81.2.26 PictureCombineMBS(DestImage As Picture, Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position

SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

81.2.28 PictureCopyPixelFastMBS(DestImage As Picture, Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options.
Example:

```
const x=100 // mouse coordinates for example
const y=100

dim p,logo as picture
```

```
logo=LogoMBS(500)

p=New Picture(800,800,32)

p.Graphics.ForeColor=& cFFFFFF
p.Graphics.FillRect 0,0,p.Width,p.Height

if PictureCopyPixelFastMBS(p, logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then
' ok
else
beep
end if

window1.Backdrop=p
```

Notes:

Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

81.2.29 NewPictureEditorMBS(pic as picture) as PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture editor editing the given picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as PictureEditorMBS

p = NewPictureEditorMBS(l)
```

Notes:

Returns nil on failure.
Works only for bitmap images.

81.2.30 NewPictureMBS(width as Integer, height as Integer, pixeltype as Integer, buffer as memoryblock, rowbytes as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a picture from a memory block.
Notes:

This wraps the REALBuildPictureFromBuffer plugin function and copies the pixels.

rowbytes must be the number of bytes per row. Typical width*3 or width*4.

Pixeltype constants:

kRBPixelRGB24	= 1	3 bytes/pixel: Red, Green, Blue
kRBPixelBGR24	= 2	3 bytes/pixel: Blue, Green, Red
kRBPixelXRGB32	= 3	4 bytes/pixel: Unused, Red, Green, Blue
kRBPixelBGRX32	= 4	4 bytes/pixel: Blue, Green, Red, Unused

81.2.31 NewPictureWriterMBS(pic as picture, width as Integer, height as Integer) as PictureWriterMBS

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture writer.
Notes:

Returns nil on failure (low memory).
If you provide an existing picture we reuse it if it has the right size. But you can pass nil to get a new one always.

81.2.32 GetMBfromPictureMBS(pic as picture, mask as picture, mode as string) as memoryblock

MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock from the picture data with the given format.
Example:

```
dim p as Picture = LogoMBS(500)
dim m as MemoryBlock = GetMBfromPictureMBS(p, p.mask, "RGB32")
```

Notes:

Returns nil on any error.
Mode can be a string with the following strings: RGB16, ARGB16, RGB16_565, ARGB32, RGB32, RGB24 or MASK8.
See the example project "Picture To Memoryblock.rbp" for the RB code matching the plugin code.
See also:

- 81.2.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock 14043

81.2.33 GetMBfromPictureMBS(pic as picture, mode as string) as memoryblock

MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock from the picture data with the given format.
Example:

```
dim p as Picture = LogoMBS(500)
dim m as MemoryBlock = GetMBfromPictureMBS(p, "RGB32")
```

Notes: Same as the other GetMBfromPictureMBS function, but takes the mask from the picture.
See also:

- 81.2.32 GetMBfromPictureMBS(pic as picture, mask as picture, mode as string) as memoryblock 14042

81.2.34 MemoryblockABGRtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a

new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.35 MemoryblockABGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture 14044

81.2.35 MemoryblockABGRtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.34 MemoryblockABGRtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture 14043

81.2.36 MemoryblockARGBtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyARGBtoMemoryblockMBS(m,0,0) then

dim x as Picture = New Picture(100,100,32)

q=MemoryblockARGBtoPictureMBS(x, m,0,100,100)

Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyARGBtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockARGBtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyBGRAtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockBGRAtoPictureMBS(nil, m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyBGRtoMemoryblockMBS(m,0) then

dim x as Picture = New Picture(100,100,32)

q=MemoryblockBGRtoPictureMBS(x, m,0,100,100)

Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if

end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

81.2.42 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer) as picture

MBS Picture Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
```

```
dim p,q,k as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
'MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// make the picture from this Memoryblock
q=MemoryblockARGBtoPictureMBS(m,0,100,100,false)

// make the mask from this Memoryblock
k=MemoryblockGrayToPictureMBS(m,kAlphaOffset,100,100,4)

// combine picture and mask
q.Mask.Graphics.DrawPicture k,0,0

Backdrop=q
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

81.2.43 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red as Integer, Blue as Integer, Green as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Notes:

This variantion of this method Multiplies the gray value with Red, Blue and Green and divided by 256.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

81.2.44 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red() as Integer, Blue() as Integer, Green() as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Notes:

This variantion of this method lookups the Red, Green and Blue values for the next pixel by using the gray value as index.

The arrays should have 256 elements.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*PixelByteSize bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.42 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer) as picture 14050
- 81.2.43 MemoryblockGrayToPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red as Integer, Blue as Integer, Green as Integer) as picture 14052

81.2.45 MemoryblockRGBAtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyRGBAtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockRGBAtoPictureMBS(m, 0, p.Width, p.Height)
```

```
break // look into memoryblock with debugger
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.46 MemoryblockRGBAtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 14054

81.2.46 MemoryblockRGBAtoPictureMBS(source as memoryblock, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
// some memory with pixel data
dim m as MemoryBlock = NewMemoryBlock(100*100*32)

for i as Integer = 1 to 1000
// place random pixels
m.Int8Value(rnd*m.size) = rnd*256
next

// and make a picture
dim l as Picture = MemoryBlockRGBAtoPictureMBS(m, 0, 100, 100)
```

```
// display in window
window1.backdrop = l
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs width*height*4 bytes in the memoryblock.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

81.2.47 MemoryblockRGBtoPictureMBS(dest as picture, source as memoryblock, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a memoryblock into a picture object.
Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*3) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyRGBtoMemoryblockMBS(m,0) then

dim x as Picture = New Picture(100,100,32)

q=MemoryblockRGBtoPictureMBS(x, m,0,100,100)
```

```
Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if
end if
```

Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

The function will crash if the memoryblock is too small. Needs width*height*3 bytes in the memoryblock.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.

81.2.48 PtrABGRtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

Does not access the mask inside the image!

81.2.58 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red as Integer, Blue as Integer, Green as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

This variantion of this method Multiplies the gray value with Red, Blue and Green and divided by 256.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*PixelByteSize bytes in the memory pointed to by pointer plus offset.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

81.2.59 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer, Red() as Integer, Blue() as Integer, Green() as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

This variantion of this method lookups the Red, Green and Blue values for the next pixel by using the gray value as index.

The arrays should have 256 elements.

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*PixelByteSize bytes in the memory pointed to by pointer plus offset.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.57 PtrGrayToPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, PixelByteSize as Integer) as picture 14061

81.2.60 PtrRGBAtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
See also:

- 81.2.61 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 14064

81.2.61 PtrRGBAtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*4 bytes in the memory pointed to by pointer plus offset.

If FlipVertically is true the image is flipped. New in version 9.4.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.60 PtrRGBAtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer, FlipVertically as boolean=false) as picture 14063

81.2.62 PtrRGBtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

In the dest picture parameter you can provide a picture to draw in. If the picture is no big enough or nil, a new one is created.

The function will crash if the data is too small where the pointer points to. Needs width*height*3 bytes in the memory pointed to by pointer plus offset.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.63 PtrRGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 14065

81.2.63 PtrRGBtoPictureMBS(source as Ptr, offset as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies image data from a pointer into a picture object.
Notes:

Returns nil on any error.
source should not be nil.
offset should be 0 or bigger and is the start position in the data the pointer points to.

The function will crash if the data is too small where the pointer points to. Needs width*height*3 bytes in the memory pointed to by pointer plus offset.

Does not access the mask inside the image!
Data is copied from memory block to the new picture, not referenced.
See also:

- 81.2.62 PtrRGBtoPictureMBS(dest as picture, source as Ptr, offset as Integer, width as Integer, height as Integer) as picture 14064

81.2.64 MandelbrotSetMBS(Threaded as Integer, width as Integer, height as Integer, fx as Double = 4.0, fy as Double = 4.0, dx as Double = -2.0, dy as Double = -2.0, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the mandelbrot picture.
Example:

```
Backdrop = MandelbrotSetMBS(0,300,300)
```

Notes:

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

Width & Height specifiy the output image size.
fx and fy are the scale values and dx/dy specify the the position of the mandelbrot image.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

81.2.65 BinaryStringtoPictureMBS(data as String) as Picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates the picture back from the binary data inside the string.
Example:

```
dim pic as Picture = LogoMBS(500)

// encode
dim s as string = PicturetoBinaryStringMBS(pic)

// decode
Backdrop = BinaryStringtoPictureMBS(s)
```

Notes:

Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

+ 0 Kenn, PPIC for Packed Picture
+ 4 Length of whole block
+ 8 Width (BigEndian)
+12 Height (BigEndian)
+16 Depth (BigEndian, 32 for 32bit)
+20 Offset of the binary data. maybe 40.
+24 Reserved for future use. Should be 0.
+40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 ->270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside the database.
Does not handle mask or alpha channel.

81.2.66 PicturetoBinaryStringMBS(p as picture) as string

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a string with the picture content for saving.
Example:

```
dim s as string
dim pic as picture = LogoMBS(100)

s=PicturetoBinaryStringMBS(pic)
```

Notes:

Deprecated. Please do not use for old projects and convert existing images into a new format, e.g. PNG.

The format of the binary encoded picture data:

+ 0 Kenn, PPIC for Packed Picture
+ 4 Length of whole block
+ 8 Width (BigEndian)
+12 Height (BigEndian)
+16 Depth (BigEndian, 32 for 32bit)
+20 Offset of the binary data. maybe 40.
+24 Reserved for future use. Should be 0.
+40 Pixel Data, packed R, G, B in one byte per Subpixel.

300x300 Pixels will make up 300*300+40 ->270040 Bytes.

This method does not require Quicktime or any other OS Service, but it does no compression.
Does not handle mask or alpha channel.

May be a good way to store pictures crossplatform inside a database. As Valentina can do its own Zip based compression, this may be a wonderfull way to store pictures uncompressed (or lossless compressed) inside the database.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with

another you should check the encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

81.2.67 WindowsDrawPictureIntoDeviceContextMBS(pic as picture, HDC as Integer, x as Integer, y as Integer, w as Integer, h as Integer, Transparent as boolean)

MBS Win Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Draws a Xojo Picture into a HDC on Windows.
Example:

```
// get a picture
dim logo as Picture = LogoMBS(500)

// get HDC
dim h as Integer = g.Handle(g.HandleTypeHDC)

// and draw into it
WindowsDrawPictureIntoDeviceContextMBS(logo, h, 0, 0, 500, 500, false)
```

Notes:

Some SDKs from other companies give you sometimes HDC value to draw your stuff inside. You can prepare a Xojo picture and copy it into the HDC.
Specify rectangle and whether to use transparency.

81.3 class PaletteCalculatorMBS

81.3.1 class PaletteCalculatorMBS

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This class allows you to calculate an 8 bit image from a RGB image and back.
Notes:

You can create the best matching palette for a given image.
If you have several images which should share the same palette, you can draw them first on one big picture before calculating the

81.3.8 GetNearestIndexOfColor(col as color) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the best matching color.
Notes:

The best color is the color with the lowest value:
value=(r-col(index).red)^2+(g-col(index).green)^2+(b-col(index).blue)^2

Returns -1 if the color is not found (should never happen).
See also:

- 81.3.9 GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer 14070

81.3.9 GetNearestIndexOfColor(r as Integer, g as Integer, b as Integer) as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the index in the palette for the best matching color.
Notes:

The best color is the color with the lowest value:
value=(r-col(index).red)^2+(g-col(index).green)^2+(b-col(index).blue)^2

Returns -1 if the color is not found (should never happen).
See also:

- 81.3.8 GetNearestIndexOfColor(col as color) as Integer 14070

81.3.10 Transform(mem as memoryblock, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Transforms a 8 bit picture to a RGB picture.
Notes:

The memoryblock must have the 8 bit picture data inside with each row being width bytes big. The memoryblock must have at least width*height bytes.

Returns nil on any error.
See also:

- 81.3.11 Transform(Pic as picture) as memoryblock 14071

81.3.11 Transform(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock with 8 bit picture data.
Notes:

The resulting memoryblock has width*height bytes.
Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
See also:

- 81.3.10 Transform(mem as memoryblock, width as Integer, height as Integer) as picture 14070

81.3.12 TransformBetterDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock with 8 bit picture data.
Notes:

The resulting memoryblock has width*height bytes.
Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
This method uses dithering to make the picture looking better than with a better transform using code like Floyd-Steinberg.

81.3.13 TransformFastDithering(Pic as picture) as memoryblock

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a memoryblock with 8 bit picture data.
Notes:

The resulting memoryblock has width*height bytes.
Each RGB color in the picture is looked up in the palette and used to fill the memoryblock.
This method uses dithering to make the picture looking better than with a simple transform.

81.3.14 Properties

81.3.15 Count as Integer

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How many colors are inside this PaletteMBS.
Notes:

This property should be 2, 4, 16 or 256.
Default is 256.

(Read and Write property)

81.3.16 Col(i as Integer) as color

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color array.
Notes:

Index goes from 0 to count-1.
(Read and Write computed property)

81.4 class Picture

81.4.1 class Picture

Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extends Xojo's Picture Class.

81.4.2 Methods

81.4.3 AddSteganographyMBS(flags as Integer, data as Memoryblock) as Picture

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
// this example uses chr(0) as end marker
dim s as string = "Hello World. This is just a test." + chr(0)
dim pic as Picture = p.AddSteganographyMBS(1, s)

dim data as MemoryBlock = pic.SteganographyMBS(1)
dim d as string = data.CString(0)

MsgBox d
```

Notes:

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns a new picture or nil. The existing picture is not modified.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it's okay via checksum and than decrypt your data.
Please store image in a loss less format like PNG.
Function does not handle mask or alpha channel.

81.4.4 AddSteganographyPictureMBS(flags as Integer, data as Picture) as Picture

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to a new picture.
Example:

```
const AllChannels = & h111

dim p as new Picture(500, 500, 32)

dim w as new window1
w.Title = "white"
w.Backdrop = p

dim l as Picture = LogoMBS(500)

w = new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
dim x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
dim y as Picture = x.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
```

Notes:

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns a new picture or nil. The existing picture is not modified.

Function does not handle mask or alpha channel.

81.4.5 AutoLevelCopyMBS as picture

MBS Picture Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies auto levels on the picture.
Notes:

The histogram is built, white and back points are searched and all pixels adjusted.
Returns nil on any error.
Thanks to Jeff Thoman for his code.

This version of the method makes a copy of the picture so it works on any kind of picture.

Renamed in version 9.2 from AutoLevelMBS to AutoLevelCopyMBS.

81.4.6 AutoLevelMBS as boolean

MBS Picture Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Applies auto levels on the picture.
Notes:

The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.
Thanks to Jeff Thoman for his code.

This version of the method modifies the pixels on the picture. Works on 32bit and 24bit pictures.

If you get a type mismatch error on using this function, you may want to use AutoLevelCopyMBS which is the old behavior.

81.4.7 BitmapMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the picture as a bitmap picture.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.BitmapMBS
canvas1.backdrop=p
```

Notes:

A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.
This function takes a look on the picture and returns it unchanged if it is allready a bitmap, but if not, the picture is Cloned as a bitmap. If you prefer to get a copy of the picture as a bitmap picture, use clone instead.

The Cloned picture does not have a mask.

81.4.8 BlueChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blue channel of the picture copied into a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
Backdrop = p.BlueChannelMBS
```

81.4.9 BlurMBS(Radius as Double, yield as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a blur effect to the image.
Example:

```
dim p as Picture = LogoMBS(500)
window1.Backdrop = p.BlurMBS(2)
```

Notes:

This is not a gaussian blur, but a faster box blur.
Returns nil on any error.

Does ignore mask or alpha channel.

81.4.10 BMPDataMBS(ResolutionValueDPI as Integer=72) as string

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a String with the BMP File content for the given picture.
Example:

```
// Make a picture
dim p as Picture = LogoMBS(100)

// Encode as BMP
dim s as string = p.BMPDataMBS

// display length in title
```

```
Title = str(lenb(s))

// and display picture
Backdrop= BMPStringtoPictureMBS(s)
```

Notes:

Does not handle masks.
Returns an empty string on any error.

81.4.11 CalcSteganographyMBS(flags as Integer) as Integer

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the steganography size.
Example:

```
dim p as Picture = LogoMBS(500)

dim size1 as Integer = p.CalcSteganographyMBS(& h100)
MsgBox "Red only: "+str(size1)

dim size2 as Integer = p.CalcSteganographyMBS(& h111)
MsgBox "RGB only: "+str(size2)
```

Notes:

Returns number of bytes that can be stored in an image of the size of this picture.
Flags can be a combination of red (& h100), green (& h010) and blue (& h001).

81.4.12 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 13.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries the colorspace profile for a picture.
Example:

```
dim p as new Picture(32,32,32)
dim c as CGColorSpaceMBS = p.CGColorSpaceMBS
MsgBox c.Name
```

Notes:

Only for Cocoa targets.

In Version 19.3 changed to default to Generic RGB, which Xojo uses if none is set.

81.4.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness of an image.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessAbsoluteMBS(30)

// show in window
window1.Backdrop = n
```

Notes:

To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.
See also:

- 81.4.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14078

81.4.14 ChangeBrightnessAbsoluteMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness of an image.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessAbsoluteMBS(10,20,30)

// show in window
window1.Backdrop = n
```

Notes:

To every pixel component the value is added.
Returns nil if the picture is no bitmap picture.

PS: This function may be optimized, if someone needs it to be faster.

Basicly Picture.ChangeBrightnessAbsoluteMBS does this:

for each pixel in picture
pixel.red = pixel.red + r
pixel.green = pixel.green + g
pixel.blue = pixel.blue + b
next

and it limits the pixel values to the range 0 to 255.
See also:

- 81.4.13 ChangeBrightnessAbsoluteMBS(Brightness as Double) as picture 14078

81.4.15 ChangeBrightnessLinearMBS(Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness of an image linear.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessLinearMBS(30)

// show in window
window1.Backdrop = n
```

Notes:

Value is fraction of change. Range -255 to 255. For example 127 would move all colors half the way to white.
Returns nil if the picture is no bitmap picture.
See also:

- 81.4.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14080

81.4.16 ChangeBrightnessLinearMBS(BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness of an image linear.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeBrightnessLinearMBS(10,20,30)

// show in window
window1.Backdrop = n
```

Notes:

Returns nil if the picture is no bitmap picture.
PS: This function may be optimized, if someone needs it to be faster (e.g. using Altivec).
See also:

- 81.4.15 ChangeBrightnessLinearMBS(Brightness as Double) as picture 14079

81.4.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness and contrast of an image.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5,30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
See also:

- 81.4.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14081

81.4.18 ChangeContrastBrightnessAbsoluteMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness and contrast of an image.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessAbsoluteMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

Notes: Returns nil if the picture is no bitmap picture.
See also:

- 81.4.17 ChangeContrastBrightnessAbsoluteMBS(Contrast as Double, Brightness as Double) as picture 14080

81.4.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness and contrast of an image linear.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5,30)

// show in window
window1.Backdrop = n
```

Notes:

Returns nil if the picture is no bitmap picture.
Contrast range is 0 to 1.0.
Brightness range is -255 to 255.
See also:

- 81.4.20 ChangeContrastBrightnessLinearMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture 14082

81.4.20 ChangeContrastBrightnessLinearMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double, BrightnessRed as Double, BrightnessGreen as Double, BrightnessBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the bightness and contrast of an image linear.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastBrightnessLinearMBS(0.5, 0.5, 0.5, 10, 20, 30)

// show in window
window1.Backdrop = n
```

Notes:

Returns nil if the picture is no bitmap picture.
Contrast range is 0 to 1.0.
Brightness range is -255 to 255.
See also:

- 81.4.19 ChangeContrastBrightnessLinearMBS(Contrast as Double, Brightness as Double) as picture 14081

81.4.21 ChangeContrastMBS(Contrast as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the contrast of the picture.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastMBS(-0.5)

// show in window
window1.Backdrop = n
```

Notes:

All three color channels are handled with the same contrast change.
Returns a picture on success or nil on any error.
Parameters can have any value.
(values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

- 81.4.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture 14083

81.4.22 ChangeContrastMBS(ContrastRed as Double, ContrastGreen as Double, ContrastBlue as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the contrast of the picture.
Example:

```
// get test picture
dim p as Picture = LogoMBS(500)

dim n as Picture = p.ChangeContrastMBS(-0.5,0.0,0.5)

// show in window
window1.Backdrop = n
```

Notes:

Three different values, one for each channel.
Returns a picture on success or nil on any error.
(values >=0.0 will add contrast, values below 0.0 will reduce contrast till gray picture at -1.0, values below -1.0 will add contrast again and also invert the picture)
See also:

- 81.4.21 ChangeContrastMBS(Contrast as Double) as picture 14082

81.4.23 ChangeCustomMBS(a as Double, b as Double) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the picture with custom values.
Notes:

Uses this formular:
NewPixelComponent=OldPixelComponent*a+b
See also:

- 81.4.24 ChangeCustomMBS(Ra as Double, Rb as Double, Ga as Double, Gb as Double, Ba as Double, Bb as Double) as picture 14084

81.4.24 ChangeCustomMBS(Ra as Double, Rb as Double, Ga as Double, Gb as Double, Ba as Double, Bb as Double) as picture

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the picture with custom values.
Notes:

Uses this formular:
NewPixelComponent=OldPixelComponent*a+b
See also:

- 81.4.23 ChangeCustomMBS(a as Double, b as Double) as picture 14083

81.4.25 ChangeSaturationMBS(Amount as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with a changed saturation.
Notes:

Range of amount is from -255 to 255.

Value 0 does nothing.
Value -255 returns a gray level picture.

81.4.26 cloneMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.clonembs
canvas1.backdrop=p
```

Notes:

A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function

creates such pictures for you.
If a picture is a bitmap can be easily tested with the graphics property like this:

```
if p.graphics=nil then // if no bitmap
p = p.clonembs // make one
end if
```

The Cloned picture does include the mask, if one exists.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask.
See also:

- 81.4.27 CloneMBS(NewMask as Picture) as picture 14085
- 81.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 14085
- 81.4.29 CloneMBS(width as Integer, height as Integer) as picture 14086

81.4.27 CloneMBS(NewMask as Picture) as picture

MBS Picture Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap.
Notes: Same as CloneMBS, but adds the mask.
See also:

- 81.4.26 cloneMBS as picture 14084
- 81.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 14085
- 81.4.29 CloneMBS(width as Integer, height as Integer) as picture 14086

81.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap.
Notes: Same as CloneMBS, but adds the mask.
See also:

- 81.4.26 cloneMBS as picture 14084
- 81.4.27 CloneMBS(NewMask as Picture) as picture 14085
- 81.4.29 CloneMBS(width as Integer, height as Integer) as picture 14086

81.4.29 CloneMBS(width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the picture as a bitmap with given size.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.clonembs(100,100)
canvas1.backdrop=p
```

Notes:

A Xojo picture object may contain an icon, a bitmap, a picture handle or something else what Xojo will support as a picture in the future.
The picture editing functions of this plugin can only work with bitmap pictures and this clone function creates such pictures for you.
If a picture is a bitmap can be easily tested with the graphics property like this:

```
if p.graphics=nil then // if no bitmap
p=p.clonembs // make one
end if
```

The Cloned picture does not have a mask or alpha channel.
See FAQ entry "How to duplicate a picture with mask or alpha channel?" on how to duplicate with mask.
See also:

- 81.4.26 cloneMBS as picture 14084
- 81.4.27 CloneMBS(NewMask as Picture) as picture 14085
- 81.4.28 CloneMBS(NewMask as Picture, width as Integer, height as Integer) as picture 14085

81.4.30 ColorizeMBS(hue as Double, sat as Double, light as Double) as picture

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Colorizes a picture.
Notes:

Hue, Sat and Light in range 0.0 to 1.0 please.
Returns new picture.

81.4.31 ColornessMBS(threshold as Integer = 10) as Double

MBS Picture Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the color coverage of the picture.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(file)

MsgBox str(pic.ColornessMBS)
```

Notes:

Counts how many pixels have color and returns percentage depending on a given threshold.
Changed in 12.3pr5 to ignore nearly black pictures when counting.

81.4.32 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.

DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.
See also:

- 81.4.33 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 14089
- 81.4.34 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 14091
- 81.4.35 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 14093
- 81.4.36 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 14094
- 81.4.37 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean 14097
- 81.4.38 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean 14098
- 81.4.39 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 14100
- 81.4.40 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 14102
- 81.4.41 CombineMBS(Image As Picture, PreMultipliedSource as boolean, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 14104

- 81.4.42 CombineMBS(Mode as Integer, SecondPicture As Picture, X as Integer = 0, Y as Integer = 0, Width as Integer = 0, Height as Integer = 0) as picture 14105

81.4.33 CombineMBS(Image As Picture, Mask As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options.
Example:

```
dim DestImage As Picture
dim Image As Picture
dim Mask As Picture
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500
dim UseColours as Boolean = true
dim ForeColour as color = & cFF0000

image=LogoMBS(500)
Mask=nil
DestImage=New Picture(700,700,32)

if DestImage.CombineMBS(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,UseColours,ForeColour)
then
window1.Backdrop=DestImage
end if
```

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

MBS Picture Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position

SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The destination image (self) can be either 24 bit or 32 bit.

81.4.42 CombineMBS(Mode as Integer, SecondPicture As Picture, X as Integer = 0, Y as Integer = 0, Width as Integer = 0, Height as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines pixels of two images with the given mode.
Example:

```
dim pic as picture // some picture
dim other as picture // some other picture
dim result as picture = pic.CombineMBS(1, other)

// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as Integer, y as Integer) as Integer
Return BitwiseXor(x,y)
End Function
```

Notes:

Each pixel is sent through an operation for each channel.
X, Y, Width and Height can limit effect of a certain portion of the source image.

Modes:

1	Bitwise XOR
2	Bitwise OR
3	Bitwise AND
4	Min
5	Max
6	AddPin (add with limit)
7	AddOver (add with overflow)
8	Difference
9	Difference squared (with limit 255)
10	Sub Pin (sub with limit)

81.4.43 CombinePixelMBS(Mode as Integer, SecondPicture As Picture) as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines pixels of two images with the given mode.
Example:

```
dim pic as picture // some picture
dim other as picture // some other picture
dim result as picture = pic.CombinePixelMBS(1, other)

// effects are made like this. If you have a suggestion for a new effect,
// send your suggestion to MBS support:
Function Combine(x as color, y as color) As color
Return rgb(x.red+y.red, x.green+y.green, x.blue+y.blue)
End Function
```

Notes:

Each pixel is sent through an operation.

Modes:

1 Average (50% first and 50% second picture)
2 Gray
3 LighterPixel
4 DarkerPixel
5 Difference Max
6 Difference Max Squared

81.4.44 CompareBrightnessMBS(other as picture, mode as Integer, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares two pictures in brightness.
Example:

```
dim p as picture = New Picture(100,100,32)
dim q as Picture = New Picture(100,100,32)

dim diff as Double = p.CompareBrightnessMBS(q, 0, 0)

MsgBox str(Diff) // shows 0 = equal
```

Notes:

Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.
If width and height are not equal, the result is 1.0.
If you need to check the mask also, please call this method a second time for the masks.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

Only compares raw pixels without checking mask or alpha channel.

81.4.45 CompareMBS(other as picture, threshold as Integer) as Double

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares two pictures.
Example:

```
dim p as picture = New Picture(100,100,32)
dim q as Picture = New Picture(100,100,32)

dim diff as Double = p.CompareMBS(q, 0)

MsgBox str(Diff) // shows 0 = equal

p.Graphics.ForeColor = & cFF0000
p.Graphics.FillRect 0, 0, p.Width, p.Height

q.Graphics.ForeColor = & cFF0001
q.Graphics.FillRect 0, 0, q.Width, q.Height

dim diff1 as Double = p.CompareMBS(q, 0)
dim diff2 as Double = p.CompareMBS(q, 2)

MsgBox str(Diff1)+" "+str(Diff2) // shows 1 (all pixels different) and shows 0 (all equal)
```

Notes:

Returns the percent of difference: Number of pixels where the squared color difference is bigger than the threshold divided by the total number of pixels.
If width and height are not equal, the result is 1.0.
If you need to check the mask also, please call this method a second time for the masks.

Only compares raw pixels without checking mask or alpha channel.

81.4.46 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.
See also:

- 81.4.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean 14110

81.4.47 CopyABGRtoMemoryblockMBS(destination as memoryblock, offset as Integer, MaskForAlpha as picture, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
```

```
g.Filloval 0,0,g.Width,g.Height

// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyABGRtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockABGRtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. 81.4.48 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.

Example:

```
dim m as MemoryBlock
dim p,q as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 3 bytes per Pixel

// Copy RGB without alpha
if p.CopyARGBtoMemoryblockMBS(m,0,0) then

dim x as Picture = New Picture(100,100,32)

q=MemoryblockARGBtoPictureMBS(x, m,0,100,100)

Backdrop=q

if x=q then
window1.Title = "reused picture"
else
window1.Title = "created new picture"
end if
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

81.4.49 CopyARGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, LittleEndian as boolean, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
dim m as MemoryBlock
dim p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the

memoryblock.

Does not access the mask inside the image!

LittleEndian specifies whether the image is stored in ARGB (BigEndian) or BGRA (LittleEndian) mode.

If Alphavalue is in range of 0 to 255 the alpha value of all pixel is set to this value. If the AlphaValue is outside this range the alpha value is not touched for all pixels.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. MBS Picture Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height
```

```
// convert to memoryblock
dim m as new MemoryBlock(4 * p.Width * p.Height)

if p.CopyARGBtoMemoryblockMBS(m, 0, p.Mask) then
// convert back
Backdrop = MemoryblockARGBtoPictureMBS(m, 0, p.Width, p.Height)

break // look into memoryblock with debugger
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
MaskForAlpha should not be nil and be the mask for this image.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock. Mask and Picture must have equal size.
The mask is used to fill alpha channel.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

81.4.55 CopyBtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if

// copy Blue channel from mask image into Memoryblock
if p.mask.CopyBtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This function takes the blue channel from the source image.

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

81.4.56 CopyGtoMemoryblockMBS(destination as memoryblock, offset as Integer, PixelByteSize as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
const kAlphaOffset=0 ' (BigEndian) and 3 (LittleEndian)
dim m as MemoryBlock
dim p as Picture

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,128,1)
p.Graphics.FillRect 0,0,100,100
p.mask.Graphics.ForeColor=rgb(127,127,127)
p.mask.Graphics.FillRect 0,0,100,100

// Make a new MemoryBlock
m=NewMemoryBlock(100*100*4) // 4 bytes per Pixel

// copy RGB and leave room for alpha
if p.CopyARGBtoMemoryblockMBS(m,0,false,-1) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
```

```
end if

// copy green channel from mask image into Memoryblock
if p.mask.CopyGtoMemoryblockMBS(m,kAlphaOffset,4) then
MsgBox EncodingToHexMBS(m.StringValue(0,99))
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.
PixelByteSize is normally 4 for 32bit per Pixel.
By using a different offset you can have this function working correctly on non BigEndian platforms.
The function will crash if the memoryblock is too small. Needs picture.width*picture.height*PixelByteSize bytes in the memoryblock.
Mask images in RB are all gray so it does not matter which channel you copy to get the alpha channel. This function takes the green channel from the source image.

If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

81.4.57 CopyMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the mask of the picture into a new and independend picture object.
Example:

```
dim p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.ForeColor=& cFFFFFF
p.mask.Graphics.Fillrect 0,0,300,300

p.mask.Graphics.ForeColor=& c000000
```

```
p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyMaskMBS
```

Notes: Returns nil on low memory.

81.4.58 CopyPictureMBS as picture

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a clone of picture.
Notes: Can duplicate mask and alpha channel.

81.4.59 CopyPictureWithMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the the picture into a new and independend picture object with mask.
Example:

```
dim p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.ForeColor=& cFFFFFF
p.mask.Graphics.Fillrect 0,0,300,300

p.mask.Graphics.ForeColor=& c000000
p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyPictureWithMaskMBS
```

Notes: Returns nil on low memory.

81.4.60 CopyPictureWithoutMaskMBS as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the the picture into a new and independend picture object without the mask.

Example:

```
dim p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,300,300

p.mask.Graphics.ForeColor=& cFFFFFF
p.mask.Graphics.Fillrect 0,0,300,300

p.mask.Graphics.ForeColor=& c000000
p.mask.Graphics.Filloval 0,0,300,300

Backdrop=p.CopyPictureWithoutMaskMBS
```

Notes: Returns nil on low memory.

81.4.61 CopyPixelFastMBS(Source As Picture, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Copies pixels from one picture into another picture with some options.
Example:

```
const x=100 // mouse coordinates for example
const y=100

dim p,logo as picture

logo=LogoMBS(500)

p=New Picture(800,800,32)

p.Graphics.ForeColor=& cFFFFFF
p.Graphics.FillRect 0,0,p.Width,p.Height

if p.CopyPixelFastMBS(logo, x-logo.Width/2, y-logo.Height/2, 0, 0, logo.Width, logo.Height) then
' ok
else
beep
end if
```

window1.Backdrop=p

Notes:

Returns true on success and false on failure.

Parameters:
Source: the source picture, must not be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy

The destination image (self) can be either 24 bit or 32 bit.
The source image can have any bit depth and may be converted to 24 or 32 bit.

81.4.62 CopyRGBAtoMemoryblockMBS(destination as memoryblock, offset as Integer, AlphaValue as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Example:

```
// get some picture
dim pic as Picture = LogoMBS(500)
// and a memoryblock of 1000 by 1000 pixels with 4 bytes per pixel
dim m as new MemoryBlock(1000* 1000 *4)

// calculate some offset for the image with 50 rows from top and 60 pixels from left
dim Offset50Lines as Integer = 1000*4 *50 +60*4

// copy picture to memoryblock
if pic.CopyRGBAtoMemoryblockMBS(m, Offset50Lines, 127, 0, pic.Height-1, 0, 4*1000) then

// show MemoryBlock content
Backdrop = MemoryblockRGBAtoPictureMBS(nil, m, 0, 1000, 1000)
end if
```

Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

81.4.68 CopyXRGBtoMemoryblockMBS(destination as memoryblock, offset as Integer, StartLine as Integer = 0, EndLine as Integer = -1, Yield as Integer = 0, DestRowBytes as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies raw image data into a memoryblock.
Notes:

Returns true on success.
destination should not be nil.
offset should be 0 or bigger and is the start position in the memoryblock.

The function will crash if the memoryblock is too small. Needs picture.width*picture.height*4 bytes in the memoryblock.

Does not access the mask inside the image!

This method was written for speed, so the creation of the memoryblock is your part. You can of course reuse memoryblocks for batch processing images as long as the memoryblock is big enough.

The X variant of this method does not touch the alpha channel in the memoryblock and the A variant changes the alpha value to the given value.

StartLine and Endline define the range of source lines from picture. Range is from 0 to picture.height-1. if Endline is -1, we use picture.height-1 internally. Yield specifies how much CPU time is given to other threads. If yield = 0, we give no CPU time away. If yield is >0, we yield every yield/60th second to other

threads. If DestRowBytes is not zero, it specifies the bytes per row in the target memoryblock for each line.

81.4.69 CountColorMBS(col as color) as Integer

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts the pixels with the given colors.
Example:

```
dim p as Picture
dim n1,n2 as Integer

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,100,100

n1=p.CountColorMBS(& cFF0000)
n2=p.CountColorMBS(& cFFFFFF)

if n1=100*100 then
if n2=300*300-100*100 then
MsgBox "OK"
else
MsgBox "white failed"
end if
else
MsgBox "red failed"
end if
```

Notes: Returns the number of pixels found.

81.4.70 CountColorsMBS(byref red as memoryblock, byref blue as memoryblock, byref green as memoryblock, byref count as Integer)

MBS Picture Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts the color parts of each pixel.
Notes:

red, blue and green are filled with 1024 bytes big memoryblocks. One 4 byte integer for each color value possible.
Count is filled with the number of pixels processed.

81.4.71 DrawPictureFMBS(pic as picture, x as Double, y as Double, alpha as Double = 1.0, yield as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draws picture with floating point coordinates.
Notes:

Supports a mask on the picture.
Returns true on success.

81.4.72 ExtractColorMBS(SearchColor as color, ReplaceWithColor as color, BackGroundColor as color) as picture

MBS Picture Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the first color and writes matching pixels with the secon color.
Example:

```
dim p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 000,100,100,100

p.Graphics.ForeColor=& c00FF00
p.Graphics.FillRect 100,100,100,100

p.Graphics.ForeColor=& c0000FF
p.Graphics.FillRect 200,100,100,100

p.Graphics.ForeColor=& c777700
p.Graphics.FillRect 100,200,100,100

// shows just a violet box on the left
backdrop=p.ExtractColorMBS(& cFF0000,& cFF00FF,& c000000)
```

Notes:

All pixels which do not match the search color are written to the new picture using the given background color.
Returns nil on any error.

81.4.73 ExtractColorRectangleMaskMBS as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a mask picture with all the rectangles marked visible which contain color.
Example:

```
dim invertedpic as picture
dim pic as Picture

pic=New Picture(300,300,32)
pic.graphics.drawpicture LogoMBS(100), 150,50

Backdrop=pic.ExtractColorRectangleMaskMBS
// marks black where the logo is drawn
```

Notes:

If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.
See also:

- 81.4.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture 14133

81.4.74 ExtractColorRectangleMaskMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a mask picture with all the rectangles marked visible which contain color.
Notes:

If you have a picture which is mostly gray and you need to find a color picture inside, this method can be helpful.

In the returned picture all pixels are black which belong to a rectangle which contains color pixels in the original picture.

All pixel outside the rectangle specified will be white.
See also:

- 81.4.73 ExtractColorRectangleMaskMBS as picture 14133

81.4.75 FindPictureMBS(pic as picture, byref x as Integer, byref y as Integer, StartX as Integer = 0, StartY as Integer = 0, Tolerance as Integer = 3) as boolean

MBS Picture Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finds the given picture inside the picture.
Example:

```
// this is search image
dim p as new Picture(20,20,32)
p.Graphics.ForeColor = & c0000FF
p.Graphics.FillRect 0, 0, 20, 20

// this is target image
dim q as new Picture(500, 500, 32)

// with some color at Random position
q.Graphics.ForeColor = & c0000FF
q.Graphics.FillRect rnd*480, rnd*480, 30, 30

// do a search
dim x, y as Integer

if q.FindPictureMBS(p, x,y) then
// found image, so draw rectangle there

q.Graphics.ForeColor = & cFF0000
q.Graphics.DrawRect x, y, p.Width, p.Height
end if

window1.Backdrop = q
```

Notes:

Returns true on success and fills x/y variables.
Pixels are compared exactly, so a little bit color correction and make the picture being not found.

StartX/StartY can give start position. Tolerance defines how much two pixel component values can differ and still be considered the same. This helps with color matching and other drawings which may alter pixels a little bit.
If function returns true, you can use x+1, y as the new start position and search again.

81.4.76 GetMaskMBS(create as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the mask for that picture.
Notes:

Same as Picture.Mask in Xojo, but over the Plugin API.
We added it to test for leaks in plugin API.

81.4.77 GrayScale2MBS(mode as Integer) as boolean

MBS Picture Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Turns picture into grayscale.
Example:

```
dim l as Picture = LogoMBS(500)
if l.GrayScale2MBS(0) then
Backdrop = l
end if
```

Notes:

Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.

81.4.78 GrayScaleMBS(mode as Integer) as picture

MBS Picture Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a grayscale copy of the picture.
Example:

```
dim l as Picture = LogoMBS(500)
Backdrop = l.GrayScaleMBS(0)
```

Notes:

If you have a mask on the picture, you need to draw that mask in the new picture's mask if you want to keep it.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601

Mode 2 and 3 uses doubles and mode 0 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

GrayScaleMBS makes a copy of the picture while GrayScale2MBS edits in-place.

81.4.79 GreenChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The green channel of the picture copied into a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
Backdrop = p.GreenChannelMBS
```

81.4.80 HashMBS as UInt32

MBS Picture Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates CRC 32 over all pixels.
Example:

```
dim p as new Picture(100, 100, 32)

dim hash1 as UInt32 = p.HashMBS

// one black pixel
p.Graphics.Pixel(50, 50) = &c000000
```

```
dim hash2 as UInt32 = p.HashMBS

MsgBox hex(hash1)+" "+hex(hash2)
```

Notes:

You can use hash to see if two pictures have 100% identical pixel values. Changing just one pixel should give different number.
Does not include alpha channel or mask for the hash, but only RGB channels.

81.4.81 HasMaskMBS as boolean

MBS Picture Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this picture has a mask or not.
Notes: Returns true if yes or false if not.

81.4.82 HMirrorMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture horizontally (flip).
Example:

```
// load picture
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as PNGPictureMBS = f.OpenAsPNGMBS

// get parts
dim pic as Picture = p.Pict.HMirrorMBS
dim mask as Picture = p.mask.HMirrorMBS

// save as png
dim g as FolderItem = SpecialFolder.Desktop.Child("output.png")
call g.SaveAsPNGMBS(pic, mask, 0)

// now apply mask to show it
pic.Mask = mask
Backdrop = pic
```

Notes:

This method returns a copy of the picture mirrored.

Returns nil on low memory.

81.4.83 HMirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture horizontally (flip).
Example:

```
if pic.HMirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.HMirrorMBS // mirror a copy
end if
```

Notes: This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

81.4.84 InvertGrayMBS as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the gray pixels inside the picture.
Example:

```
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS

Backdrop=invertedpic
```

Notes: Returns nil on any error.
See also:

- 81.4.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

81.4.85 InvertGrayMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the gray pixels inside the picture.
Example:

```
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertGrayMBS(0,0,250,250)

Backdrop=invertedpic
```

Notes:

Returns nil on any error.
The part of the picture which is not inverted will be all black.
See also:

- 81.4.84 InvertGrayMBS as picture 14138

81.4.86 InvertMBS as picture

MBS Picture Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the whole picture.
Example:

```
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS

Backdrop=invertedpic
```

Notes: Returns nil on any error.
See also:

- 81.4.87 InvertMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture 14140

81.4.87 InvertMBS(left as Integer,top as Integer,width as Integer,height as Integer) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inverts the picture.
Example:

```
dim invertedpic as picture
dim pic as picture

pic=LogoMBS(500)
invertedpic=pic.InvertMBS(0,0,250,250)

Backdrop=invertedpic
```

Notes:

Returns nil on any error.
The part of the picture which is not inverted will be all black.
See also:

- 81.4.86 InvertMBS as picture 14139

81.4.88 isBlackMBS as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only black pixels.
Example:

```
dim p as Picture

// test white
p=New Picture(100,100,32)

MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test black
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test red
p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)
```

See also:

- 81.4.89 isBlackMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean 14141

81.4.89 isBlackMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only black pixels in the given rectangle.
See also:

- 81.4.88 isBlackMBS as boolean 14140

81.4.90 isGrayMBS(tolerance as Integer = 0) as boolean

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a picture has only shades of gray in all pixels.
Example:

```
dim p as new Picture(100,100,32)

// 1. test white picture

if p.isGrayMBS then
MsgBox "white picture is gray."
end if

// 2. test gray picture
dim g as Graphics = p.Graphics
g.ForeColor = &c777777
g.FillRect 0, 0, 100, 100

if p.isGrayMBS then
MsgBox "gray picture is gray."
end if

// 3. test gray picture with tolerance
g.ForeColor = &c777778
g.FillRect 0, 0, 100, 100

if p.isGrayMBS(0) then
MsgBox "gray (not correct)"
else
MsgBox "not gray (correct)"
```

```
end if

if p.isGrayMBS(1) then
MsgBox "gray (correct)"
else
MsgBox "not gray (not correct)"
end if

// 4. test gray picture with over tolerance
g.ForeColor = & c777779
g.FillRect 0, 0, 100, 100

if p.isGrayMBS(0) then
MsgBox "gray (not correct)"
else
MsgBox "not gray (correct)"
end if

if p.isGrayMBS(1) then
MsgBox "gray (not correct)"
else
MsgBox "not gray (correct)"
end if
```

Notes:

Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5. Pass 0 if you need exact gray scales.
Like the difference between & c000000 and & c000001 is not visible to most people, it can be ignored often.
See also:

- 81.4.91 isGrayMBS(tolerance as Integer, left as Integer,top as Integer,width as Integer,height as Integer) as boolean 14142

81.4.91 isGrayMBS(tolerance as Integer, left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a picture has only shades of gray in all pixels.
Notes:

Tolerance defines how big the difference between two channels can be. Typically a value smaller than 5. Pass 0 if you need exact gray scales.
Like the difference between & c000000 and & c000001 is not visible to most people, it can be ignored often.
See also:

• 81.4.90 isGrayMBS(tolerance as Integer = 0) as boolean 14141

81.4.92 isWhiteMBS as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only white pixels.
Example:

```
dim p as Picture

// test white
p=New Picture(100,100,32)

MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test black
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)

// test red
p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 0,0,100,100
MsgBox "isBlackMBS: "+str(p.isBlackMBS)+EndOfLine+"isWhiteMBS: "+str(p.isWhiteMBS)
```

See also:

• 81.4.93 isWhiteMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean 14143

81.4.93 isWhiteMBS(left as Integer,top as Integer,width as Integer,height as Integer) as boolean

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the picture has only white pixels in the given rectangle.
See also:

• 81.4.92 isWhiteMBS as boolean 14143

81.4.94 MakeHBITMAPMBS as Ptr

MBS Picture Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a HBITMAP handle to the picture.
Notes:

Warning: This function works only right on HDIB pictures.

The picture is cloned but both pictures may use the same binary data in background.

You will have to free this handle with DeleteObject:
Declare Function DeleteObject Lib "gdi32" (hObject as Integer) as Integer

81.4.95 MirrorMBS as picture

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture vertically and horizontally.
Example:

```
canvas1.backdrop=pic.MirrorMBS
```

Notes:

Same as rotation by 180 degree.
This method returns a copy of the picture mirrored.
Returns nil on low memory.

81.4.96 MirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture vertically and horizontally.
Example:

```
if pic.MirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
else
canvas1.backdrop=pic.MirrorMBS // mirror a copy
end if
```

Notes:

Same as rotation by 180 degree.
This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

81.4.97 RedChannelMBS as picture

MBS Picture Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red channel of the picture copied into a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
Backdrop = p.RedChannelMBS
```

81.4.98 ReplaceBlueChannelMBS(BlueChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the blue channel replaced with the blue channel of the given picture.
Notes: Returns nil on low memory.

81.4.99 ReplaceColorMBS(SearchColor as color, ReplaceWithColor as color) as picture

MBS Picture Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the given color and replaces it with the second color.
Example:

```
dim p as Picture

p=New Picture(300,300,32)

p.Graphics.ForeColor=& cFF0000
p.Graphics.FillRect 000,100,100,100

p.Graphics.ForeColor=& c00FF00
p.Graphics.FillRect 100,100,100,100

p.Graphics.ForeColor=& c0000FF
p.Graphics.FillRect 200,100,100,100

p.Graphics.ForeColor=& c777700
p.Graphics.FillRect 100,200,100,100

// shows a violet box on the left. Other pixels unchanged
backdrop=p.ReplaceColorMBS(& cFF0000,& cFF00FF)
```

Notes:

All other pixels are copied to the new picture.
Returns nil on any error.

81.4.100 ReplaceGreenChannelMBS(GreenChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the green channel replaced with the green channel of the given picture.
Notes: Returns nil on low memory.

81.4.101 ReplaceRedChannelMBS(RedChannel as picture) as picture

MBS Picture Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a copy of the picture with the red channel replaced with the red channel of the given picture.
Notes: Returns nil on low memory.

81.4.102 Rotate180MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 180° counter clockwise.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate180MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

81.4.103 Rotate270MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 270° counter clockwise.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate270MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

81.4.104 Rotate90MBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by 90° counter clockwise.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.Rotate90MBS
```

Notes: You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

81.4.105 RotateImageAndMaskMBS(angle as Double, cut as boolean = False) as picture

MBS Picture Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by angle° counter clockwise.
Notes:

Internally uses RotateMBS.
Works with masked and alpha channel pictures, but is faster with masked pictures.
Returns nil on any error.
if cut is true, the image is cut to the original size.

81.4.106 RotateMBS(angle as Double, background as color = & cFFFFFFFF) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Rotates the picture by angle° counter clockwise.
Example:

```
dim p,r as picture
r=LogoMBS(500)
p=r.cloneMBS
canvas1.backdrop=p.RotateMBS(42.3,rgb(255,255,255))
```

Notes:

The area around the picture is filled using the backcolor.

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

Alpha channel support is half done. If it's working for you, please enjoy it. If not, please report.

81.4.107 RotateMemoryMBS(angle as Double) as Int64

MBS Picture Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the memory needed to roatet the picture with the given angle.
Notes: RotateMBS needs temporary buffers and fails if somewhere between memory is low.

81.4.108 ScaleImageAndMaskMBS(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales the picture to the new size including mask (in case one exists).
Notes:

This is a self made algorithm which produces nice pictures on all platforms.
It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.
Returns nil on low memory or invalid width and height values.

AntiAlias is set to false if width<=self.width or height<=self.height.

If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is

waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good reponsibility of your application.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.

81.4.109 ScaleMBS(width as Integer, height as Integer, AntiAlias as boolean=false, YieldTicks as Integer=0) as picture

MBS Picture Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales the picture to the new size.
Example:

```
dim pic as new Picture(100,100,32)

pic.Graphics.ForeColor=& cFF0000
pic.Graphics.FillOval 0,0,100,100

dim scaledPic as picture = pic.ScaleMBS(200,200)

// show scaledPic
window1.backdrop = scaledPic
```

Notes:

This is a self made algorithm which produces nice pictures on all platforms.
It is slower than QuickDraw on Mac OS, but nicer than drawpicture on Windows.
Returns nil on low memory or invalid width and height values.

AntiAlias is set to false if width<=self.width or height<=self.height.

If YieldTicks is 0, no time is given to other threads in your application. If it is a value >0, this time is waited before a thread switch is done. Setting it to 1 will give away control to another thread after 1/60th of a second. We recommend a value of 3 to 5 for a good reponsibility of your application.

Scaling down does not use antialias. If you need full antialias, please use ScalingMBS function.

If input and output size is equal, you get your picture back unchanged.
This function does not handle masks. Please use pictures with mask and scale image and mask separately.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.

81.4.110 ScalingMBS(mode as Integer, width as Integer, height as Integer, yield as Integer = 0) as picture

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scales the picture to the given size.
Example:

```
dim p as Picture

p=LogoMBS(1000)

p=p.ScalingMBS(2, 4000, 4000)

backdrop=p
```

Notes:

On low memory this function can return nil or the image may look bad. (e.g. all black)
The memory used for the temporary storage is original height * new width * 12 bytes plus some extra.
For scaling with the same size as the picture already has, the scaling is still performed.

Returns nil ony error. (e.g. destwidth=0)

Modes:

1 triangle
2 box, nereast neighbor
3 lanczos 3
4 lanczos 8
5 mitchell
6 poly 3
7 cubic

This function does not handle mask. Please use pictures with mask and scale image and mask separately.

Version 19.4 or newer of our plugin includes scaling for pictures with alpha channel.

81.4.111 ScrollHorizontalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Scrolls the image data horizontally.
Example:

```
dim p as Picture

p=LogoMBS(500) // any bitmap image

if p.ScrollHorizontalMBS(100,true,false) then
Title="ok"
end if

Backdrop=p
```

Notes:

Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

81.4.112 ScrollMBS(deltaX as Integer, deltaY as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Combines calls to ScrollHorizontalMBS and ScrollVerticalMBS.
Notes:

Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

81.4.113 ScrollVerticalMBS(delta as Integer, wrap as boolean, scrollmask as boolean) as boolean

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Scrolls the image data vertically.
Example:

```
dim p as Picture

p=LogoMBS(500) // any bitmap image

if p.ScrollVerticalMBS(100,true,false) then
Title="ok"
end if

Backdrop=p
```

Notes:

Returns true on success and false on failure.
Works only on Mac OS and Windows with 32bit bitmap images.
scrollmask defines whether a mask (if one exists) is also scrolled.
Wrap will define whether the image will wrap on the edges. If wrap is enabled on Mac, the whole thing speeds up.

81.4.114 SetSteganographyMBS(flags as Integer, data as Memoryblock) as boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to an existing picture.
Example:

```
dim p as Picture = LogoMBS(500)

// this example uses chr(0) as end marker
dim s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then

dim data as MemoryBlock = p.SteganographyMBS(1)
dim d as string = data.CString(0)

Backdrop = p
Break
end if
```

Notes:

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns true on success or false on failure.
If memoryblock provided is nil, this function fails.

If you like to store data, please encrypt them and include some way that you find your data again, detect length of data, verify it's okay via checksum and than decrypt your data.
Please store image in a loss less format like PNG.
Function does not handle mask or alpha channel.

81.4.115 SetSteganographyPictureMBS(flags as Integer, data as Picture) as boolean

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds steganography to an existing picture.
Example:

```
const AllChannels = & h111

dim p as new Picture(500, 500, 32)
dim l as Picture = LogoMBS(500)

dim w as new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
if p.SetSteganographyPictureMBS(AllChannels, l) then

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = p

// as we store in lowest bit, this picture will look strange
dim y as Picture = p.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
end if
```

Notes:

Flags can be a combination of red (& h100), green (& h010) and blue (& h001).
Returns true on success or false on failure.

Function does not handle mask or alpha channel.

81.4.116 SobelChannelsMBS(Red as boolean, Green as Boolean, Blue as boolean, direction1 as Integer = 1, direction2 as Integer = 3, swap as boolean = false) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the sobel operator.
Example:

```
dim m as Picture = LogoMBS(500)

// only green
Backdrop = m.SobelChannelsMBS(false, true, false)
```

Notes:

Useful for edge detection.
See also SobelMBS function which takes similar operators.
You can set Red/Blue/Green parameters to define which channel is modified and which channel is just copied.
Pictures look quite funny. The channel who got the edge detection has bigger areas black or white so other colors in other channels have much more visible effect.

81.4.117 SobelMBS(direction1 as Integer = 1, direction2 as Integer = 3, swap as boolean = false, gray as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the sobel operator.
Example:

```
dim m as Picture = LogoMBS(500)

Backdrop = m.SobelMBS
```

Notes:

Useful for edge detection.

direction1: The direction for first matrix.
direction2: The direction for first matrix.
swap: If false, you get white on black. If true you get black on white.
gray: whether to output gray image instead of RGB image.

Possible Matrix values:
-1: negative identity:
0: identity
1: west
2: east
3: north
4: south
5: south east
6: north west
7: north east
8: south west

You can add 10 to the 8 direction matrixes to get more weight.

81.4.118 SteganographyMBS(flags as Integer) as Memoryblock

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries steganography information inside the picture.
Example:

```
dim p as Picture = LogoMBS(500)

dim s as string = "Hello World. This is just a test." + chr(0)
if p.SetSteganographyMBS(1, s) then

dim data as MemoryBlock = p.SteganographyMBS(1)
dim d as string = data.CString(0)

Backdrop = p
Break
end if
```

Notes: Flags can be a combination of red (& h100), green (& h010) and blue (& h001).

81.4.119 SteganographyPictureMBS(flags as Integer) as Picture

MBS Picture Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries steganography information inside the picture.
Example:

```
const AllChannels = & h111

dim p as new Picture(500, 500, 32)

dim w as new window1
w.Title = "white"
w.Backdrop = p

dim l as Picture = LogoMBS(500)

w = new window1
w.Title = "Logo"
w.Backdrop = l

// adds picture. You will normally not see the modification
dim x as Picture = p.AddSteganographyPictureMBS(AllChannels, l)

w = new window1
w.Title = "Logo hidden in white picture"
w.Backdrop = x

// as we store in lowest bit, this picture will look strange
dim y as Picture = x.SteganographyPictureMBS(AllChannels)

w = new window1
w.Title = "Logo extracted"
w.Backdrop = y
```

Notes: Flags can be a combination of red (& h100), green (& h010) and blue (& h001).

81.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.
Example:

```
dim p as Picture = LogoMBS(500)
```

```
dim map(-1) as color

for r as Integer = 0 to 255
for g as Integer = 0 to 255
for b as Integer = 0 to 255
// index is r*65536+g*256+b

// we swap colors: r gives g, g gives b, b gives r
map.Append rgb(g,b,r)
next
next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

Notes:

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have 2^24 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 81.4.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture 14157
- 81.4.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture 14159
- 81.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14160

81.4.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.
Example:

```
dim p as Picture = LogoMBS(500)

dim map(-1) as Integer

for r as Integer = 0 to 255
for g as Integer = 0 to 255
for b as Integer = 0 to 255
// index is r*65536+g*256+b

// we swap colors: r gives g, g gives b, b gives r
map.Append g*65536+b*256+r
next
next
next

Backdrop=p.ThreadedTransformMBS(0, map)
```

Notes:

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index (blue+green*256+blue*65536) in the arrays to get the new color value.

The arrays should have 2^24 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 81.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture 14156

- 81.4.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture 14159

- 81.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14160

81.4.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.
Example:

```
dim p as Picture = LogoMBS(500)

dim red as MemoryBlock = NewMemoryBlock(256)
dim green as MemoryBlock = NewMemoryBlock(256)
dim blue as MemoryBlock = NewMemoryBlock(256)

for i as Integer=0 to 255
red.Byte(i)=i/2
green.Byte(i)=i/2
blue.Byte(i)=i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

Notes:

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the memoryblocks to get the new color value.

The memoryblocks must have a size of 256 Bytes.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 81.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture 14156
- 81.4.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture 14157
- 81.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture 14160

81.4.123 ThreadedTransformMBS(Threaded as Integer, RedMap() as Integer, GreenMap() as Integer, BlueMap() as Integer, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a transformation to the picture.
Example:

```
dim p as Picture = LogoMBS(500)

dim red(-1) as Integer
dim green(-1) as Integer
dim blue(-1) as Integer

for i as Integer=0 to 255
red.Append i/2
green.Append i/2
blue.Append i/2
next

Backdrop=p.ThreadedTransformMBS(0, red, green, blue)
```

Notes:

Threaded parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

For each color in the source picture the red, blue and green values are used as index in the arrays to get the new color value.

The arrays should have 256 entries.

You can pass destination picture. If dest is not nil and size matches, the plugin reuses the picture object which increases performance as no new picture is created.
See also:

- 81.4.120 ThreadedTransformMBS(Threaded as Integer, Map() as color, dest as picture = nil) as picture 14156
- 81.4.121 ThreadedTransformMBS(Threaded as Integer, Map() as Integer, dest as picture = nil) as picture 14157
- 81.4.122 ThreadedTransformMBS(Threaded as Integer, RedMap as memoryblock, GreenMap as memoryblock, BlueMap as memoryblock, dest as picture = nil) as picture 14159

81.4.124 ThresholdMBS(Threshold as integer) as picture

MBS Picture Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates black and white picture.
Notes:

With threshold value you define threshold in range from 0 to 255.
Normally you use 127 for turning picture to black & white.

81.4.125 TransformColorsMBS(red as memoryblock, blue as memoryblock, green as memoryblock, dest as picture = nil) as picture

MBS Picture Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies a transform table to the pixels.
Notes:

Red, blue and green are 256 byte big memoryblocks with one byte for each value.

In RB the function does this:
color=rgb(red.byte [color.red] , green.byte [color.green] , blue.byte [color.blue])

If you pass a destination picture and it has right size, the plugin will recycle that instead of creating a new one to increase performance.

81.4.126 TrimMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trims the picture to the given rectangle.
Example:

```
dim p as Picture = LogoMBS(500)

Backdrop = p.TrimMBS(100,100,300,300)
```

Notes:

This method does not handle the mask.
So p.Trim(0,0,p.width,p.height) will give you a copy of the image pixels without mask.
left and top are zero based.

Use TrimWithMaskMBS if you need the mask to be trimmed.

Returns nil on low memory or bad parameters.

81.4.127 TrimWithMaskMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trims the picture to the given rectangle.
Example:

```
dim p as picture
dim someimage as Picture = LogoMBS(100)

p=someimage.TrimWithMaskMBS(100,200,300,400)
```

Notes:

left and top are zero based.
Returns nil on low memory or bad parameters.

81.4.128 VMirrorMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture vertically.
Example:

```
canvas1.backdrop=pic.VMirrorMBS
```

Notes:

This method returns a copy of the picture mirrored.
Returns nil on low memory.

81.4.129 VMirrorPictureMBS as boolean

MBS Picture Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Mirrors the picture vertically.
Example:

```
if pic.VMirrorPictureMBS then // mirror picture
canvas1.backdrop=pic
```

```
else
canvas1.backdrop=pic.VMirrorMBS // mirror a copy
end if
```

Notes: This methods mirrors the picture data itself. Returns true on success and false on failure. Only bitmap pictures can be mirrored this way.

81.4.130 Properties

81.4.131 EmbeddedMaskMBS(swap as boolean) as picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Read or write a picture mask.
Example:

```
// Export a mask picture:

dim f as FolderItem
dim t as TiffPictureMBS
dim m,p as Picture
dim q as QTGraphicsExporterMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(100,100,100)
p.Graphics.fillrect 0,0,100,100
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.fillrect 20,20,80,30

m=New Picture(100,100,32)
m.Graphics.ForeColor=rgb(255,255,255)
m.Graphics.FillRect 0,0,30,100
m.Graphics.ForeColor=rgb(200,200,200)
m.Graphics.FillRect 30,0,30,100
m.Graphics.ForeColor=rgb(100,100,100)
m.Graphics.FillRect 60,0,30,100

p.EmbeddedMaskMBS(true)=m
p.Mask.Graphics.DrawPicture m,0,0 // just for showing as a backdrop

q=new QTGraphicsExporterMBS

q.OpenExporter("TIFF")
q.Depth=32
q.InputPicture=p
```

```
q.CompressionQuality=1024
q.OutputFile=SpecialFolder.Desktop.Child("Hello.tif")
title=str(q.Export)

Backdrop=p
```

Notes:

Only useful on 32bit images.
Xojo takes white for transparent, so you may need to swap this to black using the swap parameter.

Windows support removed somewhere in version 10.4 with internal changes. If you need this, please tell us.
(Read and Write computed property)

81.5 class PictureConvolutionMBS

81.5.1 class PictureConvolutionMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a Picture Convolution.
Example:

```
// blur

dim l as Picture = LogoMBS(500)
dim p as new PictureConvolutionMBS

p.hor(0) = 0.2
p.hor(1) = 0.2
p.hor(2) = 0.2
p.hor(3) = 0.2
p.hor(4) = 0.2

p.ver(0) = 0.2
p.ver(1) = 0.2
p.ver(2) = 0.2
p.ver(3) = 0.2
p.ver(4) = 0.2

p.ValueCount=5

p.SourcePicture=l

dim t as Integer=ticks
call p.run(7)
t=ticks-t

Title=str(t)

Backdrop=p.DestinationPicture
```

81.5.2 Blog Entries

- MBS Real Studio Plugins, version 13.0pr1

81.5.3 Methods

81.5.4 close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

81.5.5 Run(channels as Integer) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.
Notes:

Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

Channels is a combination of 1, 2 and 4. 1 for Red, 2 for Green and 4 for Blue.
The border (one pixel thick) is not filled in the destination picture.

This method does the following for each pixel:

```
// first horizontal fill the temporary picture
r=0
g=0
b=0

if RedChannel then
r = r + sourcepicture.pixel(x-1,y).red * Hor(0)
r = r + sourcepicture.pixel(x ,y).red * Hor(1)
r = r + sourcepicture.pixel(x+1,y).red * Hor(2)
else
r = sourcepicture.pixel(x,y)
end if

if GreenChannel then
g = g + sourcepicture.pixel(x-1,y).green * Hor(0)
g = g + sourcepicture.pixel(x ,y).green * Hor(1)
g = g + sourcepicture.pixel(x+1,y).green * Hor(2)
else
g = sourcepicture.pixel(x,y)
end if
```

```
if BlueChannel then
b = b + sourcepicture.pixel(x-1,y).blue * Hor(0)
b = b + sourcepicture.pixel(x ,y).blue * Hor(1)
b = b + sourcepicture.pixel(x+1,y).blue * Hor(2)
else
b = sourcepicture.pixel(x,y)
end if

temppicture.pixel(x,y)=rgb(r,g,b)

// now back from temporary picture to the destination picture

r=0
g=0
b=0

if RedChannel then
r = r + temppicture.pixel(x,y-1).red * Ver(0)
r = r + temppicture.pixel(x,y ).red * Ver(1)
r = r + temppicture.pixel(x,y+1).red * Ver(2)
else
r = temppicture.pixel(x,y)
end if

if GreenChannel then
g = g + temppicture.pixel(x,y-1).green * Ver(0)
g = g + temppicture.pixel(x,y ).green * Ver(1)
g = g + temppicture.pixel(x,y+1).green * Ver(2)
else
g = temppicture.pixel(x,y)
end if

if BlueChannel then
b = b + temppicture.pixel(x,y-1).blue * Ver(0)
b = b + temppicture.pixel(x,y ).blue * Ver(1)
b = b + temppicture.pixel(x,y+1).blue * Ver(2)
else
b = temppicture.pixel(x,y)
end if

destinationpicture.pixel(x,y)=rgb(r,g,b)
```

81.5.6 Properties

81.5.7 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
Notes:

If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

81.5.8 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.
Notes:

Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

81.5.9 ValueCount as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of values set in the Hor and Ver array.
Example:

```
dim p as new PictureConvolutionMBS

p.Hor(0)=0.25
p.Hor(1)=0.5
p.Hor(2)=0.25
p.ValueCount=3
```

Notes:

The index in the arrays goes from 0 to ValueCount-1.
Default is 3.
Use values like 1, 3, 5, 7, 9, 11, 13, 15, 17 or 19.
(Read and Write property)

81.5.10 Hor(index as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal factors.
Notes:

Index from 0 to 19.
(Read and Write computed property)

81.5.11 Ver(index as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical factors.
Notes:

Index from 0 to 19.
(Read and Write computed property)

81.6 class PictureEditorMBS

81.6.1 class PictureEditorMBS

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** class to edit picture data as a memoryblock in place.
Notes: This is the same code the plugin uses to edit pictures.

81.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0fc1
- MBS Xojo / Real Studio Plugins, version 14.2pr12

81.6.3 Methods

81.6.4 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data of the given row.
Notes:

Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.

81.6.5 Properties

81.6.6 AllData as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data.
Notes:

Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.

Returns nil for console pictures.
(Read only property)

81.6.7 AllDataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data for the current picture into a new memoryblock.
Notes:

Changes to this memoryblock will not be visible in the original picture.
(Read only property)

81.6.8 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the blue channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.6.9 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bytes per pixel.
Notes:

Most times 4, but for some platforms 3.
(Read only property)

81.6.10 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memory address where the data is stored.
Notes:

Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

81.6.11 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the green channel in the RGB data.

Notes:

A value between 0 and 3.
(Read only property)

81.6.12 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an alpha channel exists.
Notes: (Read only property)

81.6.13 Height as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image in pixels.
Notes: (Read only property)

81.6.14 Picture as Picture

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original picture reference.
Notes: (Read only property)

81.6.15 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the red channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.6.16 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of an image row in bytes.
Notes:

RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

81.6.17 Width as Integer

MBS Picture Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the image in pixels.
Notes: (Read only property)

81.7 class PictureLut3DMBS

81.7.1 class PictureLut3DMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for doing a LUT 3D on a picture.

81.7.2 Methods

81.7.3 close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

81.7.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

81.7.5 Properties

81.7.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
Notes:

If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

81.7.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal x coordinate to use.

Notes:

If 0 the width of the source picture defines this value.
(Read and Write property)

81.7.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal y coordinate to use.
Notes:

If 0 the height of the source picture defines this value.
(Read and Write property)

81.7.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal x coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.7.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal y coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.7.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.
Notes:

Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

81.7.12 Table(r as UInt32, g as UInt32, b as UInt32, x as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The lut table.
Notes:

Indexes r, g and b go from 0 to 16 while x goes from 0 to 2.
(Read and Write computed property)

81.8 class PictureMatrix3DMBS

81.8.1 class PictureMatrix3DMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for doing a 3D picture matrix.

81.8.2 Methods

81.8.3 close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

81.8.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.
Notes: Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

81.8.5 Properties

81.8.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
Notes:

If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

81.8.7 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal x coordinate to use.

Notes:

If 0 the width of the source picture defines this value.
(Read and Write property)

81.8.8 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal y coordinate to use.
Notes:

If 0 the height of the source picture defines this value.
(Read and Write property)

81.8.9 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal x coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.8.10 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal y coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.8.11 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.
Notes:

Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

81.8.12 Matrix(x as UInt32, y as UInt32) as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The matrix to use.
Notes:

The indexes x and y are 0 based.
(Read and Write computed property)

81.9 class PictureMatrixMBS

81.9.1 class PictureMatrixMBS

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for matrix operations on a picture.
Notes: Can be used e.g. to sharpen a picture.

81.9.2 Blog Entries

- Better OutOfBoundsException

81.9.3 Methods

81.9.4 close

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

81.9.5 Run as boolean

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the process.
Notes: Returns true on success.

81.9.6 RunRGB(red as boolean, green as boolean, blue as boolean) as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the process for the given channels.
Notes:

Returns true on success.
A few combinations are optimized for faster processing.
Still more optimization is possible.

81.9.7 Properties

81.9.8 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
Notes:

If this property is nil, a new picture will be placed here inside the Run method.
If you place a picture here, please use one created with New Picture with a 32bit depth.
(Read and Write property)

81.9.9 Displacement as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The displacement value.
Notes:

See the example project for details.
(Read and Write property)

81.9.10 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum x coordinate to use.
Notes:

Just for limiting the working area to a part of the picture.
(Read and Write property)

81.9.11 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum y coordinate to use.
Notes:

Just for limiting the working area to a part of the picture.
(Read and Write property)

81.9.12 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum x coordinate to use.
Notes:

Just for limiting the working area to a part of the picture.
(Read and Write property)

81.9.13 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum y coordinate to use.
Notes:

Just for limiting the working area to a part of the picture.
(Read and Write property)

81.9.14 ScaleFactor as Double

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A scaling factor.
Notes:

See the example project for details.
(Read and Write property)

81.9.15 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.
Notes:

The run method will fail if this picture is not a 32bit deep picture created with New Picture.
(Read and Write property)

81.9.16 Matrix(x as UInt32, y as UInt32) as Integer

MBS Picture Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The matrix used.
Notes:

X and Y are in range from 0 to 4.
Values >255 are used for empty cells.
(Read and Write computed property)

81.10 class PictureMinMaxMBS

81.10.1 class PictureMinMaxMBS

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to find the minimum/maximum pixel values.
Example:

```
dim pic as Picture = LogoMBS(500)
dim m as new PictureMinMaxMBS

if m.FindAll(pic) then
break // check values in debugger
end if
```

Notes:

This class offers several Find functions.
Please choose carefully which one you use as it's faster to use e.g. FindRed instead of FindMinRed and FindMaxRed together.

81.10.2 Methods

81.10.3 FindAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum pixels.
Notes: Sets all fields.

81.10.4 FindBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum blue pixels.
Notes: Sets BlueMaxX, BlueMax, BlueMinX, BlueMinY, BlueMin and BlueMaxY.

81.10.5 FindGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum green pixels.

Notes: Sets GreenMaxX, GreenMax, GreenMinX, GreenMinY, GreenMin and GreenMaxY.

81.10.6 FindMaxAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the maximum pixels.
Notes: Sets RedMaxX, RedMax, RedMaxY, GreenMaxX, GreenMax, GreenMaxY, BlueMaxX, BlueMax and BlueMaxY.

81.10.7 FindMaxBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the maximum blue pixel.
Notes: Sets BlueMaxX, BlueMax and BlueMaxY.

81.10.8 FindMaxGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the maximum green pixel.
Notes: Sets GreenMaxX, GreenMax and GreenMaxY.

81.10.9 FindMaxRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the maximum red pixel.
Notes: Sets RedMaxX, RedMax and RedMaxY.

81.10.10 FindMaxSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the maximum sum pixel.
Notes:

The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).
Sets SumMaxX, SumMax and SumMaxY.

81.10.11 FindMinAll(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum pixels.
Notes: Sets RedMinX, RedMin, RedMinY, GreenMinX, GreenMin, GreenMinY, BlueMinX, BlueMin and BlueMinY.

81.10.12 FindMinBlue(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum blue pixel.
Notes: Sets BlueMinX, BlueMin and BlueMinY.

81.10.13 FindMinGreen(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum green pixel.
Notes: Sets GreenMinX, GreenMin and GreenMinY.

81.10.14 FindMinRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum red pixel.
Notes: Sets RedMinX, RedMin and RedMinY.

81.10.15 FindMinSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum sum pixel.
Notes:

The sum of a pixel is the sum of all color channels of this pixel (red+green+blue).
Sets SumMinX, SumMin and SumMinY.

81.10.16 FindRed(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum red pixels.

Notes: Sets RedMaxX, RedMax, RedMinX, RedMinY, RedMin and RedMaxY.

81.10.17 FindSum(p as picture) as boolean

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the minimum and maximum sum pixels.
Notes:

The sum of a pixel is the sum of all color channels of this pixel (red+Sum+blue).
Sets SumMaxX, SumMax, SumMinX, SumMinY, SumMin and SumMaxY.

81.10.18 Properties

81.10.19 BlueMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum blue color value.
Notes:

Range: 0 to 255.
(Read and Write property)

81.10.20 BlueMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum blue value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.21 BlueMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum blue value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.22 BlueMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum blue color value.
Notes:

Range: 0 to 255.
(Read and Write property)

81.10.23 BlueMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum blue value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.24 BlueMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum blue value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.25 GreenMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum green color value.
Notes:

Range: 0 to 255
(Read and Write property)

81.10.26 GreenMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum green value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.27 GreenMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum green value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.28 GreenMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum green color value.
Notes:

Range: 0 to 255
(Read and Write property)

81.10.29 GreenMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum green value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.30 GreenMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum green value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.31 RedMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum red color value.
Notes:

Range: 0 to 255
(Read and Write property)

81.10.32 RedMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum red value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.33 RedMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum red value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.34 RedMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum red color value.
Notes:

Range: 0 to 255
(Read and Write property)

81.10.35 RedMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum red value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.36 RedMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum red value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.37 SumMax as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum sum color value.
Notes:

sum=red+blue+green
Range: 0 to 765
(Read and Write property)

81.10.38 SumMaxX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum sum value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.39 SumMaxY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the maximum sum value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.10.40 SumMin as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimum sum color value.
Notes:

sum=red+blue+green
Range: 0 to 765
(Read and Write property)

81.10.41 SumMinX as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum sum value.
Notes:

Range: 0 to Picture.Width-1. Set to -1 on any error.
(Read and Write property)

81.10.42 SumMinY as Integer

MBS Picture Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The location of the pixel with the minimum sum value.
Notes:

Range: 0 to Picture.Height-1. Set to -1 on any error.
(Read and Write property)

81.11 class PictureReaderMBS

81.11.1 class PictureReaderMBS

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to read picture data as a memoryblock.
Example:

```
dim pic as Picture = LogoMBS(500)
dim p as PictureReaderMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture reader
p=NewPictureReaderMBS(pic)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

dim sum as Double

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

sum = sum + m.UInt8Value(r)
sum = sum + m.UInt8Value(g)
sum = sum + m.UInt8Value(b)

r=r+bpp
g=g+bpp
b=b+bpp
next

next
```

```
// show the sum of all pixels:
MsgBox "Sum with plugin is: "+str(sum)

// now try same in RB code:

dim surface as RGBSurface = pic.RGBSurface
dim c as color

sum = 0.0

for y=0 to h1
for x=0 to w1
c = surface.Pixel(x,y)

sum = sum + c.red
sum = sum + c.Green
sum = sum + c.Blue

next

next

surface = nil

MsgBox "Sum with RB Code is: "+str(sum)
quit
```

Notes: This is the same code the plugin uses to read pictures.

81.11.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0fc1
- MBS Xojo / Real Studio Plugins, version 14.2pr12
- MBS Xojo / Real Studio Plugins, version 14.2pr5
- MBS REALbasic Plugins, version 10.4pr8

81.11.3 Methods

81.11.4 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data for this row.
Notes:

Changes here will be visible in the picture. (except for platforms where a copy is made of the data)
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
See also:

- 81.11.8 Data as Memoryblock 14195

81.11.5 Properties

81.11.6 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the blue channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.11.7 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bytes per pixel.
Notes:

Most times 4, but for some platforms 3.
(Read only property)

81.11.8 Data as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data.
Notes:

Changes here will be visible in the picture. (except for platforms where a copy is made of the data)
This memoryblock has a size property with value 0!

No bound checking can be done by Xojo on this memoryblock.
Returns nil for console pictures.
(Read only property)
See also:

- 81.11.4 Data(Row as Integer) as MemoryBlock 14195

81.11.9 DataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data for the current picture into a new memoryblock.
Notes: (Read only property)

81.11.10 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memory address where the data is stored.
Notes:

Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

81.11.11 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the green channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.11.12 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an alpha channel exists.
Notes: (Read only property)

81.11.13 Height as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image in pixels.
Notes: (Read only property)

81.11.14 Picture as Picture

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original picture reference.
Notes: (Read only property)

81.11.15 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the red channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.11.16 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of an image row in bytes.
Notes:

RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

81.11.17 Width as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the image in pixels.
Notes: (Read only property)

81.12 class PictureSepiaMBS

81.12.1 class PictureSepiaMBS

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for doing a sepia effect.

81.12.2 Methods

81.12.3 close

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

81.12.4 Run as boolean

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the picture effect.
Notes:

Fails if the pictures are not bitmap pictures. Source and Destination can be equal. If you provide a destination picture, the dimenstions of source and destination must be equal.

For each pixel this method does:

sourcepixel=sourcepicture.pixel(x,y)
r=sourcepixel.red
g=sourcepixel.green
b=sourcepixel.blue

sum = r * RedFactor + g * GreenFactor + b * BlueFactor

r = sum + SepiaColor.red
g = sum + SepiaColor.green
b = sum + SepiaColor.blue

destinationpicture.pixel(x,y) = rgb(r,g,b)

81.12.5 Properties

81.12.6 DestinationPicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination picture.
Notes:

If you set this property, use a bitmap picture equal in size to the source picture.
If this property is nil, the Run method will create a picture.
(Read and Write property)

81.12.7 FactorBlue as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The blue factor.
Notes: (Read and Write property)

81.12.8 FactorGreen as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The green factor.
Notes: (Read and Write property)

81.12.9 FactorRed as Double

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The red factor.
Notes: (Read and Write property)

81.12.10 MaxX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal x coordinate to use.
Notes:

If 0 the width of the source picture defines this value.
(Read and Write property)

81.12.11 MaxY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximal y coordinate to use.
Notes:

If 0 the height of the source picture defines this value.
(Read and Write property)

81.12.12 MinX as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal x coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.12.13 MinY as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minimal y coordinate to use.
Notes:

Default is 0.
(Read and Write property)

81.12.14 SepiaBlue as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sepia color to use.
Notes:

Default is 0.
(Read and Write property)

81.12.15 SepiaGreen as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sepia color to use.
Notes:

Default is 0.
(Read and Write property)

81.12.16 SepiaRed as Integer

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sepia color to use.
Notes:

Default is 0.
(Read and Write property)

81.12.17 SourcePicture as Picture

MBS Picture Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source picture.
Notes:

Must be a bitmap picture.
(you can use the picture.BitmapMBS function for this)
(Read and Write property)

81.13 class PictureWriterMBS

81.13.1 class PictureWriterMBS

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to build a picture by filling a memoryblock.
Example:

```
dim p as PictureWriterMBS
dim m as MemoryBlock
dim r,g,b,rRow,gRow,bRow,h1,w1,x,y,bpp as Integer

// Create a new picture writer
p=NewPictureWriterMBS(512,512)

h1=p.Height-1
w1=p.Width-1

bpp=p.BytesPerPixel
rRow=p.RedOffset
gRow=p.GreenOffset
bRow=p.BlueOffset
// in each row the red, blue and green channels have different offsets.
// but offsets are platform dependend

for y=0 to h1
// Get data in memory. This Memoryblock has a size property of 0!
m=p.Data(y)
r=rRow
g=gRow
b=bRow

for x=0 to w1

m.UInt8Value(r)=x\2
m.UInt8Value(g)=y\2
m.UInt8Value(b)=x*y\2

r=r+bpp
g=g+bpp
b=b+bpp
next

next

// Use Render to make a picture object
dim pic as Picture = p.Render
Backdrop = pic
```

Notes: This is the same code the plugin uses to create pictures.

- MBS REALbasic Plugins, version 10.4pr8

81.13.3 Methods

81.13.4 Data(Row as Integer) as MemoryBlock

MBS Picture Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data for the given row.
Notes:

Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
See also:

- 81.13.9 Data as Memoryblock 14204

81.13.5 Render as picture

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates and returns a picture for this writer.
Notes:

The writer is destroyed with this call, so do not use it any more.
(one picture can be created with one writer currently)

81.13.6 Properties

81.13.7 BlueOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the blue channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.13.8 BytesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bytes per pixel.
Notes:

Most times 4, but for some platforms 3.
(Read only property)

81.13.9 Data as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memoryblock with the original image data.
Notes:

Changes here will be visible in the picture.
This memoryblock has a size property with value 0!
No bound checking can be done by Xojo on this memoryblock.
Returns nil for console pictures.
(Read only property)
See also:

- 81.13.4 Data(Row as Integer) as MemoryBlock 14203

81.13.10 DataCopy as Memoryblock

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the data for the current picture into a new memoryblock.
Notes:

Changes to this memoryblock will not be visible in the rendered picture.
(Read only property)

81.13.11 DataPtr as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The memory address where the data is stored.
Notes:

Maybe useful for declares.
Returns nil for console pictures.
(Read only property)

81.13.12 GreenOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the green channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.13.13 HasAlphaChannel as Boolean

MBS Picture Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an alpha channel exists.
Example:

```
dim p as PictureWriterMBS = NewPictureWriterMBS(200, 200, true)

MsgBox "Alpha: "+str(p.HasAlphaChannel)

// get pointer to bytes
dim m as MemoryBlock = p.Data

// fill all with 127
m.FillBytesMBS 0, p.RowBytes * p.Height, 127

dim x as Picture = p.Render
Break
```

Notes: (Read only property)

81.13.14 Height as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image in pixels.
Notes: (Read only property)

81.13.15 Picture as Picture

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The buffer picture reference.
Notes:

If the writer uses a RB picture as buffer it is available here.
(depends on the actual implementation for a given platform whether this property is used)
(Read only property)

81.13.16 RedOffset as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The platform dependend offset of the red channel in the RGB data.
Notes:

A value between 0 and 3.
(Read only property)

81.13.17 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of an image row in bytes.
Notes:

RowBytes can be width*bytesPerPixel, but often it is not.
(Read only property)

81.13.18 Width as Integer

MBS Picture Plugin, Plugin Version: 6.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the image in pixels.
Notes: (Read only property)

Chapter 82

GraphicsMagick

82.1 class GM16BlobMBS

82.1.1 class GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for binary large objects.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GM16ImageMBS
dim blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

Notes:

Blob provides the means to contain any opaque data. It is named after the term "Binary Large OBject" commonly used to describe unstructured data (such as encoded images) which is stored in a database. While the function of Blob is very simple (store a pointer and and size associated with allocated data), the Blob class provides some very useful capabilities. In particular, it is fully reference counted just like the Image class.

The Blob class supports value assignment while preserving any outstanding earlier versions of the object. Since assignment is via a pointer internally, Blob is efficient enough to be stored directly in an STL container or any other data structure which requires assignment. In particular, by storing a Blob in an associative container (such as STL's 'map') it is possible to create simple indexed in-memory "database" of Blobs.

Magick++ currently uses Blob to contain encoded images (e.g. JPEG) as well as ICC and IPTC profiles. Since Blob is a general-purpose class, it may be used for other purposes as well.

82.1.2 Methods

82.1.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Default constructor creating an empty blob object.
See also:

- 82.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14208
- 82.1.5 Constructor(data as string) 14208
- 82.1.6 Constructor(other as GM16BlobMBS) 14209

82.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct object with data, making a copy of the supplied data.
See also:

- 82.1.3 Constructor 14208
- 82.1.5 Constructor(data as string) 14208
- 82.1.6 Constructor(other as GM16BlobMBS) 14209

82.1.5 Constructor(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct object with data, making a copy of the supplied data.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)
```

```
// new image
Dim mp as new GM16ImageMBS
dim blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.1.3 Constructor 14208
- 82.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14208
- 82.1.6 Constructor(other as GM16BlobMBS) 14209

82.1.6 Constructor(other as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy constructor (reference counted).
See also:

- 82.1.3 Constructor 14208
- 82.1.4 Constructor(data as memoryblock, offset as Integer, size as Integer) 14208
- 82.1.5 Constructor(data as string) 14208

82.1.7 CopyMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a copy of the data as a memoryblock.
Notes: Returns nil on any error like low memory.

82.1.8 CopyString as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a copy of the data as a string.

82.1.9 Data as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A memoryblock with the data from this blob.
Example:

```
dim b as new GM16BlobMBS("Hello")

dim m as memoryblock = b.Data
MsgBox m.StringValue(0,5) // shows "Hello"
```

Notes: This is a memoryblock referencing the data of the blob. It has no size set. The memoryblock can only be used as long as the blob object exists. if you use it after you destroyed the blob object, you can crash you application.

82.1.10 Update(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the content of this blob with a copy of the bytes in the memoryblock.
See also:

- 82.1.11 Update(data as string) 14210

82.1.11 Update(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the content of this blob with a copy of the bytes in the string.
Notes: Offset is zero based.
See also:

- 82.1.10 Update(data as memoryblock, offset as Integer, size as Integer) 14210

82.1.12 Properties

82.1.13 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal handle of the blob object.
Notes: (Read and Write property)

82.1.14 length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain data length in bytes.
Example:

```
dim b as new GM16BlobMBS("Hello")

MsgBox str(B.length) // shows 5
```

Notes: (Read only property)

82.1.15 base64 as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blob content as a string in Base64 format.
Example:

```
dim b as new GM16BlobMBS("Hello")

MsgBox b.base64 // shows "SGVsbG8="
```

Notes: (Read and Write computed property)

82.2 class GM16CoderInfoMBS

82.2.1 class GM16CoderInfoMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class used to get information about all registered coders.
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name
next

MsgBox Join(names,EndOfLine)
```

Notes: The CoderInfo class provides the means to provide information regarding GraphicsMagick support for an image format (designated by a magick string). It may be used to provide support for a specific named format (provided as an argument to the constructor), or as an element of a container when format support is queried using the coderInfoList() templated function.

82.2.2 Methods

82.2.3 CoderInfoList as GM16CoderInfoMBS()

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a list of all coders.
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
```

82.2.4 Properties

82.2.5 description as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format description (e.g. "CompuServe graphics interchange format").
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+coder.description
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.2.6 isMultiFrame as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format supports multiple frames.
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isMultiFrame)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.2.7 isReadable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format is readable.
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isReadable)
next
```

```
MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.2.8 isWritable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format is writeable.
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GM16CoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isWritable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.2.9 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of loadable module.
Notes: (Read and Write property)

82.2.10 name as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format name (e.g. "GIF").
Example:

```
dim coders(-1) as GM16CoderInfoMBS = GM16CoderInfoMBS.CoderInfoList
dim coder as GM16CoderInfoMBS = coders(0) // pick first one

MsgBox coder.name
```

Notes: (Read and Write property)

82.2.11 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Usage note for user.
Notes: (Read and Write property)

82.2.12 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Support library version.
Notes: (Read and Write property)

82.3 class GM16ColorGrayMBS

82.3.1 class GM16ColorGrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color subclass for a grayscale color.
Example:

```
dim g as new GM16ColorGrayMBS(0.5)
MsgBox str(g.shade)
```

Notes:

Representation of grayscale RGB color.
Equal parts red, green, and blue specified as a ratio (0 to 1).
Subclass of the GM16ColorMBS class.

82.3.2 Methods

82.3.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorGrayMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.3.4 Constructor(other as GM16ColorMBS) 14216
- 82.3.5 Constructor(shade as Double) 14217

82.3.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GM16ColorGrayMBS(0.5)
dim o as new GM16ColorGrayMBS(g)
```

MsgBox str(o.shade)

See also:

- 82.3.3 Constructor 14216
- 82.3.5 Constructor(shade as Double) 14217

82.3.5 Constructor(shade as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given value.
Example:

```
dim g as new GM16ColorGrayMBS(1.0)
MsgBox str(g.colorValue)
```

Notes: Range is 0.0 to 1.0.
See also:

- 82.3.3 Constructor 14216
- 82.3.4 Constructor(other as GM16ColorMBS) 14216

82.3.6 Properties

82.3.7 shade as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The gray value for this color.
Example:

```
dim g as new GM16ColorGrayMBS(1.0)
MsgBox str(g.shade)
```

Notes:

Range is 0.0 to 1.0
(Read and Write property)

82.4 class GM16ColorHSLMBS

82.4.1 class GM16ColorHSLMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a HSL color.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GM16ColorMBS class.

82.4.2 Methods

82.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorHSLMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14218
- 82.4.5 Constructor(other as GM16ColorMBS) 14219

82.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)+" "+str(g.saturation)+" "+str(g.luminosity)
```

See also:

- 82.4.3 Constructor 14218
- 82.4.5 Constructor(other as GM16ColorMBS) 14219

82.4.5 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
dim o as new GM16ColorHSLMBS(g)

MsgBox str(o.colorValue)
```

See also:

- 82.4.3 Constructor 14218
- 82.4.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14218

82.4.6 Properties

82.4.7 hue as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The hue value.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)
```

Notes: (Read and Write property)

82.4.8 luminosity as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The luminosity value.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.luminosity)
```

Notes: (Read and Write property)

82.4.9 saturation as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The saturation value.
Example:

```
dim g as new GM16ColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.saturation)
```

Notes: (Read and Write property)

82.5 class GM16ColorMBS

82.5.1 class GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color is the base color class.
Example:

```
dim c as new GM16ColorMBS(127,255,127) // light green
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: It is a simple container class for the pixel red, green, blue, and alpha values scaled to fit GraphicsMagick's Quantum size. Normally users will instantiate a class derived from Color which supports the color model that fits the needs of the application. The Color class may be constructed directly from an X11-style color string. As a perhaps odd design decision, the value transparent black is considered to represent an unset value (invalid color) in many cases. This choice was made since it avoided using more memory. The default Color constructor constructs an invalid color (i.e. transparent black) and may be used as a parameter in order to remove a color setting.

82.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.0pr7

82.5.3 Methods

82.5.4 Black as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries a black color.
Example:

```
dim black as GM16ColorMBS = GM16ColorMBS.Black

MsgBox str(black.colorValue)
```

82.5.5 Color(ColorValue as Color) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts color from Xojo to GM16ColorMBS.
Example:

```
dim c as GM16ColorMBS = GM16ColorMBS.Color(& cFF0000)

MsgBox str(c.colorValue)
```

See also:

- 82.5.6 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14222
- 82.5.7 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14222
- 82.5.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14223

82.5.6 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts color from Xojo to GM16ColorMBS with separate alpha value.
Example:

```
dim c as GM16ColorMBS = GM16ColorMBS.Color(& cFF0000, 128)

MsgBox str(c.colorValue)+" "+str(c.alpha)
```

Notes: Alpha in range from 0 to 255.
See also:

- 82.5.5 Color(ColorValue as Color) as GM16ColorMBS 14221
- 82.5.7 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14222
- 82.5.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14223

82.5.7 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates color with RGB values.
Example:

```
dim c as GM16ColorMBS = GM16ColorMBS.Color(127, 191, 255)

MsgBox str(c.colorValue)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 82.5.5 Color(ColorValue as Color) as GM16ColorMBS 14221
- 82.5.6 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14222
- 82.5.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS 14223

82.5.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates color with RGB values.
Example:

```
dim c as GM16ColorMBS = GM16ColorMBS.Color(127, 191, 255, 127)

MsgBox str(c.colorValue)+" "+str(c.alphaQuantum)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 82.5.5 Color(ColorValue as Color) as GM16ColorMBS 14221
- 82.5.6 Color(ColorValue as Color, alpha as Integer) as GM16ColorMBS 14222
- 82.5.7 Color(red as integer, green as integer, blue as integer) as GM16ColorMBS 14222

82.5.9 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.5.10 Constructor(ColorName as string) 14224
- 82.5.11 Constructor(ColorValue as color) 14224

- 82.5.12 Constructor(ColorValue as color, alpha as Integer) 14225
- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.10 Constructor(ColorName as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color based on the X11 color name.
Example:

```
dim c as new GM16ColorMBS("red")

MsgBox str(c.redQuantum)+"-"+str(c.greenQuantum)+"-"+str(c.blueQuantum) // shows "255-0-0"

dim d as new GM16ColorMBS("# 77FF00")

MsgBox str(d.redQuantum)+"-"+str(d.greenQuantum)+"-"+str(d.blueQuantum) // shows "119-255-0"
```

Notes: An alternate way to construct the class is via an X11-compatible color specification string (e.g. Color("red") or Color ("# FF0000")). Since the class may be constructed from a string, convenient strings may be passed in place of an explicit Color object in methods which accept a reference to Color. Color may also be converted to a std::string for convenience in user interfaces, and for saving settings to a text file.

- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.11 Constructor(ColorValue as color)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GM16ColorMBS(& cFF0000)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

- 82.5.12 Constructor(ColorValue as color, alpha as Integer) 14225
- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.12 Constructor(ColorValue as color, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GM16ColorMBS(& cFF0102, 127)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

See also:

- 82.5.10 Constructor(ColorName as string) 14224
- 82.5.11 Constructor(ColorValue as color) 14224
- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.13 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim r as new GM16ColorMBS(1,2,3)
dim c as new GM16ColorMBS(r)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.5.9 Constructor 14223
- 82.5.10 Constructor(ColorName as string) 14224
- 82.5.11 Constructor(ColorValue as color) 14224
- 82.5.12 Constructor(ColorValue as color, alpha as Integer) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.14 Constructor(red as Integer, green as Integer, blue as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GM16ColorMBS(1,2,3)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 82.5.9 Constructor 14223
- 82.5.10 Constructor(ColorName as string) 14224
- 82.5.11 Constructor(ColorValue as color) 14224
- 82.5.12 Constructor(ColorValue as color, alpha as Integer) 14225
- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14226

82.5.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GM16ColorMBS(1,2,3,4)

// display color, alpha is double...
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 82.5.9 Constructor 14223
- 82.5.10 Constructor(ColorName as string) 14224
- 82.5.11 Constructor(ColorValue as color) 14224
- 82.5.12 Constructor(ColorValue as color, alpha as Integer) 14225
- 82.5.13 Constructor(other as GM16ColorMBS) 14225
- 82.5.14 Constructor(red as Integer, green as Integer, blue as Integer) 14226

82.5.16 QuantumByteSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum byte size.
Example:

```
MsgBox str(GM16ColorMBS.QuantumByteSize)
```

Notes: As the plugin uses 8 bit this value should be 1.

82.5.17 scaleDoubleToQuantum(value as Double) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a double value to a value in the range of a quantum.
Example:

```
dim d as Double = 1.0
dim v as Integer = GM16ColorMBS.scaleDoubleToQuantum(d)
MsgBox str(v)
```

Notes: As the plugin uses 8 bit quantums, this is basicly a multiplication by 255.0

82.5.18 scaleQuantumToDouble(value as Integer) as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a quantum to a double value.
Example:

```
dim v as Integer = 255
dim d as Double = GM16ColorMBS.scaleQuantumToDouble(v)
MsgBox str(d)
```

Notes: The plugin uses 8bit quantums, so this is basicly the division of value by 255.0

82.5.19 White as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries a white color.
Example:

```
dim White as GM16ColorMBS = GM16ColorMBS.White

MsgBox str(White.colorValue)
```

82.5.20 Properties

82.5.21 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha value of this color.
Example:

```
dim c as new GM16ColorMBS(1,2,3,1.0)
MsgBox str(c.alpha)
```

Notes:

Range is 0.0 to 1.0. If you pass values higher, they are divided by 255.
(Read and Write property)

82.5.22 alphaQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha color value.
Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.5.23 blueQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color value.
Example:

```
dim c as new GM16ColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 3
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.5.24 colorValue as color

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Xojo color for the GraphicsMagick color.
Example:

```
dim c as new GM16ColorMBS(& cFF0102)
MsgBox str(c.ColorValue)
```

Notes: (Read and Write property)

82.5.25 greenQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color value.
Example:

```
dim r as new GM16ColorMBS(1,2,3)
MsgBox str(r.greenQuantum) // shows 2
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.5.26 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal color reference.
Example:

```
dim r as new GM16ColorMBS(1,2,3)
MsgBox str(r.handle)
```

Notes: (Read and Write property)

82.5.27 intensity as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The intensity of this color.
Example:

```
dim c as new GM16ColorMBS(1,2,3)
MsgBox str(c.intensity)
```

Notes: (Read only property)

82.5.28 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain valid color?
Example:

```
dim c as new GM16ColorMBS(1,2,3)
MsgBox str(c.isValid)
```

Notes: (Read and Write property)

82.5.29 redQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color value.
Example:

```
dim c as new GM16ColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 1
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.6 class GM16ColorMonoMBS

82.6.1 class GM16ColorMonoMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Representation of a black/white color (true/false)
Example:

```
dim g as new GM16ColorMonoMBS(false)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GM16ColorMBS class.

82.6.2 Methods

82.6.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorMonoMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.6.4 Constructor(mono as boolean) 14232
- 82.6.5 Constructor(other as GM16ColorMBS) 14233

82.6.4 Constructor(mono as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GM16ColorMonoMBS(false)
MsgBox str(g.mono)
```

See also:

- 82.6.3 Constructor 14232
- 82.6.5 Constructor(other as GM16ColorMBS) 14233

82.6.5 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GM16ColorMonoMBS(false)
dim o as new GM16ColorMonoMBS(g)
MsgBox str(o.mono)
```

See also:

- 82.6.3 Constructor 14232
- 82.6.4 Constructor(mono as boolean) 14232

82.6.6 Properties

82.6.7 mono as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color value.
Example:

```
dim g as new GM16ColorMonoMBS(true)
MsgBox str(g.mono)
```

Notes: (Read and Write property)

82.7 class GM16ColorRGBMBS

82.7.1 class GM16ColorRGBMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color class for RGB colors.
Example:

```
dim c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)+" "+str(c.green)+" "+str(c.blue)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes:

Representation of RGB color with red, green, and blue specified as ratios (0 to 1)
Subclass of the GM16ColorMBS class.

82.7.2 Methods

82.7.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorRGBMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.7.4 Constructor(other as GM16ColorMBS) 14234
- 82.7.5 Constructor(red as Double, green as Double, blue as Double) 14235

82.7.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GM16ColorRGBMBS(1,2,3)
dim o as new GM16ColorRGBMBS(g)
```

MsgBox str(o.colorValue)

See also:

- 82.7.3 Constructor 14234
- 82.7.5 Constructor(red as Double, green as Double, blue as Double) 14235

82.7.5 Constructor(red as Double, green as Double, blue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GM16ColorRGBMBS(0.1,0.2,0.3)
```

Notes: Range is 0.0 to 1.0.
See also:

- 82.7.3 Constructor 14234
- 82.7.4 Constructor(other as GM16ColorMBS) 14234

82.7.6 Properties

82.7.7 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color component.
Example:

```
dim c as new GM16ColorRGBMBS(0.0,0.0,1.0)
MsgBox str(c.blue)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.7.8 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color component.
Example:

```
dim c as new GM16ColorRGBMBS(0.0,1.0,0.0)
MsgBox str(c.green)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.7.9 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color component.
Example:

```
dim c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.8 class GM16ColorYUVMBS

82.8.1 class GM16ColorYUVMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Representation of a color in the YUV colorspace
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)+" "+str(g.u)+" "+str(g.v)
```

Notes: Subclass of the GM16ColorMBS class.

82.8.2 Methods

82.8.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GM16ColorYUVMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.8.4 Constructor(other as GM16ColorMBS) 14237
- 82.8.5 Constructor(y as Double, u as Double, v as Double) 14238

82.8.4 Constructor(other as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
dim o as new GM16ColorYUVMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 82.8.3 Constructor 14237
- 82.8.5 Constructor(y as Double, u as Double, v as Double) 14238

82.8.5 Constructor(y as Double, u as Double, v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
```

See also:

- 82.8.3 Constructor 14237
- 82.8.4 Constructor(other as GM16ColorMBS) 14237

82.8.6 Properties

82.8.7 u as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The u color component.
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.u)
```

Notes:

Range is -0.5 to +0.5.
(Read and Write property)

82.8.8 v as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The v color component.
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.v)
```

Notes:

Range is -0.5 to +0.5.
(Read and Write property)

82.8.9 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y color component.
Example:

```
dim g as new GM16ColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.9 class GM16ConvertMBS

82.9.1 class GM16ConvertMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class to convert images thread friendly.
Notes:

This class is intended to process lots of images in several instances in several threads.
If you for example use 8 Xojo threads, to process thousands of images to scale them down for thumbnails, you can easily keep 8 CPU cores busy.

Please make a new instance, set options and call run method. When run is done, please read output properties.
Do not modify properties while thread is running.

82.9.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr2

82.9.3 Methods

82.9.4 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

82.9.5 Run

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Starts converter.
Notes:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

82.9.6 Properties

82.9.7 AutoOrient as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to call autoOrient method to change orientation of image data to 0°.
Notes: (Read and Write property)

82.9.8 Enhance as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to run enhance command.
Notes:

If true, we call enhance on the image to minimize noise.
(Read and Write property)

82.9.9 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to run equalize command.
Notes:

If set to true, we call equalize command on image (histogram equalization).
(Read and Write property)

82.9.10 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the image type.
Notes:

If value is >0, the image type is change to the given type.
(Read and Write property)

82.9.11 InputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input data string.
Notes:

If set, we read image from this data.
(Read and Write property)

82.9.12 InputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input folderitem.
Notes:

If set input file to read.
(Read and Write property)

82.9.13 InputGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input geometry.
Notes:

Some formats can be loaded with different scales, so this geometry is passed to read method to define the format requested.
(Read and Write property)

82.9.14 InputImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input image.
Notes: (Read and Write property)

82.9.15 InputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image magick type.
Notes:

If empty, the type of file is automatically determined.
(Read and Write property)

82.9.16 InputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input data memoryblock.
Notes:

If set, we read image from this data.
(Read and Write property)

82.9.17 InputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input file path.
Notes:

If set input file to read.
(Read and Write property)

82.9.18 OutputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output data as string.
Notes: (Read and Write property)

82.9.19 OutputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The folderitem where to write file.
Notes:

If set, the image will be written to this file.
(Read and Write property)

82.9.20 OutputImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output image object.
Notes: (Read and Write property)

82.9.21 OutputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output magick.
Notes:

You can set this to a magick codec type to define output format, e.g. "jpeg".
(Read and Write property)

82.9.22 OutputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output data as memory block.
Notes: (Read and Write property)

82.9.23 OutputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The native file path for output.
Notes:

If set, the image will be written to this path.
(Read and Write property)

82.9.24 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quality of images in range 1 to 100.
Notes:

If value is >0, we assign it to the image for setting image quality.
(Read and Write property)

82.9.25 Running as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether this converter is running.
Notes:

Set to true while Run method runs.
(Read only property)

82.9.26 ScaleGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geometry for call to scale method.
Notes:

scale method is called with this geometry (if set) to reduce image size.
(Read and Write property)

82.9.27 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to remove all profiles and text attributes from the image.
Notes: (Read and Write property)

82.9.28 ThumbnailGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geometry for call to thumbnail method.
Notes:

thumbnail method is called with this geometry (if set) to reduce image size.
(Read and Write property)

82.9.29 Trim as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether trim command is called on image to remove extra blank space around image.
Notes: (Read and Write property)

82.9.30 WantOutputData as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether you want image compressed and stored in OutputData property.
Notes: (Read and Write property)

82.9.31 WantOutputMemory as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether you want image compressed and stored in OutputMemory property.
Notes: (Read and Write property)

82.10 class GM16CoordinateMBS

82.10.1 class GM16CoordinateMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Graphics Magick class for a coordinate.
Example:

```
dim c as new GM16CoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

82.10.2 Methods

82.10.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create a new coordinate.
See also:

- 82.10.4 Constructor(x as Double, y as Double) 14247

82.10.4 Constructor(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create a new coordinate.
Example:

```
dim c as new GM16CoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

See also:

- 82.10.3 Constructor 14247

82.10.5 Properties

82.10.6 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x value.
Example:

```
dim c as new GM16CoordinateMBS
c.x = 5
MsgBox str(c.x)
```

Notes: (Read and Write property)

82.10.7 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y value.
Example:

```
dim c as new GM16CoordinateMBS
c.y = 5
MsgBox str(c.y)
```

Notes: (Read and Write property)

82.11 class GM16ErrorExceptionMBS

82.11.1 class GM16ErrorExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The exception to report errors in the GraphicMagick plugin.
Notes:

Check the message property for details.
Subclass of the RuntimeException class.

82.12 class GM16GeometryMBS

82.12.1 class GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Geometry provides a convenient means to specify a geometry argument.
Example:

```
dim g as new GM16GeometryMBS(300,400)
MsgBox str(G.width)+" "+str(G.height)
```

Notes: The object may be initialized from a string containing a geometry specification. It may also be initialized by more efficient parameterized constructors.

82.12.2 Methods

82.12.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates empty geometry.
Example:

```
dim g as new GM16GeometryMBS
MsgBox str(G.width)+" "+str(G.height)
```

See also:

- 82.12.4 Constructor(geometry as string) 14250
- 82.12.5 Constructor(other as GM16GeometryMBS) 14251
- 82.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14251

82.12.4 Constructor(geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct geometry from string.
Example:

```
dim g as new GM16GeometryMBS("600x600")
```

MsgBox str(G.width)+" "+str(G.height)

Notes:

See the GraphicsMagick website for details.
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 82.12.3 Constructor 14250
- 82.12.5 Constructor(other as GM16GeometryMBS) 14251
- 82.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14251

82.12.5 Constructor(other as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new geometry object by copying an existing one.
Example:

```
dim g as new GM16GeometryMBS(600,600)
dim h as new GM16GeometryMBS(g)
MsgBox str(h.width)
```

See also:

- 82.12.3 Constructor 14250
- 82.12.4 Constructor(geometry as string) 14250
- 82.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14251

82.12.6 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates geometry with the given values.
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.width)
```

See also:

- 82.12.3 Constructor 14250
- 82.12.4 Constructor(geometry as string) 14250
- 82.12.5 Constructor(other as GM16GeometryMBS) 14251

82.12.7 Make(geometry as string) as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct geometry from string.
Example:

```
dim g as GM16GeometryMBS = GM16GeometryMBS.Make("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes:

See the GraphicsMagick website for more details:
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 82.12.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GM16GeometryMBS 14252

82.12.8 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates geometry with the given values.
Example:

```
dim g as GM16GeometryMBS = GM16GeometryMBS.Make(600,600)
MsgBox str(g.width)
```

See also:

- 82.12.7 Make(geometry as string) as GM16GeometryMBS 14252

82.12.9 Properties

82.12.10 aspect as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize without preserving aspect ratio (!).
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.aspect)
```

Notes: (Read and Write property)

82.12.11 fillArea as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image to fit total pixel area specified by dimensions.
Notes:

Same as @ in the geometry specification.
(Read and Write property)

82.12.12 greater as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize if image is greater than size (>).
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.greater)
```

Notes: (Read and Write property)

82.12.13 height as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height value.
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.height)
```

Notes: (Read and Write property)

82.12.14 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain a valid geometry?
Example:

```
dim g as new GM16GeometryMBS(100,200)
MsgBox str(G.isValid)
```

Notes:

May be set to false in order to invalidate an existing geometry object.
(Read and Write property)

82.12.15 less as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize if image is less than size (<).
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.less)
```

Notes: (Read and Write property)

82.12.16 limitPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Dimensions are treated as minimum rather than maximum values.
Notes:

Same as ^in the geometry specification.
(Read and Write property)

82.12.17 percent as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Width and height are expressed as percentages.
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.percent)
```

Notes: (Read and Write property)

82.12.18 StringValue as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The string representation of the geometry object.
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.StringValue)
```

Notes: (Read and Write property)

82.12.19 width as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width value.
Example:

```
dim g as new GM16GeometryMBS(600,600)
MsgBox str(g.width)
```

Notes: (Read and Write property)

82.12.20 xNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sign of X offset negative? (X origin at right)
Example:

```
dim g as new GM16GeometryMBS(100,200,30,40,true,false)
MsgBox str(G.xNegative)
```

Notes: (Read and Write property)

82.12.21 xOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X offset from origin.
Example:

```
dim g as new GM16GeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

82.12.22 yNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sign of Y offset negative? (Y origin at bottom)
Example:

```
dim g as new GM16GeometryMBS(100,200,30,40,false,true)
MsgBox str(G.yNegative)
```

Notes: (Read and Write property)

82.12.23 yOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Y offset from origin
Example:

```
dim g as new GM16GeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

82.13 class GM16GraphicsMBS

82.13.1 class GM16GraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for drawing commands targeting a GM16ImageMBS.
Notes: Please remember that all commands are collected till you call the Draw method.

82.13.2 Methods

82.13.3 Arc(startX as Double, startY as Double, endX as Double, endY as Double, startDegrees as Double, endDegrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.arc(250, 250, 100, 100,50,300)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.4 Bezier(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw a bezier curve using the stroke color and based on the coordinates specified by the coordinates array.

82.13.5 Circle(originX as Double, originY as Double, perimX as Double, perimY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.13.6 ClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Select a drawing clip path matching id.

82.13.7 ColorPixel(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Color image according to paintMethod.
Notes: The point method recolors the target pixel. The replace method recolors any pixel that matches the color of the target pixel. Floodfill recolors any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder recolors any neighbor pixel that is not the border color. Finally, reset recolors all pixels.

82.13.8 CompositeImage(x as Double, y as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 82.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14264

82.13.9 CompositeImage(x as Double, y as Double, image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 82.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14264
- 82.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14264

82.13.10 CompositeImage(x as Double, y as Double, path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.
See also:

- 82.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14264

82.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

82.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 82.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14264

82.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

82.13.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and height, using specified composition algorithm, at specified coordinates.

Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 82.13.10 CompositeImage(x as Double, y as Double, path as string) 14261
- 82.13.11 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem) 14261
- 82.13.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem, CompositeOperator as Integer) 14262
- 82.13.13 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS) 14263
- 82.13.14 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GM16ImageMBS, CompositeOperator as Integer) 14263
- 82.13.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14264

82.13.17 Constructor(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new object referencing the given image.

82.13.18 DashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the pattern of dashes and gaps used to stroke paths.
Notes: The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.13.19 DashOffset(offset as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the distance into the dash pattern to start the dash.
Notes: See documentation on SVG's stroke-dashoffset property for usage details.

82.13.20 Draw

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws all draw commands collected.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.type = image.TrueColorType
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.21 DrawPath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw on image using vector path.
Example:

```
// new picture, 500x500 and filled with white
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

dim draw as GM16GraphicsMBS = image.Graphics

// Draw path

dim cr as new GM16ColorRGBMBS("red")
dim gr as new GM16ColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
```

```
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

82.13.22 Ellipse(originX as Double, originY as Double, perimX as Double, perimY as Double, arcStart as Double, arcEnd as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees.
Notes: If a fill color is specified, then the object is filled.

82.13.23 FillColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify drawing object fill color.

82.13.24 FillOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify opacity to use when drawing using fill color.

82.13.25 FillRule(fillRule as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the algorithm which is to be used to determine what parts of the canvas are included inside the shape.
Notes: See documentation on SVG's fill-rule property for usage details.

82.13.26 Font(fontname as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify font name to use when drawing text.

Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

dim draw as GM16GraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GM16ColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello", "")
draw.Draw

Backdrop=image.CopyPicture
```

See also:

- 82.13.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer) 14268

82.13.27 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the font.
Notes: Specify font family, style, weight (one of the set { 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 } with 400 being the normal size), and stretch to be used to select the font used when drawing text. Wildcard matches may be applied to style via the AnyStyle enumeration, applied to weight if weight is zero, and applied to stretch via the AnyStretch enumeration.
See also:

- 82.13.26 Font(fontname as string) 14267

82.13.28 Gravity(GravityType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify text positioning gravity.

82.13.29 Line(startX as Double, startY as Double, endX as Double, endY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a line using stroke color and thickness using starting and ending coordinates
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a line
draw.Line(100,100,400,400)
draw.Draw

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

82.13.30 Matte(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Change the pixel matte value to transparent.
Notes: The point method changes the matte value of the target pixel. The replace method changes the matte value of any pixel that matches the color of the target pixel. Floodfill changes the matte value of any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder changes the matte value of any neighbor pixel that is not the border color, Finally reset changes the matte value of all pixels.

82.13.31 MiterLimit(miterlimit as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

82.13.32 PathArcAbs(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Notes:

The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GM16PathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.

82.13.33 PathArcAbs(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Notes:

The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GM16PathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.
See also:

- 82.13.32 PathArcAbs(c as GM16PathArgsMBS) 14270
- 82.13.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14271

82.13.34 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw an arc

draw.PathMovetoAbs 100,100
draw.PathArcAbs(100,100, 0, false, false, 200,200)
draw.DrawPath
draw.Draw

Backdrop=image.CopyPicture
```

Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

82.13.38 PathClosePath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Close the current subpath by drawing a straight line from the current point to current subpath's most recent starting point (usually, the most recent moveto point).

82.13.39 PathCurvetoAbs(c as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes:

PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 82.13.40 PathCurvetoAbs(c() as GM16PathArgsMBS) 14273
- 82.13.41 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14274

82.13.40 PathCurvetoAbs(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes:

PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the

command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

82.13.45 PathLinetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.46 PathLinetoAbs(c() as GM16CoordinateMBS) 14276
- 82.13.47 PathLinetoAbs(x as Double, y as Double) 14276

82.13.46 PathLinetoAbs(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.47 PathLinetoAbs(x as Double, y as Double) 14276

82.13.47 PathLinetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.45 PathLinetoAbs(c as GM16CoordinateMBS) 14275
- 82.13.46 PathLinetoAbs(c() as GM16CoordinateMBS) 14276

82.13.48 PathLinetoHorizontalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

82.13.49 PathLinetoHorizontalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

82.13.50 PathLinetoRel(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.51 PathLinetoRel(c() as GM16CoordinateMBS) 14277
- 82.13.52 PathLinetoRel(x as Double, y as Double) 14277

82.13.51 PathLinetoRel(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.50 PathLinetoRel(c as GM16CoordinateMBS) 14277
- 82.13.52 PathLinetoRel(x as Double, y as Double) 14277

82.13.52 PathLinetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Example:

```
// new picture, 500x500 and filled with white
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

dim draw as GM16GraphicsMBS = image.Graphics

// Draw path

dim cr as new GM16ColorRGBMBS("red")
dim gr as new GM16ColorRGBMBS("green")
```

```
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.13.50 PathLinetoRel(c as GM16CoordinateMBS) 14277
- 82.13.51 PathLinetoRel(c() as GM16CoordinateMBS) 14277

82.13.53 PathLinetoVerticalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

82.13.54 PathLinetoVerticalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

82.13.55 PathMovetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The "moveto" commands establish a new current point.
Notes:

The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 82.13.56 PathMovetoAbs(x as Double, y as Double) 14279

82.13.56 PathMovetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The "moveto" commands establish a new current point.
Notes:

The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.

- 82.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14282

82.13.63 PathQuadraticCurvetoRel(c() as GM16PathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes:

PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.

- 82.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double) 14282

82.13.64 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

82.13.65 PathSmoothCurvetoAbs(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y).
Notes:

The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

- 82.13.72 PathSmoothQuadraticCurvetoAbs(c() as GM16CoordinateMBS) 14286

82.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 82.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS) 14287
- 82.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14287

82.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GM16PathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 82.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS) 14286
- 82.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14287

82.13.76 PathSmoothQuadraticCurvetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurve-

toAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 82.13.74 PathSmoothQuadraticCurvetoRel(c as GM16CoordinateMBS) 14286
- 82.13.75 PathSmoothQuadraticCurvetoRel(c() as GM16CoordinateMBS) 14287

82.13.77 Point(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw a point using stroke color and thickness at coordinate.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color

dim draw as GM16GraphicsMBS = image.Graphics

// draw cross with pixels
for x as Integer = 240 to 260
draw.Point(x, 250)
next
for y as Integer = 240 to 260
draw.Point(250,y)
next
draw.Draw

Backdrop=image.CopyPicture
```

82.13.78 PointSize(pointSize as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set font point size.

82.13.79 Polygon(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw an arbitrary polygon using stroke color and thickness consisting of three or more

coordinates contained in an array.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color
image.strokeColor = new GM16ColorRGBMBS("green") // set color

dim draw as GM16GraphicsMBS = image.Graphics
dim coordinates(-1) as GM16CoordinateMBS

coordinates.Append new GM16CoordinateMBS(70,70)
coordinates.Append new GM16CoordinateMBS(100,340)
coordinates.Append new GM16CoordinateMBS(380,200)
coordinates.Append new GM16CoordinateMBS(70,70)

draw.Polygon coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.13.80 Polyline(values() as GM16CoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw an arbitrary polyline using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("green") // set color

dim draw as GM16GraphicsMBS = image.Graphics
dim coordinates(-1) as GM16CoordinateMBS

coordinates.Append new GM16CoordinateMBS(70,70)
coordinates.Append new GM16CoordinateMBS(100,340)
coordinates.Append new GM16CoordinateMBS(380,200)
```

```
draw.Polyline coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.13.81 PopClipPath

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pop (terminate) clip path definition started by PushClipPath.

82.13.82 PopGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pop Graphic Context.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorMBS() // transparent fillcolor
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: Removing the current graphic context from the graphic context stack restores the options to the values they had prior to the preceding PushGraphicContext operation.

82.13.83 PopPattern

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Terminate a pattern definition started via PushPattern.

82.13.84 PushClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Push (create) clip path definition with id.
Notes: Clip patch definition consists of subsequent drawing commands, terminated by PopClipPath.

82.13.85 PushGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Push Graphic Context.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorMBS() // transparent fillcolor
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: When a graphic context is pushed, options set after the context is pushed (such as coordinate transformations, color settings, etc.) are saved to a new graphic context. This allows related options to be saved

on a graphic context "stack" in order to support heirarchical nesting of options. When PopGraphicContext is used to pop the current graphic context, the options in effect during the last PushGraphicContext operation are restored.

82.13.86 PushPattern(id as string, x as Integer, y as Integer, width as Integer, height as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Start a pattern definition with arbitrary pattern name specified by id, pattern offset specified by x and y, and pattern size specified by width and height.
Notes: The pattern is defined within the coordinate system defined by the specified offset and size. Arbitrary drawing objects (including DrawableCompositeImage) may be specified between PushPattern and PopPattern in order to draw the pattern. Normally the pair PushGraphicContext & PopGraphicContext are used to enclose a pattern definition. Pattern definitions are terminated by a PopPattern object.

82.13.87 Rectangle(upperLeftX as Double, upperLeftY as Double, lowerRightX as Double, lowerRightY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a rectangle
draw.Rectangle(250, 250, 100, 100)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.13.88 Rotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set rotation to use when drawing (coordinate transformation).
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Rotation 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.89 RoundRectangle(centerX as Double, centerY as Double, width as Double, height as Double, cornerWidth as Double, cornerHeight as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a round rectangle
draw.RoundRectangle(250, 250, 100, 100,20,20)
draw.Draw
```

Backdrop=image.CopyPicture

Notes: If a fill color is specified, then the object is filled.

82.13.90 Scaling(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply scaling in x and y direction while drawing objects (coordinate transformation).
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics
draw.FillColor new GM16ColorRGBMBS("red")

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Scaling 1.2,1.1
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.91 SkewX(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Skew in X direction (coordinate transformation)
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics
```

```
draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewX 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.92 SkewY(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Skew in Y direction.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewY 5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.93 StrokeAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Antialias while drawing lines or object outlines.

82.13.94 StrokeColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set color to use when drawing lines or object outlines.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.95 StrokeLineCap(LineCap as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the end of open subpaths when they are stroked.
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.

82.13.96 StrokeLineJoin(LineJoin as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked.
Notes: Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.

82.13.97 StrokeOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Opacity to use when drawing lines or object outlines.

82.13.98 StrokeWidth(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set width to use when drawing lines or object outlines.

82.13.99 Text(x as Double, y as Double, text as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate image with text using stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

dim draw as GM16GraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GM16ColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello")
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label).
See also:

- 82.13.100 Text(x as Double, y as Double, text as string, encoding as string) 14297

82.13.100 Text(x as Double, y as Double, text as string, encoding as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate image with text represented with text encoding, using current stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Notes:

If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label()).

The text encoding specifies the code set to use for text annotations. The only character encoding which may be specified at this time is "UTF-8" for representing Unicode as a sequence of bytes. Specify an empty string to set text encoding to the system's default. Successful text annotation using Unicode may require fonts designed to support Unicode.

Seems like you need ghostscript or the DPS library for text handling, so it may no be available for you.
See also:

- 82.13.99 Text(x as Double, y as Double, text as string) 14297

82.13.101 TextAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Antialias while drawing text (default true).
Notes: The main reason to disable text antialiasing is to avoid adding new colors to the image.

82.13.102 TextDecoration(DecorationType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify decoration (e.g. UnderlineDecoration) to apply to text.

82.13.103 TextUnderColor(c as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a box under rendered text using the specified color.

82.13.104 Translation(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply coordinate translation (set new coordinate origin).
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

draw.StrokeColor new GM16ColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Translation 5,5
draw.StrokeColor new GM16ColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.13.105 Viewbox(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Dimensions of the output viewbox.
Notes: If the image is to be written to a vector format (e.g. MVG or SVG), then a PushGraphicContext() object should be pushed to the head of the list, followed by a Viewbox() statement to establish the output canvas size. A matching PopGraphicContext() object should be pushed to the tail of the list.

82.13.106 Properties

82.13.107 Image as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image this graphics object belongs to.
Notes: (Read only property)

82.14 class GM16ImageArrayMBS

82.14.1 class GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an array of images in GraphicsMagick.
Example:

```
// extract all layers of photoshop file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.psd")
dim images as new GM16ImageArrayMBS

images.readImages(file.UnixpathMBS)

dim c as Integer = images.size
for i as Integer = 0 to c-1
dim image as GM16ImageMBS = images.Image(i)
file = SpecialFolder.Desktop.Child(image.FileName+"."+str(i)+".png")
image.write(file)
next
```

Notes: Can be used to assemble/disassemble gif images.

82.14.2 Methods

82.14.3 animateImages

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Animate a sequence of image frames.
Notes: Image frames are displayed in succession, creating an animated effect. The animation options are taken from the first image frame. This feature is only supported under X11 at the moment.

82.14.4 append(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds an image to the end of the array.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)
```

```
// put copy of first image on the back
dim n as GM16ImageMBS = g.FirstImage
g.append n

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

82.14.5 appendImages(stack as boolean = false) as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Append a sequence of image frames, writing the result to new image.
Notes: All the input image frames must have the same width or height. Image frames of the same width are stacked top-to-bottom. Image frames of the same height are stacked left-to-right. If the stack parameter is false, rectangular image frames are stacked left-to-right otherwise top-to-bottom.

82.14.6 averageImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Average a sequence of image frames, writing the result to averagedImage.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// averageImages
dim n as GM16ImageMBS = g.averageImages
Backdrop = n.CopyPicture
```

Notes: All the input image frames must be the same size in pixels.

82.14.7 coalesceImages as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create a coalesced image sequence obtained by "playing" the image sequence (observing page

offsets and disposal methods) to create a new image sequence in which all frames are full size and completely rendered.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// deconstruct
g = g.coalesceImages

// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: Note that if the original image sequence relied on page offsets and disposal methods that the resulting sequence will be larger (perhaps much larger) then the original. This is useful for GIF animation sequences that have page offsets and disposal methods. The resuting image sequence is returned.

82.14.8 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty image array.

82.14.9 deconstructImages as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Break down an image sequence into constituent parts.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// deconstruct
g = g.deconstructImages

// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: This is useful for creating GIF or MNG animation sequences.

82.14.10 displayImages

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Display a sequence of image frames.
Notes:

Through use of a pop-up menu, image frames may be selected in succession. This feature is fully supported under X11 but may have only limited support in other environments.
Caution: if an image format is is not compatable with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

display methods are not supported currently.

82.14.11 FirstImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns first image in array.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// show first image
dim img as GM16ImageMBS = g.FirstImage

// convert to true color for CopyPicture to work
const TrueColorType=6
img.type=TrueColorType

Backdrop = img.CopyPicture
```

82.14.12 flattenImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Merge a sequence of image frames which represent image layers into a single composited

representation.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// put copy of first image on the back
dim n as GM16ImageMBS = g.flattenImages

Backdrop = n.CopyPicture
```

Notes: Returns the flattened image. This function is useful for combining Photoshop layers into a single image.

82.14.13 Image(index as Integer) as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries image with given index.

82.14.14 insert(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Inserts an image on the front.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// put copy of first image on the front
dim n as GM16ImageMBS = g.FirstImage
g.insert n

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

82.14.15 LastImage as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns last image in array.

82.14.16 mapImages(map as GM16ImageMBS, dither as boolean = true, measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace the colors of a sequence of images with the closest color from a reference image.
Notes: Set dither to true to enable dithering. Set measureError to true in order to evaluate quantization error.

82.14.17 montageImages(options as GM16MontageMBS) as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create a composite image by combining several separate image frames.
Example:

```
// build montage
dim StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(& cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(& c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
dim logo as Picture = LogoMBS(500)
dim image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Dim StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
dim resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: Multiple frames may be generated in the output array depending on the tile setting and the number of image frames montaged. Montage options are provided via the parameter options. Options set in the first image frame (backgroundColor, borderColor, matteColor, fillColor, strokeColor, font and fontPointsize) are also used as options by montageImages().

82.14.18 morphImages(frames as Integer) as GM16ImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Morph a seqence of image frames.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// coalesce to make sure we have full images
g = g.coalesceImages
// morph to 10 pictures
g = g.morphImages(10)

// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: This algorithm expands the number of image frames (output to the new image array) by adding the number of intervening frames specified by frames such that the original frames morph (blend) into each other when played as an animation.

82.14.19 mosaicImages as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Inlay a number of images to form a single coherent picture.
Notes: The result image argument is updated with a mosaic constructed from the image sequence.

82.14.20 quantizeImages(measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quantize colors in images using current quantization settings.
Notes: Set measureError to true in order to measure quantization error.

82.14.21 readImages(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read a sequence of image frames into existing container (appending to array) from blob.
See also:

- 82.14.22 readImages(imageSpec as string) 14308

82.14.22 readImages(imageSpec as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read a sequence of image frames into existing container (appending to array) with image names specified in the string imageSpec.
See also:

- 82.14.21 readImages(blob as GM16BlobMBS) 14308

82.14.23 remove(index as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the image with the given index.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// remove first
g.remove 0

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

Notes: Index should be between 0 and size-1.

82.14.24 reverse

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reverses the order of images in the array.

82.14.25 writeImages(blob as GM16BlobMBS, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes images to the given blob object.
Notes:

Write images in container to in-memory BLOB specified by Blob blob. Set adjoin to false to write a set of image frames via a wildcard imageSpec (e.g. image% 02d.miff).
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 82.14.26 writeImages(imageSpec as string, adjoin as boolean = true) 14309

82.14.26 writeImages(imageSpec as string, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes images to the given path.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

Notes:

Write images in container to file specified by string imageSpec. Set adjoin_ to false to write a set of image frames via a wildcard imageSpec (e.g. image% 02d.miff).
The wildcard must be one of % 0Nd, % 0No, or % 0Nx.
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 82.14.25 writeImages(blob as GM16BlobMBS, adjoin as boolean = true) 14309

82.14.27 Properties

82.14.28 empty as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Checks whether image array is empty.
Notes:

Returns true if array is empty or false if not.
(Read only property)

82.14.29 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal handle of the image array.
Notes:

Should always be non zero.
(Read and Write property)

82.14.30 size as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns number of images in this array.
Example:

```
// read gif
dim g as new GM16ImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// display number of images
MsgBox str(g.size)
```

Notes: (Read only property)

82.15 class GM16ImageChannelStatisticsMBS

82.15.1 class GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The statistics for image channel.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim stat as GM16ImageStatisticsMBS = g.statistics
dim gs as GM16ImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

82.15.2 Methods

82.15.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

82.15.4 Properties

82.15.5 maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum value observed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim stat as GM16ImageStatisticsMBS = g.statistics
dim gs as GM16ImageChannelStatisticsMBS = stat.green

MsgBox "maximum green color: "+str(gs.maximum)
```

Notes: (Read only property)

82.15.6 mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Average (mean) value observed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim stat as GM16ImageStatisticsMBS = g.statistics
dim r as GM16ImageChannelStatisticsMBS = stat.red

MsgBox "mean red color: "+str(R.mean)
```

Notes: (Read only property)

82.15.7 minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Minimum value observed.
Notes: (Read only property)

82.15.8 standardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Standard deviation, sqrt(variance).
Notes: (Read only property)

82.15.9 variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Variance.
Notes: (Read only property)

82.16 class GM16ImageMBS

82.16.1 class GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image is the primary object in Magick++ and represents a single image frame (see image design).
Example:

```
dim c as new GM16ColorMBS("white")
dim g as new GM16GeometryMBS(100,100)
dim image as new GM16ImageMBS(g, c)
```

Notes:

With MBS Plugin 14.0 we offer this classes in 8bit (GM prefix) or 16bit (GM16 prefix).

The GM16ImageArrayMBS class must be used to operate on image sequences or images (e.g. of format GIF, TIFF, MIFF, Postscript, & MNG) which are comprized of multiple image frames. Individual frames of a multi-frame image may be requested by adding array-style notation to the end of the file name (e.g. "animation.gif [3] " retrieves the fourth frame of a GIF animation. Various image manipulation operations may be applied to the image. Attributes may be set on the image to influence the operation of the manipulation operations. The GM16PixelsMBS class provides low-level access to image pixels.

82.16.2 Blog Entries

82.16.3 Methods

82.16.4 adaptiveThreshold(width as UInt32, height as UInt32, offset as double = 0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply adaptive thresholding to the image.
Notes:

see:
http://www.dai.ed.ac.uk/HIPR2/adpthrsh.htm

Adaptive thresholding is useful if the ideal threshold level is not known in advance, or if the illumination gradient is not constant across the image. Adaptive thresholding works by evaulating the mean (average) of a pixel region (size specified by width and height) and using the mean as the thresholding value. In order to remove residual noise from the background, the threshold may be adjusted by subtracting a constant offset (default zero) from the mean to compute the threshold.

82.16.5 addNoise(noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add noise to image with the specified noise type.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.addNoise(image.GaussianNoise)

Backdrop=image.CopyPicture
```

Notes: Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

82.16.6 addNoiseChannel(channel as Integer, noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add noise to an image channel with the specified noise type. The channel parameter specifies the channel to add noise to.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.addNoiseChannel(image.BlueChannel, image.ImpulseNoise)

Backdrop=image.CopyPicture
```

Notes:

The noiseType parameter specifies the type of noise.
Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, Pois-

sonNoise, UniformNoise.

82.16.7 affineTransform(sx as Double, sy as Double, rx as Double, ry as Double, tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies an affine transformation to the drawing matrix.
Notes: Specify a transformation matrix to adjust scaling, rotation, and translation (coordinate transformation) for subsequently drawn objects in the same or decendent drawing context. The sx & sy parameters represent the x & y scale factors, the rx & ry parameters represent the x & y rotation, and the tx & ty parameters represent the x & y translation.

82.16.8 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate using specified text, bounding area, and placement gravity.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the

image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.16.10 annotate(text as string, gravity as Integer) 14317
- 82.16.11 annotate(text as string, location as GM16GeometryMBS) 14318

82.16.9 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer, degrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate with text using specified text, bounding area, placement gravity, and rotation.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u

a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.16.10 annotate(text as string, gravity as Integer) 14317
- 82.16.11 annotate(text as string, location as GM16GeometryMBS) 14318

82.16.10 annotate(text as string, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate with text (bounding area is entire image) and placement gravity.
Example:

```
dim White as new GM16ColorGrayMBS(1)
dim Black as new GM16ColorGrayMBS(0)
dim geo as new GM16GeometryMBS("300x200")

dim g as new GM16ImageMBS(geo, White)

g.antiAlias = False
g.fillColor = Black
g.lineWidth = 1
g.strokeColor = Black
g.font = "@/Library/Fonts/Tahoma.ttf"
g.fontPointsize = 15

g.annotate("Hello World", g.SouthGravity)

Backdrop = g.CopyPicture
```

Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.16.11 annotate(text as string, location as GM16GeometryMBS) 14318

82.16.11 annotate(text as string, location as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate using specified text, and placement location.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.
See also:

- 82.16.8 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer) 14315
- 82.16.9 annotate(text as string, boundingArea as GM16GeometryMBS, gravity as Integer, degrees as Double) 14316
- 82.16.10 annotate(text as string, gravity as Integer) 14317

82.16.12 attributeValues as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A dictionary with all attributes.
Notes: As attributes are created on demand, this will only return all so far generated attributes.

82.16.13 autoOrient

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Orient image to be right-side up based on its current orientation attribute.
Notes: This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

82.16.14 blur(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur an image with the specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.blur(30,10)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.15 blurChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur an image channel with the specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.blurChannel(image.BlueChannel, 30,10)

Backdrop=image.CopyPicture
```

Notes: The channel parameter specifies the channel to modify. The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.16 border

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Border image (add border to image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

image.border

Backdrop=image.CopyPicture

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 82.16.17 border(geometry as GM16GeometryMBS) 14321

82.16.17 border(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Border image (add border to image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.border GM16GeometryMBS.Make(10,10)

Backdrop=image.CopyPicture
```

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 82.16.16 border 14320

82.16.18 borderGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for border.

82.16.19 cacheThreshold(threshold as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pixel cache threshold in megabytes.
Notes: Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

82.16.20 cdl(cdl as string)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Bake in the ASC-CDL.
Notes: Bake in the ASC-CDL, which is a convention for the for the exchange of basic primary color grading information between for the exchange of basic primary color grading information between equipment and software from different manufacturers. It is a useful transform for other purposes as well.

82.16.21 channel(channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extract channel from image.
Notes: Use this option to extract a particular channel from the image. MatteChannel for example, is useful for extracting the opacity values from an image.

82.16.22 charcoal(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal effect image (looks like charcoal sketch).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.charcoal

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.23 chop(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chop image (remove vertical or horizontal subregion of image).

82.16.24 colorHistogram as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates histogram.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim d as Dictionary = g.colorHistogram

MsgBox str(d.Count)+" color"

// check first color
dim c as GM16ColorMBS = d.key(0)

MsgBox "Color "+str(c.colorValue)+": "+str(d.Value(c))
```

Notes: The dictionary has a GM16ColorMBS/GMColor16MBS object as key for each color and an unsigned integer as value.

82.16.25 colorize(opacity as UInt32, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorize image with pen color, using specified percent opacity.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.colorize(10, new GM16ColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 82.16.26 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GM16ColorMBS) 14324

82.16.26 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorize image with pen color, using specified percent opacity for red, green, and blue quantums.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.colorize(10, 0, 5, new GM16ColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 82.16.25 colorize(opacity as UInt32, penColor as GM16ColorMBS) 14323

82.16.27 colorMap as GM16ColorMBS()

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries array with all colors in color map.
See also:

- 82.16.299 colorMap(index as UInt32) as GM16ColorMBS 14419

82.16.28 colorMatrix(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply a color matrix to the image channels.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

dim m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0
```

```
m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.colorMatrix 3, m

Backdrop = g.CopyPicture
```

Notes: The user supplied matrix may be of order 1 to 5 (1x1 through 5x5).

82.16.29 CombinePictureWithMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image with mask.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

dim c as new GM16ColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

Notes: Internally this calls Width and Height, CopyPicture and CopyMask.

82.16.30 compare(image as GM16ImageMBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compare current image with another image.
Notes: Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical. An ErrorOption exception is thrown if the reference image columns, rows, colorspace, or matte differ from the current image:

82.16.31 composite(compositeImage as GM16ImageMBS, gravity as Integer, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.16.32 composite(compositeImage as GM16ImageMBS, offset as GM16GeometryMBS, CompositeOperator as Integer=2) 14326
- 82.16.33 composite(compositeImage as GM16ImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2) 14326

82.16.32 composite(compositeImage as GM16ImageMBS, offset as GM16GeometryMBS, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.16.31 composite(compositeImage as GM16ImageMBS, gravity as Integer, CompositeOperator as Integer=2) 14326
- 82.16.33 composite(compositeImage as GM16ImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2) 14326

82.16.33 composite(compositeImage as GM16ImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.16.31 composite(compositeImage as GM16ImageMBS, gravity as Integer, CompositeOperator as Integer=2) 14326
- 82.16.32 composite(compositeImage as GM16ImageMBS, offset as GM16GeometryMBS, CompositeOperator as Integer=2) 14326

82.16.34 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Default constructor.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GM16ImageMBS
dim blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.16.35 Constructor(blob as GM16BlobMBS) 14327
- 82.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14328
- 82.16.37 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32) 14329
- 82.16.39 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14330
- 82.16.40 Constructor(file as folderitem) 14330
- 82.16.41 Constructor(other as GM16ImageMBS) 14331
- 82.16.42 Constructor(Path as string) 14332
- 82.16.43 Constructor(pic as picture) 14332
- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.35 Constructor(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct Image from in-memory Blob.
See also:

- 82.16.34 Constructor 14326
- 82.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14328

- 82.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string) 14329
- 82.16.39 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14330
- 82.16.40 Constructor(file as folderitem) 14330
- 82.16.41 Constructor(other as GM16ImageMBS) 14331
- 82.16.42 Constructor(Path as string) 14332
- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct Image of specified size from in-memory Blob.
See also:

- 82.16.34 Constructor 14326
- 82.16.35 Constructor(blob as GM16BlobMBS) 14327
- 82.16.37 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32) 14329
- 82.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string) 14329
- 82.16.39 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14330
- 82.16.40 Constructor(file as folderitem) 14330
- 82.16.41 Constructor(other as GM16ImageMBS) 14331
- 82.16.43 Constructor(pic as picture) 14332
- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.37 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct Image of specified size and depth from in-memory Blob.
See also:

- 82.16.34 Constructor 14326
- 82.16.35 Constructor(blob as GM16BlobMBS) 14327
- 82.16.36 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS) 14328
- 82.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string) 14329
- 82.16.39 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14330
- 82.16.40 Constructor(file as folderitem) 14330
- 82.16.42 Constructor(Path as string) 14332
- 82.16.43 Constructor(pic as picture) 14332
- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct Image of specified size, depth, and format from in-memory Blob.
See also:

- 82.16.34 Constructor 14326
- 82.16.35 Constructor(blob as GM16BlobMBS) 14327

82.16.42 Constructor(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct from image file or image specification.
See also:

- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.43 Constructor(pic as picture)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new GMImage with the given picture.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
Backdrop=image.CopyPicture
```

Notes: Pixels from both the picture and picture's mask.

- 82.16.38 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, depth as UInt32, Magick as string) 14329
- 82.16.39 Constructor(blob as GM16BlobMBS, geometry as GM16GeometryMBS, Magick as string) 14330
- 82.16.40 Constructor(file as folderitem) 14330
- 82.16.41 Constructor(other as GM16ImageMBS) 14331
- 82.16.42 Constructor(Path as string) 14332
- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct a blank image canvas of specified size and color.
Example:

```
dim g as new GM16GeometryMBS(600,600)
dim c as new GM16ColorRGBMBS(1.0,0.0,0.0) // red
dim image as new GM16ImageMBS(g, c)

const TrueColorType=6

// Ensure that there are no other references to this image.
image.modifyImage
// Set the image type to TrueColor DirectClass representation.
image.type=TrueColorType

Backdrop=image.CopyPicture(0,0,600,600)
```

- 82.16.41 Constructor(other as GM16ImageMBS) 14331
- 82.16.42 Constructor(Path as string) 14332
- 82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14334

82.16.45 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Example:

```
dim data as new memoryblock(2048*2048) // your data
dim image as new GM16ImageMBS(2048, 2048, "I", GM16ImageMBS.StorageTypeCharPixel, data)
```

Notes:

Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GM16ImageMBS(640, 480, "RGB", GM16ImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C =

cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

- 82.16.44 Constructor(size as GM16GeometryMBS, ColorValue as GM16ColorMBS) 14333

82.16.46 contrast(sharpen as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Contrast image (enhance intensity differences in image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.contrast(10)

Backdrop=image.CopyPicture
```

82.16.47 convolve(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Convolve image.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

dim m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.convolve 3, m

Backdrop = g.CopyPicture
```

Notes:

Applies a user-specified convolution to the image.
order represents the number of columns and rows in the filter kernel.
kernel is an array of doubles representing the convolution kernel.

82.16.48 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image and returns it as a new picture.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
```

```
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Rectangle(250, 250, 100, 100)

Backdrop=image.CopyPicture
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 82.16.49 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14337

82.16.49 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image and returns it as a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture(0,0,250,250)
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 82.16.48 CopyPicture as picture 14336

82.16.50 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image's mask and returns it as a new picture.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim g As New GM16ImageMBS(f)
```

```
// get image with mask
Dim p As picture = g.CopyPicture
p.mask = g.CopyPictureMask

window1.Backdrop = p
```

See also:

- 82.16.51 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14338

82.16.51 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image's mask and returns it as a new picture.
See also:

- 82.16.50 CopyPictureMask as picture 14337

82.16.52 CopyPixelsMemory as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy the pixels as they are into a memoryblock.
Notes:

Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GM16ImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 82.16.53 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock 14338

82.16.53 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy the pixels as they are into a memoryblock.
Notes:

Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GM16ImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 82.16.52 CopyPixelsMemory as Memoryblock 14338

82.16.54 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Example:

```
// get test image
dim logo as Picture = LogoMBS(500)

// create GraphicsMagick image
dim g as new GM16ImageMBS(logo)

// make a HBitmap
dim hBitmap as ptr = g.CreateHBITMAP

// convert back to Xojo picture
dim pic as Picture = WindowsBitmapMBS.HBitmapToPicture(hBitmap, true)

// show in window
Backdrop = pic

// and cleanup memory
WindowsBitmapMBS.DeleteBitmap(hBitmap)
```

Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

82.16.55 crop(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop image (return subregion of original image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

```
image.crop GM16GeometryMBS.Make(100,200)

Backdrop=image.CopyPicture
```

82.16.56 cycleColormap(amount as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Cycle (rotate) image colormap.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.cycleColormap(5)

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

82.16.57 despeckle

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Despeckle image (reduce speckle noise).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.despeckle

Backdrop=image.CopyPicture
```

82.16.58 display

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Display image on screen.
Notes:

Caution: if an image format is is not compatible with the display visual (e.g. JPEG on a colormapped

display) then the original image will be altered. Use a copy of the original if this is a problem.

The plugin is not compiled with X11 so this call may not be useful.

82.16.59 edge(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Edge image (hilight edges in image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.edge

Backdrop=image.CopyPicture
```

Notes: The radius is the radius of the pixel neighborhood. Specify a radius of zero for automatic radius selection.

82.16.60 emboss(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Emboss image (hilight edges with 3D effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.emboss

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.61 enhance

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enhance image (minimize noise).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.enhance

Backdrop=image.CopyPicture
```

82.16.62 erase

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set all image pixels to the current background color.

82.16.63 extent(geo as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// extend image to fit
dim geo as new GM16GeometryMBS(500,500)
image.extent geo

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS)

- 82.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14343
- 82.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14344

82.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// extend image to fit
dim geo as new GM16GeometryMBS(500,500)
dim col as GM16ColorMBS = GM16ColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.16.63 extent(geo as GM16GeometryMBS) 14342
- 82.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14343
- 82.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14344

82.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)
```

```
// extend image to fit
dim geo as new GM16GeometryMBS(500,500)
dim col as GM16ColorMBS = GM16ColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.16.63 extent(geo as GM16GeometryMBS) 14342

- 82.16.66 extent(geo as GM16GeometryMBS, gravity as Integer) 14344

82.16.66 extent(geo as GM16GeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// resize proportionally to fit
dim geo as new GM16GeometryMBS(500,500)
image.extent geo, image.CenterGravity

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.

- 82.16.64 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS) 14343

- 82.16.65 extent(geo as GM16GeometryMBS, backgroundColor as GM16ColorMBS, gravity as Integer) 14343

82.16.67 flip

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flip image (reflect each scanline in the vertical direction).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.flip

Backdrop=image.CopyPicture
```

82.16.68 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14345
- 82.16.70 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14346
- 82.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14346

82.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 82.16.68 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14345

- 82.16.70 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14346
- 82.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14346

82.16.70 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.68 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14345
- 82.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14345
- 82.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14346

82.16.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 82.16.68 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14345
- 82.16.69 floodFillColor(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14345
- 82.16.70 floodFillColor(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14346

82.16.72 floodFillOpacity(x as UInt32, y as UInt32, opacity as UInt32, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill pixels matching color (within fuzz factor) of target pixel(x,y) with replacement opacity value using method.

82.16.73 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14347
- 82.16.75 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14347
- 82.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348

82.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.73 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14347
- 82.16.75 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14347
- 82.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348

82.16.75 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.73 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14347
- 82.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14347
- 82.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14348

82.16.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.16.73 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS) 14347
- 82.16.74 floodFillTexture(point as GM16GeometryMBS, fillColor as GM16ColorMBS, borderColor as GM16ColorMBS) 14347
- 82.16.75 floodFillTexture(x as UInt32, y as UInt32, fillColor as GM16ColorMBS) 14347

82.16.77 flop

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flop image (reflect each scanline in the horizontal direction).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.flop

Backdrop=image.CopyPicture
```

82.16.78 FontMap as string

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries current font map in use.
Notes:

The MBS Plugin provides to GraphicsMagick the font map to use.
This is a XML defining which fonts are available.
Use this function to learn what fonts may be available or debug to see why a font doesn't load.

82.16.79 fontTypeMetrics(name as string) as GM16TypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain font metrics for text string given current font, pointsize, and density settings.

82.16.80 formatExpression(expression as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format the specified expression similar to command line '-format'.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: For example "% wx% h" is converted to a string containing image WIDTHxHEIGHT like "640x480".

82.16.81 frame

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.frame

Backdrop=image.CopyPicture
```

See also:

- 82.16.82 frame(geometry as GM16GeometryMBS) 14349
- 82.16.83 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14350

82.16.82 frame(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.frame(GM16GeometryMBS.Make("10x10"))

Backdrop=image.CopyPicture
```

See also:

- 82.16.81 frame 14349
- 82.16.83 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14350

82.16.83 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.frame(15,15)

Backdrop=image.CopyPicture
```

See also:

- 82.16.81 frame 14349
- 82.16.82 frame(geometry as GM16GeometryMBS) 14349

82.16.84 frameGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for frame.

82.16.85 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma correct the image or individual image channels.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.gamma(1,2,3)

Backdrop=image.CopyPicture
```

See also:

- 82.16.242 gamma as Double 14403

82.16.86 gaussianBlur(width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gaussian blur image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.gaussianBlur(30, 10)

Backdrop=image.CopyPicture
```

Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma

82.16.87 gaussianBlurChannel(channel as Integer, width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gaussian blur image channel.
Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma.

82.16.88 getChromaBluePrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity blue primary point.

82.16.89 getchromaGreenPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

82.16.90 getchromaRedPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

82.16.91 getchromaWhitePoint(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

82.16.92 getConstPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers read-only pixels from the image to the pixel cache as defined by the specified region

82.16.93 GetEXIFOrientation(byref orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries orientation from EXIF.
Notes:

Orientation is set to number from 0 to 8 depending on rotation. -1 if unknown.
This function can only read orientation, if there is an EXIF block in image.

Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

82.16.94 getPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers pixels from the image to the pixel cache as defined by the specified region.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

// get pointer to some pixels to write
dim x as ptr = g.getPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via syncPixels. This method is valid for DirectClass images.

82.16.95 Graphics as GM16GraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a graphics object for this image.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)
```

```
image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: Using the graphics object you can draw on the image.

82.16.96 haldClut(image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply a color lookup table (Hald CLUT) to the image.

82.16.97 Hash as String

MBS GraphicsMagick Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates a hash of the image.
Example:

```
Dim p As Picture = LogoMBS(500)
Dim g As New GM16ImageMBS(p)
msgbox g.Hash
```

Notes:

Hash is returned as 64 characters being 1 or 0.
We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.
This hash is quite immune against resizing, compression artifacts and hue changes.
You can use LevenshteinDistanceMBS or JaroWinklerDistanceMBS to compare two hashes.

82.16.98 implode(factor as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Implode image (special effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.implode(0.3)

Backdrop=image.CopyPicture
```

82.16.99 JasperLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for jasper library.

82.16.100 label(text as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Assign a label to an image.
Notes: Use this option to assign a specific label to the image. Optionally you can include the image filename, type, width, height, or scene number in the label by embedding special format characters. If the first character of string is @, the image label is read from a file titled by the remaining characters in the string. When converting to Postscript, use this option to specify a header string to print above the image.
See also:

- 82.16.253 label as string 14406

82.16.101 level(black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Level image to increase image contrast, and/or adjust image gamma.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.level(0, 127.0)
```

Backdrop=image.CopyPicture

Notes: Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten:

82.16.102 levelChannel(channel as Integer, black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Level image channel to increase image contrast, and/or adjust image gamma.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.levelChannel(image.BlueChannel, 0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image channel by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

82.16.103 LibVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the version string of the GraphicsMagick library.

82.16.104 magnify

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magnify image by integral size (double the dimensions)
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.magnify

Backdrop=image.CopyPicture
```

82.16.105 map(mapImage as GM16ImageMBS, dither as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Remap image colors with closest color from a reference image.
Example:

```
// some picture we want to map colors
dim pic as Picture = LogoMBS(500)

// build a picture with palette
dim backgroundColor as new GM16ColorMBS(255,255,255) // white
dim size as new GM16GeometryMBS(10,10)

dim i as new GM16ImageMBS(pic)
dim x as new GM16ImageMBS(size, backgroundColor)

x.pixelColor(0,0) = new GM16ColorMBS(0 ,0 ,0 ) // black
x.pixelColor(0,1) = new GM16ColorMBS(255,0 ,0 ) // red
x.pixelColor(0,2) = new GM16ColorMBS(0 ,255,0 ) // green
x.pixelColor(0,3) = new GM16ColorMBS(0 ,0 ,255) // blue
x.pixelColor(0,4) = new GM16ColorMBS(255,255,0 ) // yellow
x.pixelColor(0,5) = new GM16ColorMBS(0 ,255,255) // cyan
x.pixelColor(0,6) = new GM16ColorMBS(255,0 ,255) // magenta

// do the map
i.map(x, false)

// convert result from palette picture to bitmap picture
i.type = i.TrueColorType

// and copy picture to backdrop
Backdrop = i.CopyPicture
```

Notes: Set dither to true in to apply Floyd/Steinberg error diffusion to the image. By default, color reduction chooses an optimal set of colors that best represent the original image. Alternatively, you can choose a particular set of colors from an image file with this option.

82.16.106 matteFloodfill(target as GM16ColorMBS, opacity as UInt32, x as Integer, y as Integer, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Floodfill designated area with a replacement opacity value.

82.16.107 medianFilter(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Filter image by replacing each pixel component with the median color in a circular neighborhood.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.medianFilter(10)

Backdrop=image.CopyPicture
```

82.16.108 minify

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce image by integral (half) size.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.minify

Backdrop=image.CopyPicture
```

82.16.109 modequalizeifyImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Not documented.

82.16.110 modifyImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Prepare to update image (copy if reference >1).
Notes: Normally Magick++'s implicit reference counting takes care of all instance management. In the rare case that the automatic instance management does not work, use this method to assure that there is only one reference to the image to be modified. It should be used in the cases where a GraphicsMagick C function is used directly on an image which may have multiple references:

82.16.111 modulate(brightness as Double, saturation as Double, hue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Modulate percent hue, saturation, and brightness of an image.
Example:

```
dim logo as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(logo)

image.type = image.TrueColorType

// brightness 150%
image.modulate(150,100,100)
backdrop = image.CopyPicture
```

Notes: Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

82.16.112 montageGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile size and offset within an image montage.
Notes: Only valid for montage images.

82.16.113 motionBlur(radius as Double, sigma as Double, angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Motion blur image with specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.motionBlur(30,10,90)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels. The angle parameter specifies the angle the object appears to be comming from (zero degrees is from the right).

82.16.114 negate(grayscale as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negate colors in image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.negate

Backdrop=image.CopyPicture
```

Notes: Set grayscale to only negate grayscale values in image.

82.16.115 normalize

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Normalize image (increase contrast by normalizing the pixel values to span the full range of color values).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

image.normalize

Backdrop=image.CopyPicture

82.16.116 oilPaint(radius as Double=3.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Oilpaint image (image looks like an oil painting).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.oilPaint

Backdrop=image.CopyPicture
```

82.16.117 opacity(opacity as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or attenuate the opacity channel in the image.
Notes: If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB. The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

82.16.118 opaque(opaqueColor as GM16ColorMBS, penColor as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Change color of specified opaque pixel to specified pen color.

82.16.119 ping(data as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the blob.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels

are not valid after calling ping.
See also:

- 82.16.120 ping(file as folderitem) 14362
- 82.16.121 ping(Path as string) 14363

82.16.120 ping(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// try with Constructor (same as read)
dim t1 as Double = Microseconds
dim g1 as new GM16ImageMBS(f)

// now just ping
dim t2 as Double = Microseconds
dim g2 as new GM16ImageMBS
g2.ping(f)

// or read
dim t3 as Double = Microseconds
dim g3 as new GM16ImageMBS
g3.read(f)

dim t4 as Double = Microseconds

// show speeds
MsgBox str(T4-t3)+" µs for read"+EndOfLine+_
str(T3-t2)+" µs for ping"+EndOfLine+_
str(T2-t1)+" µs for Constructor"
```

Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 82.16.119 ping(data as GM16BlobMBS) 14361
- 82.16.121 ping(Path as string) 14363

82.16.121 ping(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the image specification.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 82.16.119 ping(data as GM16BlobMBS) 14361
- 82.16.120 ping(file as folderitem) 14362

82.16.122 PNGLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries PNG library version string.

82.16.123 quantize(measureError as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quantize image (reduce number of colors).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Set measureError to true in order to calculate error attributes.

82.16.124 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the quantum depth.

82.16.125 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

const AddQuantumOp = 1
const ThresholdQuantumOp = 10

g.quantumOperator( g.AllChannels, AddQuantumOp, 100)

// show
me.Backdrop = g.CopyPicture
```

See also:

- 82.16.126 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double) 14364

82.16.126 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
See also:

- 82.16.125 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double) 14364

82.16.127 raiseGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for raise.

82.16.128 raiseImage

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.raiseImage

Backdrop=image.CopyPicture
```

See also:

- 82.16.129 raiseImage(geometry as GM16GeometryMBS, raisedFlag as boolean=false) 14365

82.16.129 raiseImage(geometry as GM16GeometryMBS, raisedFlag as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.raiseImage(GM16GeometryMBS.Make(5,8))

Backdrop=image.CopyPicture
```

See also:

- 82.16.128 raiseImage 14364

82.16.130 randomThreshold(thresholds as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Random threshold image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.randomThreshold(GM16GeometryMBS.make("50x200"))

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

82.16.131 randomThresholdChannel(thresholds as GM16GeometryMBS, channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Random threshold image channel.
Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

82.16.132 read(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame from in-memory Blob.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GM16ImageMBS
dim blob as new GM16BlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.16.141 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14371

82.16.133 read(blob as GM16BlobMBS, size as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame of specified size from in-memory Blob.
See also:

- 82.16.132 read(blob as GM16BlobMBS) 14366
- 82.16.134 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer) 14367
- 82.16.135 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string) 14368

- 82.16.141 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14371

82.16.134 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame of specified size and depth from in-memory Blob.
See also:

- 82.16.132 read(blob as GM16BlobMBS) 14366

- 82.16.133 read(blob as GM16BlobMBS, size as GM16GeometryMBS) 14367
- 82.16.135 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string) 14368
- 82.16.136 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14368
- 82.16.137 read(file as folderitem) 14369
- 82.16.138 read(path as string) 14370
- 82.16.139 read(size as GM16GeometryMBS, file as folderitem) 14370
- 82.16.140 read(size as GM16GeometryMBS, Path as string) 14371
- 82.16.141 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14371

82.16.135 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame of specified size, depth, and format from in-memory Blob.
See also:

- 82.16.132 read(blob as GM16BlobMBS) 14366
- 82.16.133 read(blob as GM16BlobMBS, size as GM16GeometryMBS) 14367
- 82.16.134 read(blob as GM16BlobMBS, size as GM16GeometryMBS, depth as Integer) 14367
- 82.16.136 read(blob as GM16BlobMBS, size as GM16GeometryMBS, magick as string) 14368

- 82.16.138 read(path as string) 14370
- 82.16.139 read(size as GM16GeometryMBS, file as folderitem) 14370
- 82.16.141 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14371

82.16.141 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Notes:

Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GM16ImageMBS(640, 480, "RGB", GM16ImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

82.16.142 reduceNoise

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce noise in image using a noise peak elimination filter.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.reduceNoise

Backdrop=image.CopyPicture
```

See also:

- 82.16.143 reduceNoise(order as Double) 14373

82.16.143 reduceNoise(order as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce noise in image using a noise peak elimination filter.
See also:

- 82.16.142 reduceNoise 14372

82.16.144 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the release date of the used graphics magick library.
Notes: We update the library only when someone needs an update, so if you need, please contact us.

82.16.145 repage

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image page canvas and position.

82.16.146 resize(geo as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying only geometry, with filter and blur obtained from Image default.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// resize proportionally to fit
dim geo as new GM16GeometryMBS(500,500)
image.resize geo

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Same result as 'zoom' method.
See also:

- 82.16.147 resize(geo as GM16GeometryMBS, filterType as Integer) 14374
- 82.16.148 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double) 14374

82.16.147 resize(geo as GM16GeometryMBS, filterType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying geometry and filter, with blur using Image default.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// resize proportionally to fit
dim geo as new GM16GeometryMBS(500,500)
image.resize geo, image.CubicFilter

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

- 82.16.148 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double) 14374

82.16.148 resize(geo as GM16GeometryMBS, filterType as Integer, blur as double)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying geometry, filter, and blur.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GM16ImageMBS(f)

// resize proportionally to fit
dim geo as new GM16GeometryMBS(500,500)
image.resize geo, image.CubicFilter, 3

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

See also:

- 82.16.146 resize(geo as GM16GeometryMBS) 14373
- 82.16.147 resize(geo as GM16GeometryMBS, filterType as Integer) 14374

82.16.149 roll(columns as UInt32, rows as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.roll(30,30)

Backdrop=image.CopyPicture
```

See also:

- 82.16.150 roll(roll as GM16GeometryMBS) 14375

82.16.150 roll(roll as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.roll(GM16GeometryMBS.Make(0,0,30,30))

Backdrop=image.CopyPicture
```

See also:

- 82.16.149 roll(columns as UInt32, rows as UInt32) 14375

82.16.151 rotate(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotate image counter-clockwise by specified number of degrees.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

```
image.rotate(30)

Backdrop=image.CopyPicture
```

82.16.152 sample(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resize image by using pixel sampling algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.sample GM16GeometryMBS.make(100,100)

Backdrop=image.CopyPicture
```

82.16.153 scale(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resize image by using simple ratio algorithm which provides good quality.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.scale new GM16GeometryMBS(100,100)

Backdrop=image.CopyPicture
```

82.16.154 segment(clusterThreshold as Double=1.0, smoothingThreshold as Double=1.5)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

image.segment

image.type = image.TrueColorType

Backdrop=image.CopyPicture

Notes: A histogram is built for the image. This histogram is filtered to reduce noise and a second derivative of the histogram plot is built and used to identify potential cluster colors (peaks in the histogram). The cluster colors are then validated by scanning through all of the pixels to see how many pixels fall within each cluster. Some candidate cluster colors may not match any of the image pixels at all and should be discarded. Specify clusterThreshold, as the number of pixels matching a cluster color in order for the cluster to be considered valid. SmoothingThreshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative. The default is 1.5.

82.16.155 setChromaBluePrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity blue primary point.
Notes: e.g. x=0.15, y=0.06

82.16.156 setchromaGreenPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

82.16.157 setchromaRedPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

82.16.158 setchromaWhitePoint(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity white point

Notes: e.g. x=0.3127, y=0.329

82.16.159 SetEXIFOrientation(orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets orientation for EXIF.
Notes:

Changing orientation may need to set orientation via SetOrientation and SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

82.16.160 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the picture into the Image at the given position.

82.16.161 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the picture into the Image's mask at the given position.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

82.16.162 setPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Allocates a pixel cache region to store image pixels as defined by the region rectangle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

// get pointer to some pixels to write
dim x as ptr = g.setPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel cache to the image via syncPixels.

82.16.163 setStrokeDashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.16.164 shade(azimuth as Double=30.0, elevation as Double=30.0, colorShading as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shade image using distant light source.
Notes: Specify azimuth and elevation as the position of the light source. By default, the shading results as a grayscale image.. Set colorShading to true to shade the red, green, and blue components of the image.

82.16.165 sharpen(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpen pixels in image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.sharpen

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.166 sharpenChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpen pixels in image channel.
Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.16.167 shave(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shave pixels from image edges.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
```

```
image.shave(new GM16GeometryMBS(200,200))

Backdrop=image.CopyPicture
```

82.16.168 shear(xShearAngle as Double, yShearAngle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shear image (create parallelogram by sliding image by X or Y axis).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.shear(10,20)

Backdrop=image.CopyPicture
```

Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x degrees is measured relative to the Y axis, and similarly, for Y direction shears y degrees is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined as borderColor.

82.16.169 signature(force as boolean=false) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image textual signature.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

MsgBox image.signature

Backdrop=image.CopyPicture
```

Notes: Set force to true in order to re-calculate the signature regardless of whether the image data has been modified.

82.16.170 solarize(factor as Double=50.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Solarize image (similar to effect seen when exposing a photographic film to light during the development process)
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.solarize

Backdrop=image.CopyPicture
```

82.16.171 spread(amount as UInt32=3)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Spread pixels randomly within image by specified ammount
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.spread 5

Backdrop=image.CopyPicture
```

82.16.172 statistics as GM16ImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain image statistics.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim stat as GM16ImageStatisticsMBS = g.statistics
dim gs as GM16ImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: Statistics are normalized to the range of 0.0 to 1.0 and are output to the specified ImageStatistics

structure.

82.16.173 stegano(watermark as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add a digital watermark to the image (based on second image).
Example:

```
dim p as Picture = LogoMBS(500)
dim p1 as Picture = New Picture(550,500,32)
dim p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

dim image1 as new GM16ImageMBS(p1)
dim image2 as new GM16ImageMBS(p2)

image2.zoom(new GM16GeometryMBS(100,100)) // scale down

// add watermark
image1.stegano(image2)

// now make a threshold so you see the difference
image1.threshold 254

image1.type = image1.TrueColorType
Backdrop=image1.CopyPicture
```

82.16.174 stereo(rightImage as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create an image which appears in stereo when viewed with red-blue glasses (Red image on left, blue on right)
Example:

```
dim p as Picture = LogoMBS(500)
dim p1 as Picture = New Picture(550,500,32)
dim p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

dim image1 as new GM16ImageMBS(p1)
```

```
dim image2 as new GM16ImageMBS(p2)

image1.stereo(IMAGE2)

Backdrop=image1.CopyPicture
```

82.16.175 strip

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Remove all profiles and text attributes from the image.

82.16.176 strokeDashArray as Double()

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.16.177 swirl(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Swirl image (image pixels are rotated by degrees).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.swirl 200

Backdrop=image.CopyPicture
```

82.16.178 syncPixels

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers the image cache pixels to the image.

82.16.179 texture(texture as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Channel a texture on pixels matching image background color.

82.16.180 threshold(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Threshold image channels (below threshold becomes black, above threshold becomes white).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The range of the threshold parameter is 0 to MaxRGB.

82.16.181 thumbnail(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image using several algorithms to make smaller images very quickly.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)

// make thumbnail
dim geo as new GM16GeometryMBS(100, 100)
g.thumbnail(geo)

// show
me.Backdrop = g.CopyPicture
```

82.16.182 TIFFLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for tiff library.

82.16.183 transform(imageGeometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 82.16.184 transform(imageGeometry as GM16GeometryMBS, cropGeometry as GM16GeometryMBS) 14386

82.16.184 transform(imageGeometry as GM16GeometryMBS, cropGeometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 82.16.183 transform(imageGeometry as GM16GeometryMBS) 14386

82.16.185 transformOrigin(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Origin of coordinate system to use when annotating with text or drawing.

82.16.186 transformReset

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reset transformation parameters to default.

82.16.187 transformRotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation to use when annotating with text or drawing.

82.16.188 transformScale(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scale to use when annotating with text or drawing.

82.16.189 transformSkewX(x as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Skew to use in X axis when annotating with text or drawing.

82.16.190 transformSkewY(y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Skew to use in Y axis when annotating with text or drawing.

82.16.191 transparent(color as GM16ColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add matte channel to image, setting pixels matching color to transparent.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

dim c as new GM16ColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

82.16.192 trim

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trim edges that are the background color from the image.
Example:

```
dim p as Picture = LogoMBS(500)
// make the logo picture bigger
dim q as Picture = New Picture(700,700,32)
```

```
q.Graphics.DrawPicture p,100,100

dim image as new GM16ImageMBS(q)

// now trim the white border away
image.trim

Backdrop=image.CopyPicture
```

82.16.193 unregisterId

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Not documented.

82.16.194 unsharpmask(radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace image with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.unsharpmask(10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
amount: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence amount.

82.16.195 unsharpmaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace image channel with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.unsharpmaskChannel(Image.RedChannel, 10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

channel:	image channel to modify.
radius:	the radius of the Gaussian, in pixels, not counting the center pixel.
sigma:	the standard deviation of the Gaussian, in pixels.
amount:	the percentage of the difference between the original and the blur image that is added back into the original.
threshold:	the threshold in pixels needed to apply the diffence amount.

82.16.196 wave(amplitude as Double=25.0, wavelength as Double=150.0)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Map image pixels to a sine wave.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.wave

Backdrop=image.CopyPicture
```

82.16.197 write(blob as GM16BlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.

See also:

- 82.16.198 write(blob as GM16BlobMBS, magick as string) 14390
- 82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14390
- 82.16.200 write(file as folderitem) 14391
- 82.16.201 write(Path as string) 14391
- 82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14392

82.16.198 write(blob as GM16BlobMBS, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 82.16.197 write(blob as GM16BlobMBS) 14389
- 82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14390
- 82.16.200 write(file as folderitem) 14391
- 82.16.201 write(Path as string) 14391
- 82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14392

82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 82.16.197 write(blob as GM16BlobMBS) 14389
- 82.16.198 write(blob as GM16BlobMBS, magick as string) 14390
- 82.16.200 write(file as folderitem) 14391
- 82.16.201 write(Path as string) 14391
- 82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14392

82.16.200 write(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to a file.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

- 82.16.198 write(blob as GM16BlobMBS, magick as string) 14390
- 82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14390
- 82.16.201 write(Path as string) 14391
- 82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14392

82.16.201 write(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to a file.
See also:

- 82.16.197 write(blob as GM16BlobMBS) 14389
- 82.16.198 write(blob as GM16BlobMBS, magick as string) 14390
- 82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14390

- 82.16.200 write(file as folderitem) 14391
- 82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14392

82.16.202 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to an array of pixels with storage type specified by user (DispatchImage).
Notes: e.g. image.write(0, 0, 640, 1, "RGB", 0, pixels)
See also:

- 82.16.197 write(blob as GM16BlobMBS) 14389
- 82.16.198 write(blob as GM16BlobMBS, magick as string) 14390
- 82.16.199 write(blob as GM16BlobMBS, magick as string, depth as UInt32) 14390
- 82.16.200 write(file as folderitem) 14391
- 82.16.201 write(Path as string) 14391

82.16.203 ZLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for zlib library.

82.16.204 zoom(geometry as GM16GeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Zoom (resize) image to specified size.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.zoom(new GM16GeometryMBS(200,200))

Backdrop=image.CopyPicture
```

82.16.205 Properties

82.16.206 adjoin as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Join images into a single multi-image file.
Notes: (Read and Write property)

82.16.207 animationDelay as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence.
Notes:

This option is useful for regulating the animation of a sequence of GIF images within Netscape.
(Read and Write property)

82.16.208 animationIterations as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of iterations to loop an animation (e.g. Netscape loop extension) for.
Notes: (Read and Write property)

82.16.209 antiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes:

Enabled by default.
(Read and Write property)

82.16.210 backgroundColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.
Example:

```
// make a red and turn it to 100% transparent
Dim red As New GM16ColorRGBMBS("red")
```

```
red.alpha = 1

// now make image and make it RGBA with the transparnet background
dim RastoredVectorImage as New GM16ImageMBS
RastoredVectorImage.type = GM16ImageMBS.TrueColorMatteType
RastoredVectorImage.backgroundColor = red

// now read SVG, so we get a transparent background
dim SVG_File as FolderItem = SpecialFolders.desktop.Child("test.svg")
RastoredVectorImage.read(SVG_File)
```

Notes: (Read and Write property)

82.16.211 backgroundTexture as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image file name to use as the background texture.
Notes:

Does not modify image pixels.
(Read and Write property)

82.16.212 baseColumns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image width (before transformations)
Notes: (Read only property)

82.16.213 baseFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image filename (before transformations)
Notes: (Read only property)

82.16.214 baseRows as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image height (before transformations).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

Title = str(image.baseRows)+" x "+str(image.baseColumns)
```

Notes: (Read only property)

82.16.215 borderColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

82.16.216 boundingBox as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return smallest bounding box enclosing non-border pixels.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.fillColor = new GM16ColorRGBMBS("red") // set color
image.strokeColor = new GM16ColorRGBMBS("green") // set color

image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle

draw.Circle(250, 250, 120, 150)
draw.Draw

draw = nil
image.type = image.TrueColorType

Backdrop = image.CopyPicture

MsgBox image.boundingBox.StringValue
```

Notes:

The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by crop(Geometry(0,0)).
(Read only property)

82.16.217 boxColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base color that annotation text is rendered on (default none).
Notes: (Read and Write property)

82.16.218 classType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image class (DirectClass or PseudoClass).
Notes:

NOTE: setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built):
(Read and Write property)

82.16.219 clipMask as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Associate a clip mask image with the current image.
Notes:

The clip mask image must have the same dimensions as the current image or an exception is thrown. Clipping occurs wherever pixels are transparent in the clip mask image. Clipping Pass an invalid image to unset an existing clip mask.
(Read and Write property)

82.16.220 colorFuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this option to

match colors that are close to the target color in RGB space.
(Read and Write property)

82.16.221 colorMapSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of entries in the colormap.
Notes:

Setting the colormap size may extend or truncate the colormap. The maximum number of supported entries is specified by the MaxColormapSize constant, and is dependent on the value of QuantumDepth when GraphicsMagick is compiled. An exception is thrown if more entries are requested than may be supported. Care should be taken when truncating the colormap to ensure that the image colormap indexes reference valid colormap entries.
(Read and Write property)

82.16.222 colorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The colorspace (e.g. CMYK) used to represent the image pixel colors.
Notes:

UndefinedColorspace	= 0
RGBColorspace	= 1 (Plain old RGB colorspace)
GRAYColorspace	= 2 (Plain old full-range grayscale)
TransparentColorspace	= 3 (RGB but preserve matte channel during quantize)
OHTAColorspace	= 4
XYZColorspace	= 5 (CIE XYZ)
YCCColorspace	= 6 (Kodak PhotoCD PhotoYCC)
YIQColorspace	= 7
YPbPrColorspace	= 8
YUVColorspace	= 9
CMYKColorspace	= 10 (Cyan, magenta, yellow, black, alpha)
sRGBColorspace	= 11 (Kodak PhotoCD sRGB)
HSLColorspace	= 12 (Hue, saturation, luminosity)
HWBColorspace	= 13 (Hue, whiteness, blackness)
LABColorspace	= 14 (LAB colorspace not supported yet other than via lcms)
CineonLogRGBColorspace	= 15 (RGB data with Cineon Log scaling, 2.048 density range)
Rec601LumaColorspace	= 16 (Luma (Y) according to ITU-R 601)
Rec601YCbCrColorspace	= 17 (YCbCr according to ITU-R 601)
Rec709LumaColorspace	= 18 (Luma (Y) according to ITU-R 709)
Rec709YCbCrColorspace	= 19 (YCbCr according to ITU-R 709)

(Read and Write property)

82.16.223 columns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image width.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

82.16.224 comment as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image comment.
Notes:

When you set this property, you add comment string to image.
By default, each image is commented with its file name. Use this method to assign a specific comment to the image. Optionally you can include the image filename, type, width, height, or other image attributes by embedding special format characters:
(Read and Write property)

82.16.225 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Composition operator to be used when composition is implicitly used (such as for image flattening).
Notes: (Read and Write property)

82.16.226 compressType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

The default is the compression type of the input image file.
(Read and Write property)

82.16.227 debug as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enable printing of debug messages from GraphicsMagick as it executes.
Notes: (Read and Write property)

82.16.228 density as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Vertical and horizontal resolution in pixels of the image.
Example:

```
dim p as new GM16ImageMBS

dim item as FolderItem = SpecialFolder.Desktop.Child("input.png")
p.read(item)
p.scale new GM16GeometryMBS(3750,3750)
p.quality = 95
p.resolutionUnits = p.PixelsPerInchResolution
p.density = new GM16GeometryMBS(300, 300)
dim out as FolderItem = SpecialFolder.Desktop.Child("output.png")
p.write out
```

Notes:

This option specifies an image density when decoding a Postscript or Portable Document page. Often used with psPageSize.
(Read and Write property)

82.16.229 depth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (bits allocated to red/green/blue components).
Notes:

Used to specify the bit depth when reading or writing raw images or when the output format supports multiple depths. Defaults to the quantum depth that GraphicsMagick is compiled with.
(Read and Write property)

82.16.230 directory as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile names from within an image montage.
Notes: (Read only property)

82.16.231 endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian mode.
Notes:

Endianness (LSBEndian like Intel, MSBEndian like SPARC, or NativeEndian for what this computer uses) for image formats which support endian-specific options.
(Read and Write property)

82.16.232 ExifThumbnail as String

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Dim g As New GM16ImageMBS

// not load, but just read header & metadata
g.ping("/Users/cs/Desktop/test.JPG")

// get thumbnail
Dim Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)
```

Notes:

Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

82.16.233 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image file name.
Notes: (Read and Write property)

82.16.234 fileSize as Int64

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of bytes of the image on disk.
Notes: (Read only property)

82.16.235 fillColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color to use when filling drawn objects.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.16.236 fillPattern as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pattern to use while filling drawn objects.
Notes: (Read and Write property)

82.16.237 fillRule as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rule to use when filling drawn objects
Notes: (Read and Write property)

82.16.238 filterType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The reduction filter employed has a sigificant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
Notes:

Filter to use when resizing image.
(Read and Write property)

82.16.239 font as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font.
Notes:

If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

82.16.240 fontPointsize as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font point size.
Notes: (Read and Write property)

82.16.241 format as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long image format description.

Notes: (Read only property)

82.16.242 gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma correct the image or individual image channels.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.gamma = 3.0

Backdrop=image.CopyPicture
```

Notes:

If you get the value, it is the gamma level of the image. Gamma is a pow() function which converts between the linear light representation and the representation for the computer display. Most computer images are gamma corrected to 2.2 (1/0.4545) so that each step results in a visually linear step on a computer or video display:
(Read and Write property)
See also:

- 82.16.85 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double) 14351

82.16.243 geometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size of the image when encoding.
Notes: (Read only property)

82.16.244 getConstIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain immutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

82.16.245 getIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain mutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

82.16.246 gifDisposeMethod as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GIF disposal method.
Notes:

This option (specific to the GIF file format) is used to control how successive frames are rendered (how the preceding frame is disposed of) when creating a GIF animation.

Constant	Disposal	Description
UndefinedDispose	0	No disposal specified.
NoneDispose	1	Do not dispose between frames.
BackgroundDispose	2	Overwrite frame with background color from header.
PreviousDispose	3	Overwrite with previous frame.

(Read and Write property)

82.16.247 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Example:

```
dim c as new GM16ColorMBS("white")
dim g as new GM16GeometryMBS(100,100)
dim image as new GM16ImageMBS(g, c)
MsgBox hex(Image.handle) // valid if not zero
```

Notes: (Read and Write property)

82.16.248 height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the image.

Example:

```
dim c as new GM16ColorRGBMBS(1.0,0.0,0.0)
dim size as new GM16GeometryMBS(100,100)
dim g as new GM16ImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes:

This is a convenience function for you which calls size.height.
(Read only property)

82.16.249 iccColorProfile as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ICC color profile.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("IMG_0793.tif")
dim Image as new GM16ImageMBS(f)
dim ProfileBlob as GM16BlobMBS = Image.iccColorProfile
dim ProfileData as string = ProfileBlob.CopyString
dim cm as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ProfileData)
dim name as string = cm.Name

Break // check data in debugger
```

Notes:

Supplied via a Blob since Magick++/ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Color Consortium for the format of ICC color profiles.
(Read and Write property)

82.16.250 interlaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane

interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.
(Read and Write property)

82.16.251 iptcProfile as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: IPTC profile.
Notes:

Supplied via a Blob since Magick++ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Press Telecommunications Council for IPTC profiles.
(Read and Write property)

82.16.252 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain valid image?
Notes:

Set to false in order to invalidate the image. Images constructed via the default constructor are invalid images and isValid() will return false.
(Read and Write property)

82.16.253 label as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image label.
Notes: (Read only property)
See also:

- 82.16.100 label(text as string) 14355

82.16.254 lineWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Stroke width for drawing vector objects (default one)
Notes:

This method is now deprecated. Please use strokeWidth instead.
(Read and Write property)

82.16.255 magick as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The name of the codec to use for compression.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GM16ImageMBS( new GM16GeometryMBS(p.Width, p.Height), new GM16ColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

Notes: (Read and Write property)

82.16.256 matte as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image supports transparency (matte channel)
Notes: (Read and Write property)

82.16.257 matteColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (frame) color.
Notes: (Read and Write property)

82.16.258 meanErrorPerPixel as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mean error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.16.259 modulusDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image modulus depth (minimum number of bits required to support red/green/blue components without loss of accuracy).
Notes:

The pixel modulus depth may be decreased by supplying a value which is less than the current value, updating the pixels (reducing accuracy) to the new depth. The pixel modulus depth can not be increased over the current value using this method.
(Read and Write property)

82.16.260 monochrome as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image to black and white while color reducing (quantizing).
Notes: (Read and Write property)

82.16.261 normalizedMaxError as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The normalized max error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.16.262 normalizedMeanError as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The normalized mean error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.16.263 orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image orientation. Supported by some file formats such as DPX and TIFF. Useful for turning the right way up.
Notes: (Read and Write property)

82.16.264 page as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size and location of an image canvas.
Notes:

Use this option to specify the dimensions and position of the Postscript page in dots per inch or a TEXT page in pixels. This option is typically used in concert with density .

Page may also be used to position a GIF image (such as for a scene in an animation).
(Read and Write property)

82.16.265 penColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The pen color.
Notes: (Read and Write property)

82.16.266 quality as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level (default 75).
Notes: (Read and Write property)

82.16.267 quantizeColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum number of colors to quantize to.

Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.quantizeColors = 10
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.16.268 quantizeColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorspace to quantize in (default RGB).
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Dim Converter As New GM16ImageMBS(Pic)

// quantize with dither
Converter.type = GM16ImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GM16ImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

Notes:

Empirical evidence suggests that distances in color spaces such as YUV or YIQ correspond to perceptual color differences more closely than do distances in RGB space. These color spaces may give better results when color reducing an image.
(Read and Write property)

82.16.269 quantizeDither as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Floyd/Steinberg error diffusion to the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.quantizeColors = 10
image.quantizeDither = true
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes:

The basic strategy of dithering is to trade intensity resolution for spatial resolution by averaging the intensities of several neighboring pixels. Images which suffer from severe contouring when reducing colors can be improved with this option. The quantizeColors or monochrome option must be set for this option to take effect.
(Read and Write property)

82.16.270 quantizeTreeDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Depth of the quantization color classification tree.
Notes:

Values of 0 or 1 allow selection of the optimal tree depth for the color reduction algorithm. Values between 2 and 8 may be used to manually adjust the tree depth.
(Read and Write property)

82.16.271 Quiet as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Suppress all warning messages.
Notes:

Error messages are still reported.

(Read and Write property)

82.16.272 renderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of rendering intent (used when applying an ICC color profile).
Notes: (Read and Write property)

82.16.273 resolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes: (Read and Write property)

82.16.274 rows as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of pixel rows in the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

82.16.275 scene as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image scene number.
Notes: (Read and Write property)

82.16.276 size as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Width and height of a raw image (an image which does not support width and height information).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

MsgBox image.size.StringValue

image.size = new GM16GeometryMBS(200,200)

Backdrop=image.CopyPicture
```

Notes:

Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

82.16.277 strokeAntiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable stroke anti-aliasing.
Notes: (Read and Write property)

82.16.278 strokeColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Color to use when drawing object outlines.
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics
```

```
// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.16.279 strokeDashOffset as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).
Notes: (Read and Write property)

82.16.280 strokeLineCap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the end of open subpaths when they are stroked. #
Notes:

Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.
(Read and Write property)

82.16.281 strokeLineJoin as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked. Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.
Notes: (Read and Write property)

82.16.282 strokeMiterLimit as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify miter limit.
Notes:

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a

limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.
(Read and Write property)

82.16.283 strokePattern as GM16ImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pattern image to use while stroking object outlines.
Notes: (Read and Write property)

82.16.284 strokeWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Stroke width for drawing vector objects (default one).
Example:

```
dim g as new GM16GeometryMBS(500,500)
dim c as new GM16ColorRGBMBS("white") // white
dim image as new GM16ImageMBS(g, c)

image.strokeColor = new GM16ColorRGBMBS("red") // Outline color
image.fillColor = new GM16ColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GM16GraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.16.285 subImage as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subimage of an image sequence.
Notes: (Read and Write property)

82.16.286 subRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of images relative to the base image.
Notes: (Read and Write property)

82.16.287 textEncoding as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotation text encoding (e.g. "UTF-16").
Notes: (Read and Write property)

82.16.288 tileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile name.
Notes: (Read and Write property)

82.16.289 totalColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of colors in the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

Title = str(image.totalColors) // shows 5284
Backdrop=image.CombinePictureWithMask
```

Notes: (Read only property)

82.16.290 type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of this image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)

image.type = image.GrayscaleType

Backdrop=image.CopyPicture
```

Notes:

You can set this value to convert the image to the type.

Convert the image representation to the specified type or retrieve the current image type. If the image is reduced to an inferior type, then image information may be lost (e.g. color changed to grayscale).

Available enumerations for the type parameter:

BilevelType	1	black/white
GrayscaleType	2	grayscale
GrayscaleMatteType	3	grayscale with alpha (opacity) channel
PaletteType	4	colormapped
PaletteMatteType	5	colormapped with transparency
TrueColorType	6	true (full) color
TrueColorMatteType	7	true (full) color with alpha (opacity) channel
ColorSeparationType	8	Cyan, magenta, yellow, and black
ColorSeparationMatteType	9	Cyan, magenta, yellow, and black with alpha (opacity) channel
OptimizeType	10	Optimize the image type to best represent the existing pixels

(Read and Write property)

82.16.291 verbose as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Print detailed information about the image.
Notes: (Read and Write property)

82.16.292 view as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FlashPix viewing parameters.
Notes: (Read and Write property)

82.16.293 width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image.
Example:

```
dim c as new GM16ColorRGBMBS(1.0,0.0,0.0)
dim size as new GM16GeometryMBS(100,100)
dim g as new GM16ImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes:

This is a convenience function for you which calls size.width.
(Read only property)

82.16.294 x11Display as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X11 display to display to, obtain fonts from, or to capture image from.
Notes: (Read and Write property)

82.16.295 XResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: x resolution of the image.
Notes:

See also density functions.
Settable with version 19.0.
(Read and Write property)

82.16.296 YResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: y resolution of the image.
Notes:

Settable with version 19.0.
(Read and Write property)

82.16.297 attributeValue(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Access an arbitrary named image attribute.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("IMG_4048.jpg")
dim g as new GM16ImageMBS(f)
dim a as string = g.attributeValue("EXIF:DateTime")
MsgBox a
```

Notes:

Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":
(Read and Write computed property)

82.16.298 channelDepth(channel as Integer) as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain modulus channel depth.
Notes: (Read and Write computed property)

82.16.299 colorMap(index as UInt32) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color at colormap position index.
Notes: (Read and Write computed property)
See also:

- 82.16.27 colorMap as GM16ColorMBS() 14324

82.16.300 defineSet(magick as string, key as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain a definition flag to applied when encoding or decoding the specified format.
Notes:

Similar to the defineValue() method except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

(Read and Write computed property)

82.16.301 defineValue(magick as string, key as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain a definition string to applied when encoding or decoding the specified format.
Notes:

The meanings of the definitions are format specific. The format is designated by the magick argument, the format-specific key is designated by key, and the associated value is specified by value. See the defineSet() method if the key must be removed entirely.
(Read and Write computed property)

82.16.302 pixelColor(x as UInt32, y as UInt32) as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Get/set pixel color at location x & y.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GM16ImageMBS(p)
dim c as new GM16ColorMBS("red")

for x as Integer = 240 to 260
image.pixelColor(x,250)=c
next

for y as Integer = 240 to 260
image.pixelColor(250,y)=c
next

Backdrop=image.CopyPicture
```

Notes: (Read and Write computed property)

82.16.303 profile(name as string) as GM16BlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Get or set a named profile.
Notes:

Add or remove a named profile to/from the image. Remove the profile by passing an empty Blob (e.g. Blob()). Valid names are "*", "8BIM", "ICM", "IPTC", or a user/format-defined profile name.

Retrieve a named profile from the image. Valid names are: "8BIM", "8BIMTEXT", "APP1", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name
(Read and Write computed property)

82.16.304 Constants

82.16.305 AbsoluteIntent = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the intent type constants.

82.16.306 AddCompositeOp = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.307 AllChannels = 10

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.308 AllCompliance = & hffff

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the Compliance type constants.

82.16.309 AssociatedAlpha = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible alpha type constants.

82.16.310 AtopCompositeOp = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.311 BackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the gif dispose type constants.

82.16.312 BesselFilter = 14

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.313 BilevelType = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Dim Converter As New GM16ImageMBS(Pic)

// quantize with dither
Converter.type = GM16ImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GM16ImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

82.16.314 BlackChannel = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.315 BlackmanFilter = 7

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.316 BlueChannel = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.317 BottomLeftOrientation = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Left to right
Frame Direction: Bottom to top

82.16.318 BottomRightOrientation = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Right to left
Frame Direction: Bottom to top

82.16.319 BoxFilter = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.320 BumpmapCompositeOp = 12

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.321 BZipCompression = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.322 CatromFilter = 11

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.323 CenterGravity = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.324 ClearCompositeOp = 18

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.325 ColorizeCompositeOp = 28

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.326 ColorSeparationMatteType = 9

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.327 ColorSeparationType = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.328 ConcatenateMode = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.329 CopyBlackCompositeOp = 35

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.330 CopyBlueCompositeOp = 16

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.331 CopyCompositeOp = 13

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.332 CopyCyanCompositeOp = 32

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.333 CopyGreenCompositeOp = 15

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.334 CopyMagentaCompositeOp = 33

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.335 CopyOpacityCompositeOp = 17

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.336 CopyRedCompositeOp = 14

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.337 CopyYellowCompositeOp = 34

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.338 CubicFilter = 10

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.339 CyanChannel = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.340 DarkenCompositeOp = 24

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.341 DifferenceCompositeOp = 10

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.342 DirectClass = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the class type constants.

82.16.343 DisplaceCompositeOp = 20

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.344 DissolveCompositeOp = 19

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.345 DivideCompositeOp = 36

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.346 EastGravity = 6

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.347 FaxCompression = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.348 ForgetGravity = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.349 FrameMode = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the mode type constants.

82.16.350 GaussianFilter = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.351 GaussianNoise = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible noise constants.

82.16.352 GrayChannel = 11

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.353 GrayscaleMatteType = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.354 GrayscaleType = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.355 GreenChannel = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.356 Group4Compression = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.357 HammingFilter = 6

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.358 HanningFilter = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.359 HermiteFilter = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.360 HueCompositeOp = 26

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.361 ImpulseNoise = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible noise constants.

82.16.362 InCompositeOp = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.363 JPEGCompression = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.364 LanczosFilter = 13

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.365 LaplacianNoise = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible noise constants.

82.16.366 LeftBottomOrientation = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Bottom to top
Frame Direction: Left to right

82.16.367 LeftTopOrientation = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Top to bottom
Frame Direction: Left to right

82.16.368 LightenCompositeOp = 25

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.369 LineInterlace = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the interlace type constants.

82.16.370 LosslessJPEGCompression = 6

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.371 LSBEndian = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the endian type constants.
Notes: "little" endian

82.16.372 LuminizeCompositeOp = 29

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.373 LZWCompression = 7

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.374 MagentaChannel = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.375 MatteChannel = 9

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.376 MinusCompositeOp = 7

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.377 MitchellFilter = 12

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.413 RLECompression = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.414 SaturateCompositeOp = 27

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.415 SaturationIntent = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the intent type constants.

82.16.416 ScreenCompositeOp = 30

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.
Notes: Not yet implemented in GraphicsMagick.

82.16.417 SincFilter = 15

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.418 SouthEastGravity = 9

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.419 SouthGravity = 8

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.420 SouthWestGravity = 7

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.421 StaticGravity = 10

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.422 StorageTypeCharPixel = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 8bit numbers.

82.16.423 StorageTypeDoublePixel = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 64bit floating numbers.

82.16.424 StorageTypeFloatPixel = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 32bit floating numbers.

82.16.425 StorageTypeIntegerPixel = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 32bit numbers.

82.16.426 StorageTypeLongPixel = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 64bit numbers.

82.16.427 StorageTypeShortPixel = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 16bit numbers.

82.16.428 SubtractCompositeOp = 9

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.429 SVGCompliance = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the Compliance type constants.

82.16.430 ThresholdCompositeOp = 22

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.431 TopLeftOrientation = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Left to right
Frame Direction: Top to bottom

82.16.432 TopRightOrientation = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Right to left
Frame Direction: Top to bottom

82.16.433 TriangleFilter = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.434 TrueColorMatteType = 7

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.
Example:

```
Dim mp as new GM16ImageMBS(new GM16GeometryMBS(700, 700), New GM16ColorRGBMBS(1.0, 0.0, 0.0))
mp.type = mp.TrueColorMatteType
dim p as picture = mp.CopyPicture

break // see in debugger a red picture
```

82.16.435 TrueColorType = 6

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.436 UnassociatedAlpha = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible alpha type constants.

82.16.437 UndefinedChannel = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.438 UndefinedClass = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the class type constants.

82.16.439 UndefinedCompliance = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the Compliance type constants.

82.16.440 UndefinedCompositeOp = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.441 UndefinedCompression = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.16.442 UndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the gif dispose type constants.

82.16.443 UndefinedEndian = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the endian type constants.

82.16.444 UndefinedFilter = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the filter type constants.

82.16.445 UndefinedIntent = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the intent type constants.

82.16.446 UndefinedInterlace = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the interlace type constants.

82.16.447 UndefinedMode = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the mode type constants.

82.16.448 UndefinedOrientation = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the orientation type constants.
Notes:

Line direction: Unknown
Frame Direction: Unknown

82.16.449 UndefinedResolution = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the resolution type constants.

82.16.450 UndefinedType = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the image type constants.

82.16.451 UnframeMode = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the mode type constants.

82.16.452 UniformNoise = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible noise constants.

82.16.453 UnspecifiedAlpha = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible alpha type constants.

82.16.454 WestGravity = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible gravity constants.

82.16.455 X11Compliance = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the Compliance type constants.

82.16.456 XorCompositeOp = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the composite type constants.

82.16.457 XPMCompliance = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the Compliance type constants.

82.16.458 YellowChannel = 6

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the possible channel constants.

82.16.459 ZipCompression = 9

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the compression type constants.

82.17 class GM16ImageStatisticsMBS

82.17.1 class GM16ImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for image statistics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

82.17.2 Methods

82.17.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

82.17.4 Properties

82.17.5 blue as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue channel statistics.
Notes: (Read only property)

82.17.6 green as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green channel statistics.
Notes: (Read only property)

82.17.7 opacity as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity channel statistics.
Notes: (Read only property)

82.17.8 red as GM16ImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red channel statistics.
Notes: (Read only property)

82.18 class GM16LockMBS

82.18.1 class GM16LockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for locking a certain resource.
Notes: The idea is to pass the constructor a mutexlock and keep the only reference to this new lock object on the stack. On the end of the method, the destructor is called by Xojo and releases the mutexlock automatically.

82.18.2 Methods

82.18.3 Constructor(mutexlock as GM16MutexLockMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new Lock based on the given mutexlock.

82.18.4 Properties

82.18.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.18.6 target as GM16MutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mutexlock this lock is referencing to.
Notes: (Read and Write property)

82.19 class GM16MontageFramedMBS

82.19.1 class GM16MontageFramedMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** MontageFramed provides the means to specify montage options when it is desired to have decorative frames around the image thumbnails.
Notes:

MontageFramed inherits from Montage and therefore provides all the methods of Montage as well as those shown in the table "MontageFramed Methods".

Framed thumbnails consist of four components: the thumbnail image, the thumbnail frame, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.
Subclass of the GM16MontageMBS class.

82.19.2 Methods

82.19.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

82.19.4 Properties

82.19.5 borderColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the background color within the thumbnail frame.
Notes: (Read and Write computed property)

82.19.6 borderWidth as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the border (in pixels) to place between a thumbnail and its surrounding frame.
Notes:

This option only takes effect if thumbnail frames are enabled (via frameGeometry) and the thumbnail geometry specification doesn't also specify the thumbnail border width.
(Read and Write computed property)

82.19.7 frameGeometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the geometry specification for frame to place around thumbnail.
Notes:

If this parameter is not specified, then the montage is unframed.
(Read and Write computed property)

82.19.8 matteColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail frame color.
Notes: (Read and Write computed property)

82.20 class GM16MontageMBS

82.20.1 class GM16MontageMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Montage is the base class to provide montage options and provides methods to set all options required to render simple (unframed) montages.
Example:

```
// build montage
dim StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(& cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(& c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
dim logo as Picture = LogoMBS(500)
dim image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Dim StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
dim resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes:

See GM16MontageFramedMBS if you would like to create a framed montage.

Unframed thumbnails consist of four components: the thumbnail image, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.

82.20.2 Methods

82.20.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

82.20.4 Properties

82.20.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.20.6 backgroundColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the background color that thumbnails are imaged upon.
Notes: (Read and Write computed property)

82.20.7 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the image composition algorithm for thumbnails.
Notes:

This controls the algorithm by which the thumbnail image is placed on the background. Use of OverCompositeOp is recommended for use with images that have transparency. This option may have negative side-effects for images without transparency.
(Read and Write computed property)

82.20.8 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the image filename to be used for the generated montage images.
Notes:

To handle the case were multiple montage images are generated, a printf-style format may be embedded within the filename. For example, a filename specification of image% 02d.miff names the montage images as

image00.miff, image01.miff, etc.
(Read and Write computed property)

82.20.9 fillColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the fill color to use for the label text.
Notes: (Read and Write computed property)

82.20.10 font as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail label font.
Notes: (Read and Write computed property)

82.20.11 geometry as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the size of the generated thumbnail.
Notes: (Read and Write computed property)

82.20.12 gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail positioning within the specified geometry area.
Notes:

If the thumbnail is smaller in any dimension than the geometry, then it is placed according to this specification.
See Gravity constants in GM16ImageMBS class.
(Read and Write computed property)

82.20.13 label as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the format used for the image label.
Notes:

Special format characters may be embedded in the format string to include information about the image. (Read and Write computed property)

82.20.14 penColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the pen color to use for the label text (same as fill).
Notes: (Read and Write computed property)

82.20.15 pointSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail label font size.
Notes: (Read and Write computed property)

82.20.16 shadow as boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enable/disable drop-shadow on thumbnails.
Notes: (Read and Write computed property)

82.20.17 strokeColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the stroke color to use for the label text.
Notes: (Read and Write computed property)

82.20.18 texture as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies a texture image to use as montage background.
Notes:

The built-in textures "granite:" and "plasma:" are available. A texture is the same as a background image. (Read and Write computed property)

82.20.19 tile as GM16GeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the maximum number of montage columns and rows in the montage.
Notes:

The montage is built by filling out all cells in a row before advancing to the next row. Once the montage has reached the maximum number of columns and rows, a new montage image is started.
(Read and Write computed property)

82.20.20 title as string

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the montage title.
Notes: (Read and Write computed property)

82.20.21 transparentColor as GM16ColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies a montage color to set transparent.
Notes:

This option can be set the same as the background color in order for the thumbnails to appear without a background when rendered on an HTML page. For best effect, ensure that the transparent color selected does not occur in the rendered thumbnail colors.
(Read and Write computed property)

82.21 class GM16MutexLockMBS

82.21.1 class GM16MutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mutex class for GraphicsMagick.

82.21.2 Methods

82.21.3 lock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Locks the lock.
Notes: Only one thread at a time can get the lock. The other threads will wait when lock is called.

82.21.4 unlock

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unlocks the lock.

82.21.5 Properties

82.21.6 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.22 class GM16NotInitializedExceptionMBS

82.22.1 class GM16NotInitializedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception raised if you access a method/property in an object and the object was not initialized propertly.
Notes:

Check the message property for details.
Subclass of the GM16ErrorExceptionMBS class.

82.23 class GM16PathArgsMBS

82.23.1 class GM16PathArgsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This is a class for arguments to the path arc/curve methods in GM16GraphicsMBS.
Example:

```
dim g as new GM16PathArgsMBS(1,2,3,4) // for a QuadraticCurveto

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

Notes: Due we use this class for three different ways, we have three constructors to fill in the value you need for the calls.

82.23.2 Methods

82.23.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor for creating an empty object.
See also:

- 82.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14455
- 82.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14456
- 82.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14456

82.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create the arguments object for the PathArc methods in GM16GraphicsMBS.
See also:

- 82.23.3 Constructor 14455
- 82.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14456

- 82.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14456

82.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor to create the arguments object for the QuadraticCurveto methods in GM16GraphicsMBS.
Example:

```
dim g as new GM16PathArgsMBS(1,2,3,4)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 82.23.3 Constructor 14455
- 82.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14455
- 82.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14456

82.23.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor to create the arguments object for the Curveto methods in GM16GraphicsMBS.
Example:

```
dim g as new GM16PathArgsMBS(1,2,3,4,5,6)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x2)+EndOfLine+str(g.y2)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 82.23.3 Constructor 14455
- 82.23.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14455
- 82.23.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14456

82.23.7 Properties

82.23.8 largeArcFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The large arc flag.
Notes:

Draw longer of the two matching arcs
(Read and Write property)

82.23.9 radiusX as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The radius x value.
Notes: (Read and Write property)

82.23.10 radiusY as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The radius y value.
Notes: (Read and Write property)

82.23.11 sweepFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The sweep flag value.
Notes:

Draw arc matching clock-wise rotation.
(Read and Write property)

82.23.12 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x value.
Notes:

For an arc: End-point X
(Read and Write property)

82.23.13 x1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x1 value.
Notes: (Read and Write property)

82.23.14 x2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x2 value.
Notes: (Read and Write property)

82.23.15 xAxisRotation as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x Axis Rotation value.
Notes:

Rotation relative to X axis.
(Read and Write property)

82.23.16 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y value.
Notes:

for an arc: End-point Y
(Read and Write property)

82.23.17 y1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y1 value.
Notes: (Read and Write property)

82.23.18 y2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y2 value.
Notes: (Read and Write property)

82.24 class GM16PixelsMBS

82.24.1 class GM16PixelsMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty pixels object.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim p as new GM16PixelsMBS(g)

// get pointer to some pixels to read/write
dim x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

82.24.2 Methods

82.24.3 Constructor(Image as GM16ImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new Pixels object with the pixels from an image.

82.24.4 get(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfer pixels from the image to the pixel view as defined by the specified region.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim p as new GM16PixelsMBS(g)

// get pointer to some pixels
dim x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via sync.

82.24.5 getConst(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfer read-only pixels from the image to the pixel view as defined by the specified region.

82.24.6 indexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return pixel colormap index array.

82.24.7 set(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Allocate a pixel view region to store image pixels as defined by the region rectangle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim p as new GM16PixelsMBS(g)

// get pointer to some pixels to write
dim x as ptr = p.set(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel view to the image via sync.

82.24.8 sync

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers the image cache pixels to the image.

82.24.9 Properties

82.24.10 columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Width of view.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GM16ImageMBS(f)
dim p as new GM16PixelsMBS(g)

// get pointer to some pixels
dim x as ptr = p.get(0, 0, 100, 100)
```

```
// and show size
MsgBox str(p.columns)+" x "+str(p.rows)
```

Notes: (Read only property)

82.24.11 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.24.12 rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Height of view.
Notes: (Read only property)

82.24.13 x as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Left ordinate of view.
Notes: (Read only property)

82.24.14 y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Top ordinate of view.
Notes: (Read only property)

82.25 class GM16TypeMetricMBS

82.25.1 class GM16TypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The TypeMetric class provides the means to pass data from the Image class's TypeMetric method to the user.
Notes:

It provides information regarding font metrics such as ascent, descent, text width, text height, and maximum horizontal advance. The units of these font metrics are in pixels, and that the metrics are dependent on the current Image font (default Ghostscript's "Helvetica"), pointsize (default 12 points), and x/y resolution (default 72 DPI) settings.

The pixel units may be converted to points (the standard resolution-independent measure used by the typesetting industry) via the following equation:

size_points = (size_pixels * 72)/resolution
where resolution is in dots-per-inch (DPI). This means that at the default image resolution, there is one pixel per point.

Note that a font's pointsize is only a first-order approximation of the font height (ascender + descender) in points. The relationship between the specified pointsize and the rendered font height is determined by the font designer.

See FreeType Glyph Conventions for a detailed description of font metrics related issues.

82.25.2 Methods

82.25.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

82.25.4 Properties

82.25.5 ascent as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the distance in pixels from the text baseline to the highest/upper grid coordinate used

to place an outline point.
Notes:

Always a positive value.
(Read only property)

82.25.6 descent as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point.
Notes:

Always a negative value.
(Read only property)

82.25.7 maxHorizontalAdvance as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the maximum horizontal advance (advance from the beginning of a character to the beginning of the next character) in pixels.
Notes: (Read only property)

82.25.8 textHeight as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns text height in pixels.
Notes: (Read only property)

82.25.9 textWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns text width in pixels.
Notes: (Read only property)

82.26 class GM16UnsupportedExceptionMBS

82.26.1 class GM16UnsupportedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An exception raised if you call the GM functions on an unsupported platform.
Notes:

Check the message property for details.
This exception is currently only used on Windows.
(Windows support may come later)
Subclass of the GM16ErrorExceptionMBS class.

82.27 class GMBlobMBS

82.27.1 class GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for binary large objects.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GMImageMBS
dim blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

Notes:

Blob provides the means to contain any opaque data. It is named after the term "Binary Large OBject" commonly used to describe unstructured data (such as encoded images) which is stored in a database. While the function of Blob is very simple (store a pointer and and size associated with allocated data), the Blob class provides some very useful capabilities. In particular, it is fully reference counted just like the Image class.

The Blob class supports value assignment while preserving any outstanding earlier versions of the object. Since assignment is via a pointer internally, Blob is efficient enough to be stored directly in an STL container or any other data structure which requires assignment. In particular, by storing a Blob in an associative container (such as STL's 'map') it is possible to create simple indexed in-memory "database" of Blobs.

Magick++ currently uses Blob to contain encoded images (e.g. JPEG) as well as ICC and IPTC profiles. Since Blob is a general-purpose class, it may be used for other purposes as well.

82.27.2 Blog Entries

- Tip of the day: Render SVG with GraphicsMagick Plugin

82.27.3 Methods

82.27.4 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Default constructor creating an empty blob object.
See also:

- 82.27.5 Constructor(data as memoryblock, offset as Integer, size as Integer) 14468
- 82.27.6 Constructor(data as string) 14468
- 82.27.7 Constructor(other as GMBlobMBS) 14469

82.27.5 Constructor(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct object with data, making a copy of the supplied data.
See also:

- 82.27.4 Constructor 14468
- 82.27.6 Constructor(data as string) 14468
- 82.27.7 Constructor(other as GMBlobMBS) 14469

82.27.6 Constructor(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct object with data, making a copy of the supplied data.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GMImageMBS
dim blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.27.4 Constructor 14468
- 82.27.5 Constructor(data as memoryblock, offset as Integer, size as Integer) 14468
- 82.27.7 Constructor(other as GMBlobMBS) 14469

82.27.7 Constructor(other as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy constructor (reference counted).
See also:

- 82.27.4 Constructor 14468
- 82.27.5 Constructor(data as memoryblock, offset as Integer, size as Integer) 14468
- 82.27.6 Constructor(data as string) 14468

82.27.8 CopyMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a copy of the data as a memoryblock.
Notes: Returns nil on any error like low memory.

82.27.9 CopyString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a copy of the data as a string.

82.27.10 Data as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A memoryblock with the data from this blob.
Example:

```
dim b as new GMBlobMBS("Hello")

dim m as memoryblock = b.Data
MsgBox m.StringValue(0,5) // shows "Hello"
```

Notes: This is a memoryblock referencing the data of the blob. It has no size set. The memoryblock can only be used as long as the blob object exists. if you use it after you destroyed the blob object, you can crash you application.

82.27.11 Update(data as memoryblock, offset as Integer, size as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the content of this blob with a copy of the bytes in the memoryblock.
See also:

- 82.27.12 Update(data as string) 14470

82.27.12 Update(data as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the content of this blob with a copy of the bytes in the string.
Notes: Offset is zero based.
See also:

- 82.27.11 Update(data as memoryblock, offset as Integer, size as Integer) 14470

82.27.13 Properties

82.27.14 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal handle of the blob object.
Notes: (Read and Write property)

82.27.15 length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain data length in bytes.
Example:

```
dim b as new GMBlobMBS("Hello")

MsgBox str(B.length) // shows 5
```

Notes: (Read only property)

82.27.16 base64 as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blob content as a string in Base64 format.
Example:

```
dim b as new GMBlobMBS("Hello")

MsgBox b.base64 // shows "SGVsbG8="
```

Notes: (Read and Write computed property)

82.28 class GMCoderInfoMBS

82.28.1 class GMCoderInfoMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class used to get information about all registered coders.
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name
next

MsgBox Join(names,EndOfLine)
```

Notes: The CoderInfo class provides the means to provide information regarding GraphicsMagick support for an image format (designated by a magick string). It may be used to provide support for a specific named format (provided as an argument to the constructor), or as an element of a container when format support is queried using the coderInfoList() templated function.

82.28.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr1

82.28.3 Methods

82.28.4 CoderInfoList as GMCoderInfoMBS()

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a list of all coders.
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
```

82.28.5 Properties

82.28.6 description as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format description (e.g. "CompuServe graphics interchange format").
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+coder.description
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.28.7 isMultiFrame as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format supports multiple frames.
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isMultiFrame)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.28.8 isReadable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format is readable.
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isReadable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.28.9 isWritable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format is writeable.
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim names(-1) as string

for each coder as GMCoderInfoMBS in coders
names.Append coder.name+" "+str(coder.isWritable)
next

MsgBox Join(names,EndOfLine)
```

Notes: (Read and Write property)

82.28.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of loadable module.
Notes: (Read and Write property)

82.28.11 name as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format name (e.g. "GIF").
Example:

```
dim coders(-1) as GMCoderInfoMBS = GMCoderInfoMBS.CoderInfoList
dim coder as GMCoderInfoMBS = coders(0) // pick first one

MsgBox coder.name
```

Notes: (Read and Write property)

82.28.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Usage note for user.
Notes: (Read and Write property)

82.28.13 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Support library version.
Notes: (Read and Write property)

82.29 class GMColorGrayMBS

82.29.1 class GMColorGrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color subclass for a grayscale color.
Example:

```
dim g as new GMColorGrayMBS(0.5)
MsgBox str(g.shade)
```

Notes:

Representation of grayscale RGB color.
Equal parts red, green, and blue specified as a ratio (0 to 1).
Subclass of the GMColorMBS class.

82.29.2 Methods

82.29.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorGrayMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.29.4 Constructor(other as GMColorMBS) 14476
- 82.29.5 Constructor(shade as Double) 14477

82.29.4 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GMColorGrayMBS(0.5)
dim o as new GMColorGrayMBS(g)
```

MsgBox str(o.shade)

See also:

- 82.29.3 Constructor 14476
- 82.29.5 Constructor(shade as Double) 14477

82.29.5 Constructor(shade as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given value.
Example:

```
dim g as new GMColorGrayMBS(1.0)
MsgBox str(g.colorValue)
```

Notes: Range is 0.0 to 1.0.
See also:

- 82.29.3 Constructor 14476
- 82.29.4 Constructor(other as GMColorMBS) 14476

82.29.6 Properties

82.29.7 shade as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The gray value for this color.
Example:

```
dim g as new GMColorGrayMBS(1.0)
MsgBox str(g.shade)
```

Notes:

Range is 0.0 to 1.0
(Read and Write property)

82.30 class GMColorHSLMBS

82.30.1 class GMColorHSLMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a HSL color.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GMColorMBS class.

82.30.2 Methods

82.30.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorHSLMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14478
- 82.30.5 Constructor(other as GMColorMBS) 14479

82.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)+" "+str(g.saturation)+" "+str(g.luminosity)
```

See also:

- 82.30.3 Constructor 14478
- 82.30.5 Constructor(other as GMColorMBS) 14479

82.30.5 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
dim o as new GMColorHSLMBS(g)

MsgBox str(o.colorValue)
```

See also:

- 82.30.3 Constructor 14478
- 82.30.4 Constructor(hue as Double, saturation as Double, luminosity as Double) 14478

82.30.6 Properties

82.30.7 hue as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The hue value.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.hue)
```

Notes: (Read and Write property)

82.30.8 luminosity as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The luminosity value.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.luminosity)
```

Notes: (Read and Write property)

82.30.9 saturation as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The saturation value.
Example:

```
dim g as new GMColorHSLMBS(0.1,0.2,0.3)
MsgBox str(g.saturation)
```

Notes: (Read and Write property)

82.31 class GMColorMBS

82.31.1 class GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color is the base color class.
Example:

```
dim c as new GMColorMBS(127,255,127) // light green
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes: It is a simple container class for the pixel red, green, blue, and alpha values scaled to fit GraphicsMagick's Quantum size. Normally users will instantiate a class derived from Color which supports the color model that fits the needs of the application. The Color class may be constructed directly from an X11-style color string. As a perhaps odd design decision, the value transparent black is considered to represent an unset value (invalid color) in many cases. This choice was made since it avoided using more memory. The default Color constructor constructs an invalid color (i.e. transparent black) and may be used as a parameter in order to remove a color setting.

82.31.2 Blog Entries

- MBS Xojo Plugins 18.3
- MBS Xojo Plugins, version 18.3pr1
- Gradients in GraphicsMagick

82.31.3 Methods

82.31.4 Black as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries a black color.
Example:

```
dim black as GMColorMBS = GMColorMBS.Black

MsgBox str(black.colorValue)
```

82.31.5 Color(ColorValue as Color) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts color from Xojo to GMColorMBS.
Example:

```
dim c as GMColorMBS = GMColorMBS.Color(& cFF0000)

MsgBox str(c.colorValue)
```

See also:

- 82.31.6 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14482
- 82.31.7 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14482
- 82.31.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14483

82.31.6 Color(ColorValue as Color, alpha as Integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts color from Xojo to GMColorMBS with separate alpha value.
Example:

```
dim c as GMColorMBS = GMColorMBS.Color(& cFF0000, 128)

MsgBox str(c.colorValue)+" "+str(c.alpha)
```

Notes: Alpha in range from 0 to 255.
See also:

- 82.31.5 Color(ColorValue as Color) as GMColorMBS 14482
- 82.31.7 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14482
- 82.31.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14483

82.31.7 Color(red as integer, green as integer, blue as integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates color with RGB values.
Example:

```
dim c as GMColorMBS = GMColorMBS.Color(127, 191, 255)
```

MsgBox str(c.colorValue)

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 82.31.5 Color(ColorValue as Color) as GMColorMBS 14482
- 82.31.6 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14482
- 82.31.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS 14483

82.31.8 Color(red as integer, green as integer, blue as integer, alpha as Integer) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates color with RGB values.
Example:

```
dim c as GMColorMBS = GMColorMBS.Color(127, 191, 255, 127)

MsgBox str(c.colorValue)+" "+str(c.alphaQuantum)
```

Notes: Range in 0 to 255 for 8bit and 0 to 65535 for 16bit class.
See also:

- 82.31.5 Color(ColorValue as Color) as GMColorMBS 14482
- 82.31.6 Color(ColorValue as Color, alpha as Integer) as GMColorMBS 14482
- 82.31.7 Color(red as integer, green as integer, blue as integer) as GMColorMBS 14482

82.31.9 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.31.10 Constructor(ColorName as string) 14484

- 82.31.11 Constructor(ColorValue as color) 14484
- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.10 Constructor(ColorName as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color based on the X11 color name.
Example:

```
dim c as new GMColorMBS("red")

MsgBox str(c.redQuantum)+"-"+str(c.greenQuantum)+"-"+str(c.blueQuantum) // shows "255-0-0"

dim d as new GMColorMBS("# 77FF00")

MsgBox str(d.redQuantum)+"-"+str(d.greenQuantum)+"-"+str(d.blueQuantum) // shows "119-255-0"
```

Notes: An alternate way to construct the class is via an X11-compatible color specification string (e.g. Color("red") or Color ("# FF0000")). Since the class may be constructed from a string, convenient strings may be passed in place of an explicit Color object in methods which accept a reference to Color. Color may also be converted to a std::string for convenience in user interfaces, and for saving settings to a text file.

- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.11 Constructor(ColorValue as color)

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GMColorMBS(& cFF0000)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.12 Constructor(ColorValue as color, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GMColorMBS(& cFF0102, 127)
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

See also:

- 82.31.11 Constructor(ColorValue as color) 14484
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.13 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim r as new GMColorMBS(1,2,3)
dim c as new GMColorMBS(r)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.31.10 Constructor(ColorName as string) 14484
- 82.31.11 Constructor(ColorValue as color) 14484
- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.14 Constructor(red as Integer, green as Integer, blue as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GMColorMBS(1,2,3)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 82.31.9 Constructor 14483
- 82.31.10 Constructor(ColorName as string) 14484
- 82.31.11 Constructor(ColorValue as color) 14484
- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer) 14487

82.31.15 Constructor(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GMColorMBS(1,2,3,4)

// display color, alpha is double...
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)+" "+str(c.alpha)
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
See also:

- 82.31.9 Constructor 14483
- 82.31.10 Constructor(ColorName as string) 14484
- 82.31.11 Constructor(ColorValue as color) 14484
- 82.31.12 Constructor(ColorValue as color, alpha as Integer) 14485
- 82.31.13 Constructor(other as GMColorMBS) 14485
- 82.31.14 Constructor(red as Integer, green as Integer, blue as Integer) 14486

82.31.16 QuantumByteSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum byte size.
Example:

```
MsgBox str(GMColorMBS.QuantumByteSize)
```

Notes: As the plugin uses 8 bit this value should be 1.

82.31.17 scaleDoubleToQuantum(value as Double) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a double value to a value in the range of a quantum.
Example:

```
dim d as Double = 1.0
dim v as Integer = GMColorMBS.scaleDoubleToQuantum(d)
MsgBox str(v)
```

Notes: As the plugin uses 8 bit quantums, this is basicly a multiplication by 255.0

82.31.18 scaleQuantumToDouble(value as Integer) as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a quantum to a double value.
Example:

```
dim v as Integer = 255
dim d as Double = GMColorMBS.scaleQuantumToDouble(v)
MsgBox str(d)
```

Notes: The plugin uses 8bit quantums, so this is basicly the division of value by 255.0

82.31.19 White as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries a white color.
Example:

```
dim White as GMColorMBS = GMColorMBS.White

MsgBox str(White.colorValue)
```

82.31.20 Properties

82.31.21 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha value of this color.
Example:

```
dim c as new GMColorMBS(1,2,3,1.0)
MsgBox str(c.alpha)
```

Notes:

Range is 0.0 to 1.0. If you pass values higher, they are divided by 255.
(Read and Write property)

82.31.22 alphaQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha color value.
Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.31.23 blueQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color value.
Example:

```
dim c as new GMColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 3
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.31.24 colorValue as color

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Xojo color for the GraphicsMagick color.
Example:

```
dim c as new GMColorMBS(& cFF0102)
MsgBox str(c.ColorValue)
```

Notes: (Read and Write property)

82.31.25 greenQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color value.
Example:

```
dim r as new GMColorMBS(1,2,3)
MsgBox str(r.greenQuantum) // shows 2
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.31.26 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal color reference.
Example:

```
dim r as new GMColorMBS(1,2,3)
MsgBox str(r.handle)
```

Notes: (Read and Write property)

82.31.27 intensity as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The intensity of this color.
Example:

```
dim c as new GMColorMBS(1,2,3)
MsgBox str(c.intensity)
```

Notes: (Read only property)

82.31.28 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain valid color?
Example:

```
dim c as new GMColorMBS(1,2,3)
MsgBox str(c.isValid)
```

Notes: (Read and Write property)

82.31.29 redQuantum as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color value.
Example:

```
dim c as new GMColorMBS(1,2,3)
MsgBox str(c.redQuantum) // 1
```

Notes:

For 8-bit range is 0 to 255.
For 16-bit range is 0 to 65535.
(Read and Write property)

82.32 class GMColorMonoMBS

82.32.1 class GMColorMonoMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Representation of a black/white color (true/false)
Example:

```
dim g as new GMColorMonoMBS(false)
MsgBox str(g.colorValue)
```

Notes: Subclass of the GMColorMBS class.

82.32.2 Methods

82.32.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorMonoMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.32.4 Constructor(mono as boolean) 14492
- 82.32.5 Constructor(other as GMColorMBS) 14493

82.32.4 Constructor(mono as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GMColorMonoMBS(false)
MsgBox str(g.mono)
```

See also:

- 82.32.3 Constructor 14492
- 82.32.5 Constructor(other as GMColorMBS) 14493

82.32.5 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GMColorMonoMBS(false)
dim o as new GMColorMonoMBS(g)
MsgBox str(o.mono)
```

See also:

- 82.32.3 Constructor 14492
- 82.32.4 Constructor(mono as boolean) 14492

82.32.6 Properties

82.32.7 mono as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color value.
Example:

```
dim g as new GMColorMonoMBS(true)
MsgBox str(g.mono)
```

Notes: (Read and Write property)

82.33 class GMColorRGBMBS

82.33.1 class GMColorRGBMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color class for RGB colors.
Example:

```
dim c as new GMColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)+" "+str(c.green)+" "+str(c.blue)
MsgBox str(C.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

Notes:

Representation of RGB color with red, green, and blue specified as ratios (0 to 1)
Subclass of the GMColorMBS class.

82.33.3 Methods

82.33.4 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorRGBMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.33.5 Constructor(other as GMColorMBS) 14494
- 82.33.6 Constructor(red as Double, green as Double, blue as Double) 14495

82.33.5 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.

Example:

```
dim g as new GMColorRGBMBS(1,2,3)
dim o as new GMColorRGBMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 82.33.4 Constructor 14494
- 82.33.6 Constructor(red as Double, green as Double, blue as Double) 14495

82.33.6 Constructor(red as Double, green as Double, blue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim c as new GMColorRGBMBS(0.1,0.2,0.3)
```

Notes: Range is 0.0 to 1.0.
See also:

- 82.33.4 Constructor 14494
- 82.33.5 Constructor(other as GMColorMBS) 14494

82.33.7 Properties

82.33.8 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color component.
Example:

```
dim c as new GMColorRGBMBS(0.0,0.0,1.0)
MsgBox str(c.blue)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.33.9 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color component.
Example:

```
dim c as new GMColorRGBMBS(0.0,1.0,0.0)
MsgBox str(c.green)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.33.10 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color component.
Example:

```
dim c as new GMColorRGBMBS(1.0,0.0,0.0) // red
MsgBox str(C.red)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.34 class GMColorYUVMBS

82.34.1 class GMColorYUVMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Representation of a color in the YUV colorspace
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)+" "+str(g.u)+" "+str(g.v)
```

Notes: Subclass of the GMColorMBS class.

82.34.2 Methods

82.34.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with transparent black.
Example:

```
dim c as new GMColorYUVMBS
MsgBox str(c.redQuantum)+" "+str(c.greenQuantum)+" "+str(c.blueQuantum)
```

See also:

- 82.34.4 Constructor(other as GMColorMBS) 14497
- 82.34.5 Constructor(y as Double, u as Double, v as Double) 14498

82.34.4 Constructor(other as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color copying the existing color.
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
dim o as new GMColorYUVMBS(g)
MsgBox str(o.colorValue)
```

See also:

- 82.34.3 Constructor 14497
- 82.34.5 Constructor(y as Double, u as Double, v as Double) 14498

82.34.5 Constructor(y as Double, u as Double, v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color with the given values.
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
```

See also:

- 82.34.3 Constructor 14497
- 82.34.4 Constructor(other as GMColorMBS) 14497

82.34.6 Properties

82.34.7 u as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The u color component.
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.u)
```

Notes:

Range is -0.5 to +0.5.
(Read and Write property)

82.34.8 v as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The v color component.
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.v)
```

Notes:

Range is -0.5 to +0.5.
(Read and Write property)

82.34.9 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y color component.
Example:

```
dim g as new GMColorYUVMBS(0.1, 0.2, 0.3)
MsgBox str(g.y)
```

Notes:

Range is 0.0 to 1.0.
(Read and Write property)

82.35 class GMConvertMBS

82.35.1 class GMConvertMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class to convert images thread friendly.
Notes:

This class is intended to process lots of images in several instances in several threads.
If you for example use 8 Xojo threads, to process thousands of images to scale them down for thumbnails, you can easily keep 8 CPU cores busy.

Please make a new instance, set options and call run method. When run is done, please read output properties.
Do not modify properties while thread is running.

82.35.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr2
- CGImageSourceMBS CreateThumbnailMT method for Xojo

- 17.5, page 11: News
- 17.3, page 39: XDC 2019 Keynote, News from Miami by Marc Zeedar

82.35.4 Methods

82.35.5 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

82.35.6 Run

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Starts converter.
Notes:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

82.35.7 Properties

82.35.8 AutoOrient as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to call autoOrient method to change orientation of image data to 0°.
Notes: (Read and Write property)

82.35.9 Enhance as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to run enhance command.
Notes:

If true, we call enhance on the image to minimize noise.
(Read and Write property)

82.35.10 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to run equalize command.
Notes:

If set to true, we call equalize command on image (histogram equalization).
(Read and Write property)

82.35.11 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the image type.
Notes:

If value is >0, the image type is change to the given type.
(Read and Write property)

82.35.12 InputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input data string.
Notes:

If set, we read image from this data.
(Read and Write property)

82.35.13 InputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input folderitem.
Notes:

If set input file to read.
(Read and Write property)

82.35.14 InputGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input geometry.
Notes:

Some formats can be loaded with different scales, so this geometry is passed to read method to define the format requested.
(Read and Write property)

82.35.15 InputImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input image.
Notes: (Read and Write property)

82.35.16 InputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image magick type.
Notes:

If empty, the type of file is automatically determined.

(Read and Write property)

82.35.17 InputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input data memoryblock.
Notes:

If set, we read image from this data.
(Read and Write property)

82.35.18 InputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The input file path.
Notes:

If set input file to read.
(Read and Write property)

82.35.19 OutputData as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output data as string.
Notes: (Read and Write property)

82.35.20 OutputFile as FolderItem

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The folderitem where to write file.
Notes:

If set, the image will be written to this file.
(Read and Write property)

82.35.21 OutputImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output image object.

Notes: (Read and Write property)

82.35.22 OutputMagick as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output magick.
Notes:

You can set this to a magick codec type to define output format, e.g. "jpeg".
(Read and Write property)

82.35.23 OutputMemory as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Output data as memory block.
Notes: (Read and Write property)

82.35.24 OutputPath as String

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The native file path for output.
Notes:

If set, the image will be written to this path.
(Read and Write property)

82.35.25 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quality of images in range 1 to 100.
Notes:

If value is >0, we assign it to the image for setting image quality.
(Read and Write property)

82.35.26 Running as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether this converter is running.

Notes:

Set to true while Run method runs.
(Read only property)

82.35.27 ScaleGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geometry for call to scale method.
Notes:

scale method is called with this geometry (if set) to reduce image size.
(Read and Write property)

82.35.28 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to remove all profiles and text attributes from the image.
Notes: (Read and Write property)

82.35.29 ThumbnailGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geometry for call to thumbnail method.
Notes:

thumbnail method is called with this geometry (if set) to reduce image size.
(Read and Write property)

82.35.30 Trim as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether trim command is called on image to remove extra blank space around image.
Notes: (Read and Write property)

82.35.31 WantOutputData as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether you want image compressed and stored in OutputData property.

Notes: (Read and Write property)

82.35.32 WantOutputMemory as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether you want image compressed and stored in OutputMemory property.
Notes: (Read and Write property)

82.36 class GMCoordinateMBS

82.36.1 class GMCoordinateMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Graphics Magick class for a coordinate.
Example:

```
dim c as new GMCoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

82.36.2 Methods

82.36.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create a new coordinate.
See also:

- 82.36.4 Constructor(x as Double, y as Double) 14507

82.36.4 Constructor(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create a new coordinate.
Example:

```
dim c as new GMCoordinateMBS(5,6)
MsgBox str(c.x)+" "+str(c.y)
```

See also:

- 82.36.3 Constructor 14507

82.36.5 Properties

82.36.6 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x value.
Example:

```
dim c as new GMCoordinateMBS
c.x = 5
MsgBox str(c.x)
```

Notes: (Read and Write property)

82.36.7 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y value.
Example:

```
dim c as new GMCoordinateMBS
c.y = 5
MsgBox str(c.y)
```

Notes: (Read and Write property)

82.37 class GMErrorExceptionMBS

82.37.1 class GMErrorExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The exception to report errors in the GraphicMagick plugin.
Notes:

Check the message property for details.
Subclass of the RuntimeException class.

82.38 class GMGeometryMBS

82.38.1 class GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Geometry provides a convenient means to specify a geometry argument.
Example:

```
dim g as new GMGeometryMBS(300,400)
MsgBox str(G.width)+" "+str(G.height)
```

Notes: The object may be initialized from a string containing a geometry specification. It may also be initialized by more efficient parameterized constructors.

82.38.2 Blog Entries

- Tip of the day: Render SVG with GraphicsMagick Plugin

82.38.3 Methods

82.38.4 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates empty geometry.
Example:

```
dim g as new GMGeometryMBS
MsgBox str(G.width)+" "+str(G.height)
```

See also:

- 82.38.5 Constructor(geometry as string) 14511
- 82.38.6 Constructor(other as GMGeometryMBS) 14511
- 82.38.7 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14512

82.38.5 Constructor(geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct geometry from string.
Example:

```
dim g as new GMGeometryMBS("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes:

See the GraphicsMagick website for details.
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 82.38.4 Constructor 14510
- 82.38.6 Constructor(other as GMGeometryMBS) 14511
- 82.38.7 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14512

82.38.6 Constructor(other as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new geometry object by copying an existing one.
Example:

```
dim g as new GMGeometryMBS(600,600)
dim h as new GMGeometryMBS(g)
MsgBox str(h.width)
```

See also:

- 82.38.4 Constructor 14510
- 82.38.5 Constructor(geometry as string) 14511
- 82.38.7 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) 14512

82.38.7 Constructor(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates geometry with the given values.
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.width)
```

See also:

- 82.38.4 Constructor 14510
- 82.38.5 Constructor(geometry as string) 14511
- 82.38.6 Constructor(other as GMGeometryMBS) 14511

82.38.8 Make(geometry as string) as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct geometry from string.
Example:

```
dim g as GMGeometryMBS = GMGeometryMBS.Make("600x600")

MsgBox str(G.width)+" "+str(G.height)
```

Notes:

See the GraphicsMagick website for more details:
http://www.graphicsmagick.org/Magick++/Geometry.html
See also:

- 82.38.9 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GMGeometryMBS 14512

82.38.9 Make(Width as UInt32, Height as UInt32, XOffset as UInt32=0, YOffset as UInt32=0, xNegative as boolean=false, yNegative as boolean=false) as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates geometry with the given values.
Example:

```
dim g as GMGeometryMBS = GMGeometryMBS.Make(600,600)
MsgBox str(g.width)
```

See also:

- 82.38.8 Make(geometry as string) as GMGeometryMBS 14512

82.38.10 Properties

82.38.11 aspect as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize without preserving aspect ratio (!).
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.aspect)
```

Notes: (Read and Write property)

82.38.12 fillArea as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image to fit total pixel area specified by dimensions.
Notes:

Same as @ in the geometry specification.
(Read and Write property)

82.38.13 greater as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize if image is greater than size (>).
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.greater)
```

Notes: (Read and Write property)

82.38.14 height as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height value.
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.height)
```

Notes: (Read and Write property)

82.38.15 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain a valid geometry?
Example:

```
dim g as new GMGeometryMBS(100,200)
MsgBox str(G.isValid)
```

Notes:

May be set to false in order to invalidate an existing geometry object.
(Read and Write property)

82.38.16 less as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize if image is less than size (<).
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.less)
```

Notes: (Read and Write property)

82.38.17 limitPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Dimensions are treated as minimum rather than maximum values.
Notes:

Same as ^in the geometry specification.
(Read and Write property)

82.38.18 percent as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Width and height are expressed as percentages.
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.percent)
```

Notes: (Read and Write property)

82.38.19 StringValue as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The string representation of the geometry object.
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.StringValue)
```

Notes: (Read and Write property)

82.38.20 width as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width value.
Example:

```
dim g as new GMGeometryMBS(600,600)
MsgBox str(g.width)
```

Notes: (Read and Write property)

82.38.21 xNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sign of X offset negative? (X origin at right)
Example:

```
dim g as new GMGeometryMBS(100,200,30,40,true,false)
MsgBox str(G.xNegative)
```

Notes: (Read and Write property)

82.38.22 xOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X offset from origin.
Example:

```
dim g as new GMGeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

82.38.23 yNegative as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sign of Y offset negative? (Y origin at bottom)
Example:

```
dim g as new GMGeometryMBS(100,200,30,40,false,true)
MsgBox str(G.yNegative)
```

Notes: (Read and Write property)

82.38.24 yOff as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Y offset from origin
Example:

```
dim g as new GMGeometryMBS(100,200,30,40,true,true)
MsgBox str(G.xOff)+" "+str(G.yOff)
```

Notes: (Read and Write property)

82.39 class GMGraphicsMBS

82.39.1 class GMGraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for drawing commands targeting a GMImageMBS.
Notes: Please remember that all commands are collected till you call the Draw method.

82.39.2 Blog Entries

- Crop a two side page document to a single page document
- MBS Real Studio Plugins, version 12.5pr13

82.39.3 Methods

82.39.4 Arc(startX as Double, startY as Double, endX as Double, endY as Double, startDegrees as Double, endDegrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw an arc using the stroke color and based on the circle starting at coordinates startX,startY, and ending with coordinates endX,endY, and bounded by the rotational arc startDegrees,endDegrees.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.arc(250, 250, 100, 100,50,300)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.5 Bezier(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw a bezier curve using the stroke color and based on the coordinates specified by the coordinates array.

82.39.6 Circle(originX as Double, originY as Double, perimX as Double, perimY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw a circle using the stroke color and thickness using specified origin and perimeter coordinates.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.39.7 ClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Select a drawing clip path matching id.

82.39.8 ColorPixel(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color image according to paintMethod.
Notes: The point method recolors the target pixel. The replace method recolors any pixel that matches the color of the target pixel. Floodfill recolors any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder recolors any neighbor pixel that is not the border color. Finally, reset recolors all pixels.

82.39.9 CompositeImage(x as Double, y as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

82.39.10 CompositeImage(x as Double, y as Double, image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

- 82.39.17 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string, CompositeOperator as Integer) 14525

82.39.11 CompositeImage(x as Double, y as Double, path as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through.

82.39.12 CompositeImage(x as Double, y as Double, w as Double, h as Double, file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and height, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

82.39.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS, CompositeOperator as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composite current image with contents of specified image, rendered with specified width and

height, using specified composition algorithm, at specified coordinates.
Notes: If the matte attribute is set to true, then the image composition will consider an alpha channel, or transparency, present in the image file so that non-opaque portions allow part (or all) of the composite image to show through. If the specified width or height is zero, then the image is composited at its natural size, without enlargement or reduction.

- 82.39.15 CompositeImage(x as Double, y as Double, w as Double, h as Double, image as GMImageMBS, CompositeOperator as Integer) 14523
- 82.39.16 CompositeImage(x as Double, y as Double, w as Double, h as Double, path as string) 14524

82.39.18 Constructor(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new object referencing the given image.

82.39.19 DashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the pattern of dashes and gaps used to stroke paths.

Notes: The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.39.20 DashOffset(offset as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the distance into the dash pattern to start the dash.
Notes: See documentation on SVG's stroke-dashoffset property for usage details.

82.39.21 Draw

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws all draw commands collected.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.type = image.TrueColorType
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.22 DrawPath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw on image using vector path.
Example:

```
// new picture, 500x500 and filled with white
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)
```

```
dim draw as GMGraphicsMBS = image.Graphics

// Draw path

dim cr as new GMColorRGBMBS("red")
dim gr as new GMColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

82.39.23 Ellipse(originX as Double, originY as Double, perimX as Double, perimY as Double, arcStart as Double, arcEnd as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw an ellipse using the stroke color and thickness, specified origin, x & y radius, as well as specified start and end of arc in degrees.
Notes: If a fill color is specified, then the object is filled.

82.39.24 FillColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify drawing object fill color.

82.39.25 FillOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify opacity to use when drawing using fill color.

82.39.26 FillRule(fillRule as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the algorithm which is to be used to determine what parts of the canvas are included inside the shape.
Notes: See documentation on SVG's fill-rule property for usage details.

82.39.27 Font(fontname as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify font name to use when drawing text.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

dim draw as GMGraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GMColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello", "")
draw.Draw

Backdrop=image.CopyPicture
```

See also:

- 82.39.28 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer) 14528

82.39.28 Font(fontname as string, StyleType as Integer, weight as Integer, StretchType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the font.
Notes: Specify font family, style, weight (one of the set { 100 | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 } with 400 being the normal size), and stretch to be used to select the font used when drawing text. Wildcard matches may be applied to style via the AnyStyle enumeration, applied to weight if weight is zero, and applied to stretch via the AnyStretch enumeration.
See also:

• 82.39.27 Font(fontname as string) 14528

82.39.29 Gravity(GravityType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify text positioning gravity.

82.39.30 Line(startX as Double, startY as Double, endX as Double, endY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a line using stroke color and thickness using starting and ending coordinates
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a line
draw.Line(100,100,400,400)
draw.Draw

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

82.39.31 Matte(x as Double, y as Double, paintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Change the pixel matte value to transparent.
Notes: The point method changes the matte value of the target pixel. The replace method changes the matte value of any pixel that matches the color of the target pixel. Floodfill changes the matte value of any pixel that matches the color of the target pixel and is a neighbor, whereas filltoborder changes the matte value of any neighbor pixel that is not the border color, Finally reset changes the matte value of all pixels.

82.39.32 MiterLimit(miterlimit as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify miter limit.
Notes: When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.

82.39.33 PathArcAbs(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Notes:

The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GMPathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.
See also:

- 82.39.34 PathArcAbs(c() as GMPathArgsMBS) 14530
- 82.39.35 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14531

82.39.34 PathArcAbs(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Notes:

The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

In the GMPathArgsMBS, set the following properties: radiusX, radiusY, xAxisRotation, bool largeArcFlag, sweepFlag, x and y.

82.39.35 PathArcAbs(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws an elliptical arc from the current point to (x, y).
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw an arc

draw.PathMovetoAbs 100,100
draw.PathArcAbs(100,100, 0, false, false, 200,200)
draw.DrawPath
draw.Draw

Backdrop=image.CopyPicture
```

Notes: The size and orientation of the ellipse are defined by two radii (radiusX, radiusY) and an xAxisRotation, which indicates how the ellipse as a whole is rotated relative to the current coordinate system. The center (cx, cy) of the ellipse is calculated automatically to satisfy the constraints imposed by the other parameters. largeArcFlag and sweepFlag contribute to the automatic calculations and help determine how the arc is drawn. If largeArcFlag is true then draw the larger of the available arcs. If sweepFlag is true, then draw the arc matching a clock-wise rotation.

82.39.39 PathClosePath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Close the current subpath by drawing a straight line from the current point to current subpath's most recent starting point (usually, the most recent moveto point).

82.39.40 PathCurvetoAbs(c as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes:

PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

- 82.39.41 PathCurvetoAbs(c() as GMPathArgsMBS) 14534
- 82.39.42 PathCurvetoAbs(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14534

82.39.41 PathCurvetoAbs(c() as GMPathArgsMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y) using (x1,y1) as the control point at the beginning of the curve and (x2,y2) as the control point at the end of the curve.
Notes:

PathCurvetoAbs indicates that absolutecoordinates will follow; PathCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.
See also:

82.39.46 PathLinetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.

Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.39.47 PathLinetoAbs(c() as GMCoordinateMBS) 14536
- 82.39.48 PathLinetoAbs(x as Double, y as Double) 14536

82.39.47 PathLinetoAbs(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.39.46 PathLinetoAbs(c as GMCoordinateMBS) 14535
- 82.39.48 PathLinetoAbs(x as Double, y as Double) 14536

82.39.48 PathLinetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.

82.39.49 PathLinetoHorizontalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

82.39.50 PathLinetoHorizontalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a horizontal line from the current point (cpx, cpy) to (x, cpy). PathLinetoHorizontalAbs indicates that absolute coordinates are supplied; PathLinetoHorizontalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (x, cpy) for the final value of x.

82.39.51 PathLinetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.39.53 PathLinetoRel(x as Double, y as Double) 14537

82.39.52 PathLinetoRel(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.39.51 PathLinetoRel(c as GMCoordinateMBS) 14537
- 82.39.53 PathLinetoRel(x as Double, y as Double) 14537

82.39.53 PathLinetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Example:

```
// new picture, 500x500 and filled with white
dim g as new GMGeometryMBS(500,500)
```

```
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

dim draw as GMGraphicsMBS = image.Graphics

// Draw path

dim cr as new GMColorRGBMBS("red")
dim gr as new GMColorRGBMBS("green")
draw.StrokeColor cr
draw.FillColor gr
draw.PathMovetoAbs(30,10)
draw.PathLinetoAbs(20,55)
draw.PathLinetoAbs(70,50)
draw.PathLinetoAbs(80,5)
draw.DrawPath

draw.Draw

// show picture
image.type = image.TrueColorType // make sure it's a bitmap
Backdrop=image.CopyPicture
```

Notes: Draw a line from the current point to the given coordinate which becomes the new current point. PathLinetoAbs indicates that absolute coordinates are used; PathLinetoRel indicates that relative coordinates are used. A number of coordinates pairs may be specified in a list to draw a polyline. At the end of the command, the new current point is set to the final set of coordinates provided.
See also:

- 82.39.51 PathLinetoRel(c as GMCoordinateMBS) 14537
- 82.39.52 PathLinetoRel(c() as GMCoordinateMBS) 14537

82.39.54 PathLinetoVerticalAbs(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

82.39.55 PathLinetoVerticalRel(v as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The various "lineto" commands draw straight lines from the current point to a new point.
Notes: Draws a vertical line from the current point (cpx, cpy) to (cpx, y). PathLinetoVerticalAbs indicates that absolute coordinates are supplied; PathLinetoVerticalRel indicates that relative coordinates are supplied. At the end of the command, the new current point becomes (cpx, y) for the final value of y.

82.39.56 PathMovetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The "moveto" commands establish a new current point.
Notes:

The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. If a relative moveto appears as the first element of the path, then it is treated as a pair of absolute coordinates. If a moveto is followed by multiple pairs of coordinates, the subsequent pairs are treated as implicit lineto commands.
See also:

- 82.39.57 PathMovetoAbs(x as Double, y as Double) 14539

82.39.57 PathMovetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The "moveto" commands establish a new current point.
Notes:

The effect is as if the "pen" were lifted and moved to a new location. A path data segment must begin with either one of the "moveto" commands or one of the "arc" commands. Subsequent "moveto" commands (i.e., when the "moveto" is not the first command) represent the start of a new subpath.

Start a new sub-path at the given coordinate. PathMovetoAbs indicates that absolute coordinates will follow; PathMovetoRel indicates that relative coordinates will follow. 82.39.65 PathQuadraticCurvetoRel(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y) using (x1,y1) as the control point.
Notes: PathQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathQuadraticCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used

in the polybezier.

- 82.39.64 PathQuadraticCurvetoRel(c() as GMPathArgsMBS) 14542

82.39.66 PathSmoothCurvetoAbs(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a cubic Bézier curve from the current point to (x,y).
Notes:

The first control point is assumed to be the reflection of the second control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not an PathCurvetoAbs, PathCurvetoRel, PathSmoothCurvetoAbs or PathSmoothCurvetoRel, assume the first control point is coincident with the current point.) (x2,y2) is the second control point (i.e., the control point at the end of the curve). PathSmoothCurvetoAbs indicates that absolute coordinates will follow; PathSmoothCurvetoRel indicates that relative coordinates will follow. Multiple sets of coordinates may be specified to draw a polybezier. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x2, y2, x and y.

- 82.39.74 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14546

82.39.73 PathSmoothQuadraticCurvetoAbs(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 82.39.72 PathSmoothQuadraticCurvetoAbs(c as GMCoordinateMBS) 14545
- 82.39.74 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double) 14546

82.39.74 PathSmoothQuadraticCurvetoAbs(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurve-

toAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

- 82.39.72 PathSmoothQuadraticCurvetoAbs(c as GMCoordinateMBS) 14545
- 82.39.73 PathSmoothQuadraticCurvetoAbs(c() as GMCoordinateMBS) 14546

82.39.75 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 82.39.76 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS) 14547
- 82.39.77 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14548

82.39.76 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.

In the GMPathArgsMBS object, set the following properties: x1, y1, x and y.
See also:

- 82.39.75 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS) 14547
- 82.39.77 PathSmoothQuadraticCurvetoRel(x as Double, y as Double) 14548

82.39.77 PathSmoothQuadraticCurvetoRel(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draws a quadratic Bézier curve from the current point to (x,y).
Notes:

The control point is assumed to be the reflection of the control point on the previous command relative to the current point. (If there is no previous command or if the previous command was not a PathQuadraticCurvetoAbs, PathQuadraticCurvetoRel, PathSmoothQuadraticCurvetoAbs or PathSmoothQuadraticCurvetoRel, assume the control point is coincident with the current point.) PathSmoothQuadraticCurvetoAbs indicates that absolute coordinates will follow; PathSmoothQuadraticCurvetoRel indicates that relative coordinates will follow. At the end of the command, the new current point becomes the final (x,y) coordinate pair used in the polybezier.
See also:

- 82.39.75 PathSmoothQuadraticCurvetoRel(c as GMCoordinateMBS) 14547
- 82.39.76 PathSmoothQuadraticCurvetoRel(c() as GMCoordinateMBS) 14547

82.39.78 Point(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a point using stroke color and thickness at coordinate.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color

dim draw as GMGraphicsMBS = image.Graphics

// draw cross with pixels
for x as Integer = 240 to 260
draw.Point(x, 250)
next
for y as Integer = 240 to 260
draw.Point(250,y)
next
draw.Draw

Backdrop=image.CopyPicture
```

82.39.79 PointSize(pointSize as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set font point size.

82.39.80 Polygon(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw an arbitrary polygon using stroke color and thickness consisting of three or more coordinates contained in an array.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color
image.strokeColor = new GMColorRGBMBS("green") // set color

dim draw as GMGraphicsMBS = image.Graphics
dim coordinates(-1) as GMCoordinateMBS

coordinates.Append new GMCoordinateMBS(70,70)
coordinates.Append new GMCoordinateMBS(100,340)
coordinates.Append new GMCoordinateMBS(380,200)
coordinates.Append new GMCoordinateMBS(70,70)

draw.Polygon coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.39.81 Polyline(values() as GMCoordinateMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Draw an arbitrary polyline using stroke color and thickness consisting of three or more

coordinates contained in an array.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("green") // set color

dim draw as GMGraphicsMBS = image.Graphics
dim coordinates(-1) as GMCoordinateMBS

coordinates.Append new GMCoordinateMBS(70,70)
coordinates.Append new GMCoordinateMBS(100,340)
coordinates.Append new GMCoordinateMBS(380,200)

draw.Polyline coordinates
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.39.82 PopClipPath

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pop (terminate) clip path definition started by PushClipPath.

82.39.83 PopGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pop Graphic Context.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorMBS() // transparent fillcolor
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics
```

```
// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: Removing the current graphic context from the graphic context stack restores the options to the values they had prior to the preceding PushGraphicContext operation.

82.39.84 PopPattern

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Terminate a pattern definition started via PushPattern.

82.39.85 PushClipPath(id as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Push (create) clip path definition with id.
Notes: Clip patch definition consists of subsequent drawing commands, terminated by PopClipPath.

82.39.86 PushGraphicContext

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Push Graphic Context.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorMBS() // transparent fillcolor
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics
```

```
// Draw a Rectangle
draw.PushGraphicContext
draw.Translation(250,250)
draw.Rotation(50)
draw.Rectangle(0, 0, 100, 100) // rotated
draw.PopGraphicContext
draw.Rectangle(0, 0, 100, 100) // not rotated
draw.Draw

Backdrop=image.CopyPicture
```

Notes: When a graphic context is pushed, options set after the context is pushed (such as coordinate transformations, color settings, etc.) are saved to a new graphic context. This allows related options to be saved on a graphic context "stack" in order to support heirarchical nesting of options. When PopGraphicContext is used to pop the current graphic context, the options in effect during the last PushGraphicContext operation are restored.

82.39.87 PushPattern(id as string, x as Integer, y as Integer, width as Integer, height as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Start a pattern definition with arbitrary pattern name specified by id, pattern offset specified by x and y, and pattern size specified by width and height.
Notes: The pattern is defined within the coordinate system defined by the specified offset and size. Arbitrary drawing objects (including DrawableCompositeImage) may be specified between PushPattern and PopPattern in order to draw the pattern. Normally the pair PushGraphicContext & PopGraphicContext are used to enclose a pattern definition. Pattern definitions are terminated by a PopPattern object.

82.39.88 Rectangle(upperLeftX as Double, upperLeftY as Double, lowerRightX as Double, lowerRightY as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a rectangle using stroke color and thickness from upper-left coordinates to lower-right coordinates.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
```

```
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a rectangle
draw.Rectangle(250, 250, 100, 100)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.39.89 Rotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set rotation to use when drawing (coordinate transformation).
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Rotation 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.90 RoundRectangle(centerX as Double, centerY as Double, width as Double, height as Double, cornerWidth as Double, cornerHeight as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a rounded rectangle using stroke color and thickness, with specified center coordinate, specified width and height, and specified corner width and height.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a round rectangle
draw.RoundRectangle(250, 250, 100, 100,20,20)
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If a fill color is specified, then the object is filled.

82.39.91 Scaling(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply scaling in x and y direction while drawing objects (coordinate transformation).
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics
draw.FillColor new GMColorRGBMBS("red")

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.StrokeColor new GMColorRGBMBS("blue")
```

```
draw.Scaling 1.2,1.1
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.92 SkewX(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Skew in X direction (coordinate transformation)
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewX 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.93 SkewY(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Skew in Y direction.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics
```

```
draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.SkewY 5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.94 StrokeAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Antialias while drawing lines or object outlines.

82.39.95 StrokeColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set color to use when drawing lines or object outlines.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.96 StrokeLineCap(LineCap as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the end of open subpaths when they are stroked.
Notes: Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.

82.39.97 StrokeLineJoin(LineJoin as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked.
Notes: Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.

82.39.98 StrokeOpacity(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Opacity to use when drawing lines or object outlines.

82.39.99 StrokeWidth(opacity as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set width to use when drawing lines or object outlines.

82.39.100 Text(x as Double, y as Double, text as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate image with text using stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

dim draw as GMGraphicsMBS = image.Graphics

// draw red text
draw.strokeColor(new GMColorRGBMBS("red")) // Outline color
draw.strokeWidth(1)
draw.Font("/Library/Fonts/Verdana.ttf")
draw.Text(50, 50, "Hello")
draw.Draw

Backdrop=image.CopyPicture
```

Notes: If text contains special format characters the image filename, type, width, height, or other image

attributes may be incorporated in the text (see label).
See also:

- 82.39.101 Text(x as Double, y as Double, text as string, encoding as string) 14558

82.39.101 Text(x as Double, y as Double, text as string, encoding as string)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate image with text represented with text encoding, using current stroke color, font, font pointsize, and box color (text background color), at specified coordinates.
Notes:

If text contains special format characters the image filename, type, width, height, or other image attributes may be incorporated in the text (see label()).

The text encoding specifies the code set to use for text annotations. The only character encoding which may be specified at this time is "UTF-8" for representing Unicode as a sequence of bytes. Specify an empty string to set text encoding to the system's default. Successful text annotation using Unicode may require fonts designed to support Unicode.

Seems like you need ghostscript or the DPS library for text handling, so it may no be available for you.
See also:

- 82.39.100 Text(x as Double, y as Double, text as string) 14557

82.39.102 TextAntialias(flag as boolean)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Antialias while drawing text (default true).
Notes: The main reason to disable text antialiasing is to avoid adding new colors to the image.

82.39.103 TextDecoration(DecorationType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify decoration (e.g. UnderlineDecoration) to apply to text.

82.39.104 TextUnderColor(c as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a box under rendered text using the specified color.

82.39.105 Translation(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply coordinate translation (set new coordinate origin).
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

draw.StrokeColor new GMColorRGBMBS("red")
draw.Line(100,100,400,400)
draw.Translation 5,5
draw.StrokeColor new GMColorRGBMBS("blue")
draw.Line(100,100,400,400)
draw.Draw

Backdrop=image.CopyPicture
```

82.39.106 Viewbox(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Dimensions of the output viewbox.
Notes: If the image is to be written to a vector format (e.g. MVG or SVG), then a PushGraphicContext() object should be pushed to the head of the list, followed by a Viewbox() statement to establish the output canvas size. A matching PopGraphicContext() object should be pushed to the tail of the list.

82.39.107 Properties

82.39.108 Image as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image this graphics object belongs to.
Notes: (Read only property)

82.40 class GMImageArrayMBS

82.40.1 class GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an array of images in GraphicsMagick.
Example:

```
// extract all layers of photoshop file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.psd")
dim images as new GMImageArrayMBS

images.readImages(file.UnixpathMBS)

dim c as Integer = images.size
for i as Integer = 0 to c-1
dim image as GMImageMBS = images.Image(i)
file = SpecialFolder.Desktop.Child(image.FileName+"."+str(i)+".png")
image.write(file)
next
```

Notes: Can be used to assemble/disassemble gif images.

82.40.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr4

82.40.3 Methods

82.40.4 animateImages

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Animate a sequence of image frames.
Notes: Image frames are displayed in succession, creating an animated effect. The animation options are taken from the first image frame. This feature is only supported under X11 at the moment.

82.40.5 append(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds an image to the end of the array.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// put copy of first image on the back
dim n as GMImageMBS = g.FirstImage
g.append n

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

82.40.6 appendImages(stack as boolean = false) as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Append a sequence of image frames, writing the result to new image.
Notes: All the input image frames must have the same width or height. Image frames of the same width are stacked top-to-bottom. Image frames of the same height are stacked left-to-right. If the stack parameter is false, rectangular image frames are stacked left-to-right otherwise top-to-bottom.

82.40.7 averageImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Average a sequence of image frames, writing the result to averagedImage.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// averageImages
dim n as GMImageMBS = g.averageImages
Backdrop = n.CopyPicture
```

Notes: All the input image frames must be the same size in pixels.

82.40.8 coalesceImages as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create a coalesced image sequence obtained by "playing" the image sequence (observing page offsets and disposal methods) to create a new image sequence in which all frames are full size and completely rendered.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// deconstruct
g = g.coalesceImages

// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: Note that if the original image sequence relied on page offsets and disposal methods that the resulting sequence will be larger (perhaps much larger) then the original. This is useful for GIF animation sequences that have page offsets and disposal methods. The resuting image sequence is returned.

82.40.9 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty image array.

82.40.10 deconstructImages as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Break down an image sequence into constituent parts.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// deconstruct
g = g.deconstructImages
```

```
// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: This is useful for creating GIF or MNG animation sequences.

82.40.11 displayImages

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Display a sequence of image frames.
Notes:

Through use of a pop-up menu, image frames may be selected in succession. This feature is fully supported under X11 but may have only limited support in other environments.
Caution: if an image format is is not compatable with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

display methods are not supported currently.

82.40.12 FirstImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns first image in array.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// show first image
dim img as GMImageMBS = g.FirstImage

// convert to true color for CopyPicture to work
const TrueColorType=6
img.type=TrueColorType

Backdrop = img.CopyPicture
```

82.40.13 flattenImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Merge a sequence of image frames which represent image layers into a single composited representation.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// put copy of first image on the back
dim n as GMImageMBS = g.flattenImages

Backdrop = n.CopyPicture
```

Notes: Returns the flattened image. This function is useful for combining Photoshop layers into a single image.

82.40.14 Image(index as Integer) as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries image with given index.

82.40.15 insert(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts an image on the front.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// put copy of first image on the front
dim n as GMImageMBS = g.FirstImage
g.insert n

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
```

```
g.writeImages(output.UnixpathMBS)
```

82.40.16 LastImage as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns last image in array.

82.40.17 mapImages(map as GMImageMBS, dither as boolean = true, measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace the colors of a sequence of images with the closest color from a reference image.
Notes: Set dither to true to enable dithering. Set measureError to true in order to evaluate quantization error.

82.40.18 montageImages(options as GMMontageMBS) as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create a composite image by combining several separate image frames.
Example:

```
// build montage
dim StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(& cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(& c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
dim logo as Picture = LogoMBS(500)
dim image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Dim StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)
```

```
// show result
dim resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes: Multiple frames may be generated in the output array depending on the tile setting and the number of image frames montaged. Montage options are provided via the parameter options. Options set in the first image frame (backgroundColor, borderColor, matteColor, fillColor, strokeColor, font and fontPointsize) are also used as options by montageImages().

82.40.19 morphImages(frames as Integer) as GMImageArrayMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Morph a seqence of image frames.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// coalesce to make sure we have full images
g = g.coalesceImages
// morph to 10 pictures
g = g.morphImages(10)

// write gif
dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")
g.writeImages output.UnixpathMBS
```

Notes: This algorithm expands the number of image frames (output to the new image array) by adding the number of intervening frames specified by frames such that the original frames morph (blend) into each other when played as an animation.

82.40.20 mosaicImages as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Inlay a number of images to form a single coherent picture.
Notes: The result image argument is updated with a mosaic constructed from the image sequence.

82.40.21 quantizeImages(measureError as boolean = false)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quantize colors in images using current quantization settings.
Notes: Set measureError to true in order to measure quantization error.

82.40.22 readImages(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read a sequence of image frames into existing container (appending to array) from blob.
See also:

- 82.40.23 readImages(imageSpec as string) 14568

82.40.23 readImages(imageSpec as string)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read a sequence of image frames into existing container (appending to array) with image names specified in the string imageSpec.
See also:

- 82.40.22 readImages(blob as GMBlobMBS) 14568

82.40.24 remove(index as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the image with the given index.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// remove first
g.remove 0

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

Notes: Index should be between 0 and size-1.

82.40.25 reverse

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reverses the order of images in the array.

82.40.26 writeImages(blob as GMBlobMBS, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes images to the given blob object.
Notes:

Write images in container to in-memory BLOB specified by Blob blob. Set adjoin to false to write a set of image frames via a wildcard imageSpec (e.g. image% 02d.miff).
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 82.40.27 writeImages(imageSpec as string, adjoin as boolean = true) 14569

82.40.27 writeImages(imageSpec as string, adjoin as boolean = true)

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes images to the given path.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// write to file

dim output as FolderItem = SpecialFolder.Desktop.Child("output.gif")

g.writeImages(output.UnixpathMBS)
```

Notes:

Write images in container to file specified by string imageSpec. Set adjoin_ to false to write a set of image

frames via a wildcard imageSpec (e.g. image% 02d.miff).
The wildcard must be one of % 0Nd, % 0No, or % 0Nx.
Caution: if an image format is selected which is capable of supporting fewer colors than the original image or quantization has been requested, the original image will be quantized to fewer colors. Use a copy of the original if this is a problem.
See also:

- 82.40.26 writeImages(blob as GMBlobMBS, adjoin as boolean = true) 14569

82.40.28 Properties

82.40.29 empty as boolean

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Checks whether image array is empty.
Notes:

Returns true if array is empty or false if not.
(Read only property)

82.40.30 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal handle of the image array.
Notes:

Should always be non zero.
(Read and Write property)

82.40.31 size as Integer

MBS GraphicsMagick Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns number of images in this array.
Example:

```
// read gif
dim g as new GMImageArrayMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.gif")
g.readImages(file.UnixpathMBS)

// display number of images
MsgBox str(g.size)
```

Notes: (Read only property)

82.41 class GMImageChannelStatisticsMBS

82.41.1 class GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The statistics for image channel.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim stat as GMImageStatisticsMBS = g.statistics
dim gs as GMImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

82.41.2 Methods

82.41.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

82.41.4 Properties

82.41.5 maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum value observed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim stat as GMImageStatisticsMBS = g.statistics
dim gs as GMImageChannelStatisticsMBS = stat.green

MsgBox "maximum green color: "+str(gs.maximum)
```

Notes: (Read only property)

82.41.6 mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Average (mean) value observed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim stat as GMImageStatisticsMBS = g.statistics
dim r as GMImageChannelStatisticsMBS = stat.red

MsgBox "mean red color: "+str(R.mean)
```

Notes: (Read only property)

82.41.7 minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Minimum value observed.
Notes: (Read only property)

82.41.8 standardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Standard deviation, sqrt(variance).
Notes: (Read only property)

82.41.9 variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Variance.
Notes: (Read only property)

82.42 class GMImageMBS

82.42.1 class GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image is the primary object in Magick++ and represents a single image frame (see image design).
Example:

```
dim c as new GMColorMBS("white")
dim g as new GMGeometryMBS(100,100)
dim image as new GMImageMBS(g, c)
```

Notes:

With MBS Plugin 14.0 we offer this classes in 8bit (GM prefix) or 16bit (GM16 prefix).

The GMImageArrayMBS class must be used to operate on image sequences or images (e.g. of format GIF, TIFF, MIFF, Postscript, & MNG) which are comprized of multiple image frames. Individual frames of a multi-frame image may be requested by adding array-style notation to the end of the file name (e.g. "animation.gif [3] " retrieves the fourth frame of a GIF animation. Various image manipulation operations may be applied to the image. Attributes may be set on the image to influence the operation of the manipulation operations. The GMPixelsMBS class provides low-level access to image pixels.

82.42.4 Methods

82.42.5 adaptiveThreshold(width as UInt32, height as UInt32, offset as double = 0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply adaptive thresholding to the image.
Notes:

see:
http://www.dai.ed.ac.uk/HIPR2/adpthrsh.htm

Adaptive thresholding is useful if the ideal threshold level is not known in advance, or if the illumination gradient is not constant across the image. Adaptive thresholding works by evaulating the mean (average) of a pixel region (size specified by width and height) and using the mean as the thresholding value. In order to remove residual noise from the background, the threshold may be adjusted by subtracting a constant offset (default zero) from the mean to compute the threshold.

82.42.6 addNoise(noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add noise to image with the specified noise type.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.addNoise(image.GaussianNoise)

Backdrop=image.CopyPicture
```

Notes: Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

82.42.7 addNoiseChannel(channel as Integer, noise as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add noise to an image channel with the specified noise type. The channel parameter specifies the channel to add noise to.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.addNoiseChannel(image.BlueChannel, image.ImpulseNoise)

Backdrop=image.CopyPicture
```

Notes:

The noiseType parameter specifies the type of noise.
Use one of this constants: GaussianNoise, ImpulseNoise, LaplacianNoise, MultiplicativeGaussianNoise, PoissonNoise, UniformNoise.

82.42.8 affineTransform(sx as Double, sy as Double, rx as Double, ry as Double, tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies an affine transformation to the drawing matrix.
Notes: Specify a transformation matrix to adjust scaling, rotation, and translation (coordinate transformation) for subsequently drawn objects in the same or decendent drawing context. The sx & sy parameters represent the x & y scale factors, the rx & ry parameters represent the x & y rotation, and the tx & ty parameters represent the x & y translation.

82.42.9 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate using specified text, bounding area, and placement gravity.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.42.12 annotate(text as string, location as GMGeometryMBS) 14580

82.42.10 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer, degrees as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate with text using specified text, bounding area, placement gravity, and rotation.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.42.11 annotate(text as string, gravity as Integer) 14578
- 82.42.12 annotate(text as string, location as GMGeometryMBS) 14580

82.42.11 annotate(text as string, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate with text (bounding area is entire image) and placement gravity.
Example:

```
dim White as new GMColorGrayMBS(1)
dim Black as new GMColorGrayMBS(0)
dim geo as new GMGeometryMBS("300x200")

dim g as new GMImageMBS(geo, White)

g.antiAlias = False
g.fillColor = Black
g.lineWidth = 1
g.strokeColor = Black
g.font = "@/Library/Fonts/Tahoma.ttf"
g.fontPointsize = 15
```

g.annotate("Hello World", g.SouthGravity)

Backdrop = g.CopyPicture

Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.42.12 annotate(text as string, location as GMGeometryMBS) 14580

82.42.12 annotate(text as string, location as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotate using specified text, and placement location.
Notes:

Annotate image (draw text on image)

Gravity effects text placement in bounding area according to these rules:

NorthWestGravity	text bottom-left corner placed at top-left
NorthGravity	text bottom-center placed at top-center
NorthEastGravity	text bottom-right corner placed at top-right
WestGravity	text left-center placed at left-center
CenterGravity	text center placed at center
EastGravity	text right-center placed at right-center
SouthWestGravity	text top-left placed at bottom-left
SouthGravity	text top-center placed at bottom-center
SouthEastGravity	text top-right placed at bottom-right

Annotate annotates an image with text. Optionally you can include any of the following bits of information about the image by embedding the appropriate special characters:

% b file size in bytes. % c comment. % d directory in which the image resides. % e extension of the image file. % f original filename of the image. % h height of image. % i filename of the image. % k number of unique colors. % l image label. % m image file format. % n number of images in a image sequence. % o output image filename. % p page number of the image. % q image depth (8 or 16). % p page number of the image. % q image depth (8 or 16). % s image scene number. % t image filename without any extension. % u a unique temporary filename. % w image width. % x x resolution of the image. % y y resolution of the image.

Set a font with full path and @ in front. e.g. "@/Library/Fonts/Arial.ttf". This way the plugin loads it directly.

- 82.42.9 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer) 14576
- 82.42.10 annotate(text as string, boundingArea as GMGeometryMBS, gravity as Integer, degrees as Double) 14577
- 82.42.11 annotate(text as string, gravity as Integer) 14578

82.42.13 attributeValues as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A dictionary with all attributes.
Notes: As attributes are created on demand, this will only return all so far generated attributes.

82.42.14 autoOrient

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Orient image to be right-side up based on its current orientation attribute.
Notes: This allows the image to be viewed correctly when the orientation attribute is not available, or is not respected.

82.42.15 blur(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur an image with the specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.blur(30,10)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.16 blurChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur an image channel with the specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.blurChannel(image.BlueChannel, 30,10)
```

Backdrop=image.CopyPicture

Notes: The channel parameter specifies the channel to modify. The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.17 border

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Border image (add border to image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.border

Backdrop=image.CopyPicture
```

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 82.42.18 border(geometry as GMGeometryMBS) 14582

82.42.18 border(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Border image (add border to image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.border GMGeometryMBS.Make(10,10)

Backdrop=image.CopyPicture
```

Notes: The color of the border is specified by the borderColor attribute.
See also:

- 82.42.17 border 14582

82.42.19 borderGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for border.

82.42.20 cacheThreshold(threshold as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pixel cache threshold in megabytes.
Notes: Once this memory threshold is exceeded, all subsequent pixels cache operations are to/from disk. This setting is shared by all Image objects.

82.42.21 cdl(cdl as string)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Bake in the ASC-CDL.
Notes: Bake in the ASC-CDL, which is a convention for the for the exchange of basic primary color grading information between for the exchange of basic primary color grading information between equipment and software from different manufacturers. It is a useful transform for other purposes as well.

82.42.22 channel(channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extract channel from image.
Notes: Use this option to extract a particular channel from the image. MatteChannel for example, is useful for extracting the opacity values from an image.

82.42.23 charcoal(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal effect image (looks like charcoal sketch).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.charcoal

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.24 chop(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chop image (remove vertical or horizontal subregion of image).

82.42.25 colorHistogram as dictionary

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates histogram.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim d as Dictionary = g.colorHistogram

MsgBox str(d.Count)+" color"

// check first color
dim c as GMColorMBS = d.key(0)

MsgBox "Color "+str(c.colorValue)+": "+str(d.Value(c))
```

Notes: The dictionary has a GMColorMBS/GMColor16MBS object as key for each color and an unsigned integer as value.

82.42.26 colorize(opacity as UInt32, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorize image with pen color, using specified percent opacity.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.colorize(10, new GMColorMBS("red"))
```

Backdrop=image.CopyPicture

See also:

- 82.42.27 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GMColorMBS) 14585

82.42.27 colorize(opacityRed as UInt32, opacityGreen as UInt32, opacityBlue as UInt32, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorize image with pen color, using specified percent opacity for red, green, and blue quantums.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.colorize(10, 0, 5, new GMColorMBS("red"))

Backdrop=image.CopyPicture
```

See also:

- 82.42.26 colorize(opacity as UInt32, penColor as GMColorMBS) 14584

82.42.28 colorMap as GMColorMBS()

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries array with all colors in color map.
See also:

- 82.42.300 colorMap(index as UInt32) as GMColorMBS 14680

82.42.29 colorMatrix(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply a color matrix to the image channels.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
```

```
dim m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.colorMatrix 3, m

Backdrop = g.CopyPicture
```

Notes: The user supplied matrix may be of order 1 to 5 (1x1 through 5x5).

82.42.30 CombinePictureWithMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image with mask.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

dim c as new GMColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

Notes: Internally this calls Width and Height, CopyPicture and CopyMask.

82.42.31 compare(image as GMImageMBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compare current image with another image.

Notes: Sets meanErrorPerPixel, normalizedMaxError, and normalizedMeanError in the current image. False is returned if the images are identical. An ErrorOption exception is thrown if the reference image columns, rows, colorspace, or matte differ from the current image:

82.42.32 composite(compositeImage as GMImageMBS, gravity as Integer, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.42.33 composite(compositeImage as GMImageMBS, offset as GMGeometryMBS, CompositeOperator as Integer=2) 14587
- 82.42.34 composite(compositeImage as GMImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2) 14587

82.42.33 composite(compositeImage as GMImageMBS, offset as GMGeometryMBS, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.42.32 composite(compositeImage as GMImageMBS, gravity as Integer, CompositeOperator as Integer=2) 14587
- 82.42.34 composite(compositeImage as GMImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2) 14587

82.42.34 composite(compositeImage as GMImageMBS, xOffset as Integer, yOffset as Integer, CompositeOperator as Integer=2)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compose an image onto another at specified x and y offset and using a specified algorithm.
See also:

- 82.42.32 composite(compositeImage as GMImageMBS, gravity as Integer, CompositeOperator as Integer=2) 14587
- 82.42.33 composite(compositeImage as GMImageMBS, offset as GMGeometryMBS, CompositeOperator as Integer=2) 14587

82.42.35 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Default constructor.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GMImageMBS
dim blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.42.36 Constructor(blob as GMBlobMBS) 14588
- 82.42.37 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS) 14589
- 82.42.38 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS, depth as UInt32) 14590
- 82.42.40 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS, Magick as string) 14591
- 82.42.41 Constructor(file as folderitem) 14591
- 82.42.42 Constructor(other as GMImageMBS) 14592
- 82.42.43 Constructor(Path as string) 14592
- 82.42.44 Constructor(pic as picture) 14593
- 82.42.45 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS) 14594
- 82.42.46 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14594

82.42.36 Constructor(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct Image from in-memory Blob.
See also:

- 82.42.35 Constructor 14588
- 82.42.37 Constructor(blob as GMBlobMBS, geometry as GMGeometryMBS) 14589

82.42.42 Constructor(other as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an image by making a copy of the existing one.

82.42.43 Constructor(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Construct from image file or image specification.
See also:

82.42.44 Constructor(pic as picture)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new GMImage with the given picture.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
Backdrop=image.CopyPicture
```

Notes: Pixels from both the picture and picture's mask.

82.42.45 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct a blank image canvas of specified size and color.
Example:

```
dim g as new GMGeometryMBS(600,600)
dim c as new GMColorRGBMBS(1.0,0.0,0.0) // red
dim image as new GMImageMBS(g, c)

const TrueColorType=6

// Ensure that there are no other references to this image.
image.modifyImage
// Set the image type to TrueColor DirectClass representation.
image.type=TrueColorType

Backdrop=image.CopyPicture(0,0,600,600)
```

82.42.46 Constructor(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes single image frame from an array of raw pixels, with specified storage type

(ConstituteImage).
Example:

```
dim data as new memoryblock(2048*2048) // your data
dim image as new GMImageMBS(2048, 2048, "I", GMImageMBS.StorageTypeCharPixel, data)
```

Notes:

Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GMImageMBS(640, 480, "RGB", GMImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

- 82.42.45 Constructor(size as GMGeometryMBS, ColorValue as GMColorMBS) 14594

82.42.47 contrast(sharpen as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Contrast image (enhance intensity differences in image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.contrast(10)

Backdrop=image.CopyPicture
```

82.42.48 convolve(order as Integer, ColorMatrix() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Convolve image.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)

dim m(8) as Double

m(0) = 0.25
m(1) = 0
m(2) = 0.25

m(3) = 0
m(4) = 0
m(5) = 0

m(6) = 0.25
m(7) = 0
m(8) = 0.25

g.convolve 3, m
```

Backdrop = g.CopyPicture

Notes:

Applies a user-specified convolution to the image.
order represents the number of columns and rows in the filter kernel.
kernel is an array of doubles representing the convolution kernel.

82.42.49 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image and returns it as a new picture.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Rectangle(250, 250, 100, 100)

Backdrop=image.CopyPicture
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 82.42.50 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14597

82.42.50 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image and returns it as a new picture.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
```

```
image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture(0,0,250,250)
```

Notes: You may need to set image type to RGB to get it working.
See also:

- 82.42.49 CopyPicture as picture 14597

82.42.51 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image's mask and returns it as a new picture.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim g As New GMImageMBS(f)

// get image with mask
Dim p As picture = g.CopyPicture
p.mask = g.CopyPictureMask

window1.Backdrop = p
```

See also:

- 82.42.52 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 14598

82.42.52 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the image's mask and returns it as a new picture.
See also:

- 82.42.51 CopyPictureMask as picture 14598

82.42.53 CopyPixelsMemory as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy the pixels as they are into a memoryblock.
Notes:

Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GMImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 82.42.54 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock 14599

82.42.54 CopyPixelsMemory(x as Integer, y as Integer, width as Integer, height as Integer) as Memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copy the pixels as they are into a memoryblock.
Notes:

Optional specify rectangle.
Returns nil on low memory or bad parameter. Image must be of type class direct (not palette picture).
Order of pixel data is normally Red, Green, Blue, Opacity. Or Cyan, Magenta, Yellow, Black for CMYK images.
For GMImageMBS, the data is 8bit per channel. For GMImage16MBS, the data is 16bit per channel.
See also:

- 82.42.53 CopyPixelsMemory as Memoryblock 14599

82.42.55 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Example:

```
// get test image
dim logo as Picture = LogoMBS(500)

// create GraphicsMagick image
dim g as new GMImageMBS(logo)

// make a HBitmap
dim hBitmap as ptr = g.CreateHBITMAP
```

```
// convert back to Xojo picture
dim pic as Picture = WindowsBitmapMBS.HBitmapToPicture(hBitmap, true)

// show in window
Backdrop = pic

// and cleanup memory
WindowsBitmapMBS.DeleteBitmap(hBitmap)
```

Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

82.42.56 crop(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop image (return subregion of original image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.crop GMGeometryMBS.Make(100,200)

Backdrop=image.CopyPicture
```

82.42.57 cycleColormap(amount as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Cycle (rotate) image colormap.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.cycleColormap(5)

image.type = image.TrueColorType

Backdrop=image.CopyPicture
```

82.42.58 despeckle

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Despeckle image (reduce speckle noise).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.despeckle

Backdrop=image.CopyPicture
```

82.42.59 display

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Display image on screen.
Notes:

Caution: if an image format is is not compatible with the display visual (e.g. JPEG on a colormapped display) then the original image will be altered. Use a copy of the original if this is a problem.

The plugin is not compiled with X11 so this call may not be useful.

82.42.60 edge(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Edge image (hilight edges in image).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.edge

Backdrop=image.CopyPicture
```

Notes: The radius is the radius of the pixel neighborhood. Specify a radius of zero for automatic radius selection.

82.42.61 emboss(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Emboss image (hilight edges with 3D effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.emboss

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.62 enhance

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enhance image (minimize noise).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.enhance

Backdrop=image.CopyPicture
```

82.42.63 erase

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set all image pixels to the current background color.

82.42.64 extent(geo as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// extend image to fit
dim geo as new GMGeometryMBS(500,500)
image.extent geo

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14603
- 82.42.66 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14604
- 82.42.67 extent(geo as GMGeometryMBS, gravity as Integer) 14604

82.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// extend image to fit
dim geo as new GMGeometryMBS(500,500)
dim col as GMColorMBS = GMColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.42.64 extent(geo as GMGeometryMBS) 14602
- 82.42.66 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14604
- 82.42.67 extent(geo as GMGeometryMBS, gravity as Integer) 14604

82.42.66 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// extend image to fit
dim geo as new GMGeometryMBS(500,500)
dim col as GMColorMBS = GMColorMBS.Black
image.extent geo, col

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.42.64 extent(geo as GMGeometryMBS) 14602
- 82.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14603
- 82.42.67 extent(geo as GMGeometryMBS, gravity as Integer) 14604

82.42.67 extent(geo as GMGeometryMBS, gravity as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create an image canvas using background color sized according to geometry and composite existing image on it, with image placement controlled by gravity.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)
```

```
// resize proportionally to fit
dim geo as new GMGeometryMBS(500,500)
image.extent geo, image.CenterGravity

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Parameters are obtained from existing image properties if they are not specified via a method parameter. Parameters which are supported by image properties (gravity and backgroundColor) update those image properties as a side-effect.
See also:

- 82.42.64 extent(geo as GMGeometryMBS) 14602
- 82.42.65 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS) 14603
- 82.42.66 extent(geo as GMGeometryMBS, backgroundColor as GMColorMBS, gravity as Integer) 14604

82.42.68 flip

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flip image (reflect each scanline in the vertical direction).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.flip

Backdrop=image.CopyPicture
```

82.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606

- 82.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14606
- 82.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606

82.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 82.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS) 14605
- 82.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14606
- 82.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606

82.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.69 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS) 14605
- 82.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606
- 82.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606

82.42.72 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill color across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match:
See also:

- 82.42.70 floodFillColor(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14606
- 82.42.71 floodFillColor(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14606

82.42.73 floodFillOpacity(x as UInt32, y as UInt32, opacity as UInt32, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill pixels matching color (within fuzz factor) of target pixel(x,y) with replacement opacity value using method.

82.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14607
- 82.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14608
- 82.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14608

82.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14607
- 82.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14608
- 82.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14608

82.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels that match the color of the target pixel and are neighbors of the target pixel.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14607
- 82.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14607
- 82.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS) 14608

82.42.77 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS, borderColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flood-fill texture across pixels starting at target-pixel and stopping at pixels matching specified border color.
Notes: Uses current fuzz setting when determining color match.
See also:

- 82.42.74 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS) 14607
- 82.42.75 floodFillTexture(point as GMGeometryMBS, fillColor as GMColorMBS, borderColor as GMColorMBS) 14607
- 82.42.76 floodFillTexture(x as UInt32, y as UInt32, fillColor as GMColorMBS) 14608

82.42.78 flop

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flop image (reflect each scanline in the horizontal direction).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.flop

Backdrop=image.CopyPicture
```

82.42.79 FontMap as string

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries current font map in use.
Notes:

The MBS Plugin provides to GraphicsMagick the font map to use.
This is a XML defining which fonts are available.
Use this function to learn what fonts may be available or debug to see why a font doesn't load.

82.42.80 fontTypeMetrics(name as string) as GMTypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain font metrics for text string given current font, pointsize, and density settings.

82.42.81 formatExpression(expression as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Format the specified expression similar to command line '-format'.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: For example "% wx% h" is converted to a string containing image WIDTHxHEIGHT like "640x480".

82.42.82 frame

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.frame

Backdrop=image.CopyPicture
```

See also:

- 82.42.83 frame(geometry as GMGeometryMBS) 14610
- 82.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14610

82.42.83 frame(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.frame(GMGeometryMBS.Make("10x10"))

Backdrop=image.CopyPicture
```

See also:

- 82.42.82 frame 14609
- 82.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6) 14610

82.42.84 frame(width as UInt32, height as UInt32, innerBevel as Integer=6, outerBevel as Integer=6)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Draw a decorative frame around the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.frame(15,15)

Backdrop=image.CopyPicture
```

See also:

- 82.42.82 frame 14609
- 82.42.83 frame(geometry as GMGeometryMBS) 14610

82.42.85 frameGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for frame.

82.42.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma correct the image or individual image channels.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.gamma(1,2,3)

Backdrop=image.CopyPicture
```

See also:

- 82.42.243 gamma as Double 14664

82.42.87 gaussianBlur(width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gaussian blur image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.gaussianBlur(30, 10)

Backdrop=image.CopyPicture
```

Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The

standard deviation of the gaussian bell curve is specified by sigma

82.42.88 gaussianBlurChannel(channel as Integer, width as Double, sigma as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gaussian blur image channel.
Notes: The number of neighbor pixels to be included in the convolution mask is specified by width. The standard deviation of the gaussian bell curve is specified by sigma.

82.42.89 getChromaBluePrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity blue primary point.

82.42.90 getchromaGreenPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

82.42.91 getchromaRedPrimary(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

82.42.92 getchromaWhitePoint(byref x as Double, byref y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity white point
Notes: e.g. x=0.3127, y=0.329

82.42.93 getConstPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers read-only pixels from the image to the pixel cache as defined by the specified region

82.42.94 GetEXIFOrientation(byref orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries orientation from EXIF.
Notes:

Orientation is set to number from 0 to 8 depending on rotation. -1 if unknown.
This function can only read orientation, if there is an EXIF block in image.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

82.42.95 getPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers pixels from the image to the pixel cache as defined by the specified region.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)

// get pointer to some pixels to write
dim x as ptr = g.getPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via syncPixels. This method is valid for DirectClass images.

82.42.96 Graphics as GMGraphicsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a graphics object for this image.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: Using the graphics object you can draw on the image.

82.42.97 haldClut(image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply a color lookup table (Hald CLUT) to the image.

82.42.98 Hash as String

MBS GraphicsMagick Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Calculates a hash of the image.
Example:

```
Dim p As Picture = LogoMBS(500)
Dim g As New GMImageMBS(p)
msgbox g.Hash
```

Notes:

Hash is returned as 64 characters being 1 or 0.
We convert image to 8x8, turn grayscale and check if pixels are above or below mean value.
This hash is quite immune against resizing, compression artifacts and hue changes.
You can use LevenshteinDistanceMBS or JaroWinklerDistanceMBS to compare two hashes.

82.42.99 implode(factor as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Implode image (special effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.implode(0.3)

Backdrop=image.CopyPicture
```

82.42.100 JasperLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for jasper library.

82.42.101 label(text as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Assign a label to an image.
Notes: Use this option to assign a specific label to the image. Optionally you can include the image filename, type, width, height, or scene number in the label by embedding special format characters. If the first character of string is @, the image label is read from a file titled by the remaining characters in the string. When converting to Postscript, use this option to specify a header string to print above the image.
See also:

- 82.42.254 label as string 14667

82.42.102 level(black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Level image to increase image contrast, and/or adjust image gamma.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.level(0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten:

82.42.103 levelChannel(channel as Integer, black_point as Double, white_point as Double, mid_point as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Level image channel to increase image contrast, and/or adjust image gamma.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.levelChannel(image.BlueChannel, 0, 127.0)

Backdrop=image.CopyPicture
```

Notes: Adjust the levels of the image channel by scaling the colors falling between specified white and black points to the full available quantum range. The parameters provided represent the black, mid (gamma), and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. Mid point (gamma) specifies a gamma correction to apply to the image. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value. The black and white point have the valid range 0 to MaxRGB while mid (gamma) has a useful range of 0 to ten.

82.42.104 LibVersion as String

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the version string of the GraphicsMagick library.

82.42.105 magnify

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magnify image by integral size (double the dimensions)
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.magnify

Backdrop=image.CopyPicture
```

82.42.106 map(mapImage as GMImageMBS, dither as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Remap image colors with closest color from a reference image.
Example:

```
// some picture we want to map colors
dim pic as Picture = LogoMBS(500)

// build a picture with palette
dim backgroundColor as new GMColorMBS(255,255,255) // white
dim size as new GMGeometryMBS(10,10)

dim i as new GMImageMBS(pic)
dim x as new GMImageMBS(size, backgroundColor)

x.pixelColor(0,0) = new GMColorMBS(0 ,0 ,0 ) // black
x.pixelColor(0,1) = new GMColorMBS(255,0 ,0 ) // red
x.pixelColor(0,2) = new GMColorMBS(0 ,255,0 ) // green
x.pixelColor(0,3) = new GMColorMBS(0 ,0 ,255) // blue
x.pixelColor(0,4) = new GMColorMBS(255,255,0 ) // yellow
x.pixelColor(0,5) = new GMColorMBS(0 ,255,255) // cyan
x.pixelColor(0,6) = new GMColorMBS(255,0 ,255) // magenta

// do the map
i.map(x, false)

// convert result from palette picture to bitmap picture
i.type = i.TrueColorType

// and copy picture to backdrop
Backdrop = i.CopyPicture
```

Notes: Set dither to true in to apply Floyd/Steinberg error diffusion to the image. By default, color reduction chooses an optimal set of colors that best represent the original image. Alternatively, you can choose a particular set of colors from an image file with this option.

82.42.107 matteFloodfill(target as GMColorMBS, opacity as UInt32, x as Integer, y as Integer, PaintMethod as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Floodfill designated area with a replacement opacity value.

82.42.108 medianFilter(radius as Double=0.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Filter image by replacing each pixel component with the median color in a circular neighborhood.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.medianFilter(10)

Backdrop=image.CopyPicture
```

82.42.109 minify

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce image by integral (half) size.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.minify

Backdrop=image.CopyPicture
```

82.42.110 modequalizeifyImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Not documented.

82.42.111 modifyImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Prepare to update image (copy if reference >1).
Notes: Normally Magick++'s implicit reference counting takes care of all instance management. In the rare case that the automatic instance management does not work, use this method to assure that there is only one reference to the image to be modified. It should be used in the cases where a GraphicsMagick C function is used directly on an image which may have multiple references:

82.42.112 modulate(brightness as Double, saturation as Double, hue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Modulate percent hue, saturation, and brightness of an image.
Example:

```
dim logo as Picture = LogoMBS(500)
dim image as new GMImageMBS(logo)

image.type = image.TrueColorType

// brightness 150%
image.modulate(150,100,100)
backdrop = image.CopyPicture
```

Notes: Modulation of saturation and brightness is as a ratio of the current value (100 for no change). Modulation of hue is an absolute rotation of -180 degrees to +180 degrees from the current position corresponding to an argument range of 0 to 200 (100 for no change).

82.42.113 montageGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile size and offset within an image montage.
Notes: Only valid for montage images.

82.42.114 motionBlur(radius as Double, sigma as Double, angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Motion blur image with specified blur factor.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.motionBlur(30,10,90)

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels. The angle parameter specifies the angle the object appears to be comming from (zero degrees is from the right).

82.42.115 negate(grayscale as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negate colors in image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.negate

Backdrop=image.CopyPicture
```

Notes: Set grayscale to only negate grayscale values in image.

82.42.116 normalize

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Normalize image (increase contrast by normalizing the pixel values to span the full range of color values).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
```

image.normalize

Backdrop=image.CopyPicture

82.42.117 oilPaint(radius as Double=3.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Oilpaint image (image looks like an oil painting).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.oilPaint

Backdrop=image.CopyPicture
```

82.42.118 opacity(opacity as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or attenuate the opacity channel in the image.
Notes: If the image pixels are opaque then they are set to the specified opacity value, otherwise they are blended with the supplied opacity value. The value of opacity ranges from 0 (completely opaque) to MaxRGB. The defines OpaqueOpacity and TransparentOpacity are available to specify completely opaque or completely transparent, respectively.

82.42.119 opaque(opaqueColor as GMColorMBS, penColor as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Change color of specified opaque pixel to specified pen color.

82.42.120 ping(data as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the blob.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels

are not valid after calling ping.
See also:

- 82.42.121 ping(file as folderitem) 14623
- 82.42.122 ping(Path as string) 14624

82.42.121 ping(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")

// try with Constructor (same as read)
dim t1 as Double = Microseconds
dim g1 as new GMImageMBS(f)

// now just ping
dim t2 as Double = Microseconds
dim g2 as new GMImageMBS
g2.ping(f)

// or read
dim t3 as Double = Microseconds
dim g3 as new GMImageMBS
g3.read(f)

dim t4 as Double = Microseconds

// show speeds
MsgBox str(T4-t3)+" µs for read"+EndOfLine+_
str(T3-t2)+" µs for ping"+EndOfLine+_
str(T2-t1)+" µs for Constructor"
```

Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 82.42.120 ping(data as GMBlobMBS) 14622
- 82.42.122 ping(Path as string) 14624

82.42.122 ping(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads information for an image from the image specification.
Notes: Ping is similar to read except only enough of the image is read to determine the image columns, rows, and filesize. Access the columns, rows, and fileSize attributes after invoking ping. The image pixels are not valid after calling ping.
See also:

- 82.42.120 ping(data as GMBlobMBS) 14622
- 82.42.121 ping(file as folderitem) 14623

82.42.123 PNGLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries PNG library version string.

82.42.124 quantize(measureError as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Quantize image (reduce number of colors).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Set measureError to true in order to calculate error attributes.

82.42.125 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the quantum depth.

82.42.126 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)

const AddQuantumOp = 1
const ThresholdQuantumOp = 10

g.quantumOperator( g.AllChannels, AddQuantumOp, 100)

// show
me.Backdrop = g.CopyPicture
```

See also:

- 82.42.127 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double) 14625

82.42.127 quantumOperator(x as Integer, y as Integer, columns as Integer, rows as Integer, channel as Integer, Operator as Integer, rvalue as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply an arithmetic or bitwise operator to the image pixel quantums.
See also:

- 82.42.126 quantumOperator(channel as Integer, Operator as Integer, rvalue as Double) 14625

82.42.128 raiseGeometryDefault as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The default geometry description for raise.

82.42.129 raiseImage

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.raiseImage

Backdrop=image.CopyPicture
```

See also:

- 82.42.130 raiseImage(geometry as GMGeometryMBS, raisedFlag as boolean=false) 14626

82.42.130 raiseImage(geometry as GMGeometryMBS, raisedFlag as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Raise image (lighten or darken the edges of an image to give a 3-D raised or lowered effect).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.raiseImage(GMGeometryMBS.Make(5,8))

Backdrop=image.CopyPicture
```

See also:

- 82.42.129 raiseImage 14625

82.42.131 randomThreshold(thresholds as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Random threshold image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.randomThreshold(GMGeometryMBS.make("50x200"))

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

82.42.132 randomThresholdChannel(thresholds as GMGeometryMBS, channel as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Random threshold image channel.
Notes: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold. The result is a low-contrast, two color image. The thresholds argument is a geometry containing LOWxHIGH thresholds. If the string contains 2x2, 3x3, or 4x4, then an ordered dither of order 2, 3, or 4 will be performed instead. If a channel argument is specified then only the specified channel is altered. This is a very fast alternative to 'quantize' based dithering.

82.42.133 read(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame from in-memory Blob.
Example:

```
// get some image data (e.g. from blob in database)
dim logo as Picture = LogoMBS(500)
dim jpegData as string = PictureToJPEGStringMBS(logo, 80)

// new image
Dim mp as new GMImageMBS
dim blob as new GMBlobMBS(jpegData)

// read data from blob into this image object
mp.Read blob

// sometimes you need to explicit convert to RGB/RGBA
'mp.type = mp.TrueColorMatteType
Backdrop=mp.CombinePictureWithMask
```

See also:

- 82.42.134 read(blob as GMBlobMBS, size as GMGeometryMBS) 14628
- 82.42.135 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer) 14628

- 82.42.136 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer, magick as string) 14629

- 82.42.136 read(blob as GMBlobMBS, size as GMGeometryMBS, depth as Integer, magick as string) 14629
- 82.42.137 read(blob as GMBlobMBS, size as GMGeometryMBS, magick as string) 14629
- 82.42.138 read(file as folderitem) 14630
- 82.42.139 read(path as string) 14631
- 82.42.140 read(size as GMGeometryMBS, file as folderitem) 14631
- 82.42.142 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr) 14632

82.42.142 read(width as UInt32, height as UInt32, map as string, StorageType as Integer, data as ptr)

MBS GraphicsMagick Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Read single image frame from an array of raw pixels, with specified storage type (ConstituteImage).
Notes:

Returns an Image corresponding to an image stored in a raw memory array format. The pixel data must be in scanline order top-to-bottom. The data can be unsigned char, unsigned short int, unsigned int, unsigned long, float, or double. Float and double require the pixels to be normalized to the range [0..1] , otherwise the range is [0..MaxVal] where MaxVal is the maximum possible value for that type.

Note that for most 32-bit architectures the size of an unsigned long is the same as unsigned int, but for 64-bit architectures observing the LP64 standard, an unsigned long is 64 bits, while an unsigned int remains 32 bits. This should be considered when deciding if the data should be described as "Integer" or "Long".

For example, to create a 640x480 image from unsigned red-green-blue character data, use

image = new GMImageMBS(640, 480, "RGB", GMImageMBS.StorageTypeCharPixel, pixels);

width: width in pixels of the image.
height: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (same as Transparency), O = Opacity, T = Transparency, C = cyan, Y = yellow, M = magenta, K = black, or I = intensity (for grayscale). Specify "P" = pad, to skip over a quantum which is intentionally ignored. Creation of an alpha channel for CMYK images is currently not supported.
type: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..MaxRGB] . Choose from these types: StorageTypeCharPixel, StorageTypeShortPixel, StorageTypeIntegerPixel, StorageTypeLongPixel, StorageTypeFloatPixel, or StorageTypeDoublePixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

82.42.143 reduceNoise

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce noise in image using a noise peak elimination filter.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.reduceNoise

Backdrop=image.CopyPicture
```

See also:

- 82.42.144 reduceNoise(order as Double) 14634

82.42.144 reduceNoise(order as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduce noise in image using a noise peak elimination filter.
See also:

- 82.42.143 reduceNoise 14633

82.42.145 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the release date of the used graphics magick library.
Notes: We update the library only when someone needs an update, so if you need, please contact us.

82.42.146 repage

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image page canvas and position.

82.42.147 resize(geo as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying only geometry, with filter and blur obtained from Image default.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// resize proportionally to fit
dim geo as new GMGeometryMBS(500,500)
image.resize geo

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

Notes: Same result as 'zoom' method.
See also:

- 82.42.148 resize(geo as GMGeometryMBS, filterType as Integer) 14635
- 82.42.149 resize(geo as GMGeometryMBS, filterType as Integer, blur as double) 14635

82.42.148 resize(geo as GMGeometryMBS, filterType as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying geometry and filter, with blur using Image default.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// resize proportionally to fit
dim geo as new GMGeometryMBS(500,500)
image.resize geo, image.CubicFilter

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

See also:

- 82.42.147 resize(geo as GMGeometryMBS) 14634
- 82.42.149 resize(geo as GMGeometryMBS, filterType as Integer, blur as double) 14635

82.42.149 resize(geo as GMGeometryMBS, filterType as Integer, blur as double)

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image, specifying geometry, filter, and blur.
Example:

```
dim f as folderitem = SpecialFolder.Desktop.Child("test.jpg")
dim image as new GMImageMBS(f)

// resize proportionally to fit
dim geo as new GMGeometryMBS(500,500)
image.resize geo, image.CubicFilter, 3

window1.Title = image.formatExpression("% wx% h")
window1.Backdrop = image.CopyPicture
```

See also:

- 82.42.147 resize(geo as GMGeometryMBS) 14634
- 82.42.148 resize(geo as GMGeometryMBS, filterType as Integer) 14635

82.42.150 roll(columns as UInt32, rows as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.roll(30,30)

Backdrop=image.CopyPicture
```

See also:

- 82.42.151 roll(roll as GMGeometryMBS) 14636

82.42.151 roll(roll as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll image (rolls image vertically and horizontally) by specified number of columnms and rows).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.roll(GMGeometryMBS.Make(0,0,30,30))

Backdrop=image.CopyPicture
```

See also:

- 82.42.150 roll(columns as UInt32, rows as UInt32) 14636

82.42.152 rotate(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotate image counter-clockwise by specified number of degrees.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
```

```
image.rotate(30)

Backdrop=image.CopyPicture
```

82.42.153 sample(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resize image by using pixel sampling algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.sample GMGeometryMBS.make(100,100)

Backdrop=image.CopyPicture
```

82.42.154 scale(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resize image by using simple ratio algorithm which provides good quality.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.scale new GMGeometryMBS(100,100)

Backdrop=image.CopyPicture
```

82.42.155 segment(clusterThreshold as Double=1.0, smoothingThreshold as Double=1.5)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Segment (coalesce similar image components) by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy c-means technique.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
```

image.segment

image.type = image.TrueColorType

Backdrop=image.CopyPicture

Notes: A histogram is built for the image. This histogram is filtered to reduce noise and a second derivative of the histogram plot is built and used to identify potential cluster colors (peaks in the histogram). The cluster colors are then validated by scanning through all of the pixels to see how many pixels fall within each cluster. Some candidate cluster colors may not match any of the image pixels at all and should be discarded. Specify clusterThreshold, as the number of pixels matching a cluster color in order for the cluster to be considered valid. SmoothingThreshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative. The default is 1.5.

82.42.156 setChromaBluePrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity blue primary point.
Notes: e.g. x=0.15, y=0.06

82.42.157 setchromaGreenPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity green primary point.
Notes: e.g. x=0.3, y=0.6

82.42.158 setchromaRedPrimary(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity red primary point
Notes: e.g. x=0.64, y=0.33

82.42.159 setchromaWhitePoint(x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chromaticity white point

Notes: e.g. x=0.3127, y=0.329

82.42.160 SetEXIFOrientation(orientation as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets orientation for EXIF.
Notes:

Changing orientation may need to set orientation via SetOrientation and SetEXIFOrientation. With a JPEG you have orientation both in JPEG header and in EXIF metadata.
Returns true for success and false for failure.

For new development, please use ExifTagsMBS class instead.

82.42.161 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the picture into the Image at the given position.

82.42.162 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the picture into the Image's mask at the given position.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

82.42.163 setPixels(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Allocates a pixel cache region to store image pixels as defined by the region rectangle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)

// get pointer to some pixels to write
dim x as ptr = g.setPixels(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
g.syncPixels

// show
me.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel cache to the image via syncPixels.

82.42.164 setStrokeDashArray(values() as Double)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.42.165 shade(azimuth as Double=30.0, elevation as Double=30.0, colorShading as boolean=false)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shade image using distant light source.
Notes: Specify azimuth and elevation as the position of the light source. By default, the shading results as a grayscale image.. Set colorShading to true to shade the red, green, and blue components of the image.

82.42.166 sharpen(radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpen pixels in image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.sharpen

Backdrop=image.CopyPicture
```

Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.167 sharpenChannel(channel as Integer, radius as Double=0.0, sigma as Double=1.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpen pixels in image channel.
Notes: The radius parameter specifies the radius of the Gaussian, in pixels, not counting the center pixel. The sigma parameter specifies the standard deviation of the Laplacian, in pixels.

82.42.168 shave(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shave pixels from image edges.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
```

```
image.shave(new GMGeometryMBS(200,200))

Backdrop=image.CopyPicture
```

82.42.169 shear(xShearAngle as Double, yShearAngle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shear image (create parallelogram by sliding image by X or Y axis).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.shear(10,20)

Backdrop=image.CopyPicture
```

Notes: Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x degrees is measured relative to the Y axis, and similarly, for Y direction shears y degrees is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined as borderColor.

82.42.170 signature(force as boolean=false) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image textual signature.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

MsgBox image.signature

Backdrop=image.CopyPicture
```

Notes: Set force to true in order to re-calculate the signature regardless of whether the image data has been modified.

82.42.171 solarize(factor as Double=50.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Solarize image (similar to effect seen when exposing a photographic film to light during the development process)
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.solarize

Backdrop=image.CopyPicture
```

82.42.172 spread(amount as UInt32=3)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Spread pixels randomly within image by specified ammount
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.spread 5

Backdrop=image.CopyPicture
```

82.42.173 statistics as GMImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain image statistics.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim stat as GMImageStatisticsMBS = g.statistics
dim gs as GMImageChannelStatisticsMBS = stat.blue

MsgBox "blue channel: "+str(gs.minimum)+"-"+str(Gs.maximum)+", mean "+str(gs.mean)
```

Notes: Statistics are normalized to the range of 0.0 to 1.0 and are output to the specified ImageStatistics

structure.

82.42.174 stegano(watermark as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add a digital watermark to the image (based on second image).
Example:

```
dim p as Picture = LogoMBS(500)
dim p1 as Picture = New Picture(550,500,32)
dim p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

dim image1 as new GMImageMBS(p1)
dim image2 as new GMImageMBS(p2)

image2.zoom(new GMGeometryMBS(100,100)) // scale down

// add watermark
image1.stegano(image2)

// now make a threshold so you see the difference
image1.threshold 254

image1.type = image1.TrueColorType
Backdrop=image1.CopyPicture
```

82.42.175 stereo(rightImage as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Create an image which appears in stereo when viewed with red-blue glasses (Red image on left, blue on right)
Example:

```
dim p as Picture = LogoMBS(500)
dim p1 as Picture = New Picture(550,500,32)
dim p2 as Picture = New Picture(550,500,32)

p1.Graphics.DrawPicture p, 0,0
p2.Graphics.DrawPicture p,50,0

dim image1 as new GMImageMBS(p1)
```

```
dim image2 as new GMImageMBS(p2)

image1.stereo(IMAGE2)

Backdrop=image1.CopyPicture
```

82.42.176 strip

MBS GraphicsMagick Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Remove all profiles and text attributes from the image.

82.42.177 strokeDashArray as Double()

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries stroke dash pattern.
Notes: Specify the pattern of dashes and gaps used to stroke paths. The strokeDashArray represents a zero-terminated array of numbers that specify the lengths of alternating dashes and gaps in pixels. If an odd number of values is provided, then the list of values is repeated to yield an even number of values. A typical strokeDashArray array might contain the members 5 3 2 0, where the zero value indicates the end of the pattern array.

82.42.178 swirl(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Swirl image (image pixels are rotated by degrees).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.swirl 200

Backdrop=image.CopyPicture
```

82.42.179 syncPixels

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers the image cache pixels to the image.

82.42.180 texture(texture as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Channel a texture on pixels matching image background color.

82.42.181 threshold(degree as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Threshold image channels (below threshold becomes black, above threshold becomes white).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.threshold 127

// convert to RGB so CopyPicture works
image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: The range of the threshold parameter is 0 to MaxRGB.

82.42.182 thumbnail(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image using several algorithms to make smaller images very quickly.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)

// make thumbnail
dim geo as new GMGeometryMBS(100, 100)
g.thumbnail(geo)

// show
me.Backdrop = g.CopyPicture
```

82.42.183 TIFFLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for tiff library.

82.42.184 transform(imageGeometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 82.42.185 transform(imageGeometry as GMGeometryMBS, cropGeometry as GMGeometryMBS) 14647

82.42.185 transform(imageGeometry as GMGeometryMBS, cropGeometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image based on image and crop geometries.
Notes: Crop geometry is optional.
See also:

- 82.42.184 transform(imageGeometry as GMGeometryMBS) 14647

82.42.186 transformOrigin(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Origin of coordinate system to use when annotating with text or drawing.

82.42.187 transformReset

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reset transformation parameters to default.

82.42.188 transformRotation(angle as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation to use when annotating with text or drawing.

82.42.189 transformScale(tx as Double, ty as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scale to use when annotating with text or drawing.

82.42.190 transformSkewX(x as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Skew to use in X axis when annotating with text or drawing.

82.42.191 transformSkewY(y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Skew to use in Y axis when annotating with text or drawing.

82.42.192 transparent(color as GMColorMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Add matte channel to image, setting pixels matching color to transparent.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

dim c as new GMColorMBS("white")
image.transparent(c)

Backdrop=image.CombinePictureWithMask
```

82.42.193 trim

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trim edges that are the background color from the image.
Example:

```
dim p as Picture = LogoMBS(500)
// make the logo picture bigger
dim q as Picture = New Picture(700,700,32)
```

```
q.Graphics.DrawPicture p,100,100

dim image as new GMImageMBS(q)

// now trim the white border away
image.trim

Backdrop=image.CopyPicture
```

82.42.194 unregisterId

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Not documented.

82.42.195 unsharpmask(radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace image with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.unsharpmask(10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
amount: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence amount.

82.42.196 unsharpmaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replace image channel with a sharpened version of the original image using the unsharp mask algorithm.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.unsharpmaskChannel(Image.RedChannel, 10,1,0.5,50)

Backdrop=image.CopyPicture
```

Notes:

channel:	image channel to modify.
radius:	the radius of the Gaussian, in pixels, not counting the center pixel.
sigma:	the standard deviation of the Gaussian, in pixels.
amount:	the percentage of the difference between the original and the blur image that is added back into the original.
threshold:	the threshold in pixels needed to apply the diffence amount.

82.42.197 wave(amplitude as Double=25.0, wavelength as Double=150.0)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Map image pixels to a sine wave.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.wave

Backdrop=image.CopyPicture
```

82.42.198 write(blob as GMBlobMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.

See also:

- 82.42.199 write(blob as GMBlobMBS, magick as string) 14651
- 82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14651
- 82.42.201 write(file as folderitem) 14652
- 82.42.202 write(Path as string) 14652
- 82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14653

82.42.199 write(blob as GMBlobMBS, magick as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 82.42.198 write(blob as GMBlobMBS) 14650
- 82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14651
- 82.42.201 write(file as folderitem) 14652
- 82.42.202 write(Path as string) 14652
- 82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14653

82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to in-memory Blob, with optional format and adjoin parameters.
See also:

- 82.42.198 write(blob as GMBlobMBS) 14650
- 82.42.199 write(blob as GMBlobMBS, magick as string) 14651
- 82.42.201 write(file as folderitem) 14652
- 82.42.202 write(Path as string) 14652
- 82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14653

82.42.201 write(file as folderitem)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to a file.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

See also:

- 82.42.198 write(blob as GMBlobMBS) 14650
- 82.42.199 write(blob as GMBlobMBS, magick as string) 14651
- 82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14651
- 82.42.202 write(Path as string) 14652
- 82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14653

82.42.202 write(Path as string)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to a file.
See also:

- 82.42.198 write(blob as GMBlobMBS) 14650
- 82.42.199 write(blob as GMBlobMBS, magick as string) 14651
- 82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14651

- 82.42.201 write(file as folderitem) 14652
- 82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr) 14653

82.42.203 write(x as Integer, y as Integer, columns as Integer, rows as Integer, map as string, type as Integer, Pixels as Ptr)

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Write single image frame to an array of pixels with storage type specified by user (DispatchImage).
Notes: e.g. image.write(0, 0, 640, 1, "RGB", 0, pixels)
See also:

- 82.42.198 write(blob as GMBlobMBS) 14650
- 82.42.199 write(blob as GMBlobMBS, magick as string) 14651
- 82.42.200 write(blob as GMBlobMBS, magick as string, depth as UInt32) 14651
- 82.42.201 write(file as folderitem) 14652
- 82.42.202 write(Path as string) 14652

82.42.204 ZLibVersion as string

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries version string for zlib library.

82.42.205 zoom(geometry as GMGeometryMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Zoom (resize) image to specified size.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.zoom(new GMGeometryMBS(200,200))

Backdrop=image.CopyPicture
```

82.42.206 Properties

82.42.207 adjoin as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Join images into a single multi-image file.
Notes: (Read and Write property)

82.42.208 animationDelay as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Time in 1/100ths of a second (0 to 65535) which must expire before displaying the next image in an animated sequence.
Notes:

This option is useful for regulating the animation of a sequence of GIF images within Netscape.
(Read and Write property)

82.42.209 animationIterations as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of iterations to loop an animation (e.g. Netscape loop extension) for.
Notes: (Read and Write property)

82.42.210 antiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes:

Enabled by default.
(Read and Write property)

82.42.211 backgroundColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.
Example:

```
// make a red and turn it to 100% transparent
Dim red As New GMColorRGBMBS("red")
```

```
red.alpha = 1

// now make image and make it RGBA with the transparnet background
dim RastoredVectorImage as New GMImageMBS
RastoredVectorImage.type = GMImageMBS.TrueColorMatteType
RastoredVectorImage.backgroundColor = red

// now read SVG, so we get a transparent background
dim SVG_File as FolderItem = SpecialFolders.desktop.Child("test.svg")
RastoredVectorImage.read(SVG_File)
```

Notes: (Read and Write property)

82.42.212 backgroundTexture as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image file name to use as the background texture.
Notes:

Does not modify image pixels.
(Read and Write property)

82.42.213 baseColumns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image width (before transformations)
Notes: (Read only property)

82.42.214 baseFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image filename (before transformations)
Notes: (Read only property)

82.42.215 baseRows as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base image height (before transformations).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

Title = str(image.baseRows)+" x "+str(image.baseColumns)
```

Notes: (Read only property)

82.42.216 borderColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

82.42.217 boundingBox as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return smallest bounding box enclosing non-border pixels.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.fillColor = new GMColorRGBMBS("red") // set color
image.strokeColor = new GMColorRGBMBS("green") // set color

image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle

draw.Circle(250, 250, 120, 150)
draw.Draw

draw = nil
image.type = image.TrueColorType

Backdrop = image.CopyPicture

MsgBox image.boundingBox.StringValue
```

Notes:

The current fuzz value is used when discriminating between pixels. This is the crop bounding box used by crop(Geometry(0,0)).
(Read only property)

82.42.218 boxColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Base color that annotation text is rendered on (default none).
Notes: (Read and Write property)

82.42.219 classType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image class (DirectClass or PseudoClass).
Notes:

NOTE: setting a DirectClass image to PseudoClass will result in the loss of color information if the number of colors in the image is greater than the maximum palette size (either 256 or 65536 entries depending on the value of QuantumDepth when ImageMagick was built):
(Read and Write property)

82.42.220 clipMask as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Associate a clip mask image with the current image.
Notes:

The clip mask image must have the same dimensions as the current image or an exception is thrown. Clipping occurs wherever pixels are transparent in the clip mask image. Clipping Pass an invalid image to unset an existing clip mask.
(Read and Write property)

82.42.221 colorFuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this option to

match colors that are close to the target color in RGB space.
(Read and Write property)

82.42.222 colorMapSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of entries in the colormap.
Notes:

Setting the colormap size may extend or truncate the colormap. The maximum number of supported entries is specified by the MaxColormapSize constant, and is dependent on the value of QuantumDepth when GraphicsMagick is compiled. An exception is thrown if more entries are requested than may be supported. Care should be taken when truncating the colormap to ensure that the image colormap indexes reference valid colormap entries.
(Read and Write property)

82.42.223 colorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The colorspace (e.g. CMYK) used to represent the image pixel colors.
Notes:

UndefinedColorspace	= 0
RGBColorspace	= 1 (Plain old RGB colorspace)
GRAYColorspace	= 2 (Plain old full-range grayscale)
TransparentColorspace	= 3 (RGB but preserve matte channel during quantize)
OHTAColorspace	= 4
XYZColorspace	= 5 (CIE XYZ)
YCCColorspace	= 6 (Kodak PhotoCD PhotoYCC)
YIQColorspace	= 7
YPbPrColorspace	= 8
YUVColorspace	= 9
CMYKColorspace	= 10 (Cyan, magenta, yellow, black, alpha)
sRGBColorspace	= 11 (Kodak PhotoCD sRGB)
HSLColorspace	= 12 (Hue, saturation, luminosity)
HWBColorspace	= 13 (Hue, whiteness, blackness)
LABColorspace	= 14 (LAB colorspace not supported yet other than via lcms)
CineonLogRGBColorspace	= 15 (RGB data with Cineon Log scaling, 2.048 density range)
Rec601LumaColorspace	= 16 (Luma (Y) according to ITU-R 601)
Rec601YCbCrColorspace	= 17 (YCbCr according to ITU-R 601)
Rec709LumaColorspace	= 18 (Luma (Y) according to ITU-R 709)
Rec709YCbCrColorspace	= 19 (YCbCr according to ITU-R 709)

(Read and Write property)

82.42.224 columns as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image width.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

82.42.225 comment as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image comment.
Notes:

When you set this property, you add comment string to image.
By default, each image is commented with its file name. Use this method to assign a specific comment to the image. Optionally you can include the image filename, type, width, height, or other image attributes by embedding special format characters:
(Read and Write property)

82.42.226 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composition operator to be used when composition is implicitly used (such as for image flattening).
Notes: (Read and Write property)

82.42.227 compressType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

The default is the compression type of the input image file.
(Read and Write property)

82.42.228 debug as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enable printing of debug messages from GraphicsMagick as it executes.
Notes: (Read and Write property)

82.42.229 density as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Vertical and horizontal resolution in pixels of the image.
Example:

```
dim p as new GMImageMBS

dim item as FolderItem = SpecialFolder.Desktop.Child("input.png")
p.read(item)
p.scale new GMGeometryMBS(3750,3750)
p.quality = 95
p.resolutionUnits = p.PixelsPerInchResolution
p.density = new GMGeometryMBS(300, 300)
dim out as FolderItem = SpecialFolder.Desktop.Child("output.png")
p.write out
```

Notes:

This option specifies an image density when decoding a Postscript or Portable Document page. Often used with psPageSize.
(Read and Write property)

82.42.230 depth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (bits allocated to red/green/blue components).
Notes:

Used to specify the bit depth when reading or writing raw images or when the output format supports multiple depths. Defaults to the quantum depth that GraphicsMagick is compiled with.
(Read and Write property)

82.42.231 directory as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile names from within an image montage.
Notes: (Read only property)

82.42.232 endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian mode.
Notes:

Endianness (LSBEndian like Intel, MSBEndian like SPARC, or NativeEndian for what this computer uses) for image formats which support endian-specific options.
(Read and Write property)

82.42.233 ExifThumbnail as String

MBS GraphicsMagick Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Dim g As New GMImageMBS

// not load, but just read header & metadata
g.ping("/Users/cs/Desktop/test.JPG")

// get thumbnail
Dim Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)
```

Notes:

Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

82.42.234 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image file name.
Notes: (Read and Write property)

82.42.235 fileSize as Int64

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of bytes of the image on disk.
Notes: (Read only property)

82.42.236 fillColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color to use when filling drawn objects.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.42.237 fillPattern as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pattern to use while filling drawn objects.
Notes: (Read and Write property)

82.42.238 fillRule as Integer

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rule to use when filling drawn objects
Notes: (Read and Write property)

82.42.239 filterType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The reduction filter employed has a sigificant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
Notes:

Filter to use when resizing image.
(Read and Write property)

82.42.240 font as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font.
Notes:

If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

82.42.241 fontPointsize as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font point size.
Notes: (Read and Write property)

82.42.242 format as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long image format description.

Notes: (Read only property)

82.42.243 gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma correct the image or individual image channels.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.gamma = 3.0

Backdrop=image.CopyPicture
```

Notes:

If you get the value, it is the gamma level of the image. Gamma is a pow() function which converts between the linear light representation and the representation for the computer display. Most computer images are gamma corrected to 2.2 (1/0.4545) so that each step results in a visually linear step on a computer or video display:
(Read and Write property)
See also:

- 82.42.86 gamma(gammaRed as Double, gammaGreen as Double, gammaBlue as Double) 14611

82.42.244 geometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size of the image when encoding.
Notes: (Read only property)

82.42.245 getConstIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain immutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

82.42.246 getIndexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtain mutable image pixel indexes (valid for PseudoClass images)
Notes: (Read only property)

82.42.247 gifDisposeMethod as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GIF disposal method.
Notes:

This option (specific to the GIF file format) is used to control how successive frames are rendered (how the preceding frame is disposed of) when creating a GIF animation.

Constant	Disposal	Description
UndefinedDispose	0	No disposal specified.
NoneDispose	1	Do not dispose between frames.
BackgroundDispose	2	Overwrite frame with background color from header.
PreviousDispose	3	Overwrite with previous frame.

(Read and Write property)

82.42.248 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Example:

```
dim c as new GMColorMBS("white")
dim g as new GMGeometryMBS(100,100)
dim image as new GMImageMBS(g, c)
MsgBox hex(Image.handle) // valid if not zero
```

Notes: (Read and Write property)

82.42.249 height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the image.

Example:

```
dim c as new GMColorRGBMBS(1.0,0.0,0.0)
dim size as new GMGeometryMBS(100,100)
dim g as new GMImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes:

This is a convenience function for you which calls size.height.
(Read only property)

82.42.250 iccColorProfile as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ICC color profile.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("IMG_0793.tif")
dim Image as new GMImageMBS(f)
dim ProfileBlob as GMBlobMBS = Image.iccColorProfile
dim ProfileData as string = ProfileBlob.CopyString
dim cm as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromString(ProfileData)
dim name as string = cm.Name

Break // check data in debugger
```

Notes:

Supplied via a Blob since Magick++/ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Color Consortium for the format of ICC color profiles.
(Read and Write property)

82.42.251 interlaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane

interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.
(Read and Write property)

82.42.252 iptcProfile as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: IPTC profile.
Notes:

Supplied via a Blob since Magick++ and GraphicsMagick do not currently support formating this data structure directly. Specifications are available from the International Press Telecommunications Council for IPTC profiles.
(Read and Write property)

82.42.253 isValid as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Does object contain valid image?
Notes:

Set to false in order to invalidate the image. Images constructed via the default constructor are invalid images and isValid() will return false.
(Read and Write property)

82.42.254 label as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image label.
Notes: (Read only property)
See also:

- 82.42.101 label(text as string) 14615

82.42.255 lineWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Stroke width for drawing vector objects (default one)
Notes:

This method is now deprecated. Please use strokeWidth instead.
(Read and Write property)

82.42.256 magick as string

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The name of the codec to use for compression.
Example:

```
// this converts 32 bit PNG with alpha channel to BMP

dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim p as Picture = Picture.Open(f)

dim g as new GMImageMBS( new GMGeometryMBS(p.Width, p.Height), new GMColorGrayMBS(1.0))

g.type = g.TrueColorMatteType
g.matte = True
g.magick = "BMP"

g.SetPicture(p, 0, 0)
g.SetPictureMask(p.mask.invertMBS, 0, 0)

f = SpecialFolder.Desktop.Child("test.bmp")
g.write(f)
```

Notes: (Read and Write property)

82.42.257 matte as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image supports transparency (matte channel)
Notes: (Read and Write property)

82.42.258 matteColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (frame) color.
Notes: (Read and Write property)

82.42.259 meanErrorPerPixel as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mean error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.42.260 modulusDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image modulus depth (minimum number of bits required to support red/green/blue components without loss of accuracy).
Notes:

The pixel modulus depth may be decreased by supplying a value which is less than the current value, updating the pixels (reducing accuracy) to the new depth. The pixel modulus depth can not be increased over the current value using this method.
(Read and Write property)

82.42.261 monochrome as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform image to black and white while color reducing (quantizing).
Notes: (Read and Write property)

82.42.262 normalizedMaxError as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The normalized max error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.42.263 normalizedMeanError as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The normalized mean error per pixel computed when an image is color reduced.
Notes:

This parameter is only valid if verbose is set to true and the image has just been quantized.
(Read only property)

82.42.264 orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image orientation. Supported by some file formats such as DPX and TIFF. Useful for turning the right way up.
Notes: (Read and Write property)

82.42.265 page as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size and location of an image canvas.
Notes:

Use this option to specify the dimensions and position of the Postscript page in dots per inch or a TEXT page in pixels. This option is typically used in concert with density .

Page may also be used to position a GIF image (such as for a scene in an animation).
(Read and Write property)

82.42.266 penColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The pen color.
Notes: (Read and Write property)

82.42.267 quality as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level (default 75).
Notes: (Read and Write property)

82.42.268 quantizeColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum number of colors to quantize to.

Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.quantizeColors = 10
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.42.269 quantizeColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorspace to quantize in (default RGB).
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Dim Converter As New GMImageMBS(Pic)

// quantize with dither
Converter.type = GMImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GMImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

Notes:

Empirical evidence suggests that distances in color spaces such as YUV or YIQ correspond to perceptual color differences more closely than do distances in RGB space. These color spaces may give better results when color reducing an image.
(Read and Write property)

82.42.270 quantizeDither as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Apply Floyd/Steinberg error diffusion to the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.quantizeColors = 10
image.quantizeDither = true
image.quantize

image.type = image.TrueColorType
Backdrop=image.CopyPicture
```

Notes:

The basic strategy of dithering is to trade intensity resolution for spatial resolution by averaging the intensities of several neighboring pixels. Images which suffer from severe contouring when reducing colors can be improved with this option. The quantizeColors or monochrome option must be set for this option to take effect.
(Read and Write property)

82.42.271 quantizeTreeDepth as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Depth of the quantization color classification tree.
Notes:

Values of 0 or 1 allow selection of the optimal tree depth for the color reduction algorithm. Values between 2 and 8 may be used to manually adjust the tree depth.
(Read and Write property)

82.42.272 Quiet as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Suppress all warning messages.
Notes:

Error messages are still reported.

(Read and Write property)

82.42.273 renderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of rendering intent (used when applying an ICC color profile).
Notes: (Read and Write property)

82.42.274 resolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes: (Read and Write property)

82.42.275 rows as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of pixel rows in the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

Title = str(image.columns)+" x "+str(image.rows)
Backdrop=image.CopyPicture
```

Notes: (Read only property)

82.42.276 scene as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image scene number.
Notes: (Read and Write property)

82.42.277 size as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Width and height of a raw image (an image which does not support width and height information).
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

MsgBox image.size.StringValue

image.size = new GMGeometryMBS(200,200)

Backdrop=image.CopyPicture
```

Notes:

Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

82.42.278 strokeAntiAlias as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enable/disable stroke anti-aliasing.
Notes: (Read and Write property)

82.42.279 strokeColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Color to use when drawing object outlines.
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics
```

```
// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.42.280 strokeDashOffset as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: While drawing using a dash pattern, specify distance into the dash pattern to start the dash (default 0).
Notes: (Read and Write property)

82.42.281 strokeLineCap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the end of open subpaths when they are stroked. #
Notes:

Values of LineCap are UndefinedCap, ButtCap, RoundCap, and SquareCap.
(Read and Write property)

82.42.282 strokeLineJoin as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify the shape to be used at the corners of paths (or other vector shapes) when they are stroked. Values of LineJoin are UndefinedJoin, MiterJoin, RoundJoin, and BevelJoin.
Notes: (Read and Write property)

82.42.283 strokeMiterLimit as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specify miter limit.
Notes:

When two line segments meet at a sharp angle and miter joins have been specified for 'lineJoin', it is possible for the miter to extend far beyond the thickness of the line stroking the path. The miterLimit' imposes a

limit on the ratio of the miter length to the 'lineWidth'. The default value of this parameter is 4.
(Read and Write property)

82.42.284 strokePattern as GMImageMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pattern image to use while stroking object outlines.
Notes: (Read and Write property)

82.42.285 strokeWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Stroke width for drawing vector objects (default one).
Example:

```
dim g as new GMGeometryMBS(500,500)
dim c as new GMColorRGBMBS("white") // white
dim image as new GMImageMBS(g, c)

image.strokeColor = new GMColorRGBMBS("red") // Outline color
image.fillColor = new GMColorRGBMBS("green") // Fill color
image.strokeWidth = 5

dim draw as GMGraphicsMBS = image.Graphics

// Draw a circle
draw.Circle(250, 250, 120, 150)

Backdrop=image.CopyPicture
```

Notes: (Read and Write property)

82.42.286 subImage as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Subimage of an image sequence.
Notes: (Read and Write property)

82.42.287 subRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of images relative to the base image.
Notes: (Read and Write property)

82.42.288 textEncoding as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Annotation text encoding (e.g. "UTF-16").
Notes: (Read and Write property)

82.42.289 tileName as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile name.
Notes: (Read and Write property)

82.42.290 totalColors as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of colors in the image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

Title = str(image.totalColors) // shows 5284
Backdrop=image.CombinePictureWithMask
```

Notes: (Read only property)

82.42.291 type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of this image.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)

image.type = image.GrayscaleType

Backdrop=image.CopyPicture
```

Notes:

You can set this value to convert the image to the type.

Convert the image representation to the specified type or retrieve the current image type. If the image is reduced to an inferior type, then image information may be lost (e.g. color changed to grayscale).

Available enumerations for the type parameter:

BilevelType	1	black/white
GrayscaleType	2	grayscale
GrayscaleMatteType	3	grayscale with alpha (opacity) channel
PaletteType	4	colormapped
PaletteMatteType	5	colormapped with transparency
TrueColorType	6	true (full) color
TrueColorMatteType	7	true (full) color with alpha (opacity) channel
ColorSeparationType	8	Cyan, magenta, yellow, and black
ColorSeparationMatteType	9	Cyan, magenta, yellow, and black with alpha (opacity) channel
OptimizeType	10	Optimize the image type to best represent the existing pixels

(Read and Write property)

82.42.292 verbose as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Print detailed information about the image.
Notes: (Read and Write property)

82.42.293 view as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FlashPix viewing parameters.
Notes: (Read and Write property)

82.42.294 width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image.
Example:

```
dim c as new GMColorRGBMBS(1.0,0.0,0.0)
dim size as new GMGeometryMBS(100,100)
dim g as new GMImageMBS(size, c)

MsgBox str(g.width)+" "+str(g.height)
```

Notes:

This is a convenience function for you which calls size.width.
(Read only property)

82.42.295 x11Display as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X11 display to display to, obtain fonts from, or to capture image from.
Notes: (Read and Write property)

82.42.296 XResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: x resolution of the image.
Notes:

See also density functions.
Settable with version 19.0.
(Read and Write property)

82.42.297 YResolution as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: y resolution of the image.
Notes:

Settable with version 19.0.
(Read and Write property)

82.42.298 attributeValue(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Access an arbitrary named image attribute.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("IMG_4048.jpg")
dim g as new GMImageMBS(f)
dim a as string = g.attributeValue("EXIF:DateTime")
MsgBox a
```

Notes:

Any number of named attributes may be attached to the image. For example, the image comment is a named image attribute with the name "comment". EXIF tags are attached to the image as named attributes. Use the syntax "EXIF:<tag>" to request an EXIF tag similar to "EXIF:DateTime":
(Read and Write computed property)

82.42.299 channelDepth(channel as Integer) as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain modulus channel depth.
Notes: (Read and Write computed property)

82.42.300 colorMap(index as UInt32) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color at colormap position index.
Notes: (Read and Write computed property)
See also:

- 82.42.28 colorMap as GMColorMBS() 14585

82.42.301 defineSet(magick as string, key as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain a definition flag to applied when encoding or decoding the specified format.
Notes:

Similar to the defineValue() method except that passing the flag value 'true' creates a value-less define with that format and key. Passing the flag value 'false' removes any existing matching definition. The method returns 'true' if a matching key exists, and 'false' if no matching key exists.

(Read and Write computed property)

82.42.302 defineValue(magick as string, key as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set or obtain a definition string to applied when encoding or decoding the specified format.
Notes:

The meanings of the definitions are format specific. The format is designated by the magick argument, the format-specific key is designated by key, and the associated value is specified by value. See the defineSet() method if the key must be removed entirely.
(Read and Write computed property)

82.42.303 pixelColor(x as UInt32, y as UInt32) as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Get/set pixel color at location x & y.
Example:

```
dim p as Picture = LogoMBS(500)
dim image as new GMImageMBS(p)
dim c as new GMColorMBS("red")

for x as Integer = 240 to 260
image.pixelColor(x,250)=c
next

for y as Integer = 240 to 260
image.pixelColor(250,y)=c
next

Backdrop=image.CopyPicture
```

Notes: (Read and Write computed property)

82.42.304 profile(name as string) as GMBlobMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Get or set a named profile.
Notes:

Add or remove a named profile to/from the image. Remove the profile by passing an empty Blob (e.g. Blob()). Valid names are "*", "8BIM", "ICM", "IPTC", or a user/format-defined profile name.

Retrieve a named profile from the image. Valid names are: "8BIM", "8BIMTEXT", "APP1", "APP1JPEG", "ICC", "ICM", & "IPTC" or an existing user/format-defined profile name
(Read and Write computed property)

82.42.305 Constants

82.42.306 AbsoluteIntent = 3

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the intent type constants.

82.42.307 AddCompositeOp = 8

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.308 AllChannels = 10

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.309 AllCompliance = & hffff

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the Compliance type constants.

82.42.310 AssociatedAlpha = 1

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible alpha type constants.

82.42.311 AtopCompositeOp = 4

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.312 BackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the gif dispose type constants.

82.42.313 BesselFilter = 14

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.314 BilevelType = 1

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the image type constants.
Example:

```
// load a picture
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim pic as Picture = Picture.Open(f)

const GrayColorSpace = 2

Dim Converter As New GMImageMBS(Pic)

// quantize with dither
Converter.type = GMImageMBS.BilevelType
Converter.quantizeColorSpace = GrayColorSpace
Converter.quantizeColors = 2
Converter.quantizeDither = True
Converter.quantize

// convert back to Xojo
Converter.type = GMImageMBS.TrueColorType
Backdrop = Converter.CopyPicture
```

82.42.315 BlackChannel = 8

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.316 BlackmanFilter = 7

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.317 BlueChannel = 5

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.318 BottomLeftOrientation = 4

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Left to right
Frame Direction: Bottom to top

82.42.319 BottomRightOrientation = 3

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Right to left
Frame Direction: Bottom to top

82.42.320 BoxFilter = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.406 PoissonNoise = 5

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible noise constants.

82.42.407 PreviousDispose = 3

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the gif dispose type constants.

82.42.408 PseudoClass = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the class type constants.

82.42.409 QuadraticFilter = 9

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.410 RedChannel = 1

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.411 RelativeIntent = 4

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the intent type constants.

82.42.412 RightBottomOrientation = 7

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Bottom to top
Frame Direction: Right to left

82.42.413 RightTopOrientation = 6

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Top to bottom
Frame Direction: Right to left

82.42.414 RLECompression = 8

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the compression type constants.

82.42.415 SaturateCompositeOp = 27

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.416 SaturationIntent = 1

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the intent type constants.

82.42.417 ScreenCompositeOp = 30

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.
Notes: Not yet implemented in GraphicsMagick.

82.42.418 SincFilter = 15

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.419 SouthEastGravity = 9

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible gravity constants.

82.42.420 SouthGravity = 8

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible gravity constants.

82.42.421 SouthWestGravity = 7

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible gravity constants.

82.42.422 StaticGravity = 10

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible gravity constants.

82.42.423 StorageTypeCharPixel = 0

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 8bit numbers.

82.42.424 StorageTypeDoublePixel = 5

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 64bit floating numbers.

82.42.425 StorageTypeFloatPixel = 4

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 32bit floating numbers.

82.42.426 StorageTypeIntegerPixel = 2

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 32bit numbers.

82.42.427 StorageTypeLongPixel = 3

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 64bit numbers.

82.42.428 StorageTypeShortPixel = 1

MBS GraphicsMagick Plugin, Plugin Version: 14.1. **Function:** One of the storage types.
Notes: 16bit numbers.

82.42.429 SubtractCompositeOp = 9

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.430 SVGCompliance = 1

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the Compliance type constants.

82.42.431 ThresholdCompositeOp = 22

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.432 TopLeftOrientation = 1

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Left to right
Frame Direction: Top to bottom

82.42.433 TopRightOrientation = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Right to left
Frame Direction: Top to bottom

82.42.434 TriangleFilter = 3

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.435 TrueColorMatteType = 7

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the image type constants.
Example:

```
Dim mp as new GMImageMBS(new GMGeometryMBS(700, 700), New GMColorRGBMBS(1.0, 0.0, 0.0))
mp.type = mp.TrueColorMatteType
dim p as picture = mp.CopyPicture

break // see in debugger a red picture
```

82.42.436 TrueColorType = 6

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the image type constants.

82.42.437 UnassociatedAlpha = 2

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible alpha type constants.

82.42.438 UndefinedChannel = 0

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.439 UndefinedClass = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the class type constants.

82.42.440 UndefinedCompliance = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the Compliance type constants.

82.42.441 UndefinedCompositeOp = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.442 UndefinedCompression = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the compression type constants.

82.42.443 UndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the gif dispose type constants.

82.42.444 UndefinedEndian = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the endian type constants.

82.42.445 UndefinedFilter = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the filter type constants.

82.42.446 UndefinedIntent = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the intent type constants.

82.42.447 UndefinedInterlace = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the interlace type constants.

82.42.448 UndefinedMode = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the mode type constants.

82.42.449 UndefinedOrientation = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the orientation type constants.
Notes:

Line direction: Unknown
Frame Direction: Unknown

82.42.450 UndefinedResolution = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the resolution type constants.

82.42.451 UndefinedType = 0

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the image type constants.

82.42.452 UnframeMode = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the mode type constants.

82.42.453 UniformNoise = 0

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible noise constants.

82.42.454 UnspecifiedAlpha = 0

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible alpha type constants.

82.42.455 WestGravity = 4

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible gravity constants.

82.42.456 X11Compliance = 2

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the Compliance type constants.

82.42.457 XorCompositeOp = 5

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the composite type constants.

82.42.458 XPMCompliance = 4

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the Compliance type constants.

82.42.459 YellowChannel = 6

MBS GraphicsMagick Plugin, Plugin Version: 9.3. **Function:** One of the possible channel constants.

82.42.460 ZipCompression = 9

MBS GraphicsMagick Plugin, Plugin Version: 10.2. **Function:** One of the compression type constants.

82.43 class GMImageStatisticsMBS

82.43.1 class GMImageStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for image statistics.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

82.43.2 Methods

82.43.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

82.43.4 Properties

82.43.5 blue as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue channel statistics.
Notes: (Read only property)

82.43.6 green as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green channel statistics.
Notes: (Read only property)

82.43.7 opacity as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity channel statistics.
Notes: (Read only property)

82.43.8 red as GMImageChannelStatisticsMBS

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red channel statistics.
Notes: (Read only property)

82.44 class GMLockMBS

82.44.1 class GMLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for locking a certain resource.
Notes: The idea is to pass the constructor a mutexlock and keep the only reference to this new lock object on the stack. On the end of the method, the destructor is called by Xojo and releases the mutexlock automatically.

82.44.2 Methods

82.44.3 Constructor(mutexlock as GMMutexLockMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new Lock based on the given mutexlock.

82.44.4 Properties

82.44.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.44.6 target as GMMutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mutexlock this lock is referencing to.
Notes: (Read and Write property)

82.45 class GMMontageFramedMBS

82.45.1 class GMMontageFramedMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** MontageFramed provides the means to specify montage options when it is desired to have decorative frames around the image thumbnails.
Notes:

MontageFramed inherits from Montage and therefore provides all the methods of Montage as well as those shown in the table "MontageFramed Methods".

Framed thumbnails consist of four components: the thumbnail image, the thumbnail frame, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.
Subclass of the GMMontageMBS class.

82.45.2 Methods

82.45.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

82.45.4 Properties

82.45.5 borderColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the background color within the thumbnail frame.
Notes: (Read and Write computed property)

82.45.6 borderWidth as Uint32

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the border (in pixels) to place between a thumbnail and its surrounding frame.
Notes:

This option only takes effect if thumbnail frames are enabled (via frameGeometry) and the thumbnail geometry specification doesn't also specify the thumbnail border width.
(Read and Write computed property)

82.45.7 frameGeometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the geometry specification for frame to place around thumbnail.
Notes:

If this parameter is not specified, then the montage is unframed.
(Read and Write computed property)

82.45.8 matteColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail frame color.
Notes: (Read and Write computed property)

82.46 class GMMontageMBS

82.46.1 class GMMontageMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Montage is the base class to provide montage options and provides methods to set all options required to render simple (unframed) montages.
Example:

```
// build montage
dim StackingMontage as New GM16MontageMBS
StackingMontage.backgroundColor = New GM16ColorMBS(& cE7E7E7)
StackingMontage.fillColor = New GM16ColorMBS(& c000000)
StackingMontage.tile = New GM16GeometryMBS("1x20")
StackingMontage.geometry = New GM16GeometryMBS("160x120+5+5")
StackingMontage.font = "Helvetica"
StackingMontage.pointSize = 12
StackingMontage.title = "Title goes here"

// make picture
dim logo as Picture = LogoMBS(500)
dim image as New GM16ImageMBS(logo)

image.label("Sample label")

// Put the current image into the array
Dim StackingFrames As new GM16ImageArrayMBS
StackingFrames.insert(image)

// show result
dim resultImages as GM16ImageArrayMBS = StackingFrames.montageImages(StackingMontage)
Backdrop = resultImages.Image(0).CopyPicture
```

Notes:

See GMMontageFramedMBS if you would like to create a framed montage.

Unframed thumbnails consist of four components: the thumbnail image, the thumbnail border, an optional thumbnail shadow, and an optional thumbnail label area.

82.46.2 Methods

82.46.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

82.46.4 Properties

82.46.5 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.46.6 backgroundColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the background color that thumbnails are imaged upon.
Notes: (Read and Write computed property)

82.46.7 compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the image composition algorithm for thumbnails.
Notes:

This controls the algorithm by which the thumbnail image is placed on the background. Use of OverCompositeOp is recommended for use with images that have transparency. This option may have negative side-effects for images without transparency.
(Read and Write computed property)

82.46.8 fileName as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the image filename to be used for the generated montage images.
Notes:

To handle the case were multiple montage images are generated, a printf-style format may be embedded within the filename. For example, a filename specification of image% 02d.miff names the montage images as

image00.miff, image01.miff, etc.
(Read and Write computed property)

82.46.9 fillColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the fill color to use for the label text.
Notes: (Read and Write computed property)

82.46.10 font as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail label font.
Notes: (Read and Write computed property)

82.46.11 geometry as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the size of the generated thumbnail.
Notes: (Read and Write computed property)

82.46.12 gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail positioning within the specified geometry area.
Notes:

If the thumbnail is smaller in any dimension than the geometry, then it is placed according to this specification.
See Gravity constants in GMImageMBS class.
(Read and Write computed property)

82.46.13 label as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the format used for the image label.
Notes:

Special format characters may be embedded in the format string to include information about the image. (Read and Write computed property)

82.46.14 penColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the pen color to use for the label text (same as fill).
Notes: (Read and Write computed property)

82.46.15 pointSize as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the thumbnail label font size.
Notes: (Read and Write computed property)

82.46.16 shadow as boolean

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enable/disable drop-shadow on thumbnails.
Notes: (Read and Write computed property)

82.46.17 strokeColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the stroke color to use for the label text.
Notes: (Read and Write computed property)

82.46.18 texture as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies a texture image to use as montage background.
Notes:

The built-in textures ”granite:” and ”plasma:” are available. A texture is the same as a background image. (Read and Write computed property)

82.46.19 tile as GMGeometryMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the maximum number of montage columns and rows in the montage.
Notes:

The montage is built by filling out all cells in a row before advancing to the next row. Once the montage has reached the maximum number of columns and rows, a new montage image is started.
(Read and Write computed property)

82.46.20 title as string

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies the montage title.
Notes: (Read and Write computed property)

82.46.21 transparentColor as GMColorMBS

MBS GraphicsMagick Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Specifies a montage color to set transparent.
Notes:

This option can be set the same as the background color in order for the thumbnails to appear without a background when rendered on an HTML page. For best effect, ensure that the transparent color selected does not occur in the rendered thumbnail colors.
(Read and Write computed property)

82.47 class GMMutexLockMBS

82.47.1 class GMMutexLockMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mutex class for GraphicsMagick.

82.47.2 Methods

82.47.3 lock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Locks the lock.
Notes: Only one thread at a time can get the lock. The other threads will wait when lock is called.

82.47.4 unlock

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unlocks the lock.

82.47.5 Properties

82.47.6 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.48 class GMNotInitializedExceptionMBS

82.48.1 class GMNotInitializedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The exception raised if you access a method/property in an object and the object was not initialized propertly.
Notes:

Check the message property for details.
Subclass of the GMErrorExceptionMBS class.

82.49 class GMPathArgsMBS

82.49.1 class GMPathArgsMBS

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This is a class for arguments to the path arc/curve methods in GMGraphicsMBS.
Example:

```
dim g as new GMPathArgsMBS(1,2,3,4) // for a QuadraticCurveto

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

Notes: Due we use this class for three different ways, we have three constructors to fill in the value you need for the calls.

82.49.2 Methods

82.49.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor for creating an empty object.
See also:

- 82.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14716
- 82.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14717
- 82.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14717

82.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor to create the arguments object for the PathArc methods in GMGraphicsMBS.
See also:

- 82.49.3 Constructor 14716
- 82.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14717

- 82.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14717

82.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor to create the arguments object for the QuadraticCurveto methods in GMGraphicsMBS.
Example:

```
dim g as new GMPathArgsMBS(1,2,3,4)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 82.49.3 Constructor 14716
- 82.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14716
- 82.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double) 14717

82.49.6 Constructor(x1 as Double, y1 as Double, x2 as Double, y2 as Double, x as Double, y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor to create the arguments object for the Curveto methods in GMGraphicsMBS.
Example:

```
dim g as new GMPathArgsMBS(1,2,3,4,5,6)

MsgBox str(g.x1)+EndOfLine+str(g.y1)+EndOfLine+str(g.x2)+EndOfLine+str(g.y2)+EndOfLine+str(g.x)+EndOfLine+str(g.y)
```

See also:

- 82.49.3 Constructor 14716
- 82.49.4 Constructor(radiusX as Double, radiusY as Double, xAxisRotation as Double, largeArcFlag as boolean, sweepFlag as Boolean, x as Double, y as Double) 14716
- 82.49.5 Constructor(x1 as Double, y1 as Double, x as Double, y as Double) 14717

82.49.7 Properties

82.49.8 largeArcFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The large arc flag.
Notes:

Draw longer of the two matching arcs
(Read and Write property)

82.49.9 radiusX as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The radius x value.
Notes: (Read and Write property)

82.49.10 radiusY as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The radius y value.
Notes: (Read and Write property)

82.49.11 sweepFlag as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The sweep flag value.
Notes:

Draw arc matching clock-wise rotation.
(Read and Write property)

82.49.12 x as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x value.
Notes:

For an arc: End-point X
(Read and Write property)

82.49.13 x1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x1 value.
Notes: (Read and Write property)

82.49.14 x2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x2 value.
Notes: (Read and Write property)

82.49.15 xAxisRotation as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x Axis Rotation value.
Notes:

Rotation relative to X axis.
(Read and Write property)

82.49.16 y as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y value.
Notes:

for an arc: End-point Y
(Read and Write property)

82.49.17 y1 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y1 value.
Notes: (Read and Write property)

82.49.18 y2 as Double

MBS GraphicsMagick Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y2 value.
Notes: (Read and Write property)

82.50 class GMPixelsMBS

82.50.1 class GMPixelsMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty pixels object.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim p as new GMPixelsMBS(g)

// get pointer to some pixels to read/write
dim x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

82.50.2 Methods

82.50.3 Constructor(Image as GMImageMBS)

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new Pixels object with the pixels from an image.

82.50.4 get(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfer pixels from the image to the pixel view as defined by the specified region.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim p as new GMPixelsMBS(g)

// get pointer to some pixels
dim x as ptr = p.get(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: Modified pixels may be subsequently transferred back to the image via sync.

82.50.5 getConst(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfer read-only pixels from the image to the pixel view as defined by the specified region.

82.50.6 indexes as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Return pixel colormap index array.

82.50.7 set(x as Integer, y as Integer, columns as Integer, rows as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Allocate a pixel view region to store image pixels as defined by the region rectangle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim p as new GMPixelsMBS(g)

// get pointer to some pixels to write
dim x as ptr = p.set(0, 0, 100, 100)

// draw a red line to the pixel buffer
dim o as Integer
for i as Integer = 0 to 99
o = 100 * i + i
x.UInt32(o * 4) = & hFFFF0000
next

// write back
p.sync

// show
window1.Backdrop = g.CopyPicture
```

Notes: This area is subsequently transferred from the pixel view to the image via sync.

82.50.8 sync

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transfers the image cache pixels to the image.

82.50.9 Properties

82.50.10 columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Width of view.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim g as new GMImageMBS(f)
dim p as new GMPixelsMBS(g)

// get pointer to some pixels
dim x as ptr = p.get(0, 0, 100, 100)
```

```
// and show size
MsgBox str(p.columns)+" x "+str(p.rows)
```

Notes: (Read only property)

82.50.11 handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

82.50.12 rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Height of view.
Notes: (Read only property)

82.50.13 x as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Left ordinate of view.
Notes: (Read only property)

82.50.14 y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Top ordinate of view.
Notes: (Read only property)

82.51 class GMTypeMetricMBS

82.51.1 class GMTypeMetricMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The TypeMetric class provides the means to pass data from the Image class's TypeMetric method to the user.
Notes:

It provides information regarding font metrics such as ascent, descent, text width, text height, and maximum horizontal advance. The units of these font metrics are in pixels, and that the metrics are dependent on the current Image font (default Ghostscript's "Helvetica"), pointsize (default 12 points), and x/y resolution (default 72 DPI) settings.

The pixel units may be converted to points (the standard resolution-independent measure used by the typesetting industry) via the following equation:

size_points = (size_pixels * 72)/resolution
where resolution is in dots-per-inch (DPI). This means that at the default image resolution, there is one pixel per point.

Note that a font's pointsize is only a first-order approximation of the font height (ascender + descender) in points. The relationship between the specified pointsize and the rendered font height is determined by the font designer.

See FreeType Glyph Conventions for a detailed description of font metrics related issues.

82.51.2 Methods

82.51.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

82.51.4 Properties

82.51.5 ascent as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the distance in pixels from the text baseline to the highest/upper grid coordinate used

to place an outline point.
Notes:

Always a positive value.
(Read only property)

82.51.6 descent as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the the distance in pixels from the baseline to the lowest grid coordinate used to place an outline point.
Notes:

Always a negative value.
(Read only property)

82.51.7 maxHorizontalAdvance as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the maximum horizontal advance (advance from the beginning of a character to the beginning of the next character) in pixels.
Notes: (Read only property)

82.51.8 textHeight as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns text height in pixels.
Notes: (Read only property)

82.51.9 textWidth as Double

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns text width in pixels.
Notes: (Read only property)

82.52 class GMUnsupportedExceptionMBS

82.52.1 class GMUnsupportedExceptionMBS

MBS GraphicsMagick Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An exception raised if you call the GM functions on an unsupported platform.
Notes:

Check the message property for details.
This exception is currently only used on Windows.
(Windows support may come later)
Subclass of the GMErrorExceptionMBS class.

Chapter 83

Growl

83.1 class GrowlApplicationBridgeMBS

83.1.1 class GrowlApplicationBridgeMBS

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for Growl Framework 1.3 or newer.
Notes:

A class used to interface with Growl.
This class provides a means to interface with Growl.

Currently it provides a way to detect if Growl is installed and launch the GrowlHelperApp if it's not already running.

The plugin installs this class for you as delegate, so all the events go the plugin events defined in this class. If you don't have code in an event, the plugin reports it to Growl as not existant.

Please use LoadFramework before calling other methods.

83.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr12

83.1.3 Methods

83.1.4 bestRegistrationDictionary as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Obtains a registration dictionary, filled out to the best of GrowlApplicationBridge's knowledge. **Example:**

```
dim d as Dictionary = GrowlApplicationBridgeMBS.bestRegistrationDictionary
```

Notes:

This method creates a registration dictionary as best GrowlApplicationBridge knows how.

First, GrowlApplicationBridge contacts the Growl delegate (if there is one) and gets the registration dictionary from that. If no such dictionary was obtained, GrowlApplicationBridge looks in your application's main bundle for an auto-discoverable registration dictionary file. If that doesn't exist either, this method returns nil.

Second, GrowlApplicationBridge calls registrationDictionaryByFillingInDictionary with whatever dictionary was obtained. The result of that method is the result of this method.

GrowlApplicationBridge uses this method when you call registerWithDictionary with nil.

This method was introduced in Growl.framework 0.7.
Returns a registration dictionary.

83.1.5 Constructor

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

83.1.6 Destructor

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

83.1.7 frameworkInfoDictionary as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the info dictionary for the Growl Framework.
Example:

```
dim d as Dictionary = GrowlApplicationBridgeMBS.frameworkInfoDictionary
break // check values in debugger
```

Notes: You can find e.g. the version in value for the CFBundleVersion key.

83.1.8 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the Growl Framework has been loaded.
Example:

```
MsgBox str(GrowlApplicationBridgeMBS.IsFrameworkLoaded)
```

Notes: Returns true if framework is loaded.

83.1.9 isGrowlRunning as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Detects whether GrowlHelperApp is currently running.
Example:

```
MsgBox str(GrowlApplicationBridgeMBS.isGrowlRunning)
```

Notes:

Cycles through the process list to find whether GrowlHelperApp is running and returns its findings.
Returns true if GrowlHelperApp is running, false otherwise.

83.1.10 isMistEnabled as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gives the caller a fairly good indication of whether or not built-in notifications(Mist) will be

used.
Notes:

Since this call makes use of isGrowlRunning it is entirely possible for this value to change between call and executing a notification dispatch
Returns true if Growl isn't reachable and the developer has not opted-out of Mist and the user hasn't set the global mist enable key to false.

83.1.11 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the growl framework.
Example:

```
if GrowlApplicationBridgeMBS.LoadFramework(SpecialFolder.Desktop.Child("Growl.framework")) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes:

Framework should be version 1.3.
Please call this method before you use other Growl methods.
The framework can be inside your application bundle.

83.1.12 notificationDictionaryByFillingInDictionary(notifDict as dictionary) as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tries to fill in missing keys in a notification dictionary.
Notes:

notifDict: The dictionary to fill in.

Returns the dictionary with the keys filled in. This will be a separate instance from notifDict.

This function examines the \a notifDict for missing keys, and tries to get them from the last known registration dictionary. As of 1.1, the keys that it will look for are: kApplicationName and kApplicationIcon

83.1.13 notifyWithDictionary(userInfo as dictionary)

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Notifies using a userInfo dictionary suitable for passing to NSDistributedNotificationCenter.
Notes:

userInfo: The dictionary to notify with.

Before Growl 0.6, your application would have posted notifications using NSDistributedNotificationCenter by creating a userInfo dictionary with the notification data. This had the advantage of allowing you to add other data to the dictionary for programs besides Growl that might be listening.

This method allows you to use such dictionaries without being restricted to using NSDistributedNotificationCenter. The keys for this dictionary can be found in constants.

83.1.14 notifyWithTitle(title as string, description as string, notificationName as string, iconData as memoryblock = nil, Priority as Integer = 0, isSticky as boolean = false, clickContext as Variant = nil)

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Send a Growl notification.
Notes:

This is the preferred means for sending a Growl notification.
The notification name and at least one of the title and description are required (all three are preferred). All other parameters may be nil (or 0 or false as appropriate) to accept default values.

If using the Growl-WithInstaller framework, if Growl is not installed the user will be prompted to install Growl. If the user cancels, this method will have no effect until the next application session, at which time when it is called the user will be prompted again. The user is also given the option to not be prompted again. If the user does choose to install Growl, the requested notification will be displayed once Growl is installed and running.

title		The title of the notification displayed to the user.
description	The full description of the notification displayed to the user.	
notifName	The internal name of the notification. Should be human-readable, as it will be displayed in the Growl preference pane.	
iconData		Memoryblock object to show with the notification as its icon. If nil, the application's icon will be used instead.
priority		The priority of the notification. The default value is 0; positive values are higher priority and negative values are lower priority. Not all Growl displays support priority.
isSticky		If true, the notification will remain on screen until clicked. Not all Growl displays support sticky notifications.
clickContext	A context passed back to the Growl delegate if it implements growlNotificationWasClicked and the notification is clicked. Not all display plugins support clicking. The clickContext must be plist-encodable (completely of String, Array, Numbers, Dictionary, and Memoryblock types).	

See also:

- 83.1.15 notifyWithTitle(title as string, description as string, notificationName as string, iconData as memoryblock, Priority as Integer, isSticky as boolean, clickContext as Variant, identifier as string) 14734

83.1.15 notifyWithTitle(title as string, description as string, notificationName as string, iconData as memoryblock, Priority as Integer, isSticky as boolean, clickContext as Variant, identifier as string)

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Send a Growl notification.
Notes:

This is the preferred means for sending a Growl notification.
The notification name and at least one of the title and description are required (all three are preferred). All other parameters may be nil (or 0 or false as appropriate) to accept default values.

If using the Growl-WithInstaller framework, if Growl is not installed the user will be prompted to install Growl. If the user cancels, this method will have no effect until the next application session, at which time when it is called the user will be prompted again. The user is also given the option to not be prompted again. If the user does choose to install Growl, the requested notification will be displayed once Growl is installed and running.

title	The title of the notification displayed to the user.
description	The full description of the notification displayed to the user.
notifName	The internal name of the notification. Should be human-readable, as it will be displayed in the Growl preference pane.
iconData	Memoryblock to show with the notification as its icon. If nil, the application's icon will be used instead.
priority	The priority of the notification. The default value is 0; positive values are higher priority and negative values are lower priority. Not all Growl displays support priority.
isSticky	If true, the notification will remain on screen until clicked. Not all Growl displays support sticky notifications.
clickContext	A context passed back to the Growl delegate if it implements growlNotificationWasClicked and the notification is clicked. Not all display plugins support clicking. The clickContext must be plist-encodable (completely of String, Array, Numbers, Dictionary, and Memoryblock types).
identifier	An identifier for this notification. Notifications with equal identifiers are coalesced.

See also:

- 83.1.14 notifyWithTitle(title as string, description as string, notificationName as string, iconData as memoryblock = nil, Priority as Integer = 0, isSticky as boolean = false, clickContext as Variant = nil) 14733

83.1.16 registerWithDictionary(regDict as dictionary = nil) as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Register your application with Growl without setting a delegate.
Notes:

When you call this method with a dictionary, GrowlApplicationBridge registers your application using that dictionary. If you pass nil, GrowlApplicationBridge will ask the delegate (if there is one) for a dictionary, and if that doesn't work, it will look in your application's bundle for an auto-discoverable plist.

If you pass a dictionary to this method, it must include the kApplicationName key, unless a delegate is set.

This method is mainly an alternative to the delegate system introduced with Growl 0.6. Without a delegate, you cannot receive callbacks such as growlIsReady (since they are sent to the delegate). You can, however, set a delegate after registering without one.

This method was introduced in Growl.framework 0.7.

83.1.17 registrationDictionaryByFillingInDictionary(regDict as dictionary) as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tries to fill in missing keys in a registration dictionary.
Notes:

This method examines the passed-in dictionary for missing keys, and tries to work out correct values for them. As of 0.7, it uses:

Key	Value
kApplicationName	CFBundleExecutableName
kApplicationIcon	The data of the icon of the application.
App Location	The location of the application.
kNotificationsDefault	kNotificationsDefault

Keys are only filled in if missing; if a key is present in the dictionary, its value will not be changed.

This method was introduced in Growl.framework 0.7.
regDict: The dictionary to fill in.

Returns the dictionary with the keys filled in.
See also:

- 83.1.18 registrationDictionaryByFillingInDictionary(regDict as dictionary, restrictToKeys() as string) as Dictionary 14736

83.1.18 registrationDictionaryByFillingInDictionary(regDict as dictionary, restrictToKeys() as string) as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tries to fill in missing keys in a registration dictionary.
Notes:

This method examines the passed-in dictionary for missing keys, and tries to work out correct values for them. As of 0.7, it uses:

Key	Value
kApplicationName	CFBundleExecutableName
kApplicationIcon	The data of the icon of the application.
App Location	The location of the application.
kNotificationsDefault	kNotificationsDefault

Only those keys that are listed in restrictToKeys array will be filled in. Other missing keys are ignored. Also, keys are only filled in if missing; if a key is present in the dictionary, its value will not be changed.

This method was introduced in Growl.framework 0.7.
regDict: The dictionary to fill in.
restrictToKeys: The keys to fill in. If nil, any missing keys are filled in.

Returns the dictionary with the keys filled in.
See also:

- 83.1.17 registrationDictionaryByFillingInDictionary(regDict as dictionary) as Dictionary 14735

83.1.19 registrationDictionaryFromBundle(bundle as Variant = nil) as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Looks in a bundle for a registration dictionary.
Example:

```
dim d as Dictionary = GrowlApplicationBridgeMBS.registrationDictionaryFromBundle(NSBundleMBS.mainBundle)
```

Notes:

Bundle must be an instance of NSBundleMBS class.

This method looks in a bundle for an auto-discoverable registration dictionary file using NSBundle methods. If it finds one, it loads the file using dictionaryWithContentsOfFile and returns the result.

If you pass nil as the bundle, the main bundle is examined.

This method does not attempt to clean up the dictionary in any way - for example, if it is missing the <code>GROWL_APP_NAME</code>key, the result will be missing it too. Use registrationDictionaryByFillingInDictionary to try to fill in missing keys.

This method was introduced in Growl.framework 0.7.
Returns a registration dictionary.

83.1.20 registrationDictionaryFromDelegate as Dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Asks the delegate for a registration dictionary.
Notes:

If no delegate is set, or if the delegate's registrationDictionaryForGrowl method returns nil, this method returns nil.

This method does not attempt to clean up the dictionary in any way - for example, if it is missing the kApplicationName key, the result will be missing it too. Use registrationDictionaryByFillingInDictionary to try to fill in missing keys.

This method was introduced in Growl.framework 0.7.
Returns a registration dictionary.

83.1.21 reregisterGrowlNotifications

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reregister the notifications for this application.
Notes:

This method does not normally need to be called. If your application changes what notifications it is registering with Growl, call this method to have the Growl delegate's registrationDictionaryForGrowl method called again and the Growl registration information updated.

This method is now implemented using egisterWithDictionary.

83.1.22 Properties

83.1.23 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for the Growl object.
Notes: (Read and Write property)

83.1.24 shouldUseBuiltInNotifications as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current opt-in state of the framework's use of the Mist display style.
Notes:

Opt-out mechanism for the mist notification style in the event growl can't be reached.

If growl is unavailable due to not being installed or as a result of being turned off then this option can enable/disable a built-in fire and forget display style

Specifies whether or not the developer wants to opt-in (default) or opt out of the built-in Mist style in the event Growl is unreachable.
(Read and Write computed property)

83.1.25 willRegisterWhenGrowlIsReady as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to register with Growl when Growl launches (or not).
Notes:

When Growl has started listening for notifications, it posts a GROWL_IS_READY notification on the Distributed Notification Center. GrowlApplicationBridge listens for this notification, using it to perform various tasks (such as calling your delegate's growlIsReady method, if it has one). If this method is called with true, one of those tasks will be to reregister with Growl (in the manner of reregisterGrowlNotifications).

This attribute is automatically set back to false (the default) after every GROWL_IS_READY notification.

Value: True, if you want GrowlApplicationBridge to register with Growl when next it is ready; false if not.
(Read and Write computed property)

83.1.26 Events

83.1.27 applicationIconDataForGrowl as Memoryblock

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Return the data to treat as the application icon.
Notes:

The delegate may optionally return a memoryblock object to use as the application icon; if this is not implemented, the application's own icon is used. This is not generally needed.
Return the memoryblock to treat as the application icon.
Deprecated In version 1.1, in favor of applicationIconForGrowl.

83.1.28 applicationIconForGrowl as Variant

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Return the NSImage to treat as the application icon.
Notes:

The delegate may optionally return an NSImageMBS object to use as the application icon. If this method is not implemented, applicationIconDataForGrowl is tried. If that method is not implemented, the application's own icon is used. Neither method is generally needed.

Return a NSImageMBS to treat as the application icon.

83.1.29 applicationNameForGrowl as string

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Return the name of this application which will be used for Growl bookkeeping.
Notes:

This name is used both internally and in the Growl preferences.

This should remain stable between different versions and incarnations of your application.
For example, "SurfWriter" is a good app name, whereas "SurfWriter 2.0" and "SurfWriter Lite" are not.

You do not need to implement this method if you are providing the application name elsewhere, meaning in an auto-discoverable plist file in your app bundle or in the result of registrationDictionaryForGrowl.

Return the name of the application using Growl.

83.1.30 growlIsReady

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Informs the delegate that Growl has launched.
Notes: Informs the delegate that Growl (specifically, the GrowlHelperApp) was launched successfully. The application can take actions with the knowledge that Growl is installed and functional.

83.1.31 growlNotificationTimedOut(clickContext as Variant)

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Informs the delegate that a Growl notification timed out.
Notes:

Informs the delegate that a Growl notification timed out. It is only sent for notifications sent with a non-nil clickContext, so if you want to receive a message when a notification is clicked, clickContext must not be nil when calling notifyWithTitle.

clickContext: The clickContext passed when displaying the notification originally via notifyWithTitle.

83.1.32 growlNotificationWasClicked(clickContext as Variant)

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Informs the delegate that a Growl notification was clicked.
Notes:

Informs the delegate that a Growl notification was clicked. It is only sent for notifications sent with a non-nil clickContext, so if you want to receive a message when a notification is clicked, clickContext must not be nil when calling notifyWithTitle.

clickContext: The clickContext passed when displaying the notification originally via notifyWithTitle.

83.1.33 hasNetworkClientEntitlement as boolean

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Used only in sandboxed situations since we don't know whether the app has com.apple.security.network.client entitlement.
Notes: GrowlDelegate calls to find out if we have the com.apple.security.network.client entitlement, since we

can't find this out without hitting the sandbox. We only call it if we detect that the application is sandboxed.

83.1.34 registrationDictionaryForGrowl as dictionary

MBS MacExtras Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return the dictionary used to register this application with Growl.
Notes:

The returned dictionary gives Growl the complete list of notifications this application will ever send, and it also specifies which notifications should be enabled by default. Each is specified by an array of strings.

For most applications, these two arrays can be the same (if all sent notifications should be displayed by default).

The strings of these arrays will correspond to the notificationName parameter passed in notifyWithTitle calls.

The dictionary should have the required key object pairs:

key: kNotificationsAll object: Array of Strings
key: kNotificationsDefault object: Array of Strings

The dictionary may have the following key object pairs:
key: kNotificationsHumanReadableNames
object: Dictionary of key: notification name object: human-readable notification name

You do not need to implement this method if you have an auto-discoverable plist file in your app bundle.
Return the Dictionary to use for registration.

83.1.35 Constants

83.1.36 kApplicationIcon = "ApplicationIcon"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

The image data for your application's icon.
Image data representing your application's icon. This may be superimposed on a notification icon as a badge, used as the notification icon when a notification-specific icon is not supplied, or ignored altogether, depending on the display. Must be in a format supported by NSImage, such as TIFF, PNG, GIF, JPEG, BMP, PICT, or PDF.

Optional. Not supported by all display plugins.

83.1.37 kApplicationId = "ApplicationId"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

The bundle identifier of your application.
The bundle identifier of your application. This key should be unique for your application while there may be several applications with the same kApplicationName.
This key is optional.

83.1.38 kApplicationName = "ApplicationName"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

The name of your application.
The name of your application. This should remain stable between different versions and incarnations of your application.
For example, "SurfWriter" is a good app name, whereas "SurfWriter 2.0" and "SurfWriter Lite" are not.

83.1.39 kApplicationPID = "ApplicationPID"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

The process identifier of the process which sends this notification. If this field is set, the application will only receive clicked and timed out notifications which originate from this process.

Optional.

83.1.40 kGrowlNotificationIdentifier = "GrowlNotificationIdentifier"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

An identifier for the notification for coalescing purposes.

Notifications with the same identifier fall into the same class; only the last notification of a class is displayed

on the screen. If a notification of the same class is currently being displayed, it is replaced by this notification.

Optional. Not supported by all display plugins.

83.1.41 kNotificationAppIcon = "NotificationAppIcon"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

Image data for the application icon, in case kNotificationAppIcon does not apply for some reason. Image data be in a format supported by NSImage, such as TIFF, PNG, GIF, JPEG, BMP, PICT, or PDF.

Optional. Not supported by all display plugins.

83.1.42 kNotificationClickContext = "NotificationClickContext"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

Identifies which notification was clicked.

An identifier for the notification for clicking purposes.

This will be passed back to the application when the notification is clicked. It must be plist-encodable (a data, dictionary, array, number, or string), and it should be unique for each notification you post. A good click context would be a UUID string returned by UUIDMBS class.

Optional. Not supported by all display plugins.

83.1.43 kNotificationDescription = "NotificationDescription"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

The description to display in the notification.
The description should be longer and more verbose than the title.
The description usually tells the subject of the action, e.g. "Growl-0.6.dmg downloaded in 5.02 minutes".

83.1.44 kNotificationIcon = "NotificationIcon"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

Image data for the application icon, in case kNotificationAppIcon does not apply for some reason. Image data be in a format supported by NSImage, such as TIFF, PNG, GIF, JPEG, BMP, PICT, or PDF.

Optional. Not supported by all display plugins.

83.1.45 kNotificationName = "NotificationName"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

The name of the notification.
The name of the notification. Note that if you do not define kNotificationsHumanReadableNames when registering your ticket originally this name will the one displayed within the Growl preference pane and should be human-readable.

83.1.46 kNotificationPriority = "NotificationPriority"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

The priority of the notification as an integer number from -2 to +2 (+2 being highest).
Optional. Not supported by all display plugins.

83.1.47 kNotificationProgress = "NotificationProgress"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

If this key is set, it should contain a double value which describes some sort of progress (from 0.0 to 100.0). If this is key is not set, no progress bar is shown.

Optional. Not supported by all display plugins.

83.1.48 kNotificationsAll = "AllNotifications"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes: The array of all notifications your application can send.

83.1.49 kNotificationsDefault = "DefaultNotifications"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

The array of notifications to turn on by default.
These are the names of the notifications that should be enabled by default when your application registers for the first time. If your application reregisters, Growl will look here for any new notification names found in kNotificationsAll, but ignore any others.

83.1.50 kNotificationsDescriptions = "NotificationDescriptions"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

A dictionary of descriptions of _when_ each notification occurs

This is an Dictionary whose keys are kNotificationName strings and whose objects are descriptions of _when_ each notification occurs, such as "You received a new mail message" or "A file finished downloading".

This key is optional.

83.1.51 kNotificationsHumanReadableNames = "HumanReadableNames"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

A dictionary of human-readable names for your notifications.

By default, the Growl UI will display notifications by the names given in kNotificationsAll which correspond to the kNotificationName. This dictionary specifies the human-readable name to display.
The keys of the dictionary are kNotificationName strings; the objects are the human-readable versions.
For any kNotificationName not specific in this dictionary, the kNotificationName will be displayed.

This key is optional.

83.1.52 kNotificationSticky = "NotificationSticky"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

A Boolean number controlling whether the notification is sticky.
Optional. Not supported by all display plugins.

83.1.53 kNotificationTitle = "NotificationTitle"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the notification dictionary.
Notes:

The title to display in the notification.
Should be very brief. The title usually says what happened, e.g. "Download complete".

83.1.54 kTicketVersion = "TicketVersion"

MBS MacExtras Plugin, Plugin Version: 11.3. **Function:** One of the keys for the registration dictionary.
Notes:

The version of your registration ticket.
Include this key in a ticket plist file that you put in your application bundle for auto-discovery. The current ticket version is 1.

83.2 class GrowlMBS

83.2.1 class GrowlMBS

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for all the global growl functions.
Notes:

On the growl website you will find more information:
http://growl.info

The plugin is compatible to framework v0.7.5.

83.2.2 Xojo Developer Magazine

- 5.4, page 50: The Case of the Top 20, The mayor is caught in an explosive situation, and our boys are on the case by Toby Rush

- 5.3, page 6: News

83.2.3 Methods

83.2.4 IsInstalled as boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines whether the Growl prefpane and its helper app are installed.
Notes: Returns true if Growl is installed, false otherwise.

83.2.5 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cycles through the process list to find whether GrowlHelperApp is running.
Notes:

Warning: This function crashes with Growl version 0.7.5.

Returns true if Growl is running, false otherwise.

83.2.6 LaunchIfInstalled as boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Launches GrowlHelperApp if it is not already running.
Notes:

Calls the Launched event after the helper application was launched.
Returns true on success and false on any error.

83.2.7 LoadFramework(file as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the framework from a given folderitem.
Notes:

Must be called before using any other function.
Returns true on success and false on any error.

The best thing is to take the framework and copy it into the application bundle with a build step so you can locate and load it easily.

83.2.8 Register

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers the current application.
Notes:

Must be called before posting notifications.

If you are using Growl-WithInstaller.framework, and an older version of Growl is installed on the user's system, the user will automatically be prompted to update.

This will fail if you don't have a bundle identifier on your application.

83.2.9 SetAllNotificationArray(names() as string)

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Contains the names of all notifications your application may post.
Notes: You must call this function before using Register.

83.2.10 SetDefaultNotificationArray(names() as string)

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Names of notifications that should be enabled by default.
Notes:

This array can be set optional.
If not set, all notifications will be enabled by default.

83.2.11 Properties

83.2.12 ApplicationIconData as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The icon to display in the notifications.
Notes:

The data can be in any format supported by NSImage. As of Mac OS X 10.3, this includes the .icns, TIFF, JPEG, GIF, PNG, PDF, and PICT formats.

If this is not supplied, Growl will look up your application's icon by its application name.
(Read and Write property)

83.2.13 ApplicationName as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This name is used both internally and in the Growl preferences.
Notes:

This should remain stable between different versions and incarnations of your application.
For example, "SurfWriter" is a good app name, whereas "SurfWriter 2.0" and "SurfWriter Lite" are not.
(Read and Write property)

83.2.14 InstallationInformation as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The installation window information text.
Notes:

This information may be as long or short as desired (the window will be sized to fit it). If Growl is not installed, it will be displayed to the user as an explanation of what Growl is and what it can do in your application.

It should probably note that no download is required to install.

If this is empty, Growl will use a default, localized explanation.

Only used if you're using Growl-WithInstaller.framework. Otherwise, this member is ignored.
(Read and Write property)

83.2.15 InstallationWindowTitle as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The installation window title.
Notes:

Leave empty for default localized title.
(Read and Write property)

83.2.16 UpdateInformation as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The update window information text.
Notes:

This information may be as long or short as desired (the window will be sized to fit it). If an older version of Growl is installed, it will be displayed to the user as an explanation that an updated version of Growl is included in your application and no download is required.

If this is empty, Growl will use a default, localized explanation.

Only used if you're using Growl-WithInstaller.framework. Otherwise, this member is ignored.
(Read and Write property)

83.2.17 UpdateWindowTitle as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The update window information title.
Notes:

Leave empty to use default text.
(Read and Write property)

83.2.18 WillRegisterWhenGrowlIsReady as boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells framework to register with Growl when Growl launches (or not).
Notes: (Read and Write computed property)

83.2.19 Events

83.2.20 Launched

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event to inform application that the helper application was launched.

83.3 class GrowlNotificationMBS

83.3.1 class GrowlNotificationMBS

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for all the global notification related functions.
Notes:

You may subclass this class to fill the events in case you need them.

On this website you will find more information:
http://growl.info

The plugin is compatible to framework v0.7.5.

83.3.2 Methods

83.3.3 PostNotification

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Posts a Growl notification.
Notes:

This is the preferred means for sending a Growl notification.
The notification name and at least one of the title and description are required (all three are preferred). All other parameters may be empty (or 0 or false as appropriate) to accept default values.

If using the Growl-WithInstaller framework, if Growl is not installed the user will be prompted to install Growl.
If the user cancels, this function will have no effect until the next application session, at which time when it is called the user will be prompted again. The user is also given the option to not be prompted again.
If the user does choose to install Growl, the requested notification will be displayed once Growl is installed and running.

83.3.4 Properties

83.3.5 Description as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The description supplements the title with more information.
Notes:

It is usually longer and sometimes involves a list of subjects. For example, for a 'Download complete' notification, the description might have one filename per line. GrowlMail in Growl 0.6 uses a description of '% d new mail(s)' (formatted with the number of messages).
(Read and Write property)

83.3.6 IconData as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The icon to display in the notification.
Notes:

The data can be in any format supported by NSImage. As of Mac OS X 10.3, this includes the .icns, TIFF, JPEG, GIF, PNG, PDF, and PICT formats.

If this is not supplied, Growl will look up your application's icon by its application name.
(Read and Write property)

83.3.7 Identifier as String

MBS MacOSX Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The identifier to use for the application.
Notes:

Optional. Growl will use the bundle identifier of your application if you don't have one.
(Read and Write property)

83.3.8 IsSticky as Boolean

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Requests that a notification stay on-screen until dismissed explicitly.
Notes:

notifications disappear after a certain amount of time. Sticky notifications, however, remain on-screen until the user dismisses them explicitly, usually by clicking them.

Sticky notifications were introduced in Growl 0.6. Most notifications should not be sticky. Not all displays support sticky notifications, and the user may choose in Growl's preference pane to force the notification to be sticky or non-sticky, in which case the sticky bit in the notification will be ignored.
(Read and Write property)

83.3.9 Name as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification name distinguishes one type of notification from another.
Notes:

The name should be human-readable, as it will be displayed in the Growl preference pane.

The name is used in the All Notification Array and the Default Notification Array.
(Read and Write property)

83.3.10 Priority as Integer

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The priority of the notification.
Notes:

Priority is new in Growl 0.6, and is represented as a signed integer from -2 to +2. 0 is Normal priority, -2 is Very Low priority, and +2 is Very High priority.

Not all displays support priority. If you do not wish to assign a priority to your notification, assign 0.
(Read and Write property)

83.3.11 Title as String

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A notification's title describes the notification briefly.
Notes:

It should be easy to read quickly by the user.
(Read and Write property)

83.3.12 Events

83.3.13 Clicked

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This notification was clicked.

83.3.14 TimeOut

MBS MacOSX Plugin, Plugin Version: 7.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This notification timed out.

83.4 class WindowsGrowlMBS

83.4.1 class WindowsGrowlMBS

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for sending growl notifications on Windows.
Notes:

May work on Linux and Mac with version 18.4, too.

Please note that UDP does not do icons. use TCP/IP protocol if you need icons.

83.4.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr5

83.4.3 Methods

83.4.4 Constructor(protocol as Integer, password as string, application as string, notifications() as string)

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Growl object to send notifications to a lcoal server.
Example:

```
dim notifications(-1) as string

Notifications.Append "MyNotification"

dim g as new WindowsGrowlMBS(WindowsGrowlMBS.kGrowlUDP, "pass", "MyApp", notifications)
```

See also:

- 83.4.5 Constructor(protocol as Integer, server as string, password as string, application as string, notifications() as string) 14756

83.4.5 Constructor(protocol as Integer, server as string, password as string, application as string, notifications() as string)

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Growl object to send notifications to a remote server.

Example:

```
dim notifications(-1) as string

Notifications.Append "MyNotification"

dim g as new WindowsGrowlMBS(WindowsGrowlMBS.kGrowlUDP, "192.168.1.12", "pass", "MyApp", notifications)
```

See also:

- 83.4.4 Constructor(protocol as Integer, password as string, application as string, notifications() as string) 14756

83.4.6 Notify(notification as string, title as string, message as string)

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send a notification.
Example:

```
dim g as WindowsGrowlMBS // your growl instance
g.Notify("MyNotification", "Just a test to show what growl can do for you.", "http://www.mbsplugins.de/")
```

Notes:

notification: Name of notification
title: Title text to show
message: Message text.
See also:

- 83.4.7 Notify(notification as string, title as string, message as string, url as string, icon as string) 14757

83.4.7 Notify(notification as string, title as string, message as string, url as string, icon as string)

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Send a notification.
Example:

```
dim g as WindowsGrowlMBS // your growl instance
g.Notify("MyNotification", "Just a test", "to show what growl can do for you.")
```

Notes:

notification: Name of notification
title: Title text to show
message: Message text.
URL: The URL to display with message.
icon: The URL to the icon for this message. If this is a local file path, we open file and send it in the payload. Otherwise an URL is included.
See also:

- 83.4.6 Notify(notification as string, title as string, message as string) 14757

83.4.8 Properties

83.4.9 Application as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The application name.
Notes: (Read only property)

83.4.10 Password as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password.
Notes:

Leave empty for local computer.
(Read only property)

83.4.11 Protocol as Integer

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The protocol to use.
Notes: (Read only property)

83.4.12 Server as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The server address.
Notes:

Leave empty for local computer.
(Read only property)

83.4.13 Constants

83.4.14 kGrowlTCP = 1

MBS Win Plugin, Plugin Version: 10.1. **Function:** One of the protocol constants.

83.4.15 kGrowlUDP = 0

MBS Win Plugin, Plugin Version: 10.1. **Function:** One of the protocol constants.

Chapter 84

Hotkey

84.1 class HotKeyMBS

84.1.1 class HotKeyMBS

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The class for registering hotkeys.
Notes: This is a crossplatform replacement for our CarbonHotKeyMBS class.

84.1.4 Methods

84.1.5 Close

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Closes hotkey.

Notes: Same as destructor, but to unregister hotkey now.

84.1.6 Constructor(KeyCode as Integer, Modifiers as Integer, Exclusive as Boolean = false)

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Registers a new keycode.
Notes: The plugin may not check if combination is allowed, makes sense or can be pressed.

84.1.7 KeyCodeForText(name as string) as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Queries a keycode for a character.
Example:

```
MsgBox "Return: "+str(HotKeyMBS.KeyCodeForText("return"))
```

Notes:

Helper function to return platform specific key codes for various keys.
Plugin has a list based on the constants defined by Apple and Microsoft for keys.

84.1.8 Properties

84.1.9 Exclusive as Boolean

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Whether exclusive ownership of hotkey was requested.
Notes: (Read only property)

84.1.10 Handle as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes:

Only used on Mac OS X.
(Read only property)

84.1.11 ID as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The internal ID of the hotkey.
Notes: (Read only property)

84.1.12 KeyCode as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The keycode registered.
Notes: (Read only property)

84.1.13 Modifiers as Integer

MBS Util Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The modifiers used at registration.
Notes: (Read only property)

84.1.14 Events

84.1.15 KeyDown

MBS Util Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The key down event.

84.1.16 KeyUp

MBS Util Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The key up event.

84.1.17 Constants

84.1.18 AlphaKey = & h400

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the modifier flags.
Notes: Alpha Lock

84.1.19 CommandKey = & h100

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the modifier flags. **Notes:** Command Key on Mac, Windows Key on Windows.

84.1.20 ControlKey = & h1000

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the modifier flags. **Notes:** Control Key

84.1.21 OptionKey = & h800

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the modifier flags. **Notes:** Option/Alt Key

84.1.22 ShiftKey = & h200

MBS Util Plugin, Plugin Version: 15.2. **Function:** One of the modifier flags. **Notes:** Shift Key

Chapter 85

HTMLViewer Linux

85.1 class LinuxJavaScriptContextMBS

85.1.1 class LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The class for a javascript context.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

85.1.2 Methods

85.1.3 CheckScriptSyntax(script as string, sourceURL as string = """, StartLineNumber as Integer = 0) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Checks for syntax errors in a string of JavaScript.
Notes:

script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception: A string in which to store a syntax error exception, if any.
Returns true if the script is syntactically correct, otherwise false.
See also:

- 85.1.4 CheckScriptSyntax(script as string, sourceURL as string, StartLineNumber as Integer, byref

JSException as string) as boolean 14766

85.1.4 CheckScriptSyntax(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Checks for syntax errors in a string of JavaScript.
Notes:

script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception: A string in which to store a syntax error exception, if any.
Returns true if the script is syntactically correct, otherwise false.
See also:

- 85.1.3 CheckScriptSyntax(script as string, sourceURL as string = "", StartLineNumber as Integer = 0) as boolean 14765

85.1.5 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

85.1.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.1.7 EvaluateScript(script as string, sourceURL as string = "", StartLineNumber as Integer = 0) as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Evaluates a string of JavaScript.
Notes:

script A string containing the script to evaluate.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at

sourceURL. This is only used when reporting exceptions.
exception A string in which to store an exception, if any.
Returns the value as string that results from evaluating script, or "" if an exception is thrown.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.
See also:

- 85.1.8 EvaluateScript(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as string 14767

85.1.8 EvaluateScript(script as string, sourceURL as string, StartLineNumber as Integer, byref JSException as string) as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Evaluates a string of JavaScript.
Notes:

script A string containing the script to evaluate.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions.
exception A string in which to store an exception, if any.
Returns the value as string that results from evaluating script, or "" if an exception is thrown.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.
See also:

- 85.1.7 EvaluateScript(script as string, sourceURL as string = "", StartLineNumber as Integer = 0) as string 14766

85.1.9 GarbageCollect

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Performs a JavaScript garbage collection.
Notes: You should not need to call this.

85.1.10 Properties

85.1.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.1.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The reference to the parent HTMLViewer.
Notes: (Read and Write property)

85.2 class LinuxWebBackForwardListMBS

85.2.1 class LinuxWebBackForwardListMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The history of a WebView.

85.2.2 Methods

85.2.3 AddItem(item as LinuxWebHistoryItemMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Adds the item to the WebBackForwardList.

85.2.4 BackItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the item that precedes the current item.

85.2.5 BackLength as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the number of items that preced the current item.

85.2.6 Clear

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Clears the webBackForwardList by removing all its elements.
Notes: Note that not even the current page is kept in list when cleared so you would have to add it later. This method also clears the list of visited links which means that all links will appear unvisited.

85.2.7 Constructor(webview as LinuxWebViewMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates an instance of the back forward list with a controlling WebView.

85.2.8 ContainsItem(item as LinuxWebHistoryItemMBS) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Checks if item is in the back forward list.

85.2.9 CurrentItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The current item.
Notes: Returns a nil value if the back forward list is empty.

85.2.10 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.2.11 ForwardItem as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The next item forward in the list.
Notes: Returns a nil value if there nothing that succeeds the current item.

85.2.12 ForwardLength as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the number of items that succeed the current item.

85.2.13 GoBack

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Steps backward in the back forward list

85.2.14 GoForward

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Steps forward in the back forward list.

85.2.15 GoToItem(item as LinuxWebHistoryItemMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Go to the specified item in the back forward list.

85.2.16 Item(index as Integer) as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the item at a given index relative to the current item.

85.2.17 Properties

85.2.18 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.2.19 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent htmlviewer.
Notes: (Read and Write property)

85.2.20 Limit as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The maximum limit of the back forward list.
Notes: (Read and Write computed property)

85.3 class LinuxWebCookieMBS

85.3.1 class LinuxWebCookieMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The class for a cookie used with WebKit on Linux.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox c.Expires.ShortDate+" "+c.Expires.ShortTime
```

Notes:

LinuxWebCookieMBS implements HTTP cookies, primarily as described by the original Netscape cookie specification, but with slight modifications based on RFC 2109, Microsoft's HttpOnly extension attribute, and observed real-world usage (and, in particular, based on what Firefox does).

An HTTP cookie.

name and value will be set for all cookies. If the cookie is generated from a string that appears to have no name, then name will be the empty string.

domain and path give the host or domain, and path within that host/domain, to restrict this cookie to. If domain starts with ".", that indicates a domain (which matches the string after the ".", or any hostname that has domain as a suffix). Otherwise, it is a hostname and must match exactly.

expires will be non-nil if the cookie uses either the original "expires" attribute, or the "max-age" attribute specified in RFC 2109. If expires is nil, it indicates that neither "expires" nor "max-age" was specified, and the cookie expires at the end of the session.

If http_only is set, the cookie should not be exposed to untrusted code (eg, javascript), so as to minimize the danger posed by cross-site scripting attacks.

85.3.2 Blog Entries

- Cookies in HTMLViewer

85.3.3 Methods

85.3.4 Constructor(name as string, value as string, domain as string, path as string, maxAge as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new cookie with the given attributes.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Name)
```

Notes:

Use Secure and HTTPOnly properties if you need to set those attributes on the returned cookie.

maxAge is used to set the "expires" attribute on the cookie; pass -1 to not include the attribute (indicating that the cookie expires with the current session), 0 for an already-expired cookie, or a lifetime in seconds. You can use the constants kMaxAgeHour, kMaxAgeDay, kMaxAgeWeek and kMaxAgeYear (or multiples thereof) to calculate this value. (If you really care about setting the exact time that the cookie will expire, use Expire property.)

name: cookie name
value: cookie value
domain: cookie domain or hostname
path: cookie path, or ""
maxage: max age of the cookie, or -1 for a session cookie

85.3.5 Copy as LinuxWebCookieMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a copy.
Notes: If you want to edit an existing cookie, please make a copy first.

85.3.6 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.3.7 Equal(other as LinuxWebCookieMBS) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Compares two cookies.
Notes: Returns true if they are equal.

85.3.8 SetMaxAge(value as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Sets cookie's max age to value.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Hour)
c.SetMaxAge(c.kMaxAgeWeek)
MsgBox c.ToSetCookieHeader
```

Notes:

If max_age is -1, the cookie is a session cookie, and will expire at the end of the client's session. Otherwise, it is the number of seconds until the cookie expires. You can use the constants kMaxAgeHour, kMaxAgeDay, kMaxAgeWeek and kMaxAgeYear (or multiples thereof) to calculate this value. (A value of 0 indicates that the cookie should be considered already-expired.)

(This sets the same property as Expire.)

85.3.9 ToCookieHeader as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Serializes cookie in the format used by the Cookie header (ie, for returning a cookie from to a server).
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox c.ToCookieHeader
```

85.3.10 ToSetCookieHeader as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Serializes cookie in the format used by the Set-Cookie header (ie, for sending a cookie from to a client).

Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox c.ToSetCookieHeader
```

85.3.11 Properties

85.3.12 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.3.13 Owner as Variant

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The owner of this object.
Notes: (Read and Write property)

85.3.14 Domain as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The domain text.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAgeWeek)
MsgBox str(c.Domain)
```

Notes: (Read and Write computed property)

85.3.15 Expires as date

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The expiration time.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox c.Expires.ShortDate+" "+c.Expires.ShortTime
```

Notes:

If expires is nil, cookie will be a session cookie and will expire at the end of the client's session.
(Read and Write computed property)

85.3.16 HTTPOnly as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The httponly attribute.
Notes:

If true, cookie will be marked as "http only", meaning it should not be exposed to web page scripts or other untrusted code.
(Read and Write computed property)

85.3.17 Name as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The name of the cookie.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Name)
```

Notes: (Read and Write computed property)

85.3.18 Path as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The path of the cookie.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "test", LinuxWebCookieMBS.kMax-
AgeWeek)
MsgBox str(c.Path)
```

Notes: (Read and Write computed property)

85.3.19 Secure as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The secure attribute.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Secure)
c.Secure = true
MsgBox str(c.Secure)
```

Notes:

Cookie will only be transmitted from the client to the server over secure (https) connections if secure is true. (Read and Write computed property)

85.3.20 Value as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The value of the cookie.
Example:

```
dim c as new LinuxWebCookieMBS("test", "12345", "mbsplugins.de", "", LinuxWebCookieMBS.kMaxAge-
Week)
MsgBox str(c.Value)
```

Notes: (Read and Write computed property)

85.3.21 Constants

85.3.22 kMaxAgeDay = 86400

MBS Linux Plugin, Plugin Version: 12.4. **Function:** A constant for one day in seconds.

85.3.23 kMaxAgeHour = 3600

MBS Linux Plugin, Plugin Version: 12.4. **Function:** A constant for one hour in seconds.

85.3.24 kMaxAgeWeek = 604800

MBS Linux Plugin, Plugin Version: 12.4. **Function:** A constant for one week in seconds.

85.3.25 kMaxAgeYear = 31556926

MBS Linux Plugin, Plugin Version: 12.4. **Function:** A constant for one year in seconds.

85.4 class LinuxWebCookieStoreMBS

85.4.1 class LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The store for cookies.
Example:

```
dim store as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
dim cookies() as LinuxWebCookieMBS = store.AllCookies
MsgBox str(UBound(cookies)+1)+" cookies"
```

85.4.2 Blog Entries

- Cookies in HTMLViewer

85.4.3 Methods

85.4.4 AddCookie(cookie as LinuxWebCookieMBS)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Adds cookie to store.

85.4.5 AllCookies as LinuxWebCookieMBS()

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns an array with all cookies.
Example:

```
// show all cookies
dim store as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
dim cookies(-1) as LinuxWebCookieMBS = store.AllCookies
dim lines() as string

for each c as LinuxWebCookieMBS in cookies
lines.Append c.ToSetCookieHeader
next

MsgBox Join(lines,EndOfLine)
```

85.4.6 Available as Boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns true if the plugin found all functions for the web cookie store.

85.4.7 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new cookie store.
Notes: The base LinuxWebCookieStoreMBS class does not support persistent storage of cookies; use a subclass for that.

85.4.8 CookieStore as LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the default cookie store.
Example:

```
dim w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore

MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
w.AcceptPolicy = w.kAcceptNoThirdParty
MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
```

85.4.9 DeleteAllCookies

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Deletes all cookies.
Example:

```
dim w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore
w.DeleteAllCookies
```

85.4.10 DeleteCookie(cookie as LinuxWebCookieMBS)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Deletes cookie.

85.4.11 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.4.12 SetCookieStore(newStore as LinuxWebCookieStoreMBS)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Makes the given cookie store the default one.

85.4.13 Properties

85.4.14 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.4.15 Owner as Variant

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The owner of this object.
Notes: (Read and Write property)

85.4.16 AcceptPolicy as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Get/set the policy for accepting cookies.
Example:

```
dim w as LinuxWebCookieStoreMBS = LinuxWebCookieStoreMBS.CookieStore

MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
w.AcceptPolicy = w.kAcceptNoThirdParty
MsgBox "AcceptPolicy: "+str(w.AcceptPolicy)
```

Notes: (Read and Write computed property)

85.4.17 Constants

85.4.18 kAcceptAlways = 0

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the cookie accept modes.
Notes: Accept all cookies unconditionally.

85.4.19 kAcceptNever = 1

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the cookie accept modes.
Notes: Reject all cookies unconditionally.

85.4.20 kAcceptNoThirdParty = 2

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the cookie accept modes.
Notes:

No Third party cookies.
Accept all cookies set by the main document loaded in the application using libsoup. An example of the most common case, web browsers, would be: If http://www.example.com is the page loaded, accept all cookies set by example.com, but if a resource from http://www.third-party.com is loaded from that page reject any cookie that it could try to set. For libsoup to be able to tell apart first party cookies from the rest, the application must call soup_message_set_first_party() on each outgoing SoupMessage, setting the SoupURI of the main document. If no first party is set in a message when this policy is in effect, cookies will be assumed to be third party by default. (this is done by webkit)

85.5 class LinuxWebDataSourceMBS

85.5.1 class LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Data source encapsulates the content of a WebFrame.
Notes: A WebFrame has a main resource and subresources and the data source provides access to these resources. When a request gets loaded initially, it is set to a provisional state. The application can request for the request that initiated the load by asking for the provisional data source and invoking the InitialRequest method of DataSource. This data source may not have enough data and some methods may return empty values. To get a "full" data source with the data and resources loaded, you need to get the non-provisional data source through WebFrame's DataSource method. This data source will have the data after everything was loaded. Make sure that the data source was finished loading before using any of its methods. You can do this via IsLoading.

85.5.2 Methods

85.5.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new WebKitWebDataSource instance.
Notes: The URL of the WebKitWebDataSource will be set to "about:blank".
See also:

- 85.5.4 Constructor(request as LinuxWebNetworkRequestMBS) 14783

85.5.4 Constructor(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new data source with the given network request.
See also:

- 85.5.3 Constructor 14783

85.5.5 Data as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the raw data that represents the the frame's content.
Notes: The data will be incomplete until the data has finished loading. Returns "" if the web frame hasn't loaded any data. Use isLoading to test if data source is in the process of loading.

85.5.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.5.7 Encoding as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the text encoding name as set in the WebView, or if not, the text encoding of the response.

85.5.8 InitialRequest as LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns a reference to the original request that was used to load the web content.
Notes: The NetworkRequest returned by this method is the request prior to the "committed" load state. See Request for getting the "committed" request.

85.5.9 IsLoading as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Determines whether the data source is in the process of loading its content.
Notes: Returns true if loading or false if not.

85.5.10 MainResource as LinuxWebResourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the main resource of the data source.

85.5.11 Request as LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns a NetworkRequest that was used to create this DataSource.
Notes: The NetworkRequest returned by this method is the request that was "committed", and hence, different from the request you get from the InitialRequest method.

85.5.12 Subresources as LinuxWebResourceMBS()

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Gives you a list of WebKitWebResource objects that compose the WebView to which this DataSource is attached.

85.5.13 UnrechableURI as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Return the unreachable URI of data_source.
Notes: The data source will have an unreachable URL if it was created using WebFrame's LoadAlternateHtmlString method.

85.5.14 WebFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the WebFrame that represents this data source.
Notes:

The WebFrame is owned by WebKit and should not be freed or destroyed.
This will return nil if the data_source is not attached to a frame.

85.5.15 Properties

85.5.16 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.5.17 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent HTMLViewer.
Notes: (Read and Write property)

85.6 class LinuxWebFrameMBS

85.6.1 class LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The class for a WebKit WebFrame on Linux.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

85.6.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.4
- MBS Real Studio Plugins, version 12.4pr3
- Linux WebKit Support for Real Studio's HTMLViewer control

85.6.3 Methods

85.6.4 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

85.6.5 DataSource as LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the committed data source.

85.6.6 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.6.7 FindFrame(name as string) as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Searches a frame by name.
Notes:

For pre-defined names, returns frame if name is "_self" or "_current", returns frame's parent frame if name is "_parent", and returns the main frame if name is "_top". Also returns frame if it is the main frame and name is either "_parent" or "_top". For other names, this function returns the first frame that matches name. This function searches frame and its descendents first, then frame's parent and its children moving up the hierarchy until a match is found. If no match is found in frame's hierarchy, this function will search for a matching frame in other main frame hierarchies. Returns nil if no match is found.

name: the name of the frame to be found
Returns the found WebKitWebFrame or nil in case none is found.

85.6.8 JSContext as LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the javascript context for this webframe.

85.6.9 LoadAlternateString(content as string, BaseURL as string, unreachableURL as string)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Request loading of an alternate content for a URL that is unreachable.
Notes: Using this method will preserve the back-forward list. The URI passed in base url has to be an absolute URI.

85.6.10 LoadRequest(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Connects to a given URI by initiating an asynchronous client request.
Notes: Creates a provisional data source that will transition to a committed data source once any data has been received. Use StopLoading to stop the load. This function is typically invoked on the main frame.

85.6.11 LoadStatus as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the current load state.

85.6.12 LoadString(content as string, MimeType as String, Encoding as String, BaseURL as string)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Requests loading of the given content with the specified MimeType, encoding and BaseURL.
Notes:

If mime_type is "", "text/html" is assumed.
If encoding is "", "UTF-8" is assumed.

Content: an URI string
MimeType: the MIME type, or "".
Encoding: the encoding, or "".
BaseURL: the base URI for relative locations.
See also FileExtensionToMimeTypeMBS function.

85.6.13 LoadURL(URL as string)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Requests loading of the specified URI string.

85.6.14 Name as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the frame's name

85.6.15 NetworkResponse as LinuxWebNetworkResponseMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the network response.
Notes: Returns a NetworkResponse object representing the response that was given to the request for the given frame, or nil if the frame was not created by a load. You must unref the object when you are done with it.

85.6.16 Parent as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the frame's parent frame, or nil if it has none.

85.6.17 Print

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Asks the control to print it's content.

85.6.18 ProvisionalDataSource as LinuxWebDataSourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** You use the LoadRequest method to initiate a request that creates a provisional data source.
Notes:

The provisional data source will transition to a committed data source once any data has been received. Use DataSource to get the committed data source.

Returns the provisional WebDataSource or nil if a load request is not in progress.

85.6.19 Reload

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Reloads the initial request.

85.6.20 StopLoading

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Stops any pending loads on frame's data source, and those of its children.

85.6.21 Title as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the frame's document title

85.6.22 URL as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the current URI of the contents displayed by the frame.

85.6.23 Properties

85.6.24 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.6.25 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent HTMLViewer.
Notes: (Read and Write property)

85.6.26 WebView as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The reference to the parent webview.
Notes: (Read and Write property)

85.6.27 Constants

85.6.28 kLoadCommitted = 1

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: The first data chunk has arrived, meaning that the necessary transport requirements are stabilished, and the load is being performed.

85.6.29 kLoadFailed = 4

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: This state means that some error occurred during the page load that prevented it from being completed. You can connect to the error event if you want to know precisely what kind of error occurred.

85.6.30 kLoadFinished = 2

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: This state means that everything that was required to display the page has been loaded.

85.6.31 kLoadFirstVisuallyNonEmptyLayout = 3

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: The first layout with actual visible content happened; one or more layouts may have happened before that caused nothing to be visible on the screen, because the data available at the time was not significant enough.

85.6.32 kLoadProvisional = 0

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: No data has been received yet, empty structures have been allocated to perform the load; the load may still fail for transport issues such as not being able to resolve a name, or connect to a port.

85.7 class LinuxWebHistoryItemMBS

85.7.1 class LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** One item of the WebBackForwardList and or global history.
Notes: A history item consists out of a title and a uri. It can be part of the WebBackForwardList and the global history. The global history is used for coloring the links of visited sites. WebHistoryItem's constructed with Constructor() are automatically added to the global history.

85.7.2 Methods

85.7.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new WebHistoryItem instance.
See also:

- 85.7.4 Constructor(URI as string, Title as string) 14792

85.7.4 Constructor(URI as string, Title as string)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new WebHistoryItem with the given URI and title.
See also:

- 85.7.3 Constructor 14792

85.7.5 Copy as LinuxWebHistoryItemMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Makes a copy of the item for use with other WebView objects.

85.7.6 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.7.7 LastVisitedTime as Double

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The last visited timestamp.

85.7.8 OriginalURI as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The original URL of this item.

85.7.9 Title as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The title of this item.

85.7.10 URI as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The URL of this item.

85.7.11 Properties

85.7.12 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.7.13 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent htmlviewer.
Notes: (Read and Write property)

85.7.14 AlternateTitle as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The alternate title.
Notes: (Read and Write computed property)

85.8 class LinuxWebInspectorMBS

85.8.1 class LinuxWebInspectorMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The WebKit Inspector is a graphical tool to inspect and change the content of a WebKitWebView.
Notes:

It also includes an interactive JavaScriptDebugger. Using this class one can get a GtkWidget which can be embedded into an application to show the inspector.

The inspector is available when the WebKitWebSettings of the WebKitWebView has set the "enable-developer-extras" to true otherwise no inspector is available.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

85.8.2 Methods

85.8.3 Close

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Causes the Web Inspector to be closed.

85.8.4 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

85.8.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.8.6 InspectCoordinates(x as Double, y as Double)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Causes the Web Inspector to inspect the node that is located at the given coordinates of the widget.
Notes:

The coordinates should be relative to the WebKitWebView widget, not to the scrollable content, and may be obtained from a GdkEvent directly. This means x, and y being zero doesn't guarantee you will hit the left-most top corner of the content, since the contents may have been scrolled.

x: the X coordinate of the node to be inspected
y: the Y coordinate of the node to be inspected

85.8.7 InspectedURI as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Obtains the URI that is currently being inspected.

85.8.8 Show

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Causes the Web Inspector to be shown.

85.8.9 WebView as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Obtains the WebKitWebView that is used to render the inspector.

85.8.10 Properties

85.8.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.8.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The reference to the parent HTMLViewer.
Notes: (Read and Write property)

85.9 class LinuxWebNetworkRequestMBS

85.9.1 class LinuxWebNetworkRequestMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** This class represents the network related aspects of a navigation request.
Notes: It is used whenever WebKit wants to provide information about a request that will be sent, or has been sent. Inside it you can find the URI of the request, and, for valid URIs, a SoupMessage object, which provides access to further information such as headers.

85.9.2 Methods

85.9.3 Constructor(url as string)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new NetworkRequest initialized with an URI.

85.9.4 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.9.5 Properties

85.9.6 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.9.7 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent HTMLViewer.
Notes: (Read and Write property)

85.9.8 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Get or set the URL for this request.
Notes: (Read and Write computed property)

85.10 class LinuxWebNetworkResponseMBS

85.10.1 class LinuxWebNetworkResponseMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** This class represents the network related aspects of a navigation response.

85.10.2 Methods

85.10.3 Constructor(url as string)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new response object with the given URL.

85.10.4 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.10.5 Properties

85.10.6 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.10.7 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent HTMLViewer.
Notes: (Read and Write property)

85.10.8 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Get or set the URL for this request.
Notes: (Read and Write computed property)

85.11 class LinuxWebResourceMBS

85.11.1 class LinuxWebResourceMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** A web resource encapsulates the data of the download as well as the URI, MIME type and frame name of the resource.

85.11.2 Methods

85.11.3 Constructor(data as string, uri as string, mimeType as string, encoding as string = "", FrameName as string = "")

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new WebKitWebResource.
Notes:

The encoding can be "". The FrameName argument can be used if the resource represents contents of an entire HTML frame, otherwise pass "".
See also FileExtensionToMimeTypeMBS function.

85.11.4 Data as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the data of the webResource.

85.11.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.11.6 Encoding as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the encoding for this resource.

85.11.7 FrameName as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the frame name.

85.11.8 MimeType as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The MIME Type for this resource.
Notes: See also MimeTypeToFileExtensionMBS function.

85.11.9 URL as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The URL for this resource.

85.11.10 Properties

85.11.11 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.11.12 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent HTMLViewer.
Notes: (Read and Write property)

85.12 class LinuxWebSettingsMBS

85.12.1 class LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** WebSettings can be applied to a WebKitWebView to control text encoding, color, font sizes, printing mode, script support, loading of images and various other things.
Notes: After creation, a WebSettings object contains default settings.

85.12.2 Methods

85.12.3 Constructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Creates a new WebSettings instance with default values.
Notes: It must be manually attached to a WebView.

85.12.4 Copy as LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Copies an existing WebSettings instance.

85.12.5 Destructor

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.12.6 UserAgent as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the User-Agent string currently used by the web view(s) associated with the web_settings.

85.12.7 Properties

85.12.8 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.12.9 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The parent htmlviewer.
Notes: (Read and Write property)

85.13 class LinuxWebViewMBS

85.13.1 class LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The class for a WebKit WebView on Linux.
Notes:

With MBS Plugin 19.3 and Xojo 2018r2 and later, this plugin will try to load WebKit 2.0 (libwebkit2gtk-4.0.so.37) instead of WebKit 1.0 (libwebkitgtk-3.0.so).

Most functions still work for WebKit 1.x only. Let us know if you need something for WebKit 2.x.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

85.13.2 Blog Entries

- Upgrading our HTMLViewer functions for Internet Explorer
- MBS Xojo Plugins, version 19.3pr6
- HTMLViewer JavaScript communication for Xojo
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.4
- MBS Real Studio Plugins, version 12.4pr3
- Linux WebKit Support for Real Studio's HTMLViewer control

85.13.3 Methods

85.13.4 Available as Boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether the plugin found libwebkit on linux.
Notes: Returns true on linux if the class can work. Else it returns false.

85.13.5 BackForwardList as LinuxWebBackForwardListMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Obtains the BackForwardList associated with the given WebView.
Notes: The BackForwardList is owned by the WebView.

85.13.6 CanCopyClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether copy is possible.

85.13.7 CanCutClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether cut is possible.

85.13.8 CanGoBack as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Determines whether web_view has a previous history item.
Notes: Returns true if able to move back, false otherwise.

85.13.9 CanGoBackOrForward(steps as Integer) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Determines whether web_view has a history item of steps.
Notes:

Negative values represent steps backward while positive values represent steps forward.
steps: the number of steps
Returns true if able to move back or forward the given number of steps, false otherwise.

85.13.10 CanGoForward as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Determines whether web_view has a next history item.
Notes: Returns true if able to move forward, false otherwise

85.13.11 CanPasteClipboard as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether paste is possible.

85.13.12 CanRedo as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether redo is possible.

85.13.13 CanShowMimeType(MimeType as string) as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** This functions returns whether or not a MIME type can be displayed using this view.
Notes:

MimeType: a MIME type

Return boolean indicating if the MIME type can be displayed.
See also FileExtensionToMimeTypeMBS function.

85.13.14 CanUndo as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether undo is possible.

85.13.15 Constructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The private constructor.

85.13.16 CookieStore as LinuxWebCookieStoreMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the default cookie store.

85.13.17 CopyClipboard

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Copies the current selection inside the web_view to the clipboard.

85.13.18 CutClipboard

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Cuts the current selection inside the web_view to the clipboard.

85.13.19 DeleteSelection

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Deletes the current selection inside the web_view.

85.13.20 Destructor

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The destructor.

85.13.21 Encoding as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the default encoding of the WebKitWebView.

85.13.22 EvaluateScript(script as string) as string

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Evaluates a string of JavaScript.
Notes:

script A string containing the script to evaluate.
Returns the value as string that results from evaluating script, or "" if an exception is thrown.

85.13.23 ExecuteScript(script as string)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Executes java script.

85.13.24 FocusedFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the frame that has focus or an active text selection.
Notes: Returns the focused frame or nil if no frame is focused

85.13.25 GoBack

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Loads the previous history item.

85.13.26 GoBackOrForward(steps as Integer)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Loads the history item that is the number of steps away from the current item.
Notes: Negative values represent steps backward while positive values represent steps forward.

85.13.27 GoForward

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Loads the next history item.

85.13.28 GoToItem(item as LinuxWebHistoryItemMBS) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Go to the specified history item.
Notes: Returns true if loading of item is successful, false if not.

85.13.29 HasSelection as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Determines whether text was selected.
Notes: Returns true if there is selected text, false if not

85.13.30 IconURL as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the favorite icon URL for the current website.

85.13.31 Inspector as LinuxWebInspectorMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Obtains the WebKitWebInspector associated with the WebKitWebView.
Notes: Every WebKitWebView object has a WebKitWebInspector object attached to it as soon as it is created, so this function will only return nil if the argument is not a valid WebKitWebView.

85.13.32 IsLoading as Boolean

MBS Linux Plugin, Plugin Version: 19.3, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns true while web view is loading.
Notes: Works for WebKit 1.x and 2.x.

85.13.33 JSContext as LinuxJavaScriptContextMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the javascript context for the main webframe.

85.13.34 LoadHTMLString(HTMLString as string, BaseURL as string = "")

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Loads a HTML string.

85.13.35 LoadRequest(request as LinuxWebNetworkRequestMBS)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Requests loading of the specified asynchronous client request.
Notes: Creates a provisional data source that will transition to a committed data source once any data has been received. Use StopLoading to stop the load.

85.13.36 LoadStatus as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the current load state.
Notes:

Works for WebKit 1.x and 2.x.

Name	Value	Description
WEBKIT_LOAD_PROVISIONAL	0	No data has been received yet, empty structures have been allocated to perform the load; the load may still fail for transport issues such as not being able to resolve a name, or connect to a port.
WEBKIT_LOAD_COMMITTED	1	The first data chunk has arrived, meaning that the necessary transport requirements are stabilished, and the load is being performed.
WEBKIT_LOAD_FINISHED	2	This state means that everything that was required to display the page has been loaded.
WEBKIT_LOAD_FIRST_VISUALLY_NON_EMPTY_LAYOUT	3	The first layout with actual visible content happened; one or more layouts may have happened before that caused nothing to be visible on the screen, because the data available at the time was not significant enough.
WEBKIT_LOAD_FAILED	4	This state means that some error occurred during the page load that prevented it from being completed. You can connect to the # WebKitWebView::load-error signal if you want to know precisely what kind of error occurred.

85.13.37 LoadString(content as string, MimeType as String, Encoding as String, BaseURL as string)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Requests loading of the given content with the specified MimeType, encoding and BaseURL.
Notes:

If mime_type is "", "text/html" is assumed.
If encoding is "", "UTF-8" is assumed.

Content: an URI string
MimeType: the MIME type, or "".
Encoding: the encoding, or "".
BaseURL: the base URI for relative locations.

See also FileExtensionToMimeTypeMBS function.

85.13.38 LoadURL(URL as string)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Requests loading of the specified URI string.

85.13.39 MainFrame as LinuxWebFrameMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the main frame of the document.

85.13.40 MajorVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns major version of webkit.

85.13.41 MarkTextMatches(text as string, caseSensitive as boolean = false, limit as Integer = 99) as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Attempts to highlight all occurances of string inside webview.
Notes:

string: a string to look for
case_sensitive: whether to respect the case of text
limit: the maximum number of strings to look for or 0 for all
Returns the number of strings highlighted.

85.13.42 MicroVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns micro version of webkit.

85.13.43 MinorVersion as Integer

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns minor version of webkit.

85.13.44 PasteClipboard

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Pastes the current contents of the clipboard to the webview.

85.13.45 Progress as Double

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The global locating progress in percent.
Notes: 1.0 is full progress.

85.13.46 Redo

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Redos last action if possible.

85.13.47 Reload

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Reloads the initial request.

85.13.48 ReloadIgnoreCache

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Reloads the webview without using any cached data.

85.13.49 SearchText(text as string, caseSensitive as boolean = false, forward as boolean = true, wrap as boolean = true) as boolean

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Looks for a specified string inside webview.
Notes:

text: a string to look for.
case_sensitive: whether to respect the case of text.
forward: whether to find forward or not.
wrap: whether to continue looking at the beginning after reaching the end.
Returns trueT on success or false on failure.

85.13.50 SelectAll

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Attempts to select everything inside the webview.

85.13.51 SetCookieStore(newStore as LinuxWebCookieStoreMBS)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Makes the given cookie store the default one.

85.13.52 SetHighlightTextMatches(highlight as boolean)

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Highlights text matches previously marked by MarkTextMatches.

85.13.53 SetMaintainsBackForwardList(flag as boolean)

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Set the view to maintain a back or forward list of history items.

85.13.54 StopLoading

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Stops any pending loads on frame's data source, and those of its children.

85.13.55 Title as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The title of the website.

85.13.56 Undo

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Undos last action if possible.

85.13.57 UnmarkTextMatches

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Unmarks text matches from search.

85.13.58 URL as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the current URL.

85.13.59 ZoomIn

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Increases the zoom level of web_view.
Notes: The current zoom level is incremented by the value of the "zoom-step" property of the settings associated with webview.

85.13.60 ZoomOut

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Decreases the zoom level of webview.
Notes: The current zoom level is decremented by the value of the "zoom-step" property of the settings associated with webview.

85.13.61 Properties

85.13.62 Handle as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

85.13.63 HTMLViewer as HTMLViewer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The reference to the parent HTMLViewer.

Notes: (Read and Write property)

85.13.64 CacheModel as Integer

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The cache model for the htmlviewer.
Notes: (Read and Write computed property)

85.13.65 CustomEncoding as string

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The current WebKitWebView encoding.
Notes: (Read and Write computed property)

85.13.66 Editable as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether the user is allowed to edit the document.
Notes:

If flag is true, webview allows the user to edit the document. If flag is false, an element in webview's document can only be edited if the CONTENTEDITABLE attribute has been set on the element or one of its parent elements. You can change webview's document programmatically regardless of this setting. By default a WebKitWebView is not editable.

Normally, an HTML document is not editable unless the elements within the document are editable. This function provides a low-level way to make the contents of a WebKitWebView editable without altering the document or DOM structure.
(Read and Write computed property)

85.13.67 FullContentZoom as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether the zoom level affects only text or all elements.
Notes:

False if only text should be scaled (the default), true if the full content of the view should be scaled.
(Read and Write computed property)

85.13.68 ProxyURL as String

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The proxy URL setting.
Notes: (Read and Write computed property)

85.13.69 Settings as LinuxWebSettingsMBS

MBS Linux Plugin, Plugin Version: 13.5, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** The settings for this webview.
Notes: (Read and Write computed property)

85.13.70 Transparent as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether the WebKitWebView has a transparent background.
Notes:

False when the WebKitWebView draws a solid background (the default), otherwise true.
(Read and Write computed property)

85.13.71 ViewSourceMode as boolean

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Whether we are viewing the source code.
Notes: (Read and Write computed property)

85.13.72 ZoomLevel as Double

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Returns the zoom level of web_view, i.e. the factor by which elements in the page are scaled with respect to their original size.
Notes:

If the "full-content-zoom" property is set to false (the default) the zoom level changes the text size, or if true, scales all elements in the page.
(Read and Write computed property)

85.13.73 Constants

85.13.74 kCacheModelDocumentViewer = 1

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the cache model constants.
Notes: Cache in Document Viewer.

85.13.75 kCacheModelWebBrowser = 2

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the cache model constants.
Notes: Cache in Web Browser.

85.13.76 kLoadCommitted = 1

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: The first data chunk has arrived, meaning that the necessary transport requirements are stabilished, and the load is being performed.

85.13.77 kLoadFailed = 4

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: This state means that some error occurred during the page load that prevented it from being completed. You can connect to the error event if you want to know precisely what kind of error occurred.

85.13.78 kLoadFinished = 2

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: This state means that everything that was required to display the page has been loaded.

85.13.79 kLoadFirstVisuallyNonEmptyLayout = 3

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: The first layout with actual visible content happened; one or more layouts may have happened before that caused nothing to be visible on the screen, because the data available at the time was not significant enough.

85.13.80 kLoadProvisional = 0

MBS Linux Plugin, Plugin Version: 12.4. **Function:** One of the load state constants.
Notes: No data has been received yet, empty structures have been allocated to perform the load; the load may still fail for transport issues such as not being able to resolve a name, or connect to a port.

Chapter 86

HTMLViewer Mac

86.1 class DOMAbstractViewMBS

86.1.1 class DOMAbstractViewMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.1.2 Methods

86.1.3 document as DOMDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.2 class DOMAttrMBS

86.2.1 class DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.2.2 Methods

86.2.3 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.2.4 ownerElement as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.2.5 specified as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.2.6 Properties

86.2.7 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.3 class DOMCDATASectionMBS

86.3.1 class DOMCDATASectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMTextMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.4 class DOMCharacterDataMBS

86.4.1 class DOMCharacterDataMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.4.2 Methods

86.4.3 appendData(arg as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.4 deleteData(offset as Integer, count as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.5 insertData(offset as Integer, arg as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.6 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.7 replaceData(offset as Integer, count as Integer, arg as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.8 substringData(offset as Integer, count as Integer) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.4.9 Properties

86.4.10 data as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.5 class DOMCommentMBS

86.5.1 class DOMCommentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCharacterDataMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.6 class DOMCounterMBS

86.6.1 class DOMCounterMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.6.2 Methods

86.6.3 identifier as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.6.4 listStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.6.5 separator as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.7 class DOMCSSCharsetRuleMBS

86.7.1 class DOMCSSCharsetRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.7.2 Methods

86.7.3 encoding as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.8 class DOMCSSFontFaceRuleMBS

86.8.1 class DOMCSSFontFaceRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.8.2 Methods

86.8.3 style as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.9 class DOMCSSImportRuleMBS

86.9.1 class DOMCSSImportRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.9.2 Methods

86.9.3 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.9.4 media as DOMMediaListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.9.5 styleSheet as DOMCSSStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.10 class DOMCSSMediaRuleMBS

86.10.1 class DOMCSSMediaRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.10.2 Methods

86.10.3 cssRules as DOMCSSRuleListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.10.4 deleteRule(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.10.5 insertRule(rule as string, index as Integer) as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.10.6 media as DOMMediaListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.11 class DOMCSSPageRuleMBS

86.11.1 class DOMCSSPageRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.11.2 Methods

86.11.3 style as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.11.4 Properties

86.11.5 selectorText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.12 class DOMCSSPrimitiveValueMBS

86.12.1 class DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSValueMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.12.2 Methods

86.12.3 getCounterValue as DOMCounterMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.12.4 getRectValue as DOMRectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.12.5 getRGBColorValue as DOMRGBColorMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.12.6 getStringValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.12.7 primitiveType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The type of this value.
Notes: See the constants for possible values.

86.12.8 setStringValue(StringType as Integer, StringValue as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.12.9 Properties

86.12.10 getFloatValue(unitType as Integer) as single

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.12.11 Constants

86.12.12 DOM_CSS_ATTR = 22

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.13 DOM_CSS_CM = 6

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.14 DOM_CSS_COUNTER = 23

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.15 DOM_CSS_DEG = 11

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.16 DOM_CSS_DIMENSION = 18

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.17 DOM_CSS_EMS = 3

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.18 DOM_CSS_EXS = 4

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.19 DOM_CSS_GRAD = 13

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.20 DOM_CSS_HZ = 16

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.21 DOM_CSS_IDENT = 21

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.22 DOM_CSS_IN = 8

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.23 DOM_CSS_KHZ = 17

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.24 DOM_CSS_MM = 7

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.25 DOM_CSS_MS = 14

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.26 DOM_CSS_NUMBER = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.27 DOM_CSS_PC = 10

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.28 DOM_CSS_PERCENTAGE = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.29 DOM_CSS_PT = 9

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.30 DOM_CSS_PX = 5

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.31 DOM_CSS_RAD = 12

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.32 DOM_CSS_RECT = 24

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.33 DOM_CSS_RGBCOLOR = 25

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.34 DOM_CSS_S = 15

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.35 DOM_CSS_STRING = 19

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.36 DOM_CSS_UNKNOWN = 0

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.12.37 DOM_CSS_URI = 20

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the primitiveType property.

86.13 class DOMCSSRuleListMBS

86.13.1 class DOMCSSRuleListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for a list of css rules.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.13.2 Methods

86.13.3 item(index as UInt32) as DOMCSSRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the item with the given index or nil.
Notes: Index is zero based.

86.13.4 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of items in this list.

86.14 class DOMCSSRuleMBS

86.14.1 class DOMCSSRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.14.2 Methods

86.14.3 parentRule as DOMCSSRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.14.4 parentStyleSheet as DOMCSSStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.14.5 type as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The type of this rule.
Notes: See the constants for possible values.

86.14.6 Properties

86.14.7 cssText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.14.8 Constants

86.14.9 DOM_CHARSET_RULE = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the type property.

86.14.10 DOM_IMPORT_RULE = 3

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the type property.

86.14.11 DOM_MEDIA_RULE = 4

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the type property.

86.14.12 DOM_STYLE_RULE = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the type property.

86.14.13 DOM_UNKNOWN_RULE = 0

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the type property.

86.15 class DOMCSSStyleDeclarationMBS

86.15.1 class DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.15.2 Methods

86.15.3 Constructor

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.15.4 getPropertyCSSValue(propertyName as string) as DOMCSSValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.5 getPropertyPriority(propertyName as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.6 getPropertyValue(propertyName as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.7 item(index as UInt32) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.8 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.9 parentRule as DOMCSSRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.10 removeProperty(propertyName as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.11 setProperty(propertyName as string, value as string, priority as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.15.12 Properties

86.15.13 azimuth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.14 background as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.15 backgroundAttachment as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.16 backgroundColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.17 backgroundImage as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.18 backgroundPosition as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.19 backgroundRepeat as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.20 border as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.21 borderBottom as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.22 borderBottomColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.23 borderBottomStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.24 borderBottomWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.25 borderCollapse as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.26 borderColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.27 borderLeft as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.28 borderLeftColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.29 borderLeftStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.30 borderLeftWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.31 borderRight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.32 borderRightColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.33 borderRightStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.34 borderRightWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.35 borderSpacing as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.36 borderStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.37 borderTop as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.38 borderTopColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.39 borderTopStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.40 borderTopWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.41 borderWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.42 bottom as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.43 captionSide as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.44 clear as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.45 clip as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.46 colorValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.47 content as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.48 counterIncrement as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.49 counterReset as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.50 cssFloat as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.51 cssText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.52 cue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.53 cueAfter as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.54 cueBefore as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.55 cursor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.56 direction as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.57 display as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.58 elevation as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.59 emptyCells as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.60 font as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.61 fontFamily as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.62 fontSize as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.63 fontSizeAdjust as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.64 fontStretch as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.65 fontStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.66 fontVariant as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.67 fontWeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.68 height as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.69 left as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.70 letterSpacing as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.71 lineHeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.72 listStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.73 listStyleImage as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.74 listStylePosition as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.75 listStyleType as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.76 margin as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.77 marginBottom as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.78 marginLeft as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.79 marginRight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.80 marginTop as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.81 markerOffset as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.82 marks as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.83 maxHeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.84 maxWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.85 minHeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.86 minWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.87 orphans as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.88 outline as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.89 outlineColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.90 outlineStyle as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.91 outlineWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.92 overflow as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.93 padding as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.94 paddingBottom as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.95 paddingLeft as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.96 paddingRight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.97 paddingTop as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.98 page as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.99 pageBreakAfter as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.100 pageBreakBefore as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.101 pageBreakInside as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.102 pause as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.103 pauseAfter as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.104 pauseBefore as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.105 pitch as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.106 pitchRange as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.107 playDuring as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.108 position as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.109 quotes as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.110 richness as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.111 right as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.112 size as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.113 speak as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.114 speakHeader as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.115 speakNumeral as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.116 speakPunctuation as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.117 speechRate as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.118 stress as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.119 tableLayout as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.120 textAlign as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.121 textDecoration as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.122 textIndent as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.123 textShadow as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.124 textTransform as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.125 top as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.126 unicodeBidi as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.127 verticalAlign as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.128 visibility as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.129 voiceFamily as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.130 volume as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.131 whiteSpace as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.132 widows as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.133 width as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.134 wordSpacing as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.15.135 zIndex as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.16 class DOMCSSStyleRuleMBS

86.16.1 class DOMCSSStyleRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.16.2 Methods

86.16.3 style as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.16.4 Properties

86.16.5 selectorText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.17 class DOMCSSStyleSheetMBS

86.17.1 class DOMCSSStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMStyleSheetMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.17.2 Methods

86.17.3 cssRules as DOMCSSRuleListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.17.4 deleteRule(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.17.5 insertRule(rule as string, index as Integer) as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.17.6 ownerRule as DOMCSSRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.18 class DOMCSSUnknownRuleMBS

86.18.1 class DOMCSSUnknownRuleMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSRuleMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.19 class DOMCSSValueListMBS

86.19.1 class DOMCSSValueListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for a list of css values.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCSSValueMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.19.2 Methods

86.19.3 item(index as UInt32) as DOMCSSValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the item with the given index or nil.
Notes: Index is zero based.

86.19.4 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of items in this list.

86.20 class DOMCSSValueMBS

86.20.1 class DOMCSSValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.20.2 Methods

86.20.3 cssValueType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of this value.
Notes: See the constants for possible values.

86.20.4 Properties

86.20.5 cssText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.20.6 Constants

86.20.7 DOM_CSS_CUSTOM = 3

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the cssValueType property.

86.20.8 DOM_CSS_INHERIT = 0

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the cssValueType property.

86.20.9 DOM_CSS_PRIMITIVE_VALUE = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the cssValueType property.

86.20.10 DOM_CSS_VALUE_LIST = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the cssValueType property.

86.21 class DOMDocumentFragmentMBS

86.21.1 class DOMDocumentFragmentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.22 class DOMDocumentMBS

86.22.1 class DOMDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.22.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr9

86.22.3 Methods

86.22.4 createAttribute(name as string) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.5 createAttributeNS(namespaceURI as string, qualifiedName as string) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.6 createCDATASection(data as string) as DOMCDATASectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.7 createComment(data as string) as DOMCommentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.8 createCSSStyleDeclaration as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.9 createDocumentFragment as DOMDocumentFragmentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.10 createElement(tagName as string) as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.11 createElementNS(namespaceURI as string, qualifiedName as string) as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.12 createEntityReference(name as string) as DOMEntityReferenceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.22.13 createProcessingInstruction(target as string, data as string) as DOMProcessingInstructionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.14 createRange as DOMRangeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.15 createTextNode(data as string) as DOMTextMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.16 defaultView as DOMAbstractViewMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.17 doctype as DOMDocumentTypeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.18 documentElement as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.19 getComputedStyle(elt as DOMElementMBS, pseudoElt as string) as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.20 getElementById(elementId as string) as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.21 getElementsByTagName(name as string) as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.22 getElementsByTagNameNS(namespaceURI as string, localName as string) as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.23 getOverrideStyle(elt as DOMElementMBS, pseudoElt as string) as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.24 implementation as DOMImplementationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.25 importNode(importedNode as DOMNodeMBS, deep as boolean) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.22.26 styleSheets as DOMStyleSheetListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.23 class DOMDocumentTypeMBS

86.23.1 class DOMDocumentTypeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.23.2 Methods

86.23.3 entities as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.23.4 internalSubset as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.23.5 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.23.6 notations as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.23.7 publicId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.23.8 systemId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24 class DOMElementMBS

86.24.1 class DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.24.2 Methods

86.24.3 getAttribute(name as string) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.4 getAttributeNode(name as string) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.5 getAttributeNodeNS(namespaceURI as string, localName as string) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.6 getAttributeNS(namespaceURI as string, localName as string) as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.7 getElementsByTagName(name as string) as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.8 getElementsByTagNameNS(namespaceURI as string, localName as string) as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.9 hasAttribute(name as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.10 hasAttributeNS(namespaceURI as string, localName as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.11 removeAttribute(name as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.12 removeAttributeNode(oldAttr as DOMAttrMBS) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.24.13 removeAttributeNS(namespaceURI as string, qualifiedName as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.14 setAttribute(name as string, value as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.15 setAttributeNode(newAttr as DOMAttrMBS) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.16 setAttributeNodeNS(newAttr as DOMAttrMBS) as DOMAttrMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.17 setAttributeNS(namespaceURI as string, qualifiedName as string, value as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.18 style as DOMCSSStyleDeclarationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.24.19 tagName as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.25 class DOMEntityMBS

86.25.1 class DOMEntityMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.25.2 Methods

86.25.3 notationName as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.25.4 publicId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.25.5 systemId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.26 class DOMEntityReferenceMBS

86.26.1 class DOMEntityReferenceMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.27 class DOMHTMLAnchorElementMBS

86.27.1 class DOMHTMLAnchorElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.27.2 Methods

86.27.3 blur

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.27.4 focus

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.27.5 Properties

86.27.6 accessKey as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.7 charset as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.8 coords as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.9 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.10 hreflang as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.11 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.12 rel as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.13 rev as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.14 shape as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.15 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.16 target as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.27.17 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28 class DOMHTMLAppletElementMBS

86.28.1 class DOMHTMLAppletElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.28.2 Properties

86.28.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.4 alt as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.5 archive as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.6 code as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.7 codeBase as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.8 height as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.9 hspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.10 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.11 objectValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.12 vspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.28.13 width as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29 class DOMHTMLAreaElementMBS

86.29.1 class DOMHTMLAreaElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.29.2 Properties

86.29.3 accessKey as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.4 alt as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.5 coords as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.6 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.7 noHref as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.8 shape as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.9 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.29.10 target as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.30 class DOMHTMLBaseElementMBS

86.30.1 class DOMHTMLBaseElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.30.2 Properties

86.30.3 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.30.4 target as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.31 class DOMHTMLBaseFontElementMBS

86.31.1 class DOMHTMLBaseFontElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.31.2 Properties

86.31.3 colorValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.31.4 face as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.31.5 size as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32 class DOMHTMLBodyElementMBS

86.32.1 class DOMHTMLBodyElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.32.2 Properties

86.32.3 aLink as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32.4 background as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32.5 bgColor as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32.6 link as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32.7 text as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.32.8 vLink as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.33 class DOMHTMLBRElementMBS

86.33.1 class DOMHTMLBRElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.33.2 Properties

86.33.3 clear as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.34 class DOMHTMLButtonElementMBS

86.34.1 class DOMHTMLButtonElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Xojo Plugins, version 19.5pr6

86.34.3 Methods

86.34.4 click

MBS MacControls Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the button.
Notes: Check the DOM documentation for details on this function.

86.34.5 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.34.6 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.34.7 willValidate as Boolean

MBS MacControls Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks if button will validate.
Notes: Check the DOM documentation for details on this function.

86.34.8 Properties

86.34.9 accessKey as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.34.10 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.34.11 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.34.12 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.34.13 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

Notes: (Read and Write computed property)

86.35 class DOMHTMLCollectionMBS

86.35.1 class DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.35.2 Methods

86.35.3 item(index as UInt32) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.35.4 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.35.5 namedItem(name as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.36 class DOMHTMLDirectoryElementMBS

86.36.1 class DOMHTMLDirectoryElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.36.2 Properties

86.36.3 compact as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.37 class DOMHTMLDivElementMBS

86.37.1 class DOMHTMLDivElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.37.2 Properties

86.37.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.38 class DOMHTMLDListElementMBS

86.38.1 class DOMHTMLDListElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.38.2 Properties

86.38.3 compact as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.39 class DOMHTMLDocumentMBS

86.39.1 class DOMHTMLDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMDocumentMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.39.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.0pr4

86.39.3 Methods

86.39.4 anchors as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.5 applets as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.6 close

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.7 domain as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.8 forms as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.9 getElementById(elementId as string) as DOMElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.10 getElementsByName(elementName as string) as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.11 images as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.12 links as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.13 open

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.39.14 referrer as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.15 URL as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.16 write(text as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.17 writeln(text as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.39.18 Properties

86.39.19 body as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.39.20 cookie as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.39.21 title as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Example:

```
dim f as WebFrameMBS = HTMLViewer1.mainFrameMBS
dim doc as DOMDocumentMBS = f.DOMDocument

if doc isa DOMHTMLDocumentMBS then // works only if you loaded html document in htmlviewer.
dim h as DOMHTMLDocumentMBS = DOMHTMLDocumentMBS(doc)
MsgBox h.Title
end if
```

Notes: (Read and Write computed property)

86.40 class DOMHTMLElementMBS

86.40.1 class DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.40.2 Methods

86.40.3 children as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.40.4 isContentEditable as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.40.5 Properties

86.40.6 className as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes:

Notes: (Read and Write computed property)

86.45.6 longDesc as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.7 marginHeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.8 marginWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.9 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.10 noResize as Boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.11 scrolling as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.45.12 src as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.46 class DOMHTMLFrameSetElementMBS

86.46.1 class DOMHTMLFrameSetElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.46.2 Properties

86.46.3 cols as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.46.4 rows as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.47 class DOMHTMLHeadElementMBS

86.47.1 class DOMHTMLHeadElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.47.2 Properties

86.47.3 profile as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.48 class DOMHTMLHeadingElementMBS

86.48.1 class DOMHTMLHeadingElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.48.2 Properties

86.48.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.49 class DOMHTMLHRElementMBS

86.49.1 class DOMHTMLHRElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.49.4 noShade as Boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.49.5 size as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.49.6 width as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.50 class DOMHTMLHtmlElementMBS

86.50.1 class DOMHTMLHtmlElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.50.2 Properties

86.50.3 version as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51 class DOMHTMLIFrameElementMBS

86.51.1 class DOMHTMLIFrameElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.51.2 Methods

86.51.3 contentDocument as DOMDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.51.4 Properties

86.51.5 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.6 frameBorder as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.7 height as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.8 longDesc as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.9 marginHeight as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.10 marginWidth as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.11 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.12 scrolling as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.13 src as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.51.14 width as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52 class DOMHTMLImageElementMBS

86.52.1 class DOMHTMLImageElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.52.2 Properties

86.52.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.4 alt as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.5 border as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.6 height as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.7 hspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.8 isMap as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.9 longDesc as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.10 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.11 src as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.12 useMap as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.13 vspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.52.14 width as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53 class DOMHTMLInputElementMBS

86.53.1 class DOMHTMLInputElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.53.2 Methods

86.53.3 blur

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.53.4 click

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.53.5 focus

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.53.6 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.53.7 selectMethod

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.53.8 Properties

86.53.9 accept as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.10 accessKey as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.11 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.12 alt as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.13 checked as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.14 defaultChecked as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.15 defaultValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.16 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.17 maxLength as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.18 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.19 readOnly as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.20 size as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.21 src as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.22 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.23 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.24 useMap as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.53.25 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.54 class DOMHTMLIsIndexElementMBS

86.54.1 class DOMHTMLIsIndexElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.5 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.6 hreflang as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.7 media as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.8 rel as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.9 rev as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.10 target as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.58.11 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.59 class DOMHTMLMapElementMBS

86.59.1 class DOMHTMLMapElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.59.2 Methods

86.59.3 areas as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.59.4 Properties

86.59.5 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.60 class DOMHTMLMenuElementMBS

86.60.1 class DOMHTMLMenuElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.60.2 Properties

86.60.3 compact as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.61 class DOMHTMLMetaElementMBS

86.61.1 class DOMHTMLMetaElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.61.2 Properties

86.61.3 content as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.61.4 httpEquiv as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.61.5 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.61.6 scheme as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.62 class DOMHTMLModElementMBS

86.62.1 class DOMHTMLModElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.62.2 Properties

86.62.3 cite as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.62.4 dateTime as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63 class DOMHTMLObjectElementMBS

86.63.1 class DOMHTMLObjectElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.63.2 Methods

86.63.3 cells as DOMDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.63.4 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.63.5 Properties

86.63.6 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.7 archive as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.8 border as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.9 code as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.10 codeBase as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.11 codeType as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.12 data as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.13 declareValue as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.14 height as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.15 hspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.16 name as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.17 standby as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.18 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.19 type as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.20 useMap as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.21 vspace as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.63.22 width as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.64 class DOMHTMLOListElementMBS

86.64.1 class DOMHTMLOListElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.64.2 Properties

86.64.3 compact as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.64.4 start as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.64.5 type as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.65 class DOMHTMLOptGroupElementMBS

86.65.1 class DOMHTMLOptGroupElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.65.2 Properties

86.65.3 content as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.65.4 label as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.66 class DOMHTMLOptionElementMBS

86.66.1 class DOMHTMLOptionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.66.2 Methods

86.66.3 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.66.4 index as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.66.5 text as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.66.6 Properties

86.66.7 defaultSelected as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.66.8 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.66.9 label as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.66.10 selected as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.66.11 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.67 class DOMHTMLOptionsCollectionMBS

86.67.1 class DOMHTMLOptionsCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.67.2 Methods

86.67.3 item(index as Integer) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.67.4 namedItem(name as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.67.5 Properties

86.67.6 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.68 class DOMHTMLParagraphElementMBS

86.68.1 class DOMHTMLParagraphElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.68.2 Properties

86.68.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.69 class DOMHTMLParamElementMBS

86.69.1 class DOMHTMLParamElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.73 class DOMHTMLSelectElementMBS

86.73.1 class DOMHTMLSelectElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.73.2 Methods

86.73.3 add(element as DOMHTMLElementMBS, before as DOMHTMLElementMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.73.4 blur

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.73.5 focus

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.73.6 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.73.7 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.73.8 options as DOMHTMLOptionsCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.73.9 remove(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.73.10 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.73.11 Properties

86.73.12 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.13 multiple as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.14 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.15 selectedIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.16 size as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.17 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.73.18 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.74 class DOMHTMLStyleElementMBS

86.74.1 class DOMHTMLStyleElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.74.2 Properties

86.74.3 content as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.74.4 media as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.74.5 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.75 class DOMHTMLTableCaptionElementMBS

86.75.1 class DOMHTMLTableCaptionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.75.2 Properties

86.75.3 align as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76 class DOMHTMLTableCellElementMBS

86.76.1 class DOMHTMLTableCellElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.76.2 Methods

86.76.3 cellIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.76.4 Properties

86.76.5 abbr as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.6 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.7 axis as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.8 bgColor as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.9 ch as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.10 chOff as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.11 colSpan as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.12 headers as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.13 height as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.14 noWrap as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.15 rowSpan as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.16 scope as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.17 vAlign as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.76.18 width as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77 class DOMHTMLTableColElementMBS

86.77.1 class DOMHTMLTableColElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.77.2 Properties

86.77.3 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77.4 ch as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77.5 chOff as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77.6 span as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77.7 vAlign as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.77.8 width as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78 class DOMHTMLTableElementMBS

86.78.1 class DOMHTMLTableElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.78.2 Methods

86.78.3 createCaption as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.78.4 createTFoot as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.78.5 createTHead as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.78.6 deleteCaption

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.78.7 deleteRow(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.8 deleteTFoot

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.9 deleteTHead

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.10 insertRow(index as Integer) as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.11 rows as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.12 tBodies as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.78.13 Properties

86.78.14 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.15 bgColor as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.16 border as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.17 caption as DOMHTMLTableCaptionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.18 cellPadding as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.19 cellSpacing as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

Notes: (Read and Write computed property)

86.78.20 frameBorders as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.21 rules as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.22 summary as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.23 tFoot as DOMHTMLTableSectionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.24 tHead as DOMHTMLTableSectionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.78.25 width as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

Notes: (Read and Write computed property)

86.79 class DOMHTMLTableRowElementMBS

86.79.1 class DOMHTMLTableRowElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.79.2 Methods

86.79.3 cells as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.79.4 deleteCell(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.79.5 insertCell(index as Integer) as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.79.6 rowIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.79.7 sectionRowIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.79.8 Properties

86.79.9 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.79.10 bgColor as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.79.11 ch as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.79.12 chOff as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.79.13 vAlign as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.80 class DOMHTMLTableSectionElementMBS

86.80.1 class DOMHTMLTableSectionElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.80.2 Methods

86.80.3 deleteRow(index as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.80.4 insertRow(index as Integer) as DOMHTMLElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.80.5 rows as DOMHTMLCollectionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.80.6 Properties

86.80.7 align as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.80.8 ch as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.80.9 chOff as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.80.10 vAlign as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81 class DOMHTMLTextAreaElementMBS

86.81.1 class DOMHTMLTextAreaElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.81.2 Methods

86.81.3 blur

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.81.4 focus

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.81.5 form as DOMHTMLFormElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.81.6 selectMethod

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.81.7 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.81.8 Properties

86.81.9 accessKey as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.10 cols as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.11 defaultValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.12 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.13 name as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.14 readOnly as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.15 rows as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.16 tabIndex as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.81.17 value as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.82 class DOMHTMLTitleElementMBS

86.82.1 class DOMHTMLTitleElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.82.2 Properties

86.82.3 text as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.83 class DOMHTMLUListElementMBS

86.83.1 class DOMHTMLUListElementMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMHTMLElementMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.83.2 Properties

86.83.3 compact as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.83.4 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.84 class DOMImplementationMBS

86.84.1 class DOMImplementationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.84.2 Methods

86.84.3 createCSSStyleSheet(title as string, media as string) as DOMCSSStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.84.4 createDocument(namespaceURI as string, qualifiedName as string, doctype as string) as DOMDocumentTypeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.84.5 createDocumentType(qualifiedName as string, publicId as string, systemId as string) as DOMDocumentTypeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.84.6 hasFeature(feature as string, version as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.85 class DOMMediaListMBS

86.85.1 class DOMMediaListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for a list of medias.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.85.2 Methods

86.85.3 appendMedium(newMedium as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.85.4 deleteMedium(oldMedium as string)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.85.5 item(index as Integer) as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the item with the given index or "".
Notes: Index is zero based.

86.85.6 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of items in this list.

86.85.7 Properties

86.85.8 mediaText as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.86 class DOMNamedNodeMapMBS

86.86.1 class DOMNamedNodeMapMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.86.2 Methods

86.86.3 getNamedItem(name as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.86.4 getNamedItemNS(namespaceURI as string, localName as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.86.5 item(index as UInt32) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.86.6 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.86.7 removeNamedItem(name as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.86.8 removeNamedItemNS(namespaceURI as string, localName as string) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.86.9 setNamedItem(arg as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.86.10 setNamedItemNS(arg as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.87 class DOMNodeListMBS

86.87.1 class DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for a list of nodes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.88.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

86.88.3 Methods

86.88.4 appendChild(newChild as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.88.5 childNodes as DOMNodeListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.88.6 cloneNode(deep as boolean) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.7 firstChild as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.8 getAttributes as DOMNamedNodeMapMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: Renamed Attributes parameter to getAttributes in plugin version 8.2.

86.88.9 hasAttributes as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.10 hasChildNodes as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.11 insertBefore(newChild as DOMNodeMBS, refChild as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.12 isSupported(feature as string, version as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.13 lastChild as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.14 localName as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.15 namespaceURI as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.16 nextSibling as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.17 nodeName as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.18 nodeType as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The type of this node.
Notes: See the constants for possible values.

86.88.19 normalize

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.20 ownerDocument as DOMDocumentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.21 parentNode as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.22 previousSibling as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.23 removeChild(oldChild as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.24 replaceChild(newChild as DOMNodeMBS, oldChild as DOMNodeMBS) as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.88.25 Properties

86.88.26 nodeValue as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.88.27 prefix as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.88.28 Constants

86.88.29 DOM_ATTRIBUTE_NODE = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.30 DOM_CDATA_SECTION_NODE = 4

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.31 DOM_COMMENT_NODE = 8

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.32 DOM_DOCUMENT_FRAGMENT_NODE = 11

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.33 DOM_DOCUMENT_NODE = 9

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.34 DOM_DOCUMENT_TYPE_NODE = 10

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.35 DOM_ELEMENT_NODE = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.36 DOM_ENTITY_NODE = 6

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.37 DOM_ENTITY_REFERENCE_NODE = 5

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.38 DOM_NOTATION_NODE = 12

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.39 DOM_PROCESSING_INSTRUCTION_NODE = 7

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.88.40 DOM_TEXT_NODE = 3

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for the nodeType property.

86.89 class DOMNotationMBS

86.89.1 class DOMNotationMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.89.2 Methods

86.89.3 publicId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.89.4 systemId as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.90 class DOMObjectMBS

86.90.1 class DOMObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the WebScriptObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.90.2 Methods

86.90.3 sheet as DOMStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.91 class DOMProcessingInstructionMBS

86.91.1 class DOMProcessingInstructionMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMNodeMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.91.2 Methods

86.91.3 target as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.91.4 Properties

86.91.5 data as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.92 class DOMRangeMBS

86.92.1 class DOMRangeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.92.2 Methods

86.92.3 cloneContents as DOMDocumentFragmentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.92.4 cloneRange as DOMRangeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.92.5 collapse(toStart as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.92.6 collapsed as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.92.7 commonAncestorContainer as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.8 compareBoundaryPoints(how as Integer, sourceRange as DOMRangeMBS) as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.9 deleteContents

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.10 detach

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.11 endContainer as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.12 endOffset as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.13 extractContents as DOMDocumentFragmentMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.14 insertNode(newNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.15 selectNode(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.16 selectNodeContents(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.17 setEnd(refNode as DOMNodeMBS, offset as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.18 setEndAfter(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.19 setEndBefore(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.20 setStart(refNode as DOMNodeMBS, offset as Integer)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.21 setStartAfter(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.22 setStartBefore(refNode as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.23 startContainer as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.24 startOffset as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.25 surroundContents(newParent as DOMNodeMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.26 toString as string

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Check the DOM documentation for details on this function.

86.92.27 Constants

86.92.28 DOM_BAD_BOUNDARYPOINTS_ERR = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.92.29 DOM_END_TO_END = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.92.30 DOM_END_TO_START = 3

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.92.31 DOM_INVALID_NODE_TYPE_ERR = 2

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.92.32 DOM_START_TO_END = 1

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.92.33 DOM_START_TO_START = 0

MBS MacControls Plugin, Plugin Version: 7.4. **Function:** A constant for a special offset value.

86.93 class DOMRectMBS

86.93.1 class DOMRectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.93.2 Methods

86.93.3 bottom as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The bottom distance.

86.93.4 left as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The left distance.

86.93.5 right as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The right distance.

86.93.6 top as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The top distance.

86.94 class DOMRGBColorMBS

86.94.1 class DOMRGBColorMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.94.2 Methods

86.94.3 alpha as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The alpha color component.

86.94.4 blue as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The blue color component.

86.94.5 green as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The green color component.

86.94.6 red as DOMCSSPrimitiveValueMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The red color component.

86.95 class DOMStyleSheetListMBS

86.95.1 class DOMStyleSheetListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for a list of style sheets.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.95.2 Methods

86.95.3 item(index as UInt32) as DOMStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the item with the given index or nil.
Notes:

There is a bug in Webkit 2.x which makes this method returns only DOMStyleSheetMBS objects and not DOMCSSStyleSheetMBS objects.
Index is zero based.

86.95.4 length as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of items in this list.

86.96 class DOMStyleSheetMBS

86.96.1 class DOMStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.96.2 Methods

86.96.3 href as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.4 media as DOMMediaListMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.5 ownerNode as DOMNodeMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.6 parentStyleSheet as DOMStyleSheetMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.7 title as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.8 type as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.96.9 Properties

86.96.10 disabled as boolean

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.
Notes: (Read and Write computed property)

86.97 class DOMTextMBS

86.97.1 class DOMTextMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the DOM classes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
Subclass of the DOMCharacterDataMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.97.2 Methods

86.97.3 splitText(offset as Integer) as DOMTextMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Check the DOM documentation for details on this function.

86.98 class HTMLViewer

86.98.1 class HTMLViewer

Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Class in Xojo 2005 for HTML rendering.
Notes:

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The class itself is available on all platforms, but all the plugin methods are currently only working on Mac OS X.

86.98.2 Methods

86.98.3 backForwardListMBS as WebBackForwardListMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The backforward list for this webView.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Nil on failure.

86.98.4 canGoBackMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether the history can be used to move back one website.
Example:

MsgBox str(HTMLViewer1.canGoBackMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.5 canGoForwardMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the history can be used to move forward one website.
Example:

MsgBox str(HTMLViewer1.canGoForwardMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.6 canMakeTextLargerMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the text size can be increased.
Example:

MsgBox str(HTMLViewer1.canMakeTextLargerMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.7 canMakeTextSmallerMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the text size can be decreased.
Example:

MsgBox str(HTMLViewer1.canMakeTextSmallerMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.8 canResetPageZoomMBS as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether web page can be reset.
Example:

MsgBox str(HTMLViewer1.canResetPageZoomMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.9 CanShowMIMETypeAsHTMLMBS(mime as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Checks if the the MIME type is a type that the WebKit will interpret as HTML.
Example:

MsgBox str(HTMLViewer1.CanShowMIMETypeAsHTMLMBS("text/plain"))

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns false on any error and true on success.
See also FileExtensionToMimeTypeMBS function.

86.98.10 CanShowMIMETypeMBS(mime as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Checks if the WebKit can show content of a certain MIME type.
Example:

MsgBox str(HTMLViewer1.CanShowMIMETypeMBS("text/plain"))

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns false on any error and true on success.
See also FileExtensionToMimeTypeMBS function.

86.98.11 canZoomPageInMBS as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether web page can be zoomed in.
Example:

MsgBox str(HTMLViewer1.canZoomPageInMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.12 canZoomPageOutMBS as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether web page can be zoomed out.
Example:

MsgBox str(HTMLViewer1.canZoomPageOutMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.13 ChromiumBrowserMBS as ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries browser object for htmlviewer.

Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox b.MainFrame.URL
```

Notes:

Works only on Windows if Webkit is chosen as renderer.
Returns nil on any error.

Please call all chromium functions only on main thread.
Do not call in open event of HTMLViewer as browser control is not yet initialized there.

Supports Xojo 2019r3 with MBS Plugin 20.1.

86.98.14 ClearFocusMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Clears the focus.
Example:

```
HTMLViewer1.ClearFocusMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

If the focus is on the webpage, it will be cleared so there is no focus on the window. Useful if you want to workaround a focus bug in the htmlviewer control.

86.98.15 EstimatedProgressMBS as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An estimate of the percent complete for a document load.
Example:

```
MsgBox str(HTMLViewer1.EstimatedProgressMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This value will range from 0 to 1.0 and, once a load completes, will remain at 1.0 until a new load starts, at which point it will be reset to 0. The value is an estimate based on the total number of bytes expected to be received for a document, including all it's possible subresources. For more accurate progress indication it is recommended that you implement a WebFrameLoadDelegate and a WebResourceLoadDelegate.

86.98.16 EvaluateJavaScriptMBS(code as string) as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Runs the given java script and returns the result.
Example:

```
// shows current user agent string which the control sends to website
MsgBox htmlviewer1.EvaluateJavaScriptMBS("navigator.userAgent")

// using eval:
MsgBox HTMLViewer1.EvaluateJavaScriptMBS("eval(""x=10;y=20;x*y"")")

// with function:
MsgBox HTMLViewer1.EvaluateJavaScriptMBS(" test(); function test() { x = 10 ; y = 20; return x * y; }
")

// with multiline script:
dim s as string = "test();"+EndOfLine+_
"function test()"+EndOfLine+_
" { "+EndOfLine+_
" x = 10; "+EndOfLine+_
" y = 20; "+EndOfLine+_
" return x * y;"+EndOfLine+_
" } "

MsgBox HTMLViewer1.EvaluateJavaScriptMBS(s)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns "" on any error.

In Safari 2 we used "return 1+2;" while in Safari 3 we only need "1+2;". The return is no longer needed. Be aware that there is an implicit return now with Safari 3!

For Windows use IERunJavaScriptMBS function.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

86.98.17 GetPageFormatMBS as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current page format settings as a string.
Example:

```
MsgBox HTMLViewer1.GetPageFormatMBS
// shows a big XML String
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Can be used to save current printer settings to a preferences file.
Value is an empty string until a page format is defined.

86.98.18 GoBackMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Go back to the previous URL in the backforward list.
Example:

```
HTMLViewer1.GoBackMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns true if able to go back in the backforward list, false otherwise.

86.98.19 GoForwardMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Go forward to the next URL in the backforward list.
Example:

HTMLViewer1.GoForwardMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns true if able to go forward in the backforward list, false otherwise.

86.98.20 goToBackForwardItemMBS(item as WebHistoryItemMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Moves on the history to the given item.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns true on success or false on failure.

86.98.21 HandleMBS as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Handle of the WebView behind the HTMLViewer control.
Example:

MsgBox str(HTMLViewer1.HandleMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Must be non zero for the plugin functions to work.

86.98.22 HTMLTextMBS as string

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns HTML text for this document.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is the text as we generate it from current DOM tree. It is not the html text we loaded from the website. To get this original html text, please use HTMLViewer1.mainFrameMBS.dataSource.data instead.

86.98.23 IEContinueFindTextMBS(text as string, count as Integer, flags as Integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 7.7, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Continues a search started with IEFindTextMBS.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Parameters are the same as for IEFindTextMBS.

86.98.24 IEDocumentMBS as IEDocumentMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries web document object for this HTMLViewer.
Notes:

For browser based on Internet Explorer on Windows.
Raises exception on failure.

86.98.25 IEDrawToHDCMBS(HDC as Ptr, PrinterName as string = "") as boolean

MBS Win Plugin, Plugin Version: 12.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Draws the content of the html document into the graphics context.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

As of Windows Internet Explorer 9, this method is deprecated and should not be used.
Returns true on success and false on failure.

With some printers, running DrawToDC may cause problems. You can ensure that DrawToDC works prop-

erly on all printers by running SetDocumentPrinter method first, and then passing the modified device context to DrawToDC. The plugin calls SetDocumentPrinter for you when you provide a printer name.

86.98.26 IEFileCreationDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was created.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "09/13/2007"

86.98.27 IEFileModifiedDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was last modified.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "12/03/2007"

86.98.28 IEFileSizeMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the file size.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "12475"

86.98.29 IEFileUpdatedDateMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was last updated.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "01/01/1601"

86.98.30 IEFindTextMBS(text as string, count as Integer, flags as Integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 7.7, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Finds text on the current website.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

text: the string that specifies the text to find.
count: long that specifies the number of characters to search from the starting point of the range. A positive integer indicates a forward search; a negative integer indicates a backward search.
Flags: integer that specifies one or more of the following flags to indicate the type of search:

0	Default. Match partial words.
1	Match backwards.
2	Match whole words only.
4	Match case.
131072	Match bytes.
536870912	Match diacritical marks.
1073741824	Match Kashida character.
2147483648	Match AlefHamza character.

Returns true: The search text was found.
Returns false: The search text was not found.

86.98.31 IEGetTextAreaMBS(FormName as String, FieldName as String) as String

MBS Win Plugin, Plugin Version: 16.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries text for a textarea.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns text from textarea.

86.98.32 IEHandleMBS as Integer

MBS Win Plugin, Plugin Version: 8.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the windows browser object.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** If this value is zero, the plugin htmlviewer functions for Windows will not work.

86.98.33 IEHistoryBackMBS

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads a previous URL from the History list.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead.

86.98.34 IEHistoryForwardMBS

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads the next URL from the History list.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead.

86.98.35 IEHistoryLengthMBS as Integer

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the number of elements in the History list.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEHistoryMBS class instead. **Notes:** Example value: "0"

86.98.36 IEHTMLTextMBS as string

MBS Win Plugin, Plugin Version: 7.7, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns a copy of the html source code of the current webpage.
Example:

msgbox htmlviewer1.IEHTMLTextMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Improved in plugin version 12.2 to return better HTML text. This is the html generated from current web content and not the page we originally loaded. So this works with IEEditableMBS property.
Returns "" on any error.

On Mac OS X, you can use HTMLViewer1.mainFrameMBS.dataSource.data to get the document html text.

86.98.37 IEImageMBS as picture

MBS Win Plugin, Plugin Version: 9.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Copies the picture from the htmlviewer.
Example:

```
Sub Action()
ClearFocus

Dim picWeb As Picture

// Get image from IE
picWeb = HTMLViewer1.IEImageMBS

canvas1.backdrop = picWeb
End Sub
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

You may want to resize the htmlviewer to get a picture without scrollbars. (See example projects)
You may need to call ClearFocus as it seems like if the focus is on the htmlviewer it does not draw itself in our picture.

86.98.38 IELastModifiedMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the date that the page was last modified, if the page supplies one.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "12/03/2007 20:08:17"

86.98.39 IELoadHTMLMBS(HTMLText as string) as boolean

MBS Win Plugin, Plugin Version: 15.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads the HTML text into the htmlviewer.
Example:

```
// in window open event, load blank page
HTMLViewer1.LoadURL "about:blank"

// later somewhere in app load HTML:
HTMLViewer1.IELoadHTMLMBS "<html><body>Hello World</body></html>"
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Does not use a temp file like Xojo's built in method.
Returns true on success.
On Windows you may need to reset webviewer before or load "about:blank" to initialize the webviewer by Xojo (or Xojo).

86.98.40 IEMimeTypeMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the MIME type for the file.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "HTM-Datei"
See also MimeTypeToFileExtensionMBS function.

86.98.41 IENamePropMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the title of the document file.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "Apple"

86.98.42 IENavigatorAppMinorVersionMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the application's minor version value.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: ";SP2;"

86.98.43 IENavigatorAppNameMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the name of the browser.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: "Microsoft Internet Explorer"

86.98.44 IENavigatorAppVersionMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the platform and version of the browser.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: "4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

86.98.45 IENavigatorBrowserLanguageMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the current browser language.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: "de"

86.98.46 IENavigatorCookieEnabledMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves whether client-side persistent cookies are enabled in the browser.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:**

Persistent cookies are those that are stored on the client-side computer.
Example value: "True"

86.98.47 IENavigatorJavaEnabledMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns whether Java is enabled.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: "True"

86.98.48 IENavigatorOnLineMBS as boolean

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a value indicating whether the system is in global offline mode.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:**

The user can modify the global offline state by choosing Work Offline from the File menu in Microsoft Internet

Explorer version 4.0 or later. This property does not indicate whether the system is connected to the network.

Example value: "True"

86.98.49 IENavigatorUserAgentMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string equivalent to the HTTP user-agent request header.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:**

The HTTP user-agent request header contains information about compatibility, the browser, and the platform name. For more information about the browser, see the IENavigatorappNameMBS property. For more information about the platform, see the IENavigatorappVersionMBS property.

The IENavigatoruserAgentMBS property dynamically returns a different value depending on the browser and platform versions. For example, Microsoft Internet Explorer 6 returns the following string for Microsoft Windows XP.

Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)

Example value: "Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

Like other plugin function, this can only work if a page has been loaded. Xojo won't create the internal htmlviewer object before you load a page.

86.98.50 IENavigatorUserLanguageMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the operating system's natural language setting.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IENavigatorMBS class instead. **Notes:** Example value: "de"

86.98.51 IEPrintMBS as boolean

MBS Win Plugin, Plugin Version: 9.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Opens the normal print dialog for the Internet Explorer.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWindowMBS

class instead. **Notes:** Returns false on failure.

86.98.52 IEPrintPreviewMBS as boolean

MBS Win Plugin, Plugin Version: 12.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Commands Internet Explorer to show the print preview dialog for this htmlviewer.
Example:

call htmlviewer1.IEPrintPreviewMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Returns true on success. Returns false if function is not supported.
The function returns directly while the preview dialog is still running.

86.98.53 IEProtocolMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the protocol portion of a URL.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "HTTP (HyperText Transfer-Protokoll)"

86.98.54 IEReadyStateMBS as string

MBS Win Plugin, Plugin Version: 12.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a value that indicates the current state of the htmlviewer.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

uninitialized: Object is not initialized with data.
loading: Object is loading its data.
loaded: Object has finished loading its data.
interactive: User can interact with the object even though it is not fully loaded.
complete: Object is completely initialized.

An object's state is initially set to uninitialized, and then to loading. When data loading is complete, the state of the link object passes through the loaded and interactive states to reach the complete state.

The states through which an object passes are determined by that object; an object can skip certain states

(for example, interactive) if the state does not apply to that object.

Data source objects and databound elements are normally populated asynchronously, and certain programmatic operations can only be performed reliably on databound objects when they are ready for use. Therefore, the appropriate code should be written to confirm the readyState of objects prior to performing certain operations on them. For example, walking the rows of a table should not be attempted until after the table has reached the complete state.

The readyState property enables the status of an object to be tested. The correct place to test the readyState property is in the event handler for onreadystatechange. Similarly, a data source object (DSO) fires the ondatasetcomplete event to notify the document that the dataset is ready for programmatic operation.

86.98.55 IERefCountMBS as Integer

MBS Win Plugin, Plugin Version: 15.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the reference count of the IE browser object.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Useful to check if references are leaked.

86.98.56 IEReferrerMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the URL of the location that referred the user to the current page.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "http://www.apple.com/"

86.98.57 IEReloadMBS(Force as boolean = false) as boolean

MBS Win Plugin, Plugin Version: 12.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reloads the current page.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Boolean that specifies one of the following possible values:
False: Default. Reloads the document from the cache.
True: Reloads the document from the server.

86.98.58 IERunJavaScriptMBS(JavaScript as string) as boolean

MBS Win Plugin, Plugin Version: 8.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Runs a given javascript code.
Example:

```
// shows current user agent string which the control sends to website
call htmlviewer1.IERunJavaScriptMBS("document.title=navigator.userAgent;")
MsgBox htmlviewer1.IETitleMBS

// load a dummy page:
HTMLViewer1.LoadPage "<html><head></head><body></body></html>", nil

// shows an error message because of the navigator having a 6 inside:
call htmlviewer1.IERunJavaScriptMBS("document.title=navig6ator.userAgent;")

// uses try to avoid error message

dim script as string = "document.title=navig6ator.userAgent;"
dim s as string = "try { "+SCRIPT+" } catch(err) { document.title = err.description; } "

call htmlviewer1.IERunJavaScriptMBS(s)
MsgBox HTMLViewer1.IETitleMBS // shows "navig6ator is undefined"
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWindowMBS class instead. **Notes:**

Returns true if the javascript code was sent to the browser.
Returns false on any error.

The IE API does not allow to return values from Javascript. So you need to store your result in window.title and access it later using IETitleMBS.

IERunJavaScriptMBS fails if the htmlviewer is empty. You can load a dummy page like above.

For Windows use EvaluateJavaScriptMBS function.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

See IEDocumentMBS.Eval for newer version which can return result.

86.98.59 IEScrollHeightMBS as Integer

MBS Win Plugin, Plugin Version: 9.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the height of the html viewer content.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Returns 0 on any error.

86.98.60 IEScrollWidthMBS as Integer

MBS Win Plugin, Plugin Version: 9.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the width of the html viewer content.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Returns 0 on any error.

86.98.61 IESecurityMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the security state.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: "Für diesen Dokumententyp gibt es kein Sicherheitszertifikat."

86.98.62 IESetTextAreaMBS(FormName as String, FieldName as String, Value as String) as Boolean

MBS Win Plugin, Plugin Version: 16.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets text for a textarea.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns true if text is set or false on failure.

86.98.63 IEStopMBS as boolean

MBS Win Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Stops loading.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWeb-

BrowserMBS class instead. **Notes:** Returns true on success and false on failure.

86.98.64 IETextMBS as string

MBS Win Plugin, Plugin Version: 7.7, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns a copy of the text of the current webpage.
Example:

msgbox htmlviewer1.IETextMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Asks Internet Explorer for a selection of the whole document and asks selection about the text content.
Returns "" on any error.

On Mac OS X, you can use HTMLViewer1.mainFrameMBS.dataSource.data to get the document html text.

86.98.65 IEToStringMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string representation of the object.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** Example value: " [object] "

86.98.66 IEWebBrowserMBS as IEWebBrowserMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries web browser object for this HTMLViewer.
Notes:

For browser based on Internet Explorer on Windows.
Raises exception on failure.

86.98.67 IEWindowMBS as IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries web window object for this HTMLViewer.
Notes:

For browser based on Internet Explorer on Windows.
Raises exception on failure.

86.98.68 IEZoomMBS(factor as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Zooms the web content.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEWebBrowserMBS class instead. **Notes:**

Factor can be 50 for 50% .
Returns true on success.

86.98.69 InstallWebDownloadDelegateMBS(WebDownloadDelegate as WebDownloadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Installs a WebDownloadDelegateMBS to receive events from htmlviewer control.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this WebDownloadDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.98.70 InstallWebFrameLoadDelegateMBS(WebFrameLoadDelegate as WebFrameLoadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Installs a WebFrameLoadDelegateMBS to receive events from htmlviewer control.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this WebFrameLoadDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.98.71 InstallWebPolicyDelegateMBS(WebPolicyDelegate as WebPolicyDelegateMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Installs a WebPolicyDelegateMBS to receive events from htmlviewer control.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this WebPolicyDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.98.72 InstallWebResourceLoadDelegateMBS(WebResourceLoadDelegate as WebResourceLoadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Installs a WebResourceLoadDelegateMBS to receive events from htmlviewer control.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this WebResourceLoadDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.98.73 InstallWebUIDelegateMBS(WebUIDelegate as WebUIDelegateMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Installs a HTMLViewerUIDelegateMBS to receive events from htmlviewer control.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this HTMLViewerUIDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.98.74 LinuxWebViewMBS as LinuxWebViewMBS

MBS Linux Plugin, Plugin Version: 12.4, Console & Web: No, Mac: No, Win: No, Linux: Yes. **Function:** Queries the linux WebKit web view for the given htmlviewer.
Notes:

Requires a recent Xojo version (2011?). And libwekit-1.0 must be installed, so Xojo uses it for browsing.
Check Also the Available shared method on LinuxWebViewMBS class.

86.98.75 LoadHTMLStringMBS(data as memoryblock, mime as string, encoding as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Loads data as a webpage.
Example:

```
HTMLViewer1.LoadHTMLStringMBS "<b>test</b>","text/plain","","" // show as plain text
HTMLViewer1.LoadHTMLStringMBS "<b>test</b>","text/html","","" // show as html
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

data: The data to use for the main page of the document.
mime: The MIME type of the data. e.g. "text/html"
textencoding: The encoding of the data.
url: The base URL to apply to relative URLs within the document.

All parameters can be empty if needed.
Using "text/plain" mime type you can show source code of website.

Like a most Webkit Methods this one can not be called from a thread.
See also:

- 86.98.76 LoadHTMLStringMBS(text as string, url as string) 15037

86.98.76 LoadHTMLStringMBS(text as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Loads a html page from a string.
Example:

```
HTMLViewer1.LoadHTMLStringMBS("<p>Hello <a href = ""xojo/""">xojo</a></p>", "http://www.monkeybreadsoftware.de/")
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS

class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

html: The string to use for the main page of the document.
url: The base URL to apply to relative URLs within the document. (optional)

Like most Webkit Methods this one can not be called from a thread.
See also:

- 86.98.75 LoadHTMLStringMBS(data as memoryblock, mime as string, encoding as string, url as string) 15037

86.98.77 LoadRequest(request as NSURLRequestMBS)

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Loads the given url request.
Example:

```
dim r as NSURLRequestMBS = NSURLRequestMBS.requestWithURL("http://www.apple.de")
HTMLViewer1.LoadRequest r
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Like most Webkit Methods this one can not be called from a thread.

86.98.78 LoadURLMBS(url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Loads the url.
Example:

```
htmlviewer1.LoadURLMBS "http://www.monkeybreadsoftware.de"
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Like most Webkit Methods this one can not be called from a thread.
Internally this calls LoadRequest with a NSURLRequest based on the given URL.
See also:

- 86.98.79 LoadURLMBS(url as string, CachePolicy as Integer, TimeOut as Double) 15039

86.98.79 LoadURLMBS(url as string, CachePolicy as Integer, TimeOut as Double)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** htmlviewer1.LoadURLMBS "http://www.monkeybreadsoftware.de", 1, 2.0
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The timeout interval is in seconds.

Constants for the CachePolicy parameter:

const UseProtocolCachePolicy	= 0	Specifies that the caching logic defined in the protocol implementation, if any, is used for a particular URL load request. This is the default policy for URL load requests.
const ReloadIgnoringCacheData	= 1	Specifies that the data for the URL load should be loaded from the originating source. No existing cache data should be used to satisfy a URL load request.
const ReturnCacheDataElseLoad	= 2	Specifies that the existing cached data should be used to satisfy the request, regardless of its age or expiration date. If there is no existing data in the cache corresponding the request, the data is loaded from the originating source.
const ReturnCacheDataDontLoad	= 3	Specifies that the existing cache data should be used to satisfy a request, regardless of its age or expiration date. If there is no existing data in the cache corresponding to a URL load request, no attempt is made to load the data from the originating source, and the load is considered to have failed. This constant specifies a behavior that is similar to an "offline" mode.

Like most Webkit Methods this one can not be called from a thread.
Internally this calls LoadRequest with a NSURLRequest based on the given URL. It is Webkit's decision what it does based on the given constants.
See also:

- 86.98.78 LoadURLMBS(url as string) 15038

86.98.80 mainFrameMBS as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The main webframe currently displayed.

Example:

```
// get the current page url:

MsgBox HTMLViewer1.mainFrameMBS.dataSource.request.URL

// get the html data of the current page:

MsgBox HTMLViewer1.mainFrameMBS.dataSource.data
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Nil if no is present.

86.98.81 makeTextLargerMBS

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Increases the text size in the webview.
Example:

```
HTMLViewer1.LoadPage "<p>Hello</p>", nil
HTMLViewer1.makeTextLargerMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.82 makeTextSmallerMBS

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Decreases the text size in the webview.
Example:

```
HTMLViewer1.LoadPage "<p>Hello</p>", nil
HTMLViewer1.makeTextSmallerMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.83 mediaVolumeMBS as Double

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Queries the maximum volume of all sounds generated on this webview.
Example:

```
// shows 1 normally
MsgBox str(HTMLViewer1.mediaVolumeMBS)

// set to 50%
HTMLViewer1.setMediaVolumeMBS 0.5

// and check
MsgBox str(HTMLViewer1.mediaVolumeMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.84 NSScrollViewMBS as Variant

MBS MacControls Plugin, Plugin Version: 11.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the scrollview for this webviewer.
Example:

```
// get the scrollview
dim s as NSScrollViewMBS = HTMLViewer1.NSScrollViewMBS

// and destroy the scrollbars
s.horizontalScroller = nil
s.verticalScroller = nil
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Same as calling HTMLViewer.mainFrameMBS.frameView.documentView.enclosingScrollView.

We return a variant to avoid plugin dependencies. Please assign to a NSScrollViewMBS variable.

86.98.85 PageSetupDialogMBS(sheetTarget as window=nil) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Shows a page setup sheet.
Example:

call HTMLViewer1.PageSetupDialogMBS(Window1)

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

If sheetTarget is nil a modal dialog is shown and the function returns after the user clicked one of the buttons to close the dialog.
If sheetTarget is a valid window reference this window will show a sheet and the function returns while the sheet waits for mouseclicks.

Returns true on success.

86.98.86 pageSizeMultiplierMBS as Double

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Queries the page size multiplier.
Example:

MsgBox str(HTMLViewer1.pageSizeMultiplierMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.87 PrintDialogMBS(sheetTarget as window=nil, PDFFile as folderitem=nil) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Show the print sheet and allows the user to print the web content.
Example:

```
call HTMLViewer1.PrintDialogMBS(Window1)
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

If sheetTarget is nil a modal dialog is shown and the function returns after the user clicked one of the buttons to close the dialog.
If sheetTarget is a valid window reference this window will show a sheet and the function returns while the sheet waits for mouseclicks.

If PDFFile is not nil, printing is redirected to a PDF file.

Returns true on success.

This is 32-bit only. For 64-bit, please use NSPrintOperationMBS class directly.

86.98.88 PrintDialogVisibleMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether a printing sheet is visible.
Example:

```
MsgBox str(HTMLViewer1.PrintDialogVisibleMBS)
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Used with the PageSetupDialog and the PrintDialog methods.
Returns true when a dialog is visible and false when not.

86.98.89 PrintingEndMBS

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Releases memory from the printing code.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

First call PrintingStartMBS with your page size, then call several times PrintingPageMBS and finally call PrintingEndMBS.

86.98.90 PrintingPageMBS(index as UInt32) as Memoryblock

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the given page as string.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

On any error the function returns nil.
The string contains an one page PDF document.

First call PrintingStartMBS with your page size, then call several times PrintingPageMBS and finally call PrintingEndMBS.

You may want to set
HTMLViewer.preferencesMBS.shouldPrintBackgrounds = true
HTMLViewer.preferencesMBS.allowsAnimatedImageLooping = true
to get a print which includes backgrounds and animated images.

86.98.91 PrintingStartMBS(width as Double, height as Double) as Integer

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Starts the printing code.
Example:

```
dim i,c as Integer
dim f as FolderItem
dim s as string
dim b as BinaryStream

HTMLViewer1.preferencesMBS.shouldPrintBackgrounds = true // with backgrounds
```

```
HTMLViewer1.preferencesMBS.allowsAnimatedImageLooping = true // and with animated images

c=HTMLViewer1.PrintingStartMBS(800,600)
i=0
while i<c
s=HTMLViewer1.PrintingPageMBS(i)

f=SpecialFolder.Desktop.Child("Page "+str(i+1)+".pdf")
b=f.CreateBinaryFile("")
if b<>nil then
b.Write s
b.Close
end if
i=i+1
wend

HTMLViewer1.PrintingEndMBS

MsgBox str(c)+" pages printed."
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

First call PrintingStartMBS with your page size, then call several times PrintingPageMBS and finally call PrintingEndMBS.

Only one print job can be processed at the same time as they use all the same global properties.

Returns the number of pages to be printed.

86.98.92 PrintMBS(PDFFile as folderitem=nil) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Prints the web content without a dialog.
Example:

```
MsgBox str(HTMLViewer1.PrintMBS)
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

If PDFFile is not nil, printing is redirected to a PDF file.
Returns true on success.

86.98.93 PrintToPDFFileMBS(PDFFile as folderitem, LeftMargin as Double = 50.0, TopMargin as Double = 50.0, RightMargin as Double = 50.0, BottomMargin as Double = 50.0) as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Prints the PDF to a file.
Example:

```
dim file as folderitem = Specialfolder.desktop.child("test.pdf")
if not HTMLViewer1.PrintToPDFFileMBS(file) then
msgbox "Failed"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This uses the Cocoa printing system to format the web pages into nice pages.
Returns true on success.
Margin is measured in points in the user coordinate space.

86.98.94 reloadFromOriginMBS

MBS MacControls Plugin, Plugin Version: 12.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Action method that performs an end-to-end revalidation using cache-validating conditionals if possible.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Available in OS X v10.6 and later. On older versions the plugin will fall back to normal reload method.

86.98.95 ReloadMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Reloads the current page.
Example:

```
HTMLViewer1.ReloadMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.96 RenderDocumentToEPSMBS as Memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the content of the view as a EPS file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.eps")
b=f.CreateBinaryFile("")
b.Write theHTMLViewer.RenderDocumentToEPSMBS
b.Close

f.Launch // show the pdf in preview
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns nil on any error.
Will resize the eps page to match the size of the website.

86.98.97 RenderDocumentToPDFMBS as Memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the content of the view as a PDF file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.pdf")
b=f.CreateBinaryFile("")
b.Write theHTMLViewer.RenderDocumentToPDFMBS
b.Close

f.Launch // show the pdf in preview
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns nil on any error.
Will resize the pdf page to match the size of the website.

86.98.98 RenderEPSMBS as Memoryblock

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the content of the view as a EPS file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.eps")
b=f.CreateBinaryFile("")
b.Write theHTMLViewer.RenderEPSMBS
b.Close

f.Launch // show the pdf in preview
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns nil on any error.
If there is a scrollbar, it will be included.

For nice printouts, use the webview/htmlviewer printmbs method.

86.98.99 RenderPDFMBS as Memoryblock

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the content of the view as a PDF file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.pdf")
b=f.CreateBinaryFile("")
b.Write theHTMLViewer.RenderPDFMBS
b.Close

f.Launch // show the pdf in preview
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns nil on any error.
If there is a scrollbar, it will be included.
For nice printouts, use the webview/htmlviewer printmbs method.

86.98.100 RenderWebsiteImageMBS(ResolutionScale as Double = 1.0) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Makes a screenshot of the current displayed content.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim i as NSImageMBS
dim p as string

i=HTMLViewer1.RenderWebsiteImageMBS

p=i.PNGRepresentation
```

```
f=SpecialFolder.Desktop.Child("test.png")
b=f.CreateBinaryFile("")
b.Write p
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

Nil on failure.
The image returned is the page completely without scrollbars, so it may be a few thousand pixels height and may not fit on a page to print.

The value of this variant must be an object of class NSImageMBS.

Added ResolutionScale in version 13.1 to allow to get high res images. Pass 2 for a retina resolution image (independent of whether your app runs on retina display).

86.98.101 resetPageZoomMBS

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Resets the web page zoom.
Example:

```
HTMLViewer1.resetPageZoomMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.102 SearchForMBS(text as string, Forward as boolean, CaseSensitive as boolean, Wrap as Boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Searches a document view for a string and highlights the string if it is found.
Example:

```
call HTMLViewer1.SearchForMBS "holiday",true,false,true
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Starts the search from the current selection. Will search across all frames.

text: The string to search for.
forward: True to search forward, False to seach backwards.
caseSensitive: True to for case-sensitive search, False for case-insensitive search.

Returns true if found, false if not found.

86.98.103 setMaintainsBackForwardListMBS(value as boolean)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether the back forward history list is created by the webview.
Example:

HTMLViewer1.setMaintainsBackForwardListMBS true

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Default is true.

86.98.104 setMediaVolumeMBS(value as Double)

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the maximum volume of all sounds generated on this webview.
Example:

HTMLViewer1.setMediaVolumeMBS 0.5

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Sets a master volume control for all media elements in the WebView. Valid values are 0..1.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.105 SetPageFormatMBS(data as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Loads page format settings from a string.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns true on success and false on failure.

86.98.106 setPageSizeMultiplierMBS(value as Double)

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sets the page size multiplier.
Example:

HTMLViewer1.setPageSizeMultiplierMBS 2.0

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Change the zoom factor of the page in views managed by this webView.
value: A fractional percentage value, 1.0 is 100% .

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.107 StopLoadingMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Stop any pending loads on the frame's data source, and its children.
Example:

HTMLViewer1.StopLoadingMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:** This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.98.108 SupportsTextEncodingMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Find out if the current web page supports text encodings.
Example:

MsgBox str(HTMLViewer1.SupportsTextEncodingMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Returns true if the document view of the current web page can support different text encodings.

86.98.109 userAgentForURLMBS(url as string) as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The user agent used for accessing the given URL.
Example:

msgbox htmlviewer1.userAgentForURLMBS("http://www.apple.com")
// shows: Mozilla/5.0 (Macintosh; U; PPC Mac OS X; de-de) AppleWebKit/419 (KHTML, like Gecko)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

An empty string on failure else the user-agent string for the supplied URL.

86.98.110 VisibleHeightMBS as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The visible height of the htmlviewer control.
Example:

MsgBox str(HTMLViewer1.VisibleWidthMBS)+" x "+str(HTMLViewer1.VisibleHeightMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Bounds is the width and height of the controls area, but visible is only a part depending on the window size.

So if Bounds are equal to the visible part, there is no scrollbar.

86.98.111 VisibleLeftMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The left position of the visible area.
Example:

MsgBox str(HTMLViewer1.VisibleLeftMBS)+" x "+str(HTMLViewer1.VisibleTopMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Should be 0.

86.98.112 VisibleTopMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The top position of the visible area.
Example:

MsgBox str(HTMLViewer1.VisibleLeftMBS)+" x "+str(HTMLViewer1.VisibleTopMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Should be 0.

86.98.113 VisibleWidthMBS as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The visible width of the htmlviewer control.
Example:

MsgBox str(HTMLViewer1.VisibleWidthMBS)+" x "+str(HTMLViewer1.VisibleHeightMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Bounds is the width and height of the controls area, but visible is only a part depending on the window size. So if Bounds are equal to the visible part, there is no scrollbar.

86.98.114 WebViewMBS as WebViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the webview for this htmlviewer.
Example:

HTMLViewer1.WebViewMBS.toolTip = "Test tooltip"

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Nil on failure.

86.98.115 WKWebViewMBS as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Queries WKWebViewMBS associated to HTMLViewer.
Notes:

When a future Xojo version in 2020 starts using WKWebView, this method will return it.
Until that happens, this method will return nil.

86.98.116 zoomPageInMBS

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Zooms web page in.
Example:

HTMLViewer1.zoomPageInMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.117 zoomPageOutMBS

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Zooms web page out.
Example:

HTMLViewer1.zoomPageOutMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.98.118 Properties

86.98.119 ApplicationNameForUserAgentMBS as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The application name.
Example:

htmlviewer1.ApplicationNameForUserAgentMBS="test"
// useragent is now "Mozilla/5.0 (Macintosh; U; PPC Mac OS X; de-de) AppleWebKit/417.9 (KHTML, like Gecko) test"

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS

class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This name will be used in user-agent strings that are chosen for best results in rendering web pages.
(Read and Write computed property)

86.98.120 BoundsHeightMBS as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The height of the htmlviewer control.
Example:

```
MsgBox str(HTMLViewer1.BoundsLeftMBS)+" "+str(HTMLViewer1.BoundsTopMBS)+" "+str(HTMLViewer1.BoundsWid
"+str(HTMLViewer1.BoundsHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Bounds is the width and height of the controls area, but visible is only a part depending on the window size.
So if Bounds are equal to the visible part, there is no scrollbar.
(Read and Write computed property)

86.98.121 BoundsLeftMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The left position of the control size.
Example:

```
MsgBox str(HTMLViewer1.BoundsLeftMBS)+" "+str(HTMLViewer1.BoundsTopMBS)+" "+str(HTMLViewer1.BoundsWid
"+str(HTMLViewer1.BoundsHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Should be 0.
(Read and Write computed property)

86.98.122 BoundsTopMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The top position of the view size.
Example:

```
MsgBox str(HTMLViewer1.BoundsLeftMBS)+" "+str(HTMLViewer1.BoundsTopMBS)+" "+str(HTMLViewer1.BoundsWid
"+str(HTMLViewer1.BoundsHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Should be 0.
(Read and Write computed property)

86.98.123 BoundsWidthMBS as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The width of the htmlviewer control.
Example:

```
dim w as NSViewMBS

w=HTMLViewer1.mainFrameMBS.frameView.documentView

MsgBox "width: "+str(w.Bounds.Width)+" height: "+str(w.Bounds.Height)

w=HTMLViewer1.WebViewMBS

MsgBox "width: "+str(w.Bounds.Width)+" height: "+str(w.Bounds.Height)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Bounds is the width and height of the controls area, but visible is only a part depending on the window size.

So if Bounds are equal to the visible part, there is no scrollbar.
(Read and Write computed property)

86.98.124 ContinuousSpellCheckingEnabledMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether continuous spell checking is enabled.
Example:

htmlviewer1.ContinuousSpellCheckingEnabledMBS=True

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.125 CustomTextEncodingNameMBS as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The custom text encoding name.
Example:

MsgBox HTMLViewer1.CustomTextEncodingNameMBS

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

On getting:
The custom text encoding name or "" if no custom text encoding name has been set.

On setting:
Make the page display with a different text encoding; stops any load in progress.
The text encoding passed in overrides the normal text encoding smarts including what's specified in a web page's header or HTTP response.
The text encoding automatically goes back to the default when the top level frame changes to a new location.
Setting the text encoding name to nil makes the webView use default encoding rules.
(Read and Write computed property)

86.98.126 CustomUserAgentMBS as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The custom user-agent string or nil if no custom user-agent string has been set.
Example:

htmlviewer1.CustomUserAgentMBS=NewCFStringMBS("HelloWorldBrowser")

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.127 dashboardBehaviorMBS(behavior as Integer) as boolean

MBS MacControls Plugin, Plugin Version: 7.8, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: Get or set the htmlviewer behavior.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This is a private API from Apple which may break in the future.
It seems to exist for the dashboard application to switch some flags for event handling.

Behavior constants:
const WebDashboardBehaviorAlwaysSendMouseEventsToAllWindows = 0
const WebDashboardBehaviorAlwaysSendActiveNullEventsToPlugIns = 1
const WebDashboardBehaviorAlwaysAcceptsFirstMouse = 2
const WebDashboardBehaviorAllowWheelScrolling = 3
const WebDashboardBehaviorUseBackwardCompatibilityMode = 4
(Read and Write computed property)

86.98.128 DrawsBackgroundMBS as Boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Enable or disable the background drawing.
Example:

HTMLViewer1.DrawsBackgroundMBS = false

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Works only with Webkit on Mac OS X 10.3.9 and newer.
Returns false on unsupported Webkit versions.
If you set it to false, the background is not drawn and you can have transparent websites like the Dashboard widgets.
(Read and Write computed property)

86.98.129 EditableMBS as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the user is allowed to edit the document.
Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You can change the receiver's document programmatically regardless of this setting.
Available in Mac OS X v10.3.9 and later.

Normally, an HTML document is not editable unless the elements within the document are editable. This method provides a low-level way to make the contents of a WebView object editable without altering the document or DOM structure.

True if the receiver allows the user to edit the document. False if an element in the receiver's document can be edited only if the CONTENTEDITABLE attribute has been set on the element or one of its parent elements.
(Read and Write computed property)

86.98.130 FrameHeightMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The height of the view frame.
Example:

```
MsgBox str(HTMLViewer1.FrameLeftMBS)+" "+str(HTMLViewer1.FrameTopMBS)+" "+str(HTMLViewer1.FrameWidthM
"+str(HTMLViewer1.FrameHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.131 FrameLeftMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The left position of the view frame.
Example:

MsgBox str(HTMLViewer1.FrameLeftMBS)+" "+str(HTMLViewer1.FrameTopMBS)+" "+str(HTMLViewer1.FrameWidthM
"+str(HTMLViewer1.FrameHeightMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.132 FrameTopMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The top position of the view frame.
Example:

MsgBox str(HTMLViewer1.FrameLeftMBS)+" "+str(HTMLViewer1.FrameTopMBS)+" "+str(HTMLViewer1.FrameWidthM
"+str(HTMLViewer1.FrameHeightMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.133 FrameWidthMBS as Double

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The width of the view frame.
Example:

```
MsgBox str(HTMLViewer1.FrameLeftMBS)+" "+str(HTMLViewer1.FrameTopMBS)+" "+str(HTMLViewer1.FrameWidthM
"+str(HTMLViewer1.FrameHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.134 GroupNameMBS as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The group name for this WebView.
Example:

```
HTMLViewer1.GroupNameMBS = "Hello"
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

JavaScript may access named frames within the same group.
(Read and Write computed property)

86.98.135 IECharSetMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the character set used to encode the object.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "utf-8"
(Read and Write computed property)

86.98.136 IECookieMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the string value of a cookie.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "s_vi= [CS] v1 | 427CA13500002D10-A000B5B00000001 [CE] ; s_cc=true; s_nr=1196708888562; s_sq=% 5B% 5BB% 5D% 5D"
(Read and Write computed property)

86.98.137 IEDefaultCharsetMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the default character set from the current regional language settings.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "windows-1252"
(Read and Write computed property)

86.98.138 IEDomainMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the security domain of the document.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "www.apple.com"
(Read and Write computed property)

86.98.139 IEEditableMBS as boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Makes the htmlviewer editable on Windows.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:** (Read and Write computed property)

86.98.140 IETitleMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the title of the document.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "Apple"
(Read and Write computed property)

86.98.141 IEURLMBS as string

MBS Win Plugin, Plugin Version: 7.8, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the URL for the current document.
Deprecated: This item is deprecated and should no longer be used. You can use methods in IEDocumentMBS class instead. **Notes:**

Example value: "http://www.apple.com/"
(Read and Write computed property)

86.98.142 mediaStyleMBS as String

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The value to use for the CSS media property.
Example:

htmlviewer1.mediaStyleMBS="print"

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Set or get the media style for the WebView. The mediaStyle will override the normal value of the CSS media property. Setting the value to nil will restore the normal value.
(Read and Write computed property)

86.98.143 PreferencesIdentifierMBS as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The string to use a prefix for storing values for this WebView in the user defaults database.

Example:

```
MsgBox HTMLViewer1.PreferencesIdentifierMBS
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

If the WebPreferences for this WebView are stored in the user defaults database, the string set in this method will be used a key prefix.
(Read and Write computed property)

86.98.144 preferencesMBS as WebPreferencesMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The preferences for this htmlviewer.
Example:

```
HTMLViewer1.preferencesMBS.defaultFontSize = 10
HTMLViewer1.Loadpage "<p>Hello</p>", nil
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Nil on failure.
(Read and Write computed property)

86.98.145 ScrollHeightMBS as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The height of the scroll view.
Example:

```
MsgBox str(HTMLViewer1.ScrollWidthMBS)+" "+str(HTMLViewer1.ScrollHeightMBS)
```

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.146 ScrollLeftMBS as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The left position of the scroll view.
Example:

HTMLViewer1.ScrollLeftMBS=HTMLViewer1.ScrollLeftMBS+5

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You can set this value to scroll manually.
(Read and Write computed property)

86.98.147 ScrollTopMBS as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The top position of the scroll view.
Example:

HTMLViewer1.ScrollTopMBS=HTMLViewer1.ScrollTopMBS+5

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You can set this value to scroll manually.
(Read and Write computed property)

86.98.148 ScrollWidthMBS as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The width of the scroll view.

Example:

MsgBox str(HTMLViewer1.ScrollWidthMBS)+" "+str(HTMLViewer1.ScrollHeightMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.149 TextSizeMultiplierMBS as single

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The size of the text rendering in views managed by this webView.
Example:

HTMLViewer1.LoadPage " Hello ", nil
HTMLViewer1.TextSizeMultiplierMBS = 5

Deprecated: This item is deprecated and should no longer be used. You can use methods in WebViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

A fractional percentage value, 1.0 is 100% .
(Read and Write computed property)

86.98.150 toolTipMBS as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The tooltip for this htmlviewer.
Example:

HTMLViewer1.toolTipMBS = "Test tooltip"

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.
(Read and Write computed property)

86.98.151 visibleMBS as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether the control is visible.
Example:

MsgBox str(HTMLViewer1.visibleMBS)

Deprecated: This item is deprecated and should no longer be used. You can use methods in NSViewMBS class instead. **Notes:**

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

True is visible and false if hidden.
(Read and Write computed property)

86.99 Globals

86.99.1 InstallWebDownloadDelegate(extends w as WebViewMBS, theDelegate as WebDownloadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Installs a WebDownloadDelegateMBS to receive events from webview.
Notes:

This method is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

You need to keep a reference to this WebDownloadDelegateMBS object in the window where the webview is inside so the class is not destroyed too early.

86.99.2 InstallWebFrameLoadDelegate(extends w as WebViewMBS, theDelegate as WebFrameLoadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Installs a WebFrameLoadDelegateMBS to receive events from a webview control.
Notes: You need to keep a reference to this WebFrameLoadDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.99.3 InstallWebPolicyDelegate(extends w as WebViewMBS, theDelegate as WebPolicyDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Installs a WebPolicyDelegateMBS to receive events from a webview control.
Notes: You need to keep a reference to this WebPolicyDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.99.4 InstallWebResourceLoadDelegate(extends w as WebViewMBS, theDelegate as WebResourceLoadDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Installs a WebResourceLoadDelegateMBS to receive events from a webview control.
Notes: You need to keep a reference to this WebResourceLoadDelegateMBS object in the window where the WebView is inside so the class is not destroyed too early.

86.99.5 InstallWebUIDelegate(extends w as WebViewMBS, theDelegate as WebUIDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Installs a HTMLViewerUIDelegateMBS to receive events from a webview control.
Notes: You need to keep a reference to this HTMLViewerUIDelegateMBS object in the window where the htmlviewer is inside so the class is not destroyed too early.

86.100 class WebArchiveMBS

86.100.1 class WebArchiveMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class to represent a webarchive.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

WebArchive represents a main resource as well as all the subresources and subframes associated with the main resource.
The main resource can be an entire web page, a portion of a web page, or some other kind of data such as an image.
This class can be used for saving standalone web pages, representing portions of a web page on the pasteboard, or any other application where one class is needed to represent rich web content.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.100.2 Methods

86.100.3 Constructor(data as Memoryblock)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The initializer for creating a WebArchive from data.
Notes: data: The data representing the archive. This can be obtained using WebArchive's data method.
See also:

- 86.100.4 Constructor(mainResource as WebResourceMBS) 15073
- 86.100.5 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS) 15073

- 86.100.6 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS, subframeArchives() as WebArchiveMBS) 15073

86.100.4 Constructor(mainResource as WebResourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constructor for WebArchive.
Notes: Creates a new archive object with the given webresources.
See also:

- 86.100.3 Constructor(data as Memoryblock) 15072
- 86.100.5 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS) 15073
- 86.100.6 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS, subframeArchives() as WebArchiveMBS) 15073

86.100.5 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constructor for WebArchive.
Notes:

Creates a new archive object with the given webresources.
The array can be empty.
See also:

- 86.100.3 Constructor(data as Memoryblock) 15072
- 86.100.4 Constructor(mainResource as WebResourceMBS) 15073
- 86.100.6 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS, subframeArchives() as WebArchiveMBS) 15073

86.100.6 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS, subframeArchives() as WebArchiveMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constructor for WebArchive.
Notes:

Creates a new archive object with the given webresources.
The arrays can be empty.
See also:

- 86.100.3 Constructor(data as Memoryblock) 15072
- 86.100.4 Constructor(mainResource as WebResourceMBS) 15073
- 86.100.5 Constructor(mainResource as WebResourceMBS, subresources() as WebResourceMBS) 15073

86.100.7 data as Memoryblock

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The data representation of the archive.
Notes: The data returned by this method can be used to save a web archive to a file or to place a web archive on the pasteboard using WebArchivePboardType. To create a WebArchive using the returned data, use the matching constructor.

86.100.8 mainResource as WebResourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The main resource of the archive.
Notes: Nil on any error.

86.100.9 subframeArchives as WebArchiveMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The archives representing the subframes of the archive (can be empty).

86.100.10 subresources as WebResourceMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The subresource of the archive (can be empty).

86.100.11 Properties

86.100.12 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal used WebArchive object.
Notes: (Read and Write property)

86.101 class WebBackForwardListMBS

86.101.1 class WebBackForwardListMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: WebBackForwardList holds an ordered list of WebHistoryItems that comprises the back and forward lists.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Note that the methods which modify instances of this class do not cause navigation to happen in other layers of the stack; they are only for maintaining this data structure.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.101.2 Xojo Developer Magazine

- 3.6, page 6: News

86.101.3 Methods

86.101.4 addItem(item as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an entry to the list.
Notes:

The added entry is inserted immediately after the current entry.
If the current position in the list is not at the end of the list, elements in the forward list will be dropped at this point. In addition, entries may be dropped to keep the size of the list within the maximum size.

86.101.5 backItem as WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the entry right before the current entry.

86.101.6 backListCount as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the back list's current count.

86.101.7 backListWithLimit(limit as Integer) as WebHistoryItemMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a portion of the list before the current entry.
Notes:

limit: A cap on the size of the array returned.
An array of items before the current entry. The entries are in the order that they were originally visited.

86.101.8 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.101.9 containsItem(item as WebHistoryItemMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the item is part of the list.
Notes: Returns true if the item is found.

86.101.10 currentItem as WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current entry.

86.101.11 forwardItem as WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the entry right after the current entry.

86.101.12 forwardListCount as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the forward list's current count.

86.101.13 forwardListWithLimit(limit as Integer) as WebHistoryItemMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a portion of the list after the current entry.
Notes:

limit: A cap on the size of the array returned.
An array of items after the current entry, or nil if there are none. The entries are in the order that they were originally visited.

86.101.14 goBack

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Move the current pointer back to the entry before the current entry.

86.101.15 goForward

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Move the current pointer ahead to the entry after the current entry.

86.101.16 goToItem(item as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Move the current pointer to the given entry.

86.101.17 itemAtIndex(index as Integer) as WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns an entry the given distance from the current entry.
Notes:

index: Index of the desired list item relative to the current item; 0 is current item, -1 is back item, 1 is forward item, etc.

Returns the entry the given distance from the current entry. If index exceeds the limits of the list, nil is returned.

86.101.18 Properties

86.101.19 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal WebBackForwardList reference.
Notes: (Read and Write property)

86.101.20 capacity as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The list's maximum size.
Notes: (Read and Write computed property)

86.101.21 PageCacheSize as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of pages that may be cached.
Notes: (Read and Write computed property)

86.102 class WebDataSourceMBS

86.102.1 class WebDataSourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A WebDataSource represents the data associated with a web page.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

A datasource has a WebDocumentRepresentation which holds an appropriate representation of the data. WebDataSources manage a hierarchy of WebFrames. WebDataSources are typically related to a view by their containing WebFrame.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.102.2 Methods

86.102.3 addSubresource(Subresource as WebResourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a subresource to the data source.
Notes:

Adds a subresource to the data source's list of subresources.
Later, if something causes the data source to load the URL of the subresource, the data source will load the data from the subresource instead of from the network. For example, if one wants to add an image that is already downloaded to a web page, addSubresource can be called so that the data source uses the downloaded image rather than accessing the network. NOTE: If the data source already has a subresource with the same URL, addSubresource will replace it.

86.102.4 Constructor(request as NSURLRequestMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new data source based on the given request.
Notes: Handle will be non 0 on success.

86.102.5 data as MemoryBlock

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The data will be incomplete until the datasource has completely loaded.
Notes: Returns the raw data associated with the datasource. Returns nil if the datasource hasn't loaded any data.

86.102.6 initialRequest as NSURLRequestMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a reference to the original request that created the datasource.
Notes: This request will be unmodified by WebKit.

86.102.7 isLoading as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if there are any pending loads.

86.102.8 mainResource as WebResourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The main resource for this web data resource.
Notes: Nil on any error.

86.102.9 pageTitle as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns "" or the page title.

86.102.10 representation as WebDocumentRepresentationMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A representation holds a type specific representation of the datasource's data.
Notes:

The representation class is determined by mapping a MIME type to a class.
The representation is created once the MIME type of the datasource content has been determined.
Returns the representation associated with this datasource.

Returns nil if the datasource hasn't created it's representation.

86.102.11 request as NSURLRequestMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the request that was used to create this datasource.
Notes: Nil on any error.

86.102.12 response as NSURLResponseMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The response for the data source.
Notes: Nil on any error.

86.102.13 subresourceForURL(url as string) as WebResourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a subresource for a given URL.
Notes: Returns non-nil if the data source has fully downloaded a subresource with the given URL.

86.102.14 subresources as WebResourceMBS()

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns all the subresources associated with the data source.
Notes: The returned array only contains subresources that have fully downloaded.

86.102.15 textEncodingName as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns either the override encoding, as set on the WebView for this dataSource or the encoding from the response.

86.102.16 unreachableURL as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This will be non-empty only for dataSources created by calls to the WebFrame method loadAl-

ternateHTMLString.

86.102.17 webArchive as WebArchiveMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method constructs a WebArchive using the original downloaded data.
Notes:

In the case of HTML, if the current state of the document is preferred, webArchive should be called on the DOM document instead.

Returns a WebArchive representing the data source, its subresources and child frames.
Nil on any error.

86.102.18 webFrame as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the frame that represents this data source.
Notes: Nil on any error.

86.102.19 Properties

86.102.20 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal used WebDataSource reference.
Notes: (Read and Write property)

86.103 class WebDocumentRepresentationMBS

86.103.1 class WebDocumentRepresentationMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class to represent a web document representation.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.103.2 Blog Entries

- Beware of the plugin limit in Real Studio

86.103.3 Methods

86.103.4 canProvideDocumentSource as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns true if the representation can provide document source.

86.103.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.103.6 documentSource as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the textual source representation of the document.
Notes: For HTML documents this is the original HTML source.

86.103.7 title as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the title for the document.

86.103.8 Properties

86.103.9 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal used handle to a WebDocumentRepresentation.
Notes: (Read and Write property)

86.104 class WebDocumentViewMBS

86.104.1 class WebDocumentViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The view to render a webdocument.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

86.104.2 Methods

86.104.3 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: the document view content as one attributed string.
Example:

```
// save website as word document (if possible)

dim f as FolderItem
dim b as BinaryStream
dim a as NSAttributedStringMBS

a=HTMLViewer1.mainFrameMBS.frameView.documentView.attributedString

f=SpecialFolder.Desktop.Child("test.doc")
b=f.CreateBinaryFile("")
b.Write a.docFormatFromRange(0,a.length)
b.Close
```

Notes:

Works only if TextFunctionsAvailable returns true.
Returns nil on failure.

86.104.4 dataSourceUpdated(dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called when the corresponding data source has received data.

86.104.5 deselectAll

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Deselects all text in the document view.
Example:

```
HTMLViewer1.mainFrameMBS.frameView.documentView.selectAll
```

Notes: Works only if TextFunctionsAvailable returns true.

86.104.6 Image as NSImageMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Makes a screenshot of the current displayed content.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim i as NSImageMBS
dim p as string

i=theWebDocumentView.Image

p=i.PNGRepresentation

f=SpecialFolder.Desktop.Child("test.png")
b=f.CreateBinaryFile("")
b.Write p
```

Notes:

Nil on failure.
The image returned is the page completely without scrollbars, so it may be a few thousand pixels height and may not fit on a page to print.

86.104.7 layout

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called when the document view must immediately layout.
Notes: For simple views, setting the frame is a sufficient implementation of this method.

86.104.8 print

MBS MacControls Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Prints this view.
Notes: This is printing the whole view. The Cocoa framework shows print dialog and progress bar window for you.

86.104.9 SearchFor(text as string, Forward as boolean, CaseSensitive as boolean, Wrap as Boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Searches a document view for a string and highlights the string if it is found.
Example:

call myWebDocumentView.SearchFor "holiday",true,false,true

Notes:

Starts the search from the current selection. Will search across all frames.

text: The string to search for.
forward: True to search forward, False to seach backwards.
caseSensitive: True to for case-sensitive search, False for case-insensitive search.

Returns true if found, false if not found.

Works only if SearchFunctionsAvailable returns true.

86.104.10 SearchFunctionsAvailable as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the document view implements the search functions.

Notes: Not all document view classes support all functions.

86.104.11 selectAll

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Selects all text in the document view.
Example:

HTMLViewer1.mainFrameMBS.frameView.documentView.selectAll

Notes: Works only if TextFunctionsAvailable returns true.

86.104.12 selectedAttributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Attributed string that represents the current selection.
Notes: Works only if TextFunctionsAvailable returns true.

86.104.13 SelectedString as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: String that represents the current selection.
Example:

MsgBox HTMLViewer1.mainFrameMBS.frameView.documentView.SelectedString

Notes: Works only if TextFunctionsAvailable returns true.

86.104.14 setDataSource(dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called when the corresponding data source has been created.

86.104.15 setNeedsLayout(flag as boolean)

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called when WebKit has determined that the document view needs to layout.

86.104.16 stringValue as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The plain text content of this document view.
Example:

MsgBox HTMLViewer1.mainFrameMBS.frameView.documentView.stringValue

Notes:

Works only if TextFunctionsAvailable returns true.

This method should be named string, but RB does not allow that.

86.104.17 supportsTextEncoding as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: True if the document view support text encoding, false if it doesn't.
Notes: Works only if TextFunctionsAvailable returns true.

86.104.18 TextFunctionsAvailable as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the document view implements the text functions.
Notes: Not all document view subclasses support all functions.

86.105 class WebDownloadDelegateMBS

86.105.1 class WebDownloadDelegateMBS

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for receiving events about downloads running in a htmlviewer/webviewer.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The NSURLDownloadDelegate protocol defines methods that allow an object to receive informational callbacks about the asynchronous load of a download's URL request. Other delegate methods provide facilities that allow the delegate to customize the process of performing an asynchronous URL load.

Note that these delegate methods will be called on the thread that started the asynchronous load operation for the associated NSURLDownload object.

- A didBegin message will be sent to the delegate immediately upon starting the download.
- Zero or more willSendRequest messages will be sent to the delegate before any further messages are sent if it is determined that the download must redirect to a new location. The delegate can allow the redirect, modify the destination or deny the redirect.
- Zero or more didReceiveAuthenticationChallenge messages will be sent to the delegate if it is necessary to authenticate in order to download the request and NSURLDownload does not already have authenticated credentials.
- Zero or more didCancelAuthenticationChallenge messages will be sent to the delegate if NSURLDownload cancels the authentication challenge due to encountering a protocol implementation error.
- Zero or more didReceiveResponse messages will be sent to the delegate before receiving a didReceiveDataOfLength message. The only case where didReceiveResponse is not sent to a delegate is when the protocol implementation encounters an error before a response could be created.
- Zero or more didReceiveDataOfLength messages will be sent before didFinish or didFailWithError is sent to the delegate.
- Zero or one decideDestinationWithSuggestedFilename will be sent to the delegate when sufficient information has been received to determine the suggested filename for the downloaded file. The delegate will not receive this message if setDestination has already been sent to the NSURLDownload instance.
- A didCreateDestination message will be sent to the delegate when the NSURLDownload instance creates the file on disk.
- If NSURLDownload determines that the downloaded file is in a format that it is able to decode (MacBinary, Binhex or gzip), the delegate will receive a shouldDecodeSourceDataOfMIMEType. The delegate should return true to decode the data, false otherwise.

- Unless an NSURLDownload instance receives a cancel message, the delegate will receive one and only one didFinish or didFailWithError: message, but never both. In addition, once either of messages are sent, the delegate will receive no further messages for the given NSURLDownload.

Please use one delegate class per HTMLViewer (or WebViewMBS) and make sure they live about the same time. Our class keeps a reference on the WebView, so we can remove our delegate when the delegate is destroyed.

86.105.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr2
- MBS Real Studio Plugins, version 11.3pr5

86.105.3 Events

86.105.4 canAuthenticateAgainstProtectionSpace(download as NSURLDownloadMBS, protectionSpace as NSURLProtectionSpaceMBS) as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent to determine whether the delegate is able to respond to a protection space's form of authentication. (required)
Notes:

download: The download sending the message.
protectionSpace: The protection space that generates an authentication challenge.

This method is called before didReceiveAuthenticationChallenge, allowing the delegate to inspect a protection space before attempting to authenticate against it. By returning true, the delegate indicates that it can handle the form of authentication, which it does in the subsequent call to didReceiveAuthenticationChallenge. Not implementing this method is the same as returning false, in which case default authentication handling is used.

Available in Mac OS X v10.6 and later.

86.105.5 Close

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The close event.
Notes: Called when the delegate is destroyed.

86.105.6 decideDestinationWithSuggestedFilename(download as NSURLDownloadMBS, filename as string)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The delegate receives this message when download has determined a suggested filename for the downloaded file. (required)
Notes:

download: The URL download object sending the message.
filename: The suggested filename for the download.

The suggested filename is either derived from the last path component of the URL and the MIME type or, if the download was encoded, from the encoding. If the delegate wishes to modify the path, it should send setDestination to download.

The delegate will not receive this message if setDestination has already been called for the download.

Available in Mac OS X v10.2 and later.

86.105.7 DidBegin(download as NSURLDownloadMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent immediately after a download object begins a download. (required)
Notes:

download: The URL download object sending the message.

Available in Mac OS X v10.2 and later.

86.105.8 didCancelAuthenticationChallenge(download as NSURLDownloadMBS, challenge as NSURLAuthenticationChallengeMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent if an authentication challenge is canceled due to the protocol implementation encountering an error. (required)
Notes:

download: The URL download object sending the message.
challenge: The authentication challenge that caused the download object to cancel the download.

If the delegate receives this message the download will fail and the delegate will receive a didFailWithError message.

Available in Mac OS X v10.2 and later.

86.105.9 didCreateDestination(download as NSURLDownloadMBS, path as string, file as folderitem)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when the destination file is created. (required)
Notes:

download: The URL download object sending the message.
path: The path to the destination file.
file: The path to the destination file as folderitem.

Available in Mac OS X v10.2 and later.

86.105.10 didFailWithError(download as NSURLDownloadMBS, error as NSErrorMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent if the download fails or if an I/O error occurs when the file is written to disk. (required)
Notes:

download: The URL download object sending the message.
error: The error that caused the failure of the download.

Any partially downloaded file will be deleted.

Once the delegate receives this message, it will receive no further messages for download.
Available in Mac OS X v10.2 and later.

86.105.11 DidFinish(download as NSURLDownloadMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when a download object has completed downloading successfully and has written its results to disk. (required)
Notes:

download: The URL download object sending the message.

The delegate will receive no further messages for download.
Available in Mac OS X v10.2 and later.

86.105.12 didReceiveAuthenticationChallenge(download as NSURLDownloadMBS, challenge as NSURLAuthenticationChallengeMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when the URL download must authenticate a challenge in order to download the request. (required)
Notes:

download: The URL download object sending the message.
challenge: The URL authentication challenge that must be authenticated in order to download the request.

This method gives the delegate the opportunity to determine the course of action taken for the challenge: provide credentials, continue without providing credentials or cancel the authentication challenge and the download.

The delegate can determine the number of previous authentication challenges by sending the message previousFailureCount to challenge.

If the previous failure count is 0 and the value returned by proposedCredential is nil, the delegate can create a new NSURLCredential object, providing information specific to the type of credential, and send a useCredential message to challenge, passing the credential and challenge as parameters. If proposedCredential is not nil, the value is a credential from the URL or the shared credential storage that can be provided to the user as feedback.

The delegate may decide to abandon further attempts at authentication at any time by sending challenge a continueWithoutCredentialForAuthenticationChallenge or a cancelAuthenticationChallenge message. The specific action is implementation dependent.

If the delegate implements this method, the download will suspend until [challenge sender] is sent one of the following messages: useCredential, continueWithoutCredentialForAuthenticationChallenge or cancelAuthenticationChallenge.

If the delegate does not implement this method the default implementation is used. If a valid credential for the request is provided as part of the URL, or is available from the NSURLCredentialStorage the challenge is sent a useCredential:forAuthenticationChallenge with the credential. If the challenge has no credential or the credentials fail to authorize access, then continueWithoutCredentialForAuthenticationChallenge is sent to challenge sender instead.

Available in Mac OS X v10.2 and later.

86.105.13 didReceiveDataOfLength(download as NSURLDownloadMBS, length as UInt64)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent as a download object receives data incrementally. (required)
Notes:

download: The URL download object sending the message.
length: The amount of data received in this increment of the download, measured in bytes.

Available in Mac OS X v10.2 and later.

86.105.14 didReceiveResponse(download as NSURLDownloadMBS, response as NSURLResponseMBS)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when a download object has received sufficient load data to construct the NSURLResponse object for the download. (required)
Notes:

download: The URL download object sending the message.
response: The URL response object received as part of the download. response is immutable and will not be modified after this method is called.

In some rare cases, multiple responses may be received for a single download. In this case, the client should assume that each new response resets the download progress to 0 and should check the new response for the expected content length.
Available in Mac OS X v10.2 and later.

86.105.15 Open

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The open event.
Notes:

Called just after the delegate has been installed in a htmlviewer control.
This allows you to initialize your stuff before the first event is called.

86.105.16 shouldDecodeSourceDataOfMIMEType(download as NSURLDownloadMBS, encodingType as string) as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when a download object determines that the downloaded file is encoded to inquire whether the file should be automatically decoded. (required)
Notes:

download: The URL download object sending the message.
encodingType: The type of encoding used by the downloaded file. The supported encoding formats are MacBinary ("application/macbinary"), Binhex ("application/mac-binhex40") and gzip ("application/gzip").

Return true to decode the file, false otherwise.

The delegate may receive this message more than once if the file has been encoded multiple times. This method is not called if the downloaded file is not encoded.
Available in Mac OS X v10.2 and later.

86.105.17 ShouldUseCredentialStorage(download as NSURLDownloadMBS) as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent to determine whether the URL loader should consult the credential storage to authenticate the download. (required)
Notes:

connection: The connection sending the message.

This method is called before any attempt to authenticate is made. By returning false, the delegate tells the download not to consult the credential storage and makes itself responsible for providing credentials for any authentication challenges. Not implementing this method is the same as returing true. The delegate is free to consult the credential storage itself when it receives a didReceiveAuthenticationChallenge message.

Available in Mac OS X v10.6 and later.

86.105.18 willResumeWithResponse(download as NSURLDownloadMBS, response as NSURLResponseMBS, startingByte as Int64)

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when a download object has received a response from the server after attempting to resume a download. (required)
Notes:

download: The URL download object sending the message.
response: The URL response received from the server in response to an attempt to resume a download.

The location of the start of the resumed data, in bytes.
Available in Mac OS X v10.4 and later.

86.105.19 willSendRequest(download as NSURLDownloadMBS, request as NSURLRequestMBS, redirectResponse as NSURLResponseMBS) as NSURLRequestMBS

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sent when the download object determines that it must change URLs in order to continue loading a request. (required)
Notes:

download: The URL download object sending the message.
request: The proposed redirected request. The delegate should inspect the redirected request to verify that it meets its needs, and create a copy with new attributes to return to the connection if necessary.
redirectResponse: The URL response that caused the redirect. May be nil in cases where this method is not being sent as a result of involving the delegate in redirect processing.

Return the actual URL request to use in light of the redirection response. The delegate may copy and modify request as necessary to change its attributes, return request unmodified, or return nil.

If the delegate wishes to cancel the redirect, it should call the download object's cancel method. Alternatively, the delegate method can return nil to cancel the redirect, and the download will continue to process. This has special relevance in the case where redirectResponse is not nil. In this case, any data that is loaded for the download will be sent to the delegate, and the delegate will receive a downloadDidFinish: or download:didFailWithError: message, as appropriate.

The delegate can receive this message as a result of transforming a request's URL to its canonical form, or for protocol-specific reasons, such as an HTTP redirect. The delegate implementation should be prepared to receive this message multiple times.

Available in Mac OS X v10.2 and later.

86.105.20 WindowForAuthenticationSheet(download as NSURLDownloadMBS) as NSWindowMBS

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called to query the right window when automatically prompting with a sheet.

86.106 class WebFrameLoadDelegateMBS

86.106.1 class WebFrameLoadDelegateMBS

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The delegate to receive events about frames being loaded.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

A WebView's WebFrameLoadDelegate tracks the loading progress of its frames. When a data source of a frame starts to load, the data source is considered provisional". Once at least one byte is received, the data source is considered "committed". This is done so the contents of the frame will not be lost if the new data source fails to successfully load.

Please use one delegate class per HTMLViewer (or WebViewMBS) and make sure they live about the same time. Our class keeps a reference on the WebView, so we can remove our delegate when the delegate is destroyed.

86.106.2 Blog Entries

- JavaScript callback in HTMLViewer on Mac
- MBS Xojo / Real Studio Plugins, version 14.3pr8

86.106.3 Events

86.106.4 Close

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The close event.
Notes: Called when the delegate is destroyed.

86.106.5 didCancelClientRedirectForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Invoked when a client redirect is cancelled.
Notes:

Webview: The web view containing the frame.
frame: The frame being loaded.

This might happen if a frame changes locations before a pending client redirect is fired. The client redirect occurred in frame.

86.106.6 didChangeLocationWithinPageForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the scroll position in a frame has changed
Notes:

frame: The frame that scrolled

This method is called when anchors within a page have been clicked.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.7 didCommitLoadForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the load has changed from provisional to committed
Notes:

frame: The frame for which the load has committed

This method is called after the provisional data source has become the committed data source.

In some cases, a single load may be committed more than once. This happens
in the case of multipart/x-mixed-replace, also known as "server push". In this case, a single location change leads to multiple documents that are loaded in sequence. When this happens, a new commit will be sent for each document.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.8 didFailLoadWithError(WebView as WebViewMBS, ErrorString as string, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the committed load of a frame has failed
Notes:

error: The error that occurred
frame: The frame that failed to load

This method is called after a data source has committed but failed to completely load.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.9 didFailProvisionalLoadWithError(WebView as WebViewMBS, ErrorString as string, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the provisional load has failed
Notes:

error: The error that occurred
frame: The frame for which the error occurred
This method is called after the provisional data source has failed to load.
The frame will continue to display the contents of the committed data source if there is one.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.10 didFinishLoadForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the committed load of a frame has completed
Notes:

frame: The frame that finished loading

This method is called after the committed data source of a frame has successfully loaded and will only be called when all subresources such as images and stylesheets are done loading. Plug-In content and JavaScript-requested loads may occur after this method is called.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.11 didReceiveIcon(WebView as WebViewMBS, image as NSImageMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that a page icon image for a frame has been received
Notes:

image: The icon image. Also known as a "favicon".
frame: The frame for which a page icon has been received

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.12 didReceiveServerRedirectForProvisionalLoadForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that a server redirect occurred during the provisional load.
Notes:

frame: The frame for which the redirect occurred

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.13 didReceiveTitle(WebView as WebViewMBS, title as string, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the page title for a frame has been received
Notes:

title: The new page title
frame: The frame for which the title has been received

The title may update during loading; clients should be prepared for this.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.14 didStartProvisionalLoadForFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the provisional load of a frame has started
Notes:

frame: The frame for which the provisional load has started
This method is called after the provisional data source of a frame has started to load.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.15 Open

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The open event.
Notes:

Called just after the delegate has been installed in a htmlviewer control.
This allows you to initialize your stuff before the first event is called.

86.106.16 willCloseFrame(WebView as WebViewMBS, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that a pending client-side redirect has been cancelled
Notes:

frame: The frame for which the pending redirect was cancelled

A client-side redirect can be cancelled if a frame changes location before the timeout.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.17 willPerformClientRedirectToURL(WebView as WebViewMBS, URL as String, delay as Double, fireDate as Date, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that a frame will perform a client-side redirect
Notes:

frame: The frame for which the pending redirect was cancelled

URL: The URL to be redirected to
seconds: Seconds in which the redirect will happen
date: The fire date
rame: The frame on which the redirect will occur

This method can be used to continue progress feedback while a client-side redirect is pending.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.106.18 windowScriptObjectAvailable(WebView as WebViewMBS, windowScriptObject as WebScriptObjectMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies the delegate that the scripting object for a page is available.
Notes:

This is called before the page is loaded. It may be useful to allow delegates to bind native objects to the window.

windowScriptObject: The WebScriptObject for the window in the scripting environment.

If you have code in this event, return true to block the event from being sent to the next delegate. Return false to allow sending to next delegate.

86.107 class WebFrameMBS

86.107.1 class WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Every web page is represented by at least one WebFrame.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

A WebFrame has a WebFrameView and a WebDataSource.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.107.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr9
- MBS Real Studio Plugins, version 12.4pr7

86.107.3 Methods

86.107.4 childFrames as WebFrameMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The frames in the array are associated with a frame set or iframe.
Notes: Returns an array of WebFrames.

86.107.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.107.6 dataSource as WebDataSourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the committed data source.

Example:

```
// shows the page source in a msgbox:

dim w as WebFrameMBS

w=HTMLViewer1.mainFrameMBS

msgbox w.dataSource.data
```

Notes: Will return nil if the provisional data source hasn't yet been loaded.

86.107.7 DOMDocument as Variant

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The DOM represetation of this web document.
Deprecated: This item is deprecated and should no longer be used. **Notes:** The value of this variant must be an object of class DOMDocumentMBS.

86.107.8 findFrameNamed(name as string) as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method returns a frame with the given name.
Notes:

findFrameNamed returns self for _self and _current, the parent frame for _parent and the main frame for _top.
findFrameNamed returns self for _parent and _top if the receiver is the mainFrame.
findFrameNamed first searches from the current frame to all descending frames then the rest of the frames in the WebView. If still not found, findFrameNamed searches the frames of the other WebViews.

86.107.9 frameElement as Variant

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the FRAME element from the HTML source code as a DOM HTML Element object.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

nil on any error.

The value of this variant must be an object of class DOMHTMLElementMBS.

86.107.10 frameView as WebFrameViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The WebFrameView for this frame.

86.107.11 loadArchive(archive as WebArchiveMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Causes WebFrame to load a WebArchive.

86.107.12 LoadHTMLString(data as memoryblock, mime as string, encoding as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a html string.
Notes:

data: The data to use for the main page of the document.
mime: The MIME type of the data.
encoding: The encoding of the data.
url: The base URL to apply to relative URLs within the document.
See also:

- 86.107.13 LoadHTMLString(text as string, url as string) 15107

86.107.13 LoadHTMLString(text as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a html string.
Notes:

text: The string to use for the main page of the document.
url: The base URL to apply to relative URLs within the document.
See also:

- 86.107.12 LoadHTMLString(data as memoryblock, mime as string, encoding as string, url as string) 15107

86.107.14 LoadURL(url as string)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the given URL.

See also:

- 86.107.15 LoadURL(url as string, CachePolicy as Integer, TimeOut as Double) 15108

86.107.15 LoadURL(url as string, CachePolicy as Integer, TimeOut as Double)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the url.
Notes:

The timeout interval is in seconds.

Constants for the CachePolicy parameter:

const UseProtocolCachePolicy	= 0	Specifies that the caching logic defined in the protocol implementation, if any, is used for a particular URL load request. This is the default policy for URL load requests.
const ReloadIgnoringCacheData	= 1	Specifies that the data for the URL load should be loaded from the originating source. No existing cache data should be used to satisfy a URL load request.
const ReturnCacheDataElseLoad	= 2	Specifies that the existing cached data should be used to satisfy the request, regardless of its age or expiration date. If there is no existing data in the cache corresponding the request, the data is loaded from the originating source.
const ReturnCacheDataDontLoad	= 3	Specifies that the existing cache data should be used to satisfy a request, regardless of its age or expiration date. If there is no existing data in the cache corresponding to a URL load request, no attempt is made to load the data from the originating source, and the load is considered to have failed. This constant specifies a behavior that is similar to an "offline" mode.

See also:

- 86.107.14 LoadURL(url as string) 15107

86.107.16 name as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The frame name.

86.107.17 parentFrame as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The frame containing this frame, or nil if this is a top level frame.
Notes: Nil on any error.

86.107.18 provisionalDataSource as WebDataSourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Will return the provisional data source.
Notes: The provisional data source will be nil if no data source has been set on the frame, or the data source has successfully transitioned to the committed data source.

86.107.19 reload

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reloads the frame.

86.107.20 reloadFromOrigin

MBS MacControls Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs an end-to-end revalidation using cache-validating conditionals if possible.
Notes:

End-to-end reload may be necessary if the cache entry has become corrupted for some reason.

Available in OS X v10.6 and later. So this raises exception on older OS X versions. In that case, please catch exception and call reload.

86.107.21 stopLoading

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Stop any pending loads on the frame's data source, and its children.

86.107.22 webView as WebViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the WebView for the document that includes this frame.

86.107.23 Properties

86.107.24 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal used reference to a WebFrame object.
Notes: (Read and Write property)

86.108 class WebFrameViewMBS

86.108.1 class WebFrameViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class to display a webframe.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

86.108.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.2
- MBS Xojo Plugins, version 18.2pr5

86.108.3 Methods

86.108.4 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new web frame view with size 100/100 and position 0/0
Example:

```
dim t as new WebFrameViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 86.108.5 Constructor(Handle as Integer) 15112
- 86.108.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15112

86.108.5 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given WebFrameView handle.
Example:

```
dim t as new WebFrameViewMBS(0, 0, 100, 100)
dim v as new WebFrameViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a WebFrameView and the plugin retains this handle.
See also:

- 86.108.4 Constructor 15111
- 86.108.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15112

86.108.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new button with the given size and position.
Example:

```
dim x as new WebFrameViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 86.108.4 Constructor 15111
- 86.108.5 Constructor(Handle as Integer) 15112

86.108.7 printDocumentView

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called by the host application when the WebFrameView returns true from documentViewShouldHandlePrint.

86.108.8 printOperationWithPrintInfo(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a print operation set up to print this frame.
Notes:

Returns a newly created print operation object (NSPrintOperationMBS).
printInfo must be a NSPrintInfoMBS object.

86.108.9 Properties

86.108.10 allowsScrolling as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the WebFrameView allows its document to be scrolled.
Notes:

True to allow the document to be scrolled, false to disallow scrolling.
(Read and Write property)

86.108.11 canPrintHeadersAndFooters as Boolean

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this frame can print headers and footers.
Notes: (Read only property)

86.108.12 documentView as WebDocumentViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the WebFrameView's document subview.
Notes:

Returns nil on error or the subview that renders the WebFrameView's contents.
(Read only property)

86.108.13 documentViewShouldHandlePrint as Boolean

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Called by the host application before it initializes and runs a print operation.

Notes:

If false is returned, the host application will abort its print operation and call printDocumentView on the WebFrameView. The document view is then expected to run its own print operation.
If true is returned, the host application's print operation will continue as normal.
(Read only property)

86.108.14 webFrame as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the WebFrame associated with this WebFrameView.
Notes: (Read only property)

86.109 class WebHistoryItemMBS

86.109.1 class WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: WebHistoryItems are created by WebKit to represent pages visited.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The WebBackForwardList and WebHistory classes both use WebHistoryItems to represent pages visited. With the exception of the displayTitle, the properties of WebHistoryItems are set by WebKit. WebHistoryItems are normally never created directly.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.109.2 Xojo Developer Magazine

- 3.6, page 6: News

86.109.3 Methods

86.109.4 Constructor(URLstring as String, title as string, lastVisited as date)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Constructor for a new history item with the given values.
Example:

```
dim w as WebHistoryItemMBS
dim d as new date

w=new WebHistoryItemMBS("http://www.apple.com","Apple Inc.",d)
```

Notes:

WebHistoryItems are normally created for you by the WebKit.
You may use this method to prepopulate a WebBackForwardList, or create 'artificial' items to add to a WebBackForwardList. When first initialized the URLString and originalURLString will be the same.
See also:

- 86.109.5 Constructor(URLstring as String, title as string, lastVisited as Double) 15116

86.109.5 Constructor(URLstring as String, title as string, lastVisited as Double)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Constructor for a new history item with the given values.
Notes:

WebHistoryItems are normally created for you by the WebKit.
You may use this method to prepopulate a WebBackForwardList, or create 'artificial' items to add to a WebBackForwardList. When first initialized the URLString and originalURLString will be the same.
See also:

- 86.109.4 Constructor(URLstring as String, title as string, lastVisited as date) 15115

86.109.6 icon as NSImageMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The favorite icon of the page represented by this item.
Notes: This icon returned will be determined by the WebKit.

86.109.7 lastVisited as date

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last time the page represented by this item was visited.
Notes: Nil on any error.

86.109.8 lastVisitedTimeInterval as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The last time the page represented by this item was visited.
Notes: The interval is since the reference date as determined by NSDate. This value is normally set by the WebKit.

86.109.9 originalURLString as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string representation of the originial URL of this item.
Notes: This value is normally set by the WebKit.

86.109.10 title as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The title of the page represented by this item.
Notes: This title cannot be changed by the client. This value is normally set by the WebKit when a page title for the item is received.

86.109.11 URLString as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string representation of the URL represented by this item.
Notes:

The URLString may be different than the originalURLString if the page redirected to a new location. This value is normally set by the WebKit.
The value is the string corresponding to the final URL of this item.

86.109.12 Properties

86.109.13 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal used WebHistoryItem reference.
Notes: (Read and Write property)

86.109.14 alternateTitle as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A title that may be used by the client to display this item.
Notes: (Read and Write computed property)

86.110 class WebHistoryMBS

86.110.1 class WebHistoryMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: WebHistory is used to track pages that have been loaded by WebKit.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.110.2 Xojo Developer Magazine

- 3.6, page 6: News

86.110.3 Methods

86.110.4 addItem(item as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an item to the history.

86.110.5 addItems(items() as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds all items in the array to the history.

86.110.6 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.110.7 itemForURL(url as string) as WebHistoryItemMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get an item for a specific URL.
Notes:

URL: The URL of the history item to search for.
Returns an item matching the URL or nil on any error.

86.110.8 loadFromURL(file as folderitem, byref description as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a web history from the given file.
Notes:

Returns true if successful, false otherwise.
description will be set to the error description on return in case of an error.
See also:

- 86.110.9 loadFromURL(url as string, byref description as string) as boolean 15119

86.110.9 loadFromURL(url as string, byref description as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a web history from the given URL.
Notes:

Returns true if successful, false otherwise.
description will be set to the error description on return in case of an error.
See also:

- 86.110.8 loadFromURL(file as folderitem, byref description as string) as boolean 15119

86.110.10 orderedItemsLastVisitedOnDay(day as date) as WebHistoryItemMBS()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get an array of WebHistoryItem that were last visited on the day represented by the specified date, ordered from most recent to oldest.
Notes: Returns an array of WebHistoryItems last visited on the indicated day or nil.

86.110.11 orderedLastVisitedDays as date()

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get an array of dates, each one representing a unique day that contains one or more history items, ordered from most recent to oldest.

86.110.12 removeAllItems

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes all items from this history.

86.110.13 removeItem(item as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes a WebHistoryItem from the WebHistory.

86.110.14 removeItems(items() as WebHistoryItemMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes an array of WebHistoryItems from the WebHistory.

86.110.15 saveToURL(file as folderitem, byref description as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Save history to file.
Notes:

It is the client's responsibility to call this at appropriate times.
Returns true if successful, false otherwise.
description will be set to the error description on return in case of an error.
See also:

- 86.110.16 saveToURL(url as string, byref description as string) as boolean 15120

86.110.16 saveToURL(url as string, byref description as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Save history to URL.
Notes:

It is the client's responsibility to call this at appropriate times.
Returns true if successful, false otherwise.
description will be set to the error description on return in case of an error.
See also:

- 86.110.15 saveToURL(file as folderitem, byref description as string) as boolean 15120

86.110.17 Properties

86.110.18 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal used WebHistory reference.
Notes: (Read and Write property)

86.110.19 historyAgeInDaysLimit as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum number of days to be read from stored history.
Notes: (Read and Write computed property)

86.110.20 historyItemLimit as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum number of items that will be stored by the WebHistory.
Notes: (Read and Write computed property)

86.110.21 optionalSharedHistory as WebHistoryMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A shared WebHistory instance initialized with the default history file.
Notes:

Nil on any error.
If you set it, don't set it to nil.
(Read and Write computed property)

86.111 class WebOpenPanelResultListenerMBS

86.111.1 class WebOpenPanelResultListenerMBS

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** WebView user interface delegates that implement the runOpenPanelForFileButtonWithResultListener method use the methods defined in this protocol to communicate with the listener object.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The methods allow the delegate to send a cancel message, or set the selected file name.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.111.2 Methods

86.111.3 cancel

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Invoked when a file open operation was cancelled.

86.111.4 chooseFilename(file as folderitem)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Handles the results of a file open panel.
Notes: This method is invoked when a file was selected in a file open panel.
See also:

- 86.111.5 chooseFilename(filename as string) 15122

86.111.5 chooseFilename(filename as string)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Handles the results of a file open panel.
Notes: This method is invoked when a file was selected in a file open panel.
See also:

- 86.111.4 chooseFilename(file as folderitem) 15122

86.111.6 chooseFilenames(filenames() as string)

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Handles the results of a file open panel.
Notes: This method is invoked when a file was selected in a file open panel.
See also:

- 86.111.7 chooseFilenames(files() as folderitem) 15123

86.111.7 chooseFilenames(files() as folderitem)

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Handles the results of a file open panel.
Notes: This method is invoked when a file was selected in a file open panel.
See also:

- 86.111.6 chooseFilenames(filenames() as string) 15123

86.111.8 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.111.9 Properties

86.111.10 allowMultipleFiles as Boolean

MBS MacControls Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether multiple selection is allowed.
Notes: (Read only property)

86.111.11 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal reference.
Notes: (Read and Write property)

86.112 class WebPolicyDecisionListenerMBS

86.112.1 class WebPolicyDecisionListenerMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This protocol is used to call back with the results of a policy decision.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

This provides the ability to make these decisions asyncrhonously, which means the decision can be made by prompting with a sheet, for example.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.112.2 Methods

86.112.3 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.112.4 download

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Download this resource.
Notes:

Download the resource instead of displaying it.

This method is more than just a convenience because it allows an in-progress navigation to be converted to a download based on content type, without having to stop and restart the load.

86.112.5 ignore

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Ignore this resource.

Notes:

Do nothing (but the client may choose to handle the request itself)

A policy of ignore prevents WebKit from doing anything further with the load, however, the client is still free to handle the request in some other way, such as opening a new window, opening a new window behind the current one, opening the URL in an external app, revealing the location in Finder if a file URL, etc.

86.112.6 use

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Use the resource.
Notes:

If there remain more policy decisions to be made, then the next policy delegate method gets to decide. This will be either the next navigation policy delegate if there is a redirect, or the content policy delegate. If there are no more policy decisions to be made, the resource will be displayed inline if possible.

If there is no view available to display the resource inline, then unableToImplementPolicyWithError will be called with an appropriate error.

If a new window is going to be created for this navigation as a result of frame targetting, then it will be created once you call this method.

86.112.7 Properties

86.112.8 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal used reference to the WebPolicyDecisionListener object.
Notes: (Read and Write property)

86.113 class WebPolicyDelegateMBS

86.113.1 class WebPolicyDelegateMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to decide policies for webkit.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

While loading a URL, WebKit asks the WebPolicyDelegate for policies that determine the action of what to do with the URL or the data that the URL represents. Typically, the policy handler methods are called in this order:

decidePolicyForNewWindowAction (at most once)
decidePolicyForNavigationAction (zero or more times)
decidePolicyForMIMEType:request (zero or more times)

New window policy is always checked. Navigation policy is checked for the initial load and every redirect unless blocked by an earlier policy. Content policy is checked once the content type is known, unless an earlier policy prevented it.

In rare cases, content policy might be checked more than once. This occurs when loading a "multipart/x-mixed-replace" document, also known as "server push". In this case, multiple documents come in one navigation, with each replacing the last. In this case, conent policy will be checked for each one.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Please use one delegate class per HTMLViewer (or WebViewMBS) and make sure they live about the same time. Our class keeps a reference on the WebView, so we can remove our delegate when the delegate is destroyed.

86.113.2 Events

86.113.3 Close

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The close event.
Notes: Called when the delegate is destroyed.

86.113.4 decidePolicyForMIMEType(type as string,request as NSURLRequestMBS, frame as WebFrameMBS, decisionListener as WebPolicyDecisionListenerMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the policy for content which has been partially loaded.
Notes:

Sent after didStartProvisionalLoadForFrame is sent on the WebFrameLoadDelegate.

type: MIME type for the resource.
request: A NSURLRequest for the partially loaded content.
frame: The frame which is loading the URL.
decisionListener: The object to call when the decision is made

Return true to avoid the default delegate to handle this request. Call listener methods to decide what to do.
See also MimeTypeToFileExtensionMBS function.

86.113.5 decidePolicyForNavigationAction(request as NSURLRequestMBS, frame as WebFrameMBS, decisionListener as WebPolicyDecisionListenerMBS, NavigationType as Integer, ModifierFlags as Integer, OriginalURL as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This method is called to decide what to do with a proposed navigation.
Notes:

request: The request for the proposed navigation
frame: The WebFrame in which the navigation is happening
decisionListener: The object to call when the decision is made

This method will be called before loading starts, and on every redirect.

Values for NavigationType:

const WebNavigationTypeLinkClicked	= 0	A link with an href was clicked.
const WebNavigationTypeFormSubmitted	= 1	A form was submitted.
const WebNavigationTypeBackForward	= 2	The user chose back or forward.
const WebNavigationTypeReload	= 3	The User hit the reload button.
const WebNavigationTypeFormResubmitted	= 4	A form was resubmitted (by virtue of doing back, forward or reload).
const WebNavigationTypeOther	= 5	Navigation is taking place for some other reason.

Return true to avoid the default delegate to handle this request. Call listener methods to decide what to do.

86.113.6 decidePolicyForNewWindowAction(request as NSURLRequestMBS, framename as string, decisionListener as WebPolicyDecisionListenerMBS, NavigationType as Integer, ModifierFlags as Integer, OriginalURL as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This method is called to decide what to do with an targetted nagivation that would open a new window.
Notes:

request The request for the proposed navigation
frame The frame in which the navigation is taking place
decisionListener The object to call when the decision is made

This method is provided so that modified clicks on a targetted link which opens a new frame can prevent the new window from being opened if they decide to do something else, like download or present the new frame in a specialized way.

If this method picks a policy of Use, the new window will be opened, and decidePolicyForNavigationAction will be called with a WebNavigationType of WebNavigationTypeOther in its action. This is to avoid possible confusion about the modifiers.

Values for NavigationType:

const WebNavigationTypeLinkClicked	= 0	A link with an href was clicked.
const WebNavigationTypeFormSubmitted	= 1	A form was submitted.
const WebNavigationTypeBackForward	= 2	The user chose back or forward.
const WebNavigationTypeReload	= 3	The User hit the reload button.
const WebNavigationTypeFormResubmitted	= 4	A form was resubmitted (by virtue of doing back, forward or reload).
const WebNavigationTypeOther	= 5	Navigation is taking place for some other reason.

Return true to avoid the default delegate to handle this request. Call listener methods to decide what to do.

86.113.7 Open

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The open event.
Notes:

Called just after the delegate has been installed in a htmlviewer control.
This allows you to initialize your stuff before the first event is called.

86.113.8 unableToImplementPolicyWithError(errorString as string, frame as WebFrameMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a WebPolicy could not be implemented.
Notes:

It is up to the client to display appropriate feedback.

errorString: The error that caused the policy to not be implemented.
frame: The frame in which the policy could not be implemented.

Return true to avoid the default delegate to handle this request.

86.114 class WebPreferencesMBS

86.114.1 class WebPreferencesMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for handling webkit preferences.
Example:

MsgBox WebPreferencesMBS.standardPreferences.serifFontFamily

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.114.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4

86.114.3 Methods

86.114.4 Constructor(identifier as String)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new WebPreferences object with loading the values stored with the given identifier.
Example:

```
dim w as new WebPreferencesMBS("de.monkeybreadsoftware.mytest")
```

Notes: On success handle is not zero.

86.114.5 standardPreferences as WebPreferencesMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the default preferences.
Example:

MsgBox WebPreferencesMBS.standardPreferences.identifier

Notes: nil on any error.

86.114.6 Properties

86.114.7 allowsAnimatedImageLooping as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether animated image files are allowed to loop.
Example:

HTMLViewer1.preferencesMBS.allowsAnimatedImageLooping = false

Notes: (Read and Write property)

86.114.8 allowsAnimatedImages as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether to allow animated images.
Example:

HTMLViewer1.preferencesMBS.allowsAnimatedImages = false

Notes:

e.g. GIF images.
(Read and Write property)

86.114.9 arePlugInsEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether plugins are enabled.
Example:

HTMLViewer1.preferencesMBS.arePlugInsEnabled=False

Notes: (Read and Write property)

86.114.10 autosaves as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether preferences are saved automatically.
Example:

HTMLViewer1.preferencesMBS.autosaves = false

Notes:

If autosave preferences is true the settings represented by WebPreferences will be stored in the user defaults database.
(Read and Write property)

86.114.11 cacheModel as Integer

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function:

The usage model according to which WebKit determines its
caching behavior.
Example:

HTMLViewer1.preferencesMBS.cacheModel = WebPreferencesMBS.WebCacheModelDocumentViewer

Notes:

Specifies a usage model for a WebView, which WebKit will use to
determine its caching behavior.

If necessary, WebKit will prune its caches to match cacheModel if you set the value.

Research indicates that users tend to browse within clusters of
documents that hold resources in common, and to revisit previously visited
documents. WebKit and the frameworks below it include built-in caches that take
advantage of these patterns, substantially improving document load speed in
browsing situations. The WebKit cache model controls the behaviors of all of
these caches, including NSURLCache and the various WebCore caches.

Applications with a browsing interface can improve document load speed substantially by specifying WebCacheModelDocumentBrowser. Applications without a browsing interface can reduce memory usage substantially by specifying WebCacheModelDocumentViewer.

If cacheModel is not set, WebKit will select a cache model automatically.
(Read and Write property)

86.114.12 cursiveFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the cursive font family.
Example:

```
MsgBox HTMLViewer1.preferencesMBS.cursiveFontFamily
```

Notes: (Read and Write property)

86.114.13 databasesEnabled as Boolean

MBS MacControls Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether databases are enabled.
Example:

```
dim p as WebPreferencesMBS = HTMLViewer1.preferencesMBS

MsgBox str(p.databasesEnabled)
```

Notes:

This is a property defined in WebKit, but not in Apple's headers, so please wrap in try/catch to catch NSExceptionMBS if method is not implemented in older Webkit versions.
(Read and Write property)

86.114.14 defaultFixedFontSize as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default font size for fixed fonts.
Example:

MsgBox str(WebPreferencesMBS.standardPreferences.defaultFixedFontSize)

Notes: (Read and Write property)

86.114.15 defaultFontSize as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default font size for fonts.
Example:

MsgBox str(HTMLViewer1.preferencesMBS.defaultFontSize)

Notes:

(for non fixed fonts)
(Read and Write property)

86.114.16 defaultTextEncodingName as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the default text encoding.
Example:

MsgBox HTMLViewer1.preferencesMBS.defaultTextEncodingName

Notes: (Read and Write property)

86.114.17 fantasyFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the fantasy font family.
Example:

MsgBox HTMLViewer1.preferencesMBS.fantasyFontFamily

Notes: (Read and Write property)

86.114.18 fixedFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the fixed font family.
Example:

MsgBox HTMLViewer1.preferencesMBS.fixedFontFamily

Notes: (Read and Write property)

86.114.19 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal used reference to the WebPreferences object.
Example:

MsgBox str(WebPreferencesMBS.standardPreferences.Handle)

Notes: (Read and Write property)

86.114.20 identifier as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The identifier for this WebPreferences.
Example:

MsgBox HTMLViewer1.preferencesMBS.identifier

Notes: (Read only property)

86.114.21 isJavaEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether java is enabled.
Example:

HTMLViewer1.preferencesMBS.isJavaEnabled = false

Notes: (Read and Write property)

86.114.22 isJavaScriptEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether Javascript is enabled.
Example:

HTMLViewer1.preferencesMBS.isJavaScriptEnabled = false

Notes: (Read and Write property)

86.114.23 javaScriptCanOpenWindowsAutomatically as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether javascript is allowed to open windows automatically.
Example:

HTMLViewer1.preferencesMBS.javaScriptCanOpenWindowsAutomatically = false

Notes: (Read and Write property)

86.114.24 loadsImagesAutomatically as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether images are loaded automatically.
Example:

HTMLViewer1.preferencesMBS.loadsImagesAutomatically = false

Notes: (Read and Write property)

86.114.25 localStorageDatabasePath as String

MBS MacControls Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The local path for local storage.
Example:

```
// create folder
dim f as FolderItem = SpecialFolder.Desktop.Child("databases")
f.CreateAsFolder

// set it
dim p as WebPreferencesMBS = HTMLViewer1.preferencesMBS
p.localStorageDatabasePath = f.NativePath
p.localStorageEnabled = true
```

Notes:

This is a property defined in WebKit, but not in Apple's headers, so please wrap in try/catch to catch NSExceptionMBS if method is not implemented in older Webkit versions.
(Read and Write property)

86.114.26 localStorageEnabled as Boolean

MBS MacControls Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether local storage is enabled.
Example:

```
dim p as WebPreferencesMBS = HTMLViewer1.preferencesMBS

MsgBox str(p.localStorageEnabled)
```

Notes:

This is a property defined in WebKit, but not in Apple's headers, so please wrap in try/catch to catch NSExceptionMBS if method is not implemented in older Webkit versions.
(Read and Write property)

86.114.27 minimumFontSize as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum font size.
Example:

MsgBox str(HTMLViewer1.preferencesMBS.minimumFontSize)

Notes: (Read and Write property)

86.114.28 minimumLogicalFontSize as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum logical font size.
Example:

MsgBox str(HTMLViewer1.preferencesMBS.minimumLogicalFontSize)

Notes: (Read and Write property)

86.114.29 privateBrowsingEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether private browsing is enabled.
Example:

HTMLViewer1.preferencesMBS.privateBrowsingEnabled = false

Notes:

If private browsing is enabled, WebKit will not store information about sites the user visits.
(Read and Write property)

86.114.30 sansSerifFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the sans serif font family.
Example:

MsgBox HTMLViewer1.preferencesMBS.sansSerifFontFamily

Notes: (Read and Write property)

86.114.31 serifFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the serif font family.
Example:

MsgBox HTMLViewer1.preferencesMBS.serifFontFamily

Notes: (Read and Write property)

86.114.32 shouldPrintBackgrounds as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether webkit draws background on printing.
Example:

HTMLViewer1.preferencesMBS.shouldPrintBackgrounds = false

Notes: (Read and Write property)

86.114.33 standardFontFamily as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the standard font family.
Example:

MsgBox HTMLViewer1.preferencesMBS.standardFontFamily

Notes: (Read and Write property)

86.114.34 suppressesIncrementalRendering as boolean

MBS MacControls Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: True if the WebView suppresses incremental rendering.
Notes:

Available in Mac OS X 10.8 or newer.
(Read and Write property)

86.114.35 tabsToLinks as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the tab key will move focus on links.
Example:

HTMLViewer1.preferencesMBS.tabsToLinks = false

Notes:

If tabsToLinks is true, the tab key will focus links and form controls.
The option key temporarily reverses this preference.
(Read and Write property)

86.114.36 textAreasAreResizable as Boolean

MBS MacControls Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether text areas are resizable.
Example:

```
dim p as WebPreferencesMBS = HTMLViewer1.preferencesMBS

MsgBox str(p.textAreasAreResizable)
```

Notes:

This is a property defined in WebKit, but not in Apple's headers, so please wrap in try/catch to catch NSExceptionMBS if method is not implemented in older Webkit versions.
(Read and Write property)

86.114.37 userStyleSheetEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether an user style sheet is enabled.
Example:

HTMLViewer1.preferencesMBS.userStyleSheetEnabled = false

Notes: (Read and Write property)

86.114.38 userStyleSheetLocation as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The location of the user style sheet.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.css")
HTMLViewer1.preferencesMBS.userStyleSheetLocation = f.UnixPathMBS
```

Notes: (Read and Write property)

86.114.39 usesPageCache as boolean

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the receiver should use the shared page cache.
Example:

```
HTMLViewer1.preferencesMBS.usesPageCache = false
```

Notes:

Pages are cached as they are added to a WebBackForwardList, and removed from the cache as they are removed from a WebBackForwardList. Because the page cache is global, caching a page in one WebBackForwardList may cause a page in another WebBackForwardList to be evicted from the cache.
(Read and Write property)

86.114.40 Constants

86.114.41 WebCacheModelDocumentBrowser=1

MBS MacControls Plugin, Plugin Version: 9.4. **Function:**

One of the constants for the usage model for a WebView, which WebKit will use to determine its caching behavior.
Example:

```
HTMLViewer1.preferencesMBS.cacheModel = WebPreferencesMBS.WebCacheModelDocumentBrowser
```

Notes:

Appropriate for a WebView displaying a browsable series of documents with a UI for navigating between them – for example, a reference materials browser or a website designer. The WebView will cache a reasonable number of resources and previously viewed documents in memory and/or on disk.

Examples: Dictionary, Help Viewer, Coda.

86.114.42 WebCacheModelDocumentViewer=0

MBS MacControls Plugin, Plugin Version: 9.4. **Function:**

One of the constants for the usage model for a WebView, which WebKit will use to determine its caching behavior.
Example:

HTMLViewer1.preferencesMBS.cacheModel = WebPreferencesMBS.WebCacheModelDocumentViewer

Notes:

Appropriate for a WebView displaying a fixed document – like a splash screen, a chat document, or a word processing document – with no UI for navigation. The WebView will behave like any other view, releasing resources when they are no longer referenced. Remote resources, if any, will be cached to disk. This is the most memory-efficient setting.

Examples: iChat, Mail, TextMate, Growl.

86.114.43 WebCacheModelPrimaryWebBrowser=2

MBS MacControls Plugin, Plugin Version: 9.4. **Function:**

One of the constants for the usage model for a WebView, which WebKit will use to determine its caching behavior.
Example:

HTMLViewer1.preferencesMBS.cacheModel = WebPreferencesMBS.WebCacheModelPrimaryWebBrowser

Notes:

Appropriate for a WebView in the application that acts as the user's primary web browser. The WebView will cache a very large number of resources and previously viewed documents in memory and/or on disk.

Examples: Safari, OmniWeb, Shiira.

86.115 class WebPrintMBS

86.115.1 class WebPrintMBS

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class for printing webviews.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Can be used with HTMLViewer control and the WebViewMBS class.
With the WebviewMBS class you can render to PDF even in console applications.

86.115.2 Methods

86.115.3 Constructor(view as htmlviewer)

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The constructor to attach this class to a htmlviewer.
See also:

- 86.115.4 Constructor(WebViewHandle as Integer) 15144

86.115.4 Constructor(WebViewHandle as Integer)

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to attach this class to a webview.
See also:

- 86.115.3 Constructor(view as htmlviewer) 15144

86.115.5 GetPageFormat as string

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The current page format settings as a string.
Notes:

Can be used to save current printer settings to a preferences file.
Value is an empty string until a page format is defined.

86.115.6 PageSetup as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Shows a page setup sheet.
Notes:

If sheetTarget is nil a modal dialog is shown and the function returns after the user clicked one of the buttons to close the dialog.
If sheetTarget is a valid window reference this window will show a sheet and the function returns while the sheet waits for mouseclicks.

Returns true on success.

86.115.7 Print as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Prints the web content without a dialog.
Notes:

If PDFFile is not nil, printing is redirected to a PDF file.
Returns true on success.

86.115.8 PrintDialog as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Show the print sheet/dialog and allows the user to print the web content.
Notes:

If sheetTarget is nil a modal dialog is shown and the function returns after the user clicked one of the buttons to close the dialog.
If sheetTarget is a valid window reference this window will show a sheet and the function returns while the sheet waits for mouseclicks.

If PDFFile is not nil, printing is redirected to a PDF file.

Returns true on success.

86.115.9 PrintingEnd

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Releases memory from the printing code.

Notes: First call PrintingStart with your page size, then call several times PrintingPage and finally call PrintingEnd.

86.115.10 PrintingPage(index as UInt32) as Memoryblock

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the given page as string.
Notes:

On any error the function returns nil.
The string contains an one page PDF document.

First call PrintingStart with your page size, then call several times PrintingPage and finally call PrintingEnd.

86.115.11 PrintingStart(width as Double, height as Double) as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts the printing code.
Example:

```
dim i,c as Integer
dim f as FolderItem
dim s as string
dim b as BinaryStream
dim web as new WebPrintMBS(HTMLViewer1)

c=web.PrintingStart(800,600)
i=0
while i<c
s=web.PrintingPage(i)

f=SpecialFolder.Desktop.Child("Page "+str(i+1)+".pdf")
b=f.CreateBinaryFile("")
if b<>nil then
b.Write s
b.Close
end if
i=i+1
wend

web.PrintingEnd

MsgBox str(c)+" pages printed."
```

Notes:

First call PrintingStart with your page size, then call several times PrintingPage and finally call PrintingEnd.

Only one print job can be processed at the same time as they use all the same global properties.

Returns the number of pages to be printed.

86.115.12 SetPageFormat(data as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads page format settings from a string.
Notes: Returns true on success and false on failure.

86.115.13 Properties

86.115.14 DialogOpen as Boolean

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether a printing sheet is visible.
Notes:

Used with the PageSetup and the PrintDialog methods.
Returns true when a dialog is visible and false when not.
(Read and Write property)

86.115.15 HTMLViewer as HTMLViewer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The htmlviewer control this webprint object is attached to.
Notes: (Read only property)

86.115.16 PageFormatHandle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for the page format.
Notes: (Read only property)

86.115.17 PDFFile as Folderitem

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The pdf file where data is written to.
Notes:

If not nil, the printing goes to this file instead of the printer.
(Read and Write property)

86.115.18 PrintSessionHandle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for the print session.
Notes: (Read only property)

86.115.19 PrintSettingsHandle as Integer

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for the print settings.
Notes: (Read only property)

86.115.20 SheetTarget as Window

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The sheet parent window.
Notes:

If you set this property to a window, the dialogs will be sheets and attached to the window. If you set it to nil, the dialogs will be modal.
(Read and Write property)

86.115.21 Events

86.115.22 PageSetupDialogDone(accepted as boolean)

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event to notify you about the result from the page format dialog.

86.115.23 PrintDialogDone(accepted as boolean)

MBS MacControls Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event to notify you about the result from the print dialog.

86.116 class WebResourceLoadDelegateMBS

86.116.1 class WebResourceLoadDelegateMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to receive informations about resource loading.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

Implementors of this protocol will receive messages indicating that a resource is about to be loaded, data has been received for a resource, an error has been received for a resource, and completion of a resource load.

Implementors are also given the opportunity to mutate requests before they are sent.
The various progress methods of this protocol all receive an identifier as the parameter. This identifier can be used to track messages associated with a single resource. For example, a single resource may generate multiple willSendRequest calls as it's URL is redirected.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Please use one delegate class per HTMLViewer (or WebViewMBS) and make sure they live about the same time. Our class keeps a reference on the WebView, so we can remove our delegate when the delegate is destroyed.

86.116.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr3
- MBS Real Studio Plugins, version 13.0pr9

86.116.3 Events

86.116.4 Close

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The close event.
Notes: Called when the delegate is destroyed.

86.116.5 didCancelAuthenticationChallenge(id as Variant, challenge as NSURLAuthenticationChallengeMBS, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Cancel authentication for a given request.

86.116.6 didFailLoadingWithError(id as Variant, errorString as string, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called after a load has failed to load due to an error.
Notes:

id: An identifier that can be used to track the progress of a resource load across multiple call backs.
errorString: The error associated with this load.
dataSource: The dataSource that initiated the load.

86.116.7 didFinishLoadingFromDataSource(id as Variant, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called after a load has successfully completed.
Notes:

id: An identifier that can be used to track the progress of a resource load across multiple call backs.
dataSource: The dataSource that initiated the load.

86.116.8 didReceiveAuthenticationChallenge(id as Variant, challenge as NSURLAuthenticationChallengeMBS, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Start authentication for the resource, providing a challenge
Notes:

Call useCredential, continueWithoutCredential or cancel on the challenge when done.

If you do not implement this event, WebKit will handle authentication automatically by prompting with a sheet on the window that the WebView is associated with.

86.116.9 didReceiveContentLength(id as Variant, length as Integer, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Multiple of these messages may be sent as data arrives.
Notes:

id: An identifier that can be used to track the progress of a resource load across multiple events.
length: The amount of new data received. This is not the total amount, just the new amount received.
dataSource: The dataSource that initiated the load.

86.116.10 didReceiveResponse(id as Variant, response as NSURLResponseMBS, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called after a response has been received for this load.
Notes:

id: An identifier that can be used to track the progress of a resource load across multiple call backs.
response: The response for the request.
dataSource: The dataSource that initiated the load.

In some rare cases, multiple responses may be received for a single load.
This occurs with multipart/x-mixed-replace, or "server push". In this case, the client should assume that each new response resets progress so far for the resource back to 0, and should check the new response for the expected content length.

86.116.11 identifierForInitialRequest(request as NSURLRequestMBS, dataSource as WebDataSourceMBS) as Variant

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: An implementor of WebResourceLoadDelegate should provide an identifier that can be used to track the load of a single resource.
Notes:

This identifier will be passed as the first argument for all of the other WebResourceLoadDelegate methods. The identifier is useful to track changes to a resources request, which will be provided by one or more calls to willSendRequest:redirectResponse.

Return an identifier that will be passed back to the implementor for each event.

86.116.12 Open

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The open event.
Notes:

Called just after the delegate has been installed in a htmlviewer control.
This allows you to initialize your stuff before the first event is called.

86.116.13 plugInFailedWithError(errorString as string, dataSource as WebDataSourceMBS)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when a plug-in is not found, fails to load or is not available for some reason.
Notes: errorString is the localized description.

86.116.14 willSendRequest(id as Variant, request as NSURLRequestMBS, redirectResponse as NSURLResponseMBS, dataSource as WebDataSourceMBS) as NSURLRequestMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called before a load is initiated.
Notes:

The request may be modified as necessary by the receiver.

id: An identifier that can be used to track the progress of a resource load across multiple call backs.
request: The request about to be sent.
redirectResponse:If the request is being made in response to a redirect we received, the response that conveyed that redirect.
dataSource: The dataSource that initiated the load.

Returns the request, which may be mutated by the implementor, although typically will be request. You can return a new request if you like.

86.117 class WebResourceMBS

86.117.1 class WebResourceMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A WebResource represents a fully downloaded URL.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.URL+EndOfLine+w.textEncodingName+EndOfLine+w.MIMEType
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

It includes the data of the resource as well as the metadata associated with the resource.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

86.117.2 Methods

86.117.3 Constructor(data as MemoryBlock, url as string, mimeType as string, TextEncodingName as string="", frameName as string="")

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create an new WebResource.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")
```

Notes:

Handle is not 0 on success.

data: The data of the resource.
URL: The URL of the resource.
MIMEType: The MIME type of the resource.
textEncodingName: The text encoding name of the resource (can be empty).

frameName: The frame name of the resource if the resource represents the contents of an entire HTML frame (can be empty).

See also FileExtensionToMimeTypeMBS function.

86.117.4 data as MemoryBlock

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The data of the resource.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.data
```

86.117.5 frameName as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The frame name of the resource if the resource represents the contents of an entire HTML frame.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.frameName
```

Notes: Can be an empty string.

86.117.6 MIMEType as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The MIME type of the resource.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.MIMEType
```

Notes: See also MimeTypeToFileExtensionMBS function.

86.117.7 textEncodingName as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text encoding name of the resource.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.textEncodingName
```

Notes: Can be an empty string.

86.117.8 URL as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The URL of the resource.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox w.URL
```

86.117.9 Properties

86.117.10 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle to the internal used webresource reference.
Example:

```
dim w as new WebResourceMBS("Hello World", "http://www.server.invalid", "text/plain", "ASCII", "myframe")

MsgBox str(w.Handle)
```

Notes: (Read and Write property)

86.118 class WebScriptCallbackMBS

86.118.1 class WebScriptCallbackMBS

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class to handle callbacks from Javascript.
Notes: This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

86.118.2 Blog Entries

- JavaScript callback in HTMLViewer on Mac

86.118.3 Methods

86.118.4 ArgumentValue(index as Integer) as Variant

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The argument with the given index for the current callback.
Notes:

Index is from 0 to ArgumentCount-1.
variant can be a string, a number, a boolean or a date.
Only valid while a callback event is running.

86.118.5 Constructor

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor creating a new web script callback object.
Notes: On success the handle property is not zero.

86.118.6 Properties

86.118.7 ArgumentCount as Integer

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of arguments for the current callback.
Notes:

Only valid while a callback event is running.
(Read only property)

86.118.8 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internally used handle for the callback object.
Notes: (Read and Write property)

86.118.9 Events

86.118.10 Callback(Name as string) as Variant

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The callback event.
Notes:

Name is the name of the method which was called.

The functions ArgumentCount and ArgumentValue give you the parameters of this method call.

You can return numbers, strings, date objects or booleans.

86.118.11 Close

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The close event.
Notes: Called when the object is destroyed.

86.119 class WebScriptObjectMBS

86.119.1 class WebScriptObjectMBS

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The base object for scripting and all DOM objects.
Notes:

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

86.119.2 Blog Entries

- JavaScript callback in HTMLViewer on Mac

86.119.3 Methods

86.119.4 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

86.119.5 evaluateWebScript(script as String) as Variant

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Evaluates a script.
Example:

```
dim code as string

// code="1+5"
code="""hello ""+5"

dim d as DOMDocumentMBS = HTMLViewer1.mainFrameMBS.DOMDocument
MsgBox d.evaluateWebScript(code)
// shows result of calculations
```

Notes:

The script will be executed in the target script environment. The format of the script is dependent of the target script environment.

Name: The script to execute in the target script environment.

86.119.6 getValue(name as String) as Variant

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets a value in this webscript object.
Example:

```
dim w as WebFrameMBS = HTMLViewer1.mainFrameMBS
dim d as DOMDocumentMBS = w.DOMDocument

MsgBox d.getValue("key")
```

Notes: Works for numbers, booleans, dates and strings.

86.119.7 removeValue(name as String)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes a value with the given name.

86.119.8 setValue(name as String, value as Variant)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a value in this webscript object.
Example:

```
dim w as WebFrameMBS = HTMLViewer1.mainFrameMBS
dim d as DOMDocumentMBS = w.DOMDocument

d.setValue("key","Hello")
```

Notes: Works for numbers, booleans, dates and strings.

86.119.9 setWebScriptCallback(name as String, value as WebScriptCallbackMBS)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a value in this webscript object.
Example:

```
// in the windowScriptObjectAvailable event you can register the callback object

Function windowScriptObjectAvailable(windowScriptObject as WebScriptObjectMBS) As boolean
// Install an Object called "MyBrowser" on the javascript document object
// Any function call inside will tricker callback event
dim callback as WebScriptCallbackMBS // your global callback object
windowScriptObject.setWebScriptCallback "MyBrowser", callback

End Function
```

Notes: This is the special version of SetValue to be used with the WebScriptCallbackMBS class.

86.119.10 setWebScriptValueAtIndex(index as Integer, value as Variant)

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the value of the property at the specified index.
Notes:

Index is zero based.
Works for numbers, booleans, dates and strings.

86.119.11 stringRepresentation as String

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string representation of this object.
Notes: Returns an empty string on any error.

86.119.12 webScriptValueAtIndex(index as Integer) as Variant

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets the value of the property at the specified index.
Example:

```
dim d as DOMDocumentMBS = HTMLViewer1.mainFrameMBS.DOMDocument
MsgBox d.webScriptValueAtIndex(1)
```

Notes:

Index is zero based.
Works for numbers, booleans, dates and strings.

86.119.13 Properties

86.119.14 Handle as Integer

MBS MacControls Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle of the internal used reference to a WebScriptObject.
Notes: (Read and Write property)

86.120 class WebUIDelegateMBS

86.120.1 class WebUIDelegateMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A class to handle user interface requests.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

The plugin is very careful on which events it registers.
All events where you don't have code inside (not even comments), is not registered with the system and you get the default behavior.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

Please use one delegate class per HTMLViewer (or WebViewMBS) and make sure they live about the same time. Our class keeps a reference on the WebView, so we can remove our delegate when the delegate is destroyed.

86.120.3 Xojo Developer Magazine

- 13.4, page 10: News

86.120.4 Methods

86.120.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor for this class.

86.120.6 Properties

86.120.7 DisableContextMenu as Boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the plugin should disable contextual menus completely.
Notes:

Set to true to disabled the context menu.
(Read and Write property)

86.120.8 DisableNewWindow as Boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the plugin should block new window requests.
Notes:

Set to true to block all requests.
(Read and Write property)

86.120.9 Events

86.120.10 AreToolbarsVisible as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Determine whether the window's toolbars are currently visible.
Notes:

This method should return true if the window has any toolbars that are currently on, besides the status bar. If the app has more than one toolbar per window, for example a regular command toolbar and a favorites bar, it should return true from this method if at least one is on.

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.11 Close

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The close event.
Notes: Called when the delegate is destroyed.

86.120.12 ContextMenuItemsForElement(elementInformation as Dictionary, defaultMenuItems() as NSMenuItemMBS) as NSMenuItemMBS()

MBS MacControls Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the menu items to display in an element's contextual menu.
Notes:

elementInformation: A dictionary representation of the clicked element.
defaultMenuItems: An array of default NSMenuItemMBS objects to include in all contextual menus.

Return an array of NSMenuItemMBS objects to include in the contextual menu.

If you return nil, we let the default handler do it's work.

86.120.13 CreateWithRequest(Request as NSURLRequestMBS) as object

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Create a new window and begin to load the specified request.
Notes:

The newly created window is hidden, and the window operations delegate on the new WebViews will get a webViewShow call.

If no value is returned or no code is in the event, the default delegate is called.

Return nil, nothing or a valid htmlviewer or WebviewMBS object.
Your application will certainly crash if you return something different.

Request may be nil. In this case WebKit later calles LoadRequest for the new webview.

86.120.14 dragDestinationActionMaskForDraggingInfo(draggingInfo as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Controls behavior when dragging to a WebView.
Notes:

draggingInfo: The dragging info of the drag
This method is called periodically as something is dragged over a WebView. The UI delegate can return a mask indicating which drag destination actions can occur, WebDragDestinationActionAny to allow any kind of action or WebDragDestinationActionNone to not accept the drag.

If you implement this, the default delegate is not called.

If you return WebDragDestinationActionAny you simply allow all kind of drag and drop including javascript using it.

86.120.15 dragSourceActionMaskForPoint(x as Double, y as Double) as Integer

MBS MacControls Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Controls behavior when dragging from a WebView.
Notes:

X/Y: The point where the drag started in the coordinates of the WebView.

This method is called after the user has begun a drag from a WebView. The UI delegate can return a mask indicating which drag source actions can occur, WebDragSourceActionAny to allow any kind of action or WebDragSourceActionNone to not begin a drag.

If you implement this, the default delegate is not called.

If you return WebDragDestinationActionAny you simply allow all kind of drag and drop including javascript using it.

86.120.16 drawFooterInRect(rect as NSRectMBS, g as NSGraphicsMBS)

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The delegate should draw a footer for the sender in the supplied rect.
Notes:

rect: The NSRectMBS reserved for the footer of the page

Please draw within the given rectangle as the drawing may get clipped to this rectangle.
As will call CoreGraphics drawing, the origin is on the bottom left of the page.

86.120.17 drawHeaderInRect(rect as NSRectMBS, g as NSGraphicsMBS)

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate should draw a header for the sender in the supplied rect.
Notes:

rect: The NSRect reserved for the header of the page

Please draw within the given rectangle as the drawing may get clipped to this rectangle.
As will call CoreGraphics drawing, the origin is on the bottom left of the page.

86.120.18 FooterHeight as single

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The height returned will be used to calculate the rect passed to drawFooterInRect.
Notes:

Reserve a height for the printed page footer.
Returns the height to reserve for the printed page footer, return 0.0 to not reserve any space for a footer.

86.120.19 GetContentRect(byref left as Double, byref top as Double, byref width as Double, byref height as Double) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return the window's content rect.
Notes: If you want to return values, return true, else return false and the default delegate will be called for this.

86.120.20 GetFrame(byref left as Double, byref top as Double, byref width as Double, byref height as Double) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return the window's frame rect.
Notes: If you want to return values, return true, else return false and the default delegate will be called for this.

86.120.21 GetStatusText as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Get the currently displayed status text.
Notes:

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.22 HeaderHeight as single

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The height returned will be used to calculate the rect passed to drawHeaderInRect.
Notes:

Reserve a height for the printed page header.
Return the height to reserve for the printed page header, return 0.0 to not reserve any space for a header.

86.120.23 IsResizable as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Determine whether the window is resizable or not.
Notes:

If there are multiple views in the same window, they have have their own separate resize controls and this may need to be handled specially.

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.24 IsStatusBarVisible as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Determine whether the status bar is visible.
Notes:

true if the status bar is visible, otherwise false.

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.25 MouseDidMoveOverElement(elementInformation as Dictionary, modifierFlags as Integer) as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Updates information about the element the user is mousing over.
Notes:

elementInformation: A dictionary that describes the element under the mouse, or nil. Keys and values:

WebKit Key	Description of value
WebElementDOMNode	DOMNodeMBS of the element
WebElementFrame	WebFrameMBS of the element
WebElementImageAltString	String of the ALT attribute of the image element
WebElementImage	NSImageMBS of the image element
WebElementImageRect	NSRectMBS of an NSRect, the rect of the image element
WebElementImageURL	String of the image element
WebElementIsSelected	Number of BOOL indicating whether the element is selected or not
WebElementLinkURL	String of the link if the element is within an anchor
WebElementLinkTargetFrame	WebFrameMBS of the target of the anchor
WebElementLinkTitle	String of the title of the anchor
WebElementLinkLabel	String of the text within the anchor

modifierFlags: An integer bit field that indicates the modifier keys in effect during the event.

86.120.26 Open

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The open event.
Notes:

Called just after the delegate has been installed in a htmlviewer control.
This allows you to initialize your stuff before the first event is called.

86.120.27 printFrameView(frameView as WebFrameViewMBS)

MBS MacControls Plugin, Plugin Version: 18.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs that a WebFrameView needs to be printed.
Notes:

frameView: The WebFrameView needing to be printed

This method is called when a script or user requests the page to be printed.
In this method the delegate can prepare the WebFrameView to be printed. Some content that WebKit dis-

plays can be printed directly by the WebFrameView, other content will need to be handled by the delegate. To determine if the WebFrameView can handle printing the delegate should check WebFrameView's documentViewShouldHandlePrint, if true then the delegate can call printDocumentView on the WebFrameView. Otherwise the delegate will need to request a NSPrintOperation from the WebFrameView's printOperationWithPrintInfo to handle the printing.

86.120.28 RunJavaScriptAlertPanelWithMessage(message as String)

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Display a JavaScript alert panel.
Notes: Clients should visually indicate that this panel comes from JavaScript. The panel should have a single OK button.

86.120.29 RunJavaScriptConfirmPanelWithMessage(message as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Display a JavaScript confirm panel.
Notes:

Return true if the user hit OK, false if the user chose Cancel.
Clients should visually indicate that this panel comes from JavaScript. The panel should have two buttons, e.g. "OK" and "Cancel".

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.30 RunJavaScriptTextInputPanelWithPrompt(prompt as String, defaultText as String) as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Display a JavaScript text input panel.
Notes:

Return the typed text if the user hit OK, otherwise an empty string.

Clients should visually indicate that this panel comes from JavaScript. The panel should have two buttons, e.g. "OK" and "Cancel", and an area to type text.

If you place code in this event, return a value.
If no code is in the event, the default delegate will be called.

86.120.31 runOpenPanelForFileButtonWithResultListener(listener as WebOpenPanelResultListenerMBS, allowMultipleFiles as boolean) as boolean

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when an open panel should be shown.
Notes:

Return true if you handled this event.
Call chooseFilename or cancel on the listener to inform about the result.

86.120.32 SetContentRect(left as Double, top as Double, width as Double, height as Double) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Set the window's content rect.
Notes:

Even though a plugin could set the frame directly using the Window, this method is provided so implementors of this protocol can do special things on programmatic move/resize, like avoiding autosaving of the size.

If you return true the default delegate will not be called for this.

86.120.33 SetFrame(left as Double, top as Double, width as Double, height as Double) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Set the window's frame rect.
Notes:

Even though a plugin could set the frame directly using the Window, this method is provided so implementors of this protocol can do special things on programmatic move/resize, like avoiding autosaving of the size.

If you return true the default delegate will not be called for this.

86.120.34 SetResizable(resizeable as boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Set the window to resizable or not.
Notes:

If there are multiple views in the same window, they have have their own separate resize controls and this may need to be handled specially.

If you return true the default delegate will not be called for this.

86.120.35 SetStatusBarVisible(visible as boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Set whether the status bar is currently visible.
Notes:

Setting this to true should show the status bar, setting it to false should hide it.

If you return true the default delegate will not be called for this.

86.120.36 SetStatusText(text as String) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Set the window's status display, if any, to the specified string.
Notes: If you return true the default delegate will not be called for this.

86.120.37 SetToolbarsVisible(visible as boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Set whether the window's toolbars are currently visible.
Notes:

Setting this to true should turn on all toolbars (except for a possible status bar). Setting it to false should turn off all toolbars (with the same exception).

If you return true the default delegate will not be called for this.

86.120.38 willPerformDragDestinationAction(WebDragDestinationAction as Integer, draggingInfo as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Informs that WebView will perform a drag destination action.
Notes:

action: The drag destination action
draggingInfo: The dragging info of the drag

This method is called after the last call to dragDestinationActionMaskForDraggingInfo after something is dropped on a WebView.
This method informs the UI delegate of the drag destination action that WebView will perform.

86.120.39 willPerformDragSourceAction(WebDragDestinationAction as Integer, X as Double, Y as Double, pasteboard as NSPasteboardMBS)

MBS MacControls Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Informs that a drag a has begun from a WebView.
Notes:

action: The drag source action
X/Y: The point where the drag started in the coordinates of the WebView
pasteboard: The drag pasteboard

This method is called after dragSourceActionMaskForPoint is called after the user has begun a drag from a WebView.
This method informs the UI delegate of the drag source action that will be performed and gives the delegate an opportunity to modify the contents of the dragging pasteboard.

86.120.40 WindowClose as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Close the current window.
Notes:

Clients showing multiple views in one window may choose to close only the one corresponding to this WebView. Other clients may choose to ignore this method entirely.
If this event returns false the control is handled to the default delegate.

86.120.41 WindowFocus as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Focus the current window.
Notes:

Clients showing multiple views in one window may want to also do something to focus the one corresponding to this WebView.
If this event returns false the control is handled to the default delegate.

86.120.42 WindowShow as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Show the window that contains the top level view of the WebView, ordering it frontmost.
Notes:

This will only be called just after CreateWithRequest is used to create a new window.
If this event returns false the control is handled to the default delegate.

86.120.43 WindowUnfocus as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Unfocus the current window.
Notes:

Clients showing multiple views in one window may want to also do something to unfocus the one corresponding to this WebView.
If this event returns false the control is handled to the default delegate.

86.120.44 Constants

86.120.45 WebDragDestinationActionAny = -1

MBS MacControls Plugin, Plugin Version: 16.1. **Function:** One of the action constants that the destination object of a drag operation can perform.
Notes: Allows any defined action to occur.

86.120.46 WebDragDestinationActionDHTML = 1

MBS MacControls Plugin, Plugin Version: 16.1. **Function:** One of the action constants that the destination object of a drag operation can perform.
Notes: Allows DHTML (such as JavaScript) to handle the drag.

86.120.47 WebDragDestinationActionEdit = 2

MBS MacControls Plugin, Plugin Version: 16.1. **Function:** One of the action constants that the destination object of a drag operation can perform.
Notes: Allows editable documents to be changed by the drag operation.

86.120.48 WebDragDestinationActionLoad = 4

MBS MacControls Plugin, Plugin Version: 16.1. **Function:** One of the action constants that the destination object of a drag operation can perform.
Notes: Allows the drag operation to change the location.

86.120.49 WebDragDestinationActionNone = 0

MBS MacControls Plugin, Plugin Version: 16.1. **Function:** One of the action constants that the destination object of a drag operation can perform.
Notes: No action.

86.121 class WebViewMBS

86.121.1 class WebViewMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to handle a webview.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This classs is not available in Xojo 2020r1 or newer as it is for MacOS 32-bit only.

A webview is simply a content viewer for any web based content. It can render html pages, text pages and with plugins also flash or pdf files.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

86.121.3 Xojo Developer Magazine

- 6.1, page 6: Thoughts from the Publisher by Marc Zeedar

86.121.4 Methods

86.121.5 alignCenter

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that applies center alignment to selected content or all content if there's no selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.6 alignJustified

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that applies full justification to selected content or all content if there's no selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.7 alignLeft

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that applies left justification to selected content or all content if there's no selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.8 alignRight

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that applies right justification to selected content or all content if there is no selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.9 applyStyle(style as Variant)

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies the CSS typing style to the current selection.
Example:

```
dim w as WebViewMBS = HTMLViewer1.WebViewMBS
dim doc as DOMDocumentMBS = w.mainFrame.DOMDocument
dim d as DOMCSSStyleDeclarationMBS = doc.createCSSStyleDeclaration
```

d.fontWeight="bold"

w.applyStyle d

Notes:

style: The style to apply to the current selection. Must be a DOMCSSStyleDeclarationMBS object.

This method does nothing if there is no current selection or if the current selection is collapsed.

This method hides the complexities of applying styles to elements. If necessary, this method will make multiple passes over the range of the current selection to ensure that the requested style is applied to the elements in that range, and takes into account the complexities of CSS style application rules. This method also simplifies styling attributes so that the minimum number of styling directives are used to yield a given computed style.

86.121.10 backForwardList as WebBackForwardListMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the backforward list for this webView.
Notes: Nil on failure.

86.121.11 canGoBack as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the history can be used to move back one website.

86.121.12 canGoForward as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the history can be used to move forward one website.

86.121.13 canMakeTextLarger as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the text size can be increased.

86.121.14 canMakeTextSmaller as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the text size can be decreased.

86.121.15 canResetPageZoom as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether web page can be reset.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.16 CanShowMIMEType(mime as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks if the WebKit can show content of a certain MIME type.
Notes:

Returns false on any error and true on success.
See also MimeTypeToFileExtensionMBS function.

86.121.17 CanShowMIMETypeAsHTML(mime as string) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks if the the MIME type is a type that the WebKit will interpret as HTML.
Notes:

Returns false on any error and true on success.
See also MimeTypeToFileExtensionMBS function.

86.121.18 canZoomPageIn as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether web page can be zoomed in.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.19 canZoomPageOut as boolean

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether web page can be zoomed out.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.20 capitalizeWord

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to capitalize the word or words surrounding the insertion point or selection, expanding the selection if necessary.
Notes: If either end of the selection partially covers a word, that entire word is made lowercase. The sender argument is typically the object that invoked this method.

86.121.21 centerSelectionInVisibleArea

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the selection, whatever it is, inside its visible area.

86.121.22 changeAttributes

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that changes the attributes of the current selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.23 changeCaseOfLetter

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to change the case of a letter or letters in the selection, perhaps by opening a panel with capitalization options or by cycling through possible case combinations.

86.121.24 changeColor

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the color of the selected content.
Notes:

This method is invoked by the NSColorPanel sender.
Available in Mac OS X v10.3.9 and later.

86.121.25 changeDocumentBackgroundColor

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the background color of the selected content.
Notes:

This method is invoked by the NSColorPanel sender.

Available in Mac OS X v10.3.9 and later.

86.121.26 changeFont

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that changes the font of the selection, or all content if there is no selection.
Notes:

If the receiver doesn't use the Fonts panel, this method does nothing.

Available in Mac OS X v10.3.9 and later.

86.121.27 checkSpelling

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that searches for a misspelled word in the receiver.
Notes:

This action method starts a search at the end of the selection and continues until it reaches a word suspected of being misspelled or the end of the content. If a word isn't recognized by the spelling server, a showGuessPanel message is sent to the receiver which opens the Guess panel and allows the user to make a correction or add the word to the local dictionary.

Available in Mac OS X v10.3.9 and later.

86.121.28 ClearFocus

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clears the focus.
Example:

webview.ClearFocus

Notes: If the focus is on the webpage, it will be cleared so there is no focus on the window. Useful if you want to workaround a focus bug in the htmlviewer control.

86.121.29 complete

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to complete an operation in progress or a partially constructed element.
Notes: This method can be interpreted, for example, as a request to attempt expansion of a partial word, such as for expanding a glossary shortcut, or to close a graphics item being drawn.

86.121.30 Constructor

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

dim x as new WebViewMBS

Notes: On success the handle property is not zero.
See also:

- 86.121.31 Constructor(Handle as Integer) 15182
- 86.121.32 Constructor(left as Double, top as Double, width as Double, height as Double) 15183
- 86.121.33 Constructor(x as Double, y as Double, w as Double, h as Double, FrameName as string, GroupName as string) 15184

86.121.31 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given WebView handle.

Example:

```
dim t as new WebViewMBS(0, 0, 100, 100)
dim v as new WebViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a WebView and the plugin retains this handle.
See also:

- 86.121.30 Constructor 15182
- 86.121.32 Constructor(left as Double, top as Double, width as Double, height as Double) 15183
- 86.121.33 Constructor(x as Double, y as Double, w as Double, h as Double, FrameName as string, GroupName as string) 15184

86.121.32 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new button with the given size and position.
Example:

```
dim w as new WebViewMBS(0,0,800,600)

w.LoadHTMLString "Hello World",""

// and later

dim n as NSImageMBS = w.RenderImage
Backdrop=n.CopyPicture
```

Notes: On success the handle property is not zero.
See also:

- 86.121.30 Constructor 15182
- 86.121.31 Constructor(Handle as Integer) 15182
- 86.121.33 Constructor(x as Double, y as Double, w as Double, h as Double, FrameName as string, GroupName as string) 15184

86.121.33 Constructor(x as Double, y as Double, w as Double, h as Double, FrameName as string, GroupName as string)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a webview with a frame rectangle, a WebFrame name, and a group name.
Example:

```
dim w as webviewmbs

w=new WebViewMBS(0,0,800,600,"test","test")

w.LoadHTMLString "Hello World",""

// and later

dim n as NSImageMBS = w.RenderImage
Backdrop=n.CopyPicture
```

Notes:

The frameName should not be one of the pre-defined frame names (see the WebFrame findFrameNamed for a description of their meaning), but a custom name or a name used in HTML source. The groupName argument is an arbitrary identifier used to group related frames. For example, JavaScript running in a frame can access any other frame in the same group. It's up to the application how it chooses to scope related frames. Both frameName and groupName may be "". This method is the designated initializer for the WebView class.

On success the handle property is not zero.
See also:

- 86.121.30 Constructor 15182
- 86.121.31 Constructor(Handle as Integer) 15182
- 86.121.32 Constructor(left as Double, top as Double, width as Double, height as Double) 15183

86.121.34 copy

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Action method that copies the selected content to the general pasteboard.
Notes:

This action method copies the selected content onto the general pasteboard, in as many formats as the receiver supports. For example, a plain text object uses NSStringPboardType for plain text, and a rich text object also uses NSRTFPboardType.

Available in Mac OS X v10.3.9 and later.

86.121.35 copyFont

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that copies font information onto the font pasteboard.
Notes:

This action method copies the font information for the first character of the selection (or for the insertion point) onto the font pasteboard as NSFontPboardType.

Available in Mac OS X v10.3.9 and later.

86.121.36 cut

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that deletes selected content and puts it on the general pasteboard.
Notes:

This action method deletes the selected content and places it onto the general pasteboard, in as many formats as the receiver supports. For example, a plain text object uses NSStringPboardType for plain text, and a rich text object also uses NSRTFPboardType.

Available in Mac OS X v10.3.9 and later.

86.121.37 delete

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that deletes the selected content.
Notes:

The pasteboard is unaffected by invoking this method.

Available in Mac OS X v10.3.9 and later.

86.121.38 deleteBackward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or a single element backward

from the insertion point (a letter or character in text, for example).

86.121.39 deleteBackwardByDecomposingPreviousCharacter

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or a single character backward from the insertion point.
Notes: If the previous character is canonically decomposable, this method should try to delete only the last character in the grapheme cluster (for example, deleting "a"+ "'" results in "a"). NSResponder declares but does not implement this method.

86.121.40 deleteForward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or a single element forward from the insertion point (a letter or character in text, for example).

86.121.41 deleteSelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Deletes the receiver's current selection unless it's collapsed.
Notes: No content is removed if the current selection is collapsed (a range is selected with the same nodes and offsets for the start and end) or if there is no current selection.

86.121.42 deleteToBeginningOfLine

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or all text from the insertion point to the beginning of a line (typically of text).
Notes: Also places the deleted text into the kill buffer.

86.121.43 deleteToBeginningOfParagraph

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or all text from the insertion point to the beginning of a paragraph of text.
Notes: Also places the deleted text into the kill buffer.

86.121.44 deleteToEndOfLine

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or all text from the insertion point to the end of a line (typically of text).
Notes: Also places the deleted text into the kill buffer.

86.121.45 deleteToEndOfParagraph

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or all text from the insertion point to the end of a paragraph of text.
Notes: Also places the deleted text into the kill buffer.

86.121.46 deleteWordBackward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or a single word backward from the insertion point.

86.121.47 deleteWordForward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to delete the selection, if there is one, or a single word forward from the insertion point.

86.121.48 EstimatedProgress as Double

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An estimate of the percent complete for a document load.
Example:

```
// waits till rendering is done:
dim f as FolderItem = SpecialFolder.Desktop.Child("test.html")

WebView.mainFrame.LoadURL f.URLPath

while WebView.EstimatedProgress>0
DelayMBS 0.1
wend
```

```
// this works only because EstimatedProgress is set to 0.1 by LoadURL
// and set back to zero when the load process finishes.
// If future Webkit versions change the EstimatedProgress results,
// it will break.
```

Notes: This value will range from 0 to 1.0 and, once a load completes, will remain at 1.0 until a new load starts, at which point it will be reset to 0. The value is an estimate based on the total number of bytes expected to be received for a document, including all it's possible subresources. For more accurate progress indication it is recommended that you implement a WebFrameLoadDelegate and a WebResourceLoadDelegate.

86.121.49 EvaluateJavaScript(code as string) as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Runs the given java script and returns the result.
Example:

```
// shows current user agent string which the control sends to website
MsgBox webview1.EvaluateJavaScript("navigator.userAgent;")

// using eval:
MsgBox webview1.EvaluateJavaScript("eval(""x=10;y=20;x*y"")")

// with function:
MsgBox webview1.EvaluateJavaScript(" test(); function test() { x = 10 ; y = 20; return x * y; } ")

// with multiline script:
dim s as string = "test();"+EndOfLine+_
"function test()"+EndOfLine+_
" { "+EndOfLine+_
" x = 10; "+EndOfLine+_
" y = 20; "+EndOfLine+_
" return x * y;"+EndOfLine+_
" } "

MsgBox webview1.EvaluateJavaScript(s)
```

Notes:

Returns "" on any error.

In Safari 2 we used "return 1+2;" while in Safari 3 we only need "1+2;". The return is no longer needed. Be aware that there is an implicit return now with Safari 3!

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

86.121.50 GoBack

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Go back to the previous URL in the backforward list.

86.121.51 GoForward

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Go forward to the next URL in the backforward list.

86.121.52 goToBackForwardItem(item as WebHistoryItemMBS) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves on the history to the given item.
Notes: Returns true on success or false on failure.

86.121.53 HTMLText as string

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns HTML text for this document.
Notes: This is the text as we generate it from current DOM tree. It is not the html text we loaded from the website. To get this original html text, please use mainFrameMBS.dataSource.data instead.

86.121.54 indent

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to indent the selection or the insertion point if there is no selection.

86.121.55 insertBacktab

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to handle a backward tab.
Notes: A field editor might respond to this method by selecting the field before it, while a regular text object either doesn't respond to or ignores such a message.

86.121.56 insertNewline

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to insert a newline character at the insertion point or selection, deleting the selection if there is one, or to end editing if the receiver is a text field or other field editor.

86.121.57 insertParagraphSeparator

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to insert a paragraph separator at the insertion point or selection, deleting the selection if there is one.

86.121.58 insertTab

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to insert a tab character at the insertion point or selection, deleting the selection if there is one, or to end editing if the receiver is a text field or other field editor.

86.121.59 LoadHTMLString(data as memoryblock, mime as string, encoding as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads data as a webpage.
Example:

```
webview.LoadHTMLString "<b>test</b>","text/plain","","" // show as plain text
webview.LoadHTMLString "<b>test</b>","text/html","","" // show as html
```

Notes:

data: The data to use for the main page of the document.
mime: The MIME type of the data. e.g. "text/html"

textencoding: The encoding of the data.
url: The base URL to apply to relative URLs within the document.

All parameters can be empty if needed.
Using "text/plain" mime type you can show source code of website.

Like most Webkit Methods this one can not be called from a thread.
See also:

- 86.121.60 LoadHTMLString(text as string, url as string) 15191

86.121.60 LoadHTMLString(text as string, url as string)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a html page from a string.
Notes:

html: The string to use for the main page of the document.
url: The base URL to apply to relative URLs within the document. (optional)

Like most Webkit Methods this one can not be called from a thread.
See also:

- 86.121.59 LoadHTMLString(data as memoryblock, mime as string, encoding as string, url as string) 15190

86.121.61 LoadRequest(request as NSURLRequestMBS)

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the given url request.
Notes: Like most Webkit Methods this one can not be called from a thread.

86.121.62 LoadURL(url as string)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the url.
Example:

webview.LoadURL "http://www.monkeybreadsoftware.de"

Notes:

Like most Webkit Methods this one can not be called from a thread.
Internally this calls LoadRequest with a NSURLRequest based on the given URL.
See also:

- 86.121.63 LoadURL(url as string, CachePolicy as Integer, TimeOut as Double) 15192

86.121.63 LoadURL(url as string, CachePolicy as Integer, TimeOut as Double)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads the URL.
Example:

webview.LoadURL "http://www.monkeybreadsoftware.de", 1, 2.0

Notes:

The timeout interval is in seconds.

Constants for the CachePolicy parameter:

const UseProtocolCachePolicy	= 0	Specifies that the caching logic defined in the protocol implementation, if any, is used for a particular URL load request. This is the default policy for URL load requests.
const ReloadIgnoringCacheData	= 1	Specifies that the data for the URL load should be loaded from the originating source. No existing cache data should be used to satisfy a URL load request.
const ReturnCacheDataElseLoad	= 2	Specifies that the existing cached data should be used to satisfy the request, regardless of its age or expiration date. If there is no existing data in the cache corresponding the request, the data is loaded from the originating source.
const ReturnCacheDataDontLoad	= 3	Specifies that the existing cache data should be used to satisfy a request, regardless of its age or expiration date. If there is no existing data in the cache corresponding to a URL load request, no attempt is made to load the data from the originating source, and the load is considered to have failed. This constant specifies a behavior that is similar to an "offline" mode.

Like most Webkit Methods this one can not be called from a thread.
Internally this calls LoadRequest with a NSURLRequest based on the given URL.
See also:

- 86.121.62 LoadURL(url as string) 15191

86.121.64 lowercaseWord

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to make lowercase every letter in the word or words surrounding the

insertion point or selection, expanding the selection if necessary.
Notes: If either end of the selection partially covers a word, that entire word is made lowercase. NSResponder declares, but doesn't implement this method.

86.121.65 mainFrame as WebFrameMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The main webframe currently displayed.
Notes: Nil if no is present.

86.121.66 makeTextLarger

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Increases the text size in the webview.

86.121.67 makeTextSmaller

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Decreases the text size in the webview.

86.121.68 mediaVolume as single

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the maximum volume of all sounds generated on this webview.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.69 moveBackward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character backward.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed at the beginning of the former selection.

86.121.70 moveBackwardAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection backward by one element or character.
Notes: If the end being modified is the backward end, this method expands the selection; if the end being modified is the forward end, it reduces the selection. The first moveBackwardAndModifySelection or moveForwardAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the backward end becoming the mobile one if invoked first. By default, moveLeftAndModifySelection is bound to the left arrow key.

86.121.71 moveDown

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character down.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed below the beginning of the former selection.

86.121.72 moveDownAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce the top or bottom end of the selection downward by one element, character, or line (whichever is appropriate for text direction).
Notes: If the end being modified is the bottom, this method expands the selection; if the end being modified is the top, it reduces the selection. The first moveDownAndModifySelection or moveUpAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the bottom end becoming the mobile one if invoked first.

86.121.73 moveForward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character forward.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed at the end of the former selection.

86.121.74 moveForwardAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection forward by one element or character.
Notes: If the end being modified is the backward end, this method reduces the selection; if the end being modified is the forward end, it expands the selection. The first moveBackwardAndModifySelection or moveForwardAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the forward end becoming the mobile one if invoked first. By default, moveRightAndModifySelection is bound to the right arrow key.

86.121.75 moveLeft

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character to the left.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed at the left end of the former selection.

86.121.76 moveLeftAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection to the left (display order) by one element or character.
Notes:

If the end being modified is the left end, this method expands the selection; if the end being modified is the right end, it reduces the selection. The first moveLeftAndModifySelection or moveRightAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the left end becoming the mobile one if invoked first. By default, this method is bound to the left arrow key.

The essential difference between this method and the corresponding moveBackwardAndModifySelection is that the latter method moves in logical order, which can differ in bidirectional text, whereas this method moves in display order.

86.121.77 moveRight

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character to the right.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed at

the right end of the former selection.

86.121.78 moveRightAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection to the right (display order) by one element or character.
Notes:

If the end being modified is the left end, this method reduces the selection; if the end being modified is the right end, it expands the selection. The first moveLeftAndModifySelection or moveRightAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the right end becoming the mobile one if invoked first. By default, this method is bound to the right arrow key.

The essential difference between this method and the corresponding moveForwardAndModifySelection is that the latter method moves in logical order, which can differ in bidirectional text, whereas this method moves in display order.

86.121.79 moveToBeginningOfDocument

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection to the first element of the document or the insertion point to the beginning.

86.121.80 moveToBeginningOfDocumentAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point to the beginning of the document, expanding or reducing the current selection.

86.121.81 moveToBeginningOfLine

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection to the first element of the selected line or the insertion point to the beginning of the line.

86.121.82 moveToBeginningOfLineAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection or insertion point to the beginning of the line, expanding or reducing the current selection.

86.121.83 moveToBeginningOfParagraph

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the insertion point to the beginning of the selected paragraph.

86.121.84 moveToBeginningOfParagraphAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection or insertion point to the beginning of the current paragraph, expanding or reducing the current selection.

86.121.85 moveToBeginningOfSentence

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the insertion point to the beginning of the current sentence.

86.121.86 moveToBeginningOfSentenceAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the insertion point and extends the selection to the beginning of the current sentence.

86.121.87 moveToEndOfDocument

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection to the last element of the document or the insertion point to the end.

86.121.88 moveToEndOfDocumentAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection or insertion point to the end of the document, expanding or reducing the current selection.

86.121.89 moveToEndOfLine

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection to the last element of the selected line or the insertion point to the end of the line.

86.121.90 moveToEndOfLineAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection or insertion point to the end of the line, expanding or reducing the current selection.

86.121.91 moveToEndOfParagraph

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the insertion point to the end of the selected paragraph.

86.121.92 moveToEndOfParagraphAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implemented by WebView to move the selection or insertion point to the end of the current paragraph, expanding or reducing the current selection.

86.121.93 moveToEndOfSentence

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the insertion point to the end of the current sentence.

86.121.94 moveToEndOfSentenceAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves the insertion point and extends the selection to the end of the current sentence.

86.121.95 moveUp

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one element or character up.
Notes: In text, if there is a selection it should be deselected, and the insertion point should be placed above the beginning of the former selection.

86.121.96 moveUpAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce the top or bottom end of the selection upward by one element, character, or line (whichever is appropriate for text direction).
Notes: If the end being modified is the bottom, this method reduces the selection; if the end being modified is the top, it expands the selection. The first moveDownAndModifySelection or moveUpAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the top end becoming the mobile one if invoked first.

86.121.97 moveWordBackward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one word backward.
Notes: If there is a selection it should be deselected, and the insertion point should be placed at the end of the first word preceding the former selection.

86.121.98 moveWordBackwardAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection backward by one whole word.
Notes: If the end being modified is the backward end, this method expands the selection; if the end being modified is the forward end, it reduces the selection. The first moveWordBackwardAndModifySelection or moveWordForwardAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the backward end becoming the mobile one if invoked first.

86.121.99 moveWordForward

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one word forward, in logical order.
Notes: If there is a selection it should be deselected, and the insertion point should be placed at the beginning of the first word following the former selection.

86.121.100 moveWordForwardAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection forward by one whole word.
Notes: If the end being modified is the backward end, this method reduces the selection; if the end being modified is the forward end, it expands the selection. The first moveWordBackwardAndModifySelection or moveWordForwardAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the forward end becoming the mobile one if invoked first.

86.121.101 moveWordLeft

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one word to the left, in display order.
Notes:

If there is a selection it should be deselected, and the insertion point should be placed at the end of the first word to the left of the former selection.

The main difference between this method and the corresponding moveWordBackward method is that the latter moves in logical order, which is important in bidirectional text, whereas this method moves in display order.

86.121.102 moveWordLeftAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection left by one whole word in display order.
Notes:

If the end being modified is the left end, this method expands the selection; if the end being modified is the right end, it reduces the selection. The first moveWordLeftAndModifySelection or moveWordRightAndModifySelection method in a series determines the end being modified by always expanding. Hence, this

method results in the left end becoming the mobile one if invoked first.

The main difference between this method and the corresponding moveWordBackwardAndModifySelection method is that the latter moves in logical order, which is important in bidirectional text, whereas this method moves in display order.

86.121.103 moveWordRight

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to move the selection or insertion point one word right.
Notes:

If there is a selection it should be deselected, and the insertion point should be placed at the beginning of the first word to the right of the former selection.

The main difference between this method and the corresponding moveWordForward method is that the latter moves in logical order, which is important in bidirectional text, whereas this method moves in display order.

86.121.104 moveWordRightAndModifySelection

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to expand or reduce either end of the selection to the right by one whole word.
Notes:

If the end being modified is the backward end, this method reduces the selection; if the end being modified is the forward end, it expands the selection. The first moveWordBackwardAndModifySelection or moveWordForwardAndModifySelection method in a series determines the end being modified by always expanding. Hence, this method results in the forward end becoming the mobile one if invoked first.

The main difference between this method and the corresponding moveWordForwardAndModifySelection method is that the latter moves in logical order, which is important in bidirectional text, whereas this method moves in display order.

86.121.105 NSScrollView as NSScrollViewMBS

MBS MacControls Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the scrollview for this webviewer.
Notes: Same as calling WebViewMBS.mainFrame.frameView.documentView.enclosingScrollView.

86.121.106 pageDown

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver down (or back) one page in its scroll view, also moving the insertion point to the top of the newly displayed page.

86.121.107 pageSizeMultiplier as single

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the page size multiplier.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.108 pageUp

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver up (or forward) one page in its scroll view, also moving the insertion point to the top of the newly displayed page.

86.121.109 paste

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that pastes content from the pasteboard at the insertion point or over the selection.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.110 pasteAsPlainText

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that pastes pasteboard content as plain text.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.111 pasteAsRichText

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that pastes pasteboard content into the receiver as rich text, maintaining its attributes.
Notes:

The text is inserted at the insertion point if there is one; otherwise, it replaces the selection.

Available in Mac OS X v10.3.9 and later.

86.121.112 pasteFont

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that pastes font information from the font pasteboard.
Notes:

This action method pastes font information from the font pasteboard onto the selected content or insertion point of a rich text object, or over all text of the receiver.

Available in Mac OS X v10.3.9 and later.

86.121.113 performFindPanelAction

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that opens the Find menu and Find panel.
Notes: Available in Mac OS X v10.3.9 and later.

86.121.114 PrintToPDFFile(PDFFile as folderitem, LeftMargin as Double = 50.0, TopMargin as Double = 50.0, RightMargin as Double = 50.0, BottomMargin as Double = 50.0) as boolean

MBS MacControls Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Prints the PDF to a file.
Example:

```
dim file as folderitem = Specialfolder.desktop.child("test.pdf")
if not myWebView.PrintToPDFFile(file) then
msgbox "Failed"
end if
```

Notes:

This uses the Cocoa printing system to format the web pages into nice pages.
Returns true on success.

86.121.115 Reload

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reloads the current page.

86.121.116 reloadFromOrigin

MBS MacControls Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Action method that performs an end-to-end revalidation using cache-validating conditionals if possible.
Notes: Available in OS X v10.6 and later. So this raises exception on older OS X versions. In that case, please catch exception and call reload.

86.121.117 RenderDocumentToEPS as Memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the content of the view as a EPS file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.eps")
b=f.CreateBinaryFile("")
b.Write theWebView.RenderDocumentToEPS
b.Close

f.Launch // show the pdf in preview
```

Notes:

Returns nil on any error.
Will resize the eps page to match the size of the website.

86.121.118 RenderDocumentToPDF as Memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the content of the view as a PDF file's data.
Example:

```
dim f as FolderItem
dim b as BinaryStream

// create a new pdf with current content of view
f=SpecialFolder.Desktop.Child("test.pdf")
b=f.CreateBinaryFile("")
b.Write thewebview.RenderDocumentToPDF
b.Close

f.Launch // show the pdf in preview
```

Notes:

Returns nil on any error.
Will resize the pdf page to match the size of the website.

86.121.119 RenderWebsiteImage as NSImageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Makes a screenshot of the current displayed content.
Example:

```
dim f as FolderItem
dim b as BinaryStream
dim i as NSImageMBS
dim p as string

i=webview.RenderWebsiteImage

p=i.PNGRepresentation

f=SpecialFolder.Desktop.Child("test.png")
b=f.CreateBinaryFile("")
b.Write p
```

Notes:

Nil on failure.

The image returned is the page completely without scrollbars, so it may be a few thousand pixels height and may not fit on a page to print.

86.121.120 replaceSelectionWithMarkupString(html as string)

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Replaces the current selection with mixed text and markup.
Notes:

markupString: The markup string that replaces the current selection.

If the current selection is collapsed (a range is selected with the same nodes and offsets for the start and end) then no content is removed when inserting the markup, and the selection is collapsed and moved to the end of the inserted content. If no content is selected, the markup is not inserted.

86.121.121 replaceSelectionWithText(text as string)

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Replaces the current selection with a string of text.
Notes:

text: The text that replaces the current selection.

If the current selection is collapsed (a range is selected with the same nodes and offsets for the start and end) then no content is removed when inserting the text, and the selection is collapsed and moved to the end of the inserted content. If no content is selected, the text is not inserted.

86.121.122 resetPageZoom

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Resets the web page zoom.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.123 scrollLineDown

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver one line down in its scroll view, without changing the selection.

86.121.124 scrollLineUp

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver one line up in its scroll view, without changing the selection.

86.121.125 scrollPageDown

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver one page down in its scroll view, without changing the selection.

86.121.126 scrollPageUp

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to scroll the receiver one page up in its scroll view, without changing the selection.

86.121.127 SearchFor(text as string, Forward as boolean, CaseSensitive as boolean, Wrap as Boolean) as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Searches a document view for a string and highlights the string if it is found.
Notes:

Starts the search from the current selection. Will search across all frames.

text: The string to search for.
forward: True to search forward, False to seach backwards.
caseSensitive: True to for case-sensitive search, False for case-insensitive search.

Returns true if found, false if not found.

86.121.128 selectAll

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to select all selectable elements.

86.121.129 selectLine

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to select all elements in the line or lines containing the selection or insertion point.

86.121.130 selectParagraph

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to select all paragraphs containing the selection or insertion point.

86.121.131 selectSentence

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Selects the entire sentence around the insertion point.

86.121.132 selectWord

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to extend the selection to the nearest word boundaries outside it (up to, but not including, word delimiters).

86.121.133 setMaintainsBackForwardList(value as boolean)

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the back forward history list is created by the webview.
Notes: Default is true.

86.121.134 setMediaVolume(value as single)

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the maximum volume of all sounds generated on this webview.
Notes:

Sets a master volume control for all media elements in the WebView. Valid values are 0..1.

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.135 setPageSizeMultiplier(value as single)

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the page size multiplier.
Notes:

Change the zoom factor of the page in views managed by this webView.
value: A fractional percentage value, 1.0 is 100% .

This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.136 showGuessPanel

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that shows a spelling correction panel.
Notes:

This action method opens the Spelling panel, allowing the user to make a correction during spell checking.

Available in Mac OS X v10.3.9 and later.

86.121.137 startSpeaking

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that starts speaking the selected text or all text if there's no selection.
Notes:

Speech continues asynchronously until the end of the text or until terminated by invoking the stopSpeaking: method.

Available in Mac OS X v10.3.9 and later.

86.121.138 StopLoading

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Stop any pending loads on the frame's data source, and its children.

86.121.139 stopSpeaking

MBS MacControls Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An action method that stops speaking that is in progress.
Notes:

This action method stops speech that was previously started with startSpeaking.

Available in Mac OS X v10.3.9 and later.

86.121.140 SupportsTextEncoding as boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Find out if the current web page supports text encodings.
Notes: Returns true if the document view of the current web page can support different text encodings.

86.121.141 uppercaseWord

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Implemented by WebView to make uppercase every letter in the word or words surrounding the insertion point or selection, expanding the selection if necessary.
Notes: If either end of the selection partially covers a word, that entire word is made uppercase.

86.121.142 userAgentForURL(url as string) as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The user agent used for accessing the given URL.
Example:

msgbox htmlviewer1.WebViewMBS.userAgentForURL("http://www.apple.com")
// shows: Mozilla/5.0 (Macintosh; U; PPC Mac OS X; de-de) AppleWebKit/419 (KHTML, like Gecko)

Notes: An empty string on failure else the user-agent string for the supplied URL.

86.121.143 zoomPageIn

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Zooms web page in.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.144 zoomPageOut

MBS MacControls Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Zooms web page out.
Notes: This is a new webview function which is not available on all webview versions. So be aware that you may get an NSExceptionMBS about the function not being available.

86.121.145 Properties

86.121.146 ApplicationNameForUserAgent as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The application name.
Example:

webview1.ApplicationNameForUserAgent="test"
// useragent is now "Mozilla/5.0 (Macintosh; U; PPC Mac OS X; de-de) AppleWebKit/417.9 (KHTML, like Gecko) test"

Notes:

This name will be used in user-agent strings that are chosen for best results in rendering web pages.
(Read and Write computed property)

86.121.147 ContinuousSpellCheckingEnabled as boolean

MBS MacControls Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether continuous spell checking is enabled.
Example:

webview1.ContinuousSpellCheckingEnabled=True

Notes:

True if the object should have continuous spell-checking enabled; otherwise, false.
Available in Mac OS X v10.3.9 and later.
(Read and Write computed property)

86.121.148 CustomTextEncodingName as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The custom text encoding name.
Notes:

On getting:
The custom text encoding name or "" if no custom text encoding name has been set.

On setting:
Make the page display with a different text encoding; stops any load in progress.
The text encoding passed in overrides the normal text encoding smarts including what's specified in a web page's header or HTTP response.
The text encoding automatically goes back to the default when the top level frame changes to a new location.
Setting the text encoding name to nil makes the webView use default encoding rules.
(Read and Write computed property)

86.121.149 CustomUserAgent as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The custom user-agent string or nil if no custom user-agent string has been set.
Example:

webview1.CustomUserAgent="HelloWorldBrowser"

Notes: (Read and Write computed property)

86.121.150 dashboardBehavior(behavior as Integer) as boolean

MBS MacControls Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set the htmlviewer behavior.
Notes:

This is a private API from Apple which may break in the future.
It seems to exist for the dashboard application to switch some flags for event handling.

Behavior constants:
const WebDashboardBehaviorAlwaysSendMouseEventsToAllWindows = 0
const WebDashboardBehaviorAlwaysSendActiveNullEventsToPlugIns = 1
const WebDashboardBehaviorAlwaysAcceptsFirstMouse = 2
const WebDashboardBehaviorAllowWheelScrolling = 3
const WebDashboardBehaviorUseBackwardCompatibilityMode = 4
(Read and Write computed property)

86.121.151 DrawsBackground as Boolean

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Enable or disable the background drawing.
Notes:

Works only with Webkit on Mac OS X 10.3.9 and newer.
Returns false on unsupported Webkit versions.
If you set it to false, the background is not drawn and you can have transparent websites like the Dashboard widgets.
(Read and Write computed property)

86.121.152 Editable as boolean

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the user is allowed to edit the document.
Notes:

You can change the receiver's document programmatically regardless of this setting.
Available in Mac OS X v10.3.9 and later.

Normally, an HTML document is not editable unless the elements within the document are editable. This method provides a low-level way to make the contents of a WebView object editable without altering the document or DOM structure.

True if the receiver allows the user to edit the document. False if an element in the receiver's document

can be edited only if the CONTENTEDITABLE attribute has been set on the element or one of its parent elements.
(Read and Write computed property)

86.121.153 GroupName as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The group name for this WebView.
Notes:

JavaScript may access named frames within the same group.
(Read and Write computed property)

86.121.154 mediaStyle as String

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The value to use for the CSS media property.
Example:

```
dim w as WebViewMBS // your WebView
w.mediaStyle="print"
```

Notes:

Set or get the media style for the WebView. The mediaStyle will override the normal value of the CSS media property. Setting the value to nil will restore the normal value.
(Read and Write computed property)

86.121.155 preferences as WebPreferencesMBS

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The preferences for this webview.
Notes:

Nil on failure.
(Read and Write computed property)

86.121.156 PreferencesIdentifier as string

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string to use a prefix for storing values for this WebView in the user defaults database.
Notes:

If the WebPreferences for this WebView are stored in the user defaults database, the string set in this method will be used a key prefix.
(Read and Write computed property)

86.121.157 ScrollHeight as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the scroll view.
Notes: (Read and Write computed property)

86.121.158 ScrollLeft as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The left position of the scroll view.
Example:

myWebView.ScrollLeft=myWebView.ScrollLeft+5

Notes:

You can set this value to scroll manually.
(Read and Write computed property)

86.121.159 ScrollTop as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The top position of the scroll view.
Example:

myWebView.ScrollTop=myWebView.ScrollTop+5

Notes:

You can set this value to scroll manually.

(Read and Write computed property)

86.121.160 ScrollWidth as single

MBS MacControls Plugin, Plugin Version: 7.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The width of the scroll view.
Notes: (Read and Write computed property)

86.121.161 ShouldUpdateWhileOffscreen as boolean

MBS MacControls Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the web view should update even when it is not in a window that is currently visible.
Notes:

If true, the web view updates regardless if it is visible. If false, it updates only if it is visible, possibly improving performance, and then updates automatically when it becomes visible. The default value is true.

Available in OS X v10.6 and later.
(Read and Write computed property)

86.121.162 smartInsertDeleteEnabled as boolean

MBS MacControls Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the receiver should insert or delete spaces around selected words to preserve proper spacing and punctuation.
Notes:

If true, the receiver performs smart insert and delete; if false, it inserts and deletes exactly what's selected.

Available in Mac OS X v10.3.9 and later.
(Read and Write computed property)

86.121.163 TextSizeMultiplier as single

MBS MacControls Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The size of the text rendering in views managed by this webView.
Notes:

A fractional percentage value, 1.0 is 100% .
(Read and Write computed property)

86.121.164 typingStyle as Variant

MBS MacControls Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The CSS typing style.
Notes:

This is a DOMCSSStyleDeclarationMBS object.
The typing style is reset automatically when the receiver's selection changes.
(Read and Write computed property)

Chapter 87

HTMLViewer Win

87.1 class ChromiumBrowserMBS

87.1.1 class ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a WebKit browser on Windows.
Notes:

Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 18.3, page 9
- 12.4, page 8: News

87.1.4 Methods

87.1.5 CanGoBack as boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the browser can navigate backwards.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.CanGoBack)
```

87.1.6 CanGoForward as boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the browser can navigate forwards.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.CanGoForward)
```

87.1.7 ClearFocus

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Clears focus.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ClearFocus
```

87.1.8 ClearHistory

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Clear the back/forward browsing history.

Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ClearHistory
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.1.9 CloseDevTools

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Explicitly close the developer tools window if one exists for this browser instance.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.CloseDevTools
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.1.10 Constructor

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

87.1.11 Destructor

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

87.1.12 ExecuteJavaScript(jsCode as string, scriptUrl as string = "", startLine as Integer = 0)

MBS Win Plugin, Plugin Version: 14.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute a string of JavaScript code in this frame.
Example:

```
// go back to last page via javascript
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.ExecuteJavaScript "window.history.back();"
```

Notes: The scriptUrl parameter is the URL where the script in question can be found, if any. The renderer may request this URL to show the developer the source of the error. The startLine parameter is the base line number to use for error reporting.

87.1.13 Find(identifier as Integer, searchText as string, forward as boolean, MatchCase as boolean, FindNext as boolean)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Search for searchText.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.Find 1, "Hello", true, false, false

// later
m.Find 1, "Hello", true, false, true
```

Notes: Identifier can be used to have multiple searches running simultaniously. forward indicates whether to search forward or backward within the page. matchCase indicates whether the search should be case-sensitive. findNext indicates whether this is the first request or a follow-up.

87.1.14 Frame(ID as Int64) as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 17.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the frame with the specified identifier, or nil if not found.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
dim idn() as Int64= b.FrameIdentifiers
dim ids() as string
for each n as Int64 in idn
dim f as ChromiumFrameMBS = b.Frame(n)

ids.Append str(n)+" "+f.Name
next
MsgBox "FrameIdentifiers: "+EndOfLine+EndOfLine+Join(ids, EndOfLine)
```

```
end if
```

See also:

- 87.1.15 Frame(name as string) as ChromiumFrameMBS 15223

87.1.15 Frame(name as string) as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the frame with the specified name, or nil if not found.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.Frame("TopFrame")
dim s as string = f.Name
MsgBox s
```

See also:

- 87.1.14 Frame(ID as Int64) as ChromiumFrameMBS 15222

87.1.16 FrameIdentifiers as Int64()

MBS Win Plugin, Plugin Version: 17.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of frame identifiers.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
dim idn() as Int64= b.FrameIdentifiers
dim ids() as string
for each n as Int64 in idn
dim f as ChromiumFrameMBS = b.Frame(n)

ids.Append str(n)+" "+f.Name
next
MsgBox "FrameIdentifiers: "+EndOfLine+EndOfLine+Join(ids, EndOfLine)
end if
```

87.1.17 FrameNames as String()

MBS Win Plugin, Plugin Version: 17.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of frame names.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
dim Names() as string = b.FrameNames
MsgBox "FrameNames: "+EndOfLine+EndOfLine+Join(Names, EndOfLine)
end if
```

Notes: Often frames are unnamed, so named is generic.

87.1.18 GoBack

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigate backwards.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.GoBack
```

87.1.19 GoForward

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigate forwards.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.GoForward
```

87.1.20 HidePopup

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Hide the currently visible popup, if any.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.HidePopup
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.1.21 Image(width as Integer, height as Integer) as Picture

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Get the raw image data contained in the specified element without performing validation.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim p as picture = m.Image(600, 800)
window1.backdrop = p
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

The specified width and height dimensions must match the current element size.

Only supported for Chromium 2.x, but not 3.x.

87.1.22 invalidate(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Invalidate the rectangle region of the view.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.invalidate 0, 0, 600, 800
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** This function is only used when window rendering is disabled and will result in a call to HandlePaint().

87.1.23 IsLoading as boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Checks loading state.
Notes:

Returns true while page is loading.
Only available for Xojo 2017 and newer.

87.1.24 LibVersion as Integer

MBS Win Plugin, Plugin Version: 14.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns revision number of the Chromium library.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(b.LibVersion)
```

Notes:

up to Xojo 2014r1 this is 607.
Xojo 2014r2 uses 1562.

87.1.25 RegisterExtension(ExtensionName as String, javascriptCode as String) as Boolean

MBS Win Plugin, Plugin Version: 20.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Register a new V8 extension with the specified JavaScript extension code.
Notes: Returns true on success.

87.1.26 Release

MBS Win Plugin, Plugin Version: 15.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Releases the browser object.
Notes:

You don't need this normally.
This method can be used for working around Feedback case 33565.

87.1.27 Reload

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reload the current page.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.Reload
```

87.1.28 ReloadIgnoreCache

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reload the current page ignoring any cached data.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ReloadIgnoreCache
```

87.1.29 Retain

MBS Win Plugin, Plugin Version: 15.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retains the browser object.
Notes: You don't need this normally.

87.1.30 SetFocus(enableFocus as boolean = true)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Set focus for the browser window.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.SetFocus
```

Notes: If enable is true focus will be set to the window. Otherwise, focus will be removed.

87.1.31 setSize(width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Set the size of the specified element.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.setSize 600, 800
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.1.32 ShowDevTools

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Open developer tools in its own window.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.ShowDevTools
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.1.33 StopFinding(clearSelection as boolean)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Cancel all searches that are currently going on.

87.1.34 StopLoad

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Stop loading the page.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
m.StopLoad
```

87.1.35 Properties

87.1.36 FocusedFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the focused frame for the browser window.

Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.FocusedFrame
dim s as string = f.URL
MsgBox s
```

Notes: (Read only property)

87.1.37 FrameCount as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries frame count.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
if b<>Nil then
MsgBox "FrameCount: "+str(b.FrameCount)
end if
```

Notes:

Only available in Xojo 2017 and newer.
(Read only property)

87.1.38 Handle as Integer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.1.39 HasDocument as boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if a document has been loaded in the browser.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.HasDocument)
```

Notes: (Read only property)

87.1.40 Height as Integer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries height of the browser.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.Width) + " x " + str(m.Height)
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only supported for Chromium 2.x, but not 3.x.
(Read only property)

87.1.41 Identifier as Integer

MBS Win Plugin, Plugin Version: 20.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Unique identifier.
Notes: (Read only property)

87.1.42 IsPopup as boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the window is a popup window.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.IsPopup)
```

Notes: (Read only property)

87.1.43 MainFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the main (top-level) frame for the browser window.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.MainFrame
dim s as string = f.URL
MsgBox s
```

Notes: (Read only property)

87.1.44 Parent as HTMLViewer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The owner htmlviewer.
Notes: (Read only property)

87.1.45 PopupVisible as Boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if a popup is currently visible.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
msgbox str(m.PopupVisible)
```

Notes:

Only supported for Chromium 2.x, but not 3.x.
(Read only property)

87.1.46 ReferenceCount as Integer

MBS Win Plugin, Plugin Version: 15.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries reference count of this browser object.
Notes:

Normal it is 3 or 4, but due to a bug in Xojo, it can increase a lot.

See Feedback case 33565 for details.
(Read only property)

87.1.47 Width as Integer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries width of the browser.
Example:

```
dim m as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
MsgBox str(m.Width) + " x " + str(m.Height)
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only supported for Chromium 2.x, but not 3.x.
(Read only property)

87.1.48 WindowRenderingDisabled as Boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if window rendering is disabled.
Notes:

Only supported for Chromium 2.x, but not 3.x.
(Read only property)

87.1.49 ZoomLevel as Double

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Get/Set the zoom level.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.ZoomLevel = 2
```

Notes:

Change the zoom level to the specified value.
(Read and Write property)

87.2 class ChromiumCookieManagerMBS

87.2.1 class ChromiumCookieManagerMBS

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class to manage cookies for Chromium on Windows.
Notes:

May need to have a HTMLViewer first being initialized by Xojo before the Chromium DLLs can work properly.

Supports Xojo 2019r3 with MBS Plugin 20.1.

87.2.2 Blog Entries

- Upgrading WebKit for Windows support
- MBS Xojo Plugins, version 20.1pr4
- Cookies in HTMLViewer
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.2
- MBS Xojo / Real Studio Plugins, version 15.2pr2
- Cookies for Chromium in HTMLViewer on Windows

87.2.3 Methods

87.2.4 AllCookies as ChromiumCookieMBS()

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Visit all cookies.
Example:

```
dim m as new ChromiumCookieManagerMBS
dim cookies() as ChromiumCookieMBS = m.AllCookies
MsgBox str(cookies.Ubound+1)+" cookies"
```

Notes: The returned cookies are ordered by longest path, then by earliest creation date. Returns false (0) if cookies cannot be accessed.

87.2.5 Constructor

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.
Notes:

Can raise exception if no cookie manager is available, e.g. when calling on Linux or Mac OS X or Windows if you don't have the dlls.
May not work if the Chromium was not initialized before by Xojo.
See also:

- 87.2.6 Constructor(path as string, PersistSessionCookies as Boolean) 15234

87.2.6 Constructor(path as string, PersistSessionCookies as Boolean)

MBS Win Plugin, Plugin Version: 16.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The constructor for a new cookie manager.
Notes:

Can raise exception if no cookie manager is available, e.g. when calling on Linux or Mac OS X or Windows if you don't have the dlls.
May not work if the Chromium was not initialized before by Xojo.
See also:

- 87.2.5 Constructor 15234

87.2.7 DeleteAllCookies as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Deletes all cookies.
Notes: Returns number of deleted cookies.

87.2.8 DeleteCookie(URL as string, CookieName as string) as boolean

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Delete all cookies that match the specified parameters.
Notes:

If both url and values cookieName are specified all host and domain cookies matching both will be deleted. If only | url | is specified all host cookies (but not domain cookies) irrespective of path will be deleted. If url is empty all cookies for all hosts and domains will be deleted. Returns false if a non-empty invalid URL is specified or if cookies cannot be accessed.
Returns true on success.

87.2.9 DeleteCookies(URLs() as string, CookieNames() as string) as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Deletes several cookies.
Notes:

Same as DeleteCookie, but with arrays for parameters.
Returns number of successful delete attempts.

87.2.10 DeleteURLCookies(URL as String, HTTPOnly as boolean = false) as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Deletes all cookies for a given URL.
Notes:

The cookies to delete are filtered by the given url scheme, host, domain and path. If includeHttpOnly is true HTTP-only cookies will also be included in the deletion.
Returns number of cookies deleted.

87.2.11 Destructor

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

87.2.12 SetCookie(URL as string, cookie as ChromiumCookieMBS) as boolean

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets a cookie given a valid URL and explicit user-provided cookie attributes.
Example:

```
dim d as new date
dim c as new ChromiumCookieMBS

c.Domain = "www.mbsplugins.de"
c.Path = "/"
c.CreationDate = d
c.LastAccessDate = d
c.ExpirationDate = nil
c.Value = "test "+d.SQLDateTime
c.Name = "test"
c.Secure = false
c.HTTPonly = false
```

```
if CookieManager.SetCookie(c.URL, c) then
msgbox "OK"
else
MsgBox "Failed to add cookie"
end if
```

Notes: This function expects each attribute to be well-formed. It will check for disallowed characters (e.g. the ';' character is disallowed within the cookie value attribute) and will return false without setting the cookie if such characters are found.

87.2.13 SetCookies(URL() as string, cookies() as ChromiumCookieMBS) as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets a lot of cookies.
Notes:

Same as SetCookie, but with arrays of URLs and cookie objects.
Returns number of cookies created successfully.

87.2.14 SetStoragePath(Path as string) as boolean

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the directory path that will be used for storing cookie data.
Example:

```
dim CookieManager as ChromiumCookieManagerMBS // property of window/app

dim f as FolderItem = SpecialFolder.Desktop.Child("cookies")
f.CreateAsFolder

CookieManager = new ChromiumCookieManagerMBS

if CookieManager.SetStoragePath(f.NativePath) then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes:

If path is empty data will be stored in memory only.
Returns false if cookies cannot be accessed.

87.2.15 URLCookies(URL as String, HTTPOnly as boolean = false) as ChromiumCookieMBS()

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries a subset of cookies.
Notes:

The results are filtered by the given url scheme, host, domain and path. If includeHttpOnly is true HTTP-only cookies will also be included in the results. The returned cookies are ordered by longest path, then by earliest creation date. Returns empty array if cookies cannot be accessed.
Returns nil on any error like low memory.

87.2.16 Properties

87.2.17 Handle as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object refernce.
Notes: (Read only property)

87.2.18 ReferenceCount as Integer

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The reference count for the internal object.
Notes:

Only for debugging.
(Read only property)

87.3 class ChromiumCookieMBS

87.3.1 class ChromiumCookieMBS

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a cookie with WebKit on Windows.
Notes: Supports Xojo 2019r3 with MBS Plugin 20.1.

87.3.2 Blog Entries

- Cookies in HTMLViewer
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 15.2
- MBS Xojo / Real Studio Plugins, version 15.2pr2
- Cookies for Chromium in HTMLViewer on Windows

87.3.3 Methods

87.3.4 Constructor

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

87.3.5 Destructor

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

87.3.6 Properties

87.3.7 CreationDate as Date

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The cookie creation date.
Notes:

This is automatically populated by the system on cookie creation.
(Read and Write property)

87.3.8 Domain as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The domain for this cookie.
Notes:

If domain is empty a host cookie will be created instead of a domain cookie. Domain cookies are stored with a leading "." and are visible to sub-domains whereas host cookies are not.
(Read and Write property)

87.3.9 ExpirationDate as Date

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The cookie expiration date.
Notes:

Can be nil to have no expiration date.
(Read and Write property)

87.3.10 HTTPonly as Boolean

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The HTTP only state.
Notes:

If httponly is true the cookie will only be sent for HTTP requests.
(Read and Write property)

87.3.11 LastAccessDate as Date

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The cookie last access date.
Notes:

This is automatically populated by the system on access.
(Read and Write property)

87.3.12 Name as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The cookie name.

Notes: (Read and Write property)

87.3.13 Path as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The path.
Notes:

If path is non-empty only URLs at or below the path will get the cookie value.
(Read and Write property)

87.3.14 Scheme as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The scheme.
Notes:

Depends on secure setting only.
Can be "http://" or "https://".
(Read only property)

87.3.15 Secure as Boolean

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether this is a HTTPS only cookie.
Notes:

If secure is true the cookie will only be sent for HTTPS requests.
(Read and Write property)

87.3.16 URL as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The URL of the cookie.
Notes:

Build from Secure, Path and Domain.
(Read only property)

87.3.17 Value as String

MBS Win Plugin, Plugin Version: 15.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The cookie value.
Notes: (Read and Write property)

87.4 class ChromiumFrameMBS

87.4.1 class ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a webframe with WebKit on Windows.
Notes:

Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

87.4.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr4
- MBS Xojo / Real Studio plug-ins in version 14.2
- MBS Xojo / Real Studio Plugins, version 14.2pr7

87.4.3 Methods

87.4.4 Constructor

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

87.4.5 copy

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute copy in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.copy
```

87.4.6 cut

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute cut in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.cut
```

87.4.7 delete

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute delete in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.delete
```

87.4.8 Destructor

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

87.4.9 ExecuteJavaScript(jsCode as string, scriptUrl as string = """, startLine as Integer = 0)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute a string of JavaScript code in this frame.
Example:

```
// go back to last page via javascript
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
m.ExecuteJavaScript "window.history.back();"
```

Notes:

The scriptUrl parameter is the URL where the script in question can be found, if any. The renderer may request this URL to show the developer the source of the error. The startLine parameter is the base line number to use for error reporting.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

87.4.10 LoadString(StringValue as string, URL as string)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Load the contents of StringValue with the optional dummy target URL.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
m.LoadString "<p>Hello</p>", "blank:about"
```

87.4.11 LoadURL(URL as string)

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Load the specified url.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
m.LoadURL "http://www.macrumors.com"
```

87.4.12 paste

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute paste in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.paste
```

87.4.13 print

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute printing in the this frame. The user will be prompted with the print dialog appropriate to the operating system.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.print
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Only supported for Chromium 2.x, but not 3.x.

87.4.14 redo

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute redo in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.redo
```

87.4.15 SelectAll

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute select all in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
m.SelectAll
```

87.4.16 undo

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Execute undo in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
b.MainFrame.undo
```

87.4.17 ViewSource

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Save this frame's HTML source to a temporary file and open it in the default text viewing application.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
m.ViewSource
```

87.4.18 Properties

87.4.19 Browser as ChromiumBrowserMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the browser that this frame belongs to.
Notes: (Read only property)

87.4.20 Handle as Integer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.4.21 identifier as Int64

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the globally unique identifier for this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
MsgBox str(m.identifier)
```

Notes: (Read only property)

87.4.22 IsFocused as Boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if this is the focused frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
```

MsgBox str(m.IsFocused)

Notes: (Read only property)

87.4.23 IsMain as Boolean

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if this is the main (top-level) frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
MsgBox str(m.IsMain)
```

Notes: (Read only property)

87.4.24 Name as String

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name for this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim m as ChromiumFrameMBS = b.mainFrame
MsgBox m.Name
```

Notes:

If the frame has an assigned name (for example, set via the iframe "name" attribute) then that value will be returned. Otherwise a unique name will be constructed based on the frame parent hierarchy. The main (top-level) frame will always have an empty name value.
(Read only property)

87.4.25 Parent as HTMLViewer

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The owner htmlviewer.

Notes: (Read only property)

87.4.26 ParentFrame as ChromiumFrameMBS

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the parent of this frame or nil if this is the main (top-level) frame.
Notes: (Read only property)

87.4.27 Source as String

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns this frame's HTML source as a string.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.MainFrame
dim s as string = f.Source
Break // view in debugger
```

Notes: (Read only property)

87.4.28 Text as String

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns this frame's display text as a string.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.MainFrame
dim s as string = f.Text
Break // view in debugger
```

Notes: (Read only property)

87.4.29 URL as String

MBS Win Plugin, Plugin Version: 14.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the URL currently loaded in this frame.
Example:

```
dim b as ChromiumBrowserMBS = HTMLViewer1.ChromiumBrowserMBS
dim f as ChromiumFrameMBS = b.MainFrame
dim s as string = f.URL
MsgBox s
```

Notes: (Read only property)

87.5 class ChromiumWebPluginInfoMBS

87.5.1 class ChromiumWebPluginInfoMBS

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for details on installed plugins.
Notes:

Supports Xojo 2019r3 with MBS Plugin 20.1.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

87.5.2 Blog Entries

- Upgrading WebKit for Windows support
- MBS Xojo Plugins, version 20.1pr4
- MBS Xojo / Real Studio Plugins, version 16.0pr6

87.5.3 Methods

87.5.4 Constructor

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

87.5.5 Destructor

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.

87.5.6 Plugins as ChromiumWebPluginInfoMBS()

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of plugins.
Notes:

Those are the plugins Chromium found on the Windows PC.
e.g. 5 different versions of QuickTime Plugin.

87.5.7 Properties

87.5.8 Description as String

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A description of the plugin from the version information.
Notes: (Read only property)

87.5.9 Name as String

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The plugin name (i.e. Flash).
Notes: (Read only property)

87.5.10 Path as String

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The plugin file path (DLL/bundle/library).
Notes: (Read only property)

87.5.11 Version as String

MBS Win Plugin, Plugin Version: 16.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The version of the plugin (may be OS-specific).
Notes: (Read only property)

87.6 class IEDocumentMBS

87.6.1 class IEDocumentMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for the web document.
Notes:

For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IHTMLDocument2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa752574(v=vs.8

Let us know if you miss something.

87.6.2 Blog Entries

- MBS Xojo Plugins, version 20.0r6
- MBS Xojo Plugins, version 20.0r5
- Upgrading our HTMLViewer functions for Internet Explorer

87.6.3 Xojo Developer Magazine

- 18.3, page 53

87.6.4 Methods

87.6.5 CallFunction(FunctionName as string, paramArray params as variant) as variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Calls a JavaScript function.
Example:

```
dim doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

dim v as variant = doc.CallFunctiom("test", 2, 3)
```

Notes:

Returns result as variant.
You can pass as many parameters as needed.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

FunctionName should be the name of a global function defined in JavaScript.
See also:

- 87.6.6 CallFunction(FunctionName as string, params() as variant) as variant 15253

87.6.6 CallFunction(FunctionName as string, params() as variant) as variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Calls a JavaScript function.
Example:

```
dim doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

dim Params() as Variant
Params.append 2
Params.append 3

dim v as variant = doc.CallFunctiom("test", Params)
```

Notes:

Returns result as variant.
You can pass parameters for the function as array.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

FunctionName should be the name of a global function defined in JavaScript.
See also:

- 87.6.5 CallFunction(FunctionName as string, paramArray params as variant) as variant 15252

87.6.7 ClearBrowserSession as boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Ends browser session.
Notes:

For HTMLViewer using Internet Explorer engine. If you close one by closing the window with HTMLViewer control, this method should end session and a new window would start fresh again.

Flushes entries not in use from the password cache on the hard disk drive. Also resets the cache time used when the synchronization mode is once-per-session.
This should clear current session cookies.

87.6.8 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Creates new web document object for this HTMLViewer.
Notes:

For browser based on Internet Explorer on Windows.
Raises exception on failure.

87.6.9 ContinueFindText(text as string, count as integer, flags as integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Continues a search started with IEFindTextMBS.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

// find first
dim found as boolean = d.FindText("Xojo", 0, 0, true)

msgbox "Found Xojo: "+str(found)

if found then
// find next
found = d.ContinueFindText("Xojo", 0, 0, true)
end if
```

Notes: Parameters are the same as for IEFindTextMBS.

87.6.10 DrawToHDC(HDC as Ptr, PrinterName as string = "")

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Draws the content of the html document into the graphics context.
Notes:

As of Windows Internet Explorer 9, this method is deprecated and should not be used.
Returns true on success and false on failure.

With some printers, running DrawToDC may cause problems. You can ensure that DrawToDC works properly on all printers by running SetDocumentPrinter method first, and then passing the modified device context to DrawToDC. The plugin calls SetDocumentPrinter for you when you provide a printer name.

87.6.11 Evaluate(expression as string) as variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Evaluates a JavaScript expression.
Example:

```
dim doc as IEDocumentMBS = htmlviewer1.IEDocumentMBS

dim v as variant = doc.Evaluate("1+2")
Msgbox v
```

Notes:

In contrast to IEWindowMBS.RunJavaScript this function returns the result on Windows, but needs IE 9 or newer.

Our plugin converts Xojo data types to JavaScript data types like boolean, number, text or NULL. This could be extended in future to convert arrays, too.

87.6.12 FindText(text as string, count as integer, flags as integer, selectText as boolean) as boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Finds text on the current website.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

// find first
```

```
dim found as boolean = d.FindText("Xojo", 0, 0, true)

msgbox "Found Xojo: "+str(found)

if found then
// find next
found = d.ContinueFindText("Xojo", 0, 0, true)
end if
```

Notes:

text: the string that specifies the text to find.
count: long that specifies the number of characters to search from the starting point of the range. A positive integer indicates a forward search; a negative integer indicates a backward search.
Flags: integer that specifies one or more of the following flags to indicate the type of search:

0	Default. Match partial words.
1	Match backwards.
2	Match whole words only.
4	Match case.
131072	Match bytes.
536870912	Match diacritical marks.
1073741824	Match Kashida character.
2147483648	Match AlefHamza character.

Returns true: The search text was found.
Returns false: The search text was not found.

87.6.13 GetTextArea(FormName as String, FieldName as String) as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries text for a textarea.
Notes:

FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns text from textarea.

87.6.14 HTMLText as string

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns a copy of the html source code of the current webpage.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim htmlText as string = d.HTMLText
dim PlainText as string = d.text
dim toString as string = d.ToString

Break // see in debug
```

Notes:

Improved in plugin version 12.2 to return better HTML text. This is the html generated from current web content and not the page we originally loaded. So this works with Editable property.
Returns "" on any error.

On Mac OS X, you can use HTMLViewer1.mainFrameMBS.dataSource.data to get the document html text.

87.6.15 Image as picture

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Copies the picture from the document.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim p as Picture = d.Image
canvas1.Backdrop = p
```

Notes:

You may want to resize the htmlviewer to get a picture without scrollbars. (See example projects)
You may need to call ClearFocus as it seems like if the focus is on the htmlviewer it does not draw itself in our picture.

87.6.16 LoadHTML(HTMLText as string)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads the HTML text into the htmlviewer.

Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

d.LoadHTML "<p>Hello World</p>"
```

Notes:

Does not use a temp file like Xojo's built in method.
Returns true on success.
On Windows you may need to reset webviewer before or load "about:blank" to initialize the webviewer by Xojo (or Xojo).

87.6.17 PrintPreview as boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Commands Internet Explorer to show the print preview dialog for this htmlviewer.
Notes:

Returns true on success. Returns false if function is not supported.
The function returns directly while the preview dialog is still running.

87.6.18 Reload(Force as boolean = false)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reloads the current page.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
d.Reload
```

Notes:

Boolean that specifies one of the following possible values:
False: Default. Reloads the document from the cache.
True: Reloads the document from the server.

87.6.19 SetTextArea(FormName as String, FieldName as String, Value as String) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets text for a textarea.
Notes:

FormName can be "" to look for any field with given name.
Raises exception if field is not found.
Returns true if text is set or false on failure.

87.6.20 Text as string

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns a copy of the text of the current webpage.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim htmlText as string = d.HTMLText
dim PlainText as string = d.text
dim toString as string = d.ToString

Break // see in debug
```

Notes:

Asks Internet Explorer for a selection of the whole document and asks selection about the text content.
Returns "" on any error.

On Mac OS X, you can use HTMLViewer1.mainFrameMBS.dataSource.data to get the document html text.

87.6.21 Properties

87.6.22 CharSet as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the character set used to encode the object.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.CharSet
```

Notes:

Example value: "utf-8"
(Read and Write property)

87.6.23 Cookie as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the string value of a cookie.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Cookie
```

Notes:

Example value: "s_vi= [CS] v1 | 427CA13500002D10-A000B5B00000001 [CE] ; s_cc=true; s_nr=1196708888562; s_sq=% 5B% 5BB% 5D% 5D"
(Read and Write property)

87.6.24 DefaultCharset as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the default character set from the current regional language settings.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.DefaultCharset
```

Notes:

Example value: "windows-1252"
(Read and Write property)

87.6.25 Domain as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the security domain of the document.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Domain
```

Notes:

Example value: "www.apple.com"
(Read and Write property)

87.6.26 Editable as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Whether the htmlviewer is editable on Windows.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
d.Editable = true
```

Notes: (Read and Write property)

87.6.27 FileCreationDate as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was created.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.FileCreationDate
```

Notes:

Example value: "09/13/2007"
(Read only property)

87.6.28 FileModifiedDate as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was last modified.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.FileModifiedDate
```

Notes:

Example value: "12/03/2007"
(Read only property)

87.6.29 FileSize as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the file size.
Notes:

Example value: "12475"
(Read only property)

87.6.30 FileUpdatedDate as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the date the file was last updated.
Notes:

Example value: "01/01/1601"
(Read only property)

87.6.31 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.6.32 History as IEHistoryMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries history object for web document.
Notes: (Read only property)

87.6.33 LastModified as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the date that the page was last modified, if the page supplies one.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.LastModified
```

Notes:

Example value: "12/03/2007 20:08:17"
(Read only property)

87.6.34 MimeType as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the MIME type for the file.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.MimeType
```

Notes:

Example value: "HTM-Datei"
See also MimeTypeToFileExtensionMBS function.
(Read only property)

87.6.35 NameProp as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the title of the document file.
Notes:

Example value: "Apple"
(Read only property)

87.6.36 Navigator as IENavigatorMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries navigator object for web document.
Notes: (Read only property)

87.6.37 ParentWindow as IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries parent window for this document.
Notes: (Read only property)

87.6.38 Protocol as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the protocol portion of a URL.
Notes:

Example value: "HTTP (HyperText Transfer-Protokoll)"
(Read only property)

87.6.39 ReadyState as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a value that indicates the current state of the htmlviewer.
Notes:

uninitialized: Object is not initialized with data.
loading: Object is loading its data.
loaded: Object has finished loading its data.
interactive: User can interact with the object even though it is not fully loaded.
complete: Object is completely initialized.

An object's state is initially set to uninitialized, and then to loading. When data loading is complete, the state of the link object passes through the loaded and interactive states to reach the complete state.

The states through which an object passes are determined by that object; an object can skip certain states (for example, interactive) if the state does not apply to that object.

Data source objects and databound elements are normally populated asynchronously, and certain programmatic operations can only be performed reliably on databound objects when they are ready for use. There-

fore, the appropriate code should be written to confirm the readyState of objects prior to performing certain operations on them. For example, walking the rows of a table should not be attempted until after the table has reached the complete state.

The readyState property enables the status of an object to be tested. The correct place to test the readyState property is in the event handler for onreadystatechange. Similarly, a data source object (DSO) fires the ondatasetcomplete event to notify the document that the dataset is ready for programmatic operation.
(Read only property)

87.6.40 Referrer as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the URL of the location that referred the user to the current page.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Referrer
```

Notes:

Example value: "http://www.apple.com/"
(Read only property)

87.6.41 ScrollHeight as integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the height of the html viewer content.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

msgbox str(d.ScrollWidth)+" "+str(d.ScrollHeight)
```

Notes:

Returns 0 on any error.
(Read only property)

87.6.42 ScrollWidth as integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries the width of the html viewer content.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS

msgbox str(d.ScrollWidth)+" "+str(d.ScrollHeight)
```

Notes:

Returns 0 on any error.
(Read only property)

87.6.43 Security as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the security state.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Security
```

Notes:

Example value: "Für diesen Dokumententyp gibt es kein Sicherheitszertifikat."
(Read only property)

87.6.44 Title as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the title of the document.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.Title
```

Notes:

Example value: "Apple"

(Read and Write property)

87.6.45 ToString as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string representation of the object.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim htmlText as string = d.HTMLText
dim PlainText as string = d.text
dim toString as string = d.ToString

Break // see in debug
```

Notes:

Example value: " [object] "
(Read only property)

87.6.46 URL as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the URL for the current document.
Example:

```
dim d as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
msgbox d.URL
```

Notes:

Example value: "http://www.apple.com/"
(Read and Write property)

87.7 class IEExceptionMBS

87.7.1 class IEExceptionMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an error in one of the IE classes.
Notes:

See errorNumber and message properties.
Subclass of the RuntimeException class.

87.7.2 Blog Entries

- Upgrading our HTMLViewer functions for Internet Explorer

87.8 class IEHistoryMBS

87.8.1 class IEHistoryMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for the web history.
Notes:

For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IOmHistory interface:
https://docs.microsoft.com/en-us/previous-versions/aa703740(v=vs.85)

Let us know if you miss something.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

87.8.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5
- Upgrading our HTMLViewer functions for Internet Explorer

87.8.3 Methods

87.8.4 Back

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads a previous URL from the History list.

87.8.5 Constructor

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Private constructor.

87.8.6 Forward

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads the next URL from the History list.

87.8.7 Go(index as Integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads a URL from the History list.
Notes:

index: An integer indicates the relative position of a URL in the History list.

An error does not occur if the user tries to go beyond the beginning or end of the history. Instead, the user remains at the current page.

87.8.8 Properties

87.8.9 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.8.10 Length as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the number of elements in the History list.
Notes:

Example value: 0
(Read only property)

87.9 class IENavigatorMBS

87.9.1 class IENavigatorMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a navigator object.
Notes:

For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IOmNavigator interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/hh774262(v=vs.8

Let us know if you miss something.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

87.9.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5
- Upgrading our HTMLViewer functions for Internet Explorer

87.9.3 Methods

87.9.4 Constructor

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Private constructor.

87.9.5 Properties

87.9.6 AppCodeName as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the code name.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.AppCodeName
```

Notes:

Returns "Mozilla". Returned by Internet Explorer and Netscape Navigator.
(Read only property)

87.9.7 AppMinorVersion as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the application's minor version value.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.AppMinorVersion
```

Notes:

Example value: ";SP2;"
e.g. "0"
(Read only property)

87.9.8 AppName as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the name of the browser.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.AppName
```

Notes:

Example value: "Microsoft Internet Explorer"
(Read only property)

87.9.9 AppVersion as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the platform and version of the browser.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.AppVersion
```

Notes:

Example value: "4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"
(Read only property)

87.9.10 BrowserLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the current browser language.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.BrowserLanguage
```

Notes:

Example value: "de"
(Read only property)

87.9.11 CookieEnabled as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves whether client-side persistent cookies are enabled in the browser.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator
```

```
if a.CookieEnabled then
msgbox "Cookie enabled"
else
msgbox "Cookie disabled"
end if
```

Notes:

Persistent cookies are those that are stored on the client-side computer.
Example value: True
(Read only property)

87.9.12 CPUClass as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string denoting the CPU class.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.CPUClass
```

Notes:

Returns "x86" for Intel processor.
(Read only property)

87.9.13 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.9.14 JavaEnabled as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns whether Java is enabled.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

if a.JavaEnabled then
msgbox "Java enabled"
else
msgbox "Java disabled"
end if
```

Notes:

Example value: True
(Read only property)

87.9.15 OnLine as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a value indicating whether the system is in global offline mode.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.OnLine
```

Notes:

The user can modify the global offline state by choosing Work Offline from the File menu in Microsoft Internet Explorer version 4.0 or later. This property does not indicate whether the system is connected to the network.

Example value: True
(Read only property)

87.9.16 Platform as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the name of the user's operating system.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator
```

msgbox a.Platform

Notes:

Returns "Win64" for Windows 64-bit platform.
Returns "Win32" for Windows 32-bit platform.
(Read only property)

87.9.17 SystemLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the default language used by the operating system.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.SystemLanguage

msgbox a.AppCodeName
```

Notes:

The systemLanguage property reflects the language edition of the installed operating system.
e.g. de-DE
(Read only property)

87.9.18 UserAgent as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves a string equivalent to the HTTP user-agent request header.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.UserAgent
```

Notes:

The HTTP user-agent request header contains information about compatibility, the browser, and the platform name. For more information about the browser, see the IENavigatorappNameMBS property. For more information about the platform, see the IENavigatorappVersionMBS property.

The IENavigatoruserAgentMBS property dynamically returns a different value depending on the browser and platform versions. For example, Microsoft Internet Explorer 6 returns the following string for Microsoft Windows XP.

Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1)

Example value: "Mozilla/4.0 (compatible; MSIE 6.0; Windows NT 5.1; SV1; .NET CLR 1.1.4322; .NET CLR 2.0.50727)"

Like other plugin function, this can only work if a page has been loaded. Xojo won't create the internal htmlviewer object before you load a page.
(Read only property)

87.9.19 UserLanguage as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the operating system's natural language setting.
Example:

```
dim w as IEDocumentMBS = HTMLViewer1.IEDocumentMBS
dim a as IENavigatorMBS = w.Navigator

msgbox a.AppCodeName
```

Notes:

Example value: "de-DE"
(Read only property)

87.10 class IEWebBrowserMBS

87.10.1 class IEWebBrowserMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a web browser.
Notes:

For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IWebBrowser2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa752127(v=vs.8

Let us know if you miss something.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 18.3, page 10

87.10.4 Methods

87.10.5 Constructor

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Private constructor.

87.10.6 GetInternetExplorerHiDPI as Integer

MBS Win Plugin, Plugin Version: 20.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Query whether HiDPI handling is enabled.
Notes: We can opt-in for your application to let HTMLviewer use proper resolution handling for web content.

87.10.7 GetInternetExplorerVersion as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries IE version used for this application.
Notes: Queries the Internet Explorer version to use for HTMLViewer.

87.10.8 GoBack

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigates backward one item in the history list.

87.10.9 GoForward

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigates forward one item in the history list.

87.10.10 GoHome

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigates to the current home or start page.
Notes:

The user can indicate the URL to use for the home page from the Internet Options dialog box, which is accessible from the Tools menu of Windows Internet Explorer, or in the Control Panel.
Internet Explorer 7 and later. This method navigates to the first URL in the home tabs group.

87.10.11 GoSearch

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigates to the current search page.
Notes:

The user can indicate the URL to use for the search page with the Internet Options dialog box, which is accessible from the Tools menu of Windows Internet Explorer, or in the Control Panel.
Internet Explorer 7 and later. GoSearch navigates to the default search provider. For more information, see Windows Search Guide.

87.10.12 Navigate(URL as string, Flags as Integer = 0, TargetFrameName as String = "", PostData as String = "", Headers as String = "")

MBS Win Plugin, Plugin Version: 20.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Navigates to a resource identified by a URL or to a file identified by a full path.
Notes:

URL: The URL, full path, or Universal Naming Convention (UNC) location and name of the resource to display.
Flags: The combination of Navigate* constants.
TargetFrameName: Optional, the name of the frame in which to display the resource.
PostData: The post data that is sent to the server as part of a HTTP POST transaction. A POST transaction is typically used to send data gathered by an HTML form. If this parameter does not specify any post data, this method issues an HTTP GET transaction. This parameter is ignored if the URL is not an HTTP URL.
Headers: The text list that contains additional HTTP headers to send to the server. These headers are added to the default headers. For example, headers can specify the action required of the server, the type of data being passed to the server, or a status code. This parameter is ignored if the URL is not an HTTP URL.

The possible values for the TargetFrameName parameter are:

_blank	Load the link into a new unnamed window.
_parent	Load the link into the immediate parent of the document the link is in.
_self	Load the link into the same window the link was clicked in.
_top	Load the link into the full body of the current window.
WindowName	A named HTML frame. If no frame or window exists that matches the specified target name, a new window is opened for the specified link.

87.10.13 Refresh

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reloads the file that is currently displayed in the object.
Notes:

This method is the same as clicking the Refresh button or pressing F5 in Windows Internet Explorer.
To save time and network bandwidth, the WebBrowser control and InternetExplorer application store pages from recently visited sites in cached memory on the user's hard disk. When you revisit a Web site, the page

is reloaded from the local disk instead of being downloaded again from the server. To ensure that you are viewing the most current version of the page, you can force a fresh download by using the Refresh method. This method adds the "Pragma: No-cache" HTTP header to the request.
See also:

- 87.10.14 Refresh(Level as Integer) 15281

87.10.14 Refresh(Level as Integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reloads the file that is currently displayed with the specified refresh level.
See also:

- 87.10.13 Refresh 15280

87.10.15 SetInternetExplorerHiDPI(Enable as Boolean) as Boolean

MBS Win Plugin, Plugin Version: 20.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets whether HiDPI handling is enabled.
Notes:

We can opt-in for your application to let HTMLviewer use proper resolution handling for web content.
You may just call this in your app.open event.

87.10.16 SetInternetExplorerVersion(version as Integer) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets IE version used for this application.
Example:

```
// make sure we don't end up with Internet Explorer in version 7, which is default.
Dim v As Integer = IEWebBrowserMBS.GetInternetExplorerVersion

If v <11000 Then // below version 11.0

Dim b As Boolean = IEWebBrowserMBS.SetInternetExplorerVersion(11000)
If b Then
MsgBox "Requested Internet Explorer version 11.0."
Else
MsgBox "Failed to set IE version?"
End If
End If
```

Notes:

By default Xojo uses IE7 for the HTMLViewer, even if you have version 11 enabled.

Value	Description
11001	Internet Explorer 11. Webpages are displayed in IE11 edge mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
11000	IE11. Webpages containing standards-based !DOCTYPE directives are displayed in IE11 edge mode. Default value for IE11.
10001	Internet Explorer 10. Webpages are displayed in IE10 Standards mode, regardless of the !DOCTYPE directive.
10000	Internet Explorer 10. Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode. Default value for Internet Explorer 10.
9999	Windows Internet Explorer 9. Webpages are displayed in IE9 Standards mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
9000	Internet Explorer 9. Webpages containing standards-based !DOCTYPE directives are displayed in IE9 mode. Default value for Internet Explorer 9. In Internet Explorer 10, Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode.
8888	Webpages are displayed in IE8 Standards mode, regardless of the declared !DOCTYPE directive. Failing to declare a !DOCTYPE directive causes the page to load in Quirks.
8000	Webpages containing standards-based !DOCTYPE directives are displayed in IE8 mode. Default value for Internet Explorer 8. In Internet Explorer 10, Webpages containing standards-based !DOCTYPE directives are displayed in IE10 Standards mode.
7000	Webpages containing standards-based !DOCTYPE directives are displayed in IE7 Standards mode. Default value for applications hosting the WebBrowser Control.

In a test on Windows 10, we get by default this browser version:

Mozilla/4.0 (compatible; MSIE 7.0; Windows NT 6.2; Win64; x64; Trident/7.0; .NET4.0C; .NET4.0E; Tablet PC 2.0; .NET CLR 2.0.50727; .NET CLR 3.0.30729; .NET CLR 3.5.30729)

and with setting it to 11000, we get this:

Mozilla/5.0 (Windows NT 6.2; Win64; x64; Trident/7.0; rv:11.0) like Gecko

87.10.17 Stop

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Stops loading.
Notes: Returns true on success and false on failure.

87.10.18 Zoom(factor as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Zooms the web content.
Notes:

Factor can be 50 for 50% .
Returns true on success.

87.10.19 Properties

87.10.20 AddressBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the address bar of the object is visible or hidden.
Notes: (Read and Write property)

87.10.21 Busy as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets a value that indicates whether the object is engaged in a navigation or downloading operation.
Notes:

If the control is busy, you can use the Stop method to cancel the navigation or download operation before it is completed.
(Read only property)

87.10.22 FullName as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the fully qualified path of the Windows Internet Explorer executable.
Notes:

Internet Explorer 8 and later. Always returns an empty string.
This method also updates the window list.
(Read only property)

87.10.23 FullScreen as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether Windows Internet Explorer is in full-screen mode or normal window mode.
Notes:

True: Internet Explorer is in full-screen mode.
False: Default. Internet Explorer is in normal window mode.

In full-screen mode, the Internet Explorer main window is maximized, and the status bar, toolbar, menu bar, and title bar are hidden.
Setting FullScreen (even to false) resets the values of the AddressBar and ToolBar properties to true. Disable the address bar and toolbars after you set the FullScreen property.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

87.10.24 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.10.25 LocationName as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the path or title of the resource that is currently displayed.
Notes:

If the resource is an HTML webpage, the name is the title of the document. If the resource is a folder or file on the network or local computer, the name is the full file system path of the folder or file in Universal Naming Convention (UNC) format.

If this method is called before the first navigation is complete, InternetExplorer returns an empty string.
(Read only property)

87.10.26 LocationURL as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the URL of the resource that is currently displayed.
Example:

```
dim w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
msgbox w.LocationURL
```

Notes:

If the resource is a folder or file on the network or local computer, the name is the full path of the folder or file in the Universal Naming Convention (UNC) format.
If this method is called before the first navigation is complete, InternetExplorer returns an empty string.
(Read only property)

87.10.27 MenuBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the Windows Internet Explorer menu bar is visible.
Notes:

True: Default. Menu bar is visible.
False: Menu bar is hidden.
(Read and Write property)

87.10.28 Name as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The frame name or application name of the object.
Example:

```
dim w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
msgbox w.Name
```

Notes: (Read only property)

87.10.29 Offline as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the object is operating in offline mode.
Notes:

In offline mode, the browser is forced to read HTML pages from the local cache instead of reading from the source document online.
The WebBrowser object delegates this method to the top-level frame. If no frame exists, it returns false.
(Read and Write property)

87.10.30 ReadyState as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the ready state of the object.
Notes: (Read only property)

87.10.31 RegisterAsBrowser as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the object is registered as a top-level browser window.
Notes:

The architecture of Windows Internet Explorer allows for multiple instances of the IWebBrowser2 object. A "top-level" IWebBrowser2 object is the parent of all other IWebBrowser2 objects. Only top-level objects can register as a browser with this method.
By setting this property to True, Internet Explorer and Windows can locate other top-level IWebBrowser2 objects that can participate in frame name resolution. For example, if the user clicks on a hyperlink that specifies a target attribute that is not in the current window, Internet Explorer searches all registered IWebBrowser2 objects in an attempt to resolve the target name.
After the window is registered as a top-level browser, it cannot be unregistered.
(Read and Write property)

87.10.32 RegisterAsDropTarget as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the object is registered as a drop target for navigation.
Notes:

A drop target is an object that has been registered to accept data from a drag-and-drop operation.
The WebBrowser object delegates this method to the top-level frame. If no frame exists, it raises exception.
(Read and Write property)

87.10.33 Silent as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the object can display dialog boxes.
Notes:

False: Default. Dialog boxes and messages can be displayed. Critical errors and security alerts are not suppressed.
True: Dialog boxes are not displayed.

The WebBrowser object delegates this method to the top-level frame. If no frame exists, it raises exception.
(Read and Write property)

87.10.34 StatusBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets a value that indicates whether the status bar for the object is visible.
Notes:

The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

87.10.35 StatusText as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets the text in the status bar for the object.
Example:

```
dim w as IEWebBrowserMBS = HTMLViewer1.IEWebBrowserMBS
msgbox w.StatusText
```

Notes:

Windows Internet Explorer 7 and later. The security settings that restrict access to the status bar from script do not apply to this method.
(Read and Write property)

87.10.36 TheaterMode as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets whether the object is in theater mode.

Notes:

True: Object is in theater mode.
False: Default. Object is in normal mode.

In theater mode, the object's main window fills the entire screen and displays a toolbar that has a minimal set of navigational buttons. A status bar is also provided in the upper-right corner of the screen. Explorer bars, such as History and Favorites , are displayed as an autohide pane on the left edge of the screen in theater mode.

Setting TheaterMode (even to false) resets the values of the AddressBar and ToolBar properties to true. Disable the address bar and toolbars after you set the TheaterMode property.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

87.10.37 ToolBar as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or gets whether toolbars for the object are visible.
Notes:

False: Toolbar is hidden.
True: Default. Toolbar is visible.

When the ToolBar property is set to falsde, it is not equivalent to the "toolbar=no" feature of window.open. Instead, it turns off all user interface elements that can be considered toolbars, leaving Windows Internet Explorer in a blank state.
The WebBrowser object saves the value of this property, but otherwise ignores it.
(Read and Write property)

87.10.38 Type as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets the user type name of the contained document object.
Notes:

For example, this method returns "HTML Document" if the document supports the IHTMLDocument2 interface.

The WebBrowser object delegates this method to the top-level frame. If no frame exists, it returns empty text.
(Read only property)

87.10.39 Constants

87.10.40 NavigateAllowAutosearch = & h10

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: If the navigation fails, the autosearch functionality attempts to navigate common root domains (.com, .edu, and so on). If this also fails, the URL is passed to a search engine.

87.10.41 NavigateBlockRedirectsXDomain = & h8000

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 8. Block cross-domain redirect requests.

87.10.42 NavigateBrowserBar = & h20

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Causes the current Explorer Bar to navigate to the given item, if possible.

87.10.43 NavigateEnforceRestricted = & h80

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 6 for Windows XP SP2 and later. Force the URL into the restricted zone.

87.10.44 NavigateHyperlink = & h40

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 6 for Windows XP SP2 and later. If the navigation fails when a hyperlink is being followed, this constant specifies that the resource should then be bound to the moniker using the BINDF_HYPERLINK flag.

87.10.45 NavigateKeepWordWheelText = & h2000

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 7. Maintain state for dynamic navigation based on the filter string entered in the search band text box (wordwheel). Restore the wordwheel text when the navigation completes.

87.10.46 NavigateNewWindowsManaged = & h100

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 6 for Windows XP SP2 and later. Use the default Popup Manager to block pop-up windows.

87.10.47 NavigateNoHistory = 2

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Do not add the resource or file to the history list. The new page replaces the current page in the list.

87.10.48 NavigateNoReadFromCache = 4

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Not implemented.

87.10.49 NavigateNoWriteToCache = 8

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Not implemented.

87.10.50 NavigateOpenInBackgroundTab = & h1000

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 7. Open the resource or file in a new background tab; the currently active window and/or tab remains open on top.

87.10.51 NavigateOpenInNewTab = & h800

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 7. Open the resource or file in a new tab. Allow the destination window to come to the foreground, if necessary.

87.10.52 NavigateOpenNewForegroundTab = & h10000

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 8 and later. Open the resource in a new tab that becomes the foreground tab.

87.10.53 NavigateTrustedForActiveX = & h400

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 6 for Windows XP SP2 and later. Prompt for the installation of ActiveX controls.

87.10.54 NavigateUntrustedForDownload = & h200

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 6 for Windows XP SP2 and later. Block files that normally trigger a file download dialog box.

87.10.55 NavigateVirtualTab = & h4000

MBS Win Plugin, Plugin Version: 20.1. **Function:** One of the constants for navigate method.
Notes: Internet Explorer 8. Open the resource as a replacement for the current or target tab. The existing tab is closed while the new tab takes its place in the tab bar and replaces it in the tab group, if any. Browser history is copied forward to the new tab. On Windows Vista, this flag is implied if the navigation would cross integrity levels and navOpenInNewTab, navOpenInBackgroundTab, or navOpenInNewWindow is not specified.

87.10.56 ReadyStateComplete = 4

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the ready states.
Notes: Object has received all of its data.

87.10.57 ReadyStateInteractive = 3

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the ready states.
Notes: Object is interactive, but not all of its data is available.

87.10.58 ReadyStateLoaded = 2

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the ready states.
Notes: Object has been initialized.

87.10.59 ReadyStateLoading = 1

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the ready states.
Notes: Object is currently loading its properties.

87.10.60 ReadyStateUninitialized = 0

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the ready states.
Notes: Default initialization state.

87.10.61 RefreshCompletely = 2

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the Refresh levels.
Notes: Refresh without forced cache validation by sending a "Pragma:no-cache" header to the server (HTTP URLs only). Same as pressing Ctrl+F5 in Microsoft Internet Explorer.

87.10.62 RefreshIfExpired = 1

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the Refresh levels.
Notes: Not currently implemented.

87.10.63 RefreshNormal = 0

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the Refresh levels.
Notes: Refresh without sending a "Pragma:no-cache" HTTP header to the server.

87.11 class IEWindowMBS

87.11.1 class IEWindowMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for a web window.
Notes:

For HTMLViewer based on Internet Explorer on Windows.
All the methods and properties may raise IEExceptionMBS exceptions in case of failure.

Based on IHTMLWindow2 interface:
https://docs.microsoft.com/en-us/previous-versions/windows/internet-explorer/ie-developer/platform-apis/aa741505(v=vs.8

Let us know if you miss something.

87.11.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5
- Upgrading our HTMLViewer functions for Internet Explorer

87.11.3 Xojo Developer Magazine

- 18.3, page 53

87.11.4 Methods

87.11.5 Alert(Message as string)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box containing an application-defined message.
Example:

```
dim w as IEWindowMBS = HTMLViewer1.IEWindowMBS
w.Alert("Hello Alert!")
```

87.11.6 Blur

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Causes the element to lose focus and fires the onblur event.

87.11.7 Confirm(Message as string) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a confirmation dialog box that contains an optional message as well as OK and Cancel buttons.
Example:

```
dim w as IEWindowMBS = HTMLViewer1.IEWindowMBS

dim b as Boolean = w.Confirm("Like Xojo?")
Break
```

Notes:

Message: that specifies the message to display in the confirmation dialog box.
If no value is provided, the dialog box does not contain a message.

The title bar of the confirmation dialog box cannot be changed.

87.11.8 Constructor(HTMLViewer as HTMLViewer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Creates new web window object for this HTMLViewer.
Notes:

For browser based on Internet Explorer on Windows.
Raises exception on failure.

87.11.9 ExecScript(Code as string, language as String)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Executes the specified script in the provided language.
Example:

```
dim w as IEWindowMBS = HTMLViewer1.IEWindowMBS

w.ExecScript("alert('Hello');", "JavaScript")
```

Notes:

code: specifies the code to be executed.
language: specifies the language in which the code is executed. The language defaults to JScript.

Script executed through the execScript method can access all global variables available to the calling script. This can be useful when you want the functionality of another scripting language that would not otherwise be available in JScript, such as the Microsoft Visual Basic Scripting Edition (VBScript) MsgBox function.

87.11.10 MoveBy(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Moves the screen position of the window by the specified x and y offset values.
Notes:

x: long that specifies the horizontal scroll offset in pixels. The value can be either positive or negative.
y: long that specifies the vertical scroll offset in pixels. The value can be either positive or negative.

87.11.11 MoveTo(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Moves the screen position of the upper-left corner of the window to the specified x and y position.
Notes:

x: long that specifies the horizontal scroll offset in pixels. The value can be either positive or negative.
y: long that specifies the vertical scroll offset in pixels. The value can be either positive or negative.

87.11.12 Navigate(URL as string)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Loads the specified URL to the current window.
Notes: URL: that specifies the URL to display.

87.11.13 Print

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Opens the normal print dialog for the Internet Explorer.
Notes: Raises exception on failure.

87.11.14 RunJavaScript(JavaScript as string)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Executes the specified script in the provided language.
Example:

```
dim w as IEWindowMBS = HTMLViewer1.IEWindowMBS

w.RunJavaScript("alert('Hello');")
```

Notes:

Same as ExecScript with language JavaScript.
Raises exception on failure.

The IE API does not allow to return values from Javascript. So you need to store your result in window.title and access it later using IETitleMBS.

IERunJavaScriptMBS fails if the htmlviewer is empty. You can load a dummy page like above.

For Windows use EvaluateJavaScriptMBS function.

You can use JavaScriptEngineMBS class to execute JavaScript without HTMLViewer in our own cross platform JavaScript engine.

See IEDocumentMBS.Evaluate for newer version which can return result.

87.11.15 Scroll(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Causes the window to scroll to the specified x- and y-offset at the upper-left corner of the window.
Notes:

x: long that specifies the horizontal scroll offset, in pixels.
y: long that specifies the vertical scroll offset, in pixels.

This method is provided for backward compatibility only. The recommended way to scroll a window is to use the scrollTo method.

87.11.16 ScrollBy(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Causes the window to scroll relative to the current scrolled position by the specified x- and y-pixel offset.
Example:

```
dim w as IEWindowMBS = HTMLViewer1.IEWindowMBS

w.ScrollBy 0, 1000
```

Notes:

x: long that specifies the horizontal scroll offset, in pixels. Positive values scroll the window right, and negative values scroll it left.
y: long that specifies the vertical scroll offset, in pixels. Positive values scroll the window down, and negative values scroll it up.

87.11.17 ScrollTo(x as integer, y as integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Scrolls the window to the specified x- and y-offset.
Notes:

x: long that specifies the horizontal scroll offset, in pixels.
y: long that specifies the vertical scroll offset, in pixels.

87.11.18 Properties

87.11.19 DefaultStatus as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the default message displayed in the status bar at the bottom of the window.
Notes: (Read and Write property)

87.11.20 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

87.11.21 Name as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves a value that indicates the window name.
Notes: (Read and Write property)

87.11.22 Status as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets or retrieves the message in the status bar at the bottom of the window.
Notes: (Read and Write property)

87.12 Globals

87.12.1 IEClearBrowserSessionMBS as boolean

MBS Win Plugin, Plugin Version: 18.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Ends browser session.
Notes:

For HTMLViewer using Internet Explorer engine. If you close one by closing the window with HTMLViewer control, this method should end session and a new window would start fresh again.

Flushes entries not in use from the password cache on the hard disk drive. Also resets the cache time used when the synchronization mode is once-per-session.
This should clear current session cookies.

Chapter 88

iCloud

88.1 class NSComparisonPredicateMBS

88.1.1 class NSComparisonPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** NSComparisonPredicateMBS is a subclass of NSPredicateMBS that you use to compare expressions. **Example:**

```
dim n1 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(4)
dim n2 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(9)

dim modifier as Integer = NSComparisonPredicateMBS.NSDirectPredicateModifier
dim type as Integer = NSComparisonPredicateMBS.NSGreaterThanPredicateOperatorType
dim options as Integer = 0

dim c as new NSComparisonPredicateMBS(n1, n2, Modifier, type, options)

MsgBox c.predicateFormat
```

Notes:

You use comparison predicates to compare the results of two expressions. You create a comparison predicate with an operator, a left expression, and a right expression. You represent the expressions using instances of the NSExpressionMBS class. When you evaluate the predicate, it returns as a BOOL value the result of invoking the operator with the results of evaluating the expressions.
Subclass of the NSPredicateMBS class.

88.1.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

88.1.3 Methods

88.1.4 comparisonPredicateModifier as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the comparison predicate modifier for the receiver.
Notes:

Available in Mac OS X v10.4 and later.
The default value is NSDirectPredicateModifier.

88.1.5 Constructor(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS, modifier as UInt32, type as UInt32, options as UInt32)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a predicate to a given type formed by combining given left and right expressions using a given modifier and options.
Example:

```
dim n1 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(4)
dim n2 as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(9)

dim modifier as Integer = NSComparisonPredicateMBS.NSDirectPredicateModifier
dim type as Integer = NSComparisonPredicateMBS.NSGreaterThanPredicateOperatorType
dim options as Integer = 0

dim c as new NSComparisonPredicateMBS(n1, n2, Modifier, type, options)

MsgBox c.predicateFormat
```

Notes:

LeftExpression: The left hand expression.
rightExpression: The right hand expression.
modifier: The modifier to apply.
type: The predicate operator type.
options: The options to apply (see constants). For no options, pass 0.

The receiver, initialized to a predicate of type type formed by combining the left and right expressions using the modifier and options.
Available in Mac OS X v10.4 and later.

88.1.6 leftExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the left expression for the receiver, or nil if there is none.

88.1.7 options as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the options that are set for the receiver.

88.1.8 predicate(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS, modifier as UInt32, type as UInt32, options as UInt32) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a predicate of a given type formed by combining given left and right expressions using a given modifier and options.
Notes:

LeftExpression: The left hand expression.
rightExpression: The right hand expression.
modifier: The modifier to apply.
type: The predicate operator type.
options: The options to apply (see "NSComparisonPredicate Options"). For no options, pass 0.

Returns a new predicate of type type formed by combining the given left and right expressions using the modifier and options.
Available in Mac OS X v10.4 and later.

88.1.9 predicateOperatorType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the predicate type for the receiver.

88.1.10 rightExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the right expression for the receiver, or nil if there is none.

88.1.11 Constants

88.1.12 NSAllPredicateModifier = 1

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the possible modifier types.
Notes:

A predicate to compare all entries in the destination of a to-many relationship.
The left hand side must be a collection. The corresponding predicate compares each value in the left hand side with the right hand side, and returns false when it finds the first mismatch—or true if all match.
Available in Mac OS X v10.4 and later.

88.1.13 NSAnyPredicateModifier = 2

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the possible modifier types.
Notes:

A predicate to match with any entry in the destination of a to-many relationship.
The left hand side must be a collection. The corresponding predicate compares each value in the left hand side against the right hand side and returns true when it finds the first match—or false if no match is found
Available in Mac OS X v10.4 and later.

88.1.14 NSBeginsWithPredicateOperatorType = 8

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A begins-with predicate.
Available in Mac OS X v10.4 and later.

88.1.15 NSBetweenPredicateOperatorType = 100

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A predicate to determine if the right hand side lies at or between bounds specified by the left hand side.
Returns true if [lhs between rhs] ; the right hand side must be an array in which the first element sets the lower bound and the second element the upper, inclusive. Comparison is performed using compare: or the class-appropriate equivalent.
Available in Mac OS X v10.5 and later.

88.1.16 NSCaseInsensitivePredicateOption = 1

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the constants for possible types of string comparison.
Notes:

A case-insensitive predicate.
You represent this option in a predicate format string using a [c] following a string operation (for example, "NeXT" like [c] "next").
Available in Mac OS X v10.4 and later.
These options are supported for LIKE as well as all of the equality/comparison operators.

88.1.17 NSContainsPredicateOperatorType = 99

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A predicate to determine if the left hand side contains the right hand side.
Returns true if [lhs contains rhs] ; the left hand side must be an NSExpression object that evaluates to a collection
Available in Mac OS X v10.5 and later.

88.1.18 NSCustomSelectorPredicateOperatorType = 11

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A predicate that uses a custom selector that takes a single argument and returns a BOOL value.
The selector is invoked on the left hand side with the right hand side as the argument.
Available in Mac OS X v10.4 and later.

88.1.19 NSDiacriticInsensitivePredicateOption = 2

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the constants for possible types of string comparison.

Notes:

A diacritic-insensitive predicate.
You represent this option in a predicate format string using a [d] following a string operation (for example, "naïve" like [d] "naive").
Available in Mac OS X v10.4 and later.
These options are supported for LIKE as well as all of the equality/comparison operators.

88.1.20 NSDirectPredicateModifier = 0

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the possible modifier types.
Notes:

A predicate to compare directly the left and right hand sides.
Available in Mac OS X v10.4 and later.

88.1.21 NSEndsWithPredicateOperatorType = 9

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

An ends-with predicate.
Available in Mac OS X v10.4 and later.

88.1.22 NSEqualToPredicateOperatorType = 4

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

An equal-to predicate.
Available in Mac OS X v10.4 and later.

88.1.23 NSGreaterThanOrEqualToPredicateOperatorType = 3

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A greater-than-or-equal-to predicate.
Available in Mac OS X v10.4 and later.

88.1.24 NSGreaterThanPredicateOperatorType = 2

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A greater-than predicate.
Available in Mac OS X v10.4 and later.

88.1.25 NSInPredicateOperatorType = 10

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A predicate to determine if the left hand side is in the right hand side.
For strings, returns true if the left hand side is a substring of the right hand side . For collections, returns true if the left hand side is in the right hand side .
Available in Mac OS X v10.4 and later.

88.1.26 NSLessThanOrEqualToPredicateOperatorType = 1

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A less-than-or-equal-to predicate.
Available in Mac OS X v10.4 and later.

88.1.27 NSLessThanPredicateOperatorType = 0

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A less-than predicate.
Available in Mac OS X v10.4 and later.

88.1.28 NSLikePredicateOperatorType = 7

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A simple subset of the MATCHES predicate, similar in behavior to SQL LIKE.
Available in Mac OS X v10.4 and later.

88.1.29 NSMatchesPredicateOperatorType = 6

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A full regular expression matching predicate.
Available in Mac OS X v10.4 and later.

88.1.30 NSNormalizedPredicateOption = 4

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the constants for possible types of string comparison.
Notes:

Indicates that the strings to be compared have been preprocessed.
This option supersedes NSCaseInsensitivePredicateOption and NSDiacriticInsensitivePredicateOption, and is intended as a performance optimization option.
You represent this option in a predicate format string using a [n] following a string operation (for example, "WXYZlan" matches [n] ".lan").
Available in Mac OS X v10.7 and later.
These options are supported for LIKE as well as all of the equality/comparison operators.

88.1.31 NSNotEqualToPredicateOperatorType = 5

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the comparison type constants.
Notes:

A not-equal-to predicate.
Available in Mac OS X v10.4 and later.

88.2 class NSCompoundPredicateMBS

88.2.1 class NSCompoundPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: NSCompoundPredicate is a subclass of NSPredicate used to represent logical "gate" operations (AND/OR/NOT) and comparison operations.
Example:

```
dim n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
dim n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

dim n as NSPredicateMBS = NSCompoundPredicateMBS.orPredicateWithSubpredicates(array(n1,n2))
MsgBox n.predicateFormat
```

Notes:

Comparison operations are based on two expressions, as represented by instances of the NSExpression class. Expressions are created for constant values, key paths, and so on.

In Mac OS X v10.5 and later and in iOS, you can use NSCompoundPredicate to create an AND or OR compound predicate (but not a NOT compound predicate) using an array with 0, 1, or more elements:

- An AND predicate with no subpredicates evaluates to TRUE.
- An OR predicate with no subpredicates evaluates to FALSE.
- A compound predicate with one or more subpredicates evaluates to the truth of its subpredicates.

Subclass of the NSPredicateMBS class.

88.2.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

88.2.3 Methods

88.2.4 andPredicateWithSubpredicates(predicates() as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new predicate formed by AND-ing the predicates in a given array.
Example:

```
dim n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
dim n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

dim n as NSPredicateMBS = NSCompoundPredicateMBS.andPredicateWithSubpredicates(array(n1,n2))

MsgBox n.predicateFormat
```

Notes:

subpredicates: An array of NSPredicate objects.

Returns a new predicate formed by AND-ing the predicates specified by subpredicates.
An AND predicate with no subpredicates evaluates to TRUE.

88.2.5 compoundPredicateType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the predicate type for the receiver.

88.2.6 Constructor(type as Integer, predicates() as NSPredicateMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the receiver initialized to a given type using predicates from a given array.
Example:

```
dim n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
dim n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

dim n as NSPredicateMBS = new NSCompoundPredicateMBS(NSCompoundPredicateMBS.kAnd, array(n1,n2))
MsgBox n.predicateFormat
```

Notes:

type: The type of the new predicate.
subpredicates: An array of NSPredicate objects.

88.2.7 notPredicateWithSubpredicate(predicate as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new predicate formed by NOT-ing a given predicate.
Notes:

predicate: A predicate.

Returns a new predicate formed by NOT-ing the predicate specified by predicate.

88.2.8 orPredicateWithSubpredicates(predicates() as NSPredicateMBS) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new predicate formed by OR-ing the predicates in a given array.
Notes:

subpredicates: An array of NSPredicate objects.

Returns a new predicate formed by OR-ing the predicates specified by subpredicates.

An OR predicate with no subpredicates evaluates to FALSE.

88.2.9 subpredicates as NSPredicateMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the array of the receiver's subpredicates.
Example:

```
dim n1 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
dim n2 as NSPredicateMBS = NSPredicateMBS.predicateWithValue(false)

dim n as new NSCompoundPredicateMBS(NSCompoundPredicateMBS.kAnd, array(n1,n2))

for each x as NSPredicateMBS in n.subpredicates
MsgBox x.predicateFormat
next
```

88.2.10 Constants

88.2.11 kAnd = 1

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the compound predicate types. **Notes:** A logical AND predicate.

88.2.12 kNot = 0

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the compound predicate types. **Notes:** A logical NOT predicate.

88.2.13 kOR = 2

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the compound predicate types. **Notes:** A logical OR predicate.

88.3 class NSExpressionMBS

88.3.1 class NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: NSExpression is used to represent expressions in a predicate.
Notes:

Comparison operations in an NSPredicate are based on two expressions, as represented by instances of the NSExpression class. Expressions are created for constant values, key paths, and so on.

Generally, anywhere in the NSExpression class hierarchy where there is composite API and subtypes that may only reasonably respond to a subset of that API, invoking a method that does not make sense for that subtype will cause an exception to be thrown.

See NSException class documentation on apple.com.

88.3.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

88.3.3 Methods

88.3.4 arguments as Variant()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the arguments for the receiver.
Example:

```
dim args() as Variant
args.Append 5.0
dim n as NSExpressionMBS = NSExpressionMBS.expressionForFunction("abs:", args)

// query arguments
dim theargs() as Variant = n.arguments
MsgBox theargs(0)
```

Notes:

Returns the arguments for the receiver—that is, the array of expressions that will be passed as parameters during invocation of the selector on the operand of a function expression.

This method raises an exception if it is not applicable to the receiver.

88.3.5 constantValue as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the constant value of the receiver.
Example:

```
dim n as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(5)
dim v as Variant = n.constantValue
MsgBox v.StringValue // shows 5
```

Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

88.3.6 Constructor(Type as Integer)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the receiver with the specified expression type.
Notes: Available in Mac OS X v10.4 and later.

88.3.7 expressionForAggregate(subexpressions() as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new aggregate expression for a given collection.
Notes:

collection: A collection object that contains further expressions.
Returns a new expression that contains the expressions in collection.

88.3.8 expressionForConstantValue(value as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new expression that represents a given constant value.
Example:

```
dim n as NSExpressionMBS = NSExpressionMBS.expressionForConstantValue(5)
dim v as Variant = n.constantValue
MsgBox v.StringValue // shows 5
```

Notes:

obj: The constant value the new expression is to represent.

Returns a new expression that represents the constant value, obj.
Available in Mac OS X v10.4 and later.

88.3.9 expressionForEvaluatedObject as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new expression that represents the object being evaluated.
Notes: Available in Mac OS X v10.4 and later.

88.3.10 expressionForFunction(FunctionName as string, arguments() as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new expression that will invoke one of the predefined functions.
Notes:

name: The name of the function to invoke.
parameters: An array containing NSExpression objects that will be used as parameters during the invocation of selector.
For a selector taking no parameters, the array should be empty. For a selector taking one or more parameters, the array should contain one NSExpression object which will evaluate to an instance of the appropriate type for each parameter.
If there is a mismatch between the number of parameters expected and the number you provide during evaluation, an exception may be raised or missing parameters may simply be replaced by nil (which occurs depends on how many parameters are provided, and whether you have over- or underflow).

Returns a new expression that invokes the function name using the parameters in parameters.
The name parameter can be one of the following predefined functions.

See NSExpression class documentation on apple.com for details.

88.3.11 expressionForIntersectSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new NSExpression object that represent the intersection of a given set and collection.
Notes:

LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns a new NSExpression object that represents the intersection of left and right.
Available in Mac OS X v10.5 and later.

88.3.12 expressionForKeyPath(name as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new expression that invokes valueForKeyPath: with a given key path.
Notes:

keyPath: The key path that the new expression should evaluate.

Returns a new expression that invokes valueForKeyPath: with keyPath.
Available in Mac OS X v10.4 and later.

88.3.13 expressionForMinusSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new NSExpression object that represent the subtraction of a given collection from a given set.
Notes:

LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns a new NSExpression object that represents the subtraction of right from left.
Available in Mac OS X v10.5 and later.

88.3.14 expressionForUnionSet(LeftExpression as NSExpressionMBS, rightExpression as NSExpressionMBS) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new NSExpression object that represent the union of a given set and collection.
Notes:

LeftExpression: An expression that evaluates to an NSSet object.
rightExpression: An expression that evaluates to a collection object (an instance of NSArray, NSSet, or NSDictionary).

Returns an new NSExpression object that represents the union of left and right.
Available in Mac OS X v10.5 and later.

88.3.15 expressionForVariable(name as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new expression that extracts a value from the variable bindings dictionary for a given key.
Notes:

name: The key for the variable to extract from the variable bindings dictionary.

Returns a new expression that extracts from the variable bindings dictionary the value for the key string.
Available in Mac OS X v10.4 and later.

88.3.16 expressionType as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the expression type for the receiver.
Example:

```
dim n as NSExpressionMBS = NSExpressionMBS.expressionForVariable("hello")
MsgBox str(n.expressionType) // = NSVariableExpressionType
```

Notes: This method raises an exception if it is not applicable to the receiver.

88.3.17 expressionWithFormat(format as string) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an expression with the given format.
See also:

- 88.3.18 expressionWithFormat(format as string, arguments() as Variant) as NSExpressionMBS 15318

88.3.18 expressionWithFormat(format as string, arguments() as Variant) as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an expression with the given format.
See also:

- 88.3.17 expressionWithFormat(format as string) as NSExpressionMBS 15318

88.3.19 functionName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the function for the receiver.
Example:

```
dim args() as Variant
args.Append "World"
args.Append 5.0
dim n as NSExpressionMBS = NSExpressionMBS.expressionForFunction("Hello", args)

MsgBox n.functionName
```

Notes: This method raises an exception if it is not applicable to the receiver.

88.3.20 keyPath as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the key path for the receiver.
Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

88.3.21 leftExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the left expression of an aggregate expression.
Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

88.3.22 operand as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the operand for the receiver.
Notes:

The operand for the receiver—that is, the object on which the selector will be invoked.
The object is the result of evaluating a key path or one of the defined functions. This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

88.3.23 predicate as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return the predicate of a subquery expression.
Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

88.3.24 rightExpression as NSExpressionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the right expression of an aggregate expression.
Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.5 and later.

88.3.25 variable as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the variable for the receiver.
Example:

```
dim n as NSExpressionMBS = NSExpressionMBS.expressionForVariable("hello")
MsgBox n.variable
```

Notes:

This method raises an exception if it is not applicable to the receiver.
Available in Mac OS X v10.4 and later.

88.3.26 Properties

88.3.27 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSExpression object.
Notes: (Read and Write property)

88.3.28 Constants

88.3.29 NSAggregateExpressionType = 14

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that defines an aggregate of NSExpression objects.
Available in Mac OS X v10.5 and later.

88.3.30 NSBlockExpressionType = 19

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that uses an Block.
Available in Mac OS X v10.6 and later.

88.3.31 NSConstantValueExpressionType = 0

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that always returns the same value.
Available in Mac OS X v10.4 and later.

88.3.32 NSEvaluatedObjectExpressionType = 1

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that always returns the parameter object itself.
Available in Mac OS X v10.4 and later.

88.3.33 NSFunctionExpressionType = 4

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that returns the result of evaluating a function.
Available in Mac OS X v10.4 and later.

88.3.34 NSIntersectSetExpressionType = 6

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that creates an intersection of the results of two nested expressions.
Available in Mac OS X v10.5 and later.

88.3.35 NSKeyPathExpressionType = 3

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that returns something that can be used as a key path.
Available in Mac OS X v10.4 and later.

88.3.36 NSMinusSetExpressionType = 7

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that combines two nested expression results by set subtraction.
Available in Mac OS X v10.5 and later.

88.3.37 NSSubqueryExpressionType = 13

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that filters a collection using a subpredicate.
Available in Mac OS X v10.5 and later.

88.3.38 NSUnionSetExpressionType = 5

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that creates a union of the results of two nested expressions.
Available in Mac OS X v10.5 and later.

88.3.39 NSVariableExpressionType = 2

MBS MacCloud Plugin, Plugin Version: 11.3. **Function:** One of the expression type constants.
Notes:

An expression that always returns whatever value is associated with the key specified by 'variable' in the bindings dictionary.
Available in Mac OS X v10.4 and later.

88.4 class NSFileCoordinatorMBS

88.4.1 class NSFileCoordinatorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for file coordinating.
Notes: Please also check the documentation from Apple for the NSFileCoordinator class.

88.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr10
- MBS Real Studio Plugins, version 13.1pr9
- MBS Real Studio Plugins, version 11.3pr9

88.4.3 Methods

88.4.4 addFilePresenter(filePresenter as NSFilePresenterMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a new file presenter.
Notes:

If you invoke addFilePresenter: you have to do a balancing invocation of removeFilePresenter before the file presenter is deallocated, even in a garbage-collected application.

If your application reads an item and then registers a file presenter for it there is a possible race condition in which between those two steps another process does coordinated reading or writing of the item, without any messages sent to your not-quite-registered file presenter. This can leave your file presenter ignorant of the fact that what it knows about the item it just read is already out of date, or under the misconception that just because it hasn't received a relinquish... method it owns the item. To avoid that race condition you can invoke addFilePresenter in the same block that you pass to coordinateReadingItemAtURL to read what the file presenter will present.

88.4.5 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cancel all invocations of coordinate... and prepare... methods for the receiver.
Notes:

Any current invocation of one of those methods will stop waiting and return immediately, unless it has already invoked the passed-in block, in which case it will return when the passed-in block returns. Subsequent

invocations of those methods will not invoke the blocks passed into them at all. When an invocation of coordinate... or prepare... returns without invoking the passed-in block because this method was invoked it instead returns an error whose domain is NSCocoaErrorDomain and whose code is NSUserCancelledError. Messages that have already been sent to NSFilePresenters will not be cancelled but the file coordination machinery will stop waiting for the replies.

This method this can be invoked from any thread. It always returns immediately, without waiting for anything. Cancellation is racy; you usually cannot assume that no block passed into a coordinate... or prepare... method is already being invoked, so the code inside those blocks typically still has to check for cancellation, whatever that means in your application.

88.4.6 Constructor(filePresenter as NSFilePresenterMBS = nil)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.
Notes:

The designated initializer. If an NSFilePresenter is provided then the receiver is considered to have been created by that NSFilePresenter, or on its behalf.

NSFileCoordinator is meant to be instantiated on a per-file-operation basis, where a file operation is something like the opening or saving of a document, or the copying or moving of a batch of folders and files. There is no benefit to keeping an instance of it alive in your application for much more time than it takes to actually perform the file operation. Doing so can be harmful, or at least wasteful of memory, because NSFileCoordinators may retain NSFilePresenters.

You pass an NSFilePresenter to this initializer when the operation whose file access is to be coordinated is being performed by that NSFilePresenter. Associating an NSFileCoordinator with an NSFilePresenter accomplishes a few important things:
- It prevents the NSFileCoordinator from sending messages to that NSFilePresenter, so the NSFilePresenter does not have to somehow filter out messages about its own file operations. The exception to this rule is that messages about versions of the presented item being added, remove, or resolved during coordinated writing are sent to every relevant NSFilePresenter, even the one passed to Constructor.
- It allows the file coordination mechanism to determine when coordinated writing is being done in response to an NSFilePresenter receiving a savePresentedItemChangesWithCompletionHandler message, and not deadlock. Usually coordinated writing done by one NSFileCoordinator must wait for coordinated reading of the same file or directory done by another NSFileCoordinator. But, for example, when coordinated reading is begun with one NSFileCoordinator, and that causes an NSFilePresenter to do coordinated writing using another NSFileCoordinator, the writing done with the second NSFileCoordinator should not wait for the completion of the first NSFileCoordinator's reading, it should instead happen while the first NSFileCoordinator is waiting to read.
- It allows the file coordination mechanism to handle a race condition that can occur when it has sent an NSFilePresenter a presentedItemDidMoveToURL message in the NSFilePresenter's operation queue but before that message is dequeued the NSFilePresenter enqueues, on a different queue, an operation using the

old URL. For this to be effective however the NSFileCoordinator must be initialized in the same operation queue in which NSFilePresenter messages are received.
- It allows the file coordination mechanism to gracefully handle your application's registration of an NSFilePresenter that at first returns nil when sent presentedItemURL but can later return non-nil at the end of doing a coordinated write that creates the presented item in the file system for the very first time. AppKit for example takes advantage of this by registering brand new untitled NSDocuments as NSFilePresenters immediately, instead of waiting until after the first time the user causes the document to be saved to a file, which would be more complicated.

For example, NSDocument creates a single NSFileCoordinator for all of the coordinated reading and writing it does during the saving of a document. It always creates the NSFileCoordinator in the main queue even when it is doing the actual coordinated reading and writing in a background queue to implement asynchronous saving.

88.4.7 coordinateReadingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a read operation on a single file or directory using the specified options.
Notes:

file: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to reader parameter may be different than the one in this parameter. The plugin converts the folderitem to an URL for you.
options: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before your block executes.
Error: If a file presenter encounters an error while preparing for this read operation, that error is returned in this parameter and the block in the reader parameter is not executed. If you cancel this operation before the reader block is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURL event performs the file operations in a coordinated manner. This block receives an url and folderitem of the item and returns no value. Always use the URL/folderitem passed into the event instead of the value in the url parameter.

You use this method to perform read-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the reader event finishes executing. Before executing that event, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your read operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being read is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are writing to items in the package directory.
- This method does not wait for other readers of the file.
- This method does not wait for writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other write operations are occurring on the exact same directory.
- This method does not wait if write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for other readers of the directory.
- This method does not wait for writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToReader method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When reading a file package directory, file presenter objects that are currently reading the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Do not nest calls to file coordinator methods inside the event. If you call this method or any of the other file coordination methods from inside your event, the file coordinator object throws an exception. If you want to perform a write operation from inside a read block, use the coordinateWritingItemAtURL method instead. If you want to perform a batch read operation on multiple files, use the prepareForReadingItemsAtURLs method.

Available in Mac OS X v10.7 and later.

88.4.8 coordinateReadingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a read operation on a single file or directory using the specified options.
Notes:

url: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to reader parameter may be different than the one in this parameter.
options: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before your block executes.
Error: If a file presenter encounters an error while preparing for this read operation, that error is returned in this parameter and the block in the reader parameter is not executed. If you cancel this operation before the reader block is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURL event performs the file operations in a coordinated manner. This block receives an url and folderitem of the item and returns no value. Always use the URL/folderitem passed into the event instead of the value in the url parameter.

You use this method to perform read-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the reader event finishes executing. Before executing that event, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your read operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being read is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are writing to items in the package directory.
- This method does not wait for other readers of the file.
- This method does not wait for writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other write operations are occurring on the exact same directory.
- This method does not wait if write operations are occurring on items inside the directory (but not on the directory itself).

- This method does not wait for other readers of the directory.
- This method does not wait for writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToReader method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When reading a file package directory, file presenter objects that are currently reading the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Do not nest calls to file coordinator methods inside the event. If you call this method or any of the other file coordination methods from inside your event, the file coordinator object throws an exception. If you want to perform a write operation from inside a read block, use the coordinateWritingItemAtURL method instead. If you want to perform a batch read operation on multiple files, use the prepareForReadingItemsAtURLs method.

Available in Mac OS X v10.7 and later.

88.4.9 coordinateReadingItemAtURLwritingItemAtURL(readingFile as folderitem, readingOptions as Integer, writingItemAtFile as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a read operation that contains a follow-up write operation.
Notes:

readingFile: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler: method of relevant file presenters is called before your block executes.
writingItemAtFile: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.

Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the event is not executed. If you cancel this operation before the readerWriter event is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURLwritingItemAtURL event performs the read and write operations in a coordinated manner. This event receives URLs of the items to read and write and returns no value. Always use the URLs passed into the block instead of the values in the readingURL and writingURL parameters.

You use this method to perform a read operation that might also contain a write operation that needs to be coordinated. This method executes synchronously, blocking the current thread until the readerWriter event finishes executing. When performing the write operation, you may call the coordinateWritingItemAtURL method from your readerWriter block. This method does the canonical lock ordering that is required to prevent a potential deadlock of the file operations.

This method makes the same calls to file presenters, and has the same general wait behavior as the coordinateReadingItemAtURL method.

Available in Mac OS X v10.7 and later.

88.4.10 coordinateReadingItemAtURLwritingItemAtURL(readingURL as string, readingOptions as Integer, writingItemAtURL as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a read operation that contains a follow-up write operation.
Notes:

readingURL: A URL identifying the file or directory to read. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler: method of relevant file presenters is called before your block executes.
writingItemAtURL: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to the block in the readerWriter parameter may be different than the one in this parameter.
writingOptions: One of the writing options (see constants). The options you specify partially determine how

file presenters are notified and how this file coordinator object waits to execute your block.
Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the event is not executed. If you cancel this operation before the readerWriter event is executed, this parameter contains an error object on output.

The coordinateReadingItemAtURLwritingItemAtURL event performs the read and write operations in a coordinated manner. This event receives URLs of the items to read and write and returns no value. Always use the URLs passed into the block instead of the values in the readingURL and writingURL parameters.

You use this method to perform a read operation that might also contain a write operation that needs to be coordinated. This method executes synchronously, blocking the current thread until the readerWriter event finishes executing. When performing the write operation, you may call the coordinateWritingItemAtURL method from your readerWriter block. This method does the canonical lock ordering that is required to prevent a potential deadlock of the file operations.

This method makes the same calls to file presenters, and has the same general wait behavior as the coordinateReadingItemAtURL method.

Available in Mac OS X v10.7 and later.

88.4.11 coordinateWritingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a write operation on a single file or directory using the specified options.
Notes:

File: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to writer parameter may be different than the one in this parameter. (plugin converts from folderitem to URL for you)
options: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your coordinateWritingItemAtURL event.
error: If a file presenter encounters an error while preparing for this write operation, that error is returned in this parameter and the event in the writer parameter is not executed. If you cancel this operation before the writer event is executed, this parameter contains an error object on output.

The coordinateWritingItemAtURL event performs the file operations in a coordinated manner. This event receives the file reference containing the URL of the item and returns no value. Always use the UR passed into the block instead of the value in the url parameter.

You use this method to perform write-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the writer block finishes executing. Before executing the block, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your write operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being written is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other readers and writers of the exact same file to finish in-progress actions.
- This method waits if the file is a file package and other writers are reading or writing items in the package directory.
- This method does not wait for readers or writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinator-WritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other read or write operations are occurring on the exact same directory.
- This method does not wait if read or write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for readers or writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCo-ordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToWriter method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When writing a file package directory, file presenter objects that are currently reading or writing the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Note: When deleting an item inside a file package using the NSFileCoordinatorWritingForDeleting option, the file coordinator does not call the accommodatePresentedItemDeletionWithCompletionHandler method of any file presenters monitoring the file package directory itself. Instead, the delete operation is treated as a write operation on the file package.

With one exception, do not nest calls to file coordinator methods inside the block you pass to this method. You may call the coordinateReadingItemAtURL method to read the file if you discover through modification-date checking that the contents of the file have changed. However, if you call this method from inside your block, the file coordinator object throws an exception.

Available in Mac OS X v10.7 and later.

88.4.12 coordinateWritingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initiates a write operation on a single file or directory using the specified options.
Notes:

url: A URL identifying the file or directory to write. If other objects or processes are acting on the item at the URL, the actual URL passed to writer parameter may be different than the one in this parameter.
options: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your coordinateWritingItem-AtURL event.
error: If a file presenter encounters an error while preparing for this write operation, that error is returned in this parameter and the event in the writer parameter is not executed. If you cancel this operation before the writer event is executed, this parameter contains an error object on output.

The coordinateWritingItemAtURL event performs the file operations in a coordinated manner. This event receives the file reference containing the URL of the item and returns no value. Always use the UR passed into the block instead of the value in the url parameter.

You use this method to perform write-related operations on a file or directory in a coordinated manner. This method executes synchronously, blocking the current thread until the writer block finishes executing. Before executing the block, though, the file coordinator waits until other relevant file presenter objects finish in-progress actions. Similarly, your write operation may cause pending actions for other file presenters to wait until your operations are complete. Whether or not the file coordinator waits depends on whether the item being written is a file or directory and also depends on other related operations.

If the url parameter specifies a file:

- This method waits for other readers and writers of the exact same file to finish in-progress actions.

- This method waits if the file is a file package and other writers are reading or writing items in the package directory.
- This method does not wait for readers or writers that are manipulating the parent directory of the file, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

If the url parameter specifies a directory:

- This method waits if other read or write operations are occurring on the exact same directory.
- This method does not wait if read or write operations are occurring on items inside the directory (but not on the directory itself).
- This method does not wait for readers or writers that are manipulating the parent directory of the directory, unless one of those writers specified the NSFileCoordinatorWritingForDeleting or NSFileCoordinatorWritingForMoving option.

This method calls the relinquishPresentedItemToWriter method of any relevant file presenters. This method is called both for file presenters in the current process and in other processes. Depending on the options you specify, other methods of the file presenters may also be called. When writing a file package directory, file presenter objects that are currently reading or writing the contents of that file package also receive these notifications. All of the called methods must return successfully before the file coordinator executes your block. If multiple file presenters are operating on the item, the order in which those presenters are notified is undefined.

Note: When deleting an item inside a file package using the NSFileCoordinatorWritingForDeleting option, the file coordinator does not call the accommodatePresentedItemDeletionWithCompletionHandler method of any file presenters monitoring the file package directory itself. Instead, the delete operation is treated as a write operation on the file package.
With one exception, do not nest calls to file coordinator methods inside the block you pass to this method. You may call the coordinateReadingItemAtURL method to read the file if you discover through modification-date checking that the contents of the file have changed. However, if you call this method from inside your block, the file coordinator object throws an exception.

Available in Mac OS X v10.7 and later.

- 88.4.25 coordinateWritingItemAtURL(url as string, file as folderitem, tag as Variant) 15338

88.4.13 filePresenters as NSFilePresenterMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The process' file presenters.

88.4.14 FileURL(file as folderitem) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Convenience method to give you an URL for a folderitem.

88.4.15 itemAtURLdidMoveToURL(oldURL as string, newURL as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Announce that the item located by a URL is now located by another URL.
Notes:

This triggers the sending of messages to NSFilePresenters that implement the corresponding optional methods, even those in other processes, except the one specified when -initWithFilePresenter: was invoked:
- presentedItemDidMoveToURL: is sent to NSFilePresenters of the item.
- If the item is a directory then presentedItemDidMoveToURL is sent to NSFilePresenters of each item contained by it.
- presentedSubitemAtURL is sent to NSFilePresenters of each directory that contains the item, unless that method is not implemented but presentedItemDidChange is, and the directory is actually a file package, in which case presentedItemDidChange is sent instead.

Useless invocations of this method are harmless, so you don't have to write code that compares NSURLs for equality, which is not straightforward. This method must be invoked from within the block passed to an invocation of coordinateWritingItemAtURL.

88.4.16 itemAtURLwillMoveToURL(oldURL as string, newURL as string)

MBS MacCloud Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Announce that the item located by a URL is going to be located by another URL.
Notes:

Support for App Sandbox on OS X. Some applications can rename files while saving them. For example, when a user adds attachments to a rich text document, TextEdit changes the document's extension from .rtf to .rtfd. A sandboxed application like TextEdit must ordinarily prompt the user for approval before renaming a document. You can invoke this method to make your process declare its intent to rename a document without user approval. After the renaming succeeds you must invoke itemAtURLdidMoveToURL, with the same arguments, for the process to keep access to the file with its new name and to give up access to any file that appears with the old name. If the renaming fails you should probably not invoke itemAtURLwillMoveToURL.

There is no reason to invoke this method from applications that do not use App Sandbox. Invoking it does nothing on iOS.

88.4.17 prepareForReadingItemsAtURLs(readingFiles() as folderitem, readingOptions as Integer, writingItemsAtFiles() as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Prepare to read or write from multiple files in a single batch operation.
Notes:

readingFiles: An array of folderitems identifying the items you want to read.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before the prepareComplete event executes.
writingItemsAtFiles: An array of folderitems identifying the items you want to write.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.

Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the block in the writer parameter is not executed. If you cancel this operation before the batchAccessor block is executed, this parameter contains an error object on output.

The prepareComplete event is called and receives a completion handler that it must execute when it has finished its read and write calls.

You use this method to prepare the file coordinator for multiple read and write operations. This method executes synchronously, blocking the current thread until the prepareComplete event finishes executing. The event does not perform the actual operations itself but calls the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to perform them. The reason to call this method first is to improve performance when reading and writing large numbers of files or directories.

Because file coordination requires interprocess communication, it is much more efficient to batch changes to large numbers of files and directories than to change each item individually. The file coordinator uses the values in the readingURLs and writingURLs parameters together with reading and writing options to prepare any relevant file presenters for the upcoming operations. Specifically, it uses these parameters in the same way as the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to determine which file presenter methods to call.

Available in Mac OS X v10.7 and later.
See also:

- 88.4.18 prepareForReadingItemsAtURLs(readingURLs() as string, readingOptions as Integer, writingItemsAtURLs() as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15336

88.4.18 prepareForReadingItemsAtURLs(readingURLs() as string, readingOptions as Integer, writingItemsAtURLs() as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Prepare to read or write from multiple files in a single batch operation.
Notes:

readingURLs: An array of url strings identifying the items you want to read.
readingOptions: One of the reading options (see constants). If you pass 0 for this parameter, the savePresentedItemChangesWithCompletionHandler method of relevant file presenters is called before the prepareComplete event executes.
writingItemsAtURLs: An array of url strings identifying the items you want to write.
writingOptions: One of the writing options (see constants). The options you specify partially determine how file presenters are notified and how this file coordinator object waits to execute your block.

Error: If a file presenter encounters an error while preparing for this operation, that error is returned in this parameter and the block in the writer parameter is not executed. If you cancel this operation before the batchAccessor block is executed, this parameter contains an error object on output.

The prepareComplete event is called and receives a completion handler that it must execute when it has finished its read and write calls.

You use this method to prepare the file coordinator for multiple read and write operations. This method executes synchronously, blocking the current thread until the prepareComplete event finishes executing. The event does not perform the actual operations itself but calls the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to perform them. The reason to call this method first is to improve performance when reading and writing large numbers of files or directories.

Because file coordination requires interprocess communication, it is much more efficient to batch changes to large numbers of files and directories than to change each item individually. The file coordinator uses the values in the readingURLs and writingURLs parameters together with reading and writing options to prepare any relevant file presenters for the upcoming operations. Specifically, it uses these parameters in the same way as the coordinateReadingItemAtURL and coordinateWritingItemAtURL methods to determine which file presenter methods to call.

Available in Mac OS X v10.7 and later.
See also:

- 88.4.17 prepareForReadingItemsAtURLs(readingFiles() as folderitem, readingOptions as Integer, writingItemsAtFiles() as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil)

88.4.19 removeFilePresenter(filePresenter as NSFilePresenterMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the file presenter.

88.4.20 Properties

88.4.21 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSFileCoordinator object.
Notes: (Read and Write property)

88.4.22 Events

88.4.23 coordinateReadingItemAtURL(url as string, file as folderitem, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called from coordinateReadingItemAtURL method.
Notes: The plugin provides the URL and for your convenience a folderitem.
See also:

- 88.4.7 coordinateReadingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15325
- 88.4.8 coordinateReadingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15327

88.4.24 coordinateReadingItemAtURLwritingItemAtURL(readingURL as string, readingFile as folderitem, writingURL as string, writingFile as folderitem, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called from coordinateReadingItemAtURLwritingItemAtURL method.
Notes: The plugin provides the URLs and for your convenience also folderitems.
See also:

- 88.4.9 coordinateReadingItemAtURLwritingItemAtURL(readingFile as folderitem, readingOptions as Integer, writingItemAtFile as folderitem, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15328

- 88.4.10 coordinateReadingItemAtURLwritingItemAtURL(readingURL as string, readingOptions as Integer, writingItemAtURL as string, writingOptions as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15329

88.4.25 coordinateWritingItemAtURL(url as string, file as folderitem, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called from coordinateWritingItemAtURL method.
Notes: The plugin provides the URL and for your convenience a folderitem.
See also:

- 88.4.11 coordinateWritingItemAtURL(File as folderitem, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15330
- 88.4.12 coordinateWritingItemAtURL(URL as string, options as Integer, byref error as NSErrorMBS, tag as Variant = nil) 15332

88.4.26 prepareComplete(Complete as NSFilePresenterHandlerMBS, tag as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called by prepareForReadingItemsAtURLs.
Notes: You must call the complete handler when you are done.

88.4.27 Constants

88.4.28 NSFileCoordinatorReadingResolvesSymbolicLink = 2

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the reading flag constants.
Notes: Whether reading of an item that might be a symbolic link file causes the resolution of the link if it is. This affects the URL passed to the block passed to an invocation of one of the coordinateReadingItemAtURL... methods. This is not a valid option to use with prepareForReadingItemsAtURLs.

88.4.29 NSFileCoordinatorReadingWithoutChanges = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the reading flag constants.
Notes: Whether reading does _not_ trigger sending of savePresentedItemChangesWithCompletionHandler to certain NSFilePresenters in the system and waiting for those NSFilePresenters to respond. The default behavior during coordinated reading is to send savePresentedItemChangesWithCompletionHandler to NSFilePresenters.

88.4.30 NSFileCoordinatorWritingForDeleting = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the writing flag constants.
Notes:

Whether the writing to be done is actually the deletion of the item. This affects how the writing waits for previously scheduled coordinated reading and writing, how the writing causes subsequently scheduled reading and writing to wait, and what NSFilePresenter messaging is done. See the comments in the Single File Coordination section below. This option is how you trigger sending of accommodatePresentedItemDeletionWithCompletionHandler or accommodatePresentedSubitemDeletionAtURL messages to NSFilePresenters.

For example, Finder uses this when it's emptying the trash to give NSFilePresenters a chance to close documents before their files disappear, or would disappear if the files weren't still open.

88.4.31 NSFileCoordinatorWritingForMerging = 4

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the writing flag constants.
Notes: Whether coordinated writing triggers sending of savePresentedItemChangesWithCompletionHandler to certain NSFilePresenters in the system and waiting for those NSFilePresenters to respond.

88.4.32 NSFileCoordinatorWritingForMoving = 2

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the writing flag constants.
Notes:

Whether the writing to be done is actually the moving or renaming of the item. This affects how the writing waits for previously scheduled coordinated reading and writing, how the writing causes subsequently scheduled reading and writing to wait, and what NSFilePresenter messaging is done. See the comments in the Single File Coordination section below. This option has no effect when what's being moved is a plain file so you can use it in code that moves file system items without checking whether the items are files or directories. Any such check would invite a race condition anyway.

For example, Finder uses this when it's moving items that the user has dragged and dropped so as not to yank files contained by moved folders out from underneath applications that are reading or writing those files.

88.4.33 NSFileCoordinatorWritingForReplacing = 8

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the writing flag constants.
Notes:

Whether the writing to be done is actually the replacement of the item with a different item. It causes the same behavior as NSFileCoordinatorWritingForDeleting except that when the item being written to is

renamed or moved while the writer is being made to wait the item is considered to have been a different item, so the writer is not passed an updated URL to reflect the renaming or moving. Use this when the moving or creation of an item will replace any item that gets in its way. To avoid a race condition use it regardless of whether there is actually an item in the way before the writing begins. Don't use this when simply updating the contents of a file, even if the way you do that is writing the contents to another file and renaming it into place. This is not a valid option to use with prepareForReadingItemsAtURLs.

For example, NSDocument uses this for NSSaveAsOperation and NSSaveToOperation to announce that it is possibly overwriting an item with a brand new file or file package. This gives any NSFilePresenter of the overwritten item, including perhaps a different instance of NSDocument, perhaps in the same application, a chance to close itself before the item is overwritten.

For another example, the most accurate and safe way to coordinate a move is to invoke coordinateWritingItemAtURL using the NSFileCoordinatorWritingForMoving option with the source URL and NSFileCoordinatorWritingForReplacing with the destination URL.

88.5 class NSFileManagerMBS

88.5.1 class NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSFileManager class enables you to perform many generic file-system operations and insulates an application from the underlying file system.
Notes:

In Xojo you can do the same with folderitem. But for some iCloud related tasks you need to use this class.

In Cocoa applications, a file manager object is usually your first interaction with the file system. You use this object to locate, create, copy, and move files and directories. You also use this object to get information about files and directories, such as its size, modification date, and BSD permissions. You can also use a file manager object to change the values of many file and directory attributes.

The NSFileManagerMBS class supports both the folderitem and path string as ways to specify the location of a file or directory. The use of the folderitem is generally preferred for specifying file-system items because they can convert path information to a more efficient representation internally. You can also obtain a bookmark from an folderitem, which is similar to an alias and offers a more sure way of locating the file or directory later.

In iOS 5.0 and later and in Mac OS X v10.7 and later, NSFileManager includes methods for managing items stored in the cloud. Files and directories tagged for cloud storage are synced to the user's MobileMe account so that they can be made available to the user's iOS devices and Macintosh computers. Changes to an item in one location are propagated to all other locations to ensure the items stay in sync.

88.5.4 Methods

88.5.5 attributesOfFileSystemForPath(item as folderitem, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary that describes the attributes of the mounted file system on which a given path resides.
Notes:

path: A folderitem pointing to the mounted file system.
error: On input, a pointer to an error object. If an error occurs, this pointer is set to an actual error object containing the error information. You may specify nil for this parameter if you do not want the error information.

Returns an Dictionary object that describes the attributes of the mounted file system on which path resides, or nil if an error occurs. See File-System Attribute Keys for a description of the keys available in the dictionary.
See also:

- 88.5.6 attributesOfFileSystemForPath(path as string, byref error as NSErrorMBS) as Dictionary 15342

88.5.6 attributesOfFileSystemForPath(path as string, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary that describes the attributes of the mounted file system on which a given path resides.
Notes:

path: Any pathname within the mounted file system.
error: On input, a pointer to an error object. If an error occurs, this pointer is set to an actual error object containing the error information. You may specify nil for this parameter if you do not want the error information.

Returns an Dictionary object that describes the attributes of the mounted file system on which path resides, or nil if an error occurs. See File-System Attribute Keys for a description of the keys available in the dictionary.
See also:

- 88.5.5 attributesOfFileSystemForPath(item as folderitem, byref error as NSErrorMBS) as Dictionary 15342

88.5.7 attributesOfItemAtPath(item as folderitem, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the attributes of the item at a given path.
Example:

```
dim n as new NSFileManagerMBS
dim e as NSErrorMBS
dim d as Dictionary = n.attributesOfItemAtPath(SpecialFolder.Desktop, e)

break // check dictionary in debugger
```

Notes:

item: The folderitem of a file or directory.
Error: If an error occurs, this is set to an actual error object containing the error information.

Return a Dictionary object that describes the attributes (file, directory, symlink, and so on) of the file specified by path. The keys in the dictionary are described in File Attribute Keys. (see NSFile* methods)

Special Considerations
This method does not traverse symbolic links. If the item at the path is a symbolic link—that is, the value of the NSFileType key in the attributes dictionary is NSFileTypeSymbolicLink—you can use the destinationOfSymbolicLinkAtPath method to retrieve the path of the item pointed to by the link. You can also use the stringByResolvingSymlinksInPath method of NSString to resolve links in the path before retrieving the item's attributes.

Available in Mac OS X v10.5 and later.
See also:

- 88.5.8 attributesOfItemAtPath(path as string, byref error as NSErrorMBS) as Dictionary 15343

88.5.8 attributesOfItemAtPath(path as string, byref error as NSErrorMBS) as Dictionary

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the attributes of the item at a given path.
Notes:

path: The path of a file or directory.
Error: If an error occurs, this is set to an actual error object containing the error information.

Return a Dictionary object that describes the attributes (file, directory, symlink, and so on) of the file specified by path. The keys in the dictionary are described in File Attribute Keys. (see NSFile* methods)

Special Considerations
This method does not traverse symbolic links. If the item at the path is a symbolic link—that is, the value of the NSFileType key in the attributes dictionary is NSFileTypeSymbolicLink—you can use the destinationOfSymbolicLinkAtPath method to retrieve the path of the item pointed to by the link. You can also use the stringByResolvingSymlinksInPath method of NSString to resolve links in the path before retrieving the item's attributes.

Available in Mac OS X v10.5 and later.
See also:

- 88.5.7 attributesOfItemAtPath(item as folderitem, byref error as NSErrorMBS) as Dictionary 15343

88.5.9 changeCurrentDirectory(folder as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the path of the current working directory to the specified path.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Applications
if m.changeCurrentDirectory(f) then
MsgBox m.currentDirectory.NativePath
end if
```

Notes:

folder: The path of the directory to which to change.

Returns true if successful, otherwise false.

All relative pathnames refer implicitly to the current working directory. Changing the current working directory affects only paths created in the current process.
See also:

- 88.5.10 changeCurrentDirectory(path as string) as boolean 15345

88.5.10 changeCurrentDirectory(path as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the path of the current working directory to the specified path.
Example:

```
dim m as new NSFileManagerMBS
if m.changeCurrentDirectory("/Users") then
MsgBox m.currentDirectoryPath
end if
```

Notes:

path: The path of the directory to which to change.

Returns true if successful, otherwise false.

All relative pathnames refer implicitly to the current working directory. Changing the current working directory affects only paths created in the current process.
See also:

- 88.5.9 changeCurrentDirectory(folder as folderitem) as boolean 15344

88.5.11 Constructor

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

88.5.12 containerFolderForSecurityApplicationGroupIdentifier(groupIdentifier as string) as folderItem

MBS MacCocoa Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the container directory associated with the specified security application group ID.
Notes:

As explained in App Sandbox Design Guide, groups of sandboxed apps that need to share files and other information can request a container directory as part of their entitlements. These directories are stored in textasciitilde /Library/Group Containers/.

When called with a valid group identifier, this method returns the location of that directory as an folderitem. This method also creates the directory if it does not yet exist.

Important: Your app must have a com.apple.security.application-groups entitlement for the specified application group.

Available in OS X v10.8 and later.

88.5.13 containerURLForSecurityApplicationGroupIdentifier(groupIdentifier as string) as string

MBS MacCocoa Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the container directory associated with the specified security application group ID.
Notes:

As explained in App Sandbox Design Guide, groups of sandboxed apps that need to share files and other information can request a container directory as part of their entitlements. These directories are stored in textasciitilde /Library/Group Containers/.

When called with a valid group identifier, this method returns the location of that directory as an URL. This method also creates the directory if it does not yet exist.

Important: Your app must have a com.apple.security.application-groups entitlement for the specified application group.

Available in OS X v10.8 and later.

88.5.14 contentsEqual(path1 as folderitem, path2 as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether the files or directories in specified paths have the same contents.
Notes:

path1: The path of a file or directory to compare with the contents of path2.
path2: The path of a file or directory to compare with the contents of path1.

Returns true if file or directory specified in path1 has the same contents as that specified in path2, otherwise false.

If path1 and path2 are directories, the contents are the list of files and subdirectories each contains—contents of subdirectories are also compared. For files, this method checks to see if they're the same file, then compares their size, and finally compares their contents. This method does not traverse symbolic links, but compares the links themselves.

88.5.15 copyItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Copies the item at the specified path to a new location synchronously.
Notes:

Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.
See also:

- 88.5.16 copyItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 15347

88.5.16 copyItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Copies the item at the specified path to a new location synchronously.
Notes:

Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.
See also:

- 88.5.15 copyItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 15347

88.5.17 copyItemMT(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Copies the item at the specified path to a new location synchronously.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim d as FolderItem = SpecialFolder.Desktop.Child("output.rtf")
dim e as NSErrorMBS

if not NSFileManagerMBS.defaultManager.copyItemMT(f,d,e) then
MsgBox e.LocalizedDescription
else
MsgBox "OK"
end if
```

Notes:

Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. If the item at Source is a directory, this method copies the directory and all of its contents, including any hidden files. If a file with the same name already exists at Dest, this method aborts the copy attempt and returns an appropriate error. If the last component of srcPath is a symbolic link, only the link is copied to the new path.

Available in OS X v10.5 and later.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 88.5.18 copyItemMT(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 15349

88.5.18 copyItemMT(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Copies the item at the specified path to a new location synchronously.
Notes:

Source: The path to the file or directory you want to move.
Dest: The path at which to place the copy of srcPath. This path must include the name of the file or directory in its new location.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was copied successfully or the file manager's delegate aborted the operation deliberately. Returns false if an error occurred.

When copying items, the current process must have permission to read the file or directory at Source and write the parent directory of Dest. See also:

- 88.5.17 copyItemMT(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 15348

88.5.19 createDirectory(Path as folderItem, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a directory with given attributes at the specified path.
Notes:

path: A folderitme identifying the directory to create. You may specify a full path or a path that is relative to the current working directory. This parameter must not be nil.
createIntermediates: If true, this method creates any non-existent parent directories as part of creating the directory in path. If NO, this method fails if any of the intermediate parent directories does not exist. This method also fails if any of the intermediate path elements corresponds to a file and not a directory.
attributes: The file attributes for the new directory and any newly created intermediate directories. You can set the owner and group numbers, file permissions, and modification date. If you specify nil for this parameter or omit a particular value, one or more default values are used as described in the discussion. For a list of keys you can include in this dictionary, see Constants. Some of the keys, such as NSFileHFSCreatorCode and NSFileHFSTypeCode, do not apply to directories.
error: If an error occurs, this variable is set to an actual error object containing the error information.

Returns true if the directory was created, true if createIntermediates is set and the directory already exists, or false if an error occurred.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created directories are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

See also:

- 88.5.20 createDirectory(Path as String, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean 15350

88.5.20 createDirectory(Path as String, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a directory with given attributes at the specified path.
Notes:

path: A path string identifying the directory to create. You may specify a full path or a path that is relative to the current working directory. This parameter must not be nil.

createIntermediates: If true, this method creates any non-existent parent directories as part of creating the directory in path. If NO, this method fails if any of the intermediate parent directories does not exist. This method also fails if any of the intermediate path elements corresponds to a file and not a directory.
attributes: The file attributes for the new directory and any newly created intermediate directories. You can set the owner and group numbers, file permissions, and modification date. If you specify nil for this parameter or omit a particular value, one or more default values are used as described in the discussion. For a list of keys you can include in this dictionary, see Constants. Some of the keys, such as NSFileHFSCreatorCode and NSFileHFSTypeCode, do not apply to directories.
error: If an error occurs, this variable is set to an actual error object containing the error information.

Returns true if the directory was created, true if createIntermediates is set and the directory already exists, or false if an error occurred.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created directories are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

See also:

- 88.5.19 createDirectory(Path as folderItem, createIntermediates as boolean = true, attrs as Dictionary = nil, byref error as NSErrorMBS) as boolean 15350

88.5.21 createFile(Path as folderItem, contents as MemoryBlock, attrs as Dictionary = nil) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a file with the specified content and attributes at the given location.
Notes:

path: The folderitem for the new file.
contents: A data object containing the contents of the new file.
attributes: A dictionary containing the attributes to associate with the new file. You can use these attributes to set the owner and group numbers, file permissions, and modification date. For a list of keys, see NSFileAttributeKey. If you specify nil for attributes, the file is created with a set of default attributes.

Returns true if the operation was successful or if the item already exists, otherwise false.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the

default value is used. The default values for newly created files are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

If a file already exists at path, this method overwrites the contents of that file if the current process has the appropriate privileges to do so.
See also:

- 88.5.22 createFile(Path as String, contents as MemoryBlock, attrs as Dictionary = nil) as boolean 15352

88.5.22 createFile(Path as String, contents as MemoryBlock, attrs as Dictionary = nil) as boolean

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a file with the specified content and attributes at the given location.
Notes:

path: The path for the new file.
contents: A data object containing the contents of the new file.
attributes: A dictionary containing the attributes to associate with the new file. You can use these attributes to set the owner and group numbers, file permissions, and modification date. For a list of keys, see NSFileAttributeKey. If you specify nil for attributes, the file is created with a set of default attributes.

Returns true if the operation was successful or if the item already exists, otherwise false.

If you specify nil for the attributes parameter, this method uses a default set of values for the owner, group, and permissions of any newly created directories in the path. Similarly, if you omit a specific attribute, the default value is used. The default values for newly created files are as follows:

- Permissions are set according to the umask of the current process. For more information, see umask.
- The owner ID is set to the effective user ID of the process.
- The group ID is set to that of the parent directory.

If a file already exists at path, this method overwrites the contents of that file if the current process has the appropriate privileges to do so.

- 88.5.21 createFile(Path as folderItem, contents as MemoryBlock, attrs as Dictionary = nil) as boolean 15351

88.5.23 createSymbolicLink(file as folderitem, destFile as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a symbolic link at the specified URL that points to an item at the given URL.
Example:

```
dim m as new NSFileManagerMBS
dim file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim destfile as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim error as NSErrorMBS

if m.createSymbolicLink(file, destfile, error) then
MsgBox "OK"
else
MsgBox "Error: "+error.localizedDescription
end if
```

Notes:

file: The path at which to create the new symbolic link. The last path component is used as the name of the link.
destFile: The path that contains the item to be pointed to by the link. In other words, this is the destination of the link.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns true if the symbolic link was created or false if an error occurred. This method also returns false if a file, directory, or link already exists at path.

This method does not traverse symbolic links contained in either path or destPath.

Available in Mac OS X v10.5 and later.
As of Mac OS X 10.7 tests here, it seems like an alias file is created, not a symbolic link.
See also:

- 88.5.24 createSymbolicLink(path as string, destPath as string, byref error as NSErrorMBS) as boolean 15353

88.5.24 createSymbolicLink(path as string, destPath as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a symbolic link that points to the specified destination.
Notes:

path: The path at which to create the new symbolic link. The last path component is used as the name of the link.
destPath: The path that contains the item to be pointed to by the link. In other words, this is the destination of the link.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns true if the symbolic link was created or false if an error occurred. This method also returns false if a file, directory, or link already exists at path.

This method does not traverse symbolic links contained in either path or destPath.

Available in Mac OS X v10.5 and later.
As of Mac OS X 10.7 tests here, it seems like an alias file is created, not a symbolic link.
See also:

- 88.5.23 createSymbolicLink(file as folderitem, destFile as folderitem, byref error as NSErrorMBS) as boolean 15353

88.5.25 destinationOfSymbolicLinkAtPath(file as folderitem, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the path of the item pointed to by a symbolic link.
Notes:

file: The folderitem of a file or directory. Be aware that Xojo may already have resolved the symlink!
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns a string containing the path of the directory or file to which the symbolic link path refers, or "" upon failure. If the symbolic link is specified as a relative path, that relative path is returned.
See also:

- 88.5.26 destinationOfSymbolicLinkAtPath(path as string, byref error as NSErrorMBS) as string 15354

88.5.26 destinationOfSymbolicLinkAtPath(path as string, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the path of the item pointed to by a symbolic link.
Example:

```
dim f as new NSFileManagerMBS
dim e as NSErrorMBS
```

```
dim p as string = f.destinationOfSymbolicLinkAtPath("/tmp", e)

if e = nil then
MsgBox p
else
MsgBox e.LocalizedDescription
end if
```

Notes:

path: The path of a file or directory.
error: If an error occurs, upon return contains an NSError object that describes the problem.

Returns a string containing the path of the directory or file to which the symbolic link path refers, or "" upon failure. If the symbolic link is specified as a relative path, that relative path is returned.
See also:

- 88.5.25 destinationOfSymbolicLinkAtPath(file as folderitem, byref error as NSErrorMBS) as string 15354

88.5.27 displayName(path as folderitem) as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the display name of the file or directory at a specified path.
Notes:

path: The path of a file or directory.

The name of the file or directory at path in a localized form appropriate for presentation to the user. If there is no file or directory at path, or if an error occurs, returns path as is.

Display names are user-friendly names for files. They are typically used to localize standard file and directory names according to the user's language settings. They may also reflect other modifications, such as the removal of filename extensions. Such modifications are used only when displaying the file or directory to the user and do not reflect the actual path to the item in the file system. For example, if the current user's preferred language is French, the following code fragment logs the name Bibliothèque and not the name Library, which is the actual name of the directory.

88.5.28 evictUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes the local copy of the specified cloud-based item.
Notes:

item: Specify the file or directory in iCloud storage.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns true if the local item was removed successfully or false if it was not. If false is returned, an NSError object describing the error is returned in the error parameter.

This method does not remove the item from the cloud. It removes only the local version. You can use this method to force iCloud to download a new version of the file or directory from the server.

To delete a file permanently from the user's iCloud storage, use the regular NSFileManager routines for deleting files and directories. Remember that deleting items from iCloud cannot be undone. Once deleted, the item is gone forever.

Available in Mac OS X v10.7 and later.

88.5.29 fileExists(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether a file or directory exists at a specified path.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "File exists: "+str(m.fileExists(f))
```

Notes:

path: The path of the file or directory. I

Returns true if a file at the specified path exists or false if the file's does not exist or its existence could not be determined.

If the file at path is inaccessible to your application, perhaps because one or more parent directories are inaccessible, this method returns false. If the final element in path specifies a symbolic link, this method

traverses the link and returns true or false based on the existence of the file at the link destination.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585
See also:

- 88.5.30 fileExists(path as folderitem, byref isDirectory as boolean) as boolean 15357

88.5.30 fileExists(path as folderitem, byref isDirectory as boolean) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether a file or directory exists at a specified path.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop

dim directory as Boolean
MsgBox "File exists: "+str(m.fileExists(f, directory))+" and is Directory: "+str(Directory)
```

Notes:

path: The path of a file or directory.
isDirectory: Upon return, contains true if path is a directory or if the final path element is a symbolic link that points to a directory, otherwise contains false. If path doesn't exist, the return value is undefined.

Returns true if a file at the specified path exists or false if the file's does not exist or its existence could not be determined.

If the file at path is inaccessible to your application, perhaps because one or more parent directories are inaccessible, this method returns false. If the final element in path specifies a symbolic link, this method traverses the link and returns true or false based on the existence of the file at the link destination.

If you need to further determine if path is a package, use the isFilePackageAtPath method of NSWorkspaceMBS.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better

to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585
See also:

- 88.5.29 fileExists(path as folderitem) as boolean 15356

88.5.31 FileForUbiquityContainerIdentifier(containerIdentifier as string) as folderitem

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the iCloud directory associated with the specified container ID.
Notes:

containerID: Specify the container ID of the cloud-based storage container. The string you specify must not contain wildcards and must be of the form <TEAMID>.<CONTAINER>, where <TEAMID>is your development team ID and <CONTAINER>describes the bundle identifier of the container you want to access. The container identifiers for your application must be declared in the com.apple.developer.ubiquity-container-identifiers entitlement.
If you specify "", this method returns the first container listed in the com.apple.developer.ubiquity-container-identifiers entitlement.

Returns a folderitem pointing to the specified container directory or nil if the container could not be located or if iCloud storage is unavailable for the current user or device.

You can use the folderitem returned by this method to build paths to files and directories in the user's iCloud storage. Each application that syncs documents to the cloud must have at least one associated container directory in which to put those files. This container directory can be unique to the application or shared by multiple applications. You use this method to retrieve the folderitem for that container directory.

In addition to writing to its own container directory, an application can write to any container directory for which it has the appropriate permission. Each additional container directory should be listed as an additional value in the com.apple.developer.ubiquity-container-identifiers entitlement.

Note: The development team ID that precedes each container ID string is the unique identifier associated with your development team. You can find this string in the Member Center of the Apple Developer website (http://developer.apple.com/membercenter). From the Member Center home page, select the Your Account tab and then select Organization Profile from the column on the left of that tab. Your team's identifier is in the Company/Organization ID field.
The first time you call this method for a given container directory, iOS extends your application sandbox to include that container directory. Thus, it is important that you call this method at least once before trying to search for files in iCloud. And if your application accesses multiple container directories, you should call the method once for each directory.

Available in Mac OS X v10.7 and later.
FileForUbiquityContainerIdentifier returns folderitem while URLForUbiquityContainerIdentifier returns URL string.

88.5.32 fileManagerWithAuthorization(authorization as NSWorkspaceAuthorizationMBS) as NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a file manager object that is authorized to perform privileged file system operations.
Notes:

Returns nil in case of errors.

This method returns an NSFileManagerMBS instance that can perform file system operations previously allowed by the user via NSWorkspaceMBS.requestAuthorization. Each NSWorkspaceAuthorizationMBS you receive requires creating a new NSFileManagerMBS instance using this method.

Only the following NSFileManagerMBS methods currently take advantage of an authorization:

- createSymbolicLink (NSWorkspaceAuthorizationTypeCreateSymbolicLink)
- setAttributes (NSWorkspaceAuthorizationTypeSetAttributes)
- replaceItem (NSWorkspaceAuthorizationTypeReplaceFile)

Note that an NSWorkspaceAuthorizationTypeSetAttributes authorization only enables setAttributes to modify the following attributes:

- NSFileOwnerAccountID
- NSFileGroupOwnerAccountID
- NSFilePosixPermissions

Also note that for replaceItem, the backupItemName and options parameters will be ignored.

These methods may also fail with any of the following errors:

- NSWorkspaceAuthorizationInvalidError: The provided NSWorkspaceAuthorization expired or is invalid.

- NSFileWriteUnknownError: The application failed to communicate with a helper process, or a file system error occurred.
- NSFileWriteNoPermissionError: The operation failed for any other reason, including the user denying access to the resource, or access to a resource is denied by system policy.

All other NSFileManager methods invoked on this instance will behave normally.
The app using this may need code signature with com.apple.developer.security.privileged-file-operations entitlement for the sandboxed application and may need to be in applications folder.

88.5.33 homeDirectoryForUser(Name as string) as FolderItem

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the home directory for the specified user.
Notes:

userName: The username of the owner of the desired home directory.

Returns the folderitem containing the location of the specified user's home directory, or nil if no such user exists or the user's home directory is not available.

88.5.34 isDeletableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether the invoking object appears able to delete a specified file.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can delete: "+str(m.isDeletableFile(f))
```

Notes:

path: A file path.

Returns true if the current process has delete privileges for the file at path; otherwise false if the process does not have delete privileges or the existence of the file could not be determined.

For a directory or file to be deletable, the current process must either be able to write to the parent directory of path or it must have the same owner as the item at path. If path is a directory, every item contained in

path must be deletable by the current process.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method does not traverse symbolic links in the path.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585

88.5.35 isExecutableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether the operating system appears able to execute a specified file.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can execute: "+str(m.isExecutableFile(f))
```

Notes:

path: A file path.

Returns true if the current process has execute privileges for the file at path; otherwise false if the process does not have execute privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path. This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is executable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those

errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide:
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585

88.5.36 isReadableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether the invoking object appears able to read a specified file.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can read: "+str(m.isReadableFile(f))
```

Notes:

path: A file path.

Returns true if the current process has read privileges for the file at path; otherwise false if the process does not have read privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path. This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is readable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide.
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585

88.5.37 isUbiquitousItem(item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean indicating whether the item is targeted for storage in iCloud.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Is in iCloud: "+str(m.isUbiquitousItem(f))
```

Notes:

item: Specify the folderitem for the file or directory whose status you want to check.

Returns true if the item is targeted for iCloud storage or false if it is not. This method also returns false if no item exists at url.

This method reflects only whether the item should be stored in iCloud because a call was made to the setUbiquitous method with a value of true for its flag parameter. This method does not reflect whether the file has actually been uploaded to any iCloud servers. To determine a file's upload status, check the IsUploadedMBS function in the folderitem class.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.38 isUbiquitousItem(URL as string) as boolean 15363

88.5.38 isUbiquitousItem(URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean indicating whether the item is targeted for storage in iCloud.
Notes:

item: Specify the URL for the file or directory whose status you want to check.

Returns true if the item is targeted for iCloud storage or false if it is not. This method also returns false if no item exists at url.

This method reflects only whether the item should be stored in iCloud because a call was made to the setUbiquitous method with a value of true for its flag parameter. This method does not reflect whether the file has actually been uploaded to any iCloud servers. To determine a file's upload status, check the IsUploadedMBS function in the folderitem class.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.37 isUbiquitousItem(item as folderitem) as boolean 15363

88.5.39 isWritableFile(path as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value that indicates whether the invoking object appears able to write to a specified file.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("notes.rtf")

MsgBox "Can write: "+str(m.isWritableFile(f))
```

Notes:

path: A file path.

Returns true if the current process has write privileges for the file at path; otherwise false if the process does not have write privileges or the existence of the file could not be determined.

If the file at path is inaccessible to your application, perhaps because it does not have search privileges for one or more parent directories, this method returns false. This method traverses symbolic links in the path. This method also uses the real user ID and group ID, as opposed to the effective user and group IDs, to determine if the file is writable.

Note: Attempting to predicate behavior based on the current state of the file system or a particular file on the file system is not recommended. Doing so can cause odd behavior or race conditions. It's far better to attempt an operation (such as loading a file or creating a directory), check for errors, and handle those errors gracefully than it is to try to figure out ahead of time whether the operation will succeed. For more information on file system race conditions, see Race Conditions, File Operations, and Interprocess Communication in Secure Coding Guide:
http://developer.apple.com/library/mac/documentation/Security/Conceptual/SecureCodingGuide/Articles/RaceConditions.html# //apple_ref/doc/uid/TP40002585

88.5.40 lastPathComponent(pathOrURL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the last path component of a file URL or file path.
Notes: Available in Mac OS X v10.6 and later.

88.5.41 linkItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a hard link between the items at the specified paths.
Notes:

Source: The path that specifies the item you wish to link to. The value in this parameter must not be nil.
Dest: The path that identifies the location where the link will be created. The value in this parameter must not be nil.
error: If an error occurs, this pointer is set to an actual error object containing the error information.

Returns true if the hard link was created or NO if an error occurred. This method also returns false if a file, directory, or link already exists at dstPath.

Use this method to create hard links between files in the current file system. If Source is a directory, this method creates a new directory at Dest and then creates hard links for the items in that directory. If Source is (or contains) a symbolic link, the symbolic link is copied to the new location and not converted to a hard link.

Available in OS X v10.5 and later.
See also:

- 88.5.42 linkItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 15365

88.5.42 linkItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a hard link between the items at the specified paths.
Notes:

Source: The path that specifies the item you wish to link to. The value in this parameter must not be nil.
Dest: The path that identifies the location where the link will be created. The value in this parameter must not be nil.
error: If an error occurs, this pointer is set to an actual error object containing the error information.

Returns true if the hard link was created or NO if an error occurred. This method also returns false if a file, directory, or link already exists at dstPath.

Use this method to create hard links between files in the current file system. If Source is a directory, this method creates a new directory at Dest and then creates hard links for the items in that directory. If Source is (or contains) a symbolic link, the symbolic link is copied to the new location and not converted to a hard link.

Available in OS X v10.5 and later.
See also:

- 88.5.41 linkItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 15365

88.5.43 moveItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves the file or directory at the specified path to a new location synchronously.
Notes:

source: The path to the file or directory you want to move. This parameter must not be nil.
dest: The new path for the item in Source. This path must include the name of the file or directory in its new location. This parameter must not be nil.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was moved successfully or the file manager's delegate aborted the operation deliberately. Returns NO if an error occurred.

When moving items, the current process must have permission to read the item at Source and write the parent directory of Dest. If the item at Source is a directory, this method moves the directory and all of its contents, including any hidden files. If an item with the same name already exists at Dest, this method aborts the move attempt and returns an appropriate error. If the last component of Source is a symbolic link, only the link is moved to the new path; the item pointed to by the link remains at its current location.

If the source and destination of the move operation are not on the same volume, this method copies the item first and then removes it from its current location. This behavior may trigger additional delegate notifications related to copying and removing individual items.

Available in OS X v10.5 and later.
See also:

- 88.5.44 moveItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean 15367

88.5.44 moveItem(sourcePath as String, destPath as String, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves the file or directory at the specified path to a new location synchronously.
Notes:

source: The path to the file or directory you want to move. This parameter must not be nil.
dest: The new path for the item in Source. This path must include the name of the file or directory in its new location. This parameter must not be nil.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was moved successfully or the file manager's delegate aborted the operation deliberately. Returns NO if an error occurred.

When moving items, the current process must have permission to read the item at Source and write the parent directory of Dest. If the item at Source is a directory, this method moves the directory and all of its contents, including any hidden files. If an item with the same name already exists at Dest, this method aborts the move attempt and returns an appropriate error. If the last component of Source is a symbolic link, only the link is moved to the new path; the item pointed to by the link remains at its current location.

If the source and destination of the move operation are not on the same volume, this method copies the item first and then removes it from its current location. This behavior may trigger additional delegate notifications related to copying and removing individual items.

Available in OS X v10.5 and later.
See also:

- 88.5.43 moveItem(source as folderItem, dest as folderItem, byref error as NSErrorMBS) as boolean 15366

88.5.45 NSFileAppendOnly as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates whether the file is read-only.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.2 and later.

88.5.46 NSFileBusy as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates whether the file is busy.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.4 and later.

88.5.47 NSFileCreationDate as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's creation date.
The corresponding value is a date.
Available in Mac OS X v10.2 and later.

88.5.48 NSFileDeviceIdentifier as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the identifier for the device on which the file resides.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.0 and later.

88.5.49 NSFileExtensionHidden as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates whether the file's extension is hidden.
The corresponding value is a number containing a Boolean value.

Available in Mac OS X v10.1 and later.

88.5.50 NSFileGroupOwnerAccountID as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim fileManager As New NSFileManagerMBS

dim error as NSErrorMBS
Dim Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Dim Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Group: "+_
values.Value(fileManager.NSFileGroupOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileGroupOwnerAccountName)
```

Notes:

The key in a file attribute dictionary whose value indicates the file's group ID.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.2 and later.

88.5.51 NSFileGroupOwnerAccountName as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim fileManager As New NSFileManagerMBS

dim error as NSErrorMBS
Dim Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Dim Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Group: "+_
values.Value(fileManager.NSFileGroupOwnerAccountID)+_
```

```
" "+_
values.Value(fileManager.NSFileGroupOwnerAccountName)
```

Notes:

The key in a file attribute dictionary whose value indicates the group name of the file's owner.
The corresponding value is a string.
Available in Mac OS X v10.0 and later.

88.5.52 NSFileHFSCreatorCode as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's HFS creator code.
The corresponding value is a number containing an Int32. See "HFS File Types" for possible values.
Available in Mac OS X v10.1 and later.

88.5.53 NSFileHFSTypeCode as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's HFS type code.
The corresponding value is a number containing an Int32. See "HFS File Types" for possible values.
Available in Mac OS X v10.1 and later.

88.5.54 NSFileImmutable as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim n As New NSFileManagerMBS
dim e as NSErrorMBS
Dim d As Dictionary = n.attributesOfItemAtPath("/Users/cs/Desktop/test.rtf", e)
dim locked as Boolean = d.Lookup(n.NSFileImmutable, false)
```

```
Break // inspect in debugger
```

Notes:

The key in a file attribute dictionary whose value indicates whether the file is mutable.
The corresponding value is a number containing a Boolean value.
Available in Mac OS X v10.2 and later.

88.5.55 NSFileManagerUnmountDissentingProcessIdentifierErrorKey as string

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for the error dictionary containing process ID of the process blocking the unmount.

88.5.56 NSFileModificationDate as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's last modified date.
The corresponding value is a date.
Available in Mac OS X v10.0 and later.

88.5.57 NSFileOwnerAccountID as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim fileManager As New NSFileManagerMBS

dim error as NSErrorMBS
Dim Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Dim Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "Owner: "+_
values.Value(fileManager.NSFileOwnerAccountID)+_
```

```
" "+_
values.Value(fileManager.NSFileOwnerAccountName)
```

Notes:

The key in a file attribute dictionary whose value indicates the file's owner's account ID.
The corresponding value is a number containing an Int32.
Available in Mac OS X v10.2 and later.

88.5.58 NSFileOwnerAccountName as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim fileManager As New NSFileManagerMBS

dim error as NSErrorMBS
Dim Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Dim Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

'MsgBox "POSIX Permissions: "+Oct(Permissions)
MsgBox "Owner: "+_
values.Value(fileManager.NSFileOwnerAccountID)+_
" "+_
values.Value(fileManager.NSFileOwnerAccountName)
```

Notes:

The key in a file attribute dictionary whose value indicates the name of the file's owner.
The corresponding value is a string.
Available in Mac OS X v10.0 and later.

88.5.59 NSFilePosixPermissions as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim fileManager As New NSFileManagerMBS

dim error as NSErrorMBS
Dim Values As Dictionary = fileManager.attributesOfItemAtPath(file, error)
Dim Permissions As Integer = Values.Value(fileManager.NSFilePosixPermissions)

MsgBox "POSIX Permissions: "+oct(Permissions)
```

Notes:

The key in a file attribute dictionary whose value indicates the file's Posix permissions.
The corresponding value is a number.
Available in Mac OS X v10.0 and later.

88.5.60 NSFileReferenceCount as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's reference count.
The corresponding value is a number containing an Int32.
The number specifies the number of hard links to a file.
Available in Mac OS X v10.0 and later.

88.5.61 NSFileSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's size in bytes.
The corresponding value is a number containing an Int64.
Important If the file has a resource fork, the returned value does not include the size of the resource fork.

88.5.62 NSFileSystemFileNumber as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's filesystem file number.
The corresponding value is a number containing an Int32. The value corresponds to the value of st_ino, as returned by stat(2).
Available in Mac OS X v10.0 and later.

88.5.63 NSFileSystemFreeNodes as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes:

The key in a file system attribute dictionary dictionary whose value indicates the number of free nodes in the file system.
The corresponding value is a number that specifies the number of free nodes in the file system.
Available in Mac OS X v10.0 and later.

88.5.64 NSFileSystemFreeSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes:

The key in a file system attribute dictionary whose value indicates the amount of free space on the file system.
The corresponding value is a number that specifies the amount of free space on the file system in bytes. The value is determined by statfs().
Available in Mac OS X v10.0 and later.

88.5.65 NSFileSystemNodes as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes:

The key in a file system attribute dictionary whose value indicates the number of nodes in the file system.
The corresponding value is a number that specifies the number of nodes in the file system.
Available in Mac OS X v10.0 and later.

88.5.66 NSFileSystemNumber as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes:

The key in a file system attribute dictionary dictionary whose value indicates the filesystem number of the file system.
The corresponding value is a number that specifies the filesystem number of the file system. The value corresponds to the value of st_dev, as returned by stat(2).
Available in Mac OS X v10.0 and later.

88.5.67 NSFileSystemSize as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access the file attribute values contained in the dictionary object returned from the attributesOfFileSystemForPath function.
Notes:

The key in a file system attribute dictionary whose value indicates the size of the file system.
The corresponding value is a number that specifies the size of the file system in bytes. The value is determined by statfs().
Available in Mac OS X v10.0 and later.

88.5.68 NSFileType as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys to access file attribute values contained in dictionary used by setAttributes, attributesOfItemAtPath, createDirectory, and createFile.
Notes:

The key in a file attribute dictionary whose value indicates the file's type.
The corresponding value is a string (see NSFileType* shared methods for possible values).
Available in Mac OS X v10.0 and later.

88.5.69 NSFileTypeBlockSpecial as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Example:

```
// check first hard disc
dim e as NSErrorMBS
dim n as new NSFileManagerMBS
dim d as Dictionary = n.attributesOfItemAtPath("/dev/disk0", e)
MsgBox d.Value(n.NSFileType)
```

Notes: Block special file (e.g. hard disk)

88.5.70 NSFileTypeCharacterSpecial as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Notes: Character special file

88.5.71 NSFileTypeDirectory as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Example:

```
dim e as NSErrorMBS
dim n as new NSFileManagerMBS
dim d as Dictionary = n.attributesOfItemAtPath("/System", e)
MsgBox d.Value(n.NSFileType)
```

Notes: Directory

88.5.72 NSFileTypeRegular as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Notes: Regular file

88.5.73 NSFileTypeSocket as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Notes: Socket (a socket visible in file system as a file)

88.5.74 NSFileTypeSymbolicLink as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Notes: Symbolic link

88.5.75 NSFileTypeUnknown as string

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible NSFileType values.
Notes: Unknown

88.5.76 NSUbiquityIdentityDidChangeNotification as string

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sent after the iCloud ("ubiquity") identity has changed.
Notes:

The system generates this notification when the user logs into or out of an iCloud account or enables or disables the syncing of documents and data. This notification is your cue to update caches and any interface elements displaying iCloud–related content. For example, hide all references to iCloud files when the user logs out of iCloud.
When your app receives this notification, get the new token from the NSURLRelationship property. The value of that token is nil if the user disabled iCloud or logged out. There is no userInfo dictionary.

88.5.77 pathExtension(pathOrURL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the path extension of a file URL or file path.
Notes: Available in Mac OS X v10.6 and later.

88.5.78 removeItem(file as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes the file or directory at the specified path.
Notes:

path: A path string indicating the file or directory to remove. If the path specifies a directory, the contents of that directory are recursively removed.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was removed successfully or if path was nil. Returns false if an error occurred. If the delegate aborts the operation for a file, this method returns true. However, if the delegate aborts the operation for a directory, this method returns false.

Available in OS X v10.5 and later.
See also:

- 88.5.79 removeItem(path as string, byref error as NSErrorMBS) as boolean 15378

88.5.79 removeItem(path as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes the file or directory at the specified path.
Notes:

path: A path string indicating the file or directory to remove. If the path specifies a directory, the contents of that directory are recursively removed.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if the item was removed successfully or if path was nil. Returns false if an error occurred. If the delegate aborts the operation for a file, this method returns true. However, if the delegate aborts the operation for a directory, this method returns false.

Available in OS X v10.5 and later.
See also:

- 88.5.78 removeItem(file as folderitem, byref error as NSErrorMBS) as boolean 15378

88.5.80 replaceItem(originalItem as FolderItem, newItem as FolderItem, backupItemName as String, options as integer, byref resultingItem as FolderItem, byref error as NSErrorMBS) as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Replaces the contents of the item at the specified URL in a manner that ensures no data loss

occurs.
Example:

```
Dim fileManager As New NSFileManagerMBS

Dim source As FolderItem = SpecialFolder.Desktop.Child("test.rtf")
Dim dest As FolderItem = SpecialFolder.Desktop.Child("dest.rtf")

Dim result As Boolean
Dim output As FolderItem
Dim error As NSErrorMBS

result = fileManager.replaceItemAtURL(dest, source, "", 0, output, error)

If result Then
MsgBox output.NativePath
Else
MsgBox error.LocalizedDescription
End If
```

Notes:

originalItem: The item containing the content you want to replace.
newItem: The item containing the new content for originalItem. It is recommended that you put this item in a temporary directory as provided by the OS. If a temporary directory is not available, put this item in a uniquely named directory that is in the same directory as the original item.
backupItemName: If provided, the name used to create a backup of the original item.
The backup is automatically placed in the same directory as the original item. If an error occurs during the creation of the backup item, the operation fails. If there is already an item with the same name as the backup item, that item will be removed.
The backup item will be removed in the event of success unless the NSFileManagerItemReplacementWithoutDeletingBackupItem option is provided in options.
options: The options to use during the replacement. Typically, you pass NSFileManagerItemReplacementUsingNewMetadataOnly for this parameter, which uses only the metadata from the new item. You can also combine the options described in NSFileManagerItemReplacementOptions using the C-bitwise OR operator.
resultingItem: On input, a variale for a folderitem variable. When the item is replaced, this variable is set to the folderitem of the new item. If no new file system object is required, the folderitem in this parameter may be the same passed to the originalItem parameter. However, if a new file system object is required, the folderitem may be different. For example, replacing an RTF document with an RTFD document requires the creation of a new file.
error: On input, a variable for an error object. If an error occurs, this variable is set to an error object containing the error information.

Returns true if the replacement was successful or false if an error occurred.

By default, the creation date, permissions, Finder label and color, and Spotlight comments of the original

item are preserved on the new item. You can configure which metadata is preserved using the options parameter.
This method works only when the originalItem and newItem parameters are located on the same volume. Attempting to call this method by passing originalItem and newItem parameters that have locations on different volumes results in an error. Instead, you can call the URLForDirectory method, passing NSItemReplacementDirectory as the search path directory, to get a temporary URL on the destination's volume that is suitable for use with this method.
If an error occurs and the original item is not in the original location or a temporary location, the resulting error object contains a user info dictionary with the key "NSFileOriginalItemLocationKey". The value assigned to that key is an URL with the location of the item. The error code is one of the file-related errors described in NSError Codes.

88.5.81 replaceItemAtURL(originalItemURL as string, newItemURL as String, backupItemName as String, options as integer, byref resultingURL as String, byref error as NSErrorMBS) as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Replaces the contents of the item at the specified URL in a manner that ensures no data loss occurs.
Notes:

originalItemURL: The item containing the content you want to replace.
newItemURL: The item containing the new content for originalItemURL. It is recommended that you put this item in a temporary directory as provided by the OS. If a temporary directory is not available, put this item in a uniquely named directory that is in the same directory as the original item.
backupItemName: If provided, the name used to create a backup of the original item.
The backup is automatically placed in the same directory as the original item. If an error occurs during the creation of the backup item, the operation fails. If there is already an item with the same name as the backup item, that item will be removed.
The backup item will be removed in the event of success unless the NSFileManagerItemReplacementWithoutDeletingBackupItem option is provided in options.
options: The options to use during the replacement. Typically, you pass NSFileManagerItemReplacementUsingNewMetadataOnly for this parameter, which uses only the metadata from the new item. You can also combine the options described in NSFileManagerItemReplacementOptions using the C-bitwise OR operator.
resultingURL: On input, a variale for an URL variable. When the item is replaced, this variable is set to the URL of the new item. If no new file system object is required, the URL object in this parameter may be the same passed to the originalItemURL parameter. However, if a new file system object is required, the URL object may be different. For example, replacing an RTF document with an RTFD document requires the creation of a new file.
error: On input, a variable for an error object. If an error occurs, this variable is set to an error object containing the error information.

Returns true if the replacement was successful or false if an error occurred.

By default, the creation date, permissions, Finder label and color, and Spotlight comments of the original

item are preserved on the new item. You can configure which metadata is preserved using the options parameter.
This method works only when the originalItemURL and newItemURL parameters are located on the same volume. Attempting to call this method by passing originalItemURL and newItemURL parameters that have locations on different volumes results in an error. Instead, you can call the URLForDirectory method, passing NSItemReplacementDirectory as the search path directory, to get a temporary URL on the destination's volume that is suitable for use with this method.
If an error occurs and the original item is not in the original location or a temporary location, the resulting error object contains a user info dictionary with the key "NSFileOriginalItemLocationKey". The value assigned to that key is an URL with the location of the item. The error code is one of the file-related errors described in NSError Codes.

88.5.82 setAttributes(attributesDic as dictionary, item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the attributes of the specified file or directory.
Notes:

attributes: A dictionary containing as keys the attributes to set for path and as values the corresponding value for the attribute. You can set the following attributes: NSFileBusy, NSFileCreationDate, NSFileExtensionHidden, NSFileGroupOwnerAccountID, NSFileGroupOwnerAccountName, NSFileHFSCreatorCode, NSFileHFSTypeCode, NSFileImmutable, NSFileModificationDate, NSFileOwnerAccountID, NSFileOwnerAccountName, NSFilePosixPermissions. You can change single attributes or any combination of attributes; you need not specify keys for all attributes.
item: The folderitem of a file or directory.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if all changes succeed. If any change fails, returns false, but it is undefined whether any changes actually occurred.

Discussion
As in the POSIX standard, the application either must own the file or directory or must be running as superuser for attribute changes to take effect. The method attempts to make all changes specified in attributes and ignores any rejection of an attempted modification. If the last component of the path is a symbolic link it is traversed.

The NSFilePosixPermissions value must be initialized with the code representing the POSIX file-permissions bit pattern. NSFileHFSCreatorCode and NSFileHFSTypeCode will only be heeded when path specifies a file.

Available in Mac OS X v10.5 and later.
See also:

- 88.5.83 setAttributes(attributesDic as dictionary, path as string, byref error as NSErrorMBS) as

boolean 15382

88.5.83 setAttributes(attributesDic as dictionary, path as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the attributes of the specified file or directory.
Notes:

attributes: A dictionary containing as keys the attributes to set for path and as values the corresponding value for the attribute. You can set the following attributes: NSFileBusy, NSFileCreationDate, NSFileExtensionHidden, NSFileGroupOwnerAccountID, NSFileGroupOwnerAccountName, NSFileHFSCreatorCode, NSFileHFSTypeCode, NSFileImmutable, NSFileModificationDate, NSFileOwnerAccountID, NSFileOwnerAccountName, NSFilePosixPermissions. You can change single attributes or any combination of attributes; you need not specify keys for all attributes.
path: The path of a file or directory.
error: If an error occurs, this is set to an actual error object containing the error information.

Returns true if all changes succeed. If any change fails, returns false, but it is undefined whether any changes actually occurred.

Discussion
As in the POSIX standard, the application either must own the file or directory or must be running as superuser for attribute changes to take effect. The method attempts to make all changes specified in attributes and ignores any rejection of an attempted modification. If the last component of the path is a symbolic link it is traversed.

The NSFilePosixPermissions value must be initialized with the code representing the POSIX file-permissions bit pattern. NSFileHFSCreatorCode and NSFileHFSTypeCode will only be heeded when path specifies a file.

Available in Mac OS X v10.5 and later.
See also:

- 88.5.82 setAttributes(attributesDic as dictionary, item as folderitem, byref error as NSErrorMBS) as boolean 15381

88.5.84 setUbiquitous(flag as boolean, item as folderitem, destitem as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets whether the item at the specified URL should be stored in the cloud.
Notes:

flag: Specify true to move the item to iCloud or false to remove it from iCloud (if it is there currently).

item: Specify the folderitem of the item (file or directory) that you want to store in iCloud.
destitem: Specify the location in iCloud at which to store the file or directory. This folderitem must be constructed from a folderitem returned by the URLForUbiquityContainerIdentifier method, which you use to retrieve the desired iCloud container directory. The folderitem you specify may contain additional subdirectories so that you can organize your files hierarchically in iCloud. However, you are responsible for creating those intermediate subdirectories (using the NSFileManagerMBS or folderitem class) in your iCloud container directory.
error: If an error occurs, this pointer is set to an NSError object containing information about the error. You may specify nil for this parameter if you do not want the error information.

Returns yes if the item's status was updated successfully or false if an error occurred. If this method returns false and you specified a value for the error parameter, this method returns an error object.

Use this method to move a file from its current location to iCloud. For files located in an application's sandbox, this involves physically removing the file from the sandbox directory. (The system extends your application's sandbox privileges to give it access to files it moves to iCloud.) You can also use this method to move files out of iCloud and back into a local directory.

Your application must have an active file presenter object configured to monitor the specified file or directory before calling this method. When you specify true for the flag parameter, this method attempts to move the file or directory to the cloud and returns true if it is successful. This method also notifies your file presenter of the new location of the file so that your application can continue to operate on it.

Important: Do not call this method from your application's main thread. This method performs a coordinated write operation on the file you specify, and calling this method from the main thread can trigger a deadlock with the file presenter you have monitoring the file. Instead, use a dispatch queue (other than the main thread queue) to perform the method call on a secondary thread. You can always message your main thread after the call finishes to update the rest of your application's data structures.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.85 setUbiquitous(flag as boolean, item as folderitem, destURL as string, byref error as NSErrorMBS) as boolean 15383

88.5.85 setUbiquitous(flag as boolean, item as folderitem, destURL as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets whether the item at the specified URL should be stored in the cloud.
Notes:

flag: Specify true to move the item to iCloud or false to remove it from iCloud (if it is there currently).
item: Specify the folderitem of the item (file or directory) that you want to store in iCloud.

destitem: Specify the location in iCloud at which to store the file or directory. This folderitem must be constructed from a folderitem returned by the URLForUbiquityContainerIdentifier method, which you use to retrieve the desired iCloud container directory. The folderitem you specify may contain additional subdirectories so that you can organize your files hierarchically in iCloud. However, you are responsible for creating those intermediate subdirectories (using the NSFileManagerMBS or folderitem class) in your iCloud container directory.
error: If an error occurs, this pointer is set to an NSError object containing information about the error. You may specify nil for this parameter if you do not want the error information.

Returns yes if the item's status was updated successfully or false if an error occurred. If this method returns false and you specified a value for the error parameter, this method returns an error object.

Use this method to move a file from its current location to iCloud. For files located in an application's sandbox, this involves physically removing the file from the sandbox directory. (The system extends your application's sandbox privileges to give it access to files it moves to iCloud.) You can also use this method to move files out of iCloud and back into a local directory.

Your application must have an active file presenter object configured to monitor the specified file or directory before calling this method. When you specify true for the flag parameter, this method attempts to move the file or directory to the cloud and returns true if it is successful. This method also notifies your file presenter of the new location of the file so that your application can continue to operate on it.

Important: Do not call this method from your application's main thread. This method performs a coordinated write operation on the file you specify, and calling this method from the main thread can trigger a deadlock with the file presenter you have monitoring the file. Instead, use a dispatch queue (other than the main thread queue) to perform the method call on a secondary thread. You can always message your main thread after the call finishes to update the rest of your application's data structures.

Available in Mac OS X v10.7 and later.

88.5.86 startDownloadingUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts downloading (if necessary) the specified item to the local system.
Notes:

item: Specify the folderitem for the file or directory in the cloud that you want to download.
error: On input, a pointer to variable for an NSError object. If an error occurs, this pointer is set to an NSError object containing information about the error. Y

Returns true if the download started successfully or was not necessary, otherwise false. If false is returned and error is not nil, an NSError object describing the error is returned in that parameter.

If a cloud-based file or directory has not been downloaded yet, calling this method starts the download process. If the item exists locally, calling this method synchronizes the local copy with the version in the cloud.

For a given folderitem, you can determine if a file is downloaded by getting the value of the IsDownloaded method. You can also use related methods to determine the current progress in downloading the file.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.87 startDownloadingUbiquitousItem(URL as string, byref error as NSErrorMBS) as boolean 15385

88.5.87 startDownloadingUbiquitousItem(URL as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts downloading (if necessary) the specified item to the local system.
Notes:

item: Specify the URL for the file or directory in the cloud that you want to download.
error: On input, a pointer to variable for an NSError object. If an error occurs, this pointer is set to an NSError object containing information about the error. Y

Returns true if the download started successfully or was not necessary, otherwise false. If false is returned and error is not nil, an NSError object describing the error is returned in that parameter.

If a cloud-based file or directory has not been downloaded yet, calling this method starts the download process. If the item exists locally, calling this method synchronizes the local copy with the version in the cloud.

For a given folderitem, you can determine if a file is downloaded by getting the value of the IsDownloaded method. You can also use related methods to determine the current progress in downloading the file.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.86 startDownloadingUbiquitousItem(item as folderitem, byref error as NSErrorMBS) as boolean 15384

88.5.88 stringByAbbreviatingWithTildeInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string that replaces the current home directory portion of the current path with a tilde (
textasciitilde) character.
Notes:

A new string based on the current string object. If the new string specifies a file in the current home directory, the home directory portion of the path is replaced with a tilde (
textasciitilde) character. If the string does not specify a file in the current home directory, this method returns a new string object whose path is unchanged from the path in the current string.

Note that this method only works with file paths. It does not work for string representations of URLs.

For sandboxed apps in OS X, the current home directory is not the same as the user's home directory. For a sandboxed app, the home directory is the app's home directory. So if you specified a path of /Users/<current_user>/file.txt for a sandboxed app, the returned path would be unchanged from the original. However, if you specified the same path for an app not in a sandbox, this method would replace the /Users/<current_user>portion of the path with a tilde.

88.5.89 stringByAppendingPathComponent(path as string, Component as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by appending to the receiver a given string.
Notes:

The following table illustrates the effect of this method on a variety of different paths, assuming that aString is supplied as "scratch.tiff":

Receiver's String Value	Resulting String
"/tmp"	"/tmp/scratch.tiff"
"/tmp/"	"/tmp/scratch.tiff"
"/"	"/scratch.tiff"
"" (an empty string)	"scratch.tiff"

Note that this method only works with file paths (not, for example, string representations of URLs).

88.5.90 stringByAppendingPathExtension(path as string, Extension as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by appending to the receiver an extension separator followed by a given extension.
Notes:

The following table illustrates the effect of this method on a variety of different paths, assuming that ext is supplied as "tiff":

Receiver's String Value	Resulting String
"/tmp/scratch.old"	"/tmp/scratch.old.tiff"
"/tmp/scratch."	"/tmp/scratch..tiff"
"/tmp/"	"/tmp.tiff"
"scratch"	"scratch.tiff"

Note that adding an extension to "/tmp/" causes the result to be "/tmp.tiff" instead of "/tmp/.tiff". This difference is because a file named ".tiff" is not considered to have an extension, so the string is appended to the last nonempty path component.

Note that this method only works with file paths (not, for example, string representations of URLs).

Special Considerations
Prior to OS X v10.9 this method did not allow you to append file extensions to filenames starting with the tilde character (
textasciitilde).

88.5.91 stringByDeletingLastPathComponent(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by deleting the last path component from the receiver, along with any final path separator.
Notes:

A new string made by deleting the last path component from the receiver, along with any final path separator. If the receiver represents the root path it is returned unaltered.

The following table illustrates the effect of this method on a variety of different paths:

Note that this method only works with file paths (not, for example, string representations of URLs).

Receiver's String Value	Resulting String
"/tmp/scratch.tiff"	"/tmp"
"/tmp/lock/"	"/tmp"
"/tmp/"	"/"
"/tmp"	"/"
"/"	"/"
"scratch.tiff"	"" (an empty string)

88.5.92 stringByDeletingPathExtension(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by deleting the extension (if any, and only the last) from the receiver.
Notes:

A new string made by deleting the extension (if any, and only the last) from the receiver. Strips any trailing path separator before checking for an extension. If the receiver represents the root path, it is returned unaltered.

The following table illustrates the effect of this method on a variety of different paths:

Receiver's String Value	Resulting String
"/tmp/scratch.tiff"	"/tmp/scratch"
"/tmp/"	"/tmp"
"scratch.bundle/"	"scratch"
"scratch..tiff"	"scratch."
".tiff"	".tiff"
"/"	"/"

Note that attempting to delete an extension from ".tiff" causes the result to be @".tiff" instead of an empty string. This difference is because a file named ".tiff" is not considered to have an extension, so nothing is deleted. Note also that this method only works with file paths (not, for example, string representations of URLs).

88.5.93 stringByExpandingTildeInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by expanding the initial component of the receiver to its full path value.
Notes:

A new string made by expanding the initial component of the receiver, if it begins with "
textasciitilde " or "

textasciitilde user", to its full path value. Returns a new string matching the receiver if the receiver's initial component can't be expanded.

Note that this method only works with file paths (not, for example, string representations of URLs).

88.5.94 stringByResolvingSymlinksInPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made from the receiver by resolving all symbolic links and standardizing path.
Notes:

A new string made by resolving all symbolic links, then removing extraneous path components. For absolute paths, all symbolic links are guaranteed to be removed. For relative paths, symbolic links that can't be resolved are left unresolved in the returned string.

Returns self if an error occurs.

Note that this method only works with file paths (not, for example, string representations of URLs).

88.5.95 stringByStandardizingPath(path as string) as string

MBS MacCocoa Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new string made by removing extraneous path components from the receiver.
Notes:

A new string made by performing the following operations:

- Expanding an initial tilde expression using stringByExpandingTildeInPath.
- Removing an initial component of "/private/var/automount", "/var/automount", or "/private" from the path, if the result still indicates an existing file or directory (checked by consulting the file system).
- Reducing empty components and references to the current directory (that is, the sequences "//" and "/./") to single path separators.
- Removing a trailing slash from the last component.
- For absolute paths only, resolving references to the parent directory (that is, the component "..") to the real parent directory if possible using stringByResolvingSymlinksInPath. For relative paths, references to the parent directory are left in place.
- Returns self if an error occurs.

Note that the path returned by this method may still have symbolic link components in it. Note also that this method only works with file paths (not, for example, string representations of URLs).

88.5.96 trashItem(file as folderItem, byref Resulting as folderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves an item to the trash.
Notes:

Returns true if the item at url was successfully moved to the trash. Since the operation may require renaming the item to avoid a file name collision, this method returns, by reference, the resulting folderitem that the item was moved to.

If this method returns false, the item was not moved to the trash; the error parameter then contains information about the error.

Available in OS X v10.8 and later.
See also:

- 88.5.97 trashItem(Path as String, byref Resulting as FolderItem, byref error as NSErrorMBS) as boolean 15390

88.5.97 trashItem(Path as String, byref Resulting as FolderItem, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves an item to the trash.
Notes:

Returns true if the item at url was successfully moved to the trash. Since the operation may require renaming the item to avoid a file name collision, this method returns, by reference, the resulting folderitem that the item was moved to.

If this method returns false, the item was not moved to the trash; the error parameter then contains information about the error.

Available in OS X v10.8 and later.
See also:

- 88.5.96 trashItem(file as folderItem, byref Resulting as folderItem, byref error as NSErrorMBS) as boolean 15390

88.5.98 URLByAppendingPathComponent(URL as string, pathComponent as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL made by appending a path component to the original URL.
Notes:

pathComponent: The path component to add to the URL.

Returns a new URL with pathComponent appended.

If the original URL does not end with a forward slash and pathComponent does not begin with a forward slash, a forward slash is inserted between the two parts of the returned URL, unless the original URL is the empty string.

Available in Mac OS X v10.6 and later.
See also:

- 88.5.99 URLByAppendingPathComponent(URL as string, pathComponent as string, isDirectory as boolean) as string 15391

88.5.99 URLByAppendingPathComponent(URL as string, pathComponent as string, isDirectory as boolean) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL made by appending a path component to the original URL, along with a trailing slash if the component is designated a directory.
Notes:

pathComponent: The path component to add to the URL.
isDirectory: If true, a trailing slash is appended after pathComponent.
Returns a new URL with pathComponent appended.

If the original URL does not end with a forward slash and pathComponent does not begin with a forward slash, a forward slash is inserted between the two parts of the returned URL, unless the original URL is the empty string.

Available in Mac OS X v10.7 and later.
See also:

- 88.5.98 URLByAppendingPathComponent(URL as string, pathComponent as string) as string 15391

88.5.100 URLByAppendingPathExtension(URL as string, pathExtension as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL made by appending a path extension to the original URL.
Notes:

pathExtension: The path extension to add to the URL.

Returns a new URL with pathExtension appended.

If the original URL ends with one or more forward slashes, these are removed from the returned URL. A period is inserted between the two parts of the new URL.
Available in Mac OS X v10.6 and later.

88.5.101 URLByDeletingLastPathComponent(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL made by deleting the last path component from the original URL.
Notes:

If the original URL represents the root path, the returned URL is identical. Otherwise, if the original URL has only one path component, the new URL is the empty string.
Available in Mac OS X v10.6 and later.

88.5.102 URLByDeletingPathExtension(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL made by deleting the path extension, if any, from the original URL.
Notes:

If the original URL represents the root path, the returned URL is identical. If the URL has multiple path extensions, only the last one is removed.
Available in Mac OS X v10.6 and later.

88.5.103 URLByResolvingSymlinksInPath(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL that points to the same resource as the original URL and includes no symbolic links.
Notes:

If the original URL has no symbolic links, the returned URL is identical to the original URL.

This method only works on URLs with the file: path scheme. This method will return an identical URL for all other URLs.

Available in Mac OS X v10.6 and later.

88.5.104 URLByStandardizingPath(URL as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new URL that points to the same resource as the original URL and is an absolute path.
Notes:

This method only works on URLs with the file: path scheme. This method will return an identical URL for all other URLs.

Available in Mac OS X v10.6 and later.

88.5.105 URLForPublishingUbiquitousItem(item as folderitem, byref expirationDate as date, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a URL that can be emailed to users to allow them to download a copy of a cloud-based item.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")

dim error as NSErrorMBS
dim exdate as date
dim url as string = m.URLForPublishingUbiquitousItem(f, exdate, error)

// always fails as desktop folder is not in cloud
if error<>nil then
MsgBox error.localizedDescription
end if
```

Notes:

url: Specify the URL of the item in the cloud that you want to share. The URL must be prefixed with the base URL returned from the URLForUbiquityContainerIdentifier method that corresponds to the item's location.
expirationDate: On output, this parameter contains the date after which the item is no longer available at the returned URL.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns an URL with which users can download a copy of the item at url. Returns nil if the URL could not be created for any reason.

Discussion
This method creates a snapshot of the specified file and places that copy in a temporary iCloud location where it can be accessed by other users using the returned URL. The snapshot reflects the contents of the file at the time the URL was generated and is not updated when subsequent changes are made to the original file in the user's iCloud storage. The snapshot file remains available at the specified URL until the date specified in the outDate parameter, after which it is automatically deleted.

Your application must have access to the network for this call to succeed.
Available in Mac OS X v10.7 and later.
See also:

- 88.5.106 URLForPublishingUbiquitousItem(URL as string, byref expirationDate as date, byref error as NSErrorMBS) as string

88.5.106 URLForPublishingUbiquitousItem(URL as string, byref expirationDate as date, byref error as NSErrorMBS) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a URL that can be emailed to users to allow them to download a copy of a cloud-based item.
Notes:

url: Specify the URL of the item in the cloud that you want to share. The URL must be prefixed with the base URL returned from the URLForUbiquityContainerIdentifier method that corresponds to the item's location.
expirationDate: On output, this parameter contains the date after which the item is no longer available at the returned URL.
error: If an error occurs, this pointer is set to an NSError object containing information about the error.

Returns an URL with which users can download a copy of the item at url. Returns nil if the URL could not be created for any reason.

Discussion
This method creates a snapshot of the specified file and places that copy in a temporary iCloud location where it can be accessed by other users using the returned URL. The snapshot reflects the contents of the file at the time the URL was generated and is not updated when subsequent changes are made to the original file in the user's iCloud storage. The snapshot file remains available at the specified URL until the date specified in the outDate parameter, after which it is automatically deleted.

Your application must have access to the network for this call to succeed.
Available in Mac OS X v10.7 and later.
See also:

- 88.5.105 URLForPublishingUbiquitousItem(item as folderitem, byref expirationDate as date, byref error as NSErrorMBS) as string 15394

88.5.107 URLForUbiquityContainerIdentifier(containerIdentifier as string) as string

MBS MacCocoa Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the iCloud directory associated with the specified container ID.
Notes:

containerID: Specify the container ID of the cloud-based storage container. The string you specify must not contain wildcards and must be of the form <TEAMID>.<CONTAINER>, where <TEAMID>is your development team ID and <CONTAINER>describes the bundle identifier of the container you want to access. The container identifiers for your application must be declared in the com.apple.developer.ubiquity-container-identifiers entitlement.
If you specify "", this method returns the first container listed in the com.apple.developer.ubiquity-container-

identifiers entitlement.

Returns a folderitem pointing to the specified container directory or nil if the container could not be located or if iCloud storage is unavailable for the current user or device.

You can use the folderitem returned by this method to build paths to files and directories in the user's iCloud storage. Each application that syncs documents to the cloud must have at least one associated container directory in which to put those files. This container directory can be unique to the application or shared by multiple applications. You use this method to retrieve the folderitem for that container directory.

In addition to writing to its own container directory, an application can write to any container directory for which it has the appropriate permission. Each additional container directory should be listed as an additional value in the com.apple.developer.ubiquity-container-identifiers entitlement.

Note: The development team ID that precedes each container ID string is the unique identifier associated with your development team. You can find this string in the Member Center of the Apple Developer website (http://developer.apple.com/membercenter). From the Member Center home page, select the Your Account tab and then select Organization Profile from the column on the left of that tab. Your team's identifier is in the Company/Organization ID field.
The first time you call this method for a given container directory, iOS extends your application sandbox to include that container directory. Thus, it is important that you call this method at least once before trying to search for files in iCloud. And if your application accesses multiple container directories, you should call the method once for each directory.

Available in Mac OS X v10.7 and later.
FileForUbiquityContainerIdentifier returns folderitem while URLForUbiquityContainerIdentifier returns URL string.

88.5.108 Properties

88.5.109 currentDirectory as folderitem

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the path of the program's current directory.
Example:

```
dim m as new NSFileManagerMBS
dim f as FolderItem = SpecialFolder.Applications
if m.changeCurrentDirectory(f) then
MsgBox m.currentDirectory.NativePath
end if
```

Notes:

Returns the path of the program's current directory. If the program's current working directory isn't accessible, returns nil.

The string returned by this method is initialized to the current working directory; you can change the working directory by invoking changeCurrentDirectoryPath.

Relative pathnames refer implicitly to the current directory. For example, if the current directory is /tmp, and the relative pathname reports/info.txt is specified, the resulting full pathname is /tmp/reports/info.txt. (Read only property)

88.5.110 currentDirectoryPath as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the path of the program's current directory as string.
Example:

```
dim m as new NSFileManagerMBS
MsgBox m.currentDirectoryPath
```

Notes:

Returns the path of the program's current directory. If the program's current working directory isn't accessible, returns "".

The string returned by this method is initialized to the current working directory; you can change the working directory by invoking changeCurrentDirectoryPath.

Relative pathnames refer implicitly to the current directory. For example, if the current directory is /tmp, and the relative pathname reports/info.txt is specified, the resulting full pathname is /tmp/reports/info.txt. (Read only property)

88.5.111 defaultManager as NSFileManagerMBS

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default manager.
Notes:

This is just one global property, so we only create instance on first call and than return the same instance again.

(Read only property)

88.5.112 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

88.5.113 homeDirectoryForCurrentUser as FolderITem

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the home directory for the current user.
Notes: (Read only property)

88.5.114 temporaryDirectory as FolderITem

MBS MacCocoa Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the temporary directory for the current user.
Notes: (Read only property)

88.5.115 Constants

88.5.116 NSDirectoryEnumerationSkipsHiddenFiles = 4

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the option constants for enumerating the contents of directories with the contentsOfDirectoryAtURL method.
Notes:

Do not enumerate hidden files.
Available in Mac OS X v10.6 and later.

88.5.117 NSDirectoryEnumerationSkipsPackageDescendants = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the option constants for enumerating the contents of directories with the contentsOfDirectoryAtURL method.
Notes:

Do not descend into packages.
Available in Mac OS X v10.6 and later.

88.5.118 NSDirectoryEnumerationSkipsSubdirectoryDescendants = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the option constants for enumerating the contents of directories with the contentsOfDirectoryAtURL method.
Notes:

Perform a shallow enumeration; do not descend into directories.
Available in Mac OS X v10.6 and later.

88.5.119 NSFileManagerItemReplacementUsingNewMetadataOnly = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the options constants to specify the replacement behavior in NSFileManagerItemReplacementWithoutDeletingBackupItem.
Notes:

Causes NSFileManagerItemReplacementWithoutDeletingBackupItem to use metadata from the new item only and not to attempt to preserve metadata from the original item.
Available in Mac OS X v10.6 and later.

88.5.120 NSFileManagerItemReplacementWithoutDeletingBackupItem = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the options constants to specify the replacement behavior in NSFileManagerItemReplacementWithoutDeletingBackupItem.
Notes:

Causes NSFileManagerItemReplacementWithoutDeletingBackupItem to leave the backup item in place after a successful replacement. The default behavior is to remove the item.
Available in Mac OS X v10.6 and later.

88.5.121 NSFileManagerUnmountAllPartitionsAndEjectDisk = 1

MBS MacCocoa Plugin, Plugin Version: 18.5. **Function:** One of the unmount options constants.
Notes: Unmount all partitions of this disk and eject it.

88.5.122 NSFileManagerUnmountWithoutUI = 2

MBS MacCocoa Plugin, Plugin Version: 18.5. **Function:** One of the unmount options constants.
Notes: Unmount without user interface.

88.5.123 NSURLRelationshipContains = 0

MBS MacCocoa Plugin, Plugin Version: 18.5. **Function:** One of the constants indicating the relationship between a directory and an item.
Notes: The directory contains the specified item.

88.5.124 NSURLRelationshipOther = 2

MBS MacCocoa Plugin, Plugin Version: 18.5. **Function:** One of the constants indicating the relationship between a directory and an item.
Notes: The directory does not contain the item and is not the same as the item.

88.5.125 NSURLRelationshipSame = 1

MBS MacCocoa Plugin, Plugin Version: 18.5. **Function:** One of the constants indicating the relationship between a directory and an item.
Notes:

The directory and the item are the same. This relationship occurs when the value of the NSURLFileResourceIdentifierKey is the same for the directory and item.

88.5.126 NSVolumeEnumerationProduceFileReferenceURLs = 4

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the option constants for enumerating mounted volumes with the mountedVolumeURLsIncludingResourceValuesForKeys method.
Notes:

The enumeration produces file reference URLs rather than path-based URLs.
Available in Mac OS X v10.6 and later.

88.5.127 NSVolumeEnumerationSkipHiddenVolumes = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the option constants for enumerating mounted volumes with the mountedVolumeURLsIncludingResourceValuesForKeys method.
Notes:

The enumeration skips hidden volumes.
Available in Mac OS X v10.6 and later.

88.6 class NSFilePresenterHandlerMBS

88.6.1 class NSFilePresenterHandlerMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a callback.
Notes: Some iCloud related functions in NSFileCoordinatorMBS or NSFilePresenterMBS require that you call a function to notify the caller that you are finished doing some work.

88.6.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr9

88.6.3 Methods

88.6.4 Destructor

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cleans up.

88.6.5 Run(errorOrNil as NSErrorMBS = nil)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Calls the callback.
Notes:

As some callbacks ask for an error object in case of an error, you can pass one.
Other callbacks don't take a parameter.

88.7 class NSFilePresenterMBS

88.7.1 class NSFilePresenterMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The plugin class to implement the NSFilePresenter protocol.
Notes:

A protocol to be implemented by objects that present the contents of files or directories to the user for viewing or editing. The objects can take an active role in operations that access those files or directories, even operations performed by other processes in the system. For an NSFilePresenter to be aware of such file access it must be "coordinated" file access. Starting in version 10.7 many components of Mac OS X use NSFileCoordinatorMBS, including AppKit, Finder, and various applications. NSDocument conforms to the NSFilePresenter protocol and has useful implementations of all of its methods. You are unlikely to have to implement NSFilePresenter yourself in an NSDocument-based application.

See the comments for NSFileCoordinator.Constructor for information about how an NSFilePresenter can avoid receiving messages about its own reading and writing.

You can consider "item" in method names in this header file to be an abbreviation of "fileOrDirectory." As always, a directory might actually be a file package.

Please also check the documentation from Apple for the NSFilePresenter protocol.

88.7.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9
- MBS Real Studio Plugins, version 11.3pr9

88.7.3 Methods

88.7.4 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

88.7.5 Destructor

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

88.7.6 Properties

88.7.7 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSFilePresenter object.
Notes: (Read and Write property)

88.7.8 Events

88.7.9 accommodatePresentedItemDeletionWithCompletionHandler(Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells your object that its presented item is about to be deleted.
Notes:

Complete: The complete handler object to call after updating your data structures. Pass nil to the run method's errorOrNil parameter if you were able to successfully prepare for the deletion of the item. Pass an error object if your object could not prepare itself properly.

A file coordinator calls this method when your object's presented item is about to be deleted. You can use this method to perform any actions that are needed to prepare for the deletion. For example, document objects typically use this method to close the document.

Important: If you implement this method, you must execute the run method in the complete parameter at the end of your implementation. The system waits for you to execute that method before allowing the other object to delete the file or directory. Therefore, failure to execute the method could stall threads in your application or other processes.

Available in Mac OS X v10.7 and later.

88.7.10 accommodatePresentedSubitemDeletionAtURL(URL as string, file as Folderitem, Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that some entity wants to delete an item that is inside of a presented directory. (required)

Notes:

url: The URL of the item being deleted from the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.
complete: The complete handler object to call after updating your data structures. Pass nil to the run method's errorOrNil parameter if you were able to successfully prepare for the deletion of the item. Pass an error object if your object could not prepare itself properly.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. When called, your implementation of this method should take whatever actions needed to update your application to handle the deletion of the specified file.

Important: If you implement this method, you must execute the run method in the Complete parameter at the end of your implementation. The system waits for you to execute that method before allowing the other object to delete the item at the specified URL. Therefore, failure to execute the method could stall threads in your application or in other processes.

Available in Mac OS X v10.7 and later.

88.7.11 presentedItemDidChange

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is called when the item changed.
Notes:

Be notified that the file or file package's contents or attributes have been been written to. Because this method may be be invoked when the attributes have changed but the contents have not, implementations that read the contents must use modification date checking to avoid needless rereading. They should check that the modification date has changed since the receiver most recently read from or wrote to the item. To avoid race conditions, getting the modification date should typically be done within invocations of one of the NSFileCoordinatorMBS.coordinate... methods.

For example, NSDocument implements this method to react to both contents changes (like the user overwriting the document file with another application) and attribute changes (like the user toggling the "Hide extension" checkbox in a Finder info panel). It uses modification date checking as described above.

Not all programs use file coordination. Your NSFileProvider may be sent this message without being sent relinquishPresentedItemToWriter first. Make your application do the best it can in that case.

88.7.12 presentedItemDidGainVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Be notified that something in the system has added a version of the file or file package.

88.7.13 presentedItemDidLoseVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Be notified that something in the system has removed a version of the file or file package.

88.7.14 presentedItemDidMoveToURL(url as string, file as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Be notified that the file or directory has been moved or renamed, or a directory containing it has been moved or renamed.
Notes:

A typical implementation of this method will cause subsequent invocations of presentedItemURL to return the new URL.

The new URL may have a different file name extension than the current value of the presentedItemURL property.

For example, NSDocument implements this method to handle document file moving and renaming. A shoebox application would only implement this method to be robust against surprising things like the user moving its data directory while the application is running.

Not all programs use file coordination. Your NSFileProvider may be sent this message without being sent relinquishPresentedItemToWriter first. Make your application do the best it can in that case.

88.7.15 presentedItemDidResolveConflictVersion(version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Be notified that something in the system has resolved a version of the file or file package.

88.7.16 presentedItemURL as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The URL that locates the file or directory that the receiver is presenting to the user.
Notes:

Implementations of this method must be prepared to be invoked by Cocoa in any queue, at any time, including from within invocations of NSFileCoordinator methods. A nil value is valid and means that the presented item does not exist yet. An NSFilePresenter with a nil presentedItemURL will be asked for its presentedItemURL again when coordinated file access on behalf of that NSFilePresenter completes, in case the presented item was just created.

For example, NSDocument has a -presentedItemURL method that usually returns self.fileURL. In a shoebox application that stores the user's data in files somewhere on the user's computer you can implement this method to specify the directory that contains those files.

88.7.17 presentedSubitemAtURLdidGainVersion(URL as string, file as Folderitem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that the item inside the presented directory gained a new version. (required)
Notes:

url: The URL of the item inside the presented directory that gained a new version. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: url as folderitem.
version: The file version object containing information about the new file version.

Your delegate can use this method to determine how to incorporate data from the new version of the item. This might involve incorporating the version silently or asking the user about how to proceed.

Available in Mac OS X v10.7 and later.

88.7.18 presentedSubitemAtURLdidLoseVersion(URL as string, file as Folderitem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that the item inside the presented directory lost an existing version. (required)
Notes:

url: The URL of the item inside the presented directory that lost a version. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.

version: The file version object containing information about the version that was removed.

Your delegate can use this method to determine how to handle the loss of the specified file version. For an old version, you might not have to do anything. However, if your application is currently using the lost version, you would need to update your application's user interface or prompt the user about how to proceed.

Available in Mac OS X v10.7 and later.

88.7.19 presentedSubitemAtURLdidMoveToURL(oldURL as string, newURL as string, oldFile as folderitem, newFile as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that an item in the presented directory moved to a new location. (required)
Notes:

oldURL: The original URL of the item inside the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
newURL: The new URL for the item. This URL may or may not be located inside the presented directory.
oldFile: oldURL as folderitem.
newFile: newURL as folderitem.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to handle the change in location of the specified item. For example, you might update references to the item in your application's data structures and refresh your user interface.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

88.7.20 presentedSubitemAtURLdidResolveConflictVersion(URL as string, file as Folderitem, version as NSFileVersionMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that the item inside the presented directory had a version conflict resolved by an outside entity. (required)
Notes:

url: The URL of the item inside the presented directory that was in conflict. The item need not be at the

top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as folderitem.
version: The version object containing the conflicting change.

Your delegate can use this method to respond to the resolution of a version conflict by a different file presenter. This might occur if a version of your application running on another device resolves the conflict first. You might then use this method to update your user interface to indicate that there is no longer a conflict.

Available in Mac OS X v10.7 and later.

88.7.21 presentedSubitemDidAppearAtURL(URL as string, file as Folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that an item was added to the presented directory. (required)
Notes:

url: The URL of the item being added to the presented directory. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.
file: URL as a folderitem.

This method is relevant for applications that present directories. This might occur if the delegate manages the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to incorporate the new file or directory into the presented content. For example, you might add the new item to your application's data structures and refresh your user interface.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

88.7.22 presentedSubitemDidChangeAtURL(URL as string, file as Folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells the delegate that the contents or attributes of the specified item changed. (required)
Notes:

url: The URL of the item in the presented directory that changed. The item need not be at the top level of the presented directory but may itself be inside a nested subdirectory.

This method is relevant for applications that present directories. This might occur if the delegate manages

the contents of a directory or manages a file that is implemented as a file package. Your implementation of this method should take whatever actions necessary to handle the change in content or attributes of the specified item.

If the presented directory is a file package, the system calls the presentedItemDidChange method if your delegate does not implement this method.

Available in Mac OS X v10.7 and later.

88.7.23 primaryPresentedItemURL as string

MBS MacCloud Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The URL of a secondary item's primary presented file or directory. (read-only)
Notes:

This property supports App Sandbox in OS X.

Some apps require access to secondary files or directories with names that are related to the primary, user-selected file. For example, a subtitle file, by convention, has the same name as its corresponding movie file, but with a different filename extension. If a movie player is sandboxed, an NSOpenPanel object will grant access only to the user-selected movie file (the primary item) and not its associated subtitle file (the secondary item).

To gain access to a secondary item, first register an NSFilePresenter object for it. At any point in its existence, a secondary item must be able to return an NSURL object to its primary item. This is done by using this property. When done accessing the secondary item, unregister the file presenter object.

Available in OS X v10.8 and later.

88.7.24 reacquirer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The reacquirer event.
Notes:

Called when you can reacquire an object.
e.g. called by relinquishPresentedItemToReader method.

88.7.25 relinquishPresentedItemToReader(reader as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies your object that another object or process wants to read the presented file or directory.
Notes:

reader: A handler object. The reacquirer event is called to notify when the reader is done. If your object does not need to be notified, it can pass nil for the reacquirer block.

You use this method to provide an appropriate response when another object wants to read from your presented URL. For example, when this method is called, you might temporarily stop making changes to the file or directory. After taking any appropriate steps, you must execute the block in the reader parameter to let the waiting object know that it may now proceed with its task. If you want to be notified when the reader has completed its task, pass your own block to the reader and use that block to reacquire the file or URL for your own uses.

Important: If you implement this method, you must execute the run method in the reader parameter as part of your implementation. The system waits for you to execute that method before allowing the reader to operate on the file. Therefore, failure to execute the method could stall threads in your application or other processes until the user takes corrective actions.

Your implementation of this method is executed using the queue in the presentedItemOperationQueue property. Your reacquirer event is executed on the queue associated with the reader.

Available in Mac OS X v10.7 and later.

88.7.26 relinquishPresentedItemToWriter(writer as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Notifies your object that another object or process wants to write to the presented file or directory.
Notes:

writer: A complete handler object. The reacquirer event is called so that your object can be notified when the writer is done.

You use this method to provide an appropriate response when another object wants to write to your presented URL. For example, when this method is called, you would likely stop making changes to the file or directory. After taking any appropriate steps, you must execute the run method in the writer parameter to let the waiting object know that it may now proceed with its task.

Important: If you implement this method, you must execute the run method in the writer parameter at the end of your implementation. The system waits for you to execute that block before allowing the writer to

operate on the file. Therefore, failure to execute the run method could stall threads in your application or other processes.
If the writer changes the file or directory, you do not need to incorporate those changes in your reacquirer block. Instead, implement the presentedItemDidChange method and use it to detect when a writer actually wrote its changes to disk.

Your implementation of this method is executed using the queue in the presentedItemOperationQueue property. Your reacquirer event is executed on the queue associated with the writer.

Available in Mac OS X v10.7 and later.

88.7.27 savePresentedItemChangesWithCompletionHandler(Complete as NSFilePresenterHandlerMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells your object to save any unsaved changes for the presented item.
Notes:

Complete: The handler object to call after you save your changes. If you saved your changes successfully, pass nil for the run's errorOrNil parameter; otherwise, pass an error object indicating why the changes could not be saved.

The file coordinator calls this method to ensure that all objects trying to access the file or directory see the same contents. Implement this method if your object can change the presented item in a way that requires you to write those changes back to disk. If your presenter object does not make changes that need to be saved, you do not need to implement this method.

Important: If you implement this method, you must execute the run method in the Complete parameter at the end of your implementation. The system waits for you to execute that block before allowing other objects to operate on the file. Therefore, failure to execute the run method could stall threads in your application or other processes.

Available in Mac OS X v10.7 and later.

88.8 class NSFileVersionMBS

88.8.1 class NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for different file versions on Mac OS X 10.7.
Notes:

Instances of NSFileVersionMBS for the same version of the same file are equal, and instances of NSFileVersionMBS for different versions of the same file are not equal, but the equality of NSFileVersionMBSs for different files is undefined. Repeated invocations of the methods that return NSFileVersionMBSs do not necessarily return the exact same instance of NSFileVersionMBS.

An NSFileVersion object represents a snapshot of a file at a specific point in time. You use the NSFileVersion class to access and create and manage file revisions in your application. Each instance of this class contains meta information about a single revision, such as the location of the file containing the revision data, the modification date of the revision, and whether the revision is discardable.

In Mac OS X applications, you can use file version objects to track changes to a local file over time and to prevent the loss of data during editing. When managing local versions, the document architecture creates versions at specific points in the lifetime of your application. Your application can also create versions explicitly at times that your application designates as appropriate.

In addition to managing local files, the system also uses this class to manage cloud-based files. For files in the cloud, there is usually only one version of the file at any given time. However, additional file versions may be created in cases where two different computers attempt to save the file to the cloud at the same time. In that case, one file is chosen as the current version and any other versions are tagged as being in conflict with the original. Conflict versions are reported to the appropriate file presenter objects and should be resolved as soon as possible so that the corresponding files can be removed from the cloud.

Available on Mac OS X 10.7 or later.
Please also check the documentation from Apple for the NSFileVersion class.

Works also well with files in backup (Time Machine) to find older versions.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

88.8.2 Blog Entries

- Lion features for Real Studio

88.8.3 Methods

88.8.4 addVersionOfItemAtURL(url as string, withContentsOfURL as string, options as Integer, byref error as NSErrorMBS) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Add a new version of the file located by a URL, with the contents coming from a file located by either the same or a different URL, and return a new instance that represents the version if successful.
Notes:

If not successful, return false after setting Error to an NSErrorMBS that encapsulates why not.

You can add versions only on Mac OS X.

When adding or removing versions of a file you should do it as part of a "coordinated" write to the file. see NSFileCoordinatorMBS class. Using it properly ensures that NSFilePresenters of the file, or directories that contain the file, receive accurate notifications about versions being added or removed. For example, use NSFileCoordinatorMBS.coordinateWritingItemAtURL when the file URL and the contents url are the same. (NSFileVersion doesn't simply use NSFileCoordinator itself because that would be insufficient when the adding or removing of versions is part of a larger operation that should be treated as one coordinated file access.)

88.8.5 Conflict as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the version was created as a result of the discovery of a conflict between two writers of the versioned file.
Notes: When two or more versions of a file are written at the same time, perhaps because the file is saved in the cloud and one or more of the writers were offline when they were writing, the system attempts to resolve the conflict automatically. It does this by picking one of the file versions to be the current file and setting this property to true for the other file version that are in conflict.

88.8.6 Constructor

MBS MacCloud Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

88.8.7 currentVersionOfItemAtURL(file as folderitem) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Convenience variant of currentVersionOfItemAtURL which takes folderitem.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

MsgBox n.localizedName
```

See also:

- 88.8.8 currentVersionOfItemAtURL(url as string) as NSFileVersionMBS 15415

88.8.8 currentVersionOfItemAtURL(url as string) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return an NSFileVersionMBS that represents the contents of the file located by a URL, or nil if there is no such file.
See also:

- 88.8.7 currentVersionOfItemAtURL(file as folderitem) as NSFileVersionMBS 15415

88.8.9 File as folderitem

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of the receiver's storage.
Notes:

Or possibly nil if the receiver's storage has been deleted. The storage is read-only. The URL will have an arcane path. You must not derive user-presentable text from it.
If the URL does not represent a folderitem, this function gives nil.

88.8.10 FileURL(file as folderitem) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns URL for a folderitem.
Notes: Call is method in case you need to provide an URL for a folderitem.

88.8.11 localizedName as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user-presentable name of the version, or possibly "" if the receiver's storage has been deleted.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)
MsgBox n.localizedName
```

Notes: This will be different from the user-presentable name of the versioned file if, for example, the file has been renamed since the version was added.

88.8.12 localizedNameOfSavingComputer as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user-presentable name of the computer on which the version was saved, or possibly "" if the receiver's storage has been deleted, or "" if no computer name was recorded.
Notes: The computer name is guaranteed to have been recorded only if the version is a conflict version. This will be different from that computer's current name if the computer's name has been changed since the version was retrieved from that computer.

88.8.13 modificationDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The modification date of the version, or possibly nil if the receiver's storage has been deleted.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

MsgBox n.modificationDate.SQLDateTime
```

88.8.14 otherVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Convenience variant of otherVersionsOfItemAtURL taking a folderitem.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim n() as NSFileVersionMBS = NSFileVersionMBS.otherVersionsOfItemAtURL(f)

// shows all time stamps of this file.
dim lines() as string
for each x as NSFileVersionMBS in n
lines.Append x.modificationDate.SQLDateTime
next
MsgBox Join(lines,EndOfLine)
```

See also:

- 88.8.15 otherVersionsOfItemAtURL(url as string) as NSFileVersionMBS() 15417

88.8.15 otherVersionsOfItemAtURL(url as string) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Return an array of NSFileVersionMBS objects associated with the file located by a URL, or an empty array if there is no such file.
Notes: The array never contains an NSFileVersionMBS equal to what currentVersionOfItemAtURL would return.
See also:

- 88.8.14 otherVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS() 15416

88.8.16 persistentIdentifier as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The identifier for this version of the file. (read-only)
Example:

```
// get a file version
dim f as FolderItem = SpecialFolder.Desktop.Child("Notes.rtf")
dim n as NSFileVersionMBS = NSFileVersionMBS.currentVersionOfItemAtURL(f)

// get persistent identifier
dim m as MemoryBlock = n.persistentIdentifier

// later find version again
dim x as NSFileVersionMBS = NSFileVersionMBS.versionOfItemAtURLforPersistentIdentifier(f, m)

// and show something
MsgBox x.localizedName
```

Notes:

You can save the value of this property persistently and use it to recreate the version object later. When recreating the version object using the versionOfItemAtURLforPersistentIdentifier method, the version object returned is equivalent to the current object.

The plugin encodes the identifier for you into a memoryblock, so you can store it somewhere in your preferences.

88.8.17 removeAndReturnError(byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Delete the receiver's storage, and return true if successful.
Notes:

If not successful, return false after setting Error to an NSErrorMBS that encapsulates why not. Subsequent invocations of versionsOfItemAtURL won't include an NSFileVersion for a successfully removed version.

You cannot use this method to delete the versioned file itself. This method always throws an exception when sent to the result of invoking currentVersionOfItemAtURL. Use NSFileManagerMBS.removeItemAtURL for that instead.

When removing versions of a file you should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too.

88.8.18 removeOtherVersionsOfItemAtURL(file as folderitem, byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience variant of removeOtherVersionsOfItemAtURL which takes folderitem.
See also:

- 88.8.19 removeOtherVersionsOfItemAtURL(url as string, byref error as NSErrorMBS) as boolean 15418

88.8.19 removeOtherVersionsOfItemAtURL(url as string, byref error as NSErrorMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Delete all of the versions associated with the file located by a URL, except for the current one, and return true if successful.
Notes:

If not successful, return false after setting error to an NSErrorMBS that encapsulates why not.

When removing versions of a file you should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too.
See also:

- 88.8.18 removeOtherVersionsOfItemAtURL(file as folderitem, byref error as NSErrorMBS) as boolean 15418

88.8.20 replaceItemAtURL(file as folderitem, options as Integer, byref error as NSErrorMBS) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience variant of replaceItemAtURL which takes a folderitem.
See also:

- 88.8.21 replaceItemAtURL(url as string, options as Integer, byref error as NSErrorMBS) as string 15419

88.8.21 replaceItemAtURL(url as string, options as Integer, byref error as NSErrorMBS) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: If the passed-in URL locates a file, replace the file with a file whose contents are taken from the version but whose display name is taken from the file.
Notes:

If the passed-in URL does not locate a file then simply write one. If successful, return a URL that locates the resulting file; it may be different from the passed-in URL. The one exception to taking the display name from an existing file is if the version is of a different type than the overwritten file. In that case the file name extension will be taken from the version. (When file name extensions are being hidden in a user-friendly way this is not actually an exception.) If not successful, return false after setting *outError to an NSError that encapsulates why not.

When you use NSFileVersionReplacingByMoving you remove a version of the file, and should do it as part of a coordinated write to the file. The advice about this for addVersionOfItemAtURL applies here too. When you use it to promote a version to a separate file you actually write to two files, and should do it as part of a coordinated write to two files, using NSFileCoordinatorMBS.coordinateWritingItemAtURL, most likely using NSFileCoordinatorWritingForReplacing for the file you're promoting the version to.
See also:

- 88.8.20 replaceItemAtURL(file as folderitem, options as Integer, byref error as NSErrorMBS) as string 15419

88.8.22 temporaryDirectoryURLForNewVersionOfItemAtURL(url as string) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Given a URL, create a new directory that is suitable for using as the container of a new temporary file that you will create and use with NSFileVersionAddingByMoving.
Notes: This is useful when you want to create a new version of a file out of something other than the file's current contents, for example, the contents in memory of a document that has not yet been saved to its file. You must remove this directory when you are done with it, using NSFileManagerMBS.removeItemAtURL for example.

88.8.23 unresolvedConflictVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return an array of NSFileVersions that represent unresolved conflicts for the file located by a URL, or nil if there is no such file.
See also:

- 88.8.24 unresolvedConflictVersionsOfItemAtURL(url as string) as NSFileVersionMBS() 15420

88.8.24 unresolvedConflictVersionsOfItemAtURL(url as string) as NSFileVersionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return an array of NSFileVersions that represent unresolved conflicts for the file located by a URL, or nil if there is no such file.
See also:

- 88.8.23 unresolvedConflictVersionsOfItemAtURL(file as folderitem) as NSFileVersionMBS() 15420

88.8.25 URL as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of the receiver's storage.
Notes: Or possibly "" if the receiver's storage has been deleted. The storage is read-only. The URL will have an arcane path. You must not derive user-presentable text from it.

88.8.26 versionOfItemAtURLforPersistentIdentifier(file as folderitem, PersistentIdentifier as Memoryblock) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the version of the file that has the specified persistent ID.
Notes:

url: The URL of the file whose version you want.
persistentIdentifier: The persistent ID of the NSFileVersion object you want. The plugin decodes it for you from the memoryblock.

Returns the file version object with the specified ID or nil if no such version object exists.
See also:

- 88.8.27 versionOfItemAtURLforPersistentIdentifier(URL as string, PersistentIdentifier as Memoryblock) as NSFileVersionMBS 15421

88.8.27 versionOfItemAtURLforPersistentIdentifier(URL as string, PersistentIdentifier as Memoryblock) as NSFileVersionMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the version of the file that has the specified persistent ID.
Notes:

url: The URL of the file whose version you want.
persistentIdentifier: The persistent ID of the NSFileVersion object you want. The plugin decodes it for you from the memoryblock.

Returns the file version object with the specified ID or nil if no such version object exists.
See also:

- 88.8.26 versionOfItemAtURLforPersistentIdentifier(file as folderitem, PersistentIdentifier as Memoryblock) as NSFileVersionMBS 15421

88.8.28 Properties

88.8.29 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSFileVersion object.
Notes: (Read and Write property)

88.8.30 Discardable as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the system is allowed to automatically delete the receiver's storage in the future, at an unpredictable time.
Notes:

Setting this to true can fail so you must not depend on discarding for correct operation.

Once you have indicated that a version is discardable you cannot make it undiscardable again. Setting this to false causes an exception to be thrown.

You cannot make the versioned file itself discardable. Setting the value of this property always throws an exception when sent to the result of invoking currentVersionOfItemAtURL.

Versions can be discardable only on Mac OS X.
(Read and Write computed property)

88.8.31 Resolved as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: If the version is a conflict version, whether the conflict has been resolved.
Notes:

If the version is not a conflict version, simply true.

The operating system's reaction to your setting this to true is complicated and subject to change in future releases. One result however is that the version won't appear in arrays returned by unresolvedConflictVersionsOfItemAtURL anymore, unless setting fails.

Once you have indicated that a conflict has been resolved you cannot make it unresolved again. Setting this to false causes an exception to be thrown.
(Read and Write computed property)

88.8.32 Constants

88.8.33 NSFileVersionAddingByMoving = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the constants for addVersionOfItemAtURL.
Notes: Whether addVersionOfItemAtURL can move the new version contents file into the version store

instead of copying it. Moving is much faster. See the comment for temporaryDirectoryURLForNewVersionOfItemAtURL for an example of when this useful.

88.8.34 NSFileVersionReplacingByMoving = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the constants for replaceItemAtURL. **Notes:** Whether replaceItemAtURL must move the version's contents out of the version store instead of copying it. This is useful when you want to promote a version's contents to a separate file. You wouldn't use this to restore a version of a file.

88.9 class NSMetadataItemMBS

88.9.1 class NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSMetadataItem class represents the metadata associated with a file, providing a simple interface to retrieve the available attribute names and values.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

88.9.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr9

88.9.3 Methods

88.9.4 attributeKeys as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the attribute names of the receiver's values.

88.9.5 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Private constructor.

88.9.6 DisplayName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display name of the item, which may be different then the file system name.
Notes: Available in Mac OS X v10.7 and later.

88.9.7 File as folderitem

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file reference.

Notes: Available in Mac OS X v10.7 and later.

88.9.8 FileContentChangeDate as date

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time that the file contents last changed.
Notes: Available in Mac OS X v10.7 and later.

88.9.9 FileCreationDate as date

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time that the file was created.
Notes: Available in Mac OS X v10.7 and later.

88.9.10 FileName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the item as seen in the file system.
Notes: Available in Mac OS X v10.7 and later.

88.9.11 FileSize as UInt64

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size (in bytes) of the file on disk.
Notes: Available in Mac OS X v10.7 and later.

88.9.12 IsUbiquitous as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the item is stored in the cloud.
Notes: Available in Mac OS X v10.7 and later.

88.9.13 NSMetadataItemDisplayNameKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible attribute keys that may be associated with an item.

Notes:

The value is a string with the display name of the item, which may be different then the file system name.
Available in Mac OS X v10.7 and later.

88.9.14 NSMetadataItemFSContentChangeDateKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is a date object that contains the date and time that the file contents last changed.
Available in Mac OS X v10.7 and later.

88.9.15 NSMetadataItemFSCreationDateKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is a date object that contains the date and time that the file was created.
Available in Mac OS X v10.7 and later.

88.9.16 NSMetadataItemFSNameKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is a string with the name of the item as seen in the file system.
Available in Mac OS X v10.7 and later.

88.9.17 NSMetadataItemFSSizeKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is a number that indicates the size (in bytes) of the file on disk.
Available in Mac OS X v10.7 and later.

88.9.18 NSMetadataItemIsUbiquitousKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a boolean indicating whether the item is stored in the cloud.
Available in Mac OS X v10.7 and later.

88.9.19 NSMetadataItemPathKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is a string object that contains the full path to the file
Available in Mac OS X v10.7 and later.

88.9.20 NSMetadataItemURLKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that may be associated with an item.
Notes:

The value is an URL string that you can use to open the file.
Available in Mac OS X v10.7 and later.

88.9.21 NSMetadataUbiquitousItemHasUnresolvedConflictsKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a Boolean indicating whether the item is currently in conflict with another version of the file somewhere else.
Available in Mac OS X v10.7 and later.

88.9.22 NSMetadataUbiquitousItemIsDownloadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.

Notes:

The value is a Boolean indicating whether the current version of the item has been downloaded and is available locally.
Available in Mac OS X v10.7 and later.

88.9.23 NSMetadataUbiquitousItemIsDownloadingKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a Boolean indicating whether the item is currently being downloaded to the local device.
Available in Mac OS X v10.7 and later.

88.9.24 NSMetadataUbiquitousItemIsUploadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a Boolean indicating whether the item has been uploaded to the cloud.
Available in Mac OS X v10.7 and later.

88.9.25 NSMetadataUbiquitousItemIsUploadingKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a Boolean indicating whether the current version of the item is currently being uploaded to the cloud.
Available in Mac OS X v10.7 and later.

88.9.26 NSMetadataUbiquitousItemPercentDownloadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a number that contains the percentage of the file that has already been downloaded from the cloud. The value is a double in the range 0.0 to 100.0.

Available in Mac OS X v10.7 and later.

88.9.27 NSMetadataUbiquitousItemPercentUploadedKey as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible attribute keys that describe cloud-related information about the item.
Notes:

The value is a number that contains the percentage of the file that has already been uploaded to the cloud. The value is a double in the range 0.0 to 100.0.
Available in Mac OS X v10.7 and later.

88.9.28 Path as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file path.
Notes: Available in Mac OS X v10.7 and later.

88.9.29 UbiquitousItemHasUnresolvedConflicts as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the item is currently in conflict with another version of the file somewhere else.
Notes: Available in Mac OS X v10.7 and later.

88.9.30 UbiquitousItemIsDownloaded as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the current version of the item has been downloaded and is available locally.
Notes: Available in Mac OS X v10.7 and later.

88.9.31 UbiquitousItemIsDownloading as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the item is currently being downloaded to the local device.
Notes: Available in Mac OS X v10.7 and later.

88.9.32 UbiquitousItemIsUploaded as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the item has been uploaded to the cloud.
Notes: Available in Mac OS X v10.7 and later.

88.9.33 UbiquitousItemIsUploading as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the current version of the item is currently being uploaded to the cloud.
Notes: Available in Mac OS X v10.7 and later.

88.9.34 UbiquitousItemPercentDownloaded as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The percentage of the file that has already been downloaded from the cloud. The value is a double in the range 0.0 to 100.0.
Notes: Available in Mac OS X v10.7 and later.

88.9.35 UbiquitousItemPercentUploaded as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The percentage of the file that has already been uploaded to the cloud. The value is a double in the range 0.0 to 100.0.
Notes: Available in Mac OS X v10.7 and later.

88.9.36 URL as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file URL.
Notes: Available in Mac OS X v10.7 and later.

88.9.37 valueForAttribute(key as string) as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the receiver's metadata attribute name specified by a given key.
Notes:

key: The name of a metadata attribute.
Returns value as Variant.

88.9.38 valuesForAttributes(keys() as string) as dictionary

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary containing the key-value pairs for the attribute names specified by a given array of keys.
Notes:

keys: An array containing strings that specify the names of a metadata attributes.

A dictionary containing the key-value pairs for the attribute names specified by keys.

88.9.39 Properties

88.9.40 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal reference to the metadata item.
Notes:

Available in Mac OS X v10.7 and later.
(Read and Write property)

88.10 class NSMetadataQueryMBS

88.10.1 class NSMetadataQueryMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSMetadataQuery class encapsulates the functionality provided by the MDQuery opaque type for querying the Spotlight metadata.
Notes:

You may prefer MDQueryMBS class from our plugins. NSMetadataQueryMBS exists as it supports iCloud search.

NSMetadataQuery objects provide metadata query results in several ways:

- As individual attribute values for requested attributes.
- As value lists that contain the distinct values for given attributes in the query results.
- A result array proxy, containing all the query results. This is suitable for use with Cocoa bindings.
- As a hierarchical collection of results, grouping together items with the same values for specified grouping attributes. This is also suitable for use with Cocoa bindings.

Queries have two phases: the initial gathering phase that collects all currently matching results and a second live-update phase.
By default the receiver has no limitation on its search scope. Use setSearchScopes to customize.
By default, notification of updated results occurs at 1.0 seconds. Use setNotificationBatchingInterval to customize.
You must set a predicate with the setPredicate method before starting a query.

88.10.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr9

88.10.3 Methods

88.10.4 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the NSMetadataQuery object.

88.10.5 Destructor

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

88.10.6 disableUpdates

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables updates to the query results.
Notes: You should invoke this method before iterating over query results that could change due to live updates.

88.10.7 enableUpdates

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Enables updates to the query results.
Notes: You should invoke this method after you're done iterating over the query results.

88.10.8 groupedResults as NSMetadataQueryResultGroupMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing hierarchical groups of query results based on the receiver's grouping attributes.

88.10.9 groupingAttributes as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the receiver's grouping attributes.

88.10.10 indexOfResult(item as NSMetadataItemMBS) as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the index of a query result object in the receiver's results array.

88.10.11 isGathering as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the receiver is in the initial gathering phase of the query.
Notes: Returns true when the query is in the initial gathering phase; false otherwise.

88.10.12 isStarted as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the receiver has started the query.
Notes: Returns true when the receiver has executed the startQuery method; false otherwise.

88.10.13 isStopped as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the receiver has stopped the query.
Notes: Returns true when the receiver has stopped the query, false otherwise.

88.10.14 NSMetadataQueryDidFinishGatheringNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the query notification names.
Notes: Posted when the receiver has finished with the initial result-gathering phase of the query.

88.10.15 NSMetadataQueryDidStartGatheringNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the query notification names.
Notes: Posted when the receiver begins with the initial result-gathering phase of the query.

88.10.16 NSMetadataQueryDidUpdateNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the query notification names.
Notes: Posted when the receiver's results have changed during the live-update phase of the query.

88.10.17 NSMetadataQueryGatheringProgressNotification as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the query notification names.
Notes: Posted as the receiver's is collecting results during the initial result-gathering phase of the query.

88.10.18 NSMetadataQueryLocalComputerScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the scope constants you can use with setSearchScopes.

88.10.19 NSMetadataQueryNetworkScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the scope constants you can use with setSearchScopes.
Notes: Search all user-mounted remote volumes.

88.10.20 NSMetadataQueryResultContentRelevanceAttribute as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** In addition to the requested metadata attributes, a query result also includes content relevance, accessed with this key.
Notes:

Key used to retrieve a number with a floating point value between 0.0 and 1.0 inclusive. The relevance value indicates the relevance of the content of a result object. The relevance is computed based on the value of the result itself, not on its relevance to the other results returned by the query. If the value is not computed, it is treated as an attribute on the item that does not exist.
Available in Mac OS X v10.4 and later.

88.10.21 NSMetadataQueryUbiquitousDataScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the scope constants you can use with setSearchScopes.
Notes:

Search all files not in the Documents directories of the application's iCloud container directories.
vailable in Mac OS X v10.7 and later.

88.10.22 NSMetadataQueryUbiquitousDocumentsScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the scope constants you can use with setSearchScopes.
Notes:

Search all files in the Documents directories of the application's iCloud container directories.
vailable in Mac OS X v10.7 and later.

88.10.23 NSMetadataQueryUserHomeScope as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the scope constants you can use with setSearchScopes.
Notes: Search all local mounted volumes, including the user home directory. The user's home directory is searched even if it is a remote volume.

88.10.24 resultAtIndex(index as Integer) as NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the query result at a specific index.
Notes:

index: Index of the desired result in the query result array.
Returns query result at the position specified by index.

For performance reasons, you should use this method when retrieving a specific result, rather than they array returned by results.

88.10.25 resultCount as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of results returned by the receiver.
Notes: For performance reasons, you should use this method, rather than invoking count on results array.

88.10.26 results as NSMetadataItemMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the result objects for the receiver.
Notes: The results array is a proxy object that is primarily intended for use with Cocoa bindings. While it is possible to copy the proxy array and receive a "snapshot" of the complete current query results, it

is generally not recommended due to performance and memory issues. To access individual result array elements you should instead use the resultCount and resultAtIndex methods.

88.10.27 searchScopes as string()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the receiver's search scopes.
Notes: The array can contain strings that represent file system directories or the search scopes specified in Constants. An empty array indicates that there is no limitation on where the receiver searches.

88.10.28 setGroupingAttributes(attributeNames() as string)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the receiver's grouping attributes to specific attribute names.
Notes:

Invoking this method on a receiver while it's running a query, stops the query and discards current results, and immediately starts a new query.
Available in Mac OS X v10.4 and later.

88.10.29 setSearchScopes(folders() as folderitem)

MBS MacCloud Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Restrict the search scope of the receiver.
Notes: You can pass paths as folderitem.
See also:

- 88.10.30 setSearchScopes(paths() as string) 15437
- 88.10.31 setSearchScopes(paths() as string, folders() as folderitem) 15438

88.10.30 setSearchScopes(paths() as string)

MBS MacCloud Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Restrict the search scope of the receiver.
Notes: You can pass paths as strings and with the string array also the special scope strings from this class.
See also:

- 88.10.29 setSearchScopes(folders() as folderitem) 15437
- 88.10.31 setSearchScopes(paths() as string, folders() as folderitem) 15438

88.10.31 setSearchScopes(paths() as string, folders() as folderitem)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Restrict the search scope of the receiver.
Example:

```
dim m as new NSMetadataQueryMBS
dim paths() as string
dim folders() as FolderItem

// you can specify where to search either by path or by FolderItem
'paths.Append "/Applications"
folders.Append SpecialFolder.Applications

m.setSearchScopes paths, folders
```

Notes: You can pass paths as strings, paths as folderitem and with the string array also the special scope strings from this class.
See also:

- 88.10.29 setSearchScopes(folders() as folderitem) 15437
- 88.10.30 setSearchScopes(paths() as string) 15437

88.10.32 setSortDescriptor(sortDescriptor as NSSortDescriptorMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort descriptors to be used by the receiver.
Example:

```
dim m as new NSMetadataQueryMBS
m.setSortDescriptor NSSortDescriptorMBS.sortDescriptorWithKey(NSMetadataItemMBS.NSMetadataItemDisplayNameKey, true)
```

Notes: Invoking this method on the receiver running a query causes the existing query to stop, all current results are discarded, and a new query is started immediately.

88.10.33 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort descriptors to be used by the receiver.
Notes: Invoking this method on the receiver running a query causes the existing query to stop, all current

results are discarded, and a new query is started immediately.

88.10.34 sortDescriptors as NSSortDescriptorMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the receiver's sort descriptors.
Notes: Available in Mac OS X v10.4 and later.

88.10.35 startQuery as boolean

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to start the query.
Notes:

Returns true when successful; false otherwise.

A query can't be started if the receiver is already running a query or no predicate has been specified.

88.10.36 stopQuery

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops the receiver's current query from gathering any further results.
Notes:

The receiver first completes gathering any unprocessed results. If a query is stopped before the gathering phase finishes, it will not post an NSMetadataQueryDidStartGatheringNotification notification.

You would call this function to stop a query that is generating too many results to be useful but still want to access the available results. If the receiver is sent a startQuery message after performing this method, the existing results are discarded.

88.10.37 Properties

88.10.38 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the NSMetadataQuery object.
Notes: (Read and Write property)

88.10.39 notificationBatchingInterval as Double

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The interval that the receiver provides notification of updated query results.
Notes:

in seconds.
(Read and Write computed property)

88.10.40 predicate as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The predicate used by the receiver to filter the query results.
Example:

```
dim m as new NSMetadataQueryMBS
m.predicate = NSPredicateMBS.predicateWithFormat("kMDItemContentType=""com.apple.application-bundle""")
```

Notes:

Setting the predicate on a receiver running a query causes the existing query to stop, all current results are discarded, and a new query is started immediately.
(Read and Write computed property)

88.10.41 Events

88.10.42 DidFinishGathering(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called as the query has finished with the initial result-gathering phase of the query.

88.10.43 DidStartGathering(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called as the query begins with the initial result-gathering phase of the query.

88.10.44 DidUpdate(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called as the query's results have changed during the live-update phase of the query.

88.10.45 GatheringProgress(n as NSNotificationMBS)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called as the query is collecting results during the initial result-gathering phase of the query.

88.11 class NSMetadataQueryResultGroupMBS

88.11.1 class NSMetadataQueryResultGroupMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSMetadataQueryResultGroupMBS class represents a collection of grouped attribute results returned by an NSMetadataQueryMBS object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

88.11.2 Blog Entries

- More notes
- MBS Real Studio Plugins, version 11.3pr10

88.11.3 Methods

88.11.4 attributeName as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the attribute name for the receiver's result group.

88.11.5 Constructor

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

88.11.6 resultAtIndex(index as Integer) as NSMetadataItemMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the query result at a specific index.
Notes:

index: The index of the desired result.

For performance reasons, you should use this method when retrieving a specific result, rather than they array returned by results.

88.11.7 resultCount as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of results returned by the receiver.
Notes: For performance reasons, you should use this method, rather than invoking count on results.

88.11.8 results as NSMetadataItemMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the result objects for the receiver.
Notes: The results array is a proxy object that is primarily intended for use with Cocoa bindings. While it is possible to copy the proxy array to get a "snapshot" of the complete current query results, it is generally not recommended due to performance and memory issues. To access individual result array elements you should instead use the resultCount and resultAtIndex methods.

88.11.9 subgroups as NSMetadataQueryResultGroupMBS()

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the subgroups of the receiver.

88.11.10 value as Variant

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value of the attribute name for the receiver.

88.11.11 Properties

88.11.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the NSMetadataQueryResultGroup object.
Notes: (Read and Write property)

88.12 class NSPredicateMBS

88.12.1 class NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The NSPredicate class is used to define logical conditions used to constrain a search either for a fetch or for in-memory filtering.
Notes:

You use predicates to represent logical conditions, used for describing objects in persistent stores and in-memory filtering of objects. Although it is common to create predicates directly from instances of NSComparisonPredicate, NSCompoundPredicate, and NSExpression, you often create predicates from a format string which is parsed by the class methods on NSPredicate. Examples of predicate format strings include:

- Simple comparisons, such as grade == "7" or firstName like "Shaffiq"
- Case and diacritic insensitive lookups, such as name contains [cd] "itroen"
- Logical operations, such as (firstName like "Mark") OR (lastName like "Adderley")
- In Mac OS X v10.5 and later, you can create between predicates such as date between { $ YESTERDAY, $ TOMORROW } .

You can create predicates for relationships, such as:

- group.name like "work*"
- ALL children.age >12
- ANY children.age >12

You can create predicates for operations, such as @sum.items.price <1000. For a complete syntax reference, refer to the Predicate Programming Guide:
http://developer.apple.com/library/mac/# documentation/Cocoa/Conceptual/Predicates/predicates.html#//apple_ref/doc/uid/TP40001789

88.12.3 Methods

88.12.4 Constructor(predicateFormat as string)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
dim n as new NSPredicateMBS("kMDItemContentType=""com.apple.application-bundle""")
MsgBox n.predicateFormat
```

Notes:

predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

You get a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 88.12.5 Constructor(predicateFormat as string, arguments() as Variant) 15445
- 88.12.6 Constructor(value as boolean) 15446

88.12.5 Constructor(predicateFormat as string, arguments() as Variant)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
// we use one parameter here
dim s() as Variant
s.Append "com.apple.application-bundle"

dim n as new NSPredicateMBS("kMDItemContentType=% @", s)
```

```
// shows final string
MsgBox n.predicateFormat
```

Notes:

predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

You get a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 88.12.4 Constructor(predicateFormat as string) 15445
- 88.12.6 Constructor(value as boolean) 15446

88.12.6 Constructor(value as boolean)

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a predicate that always evaluates to a given value.
Example:

```
dim n as new NSPredicateMBS(true)
MsgBox n.predicateFormat
```

See also:

- 88.12.4 Constructor(predicateFormat as string) 15445
- 88.12.5 Constructor(predicateFormat as string, arguments() as Variant) 15445

88.12.7 description as string

MBS MacCloud Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The descriptor for this event.
Example:

```
dim args() as Variant
args.Append NSMetadataItemMBS.NSMetadataItemFSNameKey
dim pred as NSPredicateMBS = NSPredicateMBS.predicateWithFormat("% K LIKE '*'", args)
MsgBox pred.description
```

Notes: This is a text representation for debugging.

88.12.8 predicateFormat as string

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the receiver's format string.
Notes: The string returned by this method is not guaranteed to be the same as a string used to create the predicate.

88.12.9 predicateWithFormat(predicateFormat as string) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
dim n as NSPredicateMBS
n = NSPredicateMBS.predicateWithFormat("kMDItemContentType=""com.apple.application-bundle""")
MsgBox n.predicateFormat
```

Notes:

predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

Returns a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 88.12.10 predicateWithFormat(predicateFormat as string, arguments() as Variant) as NSPredicateMBS 15448

88.12.10 predicateWithFormat(predicateFormat as string, arguments() as Variant) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new predicate by substituting the values in a given array into a format string and parsing the result.
Example:

```
dim args() as Variant
args.Append NSMetadataItemMBS.NSMetadataItemFSNameKey
dim pred as NSPredicateMBS = NSPredicateMBS.predicateWithFormat("% K LIKE '*'", args)
MsgBox pred.description
```

Notes:

predicateFormat: The format string for the new predicate.
arguments: Optional, the arguments to substitute into predicateFormat. Values are substituted into predicateFormat in the order they appear in the array.

Returns a new predicate by substituting the values in arguments into predicateFormat, and parsing the result.
For details of the format of the format string and of limitations on variable substitution, see Predicate Format String Syntax:
http://developer.apple.com/library/mac/documentation/Cocoa/Conceptual/Predicates/Articles/pSyntax.html#//apple_ref/doc/uid/TP40001795

Available in Mac OS X v10.4 and later.
See also:

- 88.12.9 predicateWithFormat(predicateFormat as string) as NSPredicateMBS 15447

88.12.11 predicateWithValue(value as boolean) as NSPredicateMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a predicate that always evaluates to a given value.
Example:

```
dim p as NSPredicateMBS = NSPredicateMBS.predicateWithValue(true)
MsgBox p.predicateFormat
```

88.12.12 Print

MBS MacCloud Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes description for this event descriptor to the console.
Notes: You can see result in Console.app.

88.12.13 Properties

88.12.14 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the NSPredicate object.
Notes: (Read and Write property)

88.13 class NSSortDescriptorMBS

88.13.1 class NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The cocoa class for sort descriptions.
Example:

```
dim n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes:
