SCNLightingModelMBS.

You attach one or more materials to an instance of the SCNGeometryMBS class using its firstMaterial or materials property. Multiple geometries can reference the same material. In this case, changing the attributes of the material changes the appearance of every geometry that uses it.

147.23.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.23.3 Methods

147.23.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material.

147.23.5 copy as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the material.

147.23.6 material as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material object.
Notes: A newly created material contains an SCNMaterialPropertyMBS object for each of its eight visual properties. You change a material's appearance by setting the contents of each visual property. For information on each visual property's default contents and how it affects a material's appearance, see Visual Properties for Special Effects.

147.23.7 SCNLightingModelBlinn as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Blinn-Phong formula.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnlightingmodelblinn

147.23.8 SCNLightingModelConstant as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Uniform shading that incorporates ambient lighting only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelconstant

147.23.9 SCNLightingModelLambert as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient and diffuse properties only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodellambert

147.23.10 SCNLightingModelPhong as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights

are calculated using the Phong formula.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphong

147.23.11 SCNLightingModelPhysicallyBased as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Shading based on a realistic abstraction of physical lights and materials.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphysicallybased

147.23.12 Properties

147.23.13 ambient as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's response to ambient lighting.
Notes:

The ambient property specifies the amount of ambient light to reflect. This property has no visual impact on scenes that have no ambient light. Setting the ambient has no effect if locksAmbientWithDiffuse is set to true.
(Read only property)

147.23.14 ambientOcclusion as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to be multiplied with the ambient light affecting the material.
Notes:

Use this property to assign an ambient occlusion texture map to a surface. This property has no effect if there is no ambient light in the scene. If this property is not nil, SceneKit ignores the ambient property.
When using physically-based shading (see SCNLightingModelPhysicallyBased), ambient occlusion approximates large-scale surface details that obscure global illumination.
(Read only property)

147.23.15 blendMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode that determines how pixel colors rendered using this material blend with other pixel colors in the rendering target.
Notes:

With the default blend mode of SCNBlendModeAlpha, materials blend according to their alpha (opacity) values—a pixel rendered with a higher alpha value appears more opaque than one with a lower alpha value. Change this property to create special effects. For example, the SCNBlendModeAdd mode can make objects appear to glow.
(Read and Write property)

147.23.16 colorBufferWriteMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines whether the receiver writes to the color buffer when rendered.
Notes:

Defaults to SCNColorMaskAll.
(Read and Write property)

147.23.17 cullMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode determining which faces of a surface SceneKit renders. Animatable.
Notes:

The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible. Typically, back-facing surfaces are found only on the interior of a closed geometry, obscured by front-facing surfaces, so rendering these surfaces has a performance cost but no visible effect.
This property's default value is SCNCullBack, specifying that SceneKit should cull, or not render, back-facing surfaces. You can change this property's value to cause SceneKit to render only the back surfaces of a material instead. See SCNCullMode for available values.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

147.23.18 diffuse as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's diffuse response to lighting.

Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462589-diffuse
(Read only property)

147.23.19 displacement as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The displacement property specifies how vertex are translated in tangent space.
Notes:

Pass a grayscale image for a simple 'elevation' or rgb image for a vector displacement.
(Read only property)

147.23.20 DoubleSided as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit should render both front and back faces of a surface. Animatable.
Notes:

When this property's value is NO (the default), SceneKit renders a surface using the material from one side. The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible.
If you change this property's value to YES, SceneKit renders both the front and back surfaces of every polygon. SceneKit assumes the surface normals a back face to be the negative of the front face's normal vector.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

147.23.21 emission as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the color emitted by each point on a surface.
Notes:

The emission property specifies the amount of light the material emits. This emission does not light up other surfaces in the scene.
(Read only property)

147.23.22 fillMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines of to how to rasterize the receiver's primitives.
Notes:

Defaults to SCNFillModeFill.
(Read and Write property)

147.23.23 fresnelExponent as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor affecting the material's reflectivity. Animatable.
Notes:

The Fresnel exponent of a material interacts with its reflective property to determine the intensity of reflections in a surface based on its angle relative to the viewer. A higher Fresnel exponent increases the visibility of reflections when the material is viewed from a shallow angle.
(Read and Write property)

147.23.24 lightingModelName as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The lighting formula that SceneKit uses to render the material.
Notes:

SceneKit provides several different lighting models, each of which combines information from a material's visual properties with the lights and other contents of a scene. For details on how each lighting model affects rendering, see Lighting Models. For details on the contribution from each visual property, see Visual Properties for Special Effects.
(Read and Write property)

147.23.25 LitPerPixel as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit performs lighting calculations per vertex or per pixel. Animatable.
Notes:

When this property's value is YES (the default), SceneKit performs lighting calculations independently for each rendered pixel. This approach provides better rendering quality, but can adversely impact rendering performance.
If you change this property's value to NO, SceneKit performs lighting calculations for each vertex in a geom-

etry, and allows the GPU to interpolate lighting results across the pixels in between vertices. Depending on the shape and vertex count of a geometry's surface and the material properties being rendered, this approach may improve rendering performance without much noticeable impact on visual quality.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state.
(Read and Write property)

147.23.26 locksAmbientWithDiffuse as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the material responds identically to both ambient and diffuse lighting. Animatable.
Notes:

Makes the ambient property automatically match the diffuse property. Defaults to false on 10.9 and before, defaults to true otherwise. Animatable.
(Read and Write property)

147.23.27 metalness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to determine how metallic the material's surface appears.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property generally approximates aspects of a physical surface—such as index of refraction, tendency to produce sharp reflections, and tendency to produce Fresnel reflections at grazing angles—that together produce an overall metallic or nonmetallic (also called dielectric) appearance. Lower values (darker colors) cause the material to appear more like a dielectric surface. Higher values (brighter colors) cause the surface to appear more metallic.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

147.23.28 multiply as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values that are multiplied with pixels in a material after all other shading is complete.
Notes:

The multiply property specifies a color or an image used to multiply the output fragments with. The computed fragments are multiplied with the multiply value to produce the final fragments. This property may

be used for shadow maps, to fade out or tint 3d objects.
(Read only property)

147.23.29 name as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the material.
Notes:

You can provide a descriptive name for a material to make managing your scene graph easier. Materials loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine materials in a scene file without loading its scene graph.

Material names are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor.
(Read and Write property)

147.23.30 normal as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the nominal orientation of the surface at each point for use in lighting.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462542-normal
(Read only property)

147.23.31 readsFromDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines whether the receiver reads from the depth buffer when rendered.
Notes:

Defaults to true.
(Read and Write property)

147.23.32 reflective as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the reflected color for each point on a surface.

Notes:

The reflective property specifies the reflectivity of the surface. The surface will not actually reflect other objects in the scene. This property may be used as a sphere mapping to reflect a precomputed environment.
(Read only property)

147.23.33 roughness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to determine the apparent smoothness of the surface.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property approximates the level of microscopic detail—for example tiny bumps and cracks—in a surface. By approximating these "microfacets" as a single term, this property helps produce lighting calculations that resemble the energy-conserving laws of real-world physics, resulting in more realistic variation between matte and shiny surfaces. Lower values (darker colors) cause the material to appear shiny, with well-defined specular highlights. Higher values (brighter colors) cause specular highlights to spread out and the diffuse color of the material to become more retroreflective.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

147.23.34 selfIllumination as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values representing the global illumination of the surface.
Notes:

Self-illumination applies to all materials, but is especially useful for those using physically-based shading (see SCNLightingModelPhysicallyBased). Physically-based materials work best with environment-based lighting (see the SCNSceneMBS property lightingEnvironment), but for some materials it can be useful to let a surface itself define part of its lighting—for example, an object whose position obscures it from the "sky" that provides the main lighting environment. When you assign contents to this property, they override the environmental lighting contribution to diffuse shading, but environmental lighting still contributes to specular effects.
(Read only property)

147.23.35 shininess as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The sharpness of specular highlights. Animatable.
Notes:

The shininess of a material interacts with its specular property and the lighting in a scene to produce bright highlights on a surface. A higher value produces more sharply defined highlights, making a surface appear more smooth and glossy.
(Read and Write property)

147.23.36 specular as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's specular response to lighting.
Notes:

The specular property specifies the amount of light to reflect in a mirror-like manner. The specular intensity increases when the point of view lines up with the direction of the reflected light.
(Read only property)

147.23.37 transparency as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The uniform transparency of the material. Animatable.
Notes:

SceneKit determines the total opacity of each rendered pixel in a surface by multiplying the color from the material's transparent property by the value of this property. Then, the material's transparencyMode property determines how pixels from the material are blended into the scene.
You can also uniformly adjust the opacity of all content attached to a node using its opacity property.
(Read and Write property)

147.23.38 transparencyMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode SceneKit uses to calculate transparency for the material.
Notes:

The default transparency mode is SCNTransparencyModeAOne. See SCNTransparencyMode for available values and their effects.
(Read and Write property)

147.23.39 transparent as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that determines the opacity of each point in a material.

Notes:

The transparent property specifies the transparent areas of the material.
(Read only property)

147.23.40 writesToDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit produces depth information when rendering the material.
Notes:

Determines whether the receiver writes to the depth buffer when rendered. Defaults to YES.
(Read and Write property)

147.23.41 Constants

147.23.42 SCNBlendModeAdd = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by adding the source color to the destination color.
This mode results in a brightening effect that can be useful for making objects appear to glow relative to their surroundings.

147.23.43 SCNBlendModeAlpha = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying source and destination color values by their corresponding alpha values.
This mode is the default value of the blendMode property.

147.23.44 SCNBlendModeMax = 6

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Max

147.23.45 SCNBlendModeMultiply = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the source color with the background color.
This mode results in colors that are at least as dark as either of the two contributing colors.

147.23.46 SCNBlendModeReplace = 5

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Blend by replacing the destination color with the source color, ignoring alpha.

147.23.47 SCNBlendModeScreen = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the inverse of the source color with the inverse of the destination color.
This mode results in colors that are at least as light as either of the two contributing colors.

147.23.48 SCNBlendModeSubtract = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.

Notes: Blend by subtracting the source color from the destination color.

147.23.49 SCNCullModeBack = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
Notes: The mode for culling back-facing polygons (and rendering only front-facing polygons).

147.23.50 SCNCullModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
Notes: The mode for culling front-facing polygons (and rendering only back-facing polygons).

147.23.51 SCNFillModeFill = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the file mode constants.
Notes: Fill

147.23.52 SCNFillModeLines = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the file mode constants.
Notes: Lines

147.23.53 SCNTransparencyModeAOne = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: SceneKit derives transparency information from the alpha channel of colors. The value 1.0 is opaque.

147.23.54 SCNTransparencyModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Default

147.23.55 SCNTransparencyModeDualLayer = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Dual layer.

147.23.56 SCNTransparencyModeRGBZero = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes:

SceneKit derives transparency information from the luminance of colors. The value 0.0 is opaque.
When using this mode, SceneKit ignores the alpha value of colors in the material's transparent property. SceneKit calculates the luminance of a color from its red, green, and blue channels and uses the resulting value to determine the material's opacity.

147.23.57 SCNTransparencyModeSingleLayer = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Single layer.

147.24 class SCNMaterialPropertyMBS

147.24.1 class SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for the color or texture of one of a material's visual properties.
Notes:

A material has several visual properties that together determine its appearance under lighting and shading. SceneKit renders each pixel in the scene by combining the information from material properties with the locations, intensities, and colors of lights.
A material property's contents can be either a color, which provides a uniform effect across the surface of a material, or a texture, which SceneKit maps across the surface of a material using texture coordinates provided by the geometry object the material is attached to. A texture, in turn, can come from any of several sources, such as an image object, a URL to an image file, a specially formatted image or set of images for use as a cube map, or even animated content provided by Core Animation, SpriteKit, or AVFoundation—for the full set of options, see the contents property.

https://developer.apple.com/documentation/scenekit/scnmaterialproperty

147.24.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.24.3 Methods

147.24.4 Constructor(content as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property with given content.

147.24.5 materialPropertyWithColor(color as NSColorMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified color.

147.24.6 materialPropertyWithContents(content as Variant) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified contents.
Notes:

contents: The visual contents of the material property—a color, image, or source of animated content. For details, see the discussion of the contents property.

Returns a new material property object.

Newly created SCNMaterialMBS objects contain SCNMaterialPropertyMBS instances for all of their visual properties. To change a material's visual properties, you modify those instances rather than creating new material property objects.
You create new SCNMaterialPropertyMBS instances to provide textures for use with custom GLSL shaders—for details, see SCNShadableMBS.

147.24.7 materialPropertyWithImage(image as NSImageMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified image.

147.24.8 materialPropertyWithLayer(layer as CALayerMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified layer.

147.24.9 materialPropertyWithPicture(picture as Picture) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified picture.

147.24.10 Properties

147.24.11 borderColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A color used to fill in areas of a material's surface not covered by the material property's image contents.
Notes:

When the material property's contents are a texture image and its texture wrapping properties are set to SCNWrapModeClampToBorder, the border color appears in areas of a textured geometry not covered by the texture image, as shown in .
(Read and Write property)

147.24.12 contents as Variant

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The visual contents of the material property—a color, image, or source of animated content. Animatable.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395372-contents
(Read and Write property)

147.24.13 contentsTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transformation applied to the material property's visual contents. Animatable.
Notes:

SceneKit applies this transformation to the texture coordinates provided by the geometry object the material is attached to, then uses the resulting coordinates to map the material property's contents across the surface of the material. (This transformation has no effect if the material property's contents object is a constant color.)
(Read and Write property)

147.24.14 intensity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A number between 0.0 and 1.0 that modulates the effect of the material property. Animatable.
Notes:

The default intensity is 1.0. Reducing the intensity fades out the contents of the material property, causing different effects depending on which visual property of an SCNMaterialMBS object it represents:

- For the normal property, intensity varies the apparent roughness of the normal-mapped surface. Reducing intensity makes the surface appear more smooth.
- For the multiply property, reducing intensity blends the material property's colors with white, effectively reducing the strength of the color multiplication effect.
- For all other properties, reducing intensity dims the material property's contents.

(Read and Write property)

147.24.15 magnificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for rendering the material property's image contents at a size larger than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point near the camera may correspond to a small fraction of a pixel in the texture image. SceneKit uses the magnification filter to determine the color of the sampled texel at that point.
The default magnification filter is SCNFilterModeLinear.
(Read and Write property)

147.24.16 mappingChannel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The source of texture coordinates for mapping the material property's image contents.
Notes:

A geometry can have multiple independent sources of texture coordinates, each of which defines a unique mapping channel number. You can use these channels to map different visual properties of a material in different ways. For example, a geometry representing a picture frame might use one set of texture coordinates for mapping the materials of the frame itself, and another set of texture coordinates for placing a picture into the frame.
For information about creating geometries with multiple texture mapping channels, see SCNGeometryMBS.
(Read and Write property)

147.24.17 maxAnisotropy as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of anisotropic texture filtering to be used when rendering the material property's image contents.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395402-maxanisotropy
(Read and Write property)

147.24.18 minificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for rendering the material property's image contents at a size smaller than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point far from the camera may correspond to an area of several pixels in the texture image. SceneKit uses the minification filter to determine the color of the sampled texel at that point.
The default minification filter is SCNFilterModeLinear. See constants for available modes and their effects.
(Read and Write property)

147.24.19 mipFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for using mipmaps to render the material property's image contents at a size smaller than that of the original image.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395398-mipfilter
(Read and Write property)

147.24.20 wrapS as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The wrapping behavior for the S texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates ex-

tend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The S texture coordinate measures the horizontal axis of a texture image, increasing from 0.0 at the left edge of the image to 1.0 at the right edge.
The default wrap mode is SCNWrapModeClamp. See constants for available modes and their effects.
(Read and Write property)

147.24.21 wrapT as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The wrapping behavior for the T texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The T texture coordinate measures the vertical axis of a texture image, increasing from 0.0 at the bottom of the image to 1.0 at the top.
The default wrap mode is SCNWrapModeClamp.
(Read and Write property)

147.24.22 Constants

147.24.23 SCNFilterModeLinear = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering sample texels from the neighborhood of the coordinates being sampled and linearly interpolates their colors.

147.24.24 SCNFilterModeNearest = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering returns the color from only one texel, whose location is nearest to the coordinates being sampled.

147.24.25 SCNFilterModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes:

No texture filtering is applied.
Only valid for the mipFilter property, specifying that SceneKit should not use mip mapping.

147.24.26 SCNWrapModeClamp = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture coordinates are clamped to the range from 0.0 to 1.0, inclusive.
Texture sampling in areas whose texture coordinates would fall outside this range produces texel colors from the nearest edge of the texture image.

147.24.27 SCNWrapModeClampToBorder = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses texture colors for coordinates in the range from 0.0 to 1.0 (inclusive) and the material property's borderColor value otherwise.

Texture sampling in areas whose texture coordinates would fall outside this range uses the borderColor property instead of texel colors from the texture image.

147.24.28 SCNWrapModeMirror = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling of texture coordinates outside range from 0.0 to 1.0 should behave as if the range reverses before repeating.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling both texture image and its mirror image across the surface using the material.

147.24.29 SCNWrapModeRepeat = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses only the fractional part of texture coordinates, passing through the range from 0.0 to (but not including) 1.0.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling the texture image across the surface using the material.

147.25 class SCNMatrix4MBS

147.25.1 class SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a 4 x 4 matrix.
Notes: SceneKit uses matrices to represent coordinate space transformations, which in turn can represent the combined position, rotation or orientation, and scale of an object in three-dimensional space.

147.25.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.25.3 Methods

147.25.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
Notes: Initializes all values with zero.

147.25.5 copy as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the matrix.

147.25.6 equals(other as SCNMatrix4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the corresponding elements of two matrices are equal.
Notes:

self: The first matrix to be compared.
other: The first matrix to be compared.

Returns true if each element in self is exactly equal to the corresponding element in other.

This function performs a numeric (not bitwise) comparison of each pair of elements.

147.25.7 Identity as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The 4 x 4 identity matrix.
Notes: Elements on the diagonal of this matrix are 1.0; all other elements are 0.0. Multiplying another matrix by the identity matrix or multiplying the identity matrix by another matrix yields the other matrix.

147.25.8 Invert as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the inverse of the specified matrix.
Notes: The inverse matrix of the specified matrix, or the original matrix if it is not invertible.

147.25.9 Multiply(other as SCNMatrix4MBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the product of two matrices.
Notes:

self: The multiplicand, or left operand of matrix multiplication.
other: The multiplier, or right operand of matrix multiplication.

Returns the matrix product of the self and other parameters.

Matrix multiplication is not commutative. As a transformation, the result of multiplying a matrix A by a matrix B is the transformation represented by B followed by the transformation represented by A.

147.25.10 Null as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The null matrix.
Notes: All values are zero.

147.25.11 Rotate(angle as double, sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a rotation transformation.
Notes:

mat: The matrix to be combined with a rotation.
angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
sx: The x-component of the rotation axis.
sy: The y-component of the rotation axis.
sz: The z-component of the rotation axis.

Returns a new matrix.

The resulting transformation consists of the specified rotation followed by the transformation represented by the mat parameter.

147.25.12 Rotation(angle as double, x as double, y as double, z as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a rotation transformation.
Notes:

angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
x: The x-component of the rotation axis.
y: The y-component of the rotation axis.
z: The z-component of the rotation axis.

Returns a new rotation matrix.

147.25.13 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a scale transformation.
Notes:

self: The matrix to be combined with a translation.
sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified scale followed by the transformation represented by the mat parameter.
See also:

- 147.25.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 19787

147.25.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a scale transformation.
Notes:

sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new scale matrix.
See also:

- 147.25.13 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 19786

147.25.15 Translate(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a translation transformation.
Notes:

self: The matrix to be combined with a translation.
tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified translation followed by the transformation represented by the mat parameter.

147.25.16 Translation(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a translation transformation.
Notes:

tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new translation matrix.

147.25.17 Properties

147.25.18 IsIdentity as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the specified matrix is equal to the identity matrix.
Notes:

Returns true if the elements on the matrix's diagonal are 1.0 and all other elements are 0.0.
(Read only property)

147.25.19 m11 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/1.
Notes: (Read and Write property)

147.25.20 m12 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/2.
Notes: (Read and Write property)

147.25.21 m13 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/3.
Notes: (Read and Write property)

147.25.22 m14 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/4.
Notes: (Read and Write property)

147.25.23 m21 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/1.
Notes: (Read and Write property)

147.25.24 m22 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/2.
Notes: (Read and Write property)

147.25.25 m23 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/3.
Notes: (Read and Write property)

147.25.26 m24 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/4.
Notes: (Read and Write property)

147.25.27 m31 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/1.
Notes: (Read and Write property)

147.25.28 m32 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/2.
Notes: (Read and Write property)

147.25.29 m33 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/3.
Notes: (Read and Write property)

147.25.30 m34 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/4.
Notes: (Read and Write property)

147.25.31 m41 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/1.
Notes: (Read and Write property)

147.25.32 m42 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/2.
Notes: (Read and Write property)

147.25.33 m43 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/3.
Notes: (Read and Write property)

147.25.34 m44 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/4.
Notes: (Read and Write property)

147.26 class SCNNodeMBS

147.26.1 class SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A structural element of a scene graph, representing a position and transform in a 3D coordinate space, to which you can attach geometry, lights, cameras, or other displayable content.
Notes:

147.26.4 Methods

147.26.5 addChildNode(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a node to the node's array of children.
Notes:

child: The node to be added.

Calling this method appends the node to the end of the childNodes array.

147.26.6 childNodes as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of the node's children in the scene graph hierarchy.

147.26.7 childNodeWithName(Name as String, recursively as Boolean = false) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the first node in the node's child node subtree with the specified name.
Notes:

name: The name of the node to search for.
recursively: True to search the entire child node subtree, or false to search only the node's immediate children.

If the recursive parameter is true, SceneKit uses a preorder traversal to search the child node subtree—that is, the block searches a node before it searches each of the node's children, and it searches all children of a node before searching any of that node's sibling nodes. Otherwise, SceneKit searches only those nodes in the node's childNodes array.

147.26.8 clone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the node and its children.
Notes:

This method recursively copies the node and its child nodes. For a nonrecursive copy, use the inherited copy method, which creates a copy of the node without any child nodes.
Cloning or copying a node creates a duplicate of the node object, but not the geometries, lights, cameras, and other SceneKit objects attached to it—instead, each copied node shares references to these objects.

This behavior means that you can use cloning to, for example, place the same geometry at several locations within a scene without maintaining multiple copies of the geometry and its materials. However, it also means that changes to the objects attached to one node will affect other nodes that share the same attachments. For example, to render two copies of a node using different materials, you must copy both the node and its geometry before assigning a new material.

Multiple copies of an SCNGeometryMBS object efficiently share the same vertex data, so you can copy geometries without a significant performance penalty.

147.26.9 constraints as SCNConstraintMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.

Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

147.26.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new node object.
See also:

- 147.26.11 Constructor(geometry as SCNGeometryMBS) 19794

147.26.11 Constructor(geometry as SCNGeometryMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a node object with the specified geometry attached.
Notes:

geometry: The geometry to be attached.

Returns a new node object with the geometry attached, or nil if initialization is not successful.
See also:

- 147.26.10 Constructor 19794

147.26.12 convertPositionFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a position to the node's local coordinate space from that of another node.
Notes:

position: A position in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a position in the node's local coordinate space.

147.26.13 convertPositionToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a position from the node's local coordinate space to that of another node.
Notes:

position: A position in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a position in the local coordinate space defined by the other node.

147.26.14 convertTransformFromNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a transform to the node's local coordinate space from that of another node.
Notes:

transform: A transform relative to the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a transform relative to the node's coordinate space.

147.26.15 convertTransformToNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a transform from the node's local coordinate space to that of another node.
Notes:

transform: A transform relative to the node's coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a transform relative to the local coordinate space defined by the other node.

147.26.16 convertVectorFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts a direction vector to the node's local coordinate space from that of another node.
Notes:

vector: A direction vector in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a direction vector in the node's local coordinate space.

Unlike the convertPositionFromNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

147.26.17 convertVectorToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts a direction vector from the node's local coordinate space to that of another node.
Notes:

vector: A direction vector in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a direction vector in the local coordinate space defined by the other node.

Unlike the convertPositionToNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

147.26.18 copy as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the node.

147.26.19 flattenedClone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an optimized copy of the node and its children.
Notes:

A new single node containing the combined geometries and materials of the node and its child node subtree.

Rendering complex node hierarchies can incur a performance cost. Each geometry and material requires a separate draw command to be sent to the GPU, and each draw command comes with a performance overhead. If you plan for a portion of your scene's node hierarchy to remain static (with respect to itself, if not the rest of the scene), use this method to create a single node containing all elements of that node hierarchy that SceneKit can render using fewer draw commands.

147.26.20 insertChildNode(newNode as SCNNodeMBS, atIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a node to the node's array of children at a specified index.

147.26.21 localRotateBy(rotation as SCNVector4MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the node's orientation relative to its current orientation.
Notes:

rotation: The axis and angle of rotation to apply, in node-local space, expressed as a quaternion.

This method rotates the node according to its pivot transform.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

147.26.22 localTranslateBy(translation as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the node's position relative to its current position.
Notes:

translation: The distance, in node-local space, by which to move the node.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the move.

Available in macOS 10.13 or later.

147.26.23 lookAt(worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's orientation so that its local forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.

Using this method is equivalent to calling the other lookAt method and passing the node's worldUp and localFront vectors for the corresponding parameters.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 147.26.24 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS) 19798

147.26.24 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's orientation so that the specified forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.
worldUp: The direction vector, in world space, that should appear as "up" from the rotated node's point of view.
localFront: The direction vector, in the node's local space, that should orient toward the target point.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

• 147.26.23 lookAt(worldTarget as SCNVector3MBS) 19798

147.26.25 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a node object.
Notes: Returns a new node object, or nil if initialization is not successful.

147.26.26 nodeWithGeometry(geometry as SCNGeometryMBS) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a node object with the specified geometry attached.
Notes: Returns a new node object with the geometry attached, or nil if initialization is not successful.

147.26.27 removeAllActions

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Ends and removes all actions from the node.
Notes: When SceneKit removes an action from a node, it skips any remaining animation the action would perform. However, any changes the action has already made to the node's state remain in effect.

147.26.28 removeFromParentNode

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the node from its parent's array of child nodes.
Notes: Removing nodes from the node hierarchy serves two purposes. Nodes own their contents (child nodes or attached lights, geometries, and other objects), so deallocating unneeded nodes can reduce memory usage. Additionally, SceneKit does more work at rendering time with a large, complex node hierarchy, so removing nodes whose contents you don't need to display can improve rendering performance.

147.26.29 replaceChildNode(oldNode as SCNNodeMBS, newNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes a child from the node's array of children and inserts another node in its place.
Notes:

oldNode: The existing child node to be replaced.
newNode: The node with which to replace the child node.

If both the oldNode and newNode nodes are children of the node, calling this method swaps their positions in the array. Note that removing a node from the node hierarchy may result in it being deallocated.
Calling this method results in undefined behavior if the child parameter does not refer to a child of this node.

147.26.30 rotateBy(worldRotation as SCNVector4MBS, worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's position and orientation, relative to its current transform, through a rotation around the specified point in scene space.
Notes:

worldRotation: The axis and angle of rotation to apply, in scene space, expressed as a quaternion.
worldTarget: The center point, in scene space, about which to rotate.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

147.26.31 runAction(action as SCNActionMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an action to the list of actions executed by the node.
Notes:

action: The action to be performed.

SceneKit begins running a newly added action when it prepares to render the next frame.
See also:

- 147.26.32 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19801
- 147.26.33 runAction(action as SCNActionMBS, key as string) 19801
- 147.26.34 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19802

147.26.32 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an action to the list of actions executed by the node. SceneKit calls the specified block when the action completes.
Notes:

action: The action to be performed.
del: The method that SceneKit calls when the action completes.
tag: The tag is passed through to delegate method.

The new action is processed the next time SceneKit prepares to render a frame.
SceneKit calls your method after the action's duration is complete. For example, in a game you could use this method to show a Game Over message after performing a fade-out action on a node that displays a player character.
See also:

- 147.26.31 runAction(action as SCNActionMBS) 19800
- 147.26.33 runAction(action as SCNActionMBS, key as string) 19801
- 147.26.34 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19802

147.26.33 runAction(action as SCNActionMBS, key as string)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

action: The action to be performed.
key: A unique key used to identify the action.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
See also:

- 147.26.31 runAction(action as SCNActionMBS) 19800
- 147.26.32 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19801
- 147.26.34 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19802

147.26.34 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

SceneKit calls the specified block when the action completes.

action: The action to be performed.
key: A unique key used to identify the action.
del: A completion block called when the action completes.
tag: The tag is passed through to delegate method.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
SceneKit calls your method after the action's duration is complete. For example, you can use this method with a wait action to execute some code after a timed delay. If during the delay period you need to prevent the code from running, use the removeActionForKey method to cancel it.
See also:

- 147.26.31 runAction(action as SCNActionMBS) 19800
- 147.26.32 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 19801
- 147.26.33 runAction(action as SCNActionMBS, key as string) 19801

147.26.35 SCNModelTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from model space to scene (or world) space.

147.26.36 SCNModelViewProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model, View, and Projection transformations.

147.26.37 SCNModelViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model and View transformations.

147.26.38 SCNNormalTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming surface normal vectors from model space to view (or eye) space.

147.26.39 SCNProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from view (or eye) space to clip space.

147.26.40 SCNViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from scene (or world) space to view (or eye) space.

147.26.41 setConstraints(constraints() as SCNConstraintMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

147.26.42 Properties

147.26.43 Camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera attached to the node.
Notes:

To use a camera for displaying a scene, set the the pointOfView property of the view (or layer or renderer) displaying the scene to the node containing the camera. A camera looks in the direction of the node's negative z-axis, so you aim the camera by changing the position and orientation of the node containing it. You control geometric and optical parameters of the camera—projection, field of view, and depth of field—using the attached SCNCameraMBS object.
(Read and Write property)

147.26.44 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit renders the node's contents into shadow maps.
Notes:

SceneKit renders shadows by rendering a shadow map image containing silhouettes of the scene's contents, and then projecting that image onto the scene. SceneKit performs this process once for each SCNLight object in the scene whose castsShadow property is YES. Because shadow map rendering re-renders portions of the scene, it incurs a performance cost. To minimize this performance cost, exclude nodes from shadow map rendering by setting the node's castsShadow property to false.

For more details on shadow rendering, see SCNLight.
(Read and Write property)

147.26.45 EulerAngles as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node's orientation, expressed as pitch, yaw, and roll angles in radians. Animatable.
Notes:

The order of components in this vector matches the axes of rotation:

- Pitch (the x component) is the rotation about the node's x-axis.
- Yaw (the y component) is the rotation about the node's y-axis.
- Roll (the z component) is the rotation about the node's z-axis.

SceneKit applies these rotations relative to the node's pivot property in the reverse order of the components: first roll, then yaw, then pitch. The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

147.26.46 Geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry attached to the node.
Notes:

A node can have only one geometry attached to it. To combine geometries so they can be controlled or animated together, create a node with no geometry and add other nodes to it.
Animating the node's geometric properties can move, rotate, stretch and scale its geometry. For more advanced animations of a node's geometry, use its morpher and skinner objects.
(Read and Write property)

147.26.47 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

147.26.48 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines the visibility of the node's contents. Animatable.
Notes:

The default value of this property is NO, specifying that SceneKit should render geometries and use lights attached to the node or its children. Change this property's value to YES to exclude attached geometries and lights from rendering. (Cameras attached to the node or its children are not affected by this property.) Hiding a node also hides its child nodes recursively.

You can animate changes to this property's value. See Animating SceneKit Content. Hiding or showing a node in an animation results in a fade-in or fade-out effect.
(Read and Write property)

147.26.49 Light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The light attached to the node..
Notes:

A node can have only one light attached to it. To combine lights so they can be controlled or animated together, create a node with no light and add other nodes to it.
(Read and Write property)

147.26.50 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The unit vector SceneKit treats as "forward" in local space for all nodes.
Notes:

The "forward" direction of a node affects cameras and directional lighting attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint. This vector is always (0, 0, -1) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

147.26.51 localRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The direction SceneKit treats as "right" in local space for all nodes.
Notes:

No SceneKit features depend directly on this direction's definition—it's simply a natural consequence of recognizing "forward" and "up" directions for use with cameras, directional lighting, and relative orientation operations.

This vector is always (1, 0, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

147.26.52 localUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The direction SceneKit treats as "up" in local space for all nodes.
Notes:

The "up" direction of a node affects cameras attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint.
This vector is always (0, 1, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

147.26.53 movabilityHint as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A value that indicates how SceneKit should handle the node when rendering movement-related effects.
Notes:

This property controls how the node contributes to various motion-related effects during rendering. The default value is SCNMovabilityHintFixed. If the movability hint is SCNMovabilityHintMovable:

- The node's content is not affected by motion blur effects. (See the motionBlurIntensity camera property, which applies motion blur effects for camera movement but not subject movement.)
- The node does not contribute to environmental lighting of other objects. Environmental lighting is an aspect of physically based rendering (see SCNLightingModelPhysicallyBased), in which surfaces tend to pick up the color of other scene content around them. SceneKit performs environmental lighting by rendering light probes—small, omnidirectional snapshots of the scene's contents, as visible from at various points around the scene. Light probes are static, so nodes that are expected to move should not contribute to the lighting environment for other surfaces.

This value is merely a hint that communicates to SceneKit's rendering system about how you want to move content in your scene; it does not affect your ability to change the node's position or add animations or

physics to the node.
(Read and Write property)

147.26.54 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the node.
Notes:

You can provide a descriptive name for a node to make managing your scene graph easier. Nodes loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the childNodeWithName or childNodesPassingTest method to retrieve a node from a scene graph by its name, or the SCNSceneSource class to examine nodes in a scene file without loading its scene graph.

The names of nodes and their attached objects are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor. The SceneKit statistics view (see showsStatistics) also shows the names of nodes with attached cameras.
(Read and Write property)

147.26.55 Opacity as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The opacity value of the node. Animatable.
Notes:

Possible values are between 0.0 (fully transparent) and 1.0 (fully opaque). The default is 1.0.
You can animate changes to this property's value.
(Read and Write property)

147.26.56 orientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation, expressed as a quaternion. Animatable.
Notes:

The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value.
(Read and Write property)

147.26.57 parentNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's parent in the scene graph hierarchy.
Notes:

For a scene's rootNode object, the value of this property is nil.
(Read only property)

147.26.58 Paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether to run actions and animations attached to the node and its child nodes.
Notes:

The default value of this property is NO, specifying that SceneKit should continuously update the node's contents. Pausing a node pauses any running animations or actions. This property applies to the actions and animations attached to the node itself and those attached to any of its child or descendant nodes.
(Read and Write property)

147.26.59 pivot as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The pivot point for the node's position, rotation, and scale. Animatable.
Notes:

A node's pivot is the transformation between its coordinate space and that used by its position, rotation, and scale properties. The default pivot is SCNMatrix4MBS.Identity, specifying that the node's position locates the origin of its coordinate system, its rotation is about an axis through its center, and its scale is also relative to that center point.
Changing the pivot transform alters these behaviors in many useful ways. You can:

- Offset the node's contents relative to its position. For example, by setting the pivot to a translation transform you can position a node containing a sphere geometry relative to where the sphere would rest on a floor instead of relative to its center.
- Move the node's axis of rotation. For example, with a translation transform you can cause a node to revolve around a faraway point instead of rotating around its center, and with a rotation transform you can tilt the axis of rotation.
- Adjust the center point and direction for scaling the node. For example, with a translation transform you can cause a node to grow or shrink relative to a corner instead of to its center.

You can animate changes to this property's value.
(Read and Write property)

147.26.60 Position as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The translation applied to the node. Animatable.
Notes:

The node's position locates it within the coordinate system of its parent, as modified by the node's pivot property. The default position is the zero vector, indicating that the node is placed at the origin of the parent node's coordinate system.
(Read and Write property)

147.26.61 presentationNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A node object representing the state of the node as it currently appears onscreen.
Notes:

When you use implicit animation (see SCNTransaction) to change a node's properties, those node properties are set immediately to their target values, even though the animated node content appears to transition from the old property values to the new. During the animation SceneKit maintains a copy of the node, called the presentation node, whose properties reflect the transitory values determined by any in-flight animations currently affecting the node. The presentation node's properties provide a close approximation to the version of the node that is currently displayed. SceneKit also uses the presentation node when computing the results of explicit animations, physics, and constraints.

Do not modify the properties of the presentation node. (Attempting to do so results in undefined behavior.) Instead, you use the presentation node to read current animation values—for example, to create a new animation starting at those values.

The presentation node has no parent or child nodes. To access animated properties of related nodes, use the node's own parentNode and childNodes properties and the presentationNode property of each related node.
(Read only property)

147.26.62 RenderingOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The order the node's content is drawn in relative to that of other nodes.
Notes:

Nodes with greater rendering orders are rendered last. Defaults to zero.
(Read and Write property)

147.26.63 Rotation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation, expressed as a rotation angle about an axis. Animatable.
Notes:

The four-component rotation vector specifies the direction of the rotation axis in the first three components and the angle of rotation (in radians) in the fourth. The default rotation is the zero vector, specifying no rotation. Rotation is applied relative to the node's pivot property.
The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
(Read and Write property)

147.26.64 Scale as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The scale factor applied to the node. Animatable.
Notes:

Each component of the scale vector multiplies the corresponding dimension of the node's geometry. The default scale is 1.0 in all three dimensions. For example, applying a scale of (2.0, 0.5, 2.0) to a node containing a cube geometry reduces its height and increases its width and depth. Scaling is applied relative to the node's pivot property.
(Read and Write property)

147.26.65 transform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transform applied to the node relative to its parent. Animatable.
Notes:

The transformation is the combination of the node's rotation, position, and scale properties. The default transformation is SCNMatrix4MBS.Identity.

When you set the value of this property, the node's rotation, orientation, eulerAngles, position, and scale properties automatically change to match the new transform, and vice versa. SceneKit can perform this conversion only if the transform you provide is a combination of rotation, translation, and scale operations. If you set the value of this property to a skew transformation or to a nonaffine transformation, the values of these properties become undefined. Setting a new value for any of these properties causes SceneKit

to compute a new transformation, discarding any skew or nonaffine operations in the original transformation.

You can animate changes to this property's value.
(Read and Write property)

147.26.66 WorldFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "forward" (-Z) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localFront class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

147.26.67 worldOrientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation relative to the scene's world coordinate space.
Notes:

This quaternion isolates the rotational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the difference in axis and angle of rotation between the node and the scene's rootNode.
(Read and Write property)

147.26.68 WorldPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's position relative to the scene's world coordinate space.
Notes:

his vector isolates the translational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the x, y, and z offsets of the node's position from that of the scene's rootNode, and is equivalent to reading the node's position vector and converting it to world space with the convertPositionFromNode or convertPositionToNode method.
(Read and Write property)

147.26.69 WorldRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "right" (+X) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localRight class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

147.26.70 worldTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The world transform applied to the node.
Notes:

A world transform is the node's coordinate space transform relative to the scene's coordinate space. This transform is the concatenation of the node's transform property with that of its parent node, the parent's parent, and so on up to the rootNode object of the scene.
(Read and Write property)

147.26.71 WorldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "up" (+Y) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localUp class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

147.26.72 Constants

147.26.73 SCNMovabilityHintFixed = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is not expected to move over time.

147.26.74 SCNMovabilityHintMovable = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is expected to move over time.

147.26.75 SCNNodeFocusBehaviorFocusable = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is focusable and prevents nodes that it visually obscures from becoming focusable.

147.26.76 SCNNodeFocusBehaviorNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable.

147.26.77 SCNNodeFocusBehaviorOccluding = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable and prevents nodes that it visually obscures from becoming focusable.

147.26.78 Delegates

147.26.79 SCNNodeRunActionCompletedMBS(node as SCNNodeMBS, action as SCNActionMBS, key as string, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the runAction method.

147.27 class SCNPlaneMBS

147.27.1 class SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNPlaneMBS represents a rectangle with controllable width and height. The plane has one visible side.
Notes: Subclass of the SCNGeometryMBS class.

147.27.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.27.3 Methods

147.27.4 Constructor(Width as Double, Height as Double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a plane with given width and height.

147.27.5 plane(Width as Double, Height as Double) as SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a plane with given width and height.

147.27.6 Properties

147.27.7 cornerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The corner radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

147.27.8 cornerSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions for the rounded corners. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

147.27.9 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The plane extent along the Y axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.27.10 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. The default value is 1. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.27.11 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The plane extent along the X axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.27.12 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.28 class SCNPyramidMBS

147.28.1 class SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNPyramid represents a right pyramid with a rectangular base.
Notes: Subclass of the SCNGeometryMBS class.

147.28.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.28.3 Methods

147.28.4 Constructor(width as double, height as double, length as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

147.28.5 pyramid(width as double, height as double, length as double) as SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

147.28.6 Properties

147.28.7 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the pyramid. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.28.8 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.28.9 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The length of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.28.10 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.28.11 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The width of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.28.12 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.29 class SCNReplicatorConstraintMBS

147.29.1 class SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNReplicatorConstraint replicates the position/orientation/scale of a target node
Notes: Subclass of the SCNConstraintMBS class.

147.29.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.29.3 Methods

147.29.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNReplicatorConstraint constraint.

147.29.5 replicatorConstraintWithTarget(target as SCNNodeMBS) as SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNReplicatorConstraint constraint.

147.29.6 Properties

147.29.7 orientationOffset as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

147.29.8 positionOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

147.29.9 replicatesOrientation as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target orientation.
Notes:

Defaults to true.
(Read and Write property)

147.29.10 replicatesPosition as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target position.
Notes:

Defaults to true.
(Read and Write property)

147.29.11 replicatesScale as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target scale.
Notes:

Defaults to true.
(Read and Write property)

147.29.12 scaleOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines an addition scale offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

147.29.13 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to replicate.
Notes: (Read and Write property)

147.30 class SCNSceneMBS

147.30.1 class SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for the node hierarchy and global properties that together form a displayable 3D scene.
Notes:

To display 3D content with SceneKit, you create a scene containing a hierarchy of the nodes and attributes that together represent your visual elements. Typically, you build your assets in a 3D visual editor, then assemble them into a scene using Xcode's SceneKit Scene Editor, ready for SceneKit to render.

The simplest way to create a scene is through Xcode's SceneKit Scene Editor. Start by importing one or more assets from a 3D editor, such as Blender. Then you adjust the positions and attributes of the assets, and set global scene properties, such as lighting environment, to compose your scene. The scene editor creates a .scn file, which you save to a .scnassets folder in the app bundle. When you build your project, Xcode optimizes the scene file for your target platform.

147.30.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr8

147.30.3 Xojo Developer Magazine

- 18.1, page 26: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

147.30.4 Methods

147.30.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an empty scene.

147.30.6 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an empty scene.
Notes: An empty scene contains only a root SCNNode object with no contents. To populate the scene, add children to the root node.

147.30.7 sceneNamed(name as string) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from a file with the specified name in the app's main bundle.
Notes:

name: The name of a scene file in the app bundle's resources directory.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method, specifying no options and no error handling.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

- 147.30.8 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS 19826

147.30.8 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from a file with the specified name in a specific subdirectory of the app's main bundle.
Notes:

name: The name of a scene file in the app bundle.
directory: The path to the subdirectory of the bundle's resources directory containing the scene file.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

- 147.30.7 sceneNamed(name as string) as SCNSceneMBS 19826

147.30.9 sceneWithFile(file as folderItem, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from the specified file.
Notes:

file: The scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

147.30.10 sceneWithURL(FileURL as string, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from the specified URL.
Notes:

url: The URL to the scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

147.30.11 SCNSceneEndTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes: A floating-point value for the end time of the scene.

147.30.12 SCNSceneExportDestinationURL as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The final destination URL (an NSURLMBS object) for the exported scene file.
Notes: Use this option if you export a scene to a temporary directory and then move it to a final location. You must specify a final destination URL if your scene references external resources, such as image files for textures. SceneKit uses this URL to construct appropriate paths for external resources when writing the scene file.

147.30.13 SCNSceneFrameRateAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes:

A floating-point value (in an NSNumber object) for the frame rate of the scene.
This value may be present in scenes loaded from scene files produced using external tools, but has no effect

on SceneKit's rendering of the scene.

147.30.14 SCNSceneStartTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes: A floating-point value for the start time of the scene.

147.30.15 SCNSceneUpAxisAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes:

An SCNVector3MBS object (in an NSValueMBS object) specifying the orientation of the scene.

This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit's processing of the scene. Use this vector when combining elements from different scenes so that they appear in their expected orientation.

147.30.16 Properties

147.30.17 background as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A background to be rendered before the rest of the scene.
Notes:

If the material property's contents object is nil, SceneKit does not draw any background before drawing the rest of the scene. (If the scene is presented in an SCNView instance, the view's background color is visible behind the contents of the scene.)
If you specify a cube map texture for the material property (see the discussion of the contents property), SceneKit renders the background as a skybox.
(Read only property)

147.30.18 fogColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The color of the fog effect to be rendered with the scene. Animatable.
Notes:

The default fog color is white.
You can animate changes to this property's value.
(Read and Write property)

147.30.19 fogDensityExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transition curve for the fog's intensity between its start and end distances. Animatable.
Notes:

A fog effect fades out the contents of the scene with increasing distance from the pointOfView location, replacing them with increasing intensities of the fogColor color. The fogDensityExponent property determines the smoothness or abruptness of this transition.

A value of 0.0 (the default) specifies no attenuation—the fog's intensity is the same at all distances . A value of 1.0 specifies a linear transition, and a value of 2.0 specifies a quadratic transition curve. Higher values have little visible effect.

You can animate changes to this property's value.
(Read and Write property)

147.30.20 fogEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from a point of view at which the scene's contents are completely obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default end distance of 0.0 disables the fog effect. Change this property's value to enable fog.

You can animate changes to this property's value.
(Read and Write property)

147.30.21 fogStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from a point of view at which the scene's contents begin to be obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default start distance is 0.0.

You can animate changes to this property's value.
(Read and Write property)

147.30.22 lightingEnvironment as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A cube map texture that depicts the environment surrounding the scene's contents, used for advanced lighting effects.
Notes:

When rendering materials with the physicallyBased lighting model, SceneKit illuminates surfaces differently according to the environment that surrounds them. For example, with physically based shading, even a diffuse surface takes on some color from the sky above it and the ground below it.

Tip: For realistic results, reuse the same contents for both the lighting environment and the background property.

For information about defining cube maps, see the discussion of the contents property.
(Read only property)

147.30.23 paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether to run actions, animations, particle systems, and physics simulations in the scene graph.

Notes:

If false (the default), SceneKit continuously updates and renders the contents of the scene. Pausing a scene pauses any running animations or actions attached to the scene graph, and suspends updates of the scene's physics simulation and any particle systems in the scene.
(Read and Write property)

147.30.24 rootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The root node of the scene graph.
Notes:

All scene content—nodes, geometries and their materials, lights, cameras, and related objects—is organized in a node hierarchy with a single common root node.

Some scene files created using external tools may describe node hierarchies containing multiple root nodes. When SceneKit imports such files, their separate root nodes will be made children of a new, unique root node.

Each child node's coordinate system is defined relative to the transformation of its parent node. You should not modify the transform property of the root node.
(Read only property)

147.30.25 attributeForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns or sets the scene attribute for the specified key.
Notes:

key: One of the constants described in Scene Attributes that identifies the attribute to be written.
(Read and Write computed property)

147.31 class SCNShapeMBS

147.31.1 class SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNShape represents a 2D shape (cubic Bezier spline) than can be extruded.
Notes: Subclass of the SCNGeometryMBS class.

147.31.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.31.3 Methods

147.31.4 Constructor(path as NSBezierPathMBS, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

147.31.5 shape(path as NSBezierPathMBS, extrusionDepth as double) as SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

147.31.6 Properties

147.31.7 chamferMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sides of the text that are chamfered.
Notes:

The default value is ChamferModeBoth.
(Read and Write property)

147.31.8 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

147.31.9 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The default value is 0.
(Read and Write property)

147.31.10 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the shape.
(Read and Write property)

147.31.11 path as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The path defining the shape to be rendered.
Notes:

The path defines the outline of the shape. The path is filled using the even-odd rule. If the path is self-intersecting, the behavior is undefined.

(Read and Write property)

147.31.12 Constants

147.31.13 ChamferModeBack = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants. **Notes:** Apply a chamfer to only the back edge of the extruded shape.

147.31.14 ChamferModeBoth = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants. **Notes:** Apply a chamfer to both front and back edges of the extruded shape.

147.31.15 ChamferModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants. **Notes:** Apply a chamfer to only the front edge of the extruded shape.

147.32 class SCNSliderConstraintMBS

147.32.1 class SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNSliderConstraint constraint makes a node to collide and slide against a category of nodes
Notes: Subclass of the SCNConstraintMBS class.

147.32.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.32.3 Methods

147.32.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNSliderConstraint object.

147.32.5 sliderConstraint as SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNSliderConstraint object.

147.32.6 Properties

147.32.7 collisionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the category of node to collide against. Defaults to 0.
Notes: (Read and Write property)

147.32.8 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the offset of the slider.
Notes:

Defaults to (0,0,0).
(Read and Write property)

147.32.9 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the radius of the slider. Defaults to 1.
Notes: (Read and Write property)

147.33 class SCNSphereMBS

147.33.1 class SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNSphere represents a sphere with controllable radius.
Notes: Subclass of the SCNGeometryMBS class.

147.33.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.33.3 Xojo Developer Magazine

- 18.1, page 27: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

147.33.4 Methods

147.33.5 Constructor(radius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

147.33.6 sphere(radius as double) as SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

147.33.7 Properties

147.33.8 geodesic as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicate if the geometry is a geosphere.
Notes:

The default value is false.
(Read and Write property)

147.33.9 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The sphere radius. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

147.33.10 segmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of segments along both spherical coordinates. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.34 class SCNTextMBS

147.34.1 class SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNText represents a block of text that has been extruded
Notes: Subclass of the SCNGeometryMBS class.

147.34.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.34.3 Methods

147.34.4 Constructor(text as string, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of given text with given extrusion depth.
Notes:

string: The text to be represented.
extrusionDepth: The extrusion depth.

147.34.5 text(text as string, extrusionDepth as double) as SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of given text with given extrusion depth.
Notes:

string: The text to be represented.
extrusionDepth: The extrusion depth.
See also:

- 147.34.16 text as String 19843

147.34.6 Properties

147.34.7 alignmentMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines how individual lines of text are horizontally aligned within the bounds.
Notes:

For the text to be aligned you first need to set its bounds, otherwise the text is not aligned. The default value is kCAAlignmentNatural.
(Read and Write property)

147.34.8 attributedString as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)

147.34.9 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

147.34.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The actual chamfer radius might be different to the one here specified: large values are clipped to a per-glyph max value. The default value is 0.
(Read and Write property)

147.34.11 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.

(Read and Write property)

147.34.12 containerFrame as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A container within which the text may be wrapped or truncated.
Notes:

The text will start at the top-left corner of the rect. You need to set this property for text truncation or alignment to work. Getting this property when it has never been set returns CGRectMBS with all values zero.
(Read and Write property)

147.34.13 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the text.
(Read and Write property)

147.34.14 flatness as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the accuracy (or smoothness) with which fonts are rendered.
Notes:

Smaller numbers give smoother curves at the expense of more computation and heavier geometries in terms of vertices. The default value is 0.6, which yields smooth curves.
(Read and Write property)

147.34.15 font as NSFontMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font used to represent the text.
Notes:

The font property is only used when the string property is not an NSAttributedString. Defaults to the system font (12 point).

(Read and Write property)

147.34.16 text as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)
See also:

- 147.34.5 text(text as string, extrusionDepth as double) as SCNTextMBS 19840

147.34.17 textSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the bounding box size the receiver occupies.
Notes: (Read only property)

147.34.18 truncationMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Describes how the text is truncated to fit within the bounds.
Notes:

For the text to be truncated you first need to set its bounds, otherwise the text is not truncated. The default value is kCATruncationNone.
(Read and Write property)

147.34.19 Wrapped as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines whether the text is wrapped to fit within the bounds.
Notes:

For the text to be wrapped you first need to set its bounds, otherwise the text is not wrapped. The default value is false.
(Read and Write property)

147.35 class SCNTorusMBS

147.35.1 class SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNTorus represents a torus with controllable ring radius and pipe radius.
Notes: Subclass of the SCNGeometryMBS class.

147.35.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.35.3 Methods

147.35.4 Constructor(ringRadius as double, pipeRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

147.35.5 torus(ringRadius as double, pipeRadius as double) as SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

147.35.6 Properties

147.35.7 pipeRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The radius of the torus pipe. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.25.
(Read and Write property)

147.35.8 pipeSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions of the pipe. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 24.
(Read and Write property)

147.35.9 ringRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the torus ring. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

147.35.10 ringSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions of the ring. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.36 class SCNTransformConstraintMBS

147.36.1 class SCNTransformConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNTransformConstraint applies on the transform of a node via a custom block.
Notes:

Subclass of the SCNConstraintMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.36.3 Methods

147.36.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

147.37 class SCNTubeMBS

147.37.1 class SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNTube represents a tube with controllable height, inner radius and outer radius.
Notes: Subclass of the SCNGeometryMBS class.

147.37.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.37.3 Methods

147.37.4 Constructor(InnerRadius as double, outerRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

147.37.5 tube(InnerRadius as double, outerRadius as double, height as double) as SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

147.37.6 Properties

147.37.7 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the tube. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

147.37.8 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

147.37.9 innerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The inner radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is greater than or equal to the outer radius, then the geometry is empty. The default value is 0.25.
(Read and Write property)

147.37.10 outerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The outer radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is less than or equal to the inner radius, then the geometry is empty. The default value is 0.5.
(Read and Write property)

147.37.11 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

147.38 class SCNVector3MBS

147.38.1 class SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a three-component vector.
Notes: SceneKit uses three-component vectors for a variety of purposes, such as describing node or vertex positions, surface normals, and scale or translation transforms. The different vector components should be interpreted based on the context in which the vector is being used.

147.38.2 Blog Entries

147.38.4 Methods

147.38.5 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

147.38.6 copy as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the vector.

147.38.7 equals(other as SCNVector3MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Compares two vectors.
Notes: Returns true if both are equal.

147.38.8 Null as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns vector with all values zero.

147.38.9 Vector(x as double, y as double, z as double) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector.

147.38.10 Properties

147.38.11 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first component in the vector.
Notes: (Read and Write property)

147.38.12 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second component in the vector.
Notes: (Read and Write property)

147.38.13 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The third component in the vector.
Notes: (Read and Write property)

147.39 class SCNVector4MBS

147.39.1 class SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a four-component vector.
Notes:

SceneKit uses four-component vectors to represent multiple kinds of data:

- Axis-angle rotation or torque. The x, y, and z fields contain the normalized x-, y-, and z-components of the rotation axis, and the w field contains the rotation angle, in radians, or torque magnitude, in newton-meters.
- Color value (or range). The x, y, z, and w fields contain the red, green, blue, and alpha components of the color, or the width of the color variation range in each component.

147.39.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

147.39.3 Methods

147.39.4 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0, w as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

147.39.5 copy as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the vector.

147.39.6 equals(other as SCNVector4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Compares two vectors.
Notes: Returns true if equal.

147.39.7 Null as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns vector with all values zero.

147.39.8 Vector(x as double, y as double, z as double, w as double) as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the vector with given values.

147.39.9 Properties

147.39.10 w as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The fourth component in the vector.
Notes: (Read and Write property)

147.39.11 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first component in the vector.
Notes: (Read and Write property)

147.39.12 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second component in the vector.
Notes: (Read and Write property)

147.39.13 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The third component in the vector.
Notes: (Read and Write property)

147.40 class SCNViewMBS

147.40.1 class SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A view for displaying 3D SceneKit content.
Notes:

In macOS, SCNView is a subclass of NSView. As part of the operating system's view hierarchy, an SCNView object provides a place for SceneKit content in your app's user interface. You can create a SceneKit view by using its Constructor method. To provide content for a SceneKit view, assign an SCNSceneMBS object to its scene property.

For additional important methods and properties for working with SceneKit views, see the SCNSceneRenderer protocol. (You can also render SceneKit content into an arbitrary Metal command queue or OpenGL context using the SCNRenderer class, or into a Core Animation layer on macOS using the SCNLayer class. The SCNSceneRenderer protocol defines functionality common to all three SceneKit rendering classes.)

see
https://developer.apple.com/documentation/scenekit/scnview

Requires 64bit app on macOS 10.8 or newer
Subclass of the NSViewMBS class.

147.40.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr8

147.40.3 Xojo Developer Magazine

- 18.1, page 26: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

147.40.4 Methods

147.40.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new SCNViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 147.40.6 Constructor(Handle as Integer) 19855
- 147.40.7 Constructor(left as double, top as double, width as double, height as double) 19855

147.40.6 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new SCNViewMBS(0, 0, 100, 100)
dim v as new SCNViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a SCNView and the plugin retains this handle.
See also:

- 147.40.5 Constructor 19854
- 147.40.7 Constructor(left as double, top as double, width as double, height as double) 19855

147.40.7 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new SCNViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 147.40.5 Constructor 19854
- 147.40.6 Constructor(Handle as Integer) 19855

147.40.8 pause

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Pauses playback of the view's scene.
Notes: This method has no effect if the scene is already paused.

147.40.9 play

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resumes playback of the view's scene.
Notes: This method has no effect if the scene is not paused.

147.40.10 snapshot as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Renders the view's scene into a new image object.

147.40.11 stop

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops playback of the view's scene and resets the scene time to its start time.

147.40.12 Properties

147.40.13 allowsCameraControl as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the user can manipulate the current point of view that is used to render the scene.
Notes:

If you set this property to YES, SceneKit creates a camera node and handles mouse or touch events to allow the user to pan, zoom, and rotate their view of the scene. (Enabling user camera control does not modify camera objects already existing in the scene graph or the nodes containing them.)

When you enable user camera control, the defaultCameraController object handles input events and drives camera behavior. You can use that object's methods and properties to change the style of user camera interaction, and use the cameraControlConfiguration property to adjust control sensitivity.

In the default configuration, SceneKit provides the following controls:

- Pan with one finger to rotate the camera around the scene
- Pan with two fingers to translate the camera on its local xy-plane
- Pan with three fingers vertically to move the the camera forward backward
- Double-tap to switch to the next camera in the scene
- Rotate with two fingers to roll the camera (rotate on the camera node's z-axis)

Pinch to zoom in or zoom out (change the camera's fieldOfView)
The default value of this property is false. Use this option if you intend to control the camera programmatically.
(Read and Write property)

147.40.14 autoenablesDefaultLighting as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit automatically adds lights to a scene.
Notes:

If this property's value is false (the default), the only light sources SceneKit uses for rendering a scene are those contained in the scene graph. If you change the value to true, SceneKit automatically adds and places an omnidirectional light source when rendering scenes that contain no lights or only contain ambient lights.
(Read and Write property)

147.40.15 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The background color of the view.
Notes:

SceneKit displays this color behind the contents of the rendered scene. If the scene contents fill the view or if the scene provides its own background using the background property, the view's background color may not be visible.
This property's value must be a color that can be represented using RGBA components.
(Read and Write property)

147.40.16 defaultCameraController as SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default camera controller for this view.

Notes: (Read only property)

147.40.17 loops as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit restarts the scene time after all animations in the scene have played.
Notes:

If the value of this property is true (the default), SceneKit returns the scene time to zero after all animations associated with the scene have played, causing those animations to repeat. Otherwise, SceneKit stops playing the scene when all animations have completed.
(Read and Write property)

147.40.18 Playing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the scene is playing.
Notes:

If the value of this property is false (the default), SceneKit does not increment the scene time, so animations associated with the scene do not play. Change this property's value to true to start animating the scene.
(Read and Write property)

147.40.19 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node from which the scene's contents are viewed for rendering.
Notes:

Use a node with an SCNCameraMBS instance assigned to its camera property to view a scene. The node provides the position and direction of a virtual camera, and the camera object provides rendering parameters such as field of view and focus.
For debugging lights and shadows, you can also designate a spotlight (an SCNLightMBS object whose type property is spot) as a point of view. In this case, the light's spotInnerAngle property determines the field of view, and its zNear and zFar properties determine the near and far extents of the region that is visible onscreen (also known as the viewing frustum).
In either case, the direction of view is along the negative z-axis of the node's local coordinate space.
(Read and Write property)

147.40.20 preferredFramesPerSecond as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The animation frame rate that the view uses to render its scene.
Notes:

SceneKit chooses an actual frame rate that is as close as possible to your preferred frame rate based on the capabilities of the screen the view is displayed on. The actual frame rate is usually a factor of the maximum refresh rate of the screen to provide a consistent frame rate. For example, if the maximum refresh rate of the screen is 60 frames per second, that is also the highest frame rate the view sets as the actual frame rate. However, if you ask for a lower frame rate, SceneKit might choose 30, 20, 15 or some other factor to be the actual frame rate. For this reason, you want to choose a frame rate that your app can consistently maintain. The default value is 60 frames per second.
(Read and Write property)

147.40.21 rendersContinuously as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the view always renders at its preferred frame rate or only when its visible content changes.
Notes:

When this value is false (the default), the view redraws its contents only when something in its scene graph change or animates. Use this option to maximize energy efficiency.

If you change this value to true, the view redraws itself continually, at the rate specified by the preferredFramesPerSecond property, regardless of whether content is changing or animating.
(Read and Write property)

147.40.22 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The scene to be displayed in the view.
Notes: (Read and Write property)

Chapter 148

Screenshot

148.1 Globals

148.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Screenshot from the display with the given index.
Example:

```
Backdrop = ScreenshotDisplayMBS(0)
```

Notes:

Index starts at 0 for the main display.
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.

148.1.2 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates the picture from a string returnd by ScreenshotStringMBS.
Example:

```
dim p as Picture
dim s as string
```

```
dim w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)

p=ScreenshotFromStringMBS(w,h,r,s)

Backdrop=p
```

Notes:

Returns nil on any error.
(for example if width, height and rowwidth doesn't fit together.)

148.1.3 ScreenshotMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim p as picture
p=screenshotMBS
```

Notes:

For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.

148.1.4 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen rectangle in screen resolution.
Example:

```
dim p as picture
p=ScreenshotRectMBS(100,100,200,200)
```

Notes:

Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
Coordinates given in pixel on screen, so for High DPI, you need to multiply them before passing parameters.

148.1.5 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
dim index as Integer=0

s=ScreenshotStringDisplayMBS(w,h,r, index)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

148.1.6 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

Chapter 149

SFPassword

149.1 class SFPasswordAssistantMBS

149.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The class to help the user to create a new password.
Notes:

This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Xojo is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

149.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4

- MBS Xojo Plugins, version 17.4pr5

149.1.3 Methods

149.1.4 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the panel that the base window will close.
Notes: If your window which uses the panel will close, you should call that method from the CancelClose method of your window.

149.1.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new password assistant panel.

149.1.6 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Shows the panel.
Notes:

This method does a bit more than just show.
It will create the panel, create a new password and run the password quality check.

149.1.7 Properties

149.1.8 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current password.
Notes:

If you set the value, the new password is checked for quality and the TextChanged event may be fired.
(Read and Write computed property)

149.1.9 Events

149.1.10 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The text was changed.

Notes:

This event fires often.
It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don't get new events and the timer fires, you can update your GUI.

Chapter 150

Shell

150.1 Globals

150.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Executes a new application.
Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 150.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer 19870

150.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Executes a new application.
Example:

```
// launch an app using open

const sShellPath="/usr/bin/open"

dim a(1) as string
dim e(-1) as string

a(0)="open" // must be the application name
a(1)="/Applications/TextEdit.app" // first parameter

print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

dim aa(1) as string
dim ee(-1) as string

dim f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 150.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer 19869

150.2 class ShellMBS

150.2.1 class ShellMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class in MBS Plugins to run executables.
Example:

```
Dim s As New ShellMBS

s.Execute "/usr/bin/whoami"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger

MsgBox "whoami: "+output
```

Notes:

Via input stream, we can send data to the process.
And via output and error streams, we can read data coming back.

While this class does the same as Shell class in Xojo, we have the possibility to add more in the future.
For now you can benefit from an alternative implementation with stderr and stdout as two streams. Also we feature terminate methods to kill the child process.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and NSTaskMBS (Mac only).

150.2.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr1
- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo Plugins in version 19.2
- MBS Xojo Plugins, version 19.2pr6

150.2.3 Methods

150.2.4 Arguments as String()

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries arguments array.
Notes: You can add arguments to this array.

150.2.5 CloseInput

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes stdin to the process.
Notes: Sometimes this is needed as some processes wait till stdin is closed.

150.2.6 CloseStreams

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the streams.
Notes: Automatically done in destructor.

150.2.7 Constructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

150.2.8 Destructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

150.2.9 Execute(Executable as String)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the executable.
Notes:

Pass path to executable to run.
Opens the streams stdin, stdout and stderr.

150.2.10 ExitCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the exit code of the terminated process.

150.2.11 Poll

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Polls for events.
Notes:

This will check for pending event and fire events if needed.
Internally we call this with a timer for the shell object, but you can call this in a tight loop.

150.2.12 ReadError as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads data from stderr.
Notes: Queries available bytes to return all the data in the buffer.

150.2.13 ReadOutput as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads data from stdout.
Notes: Queries available bytes to return all the data in the buffer.

150.2.14 SetArguments(arguments() as String)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assigns a new array of arguments.
Example:

```
Dim sh as new ShellMBS
Dim args() As String
```

```
args.Append "-c"
args.Append "5"
args.Append "monkeybreadsoftware.com"

sh.SetArguments args
```

150.2.15 Terminate(WinExitCode as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates the app with the given exit code.
Notes:

ExitCode is only used on Windows.
Returns true on success.

150.2.16 Wait(TimeOut as double = 30.0)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Waits for process to quit.
Notes: Yields time and waits until time passed or process terminates.

150.2.17 WriteInput(data as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.

150.2.18 Properties

150.2.19 ApplicationName as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The path to the application.
Notes:

Can be empty when application is part of command line.
Only for Windows.
(Read and Write property)

150.2.20 AvailableBytesError as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of available bytes on stderr.
Notes: (Read only property)

150.2.21 AvailableBytesOutput as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of available bytes on stdout.
Notes: (Read only property)

150.2.22 CurrentDirectory as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current directory for the process.
Notes:

You can set this before calling Execute to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

150.2.23 Domain as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The domain name.
Notes:

Only used on Windows.
You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

150.2.24 Environment as Dictionary

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The environment variables to use.
Notes: (Read and Write property)

150.2.25 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Last native error code.
Notes:

Zero is success.
(Read only property)

150.2.26 Executable as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The command line to run.
Notes:

On Mac and Linux just the path to executable.
If applicationName is set for Windows, this should only provide parameters.
(Read only property)

150.2.27 IsRunning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

150.2.28 Password as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

150.2.29 PID as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The process ID of the child process.
Notes: (Read only property)

150.2.30 ProcessHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the process handle.
Notes: (Read only property)

150.2.31 ThreadHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the thread handle for the child process.
Notes: (Read only property)

150.2.32 Username as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

150.2.33 Events

150.2.34 Completed

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when process terminated.

150.2.35 DataAvailable(AvailableBytesError as Integer, AvailableBytesOutput as Integer)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called when new data is available on stderr or stdout.
Notes: You need to use read commands to query data.

150.3 class WindowsProcessMBS

150.3.1 class WindowsProcessMBS

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to run processes on Windows.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c dir"
w.CurrentDirectory = "C:"

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes:

Can be used like shell, but with more windows specific options.
For interactive shell, you need to run cmd.exe yourself.
This shell is asynchronously. For synchrones mode, please write yourself a loop waiting for process to finish.

Please read Microsoft documentation for more details:
https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx

See also NSTask (Mac only), WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and ShellMBS (cross platform).

150.3.4 Methods

150.3.5 Close

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes the process.
Notes: Same as destructor.

150.3.6 PeekError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Peeks in stderr.

150.3.7 PeekOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Peeks in stdout.

150.3.8 ReadError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data from stderr.
Notes: Please pass maximum number of bytes to read.

150.3.9 ReadOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data from stdout.
Notes: Please pass maximum number of bytes to read.

150.3.10 Run as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Starts the process.
Notes: Returns true on success or false on failure.

150.3.11 SetKillProcessWhenParentDies as boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets process to be killed automatically.
Notes:

When Xojo application ends, the process you started is killed automatically.
Returns true if option is set or false on failure.

150.3.12 Terminate(ExitCode as Integer) as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Terminates the app with the given exit code.
Notes: Returns true on success.

150.3.13 Write(Data as MemoryBlock) as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 150.3.14 Write(Data as String) as Integer 19882

150.3.14 Write(Data as String) as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 150.3.13 Write(Data as MemoryBlock) as Integer 19881

150.3.15 Properties

150.3.16 ApplicationName as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The path to the application.
Notes:

Can be empty when application is part of command line.
(Read and Write property)

150.3.17 AvailableBytesError as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of available bytes on stderr.
Notes: (Read only property)

150.3.18 AvailableBytesOutput as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of available bytes on stdout.
Notes: (Read only property)

150.3.19 CommandLine as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The command line to run.
Notes:

If applicationName is set, this should only provide parameters.
(Read and Write property)

150.3.20 CurrentDirectory as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current directory for the process.
Notes:

You can set this before calling Run to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

150.3.21 Domain as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The domain name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

150.3.22 Environment as Dictionary

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The environment variables to use.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c echo % TEST% "

// set environment
dim env as new Dictionary
env.Value("TEST") = "Hello World"
w.Environment = env

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend
```

```
// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes: (Read and Write property)

150.3.23 ExitCode as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the exit code of the terminated process.
Notes: (Read only property)

150.3.24 LastError as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Last windows error code.
Notes: (Read only property)

150.3.25 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The message text for the last error.
Notes: (Read only property)

150.3.26 Password as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

150.3.27 ProcessHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the process handle.
Notes: (Read only property)

150.3.28 ProcessID as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The process ID of the process.
Notes: (Read only property)

150.3.29 Running as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly. (Read only property)

150.3.30 ThreadHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the thread handle for the child process.
Notes: (Read only property)

150.3.31 ThreadID as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The thread ID of the main thread for the process.
Notes: (Read only property)

150.3.32 UserName as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

150.3.33 Events

150.3.34 DataAvailable(AvailableBytesOutput as Integer, AvailableBytesError as Integer)

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when data is available for stdout or stderr.

150.3.35 Terminated(ExitCode as Integer)

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when process terminated.

Chapter 151

SmartCard

151.1 class SmartCardContextMBS

151.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a SmartCard context.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

151.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

151.1.3 Methods

151.1.4 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates all outstanding actions within a specific resource manager context.
Notes:

The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was

canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.

151.1.5 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to a smartcard.
Example:

```
dim c as new SmartCardContextMBS

dim s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <>nil then
MsgBox "Connected"
else
MsgBox "Error: "+str(c.Lasterror)
end if
```

Notes:

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Reader: The name of the reader that contains the target card.
ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

151.1.6 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a smartcard context.

151.1.7 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determines whether a smart card context handle is valid.
Notes: Returns true if valid or false if not valid.

151.1.8 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of reader groups that have previously been introduced to the system.
Notes:

The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

151.1.9 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

Notes: Lasterror is set.
See also:

- 151.1.10 Readers(ReaderGroups() as string) as string() 19889

151.1.10 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
Notes:

The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.

ReaderGroups: The reader groups you like to query.
Lasterror is set.

151.1.11 Properties

151.1.12 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the smartcard API is available.
Notes:

This should be available on Mac and Windows.

Loads on Mac the PCSC.framework.
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so.
On Windows we use winscard.dll built into Windows.
(Read only property)

151.1.13 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal object reference.
Notes: (Read and Write property)

151.1.14 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

151.1.15 Constants

151.1.16 kErrorBadSeek = & H80100029

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An error occurred in setting the smart card file object pointer.

151.1.17 kErrorCancelled = & H80100002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by an Cancel request.

151.1.18 kErrorCancelledByUser = & H8010006E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by the user.

151.1.19 kErrorCantDispose = & H8010000E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The system could not dispose of the media in the requested manner.

151.1.20 kErrorCardNotAuthenticated = & H8010006F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No PIN was presented to the smart card.

151.1.21 kErrorCardUnsupported = & H8010001C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card does not meet minimal requirements for support.

151.1.22 kErrorCertificateUnavailable = & H8010002D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested certificate could not be obtained.

151.1.23 kErrorChvBlocked = & H8010006C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The card cannot be accessed because the maximum number of PIN entry attempts has been reached.

151.1.24 kErrorCommDataLost = & H8010002F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: A communications error with the smart card has been detected.

151.1.25 kErrorCommError = & H80100013

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal communications error has been detected.

151.1.26 kErrorDirNotFound = & H80100023

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified directory does not exist in the smart card.

151.1.27 kErrorDuplicateReader = & H8010001B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader driver did not produce a unique reader name.

151.1.28 kErrorEof = & H8010006D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The end of the smart card file has been reached.

151.1.29 kErrorFileNotFound = & H80100024

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified file does not exist in the smart card.

151.1.30 kErrorIccCreateorder = & H80100021

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested order of object creation is not supported.

151.1.31 kErrorIccInstallation = & H80100020

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No primary provider can be found for the smart card.

151.1.32 kErrorInsufficientBuffer = & H80100008

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The data buffer for returned data is too small for the returned data.

151.1.33 kErrorInternalError = & H80100001

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal consistency check failed.

151.1.34 kErrorInvalidAtr = & H80100015

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An ATR string obtained from the registry is not a valid ATR string.

151.1.35 kErrorInvalidChv = & H8010002A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied PIN is incorrect.

151.1.36 kErrorInvalidHandle = & H80100003

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied handle was not valid.

151.1.37 kErrorInvalidParameter = & H80100004

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: One or more of the supplied parameters could not be properly interpreted.

151.1.38 kErrorInvalidTarget = & H80100005

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Registry startup information is missing or not valid.

151.1.39 kErrorInvalidValue = & H80100011

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: One or more of the supplied parameter values could not be properly interpreted.

151.1.40 kErrorNoAccess = & H80100027

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Access is denied to the file.

151.1.41 kErrorNoDir = & H80100025

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied path does not represent a smart card directory.

151.1.42 kErrorNoFile = & H80100026

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied path does not represent a smart card file.

151.1.43 kErrorNoKeyContainer = & H80100030

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested key container does not exist on the smart card.

151.1.44 kErrorNoMemory = & H80100006

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Not enough memory available to complete this command.

151.1.45 kErrorNoReadersAvailable = & H8010002E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No smart card reader is available.

151.1.46 kErrorNoService = & H8010001D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager is not running.

151.1.47 kErrorNoSmartcard = & H8010000C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The operation requires a smart card, but no smart card is currently in the device.

151.1.48 kErrorNoSuchCertificate = & H8010002C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested certificate does not exist.

151.1.49 kErrorNotReady = & H80100010

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader or card is not ready to accept commands.

151.1.50 kErrorNotTransacted = & H80100016

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An attempt was made to end a nonexistent transaction.

151.1.51 kErrorPciTooSmall = & H80100019

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The PCI receive buffer was too small.

151.1.52 kErrorProtoMismatch = & H8010000F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested protocols are incompatible with the protocol currently in use with the card.

151.1.53 kErrorReaderUnavailable = & H80100017

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified reader is not currently available for use.

151.1.54 kErrorReaderUnsupported = & H8010001A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader driver does not meet minimal requirements for support.

151.1.55 kErrorRemovedCard = & H80100069

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card has been removed, so further communication is not possible.

151.1.56 kErrorResetCard = & H80100068

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card was reset.

151.1.57 kErrorSecurityViolation = & H8010006A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Access was denied because of a security violation.

151.1.58 kErrorServerTooBusy = & H80100031

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager is too busy to complete this operation.

151.1.59 kErrorServiceStopped = & H8010001E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager has shut down.

151.1.60 kErrorSharingViolation = & H8010000B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card cannot be accessed because of other outstanding connections.

151.1.61 kErrorShutdown = & H80100018

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The operation has been aborted to allow the server application to exit.

151.1.62 kErrorSuccess = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No error.

151.1.63 kErrorSystemCancelled = & H80100012

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by the system, presumably to log off or shut down.

151.1.64 kErrorTimeout = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The user-specified time-out value has expired.

151.1.65 kErrorUnexpected = & H8010001F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An unexpected card error has occurred.

151.1.66 kErrorUnknownCard = & H8010000D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified smart card name is not recognized.

151.1.67 kErrorUnknownError = & H80100014

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal error has been detected, but the source is unknown.

151.1.68 kErrorUnknownReader = & H80100009

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified reader name is not recognized.

151.1.69 kErrorUnknownResMng = & H8010002B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An unrecognized error code was returned.

151.1.70 kErrorUnpoweredCard = & H80100067

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Power has been removed from the smart card, so that further communication is not possible.

151.1.71 kErrorUnresponsiveCard = & H80100066

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card is not responding to a reset.

151.1.72 kErrorUnsupportedCard = & H80100065

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader cannot communicate with the card, due to ATR string configuration conflicts.

151.1.73 kErrorUnsupportedFeature = & H80100022

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: This smart card does not support the requested feature.

151.1.74 kErrorWaitedTooLong = & H80100007

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal consistency timer has expired.

151.1.75 kErrorWriteTooMany = & H80100028

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An attempt was made to write more data than would fit in the target object.

151.1.76 kErrorWrongChv = & H8010006B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The card cannot be accessed because the wrong PIN was presented.

151.2 class SmartCardMBS

151.2.1 class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a smartcard.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

151.2.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr2

- New functions for smart card reading

151.2.3 Methods

151.2.4 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts a transaction.
Notes:

The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.
The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

151.2.5 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels current transaction.
Notes: Lasterror is set.

151.2.6 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

151.2.7 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Direct control of the reader.
Notes:

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

ControlCode: Control code for the operation. This value identifies the specific operation to be performed.

Input: Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.
inputLength: Size, in bytes, of the buffer pointed to by Input.
output: Pointer to a buffer that receives the operation's output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.
outputLength: On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

151.2.8 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates a connection previously opened between the calling application and a smart card in the target reader.
Notes:

Disposition: Action to take on the card in the connected reader on close.
can be:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.
kEjectCard	Eject card.

Lasterror is set.

151.2.9 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Ends transaction.
Notes:

Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

Lasterror is set.

151.2.10 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current reader attributes for the given handle.
Notes:

It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

Lasterror is set.

151.2.11 ReadFile(FileID as MemoryBlock) as MemoryBlock

MBS Tools Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read file from smart card with APDU protocol.
Notes:

Returns data as MemoryBlock or error message.
The first two bytes are status code.

151.2.12 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Reconnect function reestablishes an existing connection between the calling application and a smart card.
Notes:

This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

151.2.13 SetAttrib(AttrId as UInt32, mem as Memoryblock)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the given reader attribute.
Notes:

It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport

protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

151.2.14 SplitValues(Data as MemoryBlock) as Dictionary

MBS Tools Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Split values read from smart card.
Notes:

Files on smartcard can contain key/value data.
Returns Dictionary with numbers (key) and values as strings.

151.2.15 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the current status of a smart card in a reader.
Notes:

You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

Lasterror is set.
See also:

- 151.2.16 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

151.2.16 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the current status of a smart card in a reader.
Notes:

Same as other Status function, but without querying the name.
Lasterror is set.
See also:

- 151.2.15 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string) 19904

151.2.17 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends a service request to the smart card and expects to receive data back from the card.
Example:

```
dim card as SmartCardMBS // your card

dim header as new memoryBlock(8)

header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

dim command as new MemoryBlock(5)
command.Int8Value(0) = 0
command.Int8Value(1) = & hCA
command.Int8Value(2) = 1
command.Int8Value(3) = & h82
command.Int8Value(4) = 2

dim buffer as new MemoryBlock(512)
dim ReceiveHeader as new MemoryBlock(8)

dim RecvLength as UInt32
card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"
```

Notes:

ioSendPci:

A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card.
For T=0, the data parameters are placed into the address pointed to by pbSendBuffer according to the following structure:

Type	name	Description
Byte	Cla	The instruction class
Byte	Ins	The instruction code
Byte	P1	Parameter to the instruction
Byte	P2	Parameter to the instruction
Byte	P3	Size of I/O transfer

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter.
For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

151.2.18 Properties

151.2.19 ActiveProtocol as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The active protocol.
Notes: (Read and Write property)

151.2.20 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

151.2.21 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

151.2.22 Constants

151.2.23 kAttributeAtrString = 590595

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Answer to reset (ATR) string.

151.2.24 kAttributeChannelId = 131344

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

DWORD encoded as & hDDDDCCCC, where DDDD = data channel type and CCCC = channel number.

The following encodings are defined for DDDD:
& h01 serial I/O; CCCC is a port number.
& h02 parallel I/O; CCCC is a port number.
& h04 PS/2 keyboard port; CCCC is zero.
& h08 SCSI; CCCC is SCSI ID number.
& h10 IDE; CCCC is device number.
& h20 USB; CCCC is device number.
& hFy vendor-defined interface with y in the range zero through 15; CCCC is vendor defined.

151.2.25 kAttributeCharacteristics = 393552

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported.
Note that multiple bits can be set:
& h00000001 Card swallowing mechanism
& h00000002 Card ejection mechanism
& h00000004 Card capture mechanism
All other values are reserved for future use (RFU).

151.2.26 kAttributeCurrentBwt = 524809

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current block waiting time.

151.2.27 kAttributeCurrentClk = 524802

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current clock rate, in kHz.

151.2.28 kAttributeCurrentCwt = 524810

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current character waiting time.

151.2.29 kAttributeCurrentD = 524804

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Bit rate conversion factor.

151.2.30 kAttributeCurrentEbcEncoding = 524811

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Current error block control encoding.
0 = longitudinal redundancy check (LRC)
1 = cyclical redundancy check (CRC)

151.2.31 kAttributeCurrentF = 524803

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Clock conversion factor.

151.2.32 kAttributeCurrentIfsc = 524807

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current byte size for information field size card.

151.2.33 kAttributeCurrentIfsd = 524808

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current byte size for information field size device.

151.2.34 kAttributeCurrentIoState = 590594

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current IO state

151.2.35 kAttributeCurrentN = 524805

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current guard time.

151.2.36 kAttributeCurrentProtocolType = 524801

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)

151.2.37 kAttributeCurrentW = 524806

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current work waiting time.

151.2.38 kAttributeDefaultClk = 196897

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Default clock rate, in kHz.

151.2.39 kAttributeDefaultDataRate = 196899

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Default data rate, in bps.

151.2.40 kAttributeDeviceFriendlyNameA = 2147418115

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's display name. Windows ANSI encoding.

151.2.41 kAttributeDeviceFriendlyNameW = 2147418117

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's display name. Unicode encoding.

151.2.42 kAttributeDeviceInUse = 2147418114

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reserved for future use.

151.2.43 kAttributeDeviceSystemNameA = 2147418116

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's system name. Windows ANSI encoding.

151.2.44 kAttributeDeviceSystemNameW = 2147418118

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's system name. Unicode encoding.

151.2.45 kAttributeDeviceUnit = 2147418113

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Instance of this vendor's reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.

151.2.46 kAttributeEscAuthrequest = 499717

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc authentication request

151.2.47 kAttributeEscCancel = 499715

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc cancel

151.2.48 kAttributeEscReset = 499712

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc reset

151.2.49 kAttributeExtendedBwt = 524812

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Extended block wait time.

151.2.50 kAttributeIccInterfaceStatus = 590593

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.

151.2.51 kAttributeIccPresence = 590592

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Single byte indicating smart card presence:
0 = not present
1 = card present but not swallowed (applies only if reader supports smart card swallowing)
2 = card present (and swallowed if reader supports smart card swallowing)
4 = card confiscated.

151.2.52 kAttributeIccTypePerAtr = 590596

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Single byte indicating smart card type.
0 = unknown type
1 = 7816 Asynchronous
2 = 7816 Synchronous
Other values RFU.

151.2.53 kAttributeMaxClk = 196898

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum clock rate, in kHz.

151.2.54 kAttributeMaxDataRate = 196900

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum data rate, in bps.

151.2.55 kAttributeMaxIfsd = 196901

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum bytes for information file size device.

151.2.56 kAttributeMaxinput = 499719

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum input

151.2.57 kAttributePowerMgmtSupport = 262449

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Zero if device does not support power down while smart card is inserted. Nonzero otherwise.

151.2.58 kAttributeProtocolTypes = 196896

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000.
pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.

151.2.59 kAttributeSupressT1IfsRequest = 2147418119

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Supress T1 information file size request.

151.2.60 kAttributeUserAuthInputDevice = 328002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: User authentication input device.

151.2.61 kAttributeUserToCardAuthDevice = 328000

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: User to card authentication device

151.2.62 kAttributeVendorIfdSerialNo = 65795

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device serial number.

151.2.63 kAttributeVendorIfdType = 65793

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device type (model designation of reader).

151.2.64 kAttributeVendorIfdVersion = 65794

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device version (DWORD in the form 0xMMmmbbbb where MM = major version, mm = minor version, and bbbb = build number).

151.2.65 kAttributeVendorName = 65792

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor name.

151.2.66 kCardStateAbsent = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is no card in the reader.

151.2.67 kCardStateNegotiable = 32

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: The card has been reset and is awaiting PTS negotiation.

151.2.68 kCardStatePowered = 16

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: Power is being provided to the card, but the reader driver is unaware of the mode of the card.

151.2.69 kCardStatePresent = 4

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is a card in the reader, but it has not been moved into position for use.

151.2.70 kCardStateSpecific = 64

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: The card has been reset and specific communication protocols have been established.

151.2.71 kCardStateSwallowed = 8

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is a card in the reader in position for use. The card is not powered.

151.2.72 kCardStateUnknown = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: Unknown state.

151.2.73 kEjectCard = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Eject card.

151.2.74 kLeaveCard = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Do not do anything special on reconnect.

151.2.75 kProtocolAny = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Any protocol is welcome

151.2.76 kProtocolRAW = 4

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Raw protocol

151.2.77 kProtocolT0 = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=0 is the active protocol.

151.2.78 kProtocolT1 = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=1 is the active protocol.

151.2.79 kProtocolT15 = 8

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=15 protocol (not on Windows)

151.2.80 kProtocolUndefined = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: kShareDirect has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.

151.2.81 kProtocolUnset = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Unset

151.2.82 kResetCard = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Reset the card (Warm Reset).

151.2.83 kShareDirect = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.

151.2.84 kShareExclusive = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is not willing to share the card with other applications.

151.2.85 kShareShared = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is willing to share the card with other applications.

151.2.86 kUnpowerCard = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Power down the card and reset it (Cold Reset).

151.3 class TKBERTLVRecordMBS

151.3.1 class TKBERTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that parses BER-encoded data and produces DER-encoded data for TLV records.
Notes:

Available in macOS 10.12 or newer.
Subclass of the TKTLVRecordMBS class.

151.3.2 Methods

151.3.3 Constructor(tag as UInt64, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a BER-TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.
See also:

- 151.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS) 19919

151.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a BER-TLV record with the specified tag and an array of TLV subrecords.
Notes:

tag: The tag field of the record.
records: The TLV subrecords of the record.

Returns a new TLV record containing the specified tag field and subrecords.
See also:

- 151.3.3 Constructor(tag as UInt64, data as MemoryBlock) 19919

151.3.5 dataForTag(tag as UInt64) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Encodes a specified tag using BER-TLV tag encoding rules.
Notes:

tag: The tag value to encode.

Returns a data object that encodes a tag value using BER-TLV encoding.

151.4 class TKCompactTLVRecordMBS

151.4.1 class TKCompactTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that implements encoding using Compact-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

151.4.2 Methods

151.4.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.

151.5 class TKSimpleTLVRecordMBS

151.5.1 class TKSimpleTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that implements encoding using Simple-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

151.5.2 Methods

151.5.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returnes a new TLV record containing the specified tag and value fields.

151.6 class TKSmartCardATRInterfaceGroupMBS

151.6.1 class TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A single interface-bytes group for a Smart Card ATR (Answer to Reset).
Notes:

You access instances of this class by calling the interfaceGroupAtIndex and interfaceGroupForProtocol methods on an TKSmartCardATRMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

151.6.2 Methods

151.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

151.6.4 Properties

151.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.6.6 HasProtocol as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether protocol is defined.
Notes: (Read only property)

151.6.7 HasTA as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TA value defined.
Notes: (Read only property)

151.6.8 HasTB as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TB value defined.
Notes: (Read only property)

151.6.9 HasTC as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TC value defined.
Notes: (Read only property)

151.6.10 Protocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The protocol for this group.
Notes:

This property returns the protocol number. See kProtocol* constants.
This property is zero for the first interface group (global), as it has no assigned protocol.
(Read only property)

151.6.11 TA as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TA interface byte of ATR group.
Notes: (Read only property)

151.6.12 TB as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TB interface byte of ATR group.
Notes: (Read only property)

151.6.13 TC as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TC interface byte of ATR group.

Notes: (Read only property)

151.7 class TKSmartCardATRMBS

151.7.1 class TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A parsed ATR (Answer To Reset) message from a Smart Card.
Notes:

This class declares a programmatic interface to parsing an ATR from data or a byte stream, and accessing the individual parts.

The TKSmartCardATR class parses ATR messages according to the ISO/IEC 7816-3 specification.

151.7.2 Methods

151.7.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on MacOS 10.10 or newer.

151.7.4 Constructor(data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TKSmartCardATR object from a provided data object.
Notes:

bytes: The ATR data to be parsed.

Returns a TKSmartCardATR object initialized with the parsed data. If bytes does not contain a valid ATR, raises UnsupportedOperationException.

151.7.5 historicalRecords as TKCompactTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of compact TLV records parsed from historical bytes.

151.7.6 interfaceGroupAtIndex(index as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the interface group at the specified index.
Notes:

index: The index of the desired interface group.

Interface group indexes start at 1, as specified by ISO 7816-3.

Returns the interface group at the specified index, or nil if not present.

151.7.7 interfaceGroupForProtocol(protocol as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the interface group with the specified protocol.
Notes:

protocol: The protocol used by the desired interface group.

Returns the interface group with the specified protocol, or nil if none exists.

151.7.8 protocols as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of protocols indicated in the ATR.
Notes:

Each element in the returned array is an integer value corresponding to a member of the kProtocol* constants.
The returned protocols are ordered such that the default protocol is at index 0, and any duplicate values are removed.

151.7.9 Properties

151.7.10 bytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR message data.
Notes: (Read only property)

151.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.7.12 historicalBytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR historical bytes, not including interface bytes or the TCK (check byte).
Notes: (Read only property)

151.7.13 Constants

151.7.14 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: Any available transmission protocols.

151.7.15 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: No transmission protocols.

151.7.16 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=0 transmission protocol.

151.7.17 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=1 transmission protocol.

151.7.18 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=15 transmission protocol.

151.8 class TKSmartCardMBS

151.8.1 class TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A representation of a smart card.
Notes:

This class provides an interface for managing sessions with a smart card, transmitting requests, and facilitating user interaction.
You can create a TKSmartCardMBS object when a smart card is inserted into a slot, by calling the makeSmartCard method on the corresponding TKSmartCardSlotMBS object. To start communicating with the smart card, call the beginSession method on the TKSmartCardMBS object. Once an exclusive session has been established, you transmit data using the transmitRequest:reply: method. After you've finished communicating with a smart card, you call the endSession method.
If the smart card is physically removed from its slot, the session object becomes invalid, and any further calls to transmitRequest will return an error.

151.8.2 Methods

151.8.3 beginSession(tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Begins a session with the Smart Card.
Notes:

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

Calls beginSessionCompleted event later.

151.8.4 beginSessionSync(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Begins a session with the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.
Returns true on success and false on failure.

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

151.8.5 beginSessionWithDelegate(handler as beginSessionCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
beginSessionCompletedDelegate(success as Boolean, error as NSErrorMBS, tag as Variant)

151.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.8.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

151.8.8 endSession

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Completes any pending transmissions and ends the session to the Smart Card.
Notes: Calls to this method should balance calls to beginSession.

151.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Synchronously begins a session, executes the given block, and ends the session.
Notes:

error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns true if the session was successfully created and the inSession event returns true; otherwise, false.
See also:

- 151.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean 19938

151.8.10 readFileWithDelegate(FileName as MemoryBlock, handler as readFileCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reads file with given filename.
Notes:

This is for Belgian ID card to read a file.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

151.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Synchronously transmits an APDU command to the card and returns the response.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.
sw: On return, contains the result code as represented by the first two bytes (SW1SW2) of the returned data.
error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns the returned data without the first two bytes (SW1SW2), or nil if an error occurred.
See also:

- 151.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil) 19933

151.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asynchronously transmits an APDU command to the card, returning the response in a completion handler.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.

Calls sendInsCompleted event later.
See also:

- 151.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock 19932

151.8.13 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call validChanged event.
Notes: Called for you by constructor.

151.8.14 transmitRequest(request as MemoryBlock, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Calls transmitRequestCompleted method later.

151.8.15 transmitRequestSync(request as MemoryBlock, byref response as MemoryBlock, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.

request: The APDU request data.
response: The response.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

151.8.16 transmitRequestWithDelegate(request as MemoryBlock, handler as transmitRequestCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
transmitRequestCompletedDelegate(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

151.8.17 userInteractionForSecurePINChange(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, currentPINByteOffset as Integer, newPINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new user interaction object for secure PIN change using the smart card reader facilities (typically a HW keypad).
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
currentPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.
newPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the new PIN.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

151.8.18 userInteractionForSecurePINVerification(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, PINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new user interaction object for secure PIN verification using the Smart Card reader facilities.
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
PINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.

This parameter is not currently used. Pass 0.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

151.8.19 Properties

151.8.20 AllowedProtocols as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The protocols allowed for communication with the Smart Card.
Notes:

kProtocolAny by default.
This property is consulted only when beginning a session to a Smart Card. Any changes to this property will not be reflected by the current session, if one is already established.
(Read and Write property)

151.8.21 cla as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The CLA byte used for APDU transmission.
Notes:

0 by default.
(Read and Write property)

151.8.22 Context as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: User-specified information.
Notes:

This property is automatically set to nil if the Smart Card is removed or another TKSmartCardMBS object begins a session.
(Read and Write property)

151.8.23 CurrentProtocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The protocol used for communication with the Smart Card.
Notes:

Returns kProtocolNone if no session is currently established.
(Read only property)

151.8.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.8.25 Sensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether sessions established for the Smart Card should be considered sensitive.
Notes:

False by default.
When this property is set to true, any sessions established for the receiver will begin and end by sending a reset command to the Smart Card. This is recommended anytime potentially sensitive information is transferred.
(Read and Write property)

151.8.26 Slot as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The slot in which the Smart Card is inserted.
Notes: (Read only property)

151.8.27 UseCommandChaining as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to use command chaining of APDU with a data field longer than 255 bytes.
Notes:

By default, this property is set to true when the Smart Card ATR announces that command chaining is supported.

(Read and Write property)

151.8.28 UseExtendedLength as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to use extended length APDU.
Notes:

By default, this property is set to true when the Smart Card slot supports transmitting extended length commands, and the ATR announces that extended length APDU is supported.
(Read and Write property)

151.8.29 Valid as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the Smart Card is valid and accessible from its slot.
Notes: (Read only property)

151.8.30 Events

151.8.31 beginSessionCompleted(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when session begun.
Notes:

success: Whether the session could be established successfully.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

151.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called in session.
Notes:

The event to be called in the context of the created session. This event returns a Boolean value indicating whether communication was successful.

error: To indicate that an error occurred during the session, populate this with an NSError object containing details and return false.
See also:

- 151.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean 19931

151.8.33 sendInsCompleted(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as integer, replyData as MemoryBlock, sw as UInt16, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when sendIns completed.
Notes:

replyData: The returned data without the first two bytes (SW1SW2), or nil if an error occurred.
sw: The result code as represented by the first two bytes (SW1SW2) of the returned data.
error: If a communication error occurred or the sw result code is anything other than & h9000, contains details about the error.

151.8.34 transmitRequestCompleted(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when transmit is done.
Notes:

response: The APDU response data, or nil if communication with the Smart Card failed.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

151.8.35 ValidChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when valid property changed.

151.8.36 Constants

151.8.37 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: Any available transmission protocols.

151.8.38 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: No transmission protocols.

151.8.39 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=0 transmission protocol.

151.8.40 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=1 transmission protocol.

151.8.41 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=15 transmission protocol.

151.8.42 TKErrorCodeAuthenticationFailed = -5

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants.
Notes: Authentication failed.

151.8.43 TKErrorCodeAuthenticationNeeded = -9

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants.
Notes: Authentication is needed.

151.8.44 TKErrorCodeBadParameter = -8

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** An invalid parameter was provided.

151.8.45 TKErrorCodeCanceledByUser = -4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The operation was canceled by the user.

151.8.46 TKErrorCodeCommunicationError = -2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** A communication error occurred.

151.8.47 TKErrorCodeCorruptedData = -3

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The data was corrupted.

151.8.48 TKErrorCodeNotImplemented = -1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The functionality is not implemented.

151.8.49 TKErrorCodeObjectNotFound = -6

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The object was not found.

151.8.50 TKErrorCodeTokenNotFound = -7

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The token was not found.

151.8.51 Delegates

151.8.52 beginSessionCompletedDelegateMBS(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the beginSessionWithDelegate method.

151.8.53 readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the readFileWithDelegate method.

151.8.54 transmitRequestCompletedDelegateMBS(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the transmitRequestWithDelegate method.

151.9 class TKSmartCardPINFormatMBS

151.9.1 class TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The formatting properties for a PIN, such as character encoding and length constraints.
Notes:

You typically interact with TKSmartCardPINFormatMBS objects when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an instance of TKSmartCardMBS.

Available in macOS 10.11 or newer.

151.9.2 Methods

151.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.9.4 Properties

151.9.5 Charset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The format of PIN characters.
Notes:

kCharsetNumeric by default.
(Read and Write property)

151.9.6 Encoding as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The encoding of PIN characters.
Notes:

kEncodingASCII by default.
(Read and Write property)

151.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.9.8 MaxPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of characters to form a valid PIN.
Notes:

8 by default.
(Read and Write property)

151.9.9 MinPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum number of characters to form a valid PIN.
Notes:

4 by default.
(Read and Write property)

151.9.10 PINBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The offset, in bits, within the PIN block to mark a location for filling in the formatted PIN, which is justified with respect to the PINJustification property value.
Notes:

0 by default.

The value of PINBitOffset indirectly controls the internal system units indicator. If PINBitOffset is byte aligned (that is, PINBitOffset % 8 == 0), the internal representation of PINBitOffset gets converted from bits to bytes.
(Read and Write property)

151.9.11 PINBlockByteLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The total length of the PIN block in bytes.
Notes:

8 by default.
(Read and Write property)

151.9.12 PINJustification as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The justification within the PIN block.
Notes:

kJustificationLeft by default.
(Read and Write property)

151.9.13 PINLengthBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The offset, in bits, within the PIN block to mark a location for filling in the PIN length, which is always left justified.
Notes:

0 by default.

The value of PINLengthBitOffset indirectly controls the internal system units indicator. If PINLengthBitOffset is byte aligned (that is, PINLengthBitOffset % 8 == 0), the internal representation of PINLengthBitOffset gets converted from bits to bytes.
(Read and Write property)

151.9.14 PINLengthBitSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The size, in bits, of the PIN length field. If set to 0, PIN length is not written.
Notes:

0 by default.
(Read and Write property)

151.9.15 Constants

151.9.16 kCharsetAlphanumeric = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN can be composed of digits and letters.

151.9.17 kCharsetNumeric = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN is only composed of digits.

151.9.18 kCharsetUpperAlphanumeric = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN can be composed of digits and uppercase letters.

151.9.19 kEncodingASCII = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters are encoded in ASCII format (for example, 1234 is encoded as 31h 32h 33h 34h).

151.9.20 kEncodingBCD = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters (only digits) are encoded in BCD format (for example, 1234 is encoded as 12h 34h).

151.9.21 kEncodingBinary = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters are encoded in Binary format (for example, 1234 is encoded as 01h 02h 03h 04h).

151.9.22 kJustificationLeft = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN justification constants. **Notes:** Justify to the left.

151.9.23 kJustificationRight = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN justification constants. **Notes:** Justify to the right.

151.10 class TKSmartCardSlotManagerMBS

151.10.1 class TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An interface to all available smart card reader slots.
Notes:

Get a list of all known smart card reader slots in the system using the slotNames property, and access individual slots by name using the getSlotWithName method.

The com.apple.security.smartcard entitlement is required in order to use TKSmartCardSlotManager.

151.10.2 Methods

151.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on MacOS 10.11 or newer.

151.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.10.5 defaultManager as TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The shared singleton Smart Card reader slot manager.
Notes: This method returns nil unless the com.apple.security.smartcard entitlement is enabled.

151.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

151.10.7 getSlotWithName(name as string, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asynchronously calls a block with a Smart Card reader slot for a specified name.
Notes:

name: The name of the Smart Card reader slot.

Calls gotSlotWithName later.

151.10.8 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call slowNamesChanged event.
Notes: Called for you by constructor.

151.10.9 slotNamed(name as string) as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Smart Card slot with a given name.
Notes: Returns the slot with the specified name, or nil if no slot with that name exists.

151.10.10 slotNames as string()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of identifiers for all the Smart Card reader slots available to the system.

151.10.11 Properties

151.10.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.10.13 Events

151.10.14 gotSlotWithName(name as string, slot as TKSmartCardSlotMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the slow with the name is found.

151.10.15 slotNamesChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when slot name list changed.

151.11 class TKSmartCardSlotMBS

151.11.1 class TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A single smart card reader slot in the system.
Notes: Use the TKSmartCardSlotManagerMBS class to manage all the smart card reader slots available to the system. You can retrieve the names of available smart card reader slots for a system using the slotNames property of a manager object, and access instances of TKSmartCardSlotMBS using the getSlotWithName method.

151.11.2 Methods

151.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.11.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

151.11.5 makeSmartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new TKSmartCardMBS object representing the currently inserted Smart Card.
Notes:

A new TKSmartCardMBS object, or nil if no Smart Card is currently inserted.

You can create multiple instances of TKSmartCardMBS that represent the same Smart Card. Exclusivity of data transfer is handled by sessions on the individual TKSmartCardMBS objects.

151.11.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call stateChanged event.

Notes: Called for you by constructor.

151.11.7 Properties

151.11.8 ATR as TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR (Answer to Reset) of the inserted Smart Card, or nil if no Smart Card is inserted or the inserted Smart Card is mute.
Notes: (Read only property)

151.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.11.10 maxInputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum length of input APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer to the Smart Card.
Notes: (Read only property)

151.11.11 maxOutputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum length of output APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer from the Smart Card.
Notes: (Read only property)

151.11.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the Smart Card reader slot.
Notes: (Read only property)

151.11.13 State as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current state of the Smart Card reader slot.
Notes: (Read only property)

151.11.14 Events

151.11.15 StateChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when state changed.

151.11.16 Constants

151.11.17 kStateEmpty = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: The Smart Card reader slot is empty; no card is inserted.

151.11.18 kStateMissing = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes:

The Smart Card reader slot is no longer known to the system.

This is the terminal state of a TKSmartCardSlotThis instance; once it has reached this state, the Smart Card reader slot cannot be reinitialized.

151.11.19 kStateMuteCard = 3

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card is inserted, but is mute, or does not provide responses to commands.

151.11.20 kStateProbing = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card was inserted into the slot and an initial probe is in underway.

151.11.21 kStateValidCard = 4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card is inserted and properly answered to a reset command.

151.12 class TKSmartCardTokenDriverMBS

151.12.1 class TKSmartCardTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The driver that acts as an entry point for smart card app extensions.
Notes: Subclass of the TKTokenDriverMBS class.

151.12.2 Methods

151.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.13 class TKSmartCardTokenMBS

151.13.1 class TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a smart card based cryptographic token.#
Notes: Subclass of the TKTokenMBS class.

151.13.2 Methods

151.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a smart card token with the specified smart card, application identifier, and token driver.
Notes:

smartCard: The smart card on which the created token should operate.
AID: The ISO 7816-4 application identifier for the smart card.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.
tokenDriver: The driver associated with the created token.
See also:

- 151.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 19956

151.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
See also:

- 151.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS) 19956

151.13.5 Properties

151.13.6 AID as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ISO 7816-4 application identifiers of the Smart Card.
Notes:

This value is specified in the Smart Card token extension's NSExtensionAttributes property list by the com.apple.ctk.aid attribute. If this attribute specifies multiple AIDs, this parameter represents the application identifier found on the card that is already preselected. If the com.apple.ctk.aid attribute is not present, no application is automatically preselected and the value of this property is nil.
(Read only property)

151.14 class TKSmartCardTokenSessionMBS

151.14.1 class TKSmartCardTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A token session that is based on a smart card token.
Notes:

You can use the smartCard property to access and send APDUs to the underlying smart card.

Available on MacOS 10.12 or newer.
Subclass of the TKTokenSessionMBS class.

151.14.2 Methods

151.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
See also:

- 151.14.4 Constructor(token as TKTokenMBS) 19958

151.14.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a token session with the specified token.
Notes:

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 151.14.3 Constructor 19958

151.14.5 Properties

151.14.6 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The smart card for the active exclusive session and selected application.

Notes:

This property can only be accessed in the implementation of a TKTokenSessionDelegate protocol delegate method. If the associated token has a value set for the AID property, this property opens an exclusive session to the card, with the application already selected.

You should not call beginSession or endSession on the returned value. Instead, the system will take care of beginning the exclusive session and terminating it when the current token request servicing is finished.
You can store any kind of information representing state of the card using the context property. This property will be automatically set to nil if the card is reset or accessed by different TKSmartCard instance, such as by another process. You can check the context property for any previously stored values as a way to avoid costly state restoration before performing an operation.
(Read only property)

151.15 class TKSmartCardUserInteractionForPINOperationMBS

151.15.1 class TKSmartCardUserInteractionForPINOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of user interaction for secure PIN operations on a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationMBS when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCard object.
The result of a user interaction is available once the interaction has completed.

Available in macOS 10.11 or newer.
Subclass of the TKSmartCardUserInteractionMBS class.

151.15.2 Methods

151.15.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.15.4 PINMessageIndices as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of message indices referring to a predefined message table, used to specify the type and number of messages displayed during the PIN operation. nil by default.
Notes: If nil, the reader does not display any message (reader specific). Typically, PIN verification takes 1 message; PIN modification takes 1 – 3 messages.

151.15.5 Properties

151.15.6 locale as NSLocaleMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale for the displayed messages.
Notes:

If nil, the user's current locale is used. By default, this value is the current locale of the system.
(Read and Write property)

151.15.7 PINCompletion as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The conditions under which PIN entry should be considered complete.
Notes: (Read and Write property)

151.15.8 resultData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The returned data without SW1-SW2 bytes, if any.
Notes: (Read and Write property)

151.15.9 resultSW as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The SW1-SW2 status bytes.
Notes: (Read and Write property)

151.15.10 Constants

151.15.11 kPINCompletionKey = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: Key

151.15.12 kPINCompletionMaxLength = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: MaxLength

151.15.13 kPINCompletionTimeout = 4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: Timeout

151.16 class TKSmartCardUserInteractionForSecurePINChangeMBS

151.16.1 class TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the user interaction for secure PIN change operations on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Available in macOS 10.11+.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

151.16.2 Methods

151.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.16.4 Properties

151.16.5 PINConfirmation as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The way PIN confirmation is requested.
Notes:

kPINConfirmationNone by default.
(Read and Write property)

151.16.6 Constants

151.16.7 kPINConfirmationCurrent = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: Current PIN confirmation.

151.16.8 kPINConfirmationNew = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: New PIN confirmation.

151.16.9 kPINConfirmationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: No PIN confirmation.

151.17 class TKSmartCardUserInteractionForSecurePINVerificationMBS

151.17.1 class TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the user interaction for secure PIN change verification on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

151.17.2 Methods

151.17.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.18 class TKSmartCardUserInteractionMBS

151.18.1 class TKSmartCardUserInteractionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The base class for encapsulating user interaction with a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively. TKSmartCardUserInteractionForPINOperationMBS is a subclass of TKSmartCardUserInteractionMBS.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationwhenMBS calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCardMBS object.

Available in macOS 10.11+.

151.18.2 Methods

151.18.3 Cancel as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to cancel an interaction started by calling run.
Notes:

Returns false if the operation is not running, or if cancelation is not supported.
For certain interactions, cancellation may not be available.

151.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

151.18.6 Run

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs the user interaction and asynchronously receives a reply.
Notes: Calls RunCompleted event later.

151.18.7 Properties

151.18.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.18.9 initialTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timeout, in seconds, for initial interaction.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

151.18.10 interactionTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timeout, in seconds, after the first key stroke.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

151.18.11 Events

151.18.12 characterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a valid character has been entered.

151.18.13 correctionKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a correction key has been pressed.

151.18.14 invalidCharacterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that an invalid character has been entered.

151.18.15 newPINConfirmationRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the new PIN needs to be re-entered for confirmation.

151.18.16 newPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the new PIN needs to be entered.

151.18.17 oldPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the old PIN needs to be entered.

151.18.18 runCompleted(success as boolean, error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when run method is done.
Notes:

success: Whether the user interaction was successful.
error: Contains information about the the error that occurred during the user interaction.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

151.18.19 validationKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the validation key has been pressed, indicating the end of PIN entry.

151.19 class TKTLVRecordMBS

151.19.1 class TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The base class encapsulating a Tag-Length-Value record.
Notes:

The CryptoTokenKit framework provides the following concrete subclasses for various TLV record encodings:

- TKBERTLVRecordMBS for BER-TLV encoding rules
- TKSimpleTLVRecordMBS for Simple-TLV encoding according to ISO 7816-4
- TKCompactTLVRecordMBS for Compact-TLV encoding according to ISO 7816-4

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

151.19.2 Methods

151.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on macOS 10.12 or newer.

151.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

151.19.5 recordFromData(data as MemoryBlock) as TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a TLV record from by parsing the specified data.
Notes:

data: A data object containing the serialized representation of a TLV record.

Returns a TLV record, or nil if data does not specify a valid record.

151.19.6 sequenceOfRecordsFromData(data as MemoryBlock) as TKTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an array of TLV records from the specified data.
Notes:

data: A data object containing the serialized representation of zero or more TLV records.

Returns a sequence of TLV records, or nil if data does not specify a sequence of valid records.

151.19.7 Properties

151.19.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record data, including the tag, length, and value fields.
Notes: (Read only property)

151.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.19.10 Tag as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The tag field of the record.
Notes: (Read only property)

151.19.11 Value as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value field of the record.

Notes: (Read only property)

151.20 class TKTokenAuthOperationMBS

151.20.1 class TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An authentication operation for a cryptographic token.
Notes: The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.

151.20.2 Methods

151.20.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.20.4 finishWithError(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finishes the authentication operation.
Notes:

error: On return, if an error occurred, contains an object with details of the error.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

Return true if the authentication operation finished successfully; otherwise false.

151.20.5 Properties

151.20.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.21 class TKTokenDriverMBS

151.21.1 class TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The abstract base class for building token drivers.
Notes: When working with Smart Card tokens, use or inherit from the TKSmartCardTokenDriverMBS subclass instead.

151.21.2 Methods

151.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

151.21.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

151.21.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets delegate, so events fire.
Notes: Called by constructor for you.

151.21.6 Properties

151.21.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.21.8 Events

151.21.9 createTokenForSmartCard(smartCard as TKSmartCardMBS, AID as MemoryBlock, byref error as NSErrorMBS) as TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a new Smart Card is detected.
Notes:

self: The Smart Card token driver.
smartCard: The detected Smart Card.
AID: The ISO 7816-4 application identifier that is selected on the Smart Card. If the com.apple.ctk.aid attributes is not present in the Smart Card token extension property list, no application is selected.
error: If an error occured, this parameter should be populated with an NSError object containing details about the error.

Return the token created for the Smart Card, or nil if an error occurs or the delegate decides not to provide a token.

This event is only for TKSmartCardTokenDriverMBS class.

151.21.10 terminateToken(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to terminate the specified token.

151.22 class TKTokenKeyAlgorithmMBS

151.22.1 class TKTokenKeyAlgorithmMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cryptographic algorithms used by token keys.
Notes:

Typically, the supported algorithm for a token key can be represented by a value of the SecKeyAlgorithm enumeration. However, tokens such as Smart Cards require that input data for operations take the format of a more specific algorithm. For example, a token may accept raw data to generate a cryptographic signature, but require that raw data to be formatted according to PKCS1 padding rules. To express such a requirement, a TKTokenKeyAlgorithm object defines a target algorithm and a set of other algorithms that were used. In the previous example, the target algorithm is kSecKeyAlgorithmRSASignatureRaw and the kSecKeyAlgorithmRSASignatureDigestPKCS1v15SHA1 algorithm is also reported as being used.

Requires macOS 10.12+ or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

151.22.2 Methods

151.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

151.22.4 isAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the specified algorithm is the target operation algorithm.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm; otherwise, false.

151.22.5 supportsAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the specified algorithm is the target operation algorithm, or one of the other algorithms

used.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm or one of the other algorithms used; otherwise, false.

151.22.6 Properties

151.22.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.23 class TKTokenKeychainCertificateMBS

151.23.1 class TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A token's certificate as stored in the keychain.
Notes: Subclass of the TKTokenKeychainItemMBS class.

151.23.2 Methods

151.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token keychain certificate with data from the specified certificate reference and a given object ID.
Notes:

CertificateData: The certificate as data block.
objectID: The object ID.

Returns a new token keychain certificate.

- 151.23.4 Constructor(TKTokenObjectID as Variant) 19978

151.23.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
See also:

- 151.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 19978

151.23.5 Properties

151.23.6 data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a DER-encoded representation of an X.509 certificate.
Notes: (Read only property)

151.24 class TKTokenKeychainContentsMBS

151.24.1 class TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the state of the keychain for a particular token.
Notes:

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

151.24.2 Methods

151.24.3 certificateForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such certificate exists, contains information about the error.

Returns the certificate, or nil if no certificate exists.

151.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

151.24.5 fillWithItems(items() as TKTokenKeychainItemMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the keychain with the specified items.
Notes:

items: The items to be added to the keychain.

All existing items for the token are first removed from the keychain before filling the keychain with items.

151.24.6 items as TKTokenKeychainItemMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns all items for token in the keychain.

151.24.7 keyForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such key exists, contains information about the error.

Returns the key, or nil if no key exists.

151.24.8 Properties

151.24.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.25 class TKTokenKeychainItemMBS

151.25.1 class TKTokenKeychainItemMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An abstract base class for managing a token's contents as keychain items.
Notes:

Don't use this base class directly. Instead, use one of its subclasses, such as TKTokenKeychainCertificateMBS for managing certificates or TKTokenKeychainKeyMBS for managing cryptographic keys.
Available on macOS 10.12+.

151.25.2 Methods

151.25.3 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token keychain item with the specified object ID.

151.25.4 Properties

151.25.5 constraints as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Access constraints for the keychain item, keyed by TKTokenOperation values wrapped in integers.
Notes: (Read and Write property)

151.25.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

151.25.7 Label as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user-visible label for the keychain item.
Notes:

This property is equivalent to the kSecAttrLabel attribute type.
(Read and Write property)

151.25.8 objectID as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the object ID used for keychain item identification.
Notes: (Read only property)

151.26 class TKTokenKeychainKeyMBS

151.26.1 class TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A token's key as stored in the keychain.
Notes:

Available on macOS 10.12+.
Subclass of the TKTokenKeychainItemMBS class.

151.26.2 Methods

151.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)
