An instance of NSSortDescriptor describes a basis for ordering objects by specifying the property to use to compare the objects, the method to use to compare the properties, and whether the comparison should be ascending or descending. Instances of NSSortDescriptor are immutable.

You construct an instance of NSSortDescriptor by specifying the key path of the property to be compared, the order of the sort (ascending or descending), and (optionally) a selector to use to perform the comparison. The three-argument constructor allows you to specify other comparison selectors such as caseInsensitiveCompare: and localizedCompare:. Sorting raises an exception if the objects to be sorted do not respond to the sort descriptor's comparison selector.

Note: Many of the descriptions of NSSortDescriptor methods refer to "property key". This, briefly, is a string (key) that identifies a property (an attribute or relationship) of an object. You can find a discussion of this terminology in "Object Modeling" in Cocoa Fundamentals Guide and in Key-Value Coding Programming Guide.
There are a number of situations in which you can use sort descriptors, for example:

- To sort an array (an instance of NSArray or NSMutableArray—see sortedArrayUsingDescriptors and sortUsingDescriptors)
- To directly compare two objects (see compareObject method)
- To specify how the elements in a table view should be arranged (see sortDescriptors)
- To specify how the elements managed by an array controller should be arranged (see sortDescriptors)
- If you are using Core Data, to specify the ordering of objects returned from a fetch request (see sortDescriptors)

- More notes
- MBS Real Studio Plugins, version 11.3pr10

88.13.3 Methods

88.13.4 compareObject(obj1 as variant, obj2 as variant) as Integer

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Compares two objects.
Notes: Returns 1, -1 or 0 (zero for equal).

88.13.5 Constructor(key as string, ascending as boolean)

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an NSSortDescriptor object initialized with a given property key path and sort order, and with the default comparison selector.
Example:

```
dim n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

On success the handle property is not zero.
Available in Mac OS X v10.3 and later.
If you implement the Compare event, we use it on OS X 10.6 and newer.
See also:

- 88.13.6 Constructor(key as string, ascending as boolean, SelectorName as String) 15451

88.13.6 Constructor(key as string, ascending as boolean, SelectorName as String)

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an NSSortDescriptor object initialized with a given property key path and sort order, and with the default comparison selector.
Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

On success the handle property is not zero.
Please pass valid name of a selector for the objects. Wrong selector causes trouble, e.g. "localizedCompare:".
Available in Mac OS X v10.3 and later.
See also:

- 88.13.5 Constructor(key as string, ascending as boolean) 15451

88.13.7 reversedSortDescriptor as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a copy of the receiver with the sort order reversed.
Example:

```
dim n as NSSortDescriptorMBS
n = NSSortDescriptorMBS.sortDescriptorWithKey("Hello", true)

dim x as NSSortDescriptorMBS = n.reversedSortDescriptor
MsgBox x.key+" "+str(x.ascending)
```

88.13.8 sortDescriptorWithKey(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKey("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering.

Available in Mac OS X 10.3 and newer.

88.13.9 sortDescriptorWithKeyComparator(key as string, ascending as boolean, Comparator as NSComparatorDelegateMBS, tag as Variant = nil) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor object initialized to do with the given ordering and comparator delegate.
Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding (see Key-Value Coding Programming Guide).
ascending: true if the receiver specifies sorting in ascending order, otherwise false.
Comparator: the comparator to use with delegate declaration "NSComparatorDelegateMBS(obj1 as Variant, obj2 as Variant, tag as Variant) as Integer".

88.13.10 sortDescriptorWithKeyWithCaseInsensitiveCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCaseInsensitiveCompare("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With case insensitive string comparison.
Available in Mac OS X 10.3 and newer.

88.13.11 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCompare("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. Uses selector "compare:".
Available in Mac OS X 10.3 and newer.
See also:

- 88.13.12 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean, Options as Integer) as NSSortDescriptorMBS 15454

88.13.12 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean, Options as Integer) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithCompare("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. Uses selector "compare:options:".
Please pass options for NSString comparison. e.g. NSNumericSearch
Available in Mac OS X 10.3 and newer.
See also:

- 88.13.11 sortDescriptorWithKeyWithCompare(key as string, ascending as boolean) as NSSortDescriptorMBS 15454

88.13.13 sortDescriptorWithKeyWithLocalizedCaseInsensitiveCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithLocalizedCaseInsensitiveCompare("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With localized string comparison. With case insensitive string comparison.
Available in Mac OS X 10.3 and newer.

88.13.14 sortDescriptorWithKeyWithLocalizedCompare(key as string, ascending as boolean) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified key and ordering.
Example:

```
dim n as NSSortDescriptorMBS

n = NSSortDescriptorMBS.sortDescriptorWithKeyWithLocalizedCompare("Hello", true)
MsgBox n.key
```

Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering. With localized string comparison.
Available in Mac OS X 10.3 and newer.

88.13.15 sortDescriptorWithKeyWithSelector(key as string, ascending as boolean, SelectorName as String) as NSSortDescriptorMBS

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an NSSortDescriptor with the specified selector, key and ordering.
Notes:

key: The property key to use when performing a comparison. In the comparison, the property is accessed using key-value coding.
ascending: True if the receiver specifies sorting in ascending order, otherwise false.

Returns an NSSortDescriptorMBS object initialized with the specified key and ordering.
Please pass valid name of a selector for the objects. Wrong selector causes trouble, e.g. "localizedCompare:".
Available in Mac OS X 10.3 and newer.

88.13.16 Properties

88.13.17 ascending as boolean

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the receiver specifies sorting in ascending order.
Example:

```
dim n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.ascending)
```

Notes: (Read only property)

88.13.18 Handle as Integer

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the NSSortDescriptor object.
Notes: (Read and Write property)

88.13.19 key as string

MBS Main Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the receiver's property key path.
Example:

```
dim n as new NSSortDescriptorMBS("Hello", true)
MsgBox str(n.key)
```

Notes:

This key path specifies the property that is compared during sorting.
(Read only property)

88.13.20 selector as String

MBS Main Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The selector used to sort.
Notes: (Read only property)

88.13.21 Events

88.13.22 Comparator(obj1 as Variant, obj2 as Variant) as Integer

MBS Main Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The compare event.

88.13.23 Delegates

88.13.24 NSComparatorDelegateMBS(obj1 as Variant, obj2 as Variant, tag as variant) as Integer

MBS Main Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for use with sortDescriptorWithKeyComparator method.

88.14 class NSUbiquitousKeyValueStoreMBS

88.14.1 class NSUbiquitousKeyValueStoreMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The iCloud class to store key value data.
Notes:

Size of data is limited to 64 KB per application and 4 KB per value.
Do not store data here. Better store some configuration data, bookmarks or highscores.

Please also check the documentation from Apple for the NSUbiquitousKeyValueStore class. Seems like you need your app to be signed with iCloud Storage Entitlements.

88.14.2 Blog Entries

88.14.3 Methods

88.14.4 ArrayValue(key as string) as Variant()

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get the value for this key as a variant.
Example:

```
dim values() as Variant

values.Append "Hello"
values.Append "World"

dim u as new NSUbiquitousKeyValueStoreMBS

u.ArrayValue("key")=values

// later read back
dim nvalues() as Variant = u.ArrayValue("key")
```

See also:

- 88.14.5 ArrayValue(key as string, assigns values() as Variant) 15460

88.14.5 ArrayValue(key as string, assigns values() as Variant)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set the value for this key as a variant.
Example:

```
dim u as new NSUbiquitousKeyValueStoreMBS
dim nvalues() as Variant = u.ArrayValue("key")
```

See also:

- 88.14.4 ArrayValue(key as string) as Variant() 15459

88.14.6 available as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Example:

```
msgbox "iCloud Key Value Store available: "+str(NSUbiquitousKeyValueStoreMBS.available)
```

Notes: This does not tell you whether Apple switched on their servers.

88.14.7 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

88.14.8 defaultStore as NSUbiquitousKeyValueStoreMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a reference to the default key store.

88.14.9 Destructor

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

88.14.10 dictionaryRepresentation as dictionary

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key value store as a dictionary.

88.14.11 NSUbiquitousKeyValueStoreChangedKeysKey as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key name for the userinfo dictionary when you receive the NSUbiquitousKeyValueStoreDidChangeExternallyNotification notification.
Notes: Value for this key in the dictionary in an array of strings.

88.14.12 NSUbiquitousKeyValueStoreChangeReasonKey as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A key name for the userinfo dictionary when you receive the NSUbiquitousKeyValueStoreDidChangeExternallyNotification notification.
Notes: Value for this key in the dictionary in an integer.

88.14.13 NSUbiquitousKeyValueStoreDidChangeExternallyNotification as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification name for the notification sent when the .
Notes: You can observe this notification with the NSNotificationObserverMBS class or simply subclass NSUbiquitousKeyValueStoreMBS and use the DidChangeExternally event.

88.14.14 removeObjectForKey(key as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the value for the key.

88.14.15 synchronize as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Synchronizes the key value store.
Example:

```
dim u as NSUbiquitousKeyValueStoreMBS = NSUbiquitousKeyValueStoreMBS.defaultStore

// safe something
u.StringValue("Font") = "Times"

if u.synchronize then
MsgBox "OK"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success.

88.14.16 Properties

88.14.17 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference for this object.
Notes: (Read and Write property)

88.14.18 BooleanValue(key as string) as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set the value for this key as a boolean.
Notes: (Read and Write computed property)

88.14.19 DataValue(key as string) as memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set the value for this key as a memoryblock.
Notes: (Read and Write computed property)

88.14.20 DictionaryValue(key as string) as Dictionary

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set the value for this key as a dictionary.

Notes: (Read and Write computed property)

88.14.21 DoubleValue(key as string) as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set the value for this key as a double.
Example:

```
dim u as new NSUbiquitousKeyValueStoreMBS

u.DoubleValue("HighScore") = 3456
```

Notes: (Read and Write computed property)

88.14.22 IntegerValue(key as string) as Int64

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set the value for this key as an integer.
Example:

```
dim u as new NSUbiquitousKeyValueStoreMBS

// query highscore value
MsgBox str(u.IntegerValue("HighScore"))
```

Notes: (Read and Write computed property)

88.14.23 StringValue(key as string) as string

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set the string value for the given key.
Example:

```
dim u as NSUbiquitousKeyValueStoreMBS = NSUbiquitousKeyValueStoreMBS.defaultStore

// safe something
u.StringValue("Font") = "Times"
```

Notes: (Read and Write computed property)

88.14.24 VariantValue(key as string) as Variant

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Get or set the value for this key as a variant.
Notes: (Read and Write computed property)

88.14.25 Events

88.14.26 DidChangeExternally(ChangeReason as Integer, ChangedKeys() as string, notification as Variant)

MBS MacCloud Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called when the ubiquitious key value store changed.
Notes:

ChangeReason gives the reason.
Can be NSUbiquitousKeyValueStoreServerChange, NSUbiquitousKeyValueStoreInitialSyncChange or NSUbiquitousKeyValueStoreQuotaViolationChange.

88.14.27 Constants

88.14.28 NSUbiquitousKeyValueStoreInitialSyncChange = 1

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the reasons for an external change to the key store.

88.14.29 NSUbiquitousKeyValueStoreQuotaViolationChange = 2

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the reasons for an external change to the key store.

88.14.30 NSUbiquitousKeyValueStoreServerChange = 0

MBS MacCloud Plugin, Plugin Version: 11.2. **Function:** One of the reasons for an external change to the key store.

Chapter 89

Icon Service

89.1 Globals

89.1.1 CompositeIconsMBS(ForeGround as IconMBS, BackGround as IconMBS) as IconMBS

MBS Picture Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Combines two icons.
Example:

```
dim i as IconMBS // global

Sub Open()
dim a,b as IconMBS

b=new IconMBS(SpecialFolder.Desktop)
a=new IconMBS(app.ApplicationFileMBS)

i=CompositeIconsMBS(a,b)

End Sub

Sub Paint(g As Graphics)
i.DrawIcon(g,0,0,128,128)
End Sub
```

Notes: Returns nil on any error (e.g. one of the two icons is invalid or nil).

89.2 class IconMBS

89.2.1 class IconMBS

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for an icon on Mac OS.
Notes: For Linux, please use LinuxIconMBS module.

89.2.2 Blog Entries

- IconFamilyMBS class deprecated

- Getting icons from Files

89.2.3 Methods

89.2.4 Constructor(f as folderitem, NoBadge as boolean = false)

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the icon for this file/folder/volume.
Example:

```
// in a paint event:

dim i as new IconMBS(SpecialFolder.Desktop)

i.DrawIcon(g, 0, 0, 128, 128)
```

Notes:

The example "GetIcon.rb" shows how to get the file icons.
A custom icon is preferred (ID -16455).

NoBadge can be set to true to have no badges on the icon.

- 89.2.5 Constructor(type as string, creator as string) 15469
- 89.2.6 Constructor(type as string, creator as string, extension as string, mime as string) 15469

89.2.5 Constructor(type as string, creator as string)

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the icon for this type and creator code combination.
Example:

```
// in a paint event:

dim i as new IconMBS("FNDR", "MACS")

i.DrawIcon(g, 0, 0, 128, 128)
```

Notes: The example "GetIcon.rb" shows how to get the predefined icons from the system.
See also:

- 89.2.4 Constructor(f as folderitem, NoBadge as boolean = false) 15468
- 89.2.6 Constructor(type as string, creator as string, extension as string, mime as string) 15469

89.2.6 Constructor(type as string, creator as string, extension as string, mime as string)

MBS Picture Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the icon base on the given information.
Example:

```
Sub Paint(g As Graphics)
// in a window paint event:

dim i as IconMBS
dim type, creator, extension, mime as string

type=""
creator=""
extension="jpg"
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws jpeg icon
i.DrawIcon(g,0,0,128,128)
```

```
type=""
creator=""
extension=""
mime="video/quicktime"

i=new iconmbs(type, creator, extension, mime)
// draws quicktime movie icon
i.DrawIcon(g,128,0,128,128)

type="TEXT"
creator="MSWD"
extension=""
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws microsoft word text file icon
i.DrawIcon(g,0,128,128,128)

type=""
creator="GKON"
extension="jpg"
mime=""

i=new iconmbs(type, creator, extension, mime)
// draws graphic converter jpeg file icon
i.DrawIcon(g,128,128,128,128)

End Sub
```

Notes:

All parameters can be empty strings if you don't know this information.
Requires Mac OS X 10.3 to work properly.
See also:

- 89.2.4 Constructor(f as folderitem, NoBadge as boolean = false) 15468
- 89.2.5 Constructor(type as string, creator as string) 15469

89.2.7 DrawIconCGContext(CGContextHandle as Integer,x as Integer,y as Integer,width as Integer,height as Integer, align as Integer, transform as Integer, flags as Integer, labelColor as color)

MBS Picture Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Draws the icon in a CoreGraphics Context.
Example:

```
Function GetIconImage(i as iconmbs, w as Integer, h as Integer) As picture
dim c as new CGPictureContextMBS(w,h)

const DrawNormal=0
const DrawNoImage=2
const DrawNoMask=4
const DrawSelected=& h8000

i.DrawIconCGContext(c.Handle, 0,0,w,h,0,0,DrawNoMask,& c000000)

c.Flush

Return c.CopyPicture
End Function
```

Notes:

You must make sure that the CGContext handle you pass in is valid. You can use CGContextMBS class for this and use GetCurrentCGContextMBS or Window.CGContextMBS to get a context. Please note that coordinates have the origin typically on the lower left.

Flags:

DrawNormal	0
DrawNoImage	2
DrawNoMask	4
DrawSelected	32768

89.2.9 GetForeground as IconMBS

MBS Picture Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** If the icon is a composited one, this function returns the icon used for the foreground.
Notes:

Returns nil on any error.
Lasterror ist set.

89.2.10 IsIconRefMaskEmpty as boolean

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the mask of the icon is empty.
Example:

```
dim i as new IconMBS("FNDR", "MACS")

MsgBox str(i.IsIconRefMaskEmpty)
```

Notes: Lasterror is set.

89.2.11 PointInIcon(pointx as Integer,pointy as Integer,x as Integer,y as Integer,width as Integer,height as Integer,align as Integer) as boolean

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tests whether a point is inside the icon's picture.
Notes:

The coordinates for pointx/pointy and x/y must be in the same system.

Align constants:

89.2.12 RectInIcon(rectx as Integer,recty as Integer,rectwidth as Integer,rectheight as Integer,x as Integer,y as Integer,width as Integer,height as Integer,align as Integer) as boolean

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tests whether a rectangle is inside the icon's picture.
Notes:

The coordinates for both rectangles must be in the same coordinate system.

Align constants:

This call may fail in some RB versions because of the count of parameters.

None	0
VerticalCenter	1
Top	2
Bottom	3
HorizontalCenter	4
AbsoluteCenter	5
CenterTop	6
CenterBottom	7
Left	8
CenterLeft	9
TopLeft	10
BottomLeft	11
Right	12
CenterRight	13
TopRight	14
BottomRight	15

89.2.13 RetainCount as Integer

MBS Picture Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** How many references to this icon are hold on this Mac.
Example:

```
dim i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.RetainCount)
```

89.2.14 Properties

89.2.15 handle as Integer

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle of this icon in memory.
Example:

```
dim i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.handle)
```

Notes: (Read and Write property)

None	0

TopRight	14
BottomRight	15

89.2.16 LastError as Integer

MBS Picture Plugin, Plugin Version: 2.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The last error code.
Example:

```
dim i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.LastError)
```

Notes:

The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

89.2.17 Release as boolean

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** whether the destructor will release the handle.
Example:

```
dim i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.Release)
```

Notes: (Read and Write property)

89.2.18 valid as boolean

MBS Picture Plugin, Plugin Version: 2.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Were the constructors successfull?
Example:

```
dim i as new IconMBS("FNDR", "MACS") // Finder Icon

MsgBox str(i.valid)
```

Notes: (Read and Write property)

Chapter 90

Image Capture

90.1 class ICCameraDeviceMBS

90.1.1 class ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICCameraDeviceMBS is a concrete subclass of ICDeviceMBS class.
Notes:

ICDeviceBrowserMBS creates instances of this class.
Subclass of the ICDeviceMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.1.2 Methods

90.1.3 cancelDelete

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Cancels the current delete operation started by sending a requestDeleteFiles.

90.1.4 cancelDownload

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Cancels the current download operation.

90.1.5 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.1.6 contents as ICCameraItemMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Contents of the camera.
Notes: The structure of the elements in this array will reflect the folder structure of the storage reported by the camera. Each item in this array will correspond to a storage on the camera.

90.1.7 filesOfType(fileUTType as string) as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method returns an array of files on the camera of type fileType.
Notes:

The fileType string is one of the following Uniform Type Identifier strings: kUTTypeImage, kUTTypeMovie, kUTTypeAudio, or kUTTypeData.
See UTTypeMBS module.

90.1.8 ICCameraDeviceCanAcceptPTPCommands as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can accept PTP commands.

90.1.9 ICCameraDeviceCanDeleteAllFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can delete all files in a single operation while it is connected.

90.1.10 ICCameraDeviceCanDeleteOneFile as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.

Notes: Indicates that the camera can delete a file at a time while it is connected.

90.1.11 ICCameraDeviceCanReceiveFile as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the host can upload files to the camera.

90.1.12 ICCameraDeviceCanSyncClock as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can synchronize its date and time with that of the host computer.

90.1.13 ICCameraDeviceCanTakePicture as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can capture a picture while it is connected, if the client sends a requestTakePicture message to it.

90.1.14 ICCameraDeviceCanTakePictureUsingShutterReleaseOnCamera as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a camera.
Notes: Indicates that the camera can capture a picture while it is connected, if the user presses the shutter release on the camera.

90.1.15 ICDeleteAfterSuccessfulDownload as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, the file will be deleted from the device after it is succcessfully downloaded.

90.1.16 ICDownloadsDirectoryURL as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes:

The value for this key should be an CFURLMBS referencing a writable directory.
The downloaded files will be saved in that directory.

90.1.17 ICDownloadSidecarFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, all sidecar files will be downloaded along with the media file.

90.1.18 ICOverwrite as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key should be a boolean value. If this value is true, the downloaded file will overwrite an existing file with the same name and extension.

90.1.19 ICSaveAsFilename as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key should be a string containing the name to be used for the downloaded file.

90.1.20 ICSavedAncillaryFiles as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key will be an array containing names of files associated with the primary file that is downloaded. The options dictionary returned in didDownloadFile may have this key.

90.1.21 ICSavedFilename as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for options dictionary.
Notes: The value for this key will be a string containing the actual name of the saved file. The options dictionary returned in didDownloadFile will have this key.

90.1.22 mediaFiles as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The property mediaFiles represents all image, movie and audio files on the camera.
Notes:

These files are returned as a single array without regard to the folder hierarchy used to store these files on the camera.

If no files show up, try again a second later as the framework may not yet have the list loaded.

90.1.23 requestDeleteFiles(files() as ICCameraFileMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Deletes files.

90.1.24 requestDisableTethering

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Send this message to disable tethered capture on the camera device if the camera has the 'ICCameraDeviceCanTakePicture' capability and if your process has already sent a 'requestEnableTethering' to it.

90.1.25 requestDownloadFile(file as ICCameraFileMBS, options as dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Download a file from the camera. Please refer to the top of this header for information about the options.
Notes:

Calls cameraDeviceDidDownloadFile event later.
The content of error returned should be examined to determine if the request completed successfully.

90.1.26 requestEnableTethering

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Send this message to enable tethered capture on the camera device if the camera has the 'ICCameraDeviceCanTakePicture' capability.

90.1.27 requestReadDataFromFile(file as ICCameraFileMBS, offset as UInt64, Length as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method asynchronously reads data of a specified length from a specified offset.
Notes:

Calls later ImageCaptureEventsMBS.cameraDeviceDidReadData event.
The content of error returned should be examined to determine if the request completed successfully.

90.1.28 requestSendPTPCommand(command as MemoryBlock, dataOut as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method asynchronously sends a PTP command to a camera.
Notes: The content of error returned should be examined to determine if the request completed successfully.

90.1.29 requestSyncClock

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Synchronize camera's clock with the computer's clock.
Notes: You should send this request only if the camera has the 'ICCameraDeviceCanSyncClock' capability.

90.1.30 requestTakePicture

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Capture a new image using the camera, the camera capabilities include 'ICCameraDeviceCanTakePicture'.
Notes: You MUST send 'requestEnableTethering' message to the camera before sending 'requestTakePicture' message.

90.1.31 requestUploadFile(file as folderitem, options as dictionary = nil)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Upload a file at fileURL to the camera.
Notes:

The options dictionary is not used in this version.
Calls later ImageCaptureEventsMBS.cameraDeviceDidUploadFile event.
The content of error returned should be examined to determine if the request completed successfully.

90.1.32 Properties

90.1.33 batteryLevel as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates the battery charge level.
Notes:

Its value ranges from 0 to 100.
(Read only property)

90.1.34 batteryLevelAvailable as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the device has reported battery charge level.
Notes: (Read only property)

90.1.35 contentCatalogPercentCompleted as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates the percentage of content cataloging completed on the device.
Notes:

Its value ranges from 0 to 100.
(Read only property)

90.1.36 isAccessRestrictedAppleDevice as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Set to true if the device is made by Apple and is pass-coded locked and connected to an untrusted

host.
Notes: (Read only property)

90.1.37 mountPoint as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Filesystem mount point for a device with transportType of ICTransportTypeMassStorage.
Notes:

This will be "" for all other devices.
(Read only property)

90.1.38 tetheredCaptureEnabled as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This property is set to YES when tethered capture is enabled on the device.
Notes:

Use 'requestEnableTethering' and 'requestDisableTethering' to enable or disable tethered capture on the device.
(Read only property)

90.1.39 timeOffset as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates the time offset, in seconds, between the camera's clock and the computer's clock.
Notes:

This value is positive if the camera's clock is ahead of the computer's clock. This property should be ignored if the camera's capabilities property does not contain ICCameraDeviceCanSyncClock.
(Read only property)

90.2 class ICCameraFileMBS

90.2.1 class ICCameraFileMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This class represents a file on an ICCameraDevice object.
Notes:

Subclass of the ICCameraItemMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.2.2 Methods

90.2.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.2.4 sidecarFiles as ICCameraFileMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns array of sidecar files.
Notes: This property is an empty array if there are no sidecar files associated with this file. Otherwise it is an array of ICCameraFile instances of sidecar files associated with this file. An example of a sidecar file is a file with the same base name as this file and having an extension XMP.

90.2.5 Properties

90.2.6 Duration as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Duration of audio/video file in seconds.
Notes: (Read only property)

90.2.7 FileSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Size of file in bytes.

Notes: (Read only property)

90.2.8 Orientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Desired orientation of image to use when it is downloaded.
Notes:

This property is set to ICEXIFOrientation1 initially. If the format of this file supports EXIF orientation tag, then this property will be updated to match the value of that tag, when the thumbnail or metadata for this file is received.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180°
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90° CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90° CCW
ICEXIFOrientation7	7	Rotated 90° CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90° CW

(Read and Write property)

90.3 class ICCameraFolderMBS

90.3.1 class ICCameraFolderMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This class represents a folder on an ICCameraDevice object.
Notes:

Subclass of the ICCameraItemMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.3.2 Methods

90.3.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.3.4 contents as ICCameraItemMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A list of items contained by this folder.

90.4 class ICCameraItemMBS

90.4.1 class ICCameraItemMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICCameraItem is an abstract class that represents an item in an ICCameraDevice object.
Notes:

ICCameraDevice object creates instances of two concrete subclasses of ICCameraItem: ICCameraFolder and ICCameraFile.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.4.2 Methods

90.4.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.4.4 Properties

90.4.5 addedAfterContentCatalogCompleted as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This property is set if the file is captured on the device after the device's content is fully enumerated.
Notes:

This does not apply to files added as a result of adding a new store to the device.
(Read only property)

90.4.6 CreationDate as Date

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creation date of this file.
Notes:

This information is usually the same as the EXIF creation date.
(Read only property)

90.4.7 Device as ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Parent device of this folder.
Notes: (Read only property)

90.4.8 FileSystemPath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The file system path of the item for items on a device with transportType of ICTransportTypeMassStorage.
Notes: (Read only property)

90.4.9 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.4.10 InTemporaryStore as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if this folder is in a temporary store.
Notes:

A temporary store may be used by the device when images are captures on the device when it is tethered to the computer.
(Read only property)

90.4.11 largeThumbnailIfAvailable as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Large thumbnail for the item if one is readily available.
Notes:

Value is a CGImageMBS.
If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveThumbnailForItem.

(Read only property)

90.4.12 Locked as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates the protection state of this item.
Notes:

It is locked if the storage card in the camera is locked.
(Read only property)

90.4.13 MetadataIfAvailable as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Metadata for the file if one is readily available.
Notes:

If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveMetadataForItem.
(Read only property)

90.4.14 ModificationDate as Date

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Modification date of this file.
Notes:

This information is usually the same as the EXIF modification date.
(Read only property)

90.4.15 Name as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Name of this file or folder.
Notes: (Read only property)

90.4.16 ParentFolder as ICCameraFolderMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Parent folder of this folder. The root folder's parentFolder is nil.
Notes: (Read only property)

90.4.17 ptpObjectHandle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: PTP object handle value if the item is on a camera that uses PTP protocol.
Notes:

The value of this property is set to 0 if the camera does not use PTP protocol.
(Read only property)

90.4.18 Raw as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the file is a raw image file.
Notes: (Read only property)

90.4.19 thumbnailIfAvailable as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Thumbnail for the item if one is readily available.
Notes:

Value is a CGImageMBS.
If one is not readily available, accessing this property will send a message to the device requesting a thumbnail for the file. The ImageCaptureEventsMBS subclass will be notified via event cameraDeviceDidReceiveThumbnailForItem.
(Read only property)

90.4.20 UserData as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mutable dictionary to store arbitrary key-value pairs associated with a camera item object.
Notes:

This can be used by view objects that bind to this object to store "house-keeping" information.
In Xojo, please query dictionary, modify it and assign back to this property.

(Read and Write property)

90.4.21 UTI as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Item UTI.
Notes:

This is an Uniform Type Identifier string. It is one of: kUTTypeFolder, kUTTypeImage, kUTTypeMovie, kUTTypeAudio, or kUTTypeData.
See UTTypeMBS module.
(Read only property)

90.5 class ICDeviceBrowserMBS

90.5.1 class ICDeviceBrowserMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The ICDeviceBrowser object is used to find devices such as digital cameras and scanners that are supported by Image Capture.
Notes: These device may be directly attached to the USB or FireWire bus on the host computer, shared by other computers, or available over a TCP/IP network. This object communicates with an Image Capture agent process asynchronously to accomplish this.

90.5.2 Blog Entries

- MBS Xojo Plugins, version 19.0pr8
- MBS Xojo / Real Studio Plugins, version 16.4pr1
- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.5.3 Methods

90.5.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.

90.5.5 Destructor

MBS AVFoundation Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

90.5.6 devices as ICDeviceMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: All devices found by the browser.
Notes: This property will change as devices appear and disappear. This array is empty before the first invocation of the deviceBrowserDidAddDevice event.

90.5.7 Start

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This message tells the receiver to start looking for devices.
Notes: Please use ImageCaptureEventsMBS class to receive events.

90.5.8 Stop

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method tells the receiver to stop looking for devices.
Notes: This will free all device instances that are not in use.

90.5.9 Properties

90.5.10 browsedDeviceTypeMask as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The device type mask.
Notes:

A mask whose set bits indicate the type of device(s) being browsed after the receiver receives the start message. This property can be changed while the browser is browsing for devices. This property can be constructed by OR'd values of ICDeviceTypeMask with values of ICDeviceLocationTypeMask.
(Read and Write property)

90.5.11 Browsing as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the device browser is browsing for devices.
Notes: (Read only property)

90.5.12 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.5.13 preferredDevice as ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method returns a device object that should be selected by the client application when it is launched.
Notes:

If the client application that calls this method is the auto-launch application associated with a device and that device is the last device attached (through USB, FireWire or network), then that device will be the preferred device. The best place to call this method is in the event deviceBrowserDidAddDevice, if the "moreComing" parameter passed to the delegate is false; or in the event deviceBrowserDidEnumerateLocalDevices.
(Read only property)

90.5.14 Events

90.5.15 DeviceDidChangeName(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

90.5.16 DeviceDidChangeSharingState(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

90.5.17 DidAddDevice(device as ICDeviceMBS, moreComing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to inform that a device has been added.
Notes: If several devices are found during the initial search, then this event is sent once for each device with the value of 'moreComing' set to true in each event except the last one.

90.5.18 DidEnumerateLocalDevices

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent after the device browser completes sending deviceBrowser:didAddDevice event for all local devices.
Notes: Detecting locally connected devices (USB and FireWire devices) is faster than detecting devices connected using a network protocol. An Image Capture client application may use this event to update its user interface to let the user know that it has completed looking for locally connected devices and then start looking for network devices.

90.5.19 DidRemoveDevice(device as ICDeviceMBS, moreGoing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to inform that a device has been removed.
Notes: If several devices are removed at the same time, then this event is sent once for each device with the value of 'moreGoing' set to true in each event except the last one.

90.5.20 RequestsSelectDevice(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an event that occurred on the device may be of interest to the client application.
Notes: In Mac OS X 10.6, this event is sent when a button is pressed on a device and the current application is the target for that button press. In the case of the button-press event, if a session is open on the device, this event will not be sent, instead the deviceDidReceiveButtonPress event is sent.

90.6 class ICDeviceMBS

90.6.1 class ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICDevice is an abstract class that represents a device supported by Image Capture.
Notes:

ImageCaptureCore defines two concrete subclasses of ICDeviceMBS, ICCameraDeviceMBS and ICScannerDeviceMBS. ICDeviceBrowserMBS creates instances of these two subclasses to represent cameras and scanners it finds.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.6.2 Methods

90.6.3 capabilities as Variant()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The capabilities of the device as reported by the device module.

90.6.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.6.5 ICButtonTypeCopy as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Copy" button on the device was pressed.

90.6.6 ICButtonTypeMail as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Mail" button on the device was pressed.

90.6.7 ICButtonTypePrint as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Print" button on the device was pressed.

90.6.8 ICButtonTypeScan as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Scan" button on the device was pressed.

90.6.9 ICButtonTypeTransfer as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Transfer" button on the device was pressed.

90.6.10 ICButtonTypeWeb as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to identify button-press on a device.
Notes: Indicates that the "Web" button on the device was pressed.

90.6.11 ICDeviceCanEjectOrDisconnect as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used to describe capabilities of a device.
Notes: Indicates either the device is mounted as a mass-storage volume and can be ejected or the it is a remote device with an active connection that can be disconnected.

90.6.12 ICDeviceLocationDescriptionBluetooth as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This description is returned for locationDescription property of a device connected via Bluetooth.

90.6.13 ICDeviceLocationDescriptionFireWire as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This description is returned for locationDescription property of a device connected to a FireWire port.

90.6.14 ICDeviceLocationDescriptionMassStorage as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This description is returned for locationDescription property of a device that is mounted as a mass-storage volume.

90.6.15 ICDeviceLocationDescriptionUSB as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This description is returned for locationDescription property of a device connected to a USB port.

90.6.16 ICLocalizedStatusNotificationKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used for device status notifications.
Notes: Key for a localized notification string.

90.6.17 ICStatusCodeKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used for device status notifications.
Notes: One of values defined in ICReturnCode.

90.6.18 ICStatusNotificationKey as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used for device status notifications.
Notes: Key for a non-localized notification string.

90.6.19 ICTransportTypeBluetooth as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates that the device uses Bluetooth transport.

90.6.20 ICTransportTypeFireWire as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates that the device uses FireWire transport.

90.6.21 ICTransportTypeMassStorage as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates that the device use mounts as a mass-storage volume.

90.6.22 ICTransportTypeTCPIP as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates that the device uses TCP/IP transport.
Notes: These devices are discovered using Bonjour.

90.6.23 ICTransportTypeUSB as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates that the device uses USB transport.

90.6.24 requestCloseSession

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This message requests to close a previously opened session on this device.
Notes: This request is completed when the ImageCaptureEventsMBS subclass receives a deviceDidCloseSessionWithError event.

90.6.25 requestEjectOrDisconnect

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Eject the media if permitted by the device, or disconnect from a remote device.

90.6.26 requestOpenSession

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This message requests to open a session on the device.
Notes:

A client MUST open a session on a device in order to use the device.
This request is completed when the ImageCaptureEventsMBS subclass receives a deviceDidOpenSession-WithError event. No more events will be sent to the delegate if this request fails.

90.6.27 requestSendMessage(messageCode as UInt32, data as MemoryBlock, maxReturnedDataSize as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This method asynchronously sends an arbitrary message with optional data to a device.
Notes:

This method allows developers to send a private message from a client application to a device module. This method is the functional equivalent of calling ICAObjectSendMessage() found in ImageCapture.framework, which has been deprecated in Mac OS X 10.6. The response to this command will be delivered using deviceDidSendMessage event.
The content of error returned should be examined to determine if the request completed successfully.
NOTE: This method SHOULD NOT BE USED to send PTP pass-through commands to a PTP camera. Please refer to requestSendPTPCommand defined in ICCameraDeviceMBS for sending PTP pass-through commands.

90.6.28 requestYield

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This message requests the device module in control of this device to yield control.
Notes: This message should be used only if the client is planning on communiting with the device directly. The device module may not yield control of the device if it has an open session.

90.6.29 Properties

90.6.30 AutolaunchApplicationPath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Filesystem path of an application that is to be automatically launched when this device is added.
Notes: (Read and Write property)

90.6.31 BonjourServiceType as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Service type if device was found via Bonjour..
Notes: (Read only property)

90.6.32 BskonjourServiceName as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Service name if device was found via Bonjour..
Notes: (Read only property)

90.6.33 ButtonPressed as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A string object with one of the ICButtonType* values defined above.
Notes: (Read only property)

90.6.34 canDeleteAllFiles as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: If all files can be deleted.
Notes: (Read only property)

90.6.35 canDeleteOneFile as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether a file can be deleted.

Notes: (Read only property)

90.6.36 canEject as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this device can be ejected.
Notes: (Read only property)

90.6.37 canReceiveFile as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this device can receive a file.
Notes: (Read only property)

90.6.38 canSyncClock as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this device can sync clock.
Notes: (Read only property)

90.6.39 canTakePicture as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether this device can take pictures.
Notes: (Read only property)

90.6.40 fwGUID as Int64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The FireWire GUID of a FireWire device in the IOKit registry.
Notes:

This will be 0 for non-FireWire devices.
(Read only property)

90.6.41 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.6.42 HasConfigurableWiFiInterface as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the device can be configured for use on a WiFi network.
Notes: (Read only property)

90.6.43 HasOpenSession as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the device has an open session.
Notes: (Read only property)

90.6.44 Icon as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Icon image for the device.
Notes:

Value is a CGImageMBS.
(Read only property)

90.6.45 IconPath as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Path to icon file.
Notes: (Read only property)

90.6.46 IPAddress as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: IP Address.

Notes: (Read only property)

90.6.47 IsRemote as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the device is a remote device published by Image Capture device sharing facility.
Notes: (Read only property)

90.6.48 IsShared as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the device is shared using the Image Capture device sharing facility.
Notes:

This value will change when sharing of this device is enabled or disabled.
(Read only property)

90.6.49 LocationDescription as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A non-localized location description string for the device.
Notes:

The value returned in one of the location description strings defined above, or location obtained from the Bonjour TXT record of a network device.
(Read only property)

90.6.50 ModuleExecutableArchitecture as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Executable Architecture of the device module in control of this device.
Notes:

Possible values:

(Read only property)

I386	& h00000007
PPC	& h00000012
X86_64	& h01000007
PPC64	& h01000012

90.6.51 ModulePath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Filesystem path of the device module that is associated with this device.
Notes:

Camera-specific capabilities are defined in ICCameraDeviceMBS class and scanner-specific capabilities are defined in ICScannerDeviceMBS class.
(Read only property)

90.6.52 ModuleVersion as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The bundle version of the device module associated with this device.
Notes:

This may change if an existing device module associated with this device is updated or a new device module for this device is installed.
(Read only property)

90.6.53 Name as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Name of the device as reported by the device module or by the device transport when a device module is not in control of this device.
Notes:

This name may change if the device module overrides the default name of the device reported by the device's transport, or if the name of the filesystem volume mounted by the device is changed by the user.
(Read only property)

90.6.54 PersistentIDString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A string representation of the persistent ID of the device.

Notes: (Read only property)

90.6.55 ProductKind as String

MBS AVFoundation Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Product kind.
Notes: (Read only property)

90.6.56 SerialNumberString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The serial number of the device.
Notes:

This will be "" if the device does not provide a serial number.
(Read only property)

90.6.57 TransportType as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transport type used by the device.
Notes:

The possible values are: ICTransportTypeUSB, ICTransportTypeFireWire, ICTransportTypeBluetooth, ICTransportTypeTCPIP, or ICTransportTypeMassStorage.
(Read only property)

90.6.58 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The type of the device as defined by ICDeviceType OR'd with its ICDeviceLocationType.
Notes:

The type of this device can be obtained by AND'ing the value retuned by this property with an appropriate ICDeviceTypeMask. The location type of this device can be obtained by AND'ing the value retuned by this property with an appropriate ICDeviceLocationTypeMask.
(Read only property)

90.6.59 usbLocationID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The USB location ID of a USB device in the IOKit registry.
Notes:

This will be 0 for non-USB devices.
(Read only property)

90.6.60 usbProductID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The USB product ID of a USB device in the IOKit registry.
Notes:

This will be 0 for non-USB devices.
(Read only property)

90.6.61 usbVendorID as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The USB vendor ID of a USB device in the IOKit registry.
Notes:

This will be 0 for non-USB devices.
(Read only property)

90.6.62 UserData as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mutable dictionary to store arbitrary key-value pairs associated with a device object.
Notes:

This can be used by view objects that bind to this object to store ”house-keeping” information.
In Xojo, please query dictionary, modify it and assign back to this property.
(Read and Write property)

90.6.63 UUIDString as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A string representation of the Universally Unique ID of the device.

Notes: (Read only property)

90.6.64 Constants

90.6.65 ICDeviceLocationTypeBluetooth = & h00000800

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device types.
Notes: Device found as a paired Bluetooth device.

90.6.66 ICDeviceLocationTypeBonjour = & h00000400

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device types.
Notes: Device found over the network by searching for Bonjour services supported by Image Capture.

90.6.67 ICDeviceLocationTypeLocal = & h00000100

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device types.
Notes: Device found directly attached to the Macintosh via its USB or FireWire port.

90.6.68 ICDeviceLocationTypeMaskBluetooth = & h00000800

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Image Capture Device Location Type Masks.
Notes: Mask to detect paired Bluetooth device.

90.6.69 ICDeviceLocationTypeMaskBonjour = & h00000400

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Image Capture Device Location Type Masks.
Notes: Mask to detect a network device that publishes a Bonjour service.

90.6.70 ICDeviceLocationTypeMaskLocal = & h00000100

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Image Capture Device Location Type Masks.

Notes: Mask to detect a local (e.g., USB or FireWire) device.

90.6.71 ICDeviceLocationTypeMaskRemote = & h0000FE00

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Image Capture Device Location Type Masks.
Notes: Mask to detect a remote (shared, Bonjour, Bluetooth) device.

90.6.72 ICDeviceLocationTypeMaskShared = & h00000200

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Image Capture Device Location Type Masks.
Notes: Mask to detect a device by another Macintosh host.

90.6.73 ICDeviceLocationTypeShared = & h00000200

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device types.
Notes: Device found over the network by searching for devices shared by other Macintosh hosts.

90.6.74 ICDeviceTypeCamera = & h00000001

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the image capture device types.
Notes: Camera device.

90.6.75 ICDeviceTypeMaskCamera = & h00000001

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device type masks.
Notes: Mask to detect a camera device.

90.6.76 ICDeviceTypeMaskScanner = & h00000002

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the device type masks.
Notes: Mask to detect a scanner device.

90.6.77 ICDeviceTypeScanner = & h00000002

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the image capture device types. **Notes:** Scanner device.

90.7 class ICScannerBandDataMBS

90.7.1 class ICScannerBandDataMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for band data from scanner.
Notes:

If image is too big to be transferred in one big block, it's sent in little chunks using this class.

Only uses when transfermode is ICScannerTransferModeMemoryBased.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.7.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.4
- MBS Xojo Plugins, version 19.4pr7

90.7.3 Methods

90.7.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.7.5 Properties

90.7.6 bigEndian as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes if the banded image data is reported in big endian.
Notes: (Read only property)

90.7.7 bitsPerComponent as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the number of bits per component for the banded image.
Notes: (Read only property)

90.7.8 bitsPerPixel as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the number of bits per pixel for banded the image.
Notes: (Read only property)

90.7.9 bytesPerRow as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Descries how many bytes are in each image band row.
Notes: (Read only property)

90.7.10 CGImage as CGImageMBS

MBS AVFoundation Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Builds CGImageMBS object with the data of this band.
Notes:

Returns nil if data can't be represented easily as CGImage.
This function is designed for RGB or Grayscale.
(Read only property)

90.7.11 colorSyncProfilePath as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the path to the color profile matching the banded data.
Notes: (Read only property)

90.7.12 dataBuffer as Memoryblock

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The pointer to the data buffer object.
Notes:

Plugin returns a copy of the data when you query this property.
(Read only property)

90.7.13 dataNumRows as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the number of rows contained in the image band.
Notes: (Read only property)

90.7.14 dataSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the actual data size of the image band buffer.
Notes: (Read only property)

90.7.15 dataStartRow as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the start row of the image band.
Notes: (Read only property)

90.7.16 fullImageHeight as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the full image height of the banded image.
Notes: (Read only property)

90.7.17 fullImageWidth as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the full image width of the banded image.
Notes: (Read only property)

90.7.18 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.7.19 numComponents as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes how many components are contained within the banded image.
Notes: (Read only property)

90.7.20 Picture as Picture

MBS AVFoundation Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Builds Picture object with the data of this band.
Notes:

Returns nil if data can't be represented easily as CGImage.
This function is designed for RGB or Grayscale.
(Read only property)

90.7.21 pixelDataType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Type of pixel data that is contained in the band.
Notes:

See ICScannerFunctionalUnitMBS.ICScannerPixelDataType* constants.
(Read only property)

90.8 class ICScannerDeviceMBS

90.8.1 class ICScannerDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a scanner device.
Notes:

ICScannerDeviceMBS is a concrete subclass of ICDeviceMBS class. ICDeviceBrowserMBS creates instances of this class. In this release, an instance of ICScannerDeviceMBS class is intended to be used by the IKScannerDeviceViewMBS object. The IKScannerDeviceView class encapsulates the complexities of setting scan parameters, performing scans and saving the result. The developer should consider using IKScannerDeviceViewMBS instead of building their own views using the ICScannerDeviceMBS object.
Subclass of the ICDeviceMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.8.2 Methods

90.8.3 availableFunctionalUnitTypes as Integer()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of functional unit types available on this scanner device.
Notes: This is an array of numbers whose values are of type ICScannerFunctionalUnitType.

90.8.4 cancelScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Cancels the current scan operation started by sending a 'requestOverviewScan' or 'requestScan'.

90.8.5 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.8.6 ICScannerStatusRequestsOverviewScan as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner is requesting an overview scan to be

performed.

90.8.7 ICScannerStatusWarmingUp as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner is warming up.

90.8.8 ICScannerStatusWarmUpDone as string

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Constants used for device status notifications.
Notes: A non-localized notification string to indicate that the scanner has warmed up.

90.8.9 requestOverviewScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts an overview scan on selectedFunctionalUnit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidCompleteOverviewScanWithError event. The content of error returned should be examined to determine if the request completed successfully.

90.8.10 requestScan

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Starts a scan on selectedFunctionalUnit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidCompleteScanWithError event. The content of error returned should be examined to determine if the request completed successfully.

90.8.11 requestSelectFunctionalUnit(type as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Requests the scanner device to select a functional unit.
Notes: When this request is completed, the delegate will be notified using the scannerDeviceDidSelectFunctionalUnit.

90.8.12 Properties

90.8.13 documentName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The document name.
Notes: (Read and Write property)

90.8.14 documentUTI as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The document UTI.
Notes:

Currently supported UTIs are: kUTTypeJPEG, kUTTypeJPEG2000, kUTTypeTIFF, kUTTypePNG etc.
see UTTypeMBS module.
(Read and Write property)

90.8.15 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

90.8.16 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

90.8.17 maxMemoryBandSize as UInt64

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The total maximum band size requested when performing a ICScannerTransferModeMemoryBased.
Notes: (Read and Write property)

90.8.18 selectedFunctionalUnit as ICScannerFunctionalUnitMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The currently selected functional unit on the scanner device.
Notes: (Read only property)

90.8.19 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transfer mode for scanned document.
Notes: (Read and Write property)

90.8.20 Constants

90.8.21 ICScannerTransferModeFileBased = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** Transfer mode constants to be used when transferring scan data from the scanner functional unit.
Notes: Save the scan as a file.

90.8.22 ICScannerTransferModeMemoryBased = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** Transfer mode constants to be used when transferring scan data from the scanner functional unit.
Notes: Transfer the scan as data.

90.9 class ICScannerFeatureBooleanMBS

90.9.1 class ICScannerFeatureBooleanMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFeatureBoolean object is used to represent a property of a scanner functional unit whose value can be true or false.
Notes:

Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.9.2 Methods

90.9.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.9.4 Properties

90.9.5 value as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The value of this feature.
Notes: (Read and Write property)

90.10 class ICScannerFeatureEnumerationMBS

90.10.1 class ICScannerFeatureEnumerationMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFeatureEnumeration object is used to represent a feature of a scanner functional unit that can have one of several discrete values.
Notes:

Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.10.2 Methods

90.10.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.10.4 menuItemLabels as String()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The human readable menu item labels to be used in a menu to allow the user to select the current value from an array of possible values.

90.10.5 menuItemLabelsTooltips as String()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tooltip text associated with the menu items.

90.10.6 values as Variant()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of possible values. All items in this array must be of same type.

90.10.7 Properties

90.10.8 currentValue as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The current value.
Notes:

The current value can be set to one of the possible values in the "values" property below.
(Read and Write property)

90.10.9 defaultValue as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default value.
Notes:

The default value can be set to one of the possible values in the "values" property below.
(Read only property)

90.11 class ICScannerFeatureMBS

90.11.1 class ICScannerFeatureMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFeature class is an abstract base class used to describe a scanner feature.
Notes:

ImageCaptureCore defines three concrete subclasses of ICScannerFeatureMBS: ICScannerFeatureEnumerationMBS, ICScannerFeatureRangeMBS and ICScannerFeatureBooleanMBS.
The scanner functional units may have one or more instances of these classes to allow users to choose scanner-specific settings or operations before performing a scan.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.11.2 Methods

90.11.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.11.4 Properties

90.11.5 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.11.6 humanReadableName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The human readable name of this feature.
Notes: (Read only property)

90.11.7 internalName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal name of this feature.

Notes: (Read only property)

90.11.8 tooltip as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tooltip text describing the feature.
Notes: (Read only property)

90.11.9 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Scanner feature type.
Notes:

See ICScannerFeatureType* constants.
(Read only property)

90.11.10 Constants

90.11.11 ICScannerFeatureTypeBoolean = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the feature type constants.
Notes: The value of this feature can be true or false.

90.11.12 ICScannerFeatureTypeEnumeration = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the feature type constants.
Notes: This feature can have one of several discrete values, strings or numbers.

90.11.13 ICScannerFeatureTypeRange = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the feature type constants.
Notes: This value of this feature lies within a range.

90.11.14 ICScannerFeatureTypeTemplate = 3

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the feature type constants. **Notes:** A group of features.

90.12 class ICScannerFeatureRangeMBS

90.12.1 class ICScannerFeatureRangeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFeatureRange object is used to represent a property of a scanner functional unit whose value lies within a range.
Notes:

Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.12.2 Methods

90.12.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.12.4 Properties

90.12.5 currentValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The current value.
Notes:

Attempting to set the current value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the current value.
(Read only property)

90.12.6 defaultValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The default value.
Notes:

Attempting to set the default value to a value that is not coincident with a step will result in a value corresponding to the nearest step being assigned to the default value.
(Read only property)

90.12.7 maxValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum value.
Notes: (Read only property)

90.12.8 minValue as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum value.
Notes: (Read only property)

90.12.9 stepSize as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The step size.
Notes: (Read only property)

90.13 class ICScannerFeatureTemplateMBS

90.13.1 class ICScannerFeatureTemplateMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFeatureTemplate object is used to define a group of one or more rectangular scan areas that can be used with a scanner functional unit.
Notes:

Subclass of the ICScannerFeatureMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.13.2 Methods

90.13.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.13.4 targets as ICScannerFeatureMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The target features.

90.14 class ICScannerFunctionalUnitDocumentFeederMBS

90.14.1 class ICScannerFunctionalUnitDocumentFeederMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFunctionalUnitDocumentFeeder is a concrete subclass of ICScannerFunctionalUnit class.
Notes:

ICScannerDevice creates instances of this class.
This represents the document feeder unit on the scanner.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.14.2 Methods

90.14.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.14.4 Properties

90.14.5 documentLoaded as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the feeder has documents to scan.
Notes:

This value will change when the document is loaded or removed from the feeder, if the scanner module has the capability to detect this state.
(Read only property)

90.14.6 duplexScanningEnabled as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether duplex scanning is enabled.
Notes: (Read and Write property)

90.14.7 evenPageOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Desired orientation of the even pages of the scanned document.
Notes:

This property is set to ICEXIFOrientation1 initially.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180°
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90° CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90° CCW
ICEXIFOrientation7	7	Rotated 90° CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90° CW

(Read and Write property)

90.14.8 oddPageOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Desired orientation of the odd pages of the scanned document.
Notes:

This property is set to ICEXIFOrientation1 initially.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180°
ICEXIFOrientation4	4	Flipped vertically
ICEXIFOrientation5	5	Rotated 90° CCW and flipped vertically
ICEXIFOrientation6	6	Rotated 90° CCW
ICEXIFOrientation7	7	Rotated 90° CW and flipped vertically
ICEXIFOrientation8	8	Rotated 90° CW

(Read and Write property)

90.14.9 reverseFeederPageOrder as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether the document feeder reads pages from back to front.
Notes: (Read only property)

90.14.10 supportsDuplexScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates whether duplex scanning is supported.
Notes: (Read only property)

90.15 class ICScannerFunctionalUnitFlatbedMBS

90.15.1 class ICScannerFunctionalUnitFlatbedMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFunctionalUnitFlatbedMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes:

ICScannerDevice creates instances of this class.
This represents the flatbed unit on the scanner.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.15.2 Methods

90.15.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.16 class ICScannerFunctionalUnitMBS

90.16.1 class ICScannerFunctionalUnitMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFunctionalUnit is an abstract class that represents a scanner functiona unit.
Notes:

ImageCaptureCore defines three concrete subclasses of ICScannerFunctionalUnit: ICScannerFunctionalUnitFlatbed, ICScannerFunctionalUnitPositiveTransparency, ICScannerFunctionalUnitNegativeTransparency and ICScannerFunctionalUnitDocumentFeeder. ICScannerDevice creates instances of these concrete subclasses.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.16.2 Methods

90.16.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.16.4 templates as ICScannerFeatureTemplateMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of objects of type ICScannerFeatureTemplate.

90.16.5 vendorFeatures as ICScannerFeatureMBS()

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of objects of type ICScannerFeature.

90.16.6 Properties

90.16.7 acceptsThresholdForBlackAndWhiteScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if this functional unit accepts threshold value to be used when performing a scan in black & white.

Notes: (Read only property)

90.16.8 bitDepth as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The bit depth to use when performing the final scan.
Notes:

This will always be one of the supported bit depths.
(Read and Write property)

90.16.9 canPerformOverviewScan as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if this functional unit can perfrom an overview scan.
Notes:

Not all functional units can perform an overview scan. For example, a document feeder or a sheet feeder unit cannot perform an overview scan.
(Read only property)

90.16.10 defaultThresholdForBlackAndWhiteScanning as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Default threshold value used when performing a scan in black & white.
Notes:

This value is from 0 to 255.
(Read only property)

90.16.11 documentSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Document size of the current document type expressed in current measurement unit.
Notes: (Read only property)

90.16.12 documentType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current document type.
Notes:

This will always be one of the supported document types.
(Read and Write property)

90.16.13 measurementUnit as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current measurement unit. This will always be one of the supported measurement units.
Notes: (Read and Write property)

90.16.14 nativeXResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Optical resolution along the X axis.
Notes: (Read only property)

90.16.15 nativeYResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Optical resolution along the Y axis.
Notes: (Read only property)

90.16.16 overviewImage as Variant

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Overview scan image.
Notes:

This property will be nil for functional units that do not support overview scans.
Value is a CGImageMBS.
(Read only property)

90.16.17 overviewResolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Overview image resolution.
Notes:

Value assigned to this will be contrained by resolutions allowed by the device.
(Read and Write property)

90.16.18 overviewScanInProgress as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if an overview scan is in progress.
Notes: (Read only property)

90.16.19 physicalSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Physical size of the scan area in current measurement unit.
Notes: (Read only property)

90.16.20 pixelDataType as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The pixel data type.
Notes:

See ICScannerPixelDataType* constants.
(Read and Write property)

90.16.21 preferredResolutions as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current scan resolution.
Notes:

This will always be one of the supported resolution values.
(Read only property)

90.16.22 preferredScaleFactors as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Preferred scale factors in percentage.
Notes: (Read only property)

90.16.23 resolution as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current scan resolution.
Notes:

This will always be one of the supported resolution values.
(Read and Write property)

90.16.24 scaleFactor as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current scale factor.
Notes:

This will always be one of the supported scale factor values.
(Read only property)

90.16.25 scanArea as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: This property along with scanAreaOrientation describes the area to be scanned.
Notes: (Read and Write property)

90.16.26 scanAreaOrientation as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Desired orientation of the scan area.
Notes:

This property along with scanArea describes the area to be scanned.
This property is set to ICEXIFOrientation1 initially. This property is not used by the ICScannerFunctionalUnitDocumentFeeder subclass.

Possible values:

ICEXIFOrientation1	1	Normal
ICEXIFOrientation2	2	Flipped horizontally
ICEXIFOrientation3	3	Rotated 180°
ICEXIFOrientation4	4	Flipped vertically

(Read and Write property)

90.16.27 scanInProgress as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if a scan is in progress.
Notes: (Read only property)

90.16.28 scanProgressPercentDone as Double

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates percentage of scan completed.
Notes: (Read only property)

90.16.29 state as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates the current state of the functional unit.
Notes:

See ICScannerFunctionalUnitState* constants.
(Read only property)

90.16.30 supportedBitDepths as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Supported bit depths.
Notes:

The values in this set are valid values defined by ICScannerBitDepth.
(Read only property)

90.16.31 supportedDocumentTypes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Supported document types.
Notes:

The values in this set are valid values defined by ICScannerDocumentType.
(Read only property)

90.16.32 supportedMeasurementUnits as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Supported measurement units. The values in this set are valid values defined by ICScannerMeasurementUnit.
Notes: (Read only property)

90.16.33 supportedResolutions as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Supported scan resolutions in DPI.
Notes: (Read only property)

90.16.34 supportedScaleFactors as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Supported scale factors in percentage.
Notes: (Read only property)

90.16.35 thresholdForBlackAndWhiteScanning as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Threshold value to be used when performing a scan in black & white.
Notes:

This value should be from 0 to 255.
(Read and Write property)

90.16.36 type as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Functional unit type.
Notes:

See ICScannerFunctionalUnitType* constants.
(Read only property)

90.16.37 usesThresholdForBlackAndWhiteScanning as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if this functional unit uses threshold value to be used when performing a scan in black & white.
Notes: (Read only property)

90.16.38 Constants

90.16.39 ICScannerBitDepth16Bits = 16

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the possible number of bits per channel in the scanned image.
Notes: Image with 16 bits per channel.

90.16.40 ICScannerBitDepth1Bit = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the possible number of bits per channel in the scanned image.
Notes: 1-bit image.

90.16.41 ICScannerBitDepth8Bits = 8

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the possible number of bits per channel in the scanned image.

Notes: Image with 8 bits per channel.

90.16.42 ICScannerColorDataFormatTypeChunky = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the color data formats.
Notes:

For multi-channel data (e.g., RGB) data from all channels are interleaved.
Identifies color data formats. Only relevant for multi-channel data. Corresponds to "ICAP_PLANARCHUNKY" of the TWAIN Specification.

90.16.43 ICScannerColorDataFormatTypePlanar = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the color data formats.
Notes:

For multi-channel data (e.g., RGB) each channel is transferred sequentially.
Identifies color data formats. Only relevant for multi-channel data. Corresponds to "ICAP_PLANARCHUNKY" of the TWAIN Specification.

90.16.44 ICScannerDocumentType10 = 25

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A10, 26.00 mm x 37.00 mm

90.16.45 ICScannerDocumentType10R = 67

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 10R, 10" x 12" 254.00 mm x 304.80 mm 5:6

90.16.46 ICScannerDocumentType110 = 72

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: Instamatic 110, 13.00 mm x 17.00 mm

90.16.47 ICScannerDocumentType11R = 69

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 11R, 11” x 14” 279.40 mm x 355.60 mm 11:14

90.16.48 ICScannerDocumentType12R = 70

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 12R, 12” x 15” 304.80 mm x 381.00 mm 4:5

90.16.49 ICScannerDocumentType135 = 76

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: Standard 35 mm, 36.00 mm x 24.00 mm

90.16.50 ICScannerDocumentType2A0 = 18

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 2A0, 1189.00 mm x 1682.00 mm

90.16.51 ICScannerDocumentType3R = 61

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 3R, 3.5” x 5” 88.90 mm x 127.00 mm 7:10

90.16.52 ICScannerDocumentType4A0 = 17

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 4A0, 1682.00 mm x 2378.00 mm

90.16.53 ICScannerDocumentType4R = 62

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: 4R, 4” x 6” 101.60 mm x 152.40 mm 2:3

90.16.54 ICScannerDocumentType5R = 63

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** 5R, 5” x 7” 127.00 mm x 177.80 mm 5:7

90.16.55 ICScannerDocumentType6R = 64

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** 6R, 6” x 8” 152.40 mm x 203.20 mm 3:4

90.16.56 ICScannerDocumentType8R = 65

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** 8R, 8” x 10” 203.20 mm x 254.00 mm 4:5

90.16.57 ICScannerDocumentTypeA0 = 19

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** A0, 841.00 mm x 1189.00 mm

90.16.58 ICScannerDocumentTypeA1 = 20

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** A1, 594.00 mm x 841.00 mm

90.16.59 ICScannerDocumentTypeA2 = 21

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** A2, 420.00 mm x 594.00 mm

90.16.60 ICScannerDocumentTypeA3 = 11

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** A3, 297.00 mm x 420.00 mm

90.16.61 ICScannerDocumentTypeA4 = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A4, 210.00 mm x 297.00 mm

90.16.62 ICScannerDocumentTypeA5 = 5

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A5, 148.00 mm x 210.00 mm

90.16.63 ICScannerDocumentTypeA6 = 13

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A6, 105.00 mm x 148.00 mm

90.16.64 ICScannerDocumentTypeA7 = 22

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A7, 74.00 mm x 105.00 mm

90.16.65 ICScannerDocumentTypeA8 = 23

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A8, 52.00 mm x 74.00 mm

90.16.66 ICScannerDocumentTypeA9 = 24

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: A9, 37.00 mm x 52.00 mm

90.16.67 ICScannerDocumentTypeAPSC = 74

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: APS Classic, 25.10 mm x 16.70 mm

90.16.68 ICScannerDocumentTypeAPSH = 73

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** APS High Definition, 30.20 mm x 16.70 mm

90.16.69 ICScannerDocumentTypeAPSP = 75

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** APS Panoramic, 30.20 mm x 9.50 mm

90.16.70 ICScannerDocumentTypeB5 = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** B5/JIS B5, 182.00 mm x 257.00 mm

90.16.71 ICScannerDocumentTypeBusinessCard = 53

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** Business Card, 90.00 mm x 55.00 mm

90.16.72 ICScannerDocumentTypeC0 = 44

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** C0, 917.00 mm x 1297.00 mm

90.16.73 ICScannerDocumentTypeC1 = 45

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** C1, 648.00 mm x 917.00 mm

90.16.74 ICScannerDocumentTypeC10 = 51

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** C10, 28.00 mm x 40.00 mm

90.16.75 ICScannerDocumentTypeC2 = 46

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C2, 458.00 mm x 648.00 mm

90.16.76 ICScannerDocumentTypeC3 = 47

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C3, 324.00 mm x 458.00 mm

90.16.77 ICScannerDocumentTypeC4 = 14

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C4, 229.00 mm x 324.00 mm

90.16.78 ICScannerDocumentTypeC5 = 15

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C5, 162.00 mm x 229.00 mm

90.16.79 ICScannerDocumentTypeC6 = 16

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C6, 114.00 mm x 162.00 mm

90.16.80 ICScannerDocumentTypeC7 = 48

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C7, 81.00 mm x 114.00 mm

90.16.81 ICScannerDocumentTypeC8 = 49

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: C8, 57.00 mm x 81.00 mm

90.16.82 ICScannerDocumentTypeC9 = 50

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** C9, 40.00 mm x 57.00 mm

90.16.83 ICScannerDocumentTypeDefault = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** This is the platten size. Not valid for scanners without a platten.

90.16.84 ICScannerDocumentTypeE = 60

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** Japanese E, 3.25" x 4.75" 82.55 mm x 120.65 mm 11:16

90.16.85 ICScannerDocumentTypeISOB0 = 26

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types. **Notes:** ISO B0, 1000.00 mm x 1414.00 mm

90.16.115 ICScannerDocumentTypeUSStatement = 52

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the document types.
Notes: US Statement, 5.5” x 8.5”, 139.70 mm x 215.90 mm

90.16.116 ICScannerFunctionalUnitStateOverviewScanInProgress = 4

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** A flag to indicate the scanner functional unit’s state.
Notes: The scanner functional unit is performing an overview scan.

90.16.117 ICScannerFunctionalUnitStateReady = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** A flag to indicate the scanner functional unit’s state.
Notes: The scanner functional unit is ready for operation.

90.16.118 ICScannerFunctionalUnitStateScanInProgress = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** A flag to indicate the scanner functional unit’s state.

Notes: The scanner functional unit is performing a scan.

90.16.119 ICScannerFunctionalUnitTypeDocumentFeeder = 3

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Scanner Functional Unit Types.
Notes: Document feeder functional unit.

90.16.120 ICScannerFunctionalUnitTypeFlatbed = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Scanner Functional Unit Types.
Notes: Flatbed functional unit.

90.16.121 ICScannerFunctionalUnitTypeNegativeTransparency = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Scanner Functional Unit Types.
Notes: Transparency functional unit for scanning negatives.

90.16.122 ICScannerFunctionalUnitTypePositiveTransparency = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the Scanner Functional Unit Types.
Notes: Transparency functional unit for scanning positives.

90.16.123 ICScannerMeasurementUnitCentimeters = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.
Notes: 1 cm = 1.00 cm or 1/2.54 inches

90.16.124 ICScannerMeasurementUnitInches = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.
Notes: 1 inch = 2.54 cm

90.16.125 ICScannerMeasurementUnitPicas = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.
Notes: 1 pica = .42333333 cm or 1/6 inches

90.16.126 ICScannerMeasurementUnitPixels = 5

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.

90.16.127 ICScannerMeasurementUnitPoints = 3

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.
Notes: 1 point = .0352777775 cm or 1/72 inches

90.16.128 ICScannerMeasurementUnitTwips = 4

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the units of measurement used by the scanner.
Notes: 1 twip = .0001763888 cm or 1/1440 inches

90.16.129 ICScannerPixelDataTypeBW = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types.
Notes: Monochrome 1 bit pixel image.

90.16.130 ICScannerPixelDataTypeCIEXYZ = 8

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types.
Notes: Color image in CIEXYZ color space.

90.16.131 ICScannerPixelDataTypeCMY = 4

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Color image in CMY color space.

90.16.132 ICScannerPixelDataTypeCMYK = 5

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Color image in CMYK color space.

90.16.133 ICScannerPixelDataTypeGray = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** 8 bit pixel Gray color space.

90.16.134 ICScannerPixelDataTypePalette = 3

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Indexed Color image.

90.16.135 ICScannerPixelDataTypeRGB = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Color image RGB color space.

90.16.136 ICScannerPixelDataTypeYUV = 6

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Color image in YUV color space.

90.16.137 ICScannerPixelDataTypeYUVK = 7

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the pixel data types. **Notes:** Color image in YUVK color space.

90.17 class ICScannerFunctionalUnitNegativeTransparencyMBS

90.17.1 class ICScannerFunctionalUnitNegativeTransparencyMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFunctionalUnitNegativeTransparencyMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes:

ICScannerDeviceMBS creates instances of this class.
This represents the transparency unit on the scanner for scanning negatives.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.17.2 Methods

90.17.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.18 class ICScannerFunctionalUnitPositiveTransparencyMBS

90.18.1 class ICScannerFunctionalUnitPositiveTransparencyMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: ICScannerFunctionalUnitPositiveTransparencyMBS is a concrete subclass of ICScannerFunctionalUnitMBS class.
Notes:

ICScannerDeviceMBS creates instances of this class.
This represents the transparency unit on the scanner for scanning postives.
Subclass of the ICScannerFunctionalUnitMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

90.18.2 Methods

90.18.3 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

90.19 control IKCameraDeviceViewControlMBS

90.19.1 control IKCameraDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a Camera Device View.
Notes: For Xojo with Cocoa target.

90.19.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.19.3 Properties

90.19.4 View as IKCameraDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The camera device view used in this control.
Notes: (Read only property)

90.19.5 Events

90.19.6 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

90.19.7 DidDownloadFile(CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.19.8 DidEncounterError(Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the camera device reports an error.

90.19.9 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

90.19.10 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

90.19.11 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

90.19.12 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

90.19.13 MenuAction(HitItem as MenuItem) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

90.19.14 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

90.19.15 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

90.19.16 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

90.19.17 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

90.19.18 SelectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is sent when the user selection did change.

90.20 class IKCameraDeviceViewMBS

90.20.1 class IKCameraDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Displays content of a Image Capture supported camera.
Notes: Subclass of the NSViewMBS class.

90.20.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.20.3 Methods

90.20.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new IKCameraDeviceViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 90.20.5 Constructor(Handle as Integer) 15562
- 90.20.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15563

90.20.5 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new IKCameraDeviceViewMBS(0, 0, 100, 100)
dim v as new IKCameraDeviceViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKCameraDeviceView and the plugin retains this handle.
See also:

- 90.20.4 Constructor 15562
- 90.20.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15563

90.20.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new IKCameraDeviceViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 90.20.4 Constructor 15562
- 90.20.5 Constructor(Handle as Integer) 15562

90.20.7 deleteSelectedItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Delete selected items.

90.20.8 downloadAllItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Download all items.

90.20.9 downloadSelectedItems

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Download selected items.

90.20.10 rotateLeft

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Rotate selected items left.

90.20.11 rotateRight

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Rotate selected items right.

90.20.12 selectIndexes(indexes as NSIndexSetMBS, extend as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Setting current user selection.

90.20.13 Properties

90.20.14 cameraDevice as ICCameraDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera device.
Notes: (Read and Write property)

90.20.15 canDeleteSelectedItems as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the user selected items can be deleted.
Notes: (Read only property)

90.20.16 canDownloadSelectedItems as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the user selected items can be downloaded.
Notes: (Read only property)

90.20.17 canRotateSelectedItemsLeft as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the user selected items can be rotated left.
Notes: (Read only property)

90.20.18 canRotateSelectedItemsRight as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Indicates if the user selected items can be rotated right.
Notes: (Read only property)

90.20.19 displaysDownloadsDirectoryControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Show a downloads directory control.
Notes: (Read and Write property)

90.20.20 displaysPostProcessApplicationControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Show a postprocessing application control.
Notes: (Read and Write property)

90.20.21 downloadAllControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Label for the 'Download All' control - allows for example renaming to 'Import All'.
Notes: (Read and Write property)

90.20.22 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.

(Read and Write property)

90.20.23 downloadSelectedControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Label for the 'Download Selected' control.
Notes: (Read and Write property)

90.20.24 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

90.20.25 hasDisplayModeIcon as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Support icon view display mode.
Notes: (Read and Write property)

90.20.26 hasDisplayModeTable as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Support table view display mode.
Notes: (Read and Write property)

90.20.27 iconSize as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: in icon mode: size of the image thumbnails.
Notes: (Read and Write property)

90.20.28 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current display mode.
Notes:

see IKCameraDeviceViewDisplayMode constants.
(Read and Write property)

90.20.29 postProcessApplication as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Postprocessing application.
Notes:

A file URL to application.
(Read and Write property)

90.20.30 selectedIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current user selection.
Notes: (Read only property)

90.20.31 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Transfer mode either file based - or - in memory.
Notes:

See IKCameraDeviceViewTransferMode constants.
(Read and Write property)

90.20.32 Events

90.20.33 DidDownloadFile(CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent for each file that gets downloaded.

Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.20.34 DidEncounterError(Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is sent every time the camera device reports an error.

90.20.35 SelectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is sent when the user selection did change.

90.20.36 Constants

90.20.37 IKCameraDeviceViewDisplayModeIcon = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display modes.
Notes: Show Icons

90.20.38 IKCameraDeviceViewDisplayModeTable = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display modes.
Notes: Show Table

90.20.39 IKCameraDeviceViewTransferModeFileBased = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the transfer mode constants.
Notes: File based download.

90.20.40 IKCameraDeviceViewTransferModeMemoryBased = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the transfer mode constants.
Notes: Memory based download.

90.21 control IKDeviceBrowserViewControlMBS

90.21.1 control IKDeviceBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a Device Browser View.
Notes: For Xojo with Cocoa target.

90.21.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.21.3 Properties

90.21.4 View as IKDeviceBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The device browser view used in this control.
Notes: (Read only property)

90.21.5 Events

90.21.6 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

90.21.7 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the device browser reports an error.

90.21.8 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

90.21.9 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

90.21.10 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

90.21.11 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

90.21.12 MenuAction(HitItem as MenuItem) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

90.21.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

90.21.14 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

90.21.15 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

90.21.16 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

90.21.17 SelectionDidChange(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the user selection did change.
Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

90.22 class IKDeviceBrowserViewMBS

90.22.1 class IKDeviceBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Displays Image Capture cameras and scanners.
Notes: Subclass of the NSViewMBS class.

90.22.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.22.3 Methods

90.22.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new IKDeviceBrowserViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 90.22.5 Constructor(Handle as Integer) 15572
- 90.22.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15573

90.22.5 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new IKDeviceBrowserViewMBS(0, 0, 100, 100)
dim v as new IKDeviceBrowserViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKDeviceBrowserView and the plugin retains this handle.
See also:

- 90.22.4 Constructor 15572
- 90.22.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15573

90.22.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new IKDeviceBrowserViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 90.22.4 Constructor 15572

90.22.7 Properties

90.22.8 displaysLocalCameras as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: For device filtering - indicates that the IKDeviceBrowserView should include local cameras.
Notes: (Read and Write property)

90.22.9 displaysLocalScanners as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: for device filtering - indicates that the IKDeviceBrowserView should include local scanners.
Notes: (Read and Write property)

90.22.10 displaysNetworkCameras as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: for device filtering - indicates that the IKDeviceBrowserView should include network/shared cameras.
Notes: (Read and Write property)

90.22.11 displaysNetworkScanners as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: for device filtering - indicates that the IKDeviceBrowserView should include network/shared scanners.
Notes: (Read and Write property)

90.22.12 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the supported display modes (table, outline, or icon mode).
Notes: (Read and Write property)

90.22.13 selectedDevice as ICDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: User selected device (ICCameraDevice or ICScannerDevice).
Notes: (Read only property)

90.22.14 Events

90.22.15 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the device browser reports an error.

90.22.16 SelectionDidChange(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the user selection did change.

Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

90.22.17 Constants

90.22.18 IKDeviceBrowserViewDisplayModeIcon = 2

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display modes.
Notes: Icon

90.22.19 IKDeviceBrowserViewDisplayModeOutline = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display modes.
Notes: Outline

90.22.20 IKDeviceBrowserViewDisplayModeTable = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display modes.
Notes: Table

90.23 control IKScannerDeviceViewControlMBS

90.23.1 control IKScannerDeviceViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The Xojo control for a Scanner Device View.
Notes: For Xojo with Cocoa target.

90.23.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.23.3 Properties

90.23.4 View as IKScannerDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The scanner view used in this control.
Notes: (Read only property)

90.23.5 Events

90.23.6 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

90.23.7 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the scanner device reports an error.

90.23.8 DidScanToBandData(data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For memory a based transfer this event is sent for every time an image band of data was scanned.

Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

90.23.9 DidScanToURL(url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.23.10 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

90.23.11 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

90.23.12 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

90.23.13 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

90.23.14 MenuAction(HitItem as MenuItem) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

90.23.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

90.23.16 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

90.23.17 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

90.23.18 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

90.24 class IKScannerDeviceViewMBS

90.24.1 class IKScannerDeviceViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: IKScannerDeviceView displays a UI to work with Image Capture supported scanners.
Notes: Subclass of the NSViewMBS class.

90.24.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr2

90.24.3 Methods

90.24.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new IKScannerDeviceViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 90.24.5 Constructor(Handle as Integer) 15580
- 90.24.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15581

90.24.5 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new IKScannerDeviceViewMBS(0, 0, 100, 100)
dim v as new IKScannerDeviceViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKScannerDeviceView and the plugin retains this handle.
See also:

- 90.24.4 Constructor 15580
- 90.24.6 Constructor(left as Double, top as Double, width as Double, height as Double) 15581

90.24.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new IKScannerDeviceViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 90.24.4 Constructor 15580
- 90.24.5 Constructor(Handle as Integer) 15580

90.24.7 Properties

90.24.8 displaysDownloadsDirectoryControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Show a downloads directory control.
Notes: (Read and Write property)

90.24.9 displaysPostProcessApplicationControl as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Show a postprocessing application control.
Notes: (Read and Write property)

90.24.10 documentName as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Document name.
Notes: (Read and Write property)

90.24.11 downloadsDirectory as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

90.24.12 downloadsFolder as FolderItem

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Downloads directory.
Notes:

Download location can be provided as file URL with downloadsDirectory property or as folderitem with downloadsFolder property.
(Read and Write property)

90.24.13 hasDisplayModeAdvanced as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Support advanced scanning UI.
Notes: (Read and Write property)

90.24.14 hasDisplayModeSimple as Boolean

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Support a simple scanning UI.
Notes: (Read and Write property)

90.24.15 mode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Current display mode.
Notes:

See IKScannerDeviceViewDisplayMode constants.
(Read and Write property)

90.24.16 overviewControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Label for the 'Overview' control.
Notes: (Read and Write property)

90.24.17 postProcessApplication as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Postprocessing application.
Notes: (Read and Write property)

90.24.18 scanControlLabel as String

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: label for the 'Scan' control.
Notes: (Read and Write property)

90.24.19 scannerDevice as ICScannerDeviceMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The scanner device.
Notes: (Read and Write property)

90.24.20 transferMode as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: transfer mode either file based - or - in memory.
Notes:

See IKScannerDeviceViewTransferMode constants.
(Read and Write property)

90.24.21 Events

90.24.22 DidEncounterError(error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the scanner device reports an error.

90.24.23 DidScanToBandData(data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes: The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

90.24.24 DidScanToURL(url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.24.25 Constants

90.24.26 IKScannerDeviceViewDisplayModeAdvanced = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display mode constants.
Notes: Advanced

90.24.27 IKScannerDeviceViewDisplayModeSimple = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the display mode constants.
Notes: Simple

90.24.28 IKScannerDeviceViewTransferModeFileBased = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the transport modes.
Notes: File based scan.

90.24.29 IKScannerDeviceViewTransferModeMemoryBased = 1

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the transport modes.
Notes: Memory based scan.

90.25 class ImageCaptureEventsMBS

90.25.1 class ImageCaptureEventsMBS

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Central class for Image Capture events.
Notes:

Whenever you have an ICA object, the plugin will register a delegate for it and dispatch all events here.
For some view classes, events are in addition dispatched to the controls.

90.25.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr6

90.25.3 Properties

90.25.4 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

90.25.5 Events

90.25.6 cameraDeviceDidAddItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an object is added to the device.
Notes: The object may be an instance of ICCameraFolder or ICCameraFile class.

90.25.7 cameraDeviceDidAddItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an object or objects are added to the device.
Notes:

Instead of receive one event per object, an array of objects is sent.
The objects may be instances of ICCameraFolder or ICCameraFile class.

90.25.8 cameraDeviceDidBecomeReadyWithCompleteContentCatalog(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the camera device is done enumerating its content and is ready to receive requests.
Notes: A session must be opened on the device in order to enumerate its content and make it ready to receive requests.

90.25.9 cameraDeviceDidChangeCapability(camera as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the capability of a device changes.
Notes: This usually happens when the device module takes control or yields control of the device.

90.25.10 cameraDeviceDidCompleteDeleteFilesWithError(camera as ICCameraDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Files have been deleted.
Notes: This event is sent after the camera device completes a delete operation initiated by sending a requestDeleteFiles event to that device.

90.25.11 cameraDeviceDidDownloadFile(file as ICCameraFileMBS, error as NSErrorMBS, options as Dictionary, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Download of file finished.

90.25.12 cameraDeviceDidReadData(data as Memoryblock, file as ICCameraFileMBS, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Reading file data finished.

90.25.13 cameraDeviceDidReceiveDownloadProgressForFile(file as ICCameraFileMBS, downloadedBytes as UInt64, maxBytes as UInt64)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to provide status of the download operation.

90.25.14 cameraDeviceDidReceiveMetadataForItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the metadata requested for an item on a device is available.

90.25.15 cameraDeviceDidReceivePTPEvent(camera as ICCameraDeviceMBS, eventData as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to convey a PTP event.

90.25.16 cameraDeviceDidReceiveThumbnailForItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the thumbnail requested for an item on a device is available.

90.25.17 cameraDeviceDidRemoveItem(camera as ICCameraDeviceMBS, item as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an object is removed from the device.
Notes: The object may be an instance of ICCameraFolder or ICCameraFile class.

90.25.18 cameraDeviceDidRemoveItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an object or objects are removed from the device.
Notes: The objects may be instances of ICCameraFolder or ICCameraFile class. This method supercedes cameraDeviceDidRemoveItem method described above.

90.25.19 cameraDeviceDidRenameItems(camera as ICCameraDeviceMBS, items() as ICCameraItemMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an object or objects are renamed on the device.
Notes: The objects may be instances of ICCameraFolder or ICCameraFile class.

90.25.20 cameraDeviceDidSendPTPCommand(command as Memoryblock, data as Memoryblock, response as MemoryBlock, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a requestSendPTPCommand event got a response or error.

90.25.21 cameraDeviceDidUploadFile(fileURL as string, file as FolderItem, error as NSErrorMBS, device as ICCameraDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: A file upload was completed.

90.25.22 cameraDeviceViewDidDownloadFile(cameraDeviceView as IKCameraDeviceViewMBS, CameraFile as ICCameraFileMBS, URL as string, File as folderItem, data as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent for each file that gets downloaded.
Notes: Based on the IKCameraDeviceViewDisplayMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.25.23 cameraDeviceViewDidEncounterError(cameraDeviceView as IKCameraDeviceViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the camera device reports an error.

90.25.24 cameraDeviceViewSelectionDidChange(cameraDeviceView as IKCameraDeviceViewMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the user selection did change.

90.25.25 deviceBrowserDeviceDidChangeName(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

90.25.26 deviceBrowserDeviceDidChangeSharingState(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

90.25.27 deviceBrowserDidAddDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS, moreComing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to inform that a device has been added.
Notes: If several devices are found during the initial search, then this event is sent once for each device with the value of 'moreComing' set to true in each event except the last one.

90.25.28 deviceBrowserDidEnumerateLocalDevices(browser as ICDeviceBrowserMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent after the device browser completes sending deviceBrowserDidAddDevice event for all local devices.
Notes: Detecting locally connected devices (USB and FireWire devices) is faster than detecting devices connected using a network protocol. An Image Capture client application may use this event to update its user interface to let the user know that it has completed looking for locally connected devices and then start looking for network devices.

90.25.29 deviceBrowserDidRemoveDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS, moreGoing as boolean)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to inform that a device has been removed.
Notes: If several devices are removed at the same time, then this event is sent once for each device with the value of 'moreGoing' set to true in each event except the last one.

90.25.30 deviceBrowserRequestsSelectDevice(browser as ICDeviceBrowserMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when an event that occurred on the device may be of interest to the client application.
Notes: In Mac OS X 10.6, this event is sent when a button is pressed on a device and the current application is the target for that button press. In the case of the button-press event, if a session is open on the device, this event will not be sent, instead the deviceDidReceiveButtonPress event is sent.

90.25.31 deviceBrowserViewDidEncounterError(deviceBrowserView as IKDeviceBrowserViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the device browser reports an error.

90.25.32 deviceBrowserViewSelectionDidChange(deviceBrowserView as IKDeviceBrowserViewMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the user selection did change.

Notes: The device may be a ICCameraDeviceMBS or a ICScannerDeviceMBS.

90.25.33 deviceDidBecomeReady(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the device is ready to receive requests.
Notes: A camera device is ready, when it is ready to receive requests. A scanner device is ready when its functional units are found and the default functional unit is selected for use and is ready to receive requests. The device will become ready to receive requests only after a session is opened.

90.25.34 deviceDidChangeName(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent if the name of a device changes.
Notes: This happens if the device module overrides the default name of the device reported by the device's transport layer, or if the name of the filesystem volume mounted by the device is changed by the user.

90.25.35 deviceDidChangeSharingState(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the sharing state of a device has changes.
Notes: Any Image Capture client application can choose to share the device over the network using the sharing or webSharing facility in Image Capture.

90.25.36 deviceDidCloseSessionWithError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when a session is closed on a device.
Notes: This event completes the process initiated by the message "requestCloseSession" sent to the device object. This event is also sent if the device module in control of the device ceases to control the device.

90.25.37 deviceDidEncounterError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the device delegate when a camera or scanner device encounters an error.

90.25.38 deviceDidOpenSessionWithError(device as ICDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when a session is opened on a device.
Notes: This event completes the process initiated by the requestOpenSession sent to the device object.

90.25.39 deviceDidReceiveButtonPress(device as ICDeviceMBS, buttonType as String)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the device delegate if a button is pressed on the device.
Notes: This event is sent only if a session is open on the device. The value of 'buttonType' argument is one of the ICButtonType* values defined above.

90.25.40 deviceDidReceiveCustomNotification(device as ICDeviceMBS, notification as Dictionary, data as Memoryblock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the device delegate the device sends a custom notification 'notification' with an arbitrary byte buffer 'data'.
Notes: This event is sent only if a session is open on the device.

90.25.41 deviceDidReceiveStatusInformation(device as ICDeviceMBS, status as Dictionary)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when status information is received from a camera or a scanner.
Notes:

In Mac OS X 10.6 this event is not called for camera devices. This may change in the future releases of Mac OS X.
The 'status' dictionary contains two keys, ICStatusNotificationKey and ICLocalizedStatusNotificationKey, which are defined above. If type of 'device' is ICDeviceTypeScanner, the value of ICStatusNotificationKey will be one of the values defined in ICScannerDevice.h (e.g., ICScannerStatusWarmingUp, ICScannerStatusWarmUpDone, or ICScannerStatusRequestsOverviewScan); the value of ICLocalizedStatusNotificationKey will be a localized status information string suitable for displaying to the user.

90.25.42 deviceDidRemove(device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent to the delegate to inform that a device has been removed.

90.25.43 deviceDidSendMessage(messageCode as UInt32, data as Memoryblock, error as NSErrorMBS, device as ICDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The call to requestSendMessage was successful.

90.25.44 scannerDeviceDidBecomeAvailable(scanner as ICScannerDeviceMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when another client closes an open session on the scanner.
Notes: Scanners require exclusive access, only one client can open a session on a scanner. The scanner is available if it does not have a session opened by another client. Attempting to open a session on a scanner that already has an open session for another client will result in an error. A client that wants to open a session on a scanner as soon as it is available should implement this method and send "requestOpenSession" message to scanner object from that method.

90.25.45 scannerDeviceDidCompleteOverviewScanWithError(scanner as ICScannerDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent after the scanner device completes an overview scan.

90.25.46 scannerDeviceDidCompleteScanWithError(scanner as ICScannerDeviceMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent after the scanner device completes a scan.

90.25.47 scannerDeviceDidScanToBandData(scanner as ICScannerDeviceMBS, Data as ICScannerBandDataMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the scanner device receives the requested scan progress notification and a band of data is sent for each notification received.
Notes: In memory transfer mode, this will send a band of size that has been selected by the client via the maxMemoryBandSize property.

90.25.48 scannerDeviceDidScanToURL(scanner as ICScannerDeviceMBS, URL as string, file as folderitem, data as MemoryBlock)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when the scanner device receives the requested scan.
Notes:

If selectedFunctionalUnit is a document feeder, then this event will be sent once for each scanned page.
This event is sent when the scanner device receives the requested scan. If selectedFunctionalUnit is a document feeder, then this event will be sent once for each scanned page.

90.25.49 scannerDeviceDidSelectFunctionalUnit(scanner as ICScannerDeviceMBS, functionalUnit as Variant, Error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent when a functional unit is selected on the scanner device.
Notes: A functional unit is selected immediately after the scanner device is instantiated and in response to requestSelectFunctionalUnit method.

90.25.50 scannerDeviceViewDidEncounterError(scannerDeviceView as IKScannerDeviceViewMBS, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event is sent every time the scanner device reports an error.

90.25.51 scannerDeviceViewDidScanToBandData(scannerDeviceView as IKScannerDeviceViewMBS, data as ICScannerBandDataMBS, scanInfo as Dictionary, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For memory a based transfer this event is sent for every time an image band of data was scanned.
Notes:

The 'data' parameter describes the scanned image data. Note that rotation/cropping/image adjustments are not applied yet. The 'scanInfo' parameter contains additional information (rotation angle, ...) that should be applied once the scan is completed.

Only called if transfermode is ICScannerTransferModeMemoryBased.

90.25.52 scannerDeviceViewDidScanToURL(scannerDeviceView as IKScannerDeviceViewMBS, url as String, file as FolderItem, fileData as MemoryBlock, error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: For file based transfer this event is sent for each image that gets scanned.
Notes: Based on the IKScannerDeviceViewTransferMode the downloaded file will be saved on disk using the 'url', or returned in memory as Memoryblock.

90.25.53 Constants

90.25.54 ICReturnCommunicationTimedOut = -9923

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Communication between different components of Image Capture timed out.

90.25.55 ICReturnDeleteFilesCanceled = -9942

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A request to delete files was canceled.

90.25.56 ICReturnDeleteFilesFailed = -9941

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A request to delete files failed.

90.25.57 ICReturnDeviceFailedToCloseSession = -9928

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to close a session on a specified device.

90.25.58 ICReturnDeviceFailedToOpenSession = -9927

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to open a session on a specified device.

90.25.59 ICReturnDeviceFailedToTakePicture = -9944

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to take a tethered-capture picture on a camera device.

90.25.60 ICReturnDeviceIsPasscodeLocked = -9943

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: The device is locked with a passcode. Its contents cannot be seen unless it is unlocked.

90.25.61 ICReturnDeviceSoftwareInstallationCanceled = -9948

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Software installation for the device has been canceled.

90.25.62 ICReturnDeviceSoftwareInstallationCompleted = -9947

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Software installation for the device has completed successfully.

90.25.63 ICReturnDeviceSoftwareInstallationFailed = -9949

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Software installation for the device failed.

90.25.64 ICReturnDeviceSoftwareIsBeingInstalled = -9946

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to open session because software to communicate with the device is being installed.

90.25.65 ICReturnDeviceSoftwareNotAvailable = -9950

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Software for the device is not available from Apple.

90.25.66 ICReturnDeviceSoftwareNotInstalled = -9945

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to open session because software to communicate with the device is not installed.

90.25.67 ICReturnDownloadCanceled = -9937

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A download operation was canceled.

90.25.68 ICReturnDownloadFailed = -9934

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A non-specific error occurred while downloading a file.

90.25.69 ICReturnFailedToCompletePassThroughCommand = -9936

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to complete a pass-through (e.g., PTP pass-through) command.

90.25.70 ICReturnFailedToCompleteSendMessageRequest = -9940

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A request to send a event to a device failed.

90.25.71 ICReturnFailedToDisabeTethering = -9939

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to disable tethered-capture on a camera device.

90.25.72 ICReturnFailedToEnabeTethering = -9938

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to enable tethered-capture on a camera device.

90.25.73 ICReturnInvalidParam = -9922

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: An invalid parameter was found.

90.25.74 ICReturnReceivedUnsolicitedScannerErrorInfo = -9933

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: An unsolicited error information was received from a scanner.

90.25.75 ICReturnReceivedUnsolicitedScannerStatusInfo = -9932

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: An unsolicited status information was received from a scanner.

90.25.76 ICReturnScannerFailedToCompleteOverviewScan = -9930

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Overview scan operation failed to complete on the specified scanner.

90.25.77 ICReturnScannerFailedToCompleteScan = -9931

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Scan operation failed to complete on the specified scanner.

90.25.78 ICReturnScannerFailedToSelectFunctionalUnit = -9929

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Failed to select a functional unit on the specified scanner.

90.25.79 ICReturnScannerInUseByLocalUser = -9925

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Scanner is being used by a remote user.

90.25.80 ICReturnScannerInUseByRemoteUser = -9926

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Scanner is being used by a local user.

90.25.81 ICReturnScanOperationCanceled = -9924

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: The scan operation is canceled.

90.25.82 ICReturnSuccess = 0

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: Operation successful.

90.25.83 ICReturnUploadFailed = -9935

MBS AVFoundation Plugin, Plugin Version: 14.3. **Function:** One of the error constants.
Notes: A non-specific error occurred while updownloading a file.

90.26 class ImageCaptureMBS

90.26.1 class ImageCaptureMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The base class to start with image capture.
Example:

```
dim m as new ImageCaptureMBS
dim list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
dim dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
dim a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Deprecated: This item is deprecated and should no longer be used. You can use ICDeviceMBS instead.
Notes:

Deprecated. Please stop using this class soon.
On Mac OS X 10.8 some functions stop working as Apple does no longer provide 32 bit libraries.

90.26.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr2
- MBS Xojo / Real Studio Plugins, version 15.4pr5

90.26.3 Methods

90.26.4 DeviceList as ImageCaptureObjectMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the object with the device list.

Example:

```
dim m as new ImageCaptureMBS
dim list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
dim dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
dim a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Notes:

Returns nil on any error.
Lasterror is set.

90.26.5 ImportImage(flags as Integer) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Example:

```
dim m as new ImageCaptureMBS
dim flags as Integer = ImageCaptureObjectMBS.kICAAllowMultipleImages + ImageCaptureObjectMBS.kI-
CADownloadAndReturnPathArray

// do the import and allow all file types
dim files(-1) as string = m.ImportImage(flags)

for each path as string in files
// show path
MsgBox path

// open that picture file in preview
dim f as FolderItem = GetFolderItem(path, FolderItem.PathTypeShell)
```

f.Launch
next

Notes:

Use this method to allow the user to work a camera or a scanner.

The behavior:
(a) if no device is connected, a panel saying that there's no device connected is displayed,
(b) if a single device is connected, an appropriate user interface to access that device will be displayed,
(c) if several devices are connected, a device selector panel will be displayed.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.
See also:

- 90.26.6 ImportImage(flags as Integer, filetypes() as string) as string() 15603

90.26.6 ImportImage(flags as Integer, filetypes() as string) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Example:

```
dim m as new ImageCaptureMBS
dim flags as Integer = ImageCaptureObjectMBS.kICAAllowMultipleImages + ImageCaptureObjectMBS.kICADownloadAndReturnPathArray

// the file types we accept:
dim types(-1) as string

types.Append "tif"
```

```
types.Append "tiff"
types.Append "jpg"
types.Append "png"

dim files(-1) as string = m.ImportImage(flags, types)

for each path as string in files
// show path
MsgBox path

// open that picture file in preview
dim f as FolderItem = GetFolderItem(path, FolderItem.PathTypeShell)
f.Launch
next
```

Notes:

Use this method to allow the user to work a camera or a scanner.

The behavior:
(a) if no device is connected, a panel saying that there's no device connected is displayed,
(b) if a single device is connected, an appropriate user interface to access that device will be displayed,
(c) if several devices are connected, a device selector panel will be displayed.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

90.26.7 kICABluetoothAddressKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.8 kICABluetoothTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.9 kICADeviceBrowserDeviceRefKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.10 kICADeviceIconPathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.11 kICADeviceModulePathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.12 kICAErrorKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.13 kICAFireWireGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.14 kICAFireWireTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.15 kICAIOServicePathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.16 kICAIPAddressKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.17 kICAIPGUIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.18 kICAIPNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.19 kICANotificationClassKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.20 kICANotificationClassProprietary as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

90.26.21 kICANotificationClassPTPStandard as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

90.26.22 kICANotificationClassPTPVendor as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the notification classes.
Notes: A possible value for kICANotificationClassKey.

90.26.23 kICANotificationDataCookieKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.24 kICANotificationDataKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.25 kICANotificationDataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.26 kICANotificationDeviceICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.27 kICANotificationDeviceListICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.28 kICANotificationICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.29 kICANotificationImageBytesPerRowKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.30 kICANotificationImageDataKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.31 kICANotificationImageDataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.32 kICANotificationImageHeightKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.33 kICANotificationImageKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.34 kICANotificationImageNumberOfRowsKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.35 kICANotificationImageStartRowKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.36 kICANotificationImageWidthKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.37 kICANotificationNumerOfImagesRemainingKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.38 kICANotificationPercentDownloadedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.39 kICANotificationRawEventKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.40 kICANotificationScannerButtonTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.41 kICANotificationScannerDocumentNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.42 kICANotificationSubTypeDocumentLoaded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.43 kICANotificationSubTypeDocumentNotLoaded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.44 kICANotificationSubTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.45 kICANotificationSubTypePerformOverviewScan as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.46 kICANotificationSubTypeWarmUpDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.47 kICANotificationSubTypeWarmUpStarted as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.48 kICANotificationTypeCaptureComplete as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.49 kICANotificationTypeDeviceAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.50 kICANotificationTypeDeviceConnectionProgress as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.51 kICANotificationTypeDeviceInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.52 kICANotificationTypeDevicePropertyChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.53 kICANotificationTypeDeviceRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.54 kICANotificationTypeDeviceStatusError as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.55 kICANotificationTypeDeviceStatusInfo as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.56 kICANotificationTypeDeviceWasReset as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.57 kICANotificationTypeDownloadProgressStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.58 kICANotificationTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.
Notes: The type of notification. See kICANotificationType* constants.

90.26.59 kICANotificationTypeObjectAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.60 kICANotificationTypeObjectInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.61 kICANotificationTypeObjectRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.62 kICANotificationTypeProprietary as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.63 kICANotificationTypeRequestObjectTransfer as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.64 kICANotificationTypeScannerButtonPressed as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.65 kICANotificationTypeScannerOverviewOverlayAvailable as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.66 kICANotificationTypeScannerPageDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.67 kICANotificationTypeScannerScanDone as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.68 kICANotificationTypeScannerSessionClosed as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.69 kICANotificationTypeScanProgressStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.70 kICANotificationTypeStoreAdded as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.71 kICANotificationTypeStoreFull as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.72 kICANotificationTypeStoreInfoChanged as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.73 kICANotificationTypeStoreRemoved as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.74 kICANotificationTypeTransactionCanceled as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.75 kICANotificationTypeUnreportedStatus as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification types for the notification event.

90.26.76 kICANotificationVendorErrorCodeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.77 kICARefconKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the notification dictionary.

90.26.78 kICASCSITransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.79 kICATCPIPTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.80 kICATransportTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.81 kICATWAINDSPathKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.82 kICATWAINTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.83 kICAUSBLocationIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the parameter dictionary for LoadDeviceModule.

90.26.84 kICAUSBTransportType as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the transport type constants.

90.26.85 kICAUserAssignedDeviceNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the device properties keys.
Notes: This key may be present in the property dictionary of a device if the device has a user-assigned name.

90.26.86 LoadDeviceModule(params as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Loads a device module.
Notes:

Typically, connecting a FireWire or an USB device will automatically load an appropriate device module. This API is needed only for loading a device module manually for devices that do not use a hot-plug interface, such as Bluetooth, SCSI, or TCP/IP.

Legal Key-Value pairs for populating paramDictionary:

Lasterror is set.

90.26.87 RegisterForEventNotification(objectOfInterest as ImageCaptureObjectMBS, eventsOfInterest() as string, options as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Register with Image Capture framework to receive notification about events of interest.

Key	Value	Comment
kICADeviceModulePathKey	String	Path to the device module bundle that needs to be launched.
kICATransportTypeKey	String	Should be one of the six predifined transport types.
kICABluetoothAddressKey	String	Bluetooth device address string formatted as "00-11-22-33-44-55".
kICAUSBLocationIDKey	Number (integer)	32 bit USB location ID.
kICAFireWireGUIDKey	Number (Int64)	64 bit FireWire GUID.
kICAIOServicePathKey	String	IO service path to the device obtained from the IO registry.
kICAIPAddressKey	String	IP address of the device. This can be a host address ("camera.apple.com"), ipv4 address ('192.168.123.10") or ipv6 address ("3ff3:0000:0000:0000:0123:4567:89ab:cdef")
kICAIPPortKey	Number (integer)	IP port number of the device.
kICAIPNameKey	String	Human readable device name.
kICAIPGUIDKey	String	16 byte GUID string of the device formatted as "01234567-89ab-cdef-0123-456789abcdef".
kICATWAINDSPathKey	String	Path to TWAIN DS bundle.

90.26.88 SendNotification(notificationDictionary as dictionary) as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sends notification.
Notes:

Returns the reply code.
Lasterror is set.

90.26.89 SendNotificationAndWaitForReply(notificationDictionary as dictionary) as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sends notification and wait for reply.
Notes:

Returns the reply code.
Lasterror is set.

90.26.90 ShowDeviceBrowser

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Displays a device browser user interface from any Image Capture client application.
Notes:

The device browser user interface allows the user to do the following:

- enable and disable sharing of locally connected cameras and scanners.
- connect to or disconnect from cameras and scanners shared by other computers.

- configure WiFi capable cameras for use over the WiFi network.

Lasterror is set.

90.26.91 UnloadDeviceModule(deviceObject as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Unloads a device module.
Notes:

The device module providing this object will be unloaded, if this is the last device object provided by the device module.
Lasterror is set.

90.26.92 Properties

90.26.93 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last function used.
Notes:

Value is 0 if the function was successfull, -1 if the function is not available, one of the following values or a Mac OS error code:

Possible values:

kICACommunicationErr = -9900
kICADeviceNotFoundErr = -9901
kICADeviceNotOpenErr = -9902
kICAFileCorruptedErr = -9903
kICAIOPendingErr = -9904
kICAInvalidObjectErr = -9905
kICAInvalidPropertyErr = -9906
kICAIndexOutOfRangeErr = -9907
kICAPropertyTypeNotFoundErr = -9908
kICACannotYieldDevice = -9909
kICADataTypeNotFoundErr = -9910
kICADeviceMemoryAllocationErr = -9911
kICADeviceInternalErr = -9912
kICADeviceInvalidParamErr = -9913
kICADeviceAlreadyOpenErr = -9914
kICADeviceLocationIDNotFoundErr = -9915

kICADeviceGUIDNotFoundErr = -9916
kICADeviceIOServicePathNotFoundErr = -9917
kICADeviceUnsupportedErr = -9918
kICAFrameworkInternalErr = -9919
kICAExtensionInternalErr = -9920
kICAInvalidSessionErr = -9921
(Read and Write property)

90.26.94 Events

90.26.95 Notification(notificationType as string, notificationDictionary as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called for all events coming from Image Capture.
Notes:

Use RegisterForEventNotification to register for events.

The Image Capture notification event will be called with a notificationDictionary that may contain one or more key-value pairs as defined below:

Key	Value Type	Comments
kICANotificationICAObjectKey	Number	An object associated with the notification.
kICANotificationDeviceICAObjectKey	Number	A device object associated with the notification.
kICANotificationClassKey	String	See below.
kICANotificationTypeKey	String	See below.
kICANotificationRawEventKey	Number	The unprocesssed event code sent by a device.
kICANotificationDataKey	Data String	Data associated with the event.
kICANotificationDataSizeKey	Number	Size of data associated with the event. This is used if the data is not sent with the notification. [Needed for backward compatiblity with pre-Leopard device modules] .
kICANotificationDataCookieKey	Number	A token identifying the data associated with this event. This data can be retrieved by calling SendMessage with messageType set to kICAMessageGetEventData, dataType set to value of kICANotificationDataCookieKeyand dataSize set to value of kICANotificationDataSizeKey.

The following keys are present if the value of kICANotificationDataKey represents image data. The values of these keys are Numbers representing the width, height, bytes per row, start row, and number of rows of the image:

kICANotificationImageKey	Dictionary	A dictionary that describes an Image associated with the notification.
kICANotificationImageDataKey	Data String	Image data
kICANotificationImageWidthKey	Number	Image width in pixels
kICANotificationImageHeightKey	Number	Image height in pixels
kICANotificationImageBytesPerRowKey	Number	Bytes per row in image
kICANotificationImageStartRowKey	Number	Starting row number of the image.
kICANotificationImageNumberOfRowsKey	Number	Number of rows of image data sent in this notification.

90.27 class ImageCaptureObjectMBS

90.27.1 class ImageCaptureObjectMBS

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An image capture object.
Deprecated: This item is deprecated and should no longer be used. You can use ICDeviceMBS instead.

90.27.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr2

90.27.3 Methods

90.27.4 CloseSession

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Close a session on a camera device.
Notes:

Lasterror is set.
For a scanner device use the ScannerCloseSession.

90.27.5 Constructor

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new image capture object.
See also:

- 90.27.6 Constructor(handle as Integer) 15621

90.27.6 Constructor(handle as Integer)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new image capture object with the given handle.
See also:

- 90.27.5 Constructor 15621

90.27.7 CopyData(startByte as int64, requestedSize as int64) as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get a copy of data associated with a file object.
Example:

```
dim o as ImageCaptureObjectMBS // your object pointing to an image file.

dim d2 as Dictionary = o.PropertyDictionary
dim size as Integer = d2.Value(o.kICAPropertyImageSize)

dim data as string = o.CopyData(0, size)

if lenb(data)>0 then
// you got the data, now process it.
end if
```

Notes:

startByte: Starting byte offset of the data in the file object.
requestedSize: Requested data size in bytes.

If you want to get all bytes of an object, pass startByte = 0 and requestedSize = filesize.
Lasterror is set.

90.27.8 CopyThumbnail(format as string) as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get a thumbnail associated with an object.
Notes:

This is the recommended way to get the thumbnail of an object.

Use the constants for the format: kICAThumbnailFormatJPEG, kICAThumbnailFormatTIFF or kICAThumbnailFormatPNG
Lasterror is set.

90.27.9 DownloadFile(dir as folderitem, flags as Integer, MacType as string, MacCreator as string, angle as Double) as folderitem

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Downloads a file to disk.

Notes:

This API is a convenient way to download a file to disk. To receive the image data in memory use CopyObjectData.

Constants for flags:

kDeleteAfterDownload	= 1	Delete file after a successful download.
kCreateCustomIcon	= 2	Create a custom icon for Finder.
kAddMetaDataToFinderComment	= 4	Add basic metadata to finder comment field.
kAdjustCreationDate	= 8	Set creation date of the downloaded file same as the creation date for the file as reported by the device.
kSetFileTypeAndCreator	= & h10	Set 4-char file type and creator code.
kEmbedColorSyncProfile	= & h20	Embed ColorSync profile to the image if one was not already embedded.
kRotateImage	= & h40	Rotate the image.
kDontEmbedColorSyncProfile	= & h80	Do not embed ColorSync profile to the image.

Lasterror is set.

90.27.10 ImportImage(flags as Integer) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Notes:

Use this method to allow the user to work a camera or a scanner.
The ImageCaptureObjectMBS object you use for this call, should point to a camera or scanner device.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.
See also:

- 90.27.11 ImportImage(flags as Integer, filetypes() as string) as string() 15624

90.27.11 ImportImage(flags as Integer, filetypes() as string) as string()

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This method displays a Common User Interface panel similar to the user interface of Image Capture Application.
Notes:

Use this method to allow the user to work a camera or a scanner.
The ImageCaptureObjectMBS object you use for this call, should point to a camera or scanner device.

filetypes: Optional an array of file extension strings such as "jpg", "tif", etc., that are of interest to the calling application. If no array is provided, all files are displayed.

Flag values that can be used in ImportImage:

kICAAllowMultipleImages	= 1	Use this constant to allow users to select multiple images in the Import Image dialog.
kICADownloadAndReturnPathArray	= 2	Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

Returns an array of Strings for the imported images if the kICADownloadAndReturnPathArray flag is not specified. Otherwise returns an array of Strings holding the paths of the images that are downloaded.
See also:

- 90.27.10 ImportImage(flags as Integer) as string() 15623

90.27.12 kICABonjourServiceNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.13 kICABonjourServiceTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.14 kICABonjourTXTRecordKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.15 kICACreationDateStringKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.16 kICADataPropertyKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.17 kICADataSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.18 kICADataTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.19 kICADeviceCapabilitiesKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.20 kICADevicePropArtist as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.21 kICADevicePropBatteryLevel as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.22 kICADevicePropBurstInterval as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.23 kICADevicePropBurstNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.24 kICADevicePropCaptureDelay as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.25 kICADevicePropCompressionSetting as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.26 kICADevicePropContrast as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.27 kICADevicePropCopyrightInfo as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.28 kICADevicePropDateTime as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.29 kICADevicePropDigitalZoom as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.30 kICADevicePropEffectMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.31 kICADevicePropExposureBiasCompensation as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.32 kICADevicePropExposureIndex as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.33 kICADevicePropExposureMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.34 kICADevicePropExposureProgramMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.35 kICADevicePropExposureTime as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.36 kICADevicePropFlashMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.37 kICADevicePropFNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.38 kICADevicePropFocalLength as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.39 kICADevicePropFocusDistance as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.40 kICADevicePropFocusMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.41 kICADevicePropFocusMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.42 kICADevicePropFunctionalMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.43 kICADevicePropImageSize as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.44 kICADevicePropRGBGain as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.45 kICADevicePropSharpness as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.46 kICADevicePropStillCaptureMode as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.47 kICADevicePropTimelapseInterval as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.48 kICADevicePropTimelapseNumber as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.49 kICADevicePropUndefined as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.50 kICADevicePropUploadURL as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.51 kICADevicePropWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the device properties.

90.27.52 kICADevicesArrayKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.
Example:

```
dim m as new ImageCaptureMBS
dim list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
dim dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
dim a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

90.27.53 kICADeviceSharedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.54 kICADeviceTypeCamera as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the device type constants.

90.27.55 kICADeviceTypeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.56 kICADeviceTypeScanner as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the device type constants.

90.27.57 kICADeviceUsedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.58 kICADeviceWebSharedKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.59 kICAExecutableArchitectureKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.60 kICALockStatusKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.61 kICAMediaDurationInSecondsKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.62 kICAMediaHeightKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.
Notes: Value for this key in the dictionary is a number.

90.27.63 kICAMediaWidthKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.
Notes: Value for this key in the dictionary is a number.

90.27.64 kICAModificationDateStringKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.65 kICAObjectKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.

90.27.66 kICAObjectNameKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.

90.27.67 kICARawKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.68 kICARemoteDeviceKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.69 kICAThumbnailPropertyKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.70 kICAThumbnailSizeKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.71 kICAUSBProductIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.

90.27.72 kICAUSBVendorIDKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the property keys for a device.

90.27.73 kMetaDataDictionaryKey as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the keys in the dictionaries.

90.27.74 OpenSession(device as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Opens a session on a camera device.
Notes:

Lasterror is set.
For a scanner device use the ScannerOpenSession method.

90.27.75 PropertyDictionary as dictionary

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get a dictionary containing all the properties for an object specified.
Example:

```
dim m as new ImageCaptureMBS
dim list as ImageCaptureObjectMBS = m.DeviceList

if List<>Nil then
// look into properties
dim dic as Dictionary = list.PropertyDictionary

// take the devices array there
if dic<>Nil and dic.HasKey(ImageCaptureObjectMBS.kICADevicesArrayKey) then
dim a(-1) as Variant = dic.Value(ImageCaptureObjectMBS.kICADevicesArrayKey)

// display device name
for each properties as Dictionary in a
MsgBox Properties.Value("ifil")
next
end if
end if
```

Notes: Lasterror is set.

90.27.76 PropertyDictionaryText as string

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Get a dictionary containing all the properties for an object specified.
Example:

```
dim m as new ImageCaptureMBS
dim list as ImageCaptureObjectMBS = m.DeviceList
```

```
if List<>Nil then
MsgBox List.PropertyDictionaryText
end if
```

Notes:

Lasterror is set.
This is for debugging and may be removed soon.
The format of the text is the plist file format.

90.27.77 ScannerCloseSession

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Closes a session on a scanner device.
Notes:

Lasterror is set.
For a camera device use the CloseSession method.

90.27.78 ScannerGetParameters as dictionary

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Query scanner parameters.
Notes:

Use this method to get information about the scanner such as resolution, scanning area, etc.
Lasterror is set.

90.27.79 ScannerInitialize

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a scanner device.
Notes: Lasterror is set.

90.27.80 ScannerOpenSession(device as ImageCaptureObjectMBS)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Opens a session on a scanner device.

Notes:

Lasterror is set.
For a camera device use the OpenSession method.

90.27.81 ScannerSetParameters(dic as dictionary)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Configures a scanner.
Notes:

Use this method to specify scan parameters that will be used when a scan is initiated via ScannerStart.
Lasterror is set.

90.27.82 ScannerStart

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Starts scanning.
Notes:

Use this method to start a scan based on the parameters that were specified in a previous ScannerSetParameters call.
Lasterror is set.

90.27.83 ScannerStatus as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the scanner status.
Notes: Lasterror is set.

90.27.84 SendMessageMemory(messageType as string, startByte as UInt32, data as memoryblock, dataType as string) as UInt32

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sends a message to a device object.
Notes:

Use this API to send a message to a device object. All devices do not respond to all the messages defined above.

messageType: A message type. e.g., kICAMessageCameraCaptureNewImage.
startByte: Offset in dataPtr from where data access for read/write should occur.
data: The data to send.
dataType: Data type.

Lasterror is set.
Retruns the result from this message.

90.27.85 SendMessageString(messageType as string, startByte as UInt32, data as string, dataType as string) as UInt32

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sends a message to a device object.
Notes:

Use this API to send a message to a device object. All devices do not respond to all the messages defined above.

messageType: A message type. e.g., kICAMessageCameraCaptureNewImage.
startByte: Offset in dataPtr from where data access for read/write should occur.
data: The data to send.
dataType: Data type.

Lasterror is set.
Retruns the result from this message.

90.27.86 UploadFile(file as folderitem, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Uploads a file to a device that supports this capability.
Notes:

The device choses an appropriate destination location for the uploaded image and sends a kICANotificationTypeObjectAdded notification.
Lasterror is set.

Flag values that can be used in UploadFile:

kICAUploadFileAsIs	Use this constant to upload a file as is.
kICAUploadFileScaleToFit	Use this constant to upload a file after scaling to fit a specified bounding rect.

90.27.87 Properties

90.27.88 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

90.27.89 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The error code from the last function used.
Notes:

Value is 0 if the function was successfull, -1 if the function is not available, one of the following values or a Mac OS error code:

Possible values:

kICACommunicationErr = -9900
kICADeviceNotFoundErr = -9901
kICADeviceNotOpenErr = -9902
kICAFileCorruptedErr = -9903
kICAIOPendingErr = -9904
kICAInvalidObjectErr = -9905
kICAInvalidPropertyErr = -9906
kICAIndexOutOfRangeErr = -9907
kICAPropertyTypeNotFoundErr = -9908
kICACannotYieldDevice = -9909
kICADataTypeNotFoundErr = -9910
kICADeviceMemoryAllocationErr = -9911
kICADeviceInternalErr = -9912
kICADeviceInvalidParamErr = -9913
kICADeviceAlreadyOpenErr = -9914
kICADeviceLocationIDNotFoundErr = -9915
kICADeviceGUIDNotFoundErr = -9916
kICADeviceIOServicePathNotFoundErr = -9917
kICADeviceUnsupportedErr = -9918
kICAFrameworkInternalErr = -9919
kICAExtensionInternalErr = -9920
kICAInvalidSessionErr = -9921
(Read and Write property)

90.27.90 ScannerSessionHandle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for a scanner session.
Notes:

Lasterror is set.
(Read and Write property)

90.27.91 SessionHandle as Integer

MBS MacOSX Plugin, Plugin Version: 10.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The handle for the session.
Notes: (Read and Write property)

90.27.92 Constants

90.27.93 kAddMetaDataToFinderComment = 4

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Add basic metadata to finder comment field.

90.27.94 kAdjustCreationDate = 8

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Set creation date of the downloaded file same as the creation date for the file as reported by the device.

90.27.95 kCreateCustomIcon = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Create a custom icon for Finder.

90.27.96 kDeleteAfterDownload = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Delete file after a successful download.

90.27.97 kDontEmbedColorSyncProfile = & h80

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Do not embed ColorSync profile to the image.

90.27.98 kEmbedColorSyncProfile = & h20

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Embed ColorSync profile to the image if one was not already embedded.

90.27.99 kICAAccessReadOnly = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraAccessCapability.
Notes: Read-only without object deletion.

90.27.100 kICAAccessReadOnlyWithObjectDeletion = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraAccessCapability.
Notes: Read-only with object deletion.

90.27.101 kICAAccessReadWrite = 0

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraAccessCapability.
Notes: Read-write.

90.27.102 kICAAllowMultipleImages = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for ImportImage.
Notes:

Use this constant to allow users to select multiple images in the Import Image dialog.

Seems like Image Capture in Mac OS X 10.6 ignores this flag and allows multiple images always.

90.27.103 kICAButtonCopy = "copy"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for scanner buttons. **Notes:** Copy button.

90.27.104 kICAButtonEMail = "mail"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for scanner buttons. **Notes:** Email button.

90.27.105 kICAButtonScan = "scan"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for scanner buttons. **Notes:** Scan button.

90.27.106 kICAButtonWeb = "web "

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for scanner buttons.
Notes: Web button.

90.27.107 kICACameraPassThruNotUsed = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants associated with Image Capture PassThru commands.
Notes: Use this constant when using a pass-through command that doesn't involve sending or receiving data.

90.27.108 kICACameraPassThruReceive = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants associated with Image Capture PassThru commands.
Notes: Use this constant when receiving data from a device using a pass-through command.

90.27.109 kICACameraPassThruSend = 0

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants associated with Image Capture PassThru commands.
Notes: Use this constant when sending data to a device using a pass-through command.

90.27.110 kICACannotYieldDevice = -9909

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: The device module cannot yield the specified device to the requestor.

90.27.111 kICACapabilityCanCameraCaptureNewImage = "ccni"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.
Notes: Can capture a new image using the camera.

90.27.112 kICACapabilityCanCameraDeleteAll = "dela"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.
Notes: Can delete all images stored in the camera.

90.27.113 kICACapabilityCanCameraDeleteOne = "del1"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.
Notes: Can delete one image stored in the camera.

90.27.114 kICACapabilityCanCameraSyncClock = "sclk"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.
Notes: Can synchronize camera's clock with the computer's clock.

90.27.115 kICACapabilityCanCameraUploadData = "load"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.
Notes: Can upload data to the camera.

90.27.116 kICACapabilityMayStoreNewImagesInTempStore = "temp"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera capabilities constants.

90.27.117 kICACommunicationErr = -9900

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: An error occurred in communication between different components of Image Capture framework.

90.27.118 kICADataTypeNotFoundErr = -9910

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: Data with the specified data type is not found.

90.27.119 kICADevice = "icdv"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a device supported by Image Capture framework.

90.27.120 kICADeviceAlreadyOpenErr = -9914

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified device is already open.

90.27.121 kICADeviceCamera = "cmra"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a camera.

90.27.122 kICADeviceGUIDNotFoundErr = -9916

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified FireWire GUID is not found.

90.27.123 kICADeviceInternalErr = -9912

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The device module encountered an unspecifed error.

90.27.124 kICADeviceInvalidParamErr = -9913

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** At least one of the parameters passed to the device module is invalid.

90.27.125 kICADeviceIOServicePathNotFoundErr = -9917

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified IOService path is not found.

90.27.126 kICADeviceLocationIDNotFoundErr = -9915

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified USB Location ID is not found.

90.27.127 kICADeviceMemoryAllocationErr = -9911

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The device module encountered a memory allocation error.

90.27.128 kICADeviceMFP = "mfp "

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a multi-function peripheral.

90.27.129 kICADeviceNotFoundErr = -9901

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified device is not found.

90.27.130 kICADeviceNotOpenErr = -9902

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** The specified device is not open.

90.27.131 kICADeviceOther = "doth"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a device supported by Image Capture framework, but of unknown subtype.

90.27.132 kICADevicePDA = "pda "

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a personal digital assistant.

90.27.133 kICADevicePhone = "phon"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a camera phone.

90.27.134 kICADeviceScanner = "scan"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a scanner.

90.27.135 kICADeviceUnsupportedErr = -9918

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** Device not supported.

90.27.136 kICADirectory = "dire"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a directory.

90.27.137 kICADownloadAndReturnPathArray = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for ImportImage. **Example:**

```
dim m as new ImageCaptureMBS
dim flags as Integer = ImageCaptureObjectMBS.kICAAllowMultipleImages + ImageCaptureObjectMBS.kI-
CADownloadAndReturnPathArray

// do the import and allow all file types
dim files(-1) as string = m.ImportImage(flags)

for each path as string in files
// open that picture file in preview
dim f as FolderItem = GetFolderItem(path, FolderItem.PathTypeShell)
f.Launch
next
```

Notes: Use this constant to download the images to a temporary location and return an array of paths to the downloaded images.

90.27.138 kICAExtensionInternalErr = -9920

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** Image Capture Extension encountered an error.

90.27.139 kICAFile = "file"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a file.

90.27.140 kICAFileAudio = "audo"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is an audio file.

90.27.141 kICAFileCorruptedErr = -9903

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** Encountered a corrupt file.

90.27.142 kICAFileFirmware = "firm"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a firmware file.

90.27.143 kICAFileImage = "imag"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is an image file.

90.27.144 kICAFileMovie = "moov"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants.
Notes: Object is a movie file.

90.27.145 kICAFileOther = "othe"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants.
Notes: Object is a generic file.

90.27.146 kICAFileystemDCF = 3

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants values for kICAPropertyCameraFilesystemType.
Notes: DCF-conformant.

90.27.147 kICAFileystemGenericFlat = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants values for kICAPropertyCameraFilesystemType.
Notes: Generic flat.

90.27.148 kICAFileystemGenericHierarchical = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants values for kICAPropertyCameraFilesystemType.
Notes: Generic hierarchical.

90.27.149 kICAFileystemUndefined = 0

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants values for kICAPropertyCameraFilesystemType.
Notes: Undefined.

90.27.150 kICAFlagReadAccess = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** Constants for the property info.
Notes: Access for read only.

90.27.151 kICAFlagReadWriteAccess = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** Constants for the property info.
Notes: Access for read and write.

90.27.152 kICAFrameworkInternalErr = -9919

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: Image Capture Framework encountered an error.

90.27.153 kICAIndexOutOfRangeErr = -9907

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: The specified index is out of range.

90.27.154 kICAInvalidObjectErr = -9905

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: The specified object is invalid.

90.27.155 kICAInvalidPropertyErr = -9906

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: The specified property is invalid.

90.27.156 kICAInvalidSessionErr = -9921

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: The specified session is not valid.

90.27.157 kICAIOPendingErr = -9904

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants. **Notes:** There is a pending I/O.

90.27.158 kICAList = "objl"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the object types and subtypes constants. **Notes:** Object is a device list.

90.27.159 kICAMessageCameraCaptureNewImage = "ccni"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants. **Notes:** Capture a new image using the camera.

90.27.160 kICAMessageCameraDeleteAll = "dela"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants. **Notes:** Delete all images stored in the camera.

90.27.161 kICAMessageCameraDeleteOne = "del1"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants. **Notes:** Delete one image stored in the camera.

90.27.162 kICAMessageCameraPassThrough = "pass"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants.

90.27.163 kICAMessageCameraReadClock = "rclk"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants. **Notes:** Read clock from device.

90.27.164 kICAMessageCameraSyncClock = "sclk"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants.
Notes: Synchronize camera's clock with the computer's clock.

90.27.165 kICAMessageCameraUploadData = "load"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the Camera message constants.
Notes: Upload data to the camera.

90.27.166 kICAMessageCheckDevice = "chkd"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.

90.27.167 kICAMessageConnect = "open"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Connect to device.

90.27.168 kICAMessageDeviceYield = "yiel"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Yield device. Image Capture framework yields a device so that the sender of the message can directly communicate with the device.

90.27.169 kICAMessageDisconnect = "clos"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Disconnect device.

90.27.170 kICAMessageGetEventData = "mged"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Get data associated with an event.

90.27.171 kICAMessageGetLastButtonPressed = "btn?"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Get last button pressed on the device (scanner).

90.27.172 kICAMessageReset = "rese"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.
Notes: Reset device.

90.27.173 kICAMessageScannerOverviewSelectionChanged = "area"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the message constants.

90.27.174 kICAProperty = "prop"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary.
Notes: Generic property type; for images, refer to 'Digital Still Camera Image File Format Standard' Exif Version 2.1 section 2.6.4. and 2.6.5.

90.27.175 kICAPropertyCameraAccessCapability = "acap"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Access capability. Data type: UInt16.

90.27.176 kICAPropertyCameraArtist = "501E"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Artist. Property data type: string; Property desc forms: none.

90.27.177 kICAPropertyCameraBatteryLevel = "5001"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.

Notes: Battery level. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.178 kICAPropertyCameraBurstInterval = "5019"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Burst interval. Property data type: UInt16; Property desc forms: Enum/Range.

90.27.179 kICAPropertyCameraBurstNumber = "5018"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Burst number. Property data type: UInt16; Property desc forms: Enum/Range.

90.27.180 kICAPropertyCameraCaptureDelay = "5012"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Capture delay. Property data type: UInt32; Property desc forms: Enum/Range.

90.27.181 kICAPropertyCameraCompressionSetting = "5004"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Compression setting. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.182 kICAPropertyCameraContrast = "5014"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Contrast. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.183 kICAPropertyCameraCopyrightInfo = "501F"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.

Notes: Copyright info. Property data type: string; Property desc forms: none.

90.27.184 kICAPropertyCameraDateTime = "5011"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Date & time. Property data type: string; Property desc forms: none.

90.27.185 kICAPropertyCameraDigitalZoom = "5016"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Digital zoom. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.186 kICAPropertyCameraEffectMode = "5017"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Effect mode. Property data type: UInt16; Property desc forms: Enum.

90.27.187 kICAPropertyCameraExposureBiasCompensation = "5010"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Exposure bias compensation. Property data type: UInt16; Property desc forms: Enum/Range.

90.27.188 kICAPropertyCameraExposureIndex = "500F"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Exposure index. Property data type: UInt16; Property desc forms: Enum/Range.

90.27.189 kICAPropertyCameraExposureMeteringMode = "500B"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.

Notes: Exposure Metering mode. Property data type: UInt16; Property desc forms: Enum.

90.27.190 kICAPropertyCameraExposureProgramMode = "500E"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Exposure program mode. Property data type: UInt16; Property desc forms: Enum.

90.27.191 kICAPropertyCameraExposureTime = "500D"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Exposure time. Property data type: UInt32; Property desc forms: Enum/Range.

90.27.192 kICAPropertyCameraFilesystemType = "fsys"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: File system type. Data type: UInt16.

90.27.193 kICAPropertyCameraFlashMode = "500C"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Flash mode. Property data type: UInt16; Property desc forms: Enum.

90.27.194 kICAPropertyCameraFNumber = "5007"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: F-number. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.195 kICAPropertyCameraFocalLength = "5008"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.

Notes: Focal length. Property data type: UInt32; Property desc forms: Enum/Range.

90.27.196 kICAPropertyCameraFocusDistance = "5009"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Focus distance. Property data type: UInt16; Property desc forms: Enum.

90.27.197 kICAPropertyCameraFocusMeteringMode = "501C"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Focus metering mode. Property data type: UInt16; Property desc forms: Enum.

90.27.198 kICAPropertyCameraFocusMode = "500A"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Focus mode. Property data type: UInt16; Property desc forms: Enum.

90.27.199 kICAPropertyCameraFreeSpaceInBytes = "fres"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Free space available on storage in bytes. Data type: UInt64.

90.27.200 kICAPropertyCameraFreeSpaceInImages = "frei"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Number of images that may still be captured in to this store based on the current image capture settings on the camera. Data type: UInt32.

90.27.201 kICAPropertyCameraFunctionalMode = "5002"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Functional mode. Property data type: UInt16; Property desc forms: Enum.

90.27.202 kICAPropertyCameraIcon = "icon"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for camera specific constants.
Notes: Camera icon in ICAThumbnail format.

90.27.203 kICAPropertyCameraImageSize = "5003"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Image size. Property data type: CFString; Property desc forms: Enum/Range.

90.27.204 kICAPropertyCameraMaxCapacity = "maxc"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Total storage capacity in bytes. Data type: UInt64.

90.27.205 kICAPropertyCameraRGBGain = "5006"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: RGB gain. Property data type: string; Property desc forms: Enum/Range.

90.27.206 kICAPropertyCameraSharpness = "5015"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Sharpness. Property data type: UInt8; Property desc forms: Enum/Range.

90.27.207 kICAPropertyCameraStillCaptureMode = "5013"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Still capture mode. Property data type: UInt16; Property desc forms: Enum.

90.27.208 kICAPropertyCameraStorageDescription = "stod"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Storage description. Data type: string.

90.27.209 kICAPropertyCameraStorageType = "stor"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Storage type. Data type: UInt16.

90.27.210 kICAPropertyCameraSupportedMessages = "msgs"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constants for camera specific constants.
Notes: Messages supported/understood by the camera.

90.27.211 kICAPropertyCameraTimelapseInterval = "501B"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Timelapse interval. Property data type: UInt32; Property desc forms: Enum/Range.

90.27.212 kICAPropertyCameraTimelapseNumber = "501A"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Timelapse number. Property data type: UInt16; Property desc forms: Enum/Range.

90.27.213 kICAPropertyCameraUploadURL = "501D"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Upload URL. Property data type: string; Property desc forms: none.

90.27.214 kICAPropertyCameraVolumeLabel = "voll"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: Volume label. Data type: string.

90.27.215 kICAPropertyCameraWhiteBalance = "5005"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant for Standard camera properties.
Notes: White balance. Property data type: UInt16; Property desc forms: Enum.

90.27.216 kICAPropertyColorSpace = "A001"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary.
Notes: Color space used to represent an image.

90.27.217 kICAPropertyColorSyncProfile = "prof"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary.
Notes: ColorSync profile associated with an image.

90.27.218 kICAPropertyImageAperture = "9202"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary.
Notes: Aperture used to capture an image.

90.27.219 kICAPropertyImageBitDepth = "0102"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Image bit-depth.

90.27.220 kICAPropertyImageData = "idat"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Data of an image.

90.27.221 kICAPropertyImageDateDigitized = "9004"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Digitized date & time of an object; value associated with this property is a null-terminated string conforming to format "YYYY:MM:DD hh:mm:ss".

90.27.222 kICAPropertyImageDateOriginal = "9003"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Original date & time of an object; value associated with this property is a null-terminated string conforming to format "YYYY:MM:DD hh:mm:ss".

90.27.223 kICAPropertyImageDPI = "011A"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Image DPI.

90.27.224 kICAPropertyImageExposureTime = "829A"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Image exposure time.

90.27.225 kICAPropertyImageFilename = "ifil"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Filename of an image.

90.27.226 kICAPropertyImageFlash = "9209"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Indicates whether flash was used to capture an image.

90.27.227 kICAPropertyImageFNumber = "829D"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Image f-Number.

90.27.228 kICAPropertyImageHeight = "0101"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Image height.

90.27.229 kICAPropertyImageShutterSpeed = "9201"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Shutter speed used to capture an image.

90.27.230 kICAPropertyImageSize = "isiz"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Size of an image in bytes.

90.27.231 kICAPropertyImageThumbnail = "thum"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary. **Notes:** Thumbnail of an image.

90.27.232 kICAPropertyImageWidth = "0100"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the keys for the properties dictionary.
Notes: Image width.

90.27.233 kICAPropertyTypeNotFoundErr = -9908

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the image capture specific error constants.
Notes: A property with the specified property type is not found.

90.27.234 kICAStorageFixedRAM = 3

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraStorageType.
Notes: Fixed RAM.

90.27.235 kICAStorageFixedROM = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraStorageType.
Notes: Fixed ROM.

90.27.236 kICAStorageRemovableRAM = 4

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraStorageType.
Notes: Removable RAM.

90.27.237 kICAStorageRemovableROM = 2

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraStorageType.
Notes: Removable ROM.

90.27.238 kICAStorageUndefined = 0

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the constant values for kICAPropertyCameraStorageType.
Notes: Undefined.

90.27.239 kICAThumbnailFormatJPEG = "jpeg"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the thumbnail format constants.
Notes: Use this constant to receive a thumbnail in JPEG format.

90.27.240 kICAThumbnailFormatPNG = "png "

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the thumbnail format constants.
Notes: Use this constant to receive a thumbnail in PNG format.

90.27.241 kICAThumbnailFormatTIFF = "tiff"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the thumbnail format constants.
Notes: Use this constant to receive a thumbnail in TIFF format.

90.27.242 kICATypeBoolean = "bool"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.
Notes: Boolean

90.27.243 kICATypeData = "data"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.

90.27.244 kICATypeFixed = "sing"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.
Notes: IEEE 32-bit floating point.

90.27.245 kICATypeFloat = "floa"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** float.

90.27.246 kICATypeSInt16 = "si16"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** SInt16.

90.27.247 kICATypeSInt32 = "si32"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** SInt32.

90.27.248 kICATypeSInt64 = "si64"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** SInt64.

90.27.249 kICATypeString = "TEXT"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** Char string.

90.27.250 kICATypeThumbnail = "thum"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** ICAThumbnail.

90.27.251 kICATypeUInt16 = "ui16"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants. **Notes:** UInt16.

90.27.252 kICATypeUInt32 = "ui32"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.
Notes: UInt32.

90.27.253 kICATypeUInt64 = "ui64"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.
Notes: UInt64.

90.27.254 kICATypeUInt8 = "ui08"

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the data type constants.
Notes: UInt8.

90.27.255 kICAUploadFileAsIs = 0

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for UploadFile.
Notes: Use this constant to upload a file as is.

90.27.256 kICAUploadFileScaleToFit = 1

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for UploadFile.
Notes: Use this constant to upload a file after scaling to fit a specified bounding rect.

90.27.257 kRotateImage = & h40

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Rotate the image.

90.27.258 kSetFileTypeAndCreator = & h10

MBS MacOSX Plugin, Plugin Version: 10.1. **Function:** One of the flag constants for DownloadFile.
Notes: Set 4-char file type and creator code.

90.28 class WIADataCallbackMBS

90.28.1 class WIADataCallbackMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Provides an application callback mechanism during data transfers from Windows Image Acquisition (WIA) hardware devices to applications.
Notes: Works on Windows 2000 Professional, Windows XP and Windows Server 2003.

90.28.2 Properties

90.28.3 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.28.4 Events

90.28.5 BandedDataCallback(message as Integer, Status as Integer, PercentComplete as Integer, Offset as Integer, Length as Integer, Buffer as memoryblock) as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Provides data transfer status notifications.
Notes:

Windows Image Acquisition (WIA) data transfer methods of the WiaDataTransfer interface periodically call this method.

Message: Specifies a constant that indicates the reason for the callback. Can be one of the kMessage* constants.
Status: Specifies a constant that indicates the status of the WIA device. Can be set to a combination of the kStatus* constants.
PercentComplete: Specifies the percentage of the total data that has been transferred so far.
Offset: Specifies an offset, in bytes, from the beginning of the buffer where the current band of data begins.
Length: Specifies the length, in bytes, of the current band of data.
Buffer: The data buffer.

Lasterror is set.

Your application must provide the BandedDataCallback event. This event is periodically invoked by the data transfer methods of the WiaDataTransferMBS interface. It provides status messages to the application during the data transfer. By returning false, your program can also use this method to prematurely terminate the data transfer.

When this method is invoked, the Message parameter will contain the reason for the call. Not all parameters will contain data on all calls. For example, when BandedDataCallback is invoked with a message of kMessageTermination, it should not attempt to use the values in the Buffer, Offset, and Length parameters.

If the value of Message is kMessageData, the buffer contains a band of image data. The Offset parameter contains an offset in bytes from the beginning of the buffer where the current band of data begins. The Length parameter specified the length in bytes of the current band of data.

During calls where Message is set to kMessageData or kMessageStatus, the Status parameter contains a valid value. Its contents should not be used when Message contains other values.

If Message is kMessageDataHeader, the Buffer parameter points to a WIA_DATA_CALLBACK_HEADER structure.

When an error has occurred during an image data transfer, the driver sets Message to IT_MSG_DEVICE_STATUS. The proxy callback object calls ReportStatus, which handles the error and displays messages to the user.

90.28.6 Constants

90.28.7 kMessageData = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The WIA system is transferring data to the application.

90.28.8 kMessageDataHeader = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The application is receiving a header prior to receiving the actual data.

90.28.9 kMessageFilePreviewData = 6

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The WIA system is transferring preview data to the application.

90.28.10 kMessageFilePreviewDataHeader = 7

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The application is receiving a header prior to receiving the actual preview data.

90.28.11 kMessageNewPage = 5

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The data transfer is beginning a new page.

90.28.12 kMessageStatus = 3

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: This invocation of the callback is sending only status information.

90.28.13 kMessageTermination = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the message parameter in the BandedDataCallback callback.
Notes: The data transfer is complete.

90.28.14 kStatusProcessingData = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the status parameter in the BandedDataCallback callback.
Notes: Data is currently being processed.

90.28.15 kStatusTransferFromDevice = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the status parameter in the BandedDataCallback callback.
Notes: Data is currently being transferred from the WIA device.

90.28.16 kStatusTransferToClient = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the status parameter in the BandedDataCallback callback.
Notes: Data is currently being transferred to the client's data buffer.

90.29 class WIADataTransferInfoMBS

90.29.1 class WIADataTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADataTransferInfoMBS class is used by applications to describe the buffer used to retrieve bands of data from Windows Image Acquisition (WIA) devices.
Notes: It is primarily used in conjunction with the methods of the IWiaDataTransfer interface.

90.29.2 Properties

90.29.3 BufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size in bytes of the buffer that is used for the data transfer.
Notes: (Read and Write property)

90.29.4 DoubleBuffer as Boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Contains true if the device is double buffered, false if the device is not double buffered.
Notes: (Read and Write property)

90.29.5 Section as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies an optional handle to a shared section of memory allocated by the application. If this member is set to nil, GetBandedData allocates the shared memory itself.
Notes: (Read and Write property)

90.29.6 Size as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Contains the size of this structure.
Notes: (Read and Write property)

90.30 class WIADataTransferMBS

90.30.1 class WIADataTransferMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADataTransferMBS interface is a high performance data transfer interface.
Notes:

This interface supports a shared memory window to transfer data from the device object to the application, and eliminates unnecessary data copies during marshalling. A callback mechanism is provided in the form of the WiaDataCallbackMBS interface. It enables applications to obtain data transfer status notification, transfer data from the Windows Image Acquisition (WIA) device to the application, and cancel pending data transfers.

For Windows Vista applications, use IWiaTransfer instead of IWiaDataTransfer.

90.30.2 Methods

90.30.3 EnumerateFormatInfo as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns an enumerator for the format information.
Notes: Lasterror is set.

90.30.4 GetBandedData(DataTransInfo as WIADataTransferInfoMBS, DataCallback as WIADataCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetBandedData method transfers a band of data from a hardware device to an application.
Notes:

For efficiency, applications retrieve data from Windows Image Acquisition (WIA) hardware devices in successive bands.
Lasterror is set.

90.30.5 GetDataFile(DataCallback as WIADataCallbackMBS) as folderitem

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetData method retrieves complete files from a Windows Image Acquisition (WIA) device.
Notes:

Lasterror is set.
Returns the folderitem for the new file. Copy or load the file as this temporary file is deleted as soon as the object is destroyed.

90.30.6 GetDataPath(DataCallback as WIADataCallbackMBS) as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetData method retrieves complete files from a Windows Image Acquisition (WIA) device.
Notes:

Lasterror is set.
Returns the folderitem for the new file. Copy or load the file as this temporary file is deleted as soon as the object is destroyed.

90.30.7 GetExtendedTransferInfo as WIAExtendedTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetExtendedTransferInfo retrieves extended information relating to data transfer buffers in the case of banded data transfers.
Notes:

Applications typically use this method to retrieve driver recommended settings for minimum buffer size, maximum buffer size, and optimal buffer size for banded data transfers.

Lasterror is set.

90.30.8 QueryGetData as WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The QueryGetData method is used by applications to query a Windows Image Acquisition (WIA) device to determine what types of data formats it supports.
Notes: Lasterror is set.

90.30.9 Properties

90.30.10 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.

Notes: (Read and Write property)

90.30.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.31 class WIADeviceCapabilitiesEnumeratorMBS

90.31.1 class WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADeviceCapabilitiesEnumeratorMBS class enumerates the currently available Windows Image Acquisition (WIA) hardware device capabilities.
Notes: Device capabilities include commands and events that the device supports.

90.31.2 Methods

90.31.3 Clone as WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a copy of the WIADeviceCapabilitiesEnumeratorMBS object.
Notes: Lasterror is set.

90.31.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of items in the enumeration.
Notes: Lasterror is set.

90.31.5 NextItem as WIADeviceCapabilitiesMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next item in the enumeration.
Notes: Lasterror is set.

90.31.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resets the enumeration.
Notes: Lasterror is set.

90.31.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips the given number of entries in the enumeration.
Notes: Lasterror is set.

90.31.8 Properties

90.31.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.31.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.32 class WIADeviceCapabilitiesMBS

90.32.1 class WIADeviceCapabilitiesMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for device capabilities.

90.32.2 Properties

90.32.3 Commandline as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a string that represents command line arguments.
Notes: (Read and Write property)

90.32.4 Description as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a string that contains a description of the capability that is displayed to the user.
Notes: (Read and Write property)

90.32.5 Flags as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Flags for this capability
Notes: (Read and Write property)

90.32.6 GUID as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a GUID that identifies the device capability.
Notes:

This member can be set to any of the values specified in WIAItemMBS constants for Device Commands (kCommand*) or WIA Event Identifiers (kEvent*).
(Read and Write property)

90.32.7 Icon as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a string that represents the location and resource ID of the icon that represents this capability or handler.
Notes:

The string must be of the following form: drive:\path\module,n, where n is the icon's negated resource ID (that is, if the resource ID of the icon is 100, then n is -100).
(Read and Write property)

90.32.8 Name as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies a string that contains a short version of the capability name.
Notes: (Read and Write property)

90.33 class WIADeviceInfoEnumeratorMBS

90.33.1 class WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADeviceInfoEnumeratorMBS class enumerates the currently available Windows Image Acquisition (WIA) hardware devices and their properties.
Notes: Device information properties describe the installation and configuration of WIA hardware devices.

90.33.2 Methods

90.33.3 Clone as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a copy of the enumerator.
Notes: Lasterror is set.

90.33.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of items in the enumeration.
Notes: Lasterror is set.

90.33.5 NextItem as WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next item in the enumeration.
Notes: Lasterror is set.

90.33.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resets the enumeration.
Notes: Lasterror is set.

90.33.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips the given number of entries in the enumeration.
Notes: Lasterror is set.

90.33.8 Properties

90.33.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.33.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.34 class WIADeviceManager1MBS

90.34.1 class WIADeviceManager1MBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADeviceManager1MBS interface is used to create and manage image acquisition devices and to register to receive device events.
Notes: WIA 1.x is available on Windows 2000 and newer

90.34.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1
- MBS REALbasic Plugins, version 10.3pr4

90.34.3 Methods

90.34.4 Constructor

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new WIA 1.0 manager object.
Example:

```
dim DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
MsgBox "OK"
end if
```

90.34.5 CreateDevice(DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a hierarchical tree of WiaItem objects for a Windows Image Acquisition device.
Notes:

DeviceID: Specifies the unique identifier of the WIA device.

Lasterror is set.

Applications use the CreateDevice method to create a device object for the WIA devices specified by the DeviceID parameter.

Returns the WIAItemMBS object for the root item. Applications can use this tree of objects to control and retrieve data from the WIA device.

90.34.6 EnumDeviceInfo(flags as Integer = & h10) as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an enumerator of property information for each available Windows Image Acquisition device.
Example:

```
dim DeviceManager1 as new WIADeviceManager1MBS

// Enumerate all local devices
dim e as WIADeviceInfoEnumeratorMBS = DeviceManager1.EnumDeviceInfo(DeviceManager1.kEnumLo-
cal)
if e<>Nil then

dim p as WIAPropertyStorageMBS = e.NextItem
while p<>Nil

// display the name of the device in a listbox
Listbox1.AddFolder p.Read(p.kDevicePropertyDevNameString)

p = e.NextItem
wend
end if
```

Notes:

Flags: Specifies the types of WIA devices to enumerate. Should be set to kEnumLocal.
Lasterror is set.

90.34.7 GetImageDialog(parentWindow as window, DeviceType as Integer, Flags as Integer, Intent as Integer, file as folderitem, rootitem as WIAItemMBS=nil)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) device and write the image to a specified file.
Notes:

Lasterror is set.

This method combines the functionality of SelectDeviceDialog to completely encapsulate image acquisition within a single API call.

parentWindowHandle: Handle of the window that owns the Get Image dialog box.
DeviceType: Specifies which type of WIA device to use. Is set to kDeviceTypeDefault, kDeviceTypeScanner, or kDeviceTypeDigitalCamera.
Flags: Specifies dialog box behavior. Can be set to the following constants: kSelectDeviceNoDefault, kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. Use kIntent* constants.
rootitem: Returns the interface of the hierarchical tree of WiaItem objects returned by CreateDevice.
file: Specifies the name of the file to which the image data is written.

Invoking this method displays a dialog box that enables users to acquire images. It can also display the Select Device dialog box created by the SelectDeviceDlg method.

If the application passes nil for the value of the rootitem parameter, GetImageDlg displays the Select Device dialog box that lets the user select the WIA input device. If the application specifies a WIA input device by passing a pointer to the device's item tree through the pItemRoot parameter, GetImageDlg does not display the Select Device dialog box. Instead, it will use the specified input device to acquire the image.

When using the Select Device dialog box, applications can specify types of WIA input devices. To do so, they must set the rootitem parameter to NULL and pass the appropriate constants through the DeviceType parameter. If more than one device of the specified type is present, the GetImageDlg displays the Select Device dialog box to let the user select which device will be used.

If GetImageDlg finds only one matching device, it will not display the Select Device dialog box. Instead, it will select the matching device. You can override this behavior and force GetImageDlg to display the Select Device dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.

The dialog must have sufficient rights to the folder for file that it can save the file with a unique file name. The folder should also be protected with an access control list (ACL) because it contains user data.

90.34.9 SelectDeviceDialog(parentWindow as window, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box that enables the user to select a hardware device for image acquisition.
Example:

```
dim DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
dim it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
dim p as WIAPropertyStorageMBS = it.PropertyStorage
dim name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes:

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.
Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

(Read and Write property)

90.34.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.34.18 Constants

90.34.19 kDeviceDialogSingleImage = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the GetImageDialog method.
Notes:

Restrict image selection to a single image in the device image acquisition dialog box.
Only for WIA 2.x.

90.34.20 kDeviceDialogUseCommonUI = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the GetImageDialog method.
Notes: Use the system UI, if available, rather than the vendor-supplied UI. If the system UI is not available, the vendor UI is used. If neither UI is available, the function returns E_NOTIMPL.

90.34.21 kDeviceTypeDefault = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the device type constants.

90.34.22 kDeviceTypeDigitalCamera = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the device type constants.

90.34.23 kDeviceTypeScanner = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the device type constants.

90.34.24 kDeviceTypeStreamingVideo = 3

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the device type constants.

90.34.25 kEnumAll = 15

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for EnumDeviceInfo flags parameter.
Notes: All devices are enumerated, both locally and remote, including inactive (disconnected) devices and legacy STI-only devices.

90.34.26 kEnumLocal = 16

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for EnumDeviceInfo flags parameter.
Notes: Only locally connected active scanner devices are enumerated.

90.34.27 kIntentBestPreview = & h40000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Specifies the best quality preview.

90.34.28 kIntentImageTypeColor = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for color content.

90.34.29 kIntentImageTypeGrayscale = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for grayscale content.

90.34.30 kIntentImageTypeMask = & hF

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Mask for all of the image type flags.

90.34.31 kIntentImageTypeText = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for text content.

90.34.32 kIntentMaximizeQuality = & h20000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties to maximize image quality.

90.34.33 kIntentMinimizeSize = & h10000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties to minimize image size.

90.34.34 kIntentNone = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Default value. Do not preset any properties.

90.34.35 kIntentSizeMask = & hF0000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Mask for all of the size/quality flags.

90.34.36 kSelectDeviceNoDefault = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the GetImageDialog method.
Notes:

Force this method to display the Select Device dialog box.
Only for WIA 2.x.

90.35 class WIADeviceManager2MBS

90.35.1 class WIADeviceManager2MBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIADeviceManager2MBS interface is used to create and manage image acquisition devices and to register to receive device events.
Notes: WIA 2.x is available on Windows Vista and newer.

90.35.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1
- MBS REALbasic Plugins, version 10.3pr4

90.35.3 Methods

90.35.4 Constructor

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new WIA 2.0 manager object.
Example:

```
dim DeviceManager as new WIADeviceManager2MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
MsgBox "OK"
end if
```

90.35.5 CreateDevice(DeviceID as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a hierarchical tree of WiaItem objects for a Windows Image Acquisition device.
Notes:

DeviceID: Specifies the unique identifier of the WIA device.

Lasterror is set.

Applications use the CreateDevice method to create a device object for the WIA devices specified by the DeviceID parameter.

Returns the WIAItemMBS object for the root item. Applications can use this tree of objects to control and retrieve data from the WIA device.

90.35.6 EnumDeviceInfo(flags as Integer = & h10) as WIADeviceInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an enumerator of property information for each available Windows Image Acquisition device.
Example:

```
dim DeviceManager2 as new WIADeviceManager2MBS

// Enumerate all local devices
dim e as WIADeviceInfoEnumeratorMBS = DeviceManager2.EnumDeviceInfo(DeviceManager2.kEnumLocal)
if e<>Nil then

dim p as WIAPropertyStorageMBS = e.NextItem
while p<>Nil

// display the name of the device in a listbox
Listbox1.AddFolder p.Read(p.kDevicePropertyDevNameString)

p = e.NextItem
wend
end if
```

Notes:

Flags: Specifies the types of WIA devices to enumerate. Should be set to kEnumLocal or kEnumAll.
Lasterror is set.

90.35.7 GetImageDialog(Flags as Integer, DeviceID as string, parentWindow as window, FolderName as String, Filename as String, byref item as WIAItemMBS) as string()

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) 2.0 device and write the image to a specified file. This method extends

the functionality of SelectDeviceDlg to encapsulate image acquisition within a single API call.
Notes:

Lasterror is set.

Flags: Specifies dialog box behavior. Can be set to the following values: kDeviceDialogUseCommonUI
DeviceID: Specifies the scanner to use.
parentWindowHandle: A handle of the window that owns the Get Image dialog box.
FolderName: Specifies the name of the folder ito store the scanned files in.
Filename: Specifies the name of the file to write the image data to.
item: The variable to return the WiaItem that the images were scanned from.

Returns an array with paths to the files that have been scanned.

If the application passes an emapty string for the value of the DeviceID parameter, GetImageDialog displays the Select Device dialog box so that the user can select the WIA 2.0 input device.

Use a menu item named From scanner on the File menu so that device and image selections are available in your application.

The dialog box must have sufficient rights to FolderName so that it can save the files with unique file names. Protect the folder with an access control list (ACL) because it contains user data.

90.35.8 GetImageDialog(Flags as Integer, DeviceID as string, parentWindowHandle as Integer, FolderName as String, Filename as String, byref item as WIAItemMBS) as string()

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetImageDialog method displays one or more dialog boxes that enable a user to acquire an image from a Windows Image Acquisition (WIA) 2.0 device and write the image to a specified file. This method extends the functionality of SelectDeviceDlg to encapsulate image acquisition within a single API call.
Notes:

Lasterror is set.

Flags: Specifies dialog box behavior. Can be set to the following values: kDeviceDialogUseCommonUI
DeviceID: Specifies the scanner to use.
parentWindowHandle: A handle of the window that owns the Get Image dialog box.
FolderName: Specifies the name of the folder ito store the scanned files in.
Filename: Specifies the name of the file to write the image data to.

item: The variable to return the WiaItem that the images were scanned from.

Returns an array with paths to the files that have been scanned.

If the application passes an empty string for the value of the DeviceID parameter, GetImageDialog displays the Select Device dialog box so that the user can select the WIA 2.0 input device.

Use a menu item named From scanner on the File menu so that device and image selections are available in your application.

The dialog box must have sufficient rights to FolderName so that it can save the files with unique file names. Protect the folder with an access control list (ACL) because it contains user data.

- 90.35.7 GetImageDialog(Flags as Integer, DeviceID as string, parentWindow as window, FolderName as String, Filename as String, byref item as WIAItemMBS) as string() 15694

90.35.9 SelectDeviceDialog(parentWindow as window, DeviceType as Integer, Flags as Integer) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box that enables the user to select a hardware device for image acquisition.
Example:

```
dim DeviceManager as new WIADeviceManager2MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
dim it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
dim p as WIAPropertyStorageMBS = it.PropertyStorage
dim name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes:

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA 2.0 device to use. See WIA Device Type Specifiers for a list of possible values.

Flags: Specifies the behavior of the dialog box. The value can be one of the following constants: kSelectDeviceNoDefault
DeviceID: Optional, On output, receives a string which contains the device's identifier string. On input, pass the address of a pointer if this information is needed, or "" if it is not needed.

Returns the WIAItem which was selected.
Lasterror is set.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialog method creates a hierarchical tree of IWiaItem2 objects for the device. It returns the WiaItemMBS object of the root item.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialog does not display the Select Device dialog box. Instead it returns the WiaItemMBS tree for the device. You can override this behavior and force SelectDeviceDialog to display the dialog box by specifying kSelectDeviceNoDefault as the value for the Flags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the Select Device dialog box so the user may choose one.

It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

90.35.13 SelectDeviceDialogID(parentWindow as window, DeviceType as Integer, Flags as Integer) as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box that enables the user to select a hardware device for image acquisition.
Notes:

Lasterror is set.

parentWindow: Specifies the parent window of the Select Device dialog box.
DeviceType: Specifies which type of WIA device to use. See kDeviceType* constants.
Flags: Specifies the behavior of the dialog box. You can pass the following constant: kSelectDeviceNoDefault

Returns the selected DeviceID.

This method creates and displays the Select Device dialog box so the user can select a WIA device for image acquisition. If a device is successfully selected, the SelectDeviceDialogID method retruns its identifier string to the application.

The application can restrict the devices displayed to the user to particular types by specifying the device types through the DeviceType parameter. If only one device meets the specification, SelectDeviceDialogID

does not display the Select Device dialog box. Instead it passes the device's identifier string to the application without displaying the dialog box. You can override this behavior and force SelectDeviceDialogID to display the dialog box by passing kSelectDeviceNoDefault as the value for the lFlags parameter. If more than one WIA device matches the specification, all matching devices are displayed in the SelectDevice dialog box so the user may choose one.

Note It is recommended that applications make device and image selection available through a menu item named From scanner on the File menu.

90.35.35 kIntentSizeMask = & hF0000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog. **Notes:** Mask for all of the size/quality flags.

90.35.36 kSelectDeviceNoDefault = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the GetImageDialog method. **Notes:** Force this method to display the Select Device dialog box.

90.36 class WIAExtendedTransferInfoMBS

90.36.1 class WIAExtendedTransferInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAExtendedTransferInfoMBS class specifies extended transfer information for the GetExtendedTransferInfo method.
Notes: Requires Windows 2000 Professional, Windows XP or Windows Server 2003.

90.36.2 Properties

90.36.3 MaxBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Driver-recommended maximum buffer size the application could request in a call to GetBandedData.
Notes:

Going over this limit is not detrimental, however, the driver can simply not use the whole buffer and limit each band of data to this maximum size.
(Read and Write property)

90.36.4 MinBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Minimum buffer size the application should request in a call to GetBandedData.
Notes: (Read and Write property)

90.36.5 NumBuffers as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This value is not used and should be ignored.
Notes: (Read and Write property)

90.36.6 OptimalBufferSize as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Driver-recommended buffer size the application should request in a call to GetBandedData.
Notes: (Read and Write property)

90.36.7 Size as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Size of this structure.
Notes: (Read and Write property)

90.37 class WIAFormatInfoEnumeratorMBS

90.37.1 class WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Use the WIAFormatInfoEnumeratorMBS class to enumerate the format and media type information for a device.

90.37.2 Methods

90.37.3 Clone as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Clones this enumerator.
Notes: Lasterror is set.

90.37.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of elements stored by this enumerator.
Notes: Lasterror is set.

90.37.5 NextItem as WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next item in the enumeration.

90.37.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resets the enumerator.
Notes: Lasterror is set.

90.37.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips the specified number of structures in the enumeration.

Notes: Lasterror is set.

90.37.8 Properties

90.37.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.37.10 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.38 class WIAFormatInfoMBS

90.38.1 class WIAFormatInfoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAFormatInfoMBS class specifies valid format and media type pairs for a device.
Notes: Requires Windows 2000 Professional, Windows XP or Windows Server 2003.

90.38.2 Properties

90.38.3 FormatID as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** GUID that identifies the format.
Notes: (Read and Write property)

90.38.4 Tymed as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The media type that corresponds to the guidFormatID member.
Notes: (Read and Write property)

90.39 class WIAGUIDMBS

90.39.1 class WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a Windows unique ID.
Example:

```
dim w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

MsgBox w.DisplayString
```

Notes: If you need to validate a GUID or UUID, please check the IsGUID function in our FAQ.

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0
- MBS Xojo Plugins, version 18.0pr6

90.39.3 Methods

90.39.4 Constructor

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a GUID with only zeros.
Example:

```
dim g as new WIAGUIDMBS

MsgBox g.DisplayString
```

See also:

- 90.39.5 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

90.39.5 Constructor(value1 as Integer, value2 as Integer, value3 as Integer, value4 as Integer, value5 as Integer, value6 as Integer, value7 as Integer, value8 as Integer, value9 as Integer, value10 as Integer, value11 as Integer, value12 as Integer, value13 as Integer, value14 as Integer, value15 as Integer, value16 as Integer)

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new GUID with the given byte values.
Example:

```
dim g as new WIAGUIDMBS(& h14, & h3e, & h4e, & h83, & h64, & h97, & h11, & hd2, & ha2, & h31, & h00, & hc0, & h4f, & ha3, & h18, & h09)

MsgBox g.DisplayString
```

See also:

- 90.39.4 Constructor 15711

90.39.6 DisplayString as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ID well formatted.
Example:

```
dim w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

MsgBox w.DisplayString
```

90.39.7 Equal(other as WIAGUIDMBS) as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether two GUIDs are equal.
Example:

```
dim w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF
dim v as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF

if w.Equal(v) then
MsgBox "Equal, right."
else
MsgBox "not equal, a bug."
end if
```

```
v = WIAPropertyStorageMBS.kImageFormatBMP

if w.Equal(v) then
MsgBox "Equal, a bug."
else
MsgBox "not equal, right."
end if
```

Notes: Returns true if both items are equals.

90.39.8 Parse(GUID as String) as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 18.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Parses GUID string into a GUID object.

90.39.9 Properties

90.39.10 Byte(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Read or write the byte value.
Example:

```
dim g as new WIAGUIDMBS

g.Byte(1) = 65

MsgBox str(g.Byte(1)) // shows 65
```

Notes: (Read and Write computed property)

90.39.11 Data as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The UID as binary string.
Example:

```
dim w as WIAGUIDMBS = WIAPropertyStorageMBS.kImageFormatTIFF
MsgBox EncodeBase64(w.Data)
```

Notes: (Read and Write computed property)

90.40 class WIAItemEnumeratorMBS

90.40.1 class WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAItemEnumeratorMBS class is used by applications to enumerate WiaItemMBS objects in the tree's current folder.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
dim e as WIAItemEnumeratorMBS = Root.EnumerateChildItems

if e<>Nil then
dim it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes: The Windows Image Acquisition (WIA) run-time system represents every WIA hardware device to applications as a hierarchical tree of WiaItemMBS objects.

90.40.2 Methods

90.40.3 Clone as WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an additional instance of the WIAItemEnumeratorMBS object.
Notes: Lasterror is set.

90.40.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of elements stored by this enumerator.
Notes: Lasterror is set.

90.40.5 NextItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next item in the enumeration.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
dim e as WIAItemEnumeratorMBS = Root.EnumerateChildItems

if e<>Nil then
dim it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes: Lasterror is set.

90.40.6 Reset

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resets the enumeration.
Notes: Lasterror is set.

90.40.7 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips the specified number of items during an enumeration of available WiaItemMBS objects.
Notes: Lasterror is set.

90.40.8 Properties

90.40.9 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 1.x or 2.x.
(Read and Write property)

90.40.10 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 1.x.
(Read and Write property)

90.40.11 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 2.x.
(Read and Write property)

90.40.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.41 class WIAItemMBS

90.41.1 class WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for an item.
Notes:

Each Windows Image Acquisition (WIA) hardware device is represented to an application as a hierarchical tree of WiaItem objects. The WiaItem interface provides applications with the ability to query devices to discover their capabilities. It also provides access to data transfer interfaces and item properties. In addition, the WiaItem interface provides methods to enable applications to control the device.

This class encapsulates transparently the system classes for WIA 1.x and 2.x.

90.41.2 Blog Entries

- MBS REALbasic Plugins, version 10.3pr4

90.41.3 Methods

90.41.4 AnalyzeItem

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The AnalyzeItem method causes the Windows Image Acquisition (WIA) hardware device to acquire and try to detect what data types are present.
Notes:

This method is used with scanners to detect what type of data is on a page. When an application calls this method, the WIA hardware device driver scans and analyzes the current page. For each data type it detects, it creates an WiaItem object to represent the region on the page the data occupies.

Image processing and OCR software can use this capability to detect graphics and text on a page. This method adds the regions it creates into the WIA device's WiaItem tree. The application can select the individual regions and use the standard data transfer methods to acquire data from them.

If necessary, applications can override the regions created by this method.

Works only on WIA 1.x.
Lasterror is set.

90.41.5 CreateChildItem(ItemFlags as Integer, CreationFlags as Integer, ItemName as string, FullItemName as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateChildItem method is used by applications to add WiaItem objects to the WiaItem tree of a device.
Notes:

ItemFlags: Specifies the WIA item type.
CreationFlags: Specifies how to create the new item. Only for WIA 2.x. Can be 0 to set the default values for the properties of the child. Can be & H40000000 to copy the values of all Read/Write properties from the parent.
ItemName: Specifies the WIA item name, such as "Top". You can think of this parameter as being equivalent to a file name.
FullItemName: Specifies the full WIA item name. You can think of this parameter as equivalent to a full path to a file, such as "003\Root\Top". Only for WIA 1.x.

Lasterror is set.
Returns nil on any error and the new item object on success.

Some WIA hardware devices allow applications to create new items in the WiaItem tree that represents the device. Applications must test the devices to see if they support this capability. Use the EnumerateDeviceCapabilities function to enumerate the current device's capabilities.

If the device allows the creation of new items in the WiaItem tree, invoking CreateChildItem creates a new WiaItem that is a child of the current node.

90.41.6 DataTransfer as WIADataTransferMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a Data transfer object.
Notes:

Lasterror is set.
Only for WIA 1.x.
Returns nil on any error.

90.41.7 DeleteItem

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes the current IWiaItem object from the object tree of the device.
Notes:

Lasterror is set.
Available on both WIA 1.x and 2.x.

The Windows Image Acquisition (WIA) run-time system represents each WIA hardware device connected to the user's computer as a hierarchical tree of IWiaItem objects. A given WIA device may or may not allow applications to delete IWiaItem objects from its tree. Use the EnumerateDeviceCapabilities function to query the device for item deletion capability.

If the device supports item deletion in its WiaItem tree, invoke the DeleteItem method to remove the WiaItem object. Note that this method will only delete an object after all references to the object have been released.

90.41.8 DeviceCommand(command as WIAGUIDMBS) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Issues a command to a Windows Image Acquisition (WIA) hardware device.
Example:

```
dim targetItem as WIAItemMBS // your item
dim resultItem as WIAItemMBS
resultItem = targetItem.DeviceCommand(targetItem.kCommandTakePicture)
```

Notes:

Command: Specifies the command to send to the WIA 2.0 device. See kCommand* constants.
Works with WIA 1.x and 2.x.

Applications use this method to send WIA commands to hardware devices.

When the application sends the kCommandTakePicture command to the device, the WIA run-time system creates the WiaItem object to represent the image. The DeviceCommand method returns this new WIAItemMBS object.

90.41.9 DeviceDialog(Flags as Integer, Win as window, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box to the user to prepare for image acquisition.
Notes:

Lasterror is set.
Only for WIA 2.x.

Flags: Specifies a set of flags that control the dialog box's operation. The value can be either 0 to represent the default behavior or any of the following flags: kDeviceDialogSingleImage, kDeviceDialogUseCommonUI and kSelectDeviceNoDefault
Win: A handle to the parent window.
FolderName: Specifies the folder name where the files are to be transferred.
Filename: Specifies the template file name.
paths: An array to be filled with the file paths.
items: An array to be filled with the wia item objects.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. It is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaTransferMBS class to acquire the image.
See also:

- 90.41.11 DeviceDialog(Win as window, Flags as Integer, Intent as Integer) as WIAItemMBS() 15722
- 90.41.12 DeviceDialog(WindowHandle as Integer, Flags as Integer, Intent as Integer) as WIAItemMBS() 15723

90.41.10 DeviceDialog(Flags as Integer, WindowHandle as Integer, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Displays a dialog box to the user to prepare for image acquisition.
Notes:

Lasterror is set.
Only for WIA 2.x.

Flags: Specifies a set of flags that control the dialog box's operation. The value can be either 0 to represent the default behavior or any of the following flags: kDeviceDialogSingleImage, kDeviceDialogUseCommonUI and kSelectDeviceNoDefault
WindowHandle: A handle to the parent window.
FolderName: Specifies the folder name where the files are to be transferred.
Filename: Specifies the template file name.
paths: An array to be filled with the file paths.
items: An array to be filled with the wia item objects.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. It is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaTransferMBS class to acquire the image.
See also:

- 90.41.9 DeviceDialog(Flags as Integer, Win as window, FolderName as string, Filename as string, paths() as string, items() as WIAItemMBS) 15720
- 90.41.11 DeviceDialog(Win as window, Flags as Integer, Intent as Integer) as WIAItemMBS() 15722
- 90.41.12 DeviceDialog(WindowHandle as Integer, Flags as Integer, Intent as Integer) as WIAItemMBS() 15723

90.41.11 DeviceDialog(Win as window, Flags as Integer, Intent as Integer) as WIAItemMBS()

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The DeviceDialog method is used by applications to display a dialog box to the user to prepare for image acquisition.
Notes:

win: Handle of the parent window of the dialog box.
Flags: Specifies a set of flags that control the dialog box's operation. Can be set to any of the following values: kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. For a list of image intent values, kIntent* constants.

Lasterror is set.
Only for WIA 1.x.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. For instance, this dialog box enables the user to select images to download from a camera. When using a scanner, it is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaDataTransferMBS interface to acquire the image.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.

90.41.12 DeviceDialog(WindowHandle as Integer, Flags as Integer, Intent as Integer) as WIAItemMBS()

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The DeviceDialog method is used by applications to display a dialog box to the user to prepare for image acquisition.
Notes:

WindowHandle: Handle of the parent window of the dialog box.
Flags: Specifies a set of flags that control the dialog box's operation. Can be set to any of the following values: kDeviceDialogUseCommonUI and kDeviceDialogSingleImage.
Intent: Specifies what type of data the image is intended to represent. For a list of image intent values, kIntent* constants.

Lasterror is set.
Only for WIA 1.x.

This method displays a dialog box to the user that an application uses to gather all the information required for image acquisition. For instance, this dialog box enables the user to select images to download from a camera. When using a scanner, it is also used to specify image scan properties such as brightness and contrast.

After this method returns, the application can use the WiaDataTransferMBS interface to acquire the image.

It is recommended that applications make device and image selection available through a menu item named From scanner or camera on the File menu.
See also:

90.41.13 EnumerateChildItems(CategoryGUID as WIAGUIDMBS=nil) as WIAItemEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates and returns an enumerator object for non-empty folders in a WiaItem tree of a Windows Image

Acquisition (WIA) device.
Example:

```
Sub EnumerateItems(root as WIAItemMBS)
dim e as WIAItemEnumeratorMBS = Root.EnumerateChildItems

if e<>Nil then
dim it as WIAItemMBS = e.NextItem

while it<>nil

// do something with item

it = e.NextItem
wend

end if
End Sub
```

Notes:

Lasterror is set.
Works for WIA 1.x and WIA 2.x.

CategoryGUID: Specifies a category for which child nodes are enumerated. If nil, then all child nodes are enumerated. This parameter is only used on WIA 2.x.

The WIA run-time system represents each WIA hardware device as a hierarchical tree of WiaItem objects. The EnumerateChildItems method enables applications to enumerate child items in the current item. However, it can only be applied to items that are folders.

If the folder is not empty, it contains a subtree of WiaItem objects. The EnumerateChildItems method enumerates all of the items contained in the folder.

90.41.14 EnumerateDeviceCapabilities(Flags as Integer) as WIADeviceCapabilitiesEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an enumerator that is used to ascertain the commands and events a Windows Image Acquisition (WIA) device supports.
Notes:

Flags: Specifies a flag that selects the type of capabilities to enumerate. Can be a combination of kDe-

viceCommands and kDeviceEvents.

Works for both WIA 1.x and 2.x
Lasterror is set.

Use this method to create an enumerator object to obtain the set of commands and events that a WIA device supports. You can use the Flags parameter to specify which kinds of device capabilities to enumerate.

90.41.15 FindItemByName(name as string) as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Searches an item's tree of subitems using the name as the search key.
Notes:

name: Specifies the name fo the item to search for.

Lasterror is set.
Works with WIA 1.x and 2.x.

This method searches the current item's tree of sub-items using the name as the search key. If FindItemBy-Name finds the item specified by name, it retruns the WiaItem object.

90.41.16 ItemCategory as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets an item's category information.
Notes:

Lasterror is set. Only for WIA 2.x.

Every WiaItemMBS object in the hierarchical tree of objects associated with a Windows Image Acquisition (WIA) 2.0 hardware device has a specific category. This method enables applications to identify the category of any item in a hierarchical tree of item objects in a device.

Requires Windows Vista or Windows Server 2008.

90.41.17 ItemType as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets an item's type information.
Example:

```
dim it as WIAItemMBS // your item
if BitwiseAnd(it.ItemType,it.kTypeFolder)=it.kTypeFolder or BitwiseAnd(it.ItemType, it.kTypeHasAttachments)=it.kTypeHasAttachments then
msgbox "may have children."
else
msgbox "no children."
end if
```

Notes:

Works with WIA 1.x and 2.x.
Lasterror is set.

Every WiaItemMBS object in the hierarchical tree of objects associated with a Windows Image Acquisition (WIA) 2.0 hardware device has a specific data type. Item objects represent folders and files. Folders contain file objects. File objects contain data acquired by the device such as images and sounds. This method enables applications to identify the type of any item in a hierarchical tree of item objects in a device.

An item may have more than one type. For example, an item that represents an audio file will have the type attributes WiaItemTypeAudio bitwiseor WiaItemTypeFile.

90.41.18 kCategoryFeeder as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

```
MsgBox WIAItemMBS.kCategoryFeeder.DisplayString
```

90.41.19 kCategoryFeederBack as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFeederBack.DisplayString

90.41.20 kCategoryFeederFront as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFeederFront.DisplayString

90.41.21 kCategoryFilm as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFilm.DisplayString

90.41.22 kCategoryFinishedFile as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFinishedFile.DisplayString

90.41.23 kCategoryFlatbed as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFlatbed.DisplayString

90.41.24 kCategoryFolder as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryFolder.DisplayString

90.41.25 kCategoryRoot as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA IPA item category constants
Example:

MsgBox WIAItemMBS.kCategoryRoot.DisplayString

90.41.26 kCommandChangeDocument as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandChangeDocument.DisplayString

90.41.27 kCommandDeleteAllItems as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandDeleteAllItems.DisplayString

90.41.28 kCommandDiagnostic as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandDiagnostic.DisplayString

90.41.29 kCommandSynchronize as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandSynchronize.DisplayString

90.41.30 kCommandTakePicture as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.

90.41.31 kCommandUnloadDocument as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA command constants.
Example:

MsgBox WIAItemMBS.kCommandUnloadDocument.DisplayString

90.41.32 ParentItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the parent item in the tree that represents a Windows Image Acquisition (WIA) 2.0 hardware device.
Notes:

Works only in WIA 2.x. Lasterror is set.
Given any WiaItem object in the object tree of a WIA 2.0 hardware device, the application retrieves a pointer to the parent item by calling this function.

90.41.33 PropertyStorage as WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries properties for this item.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
dim p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
dim e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
dim ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
dim v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
dim g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend

end if
end if
```

```
End Sub
```

Notes:

Lasterror is set.
Returns nil on any error.

90.41.34 RootItem as WIAItemMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the root item of a tree of item objects used to represent a Windows Image Acquisition (WIA) hardware device.
Notes:

Lasterror is set.
Works with WIA 1.x and 2.x.

Given any WiaItem object in the object tree of a WIA hardware device, the application retrieves a pointer to the root item by calling this function.

90.41.35 Transfer as WIATransferMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a transfer object for this item.
Notes:

Only available on WIA 2.x.
Lasterror is set.
Returns nil on any error.

90.41.36 Properties

90.41.37 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 1.x or 2.x.
(Read and Write property)

90.41.38 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 1.x.
(Read and Write property)

90.41.39 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

The handle for WIA 2.x.
(Read and Write property)

90.41.40 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.41.41 Constants

90.41.42 kDeviceCommands = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flag constants for the EnumerateDeviceCapabilities function.
Notes: Enumerate device commands.

90.41.43 kDeviceDialogSingleImage = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the DeviceDialog and ImageDialog flag constants.
Notes: Only allow one image to be selected

90.41.44 kDeviceDialogUseCommonUI = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the DeviceDialog and ImageDialog flag constants.
Notes: Give preference to the system-provided UI, if available.

90.41.45 kDeviceEvents = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flag constants for the EnumerateDeviceCapabilities function.
Notes: Enumerate device events.

90.41.46 kIntentBestPreview = & h40000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Specifies the best quality preview.

90.41.47 kIntentImageTypeColor = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for color content.

90.41.48 kIntentImageTypeGrayscale = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for grayscale content.

90.41.49 kIntentImageTypeMask = & hF

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Mask for all of the image type flags.

90.41.50 kIntentImageTypeText = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog.
Notes: Preset properties for text content.

90.41.51 kIntentMaximizeQuality = & h20000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog. **Notes:** Preset properties to maximize image quality.

90.41.52 kIntentMinimizeSize = & h10000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog. **Notes:** Preset properties to minimize image size.

90.41.53 kIntentNone = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog. **Notes:** Default value. Do not preset any properties.

90.41.54 kIntentSizeMask = & hF0000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the intent constants for GetImageDialog. **Notes:** Mask for all of the size/quality flags.

90.41.55 kSelectDeviceNoDefault = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the Select Device Dialog and Image Dialog flag constants.

90.41.56 kTypeAnalyze = & h00000010

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.57 kTypeAudio = & h00000020

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.58 kTypeBurst = & h00000800

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.59 kTypeDeleted = & h00000080

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.60 kTypeDevice = & h00000040

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.61 kTypeDisconnected = & h00000100

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.62 kTypeFile = & h00000002

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.63 kTypeFolder = & h00000004

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.
Example:

```
dim it as WIAItemMBS // your item
if BitwiseAnd(it.ItemType,it.kTypeFolder)=it.kTypeFolder or BitwiseAnd(it.ItemType, it.kTypeHasAttachments)=it.kTypeHasAttachments then
msgbox "may have children."
else
msgbox "no children."
end if
```

90.41.64 kTypeFree = & h00000000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.65 kTypeGenerated = & h00004000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.66 kTypeHasAttachments = & h00008000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.
Example:

```
dim it as WIAItemMBS // your item
if BitwiseAnd(it.ItemType,it.kTypeFolder)=it.kTypeFolder or BitwiseAnd(it.ItemType, it.kTypeHasAttachments)=it.kTypeHasAttachments then
msgbox "may have children."
else
msgbox "no children."
end if
```

90.41.67 kTypeHPanorama = & h00000200

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.68 kTypeImage = & h00000001

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.69 kTypeRoot = & h00000008

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.70 kTypeStorage = & h00001000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.71 kTypeTransfer = & h00002000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.72 kTypeVideo = & h00010000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.41.73 kTypeVPanorama = & h00000400

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA item type constants.

90.42 class WIAPropertyEnumeratorMBS

90.42.1 class WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a property enumerator.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
dim p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
dim e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
dim ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
dim v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
dim g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend
```

```
end if
end if
End Sub
```

90.42.2 Methods

90.42.3 Clone as WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a copy of the enumerator.
Notes: Lasterror is set.

90.42.4 NextItem as WIAPropertyMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next item.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
dim p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
dim e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
dim ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
dim v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k
```

```
if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
dim g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend

end if
end if
End Sub
```

Notes: Lasterror is set.

90.42.5 Reset

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resets the enumerator.
Notes: Lasterror is set.

90.42.6 Skip(celt as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Skips the next items.
Notes: Lasterror is set.

90.42.7 Properties

90.42.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.

Notes: (Read and Write property)

90.42.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.43 class WIAPropertyMBS

90.43.1 class WIAPropertyMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAPropertyMBS class contains data about a single property in a property set. This data is the property ID and type tag, and the optional string name that may be associated with the property.
Example:

```
Sub ListProperties(it as WIAItemMBS, plist as listbox)
// enumerate properties into a given listbox

// clear list
PList.DeleteAllRows

// get properties
dim p as WIAPropertyStorageMBS = it.PropertyStorage
if p<>Nil then
dim e as WIAPropertyEnumeratorMBS = p.Enumerate

if e<>nil then
dim ps as WIAPropertyMBS = e.NextItem

while ps<>Nil
// read the property value
dim v as Variant = p.Read(ps)

// get some identifier string for the listbox, name or id
dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

PList.AddRow k

if v.Type = v.TypeObject then
if v isa WIAGUIDMBS then
dim g as WIAGUIDMBS = v
PList.Cell(PList.LastIndex,1)=g.DisplayString
else
PList.Cell(PList.LastIndex,1)="? some object" // should never happen
end if
else
PList.Cell(PList.LastIndex,1)=v.StringValue
end if

ps = e.NextItem
wend
```

```
end if
end if
End Sub
```

90.43.2 Properties

90.43.3 ID as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A 32-bit identifier that uniquely identifies the property within the property set.
Example:

```
dim ps as WIAPropertyMBS // your property

dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

MsgBox k
```

Notes:

All properties within property sets must have unique property identifiers.
(Read and Write property)

90.43.4 Name as String

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The string that contains the optional string name associated with the property
Example:

```
dim ps as WIAPropertyMBS // your property

dim k as string = ps.Name
if len(k)=0 then
k = str(ps.ID)
end if

MsgBox k
```

Notes: (Read and Write property)

90.43.5 Type as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The property type.
Notes: (Read and Write property)

90.44 class WIAPropertyStorageMBS

90.44.1 class WIAPropertyStorageMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAPropertyStorageMBS class manages the persistent properties of a single property set.
Example:

```
dim DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
dim it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
dim p as WIAPropertyStorageMBS = it.PropertyStorage
dim name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes:

Persistent properties consist of information that can be stored persistently in a property set, such as the summary information associated with a file. This contrasts with run-time properties associated with Controls and Automation, which can be used to affect system behavior. Use the methods of the WIAPropertyStorageMBS interface to create or open a persistent property set. An instance of the WIAPropertyStorageMBS interface can manage zero or more WIAPropertyStorageMBS instances.

Each property within a property set is identified by a property identifier (ID), a integer value unique to that set. You can also assign a string name to a property through the WIAPropertyStorageMBS interface.

The automatic conversion to variant supports:
nil, integer, uint32, int64, uint64, single, double, boolean, string and WIAGUIDMBS.

The automatic conversion from variant supports:
integer, boolean, single, double, Int64, string and WIAGUIDMBS.

90.44.2 Methods

90.44.3 Commit(flags as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Saves changes made to a property storage object to the parent storage object.
Notes:

See kCommit* flags for the flags parameter.
Lasterror is set.

90.44.4 Count as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of properties stored in the property storage.
Notes: Lasterror is set.

90.44.5 Delete(id as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes an item by ID.
Notes: Lasterror is set.
See also:

- 90.44.6 Delete(name as string) 15746

90.44.6 Delete(name as string)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes an item by name.
Notes: Lasterror is set.
See also:

- 90.44.5 Delete(id as Integer) 15746

90.44.7 DeletePropertyName(id as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes specified string names from the current property set.
Notes:

Lasterror is set.

id: Property identifier for which string name are to be deleted.

For each property identifier in rgpropid, DeletePropertyName removes any corresponding name-to-property ID mapping. An attempt is silently ignored to delete the name of a property that either does not exist or does not currently have a string name associated with it. This method has no effect on the properties themselves.

90.44.8 Enumerate as WIAPropertyEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Enumerates the properties on this property storage.
Notes: Returns nil on any error. Lasterror is set.

90.44.9 kAudioFormatAIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatAIFF.DisplayString

90.44.10 kAudioFormatMP3 as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatMP3.DisplayString

90.44.11 kAudioFormatWAV as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatWAV.DisplayString

90.44.12 kAudioFormatWMA as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kAudioFormatWMA.DisplayString

90.44.13 kImageFormatASF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatASF.DisplayString

90.44.14 kImageFormatAVI as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatAVI.DisplayString

90.44.15 kImageFormatBMP as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatBMP.DisplayString

90.44.16 kImageFormatCIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatCIFF.DisplayString

90.44.17 kImageFormatDPOF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatDPOF.DisplayString

90.44.18 kImageFormatEMF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatEMF.DisplayString

90.44.19 kImageFormatExec as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatExec.DisplayString

90.44.20 kImageFormatEXIF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatEXIF.DisplayString

90.44.21 kImageFormatFlashPix as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatFlashPix.DisplayString

90.44.22 kImageFormatGIF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatGIF.DisplayString

90.44.23 kImageFormatHTML as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatHTML.DisplayString

90.44.24 kImageFormatICO as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatICO.DisplayString

90.44.25 kImageFormatJPEG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG.DisplayString

90.44.26 kImageFormatJPEG2K as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG2K.DisplayString

90.44.27 kImageFormatJPEG2KX as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatJPEG2KX.DisplayString

90.44.28 kImageFormatMemoryBMP as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatMemoryBMP.DisplayString

90.44.29 kImageFormatMPG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA audio format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatMPG.DisplayString

90.44.30 kImageFormatPhotoCD as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPhotoCD.DisplayString

90.44.31 kImageFormatPICT as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPICT.DisplayString

90.44.32 kImageFormatPNG as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatPNG.DisplayString

90.44.33 kImageFormatRawRGB as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatRawRGB.DisplayString

90.44.34 kImageFormatRTF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatRTF.DisplayString

90.44.35 kImageFormatScript as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatScript.DisplayString

90.44.36 kImageFormatTIFF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatTIFF.DisplayString

90.44.37 kImageFormatTXT as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatTXT.DisplayString

90.44.38 kImageFormatUndefined as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatUndefined.DisplayString

90.44.39 kImageFormatUnicode16 as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA misc format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatUnicode16.DisplayString

90.44.40 kImageFormatWMF as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA image format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatWMF.DisplayString

90.44.41 kImageFormatXML as WIAGUIDMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** One of the WIA document format constants.
Example:

MsgBox WIAPropertyStorageMBS.kImageFormatXML.DisplayString

90.44.42 Read(id as Integer) as Variant

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads a property by id.
Notes: Lasterror is set.
See also:

- 90.44.43 Read(name as string) as Variant 15755
- 90.44.44 Read(p as WIAPropertyMBS) as Variant 15755

90.44.43 Read(name as string) as Variant

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads a property by name.
Example:

```
dim DeviceManager as new WIADeviceManager1MBS

if 0 = DeviceManager.Handle then
MsgBox "Failed to initialize device manager."
else
dim it as WIAItemMBS = DeviceManager.SelectDeviceDialog(window1, DeviceManager.kDeviceTypeDefault, DeviceManager.kSelectDeviceNoDefault)

if it<>Nil then
dim p as WIAPropertyStorageMBS = it.PropertyStorage
dim name as string = p.Read(p.kItemPropertyItemNameString)
MsgBox name
end if
end if
```

Notes: Lasterror is set.
See also:

- 90.44.42 Read(id as Integer) as Variant 15754
- 90.44.44 Read(p as WIAPropertyMBS) as Variant 15755

90.44.44 Read(p as WIAPropertyMBS) as Variant

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads a property by a property specification.
Notes: Lasterror is set.
See also:

- 90.44.42 Read(id as Integer) as Variant 15754
- 90.44.43 Read(name as string) as Variant 15755

90.44.45 ReadPropertyName(id as Integer) as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves any existing string name for the specified property ID.
Notes: Lasterror is set.

90.44.46 Revert

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Revert method discards all changes to the named property set since it was last opened or discards changes that were last committed to the property set.
Notes:

This method has no effect on a direct-mode property set.
Lasterror is set.

90.44.47 Write(id as Integer, value as Variant)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes a property by id.
Notes: Lasterror is set.
See also:

- 90.44.48 Write(name as string, value as Variant, id as Integer = 0) 15756
- 90.44.49 Write(p as WIAPropertyMBS, value as Variant) 15756

90.44.48 Write(name as string, value as Variant, id as Integer = 0)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes a property by name with optional id.
Notes: Lasterror is set.
See also:

- 90.44.47 Write(id as Integer, value as Variant) 15756
- 90.44.49 Write(p as WIAPropertyMBS, value as Variant) 15756

90.44.49 Write(p as WIAPropertyMBS, value as Variant)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes a property by property specification.
Notes: Lasterror is set.
See also:

- 90.44.47 Write(id as Integer, value as Variant) 15756
- 90.44.48 Write(name as string, value as Variant, id as Integer = 0) 15756

90.44.50 WritePropertyName(id as Integer, name as string)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Assigns string names to a specified array of property IDs in the current property set.
Notes:

id: the property ID for which name is to be set.
name: The new name to be assigned to the corresponding property ID in the id parameter. This name may not exceed 255 characters.

Lasterror is set.

90.44.51 Properties

90.44.52 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.44.53 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.44.54 Constants

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the commit flag constants.

90.44.159 kCommitFlagsDefault = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the commit flag constants.
Notes: Commits per the usual transaction semantics. Last writer wins. This flag may not be specified with other flag values.

90.44.160 kCommitFlagsOnlyIfCurrent = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the commit flag constants.
Notes: Commits the changes only if the current persistent contents of the property set are the ones on which the changes about to be committed are based. That is, does not commit changes if the contents of the property set have been changed by a commit from another opening of the property set. The error STG_E_NOTCURRENT is returned if the commit does not succeed for this reason.

90.44.161 kCommitFlagsOverwrite = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the commit flag constants.
Notes:

Useful only when committing a transaction that has no further outer nesting level of transactions, though acceptable in all cases.
Note: Indicates that the caller is willing to risk some data corruption at the expense of decreased disk usage on the destination volume. This flag is potentially useful in low disk-space scenarios, though it should be used with caution.

90.44.326 kScannerItemPropertyOrientation = 6156

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.327 kScannerItemPropertyOrientationString = "Orientation"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.328 kScannerItemPropertyPhotometricInterp = 6153

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.329 kScannerItemPropertyPhotometricInterpString = "Photometric Interpretation"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.330 kScannerItemPropertyRotation = 6157

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.331 kScannerItemPropertyRotationString = "Rotation"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.332 kScannerItemPropertyThreshold = 6159

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.333 kScannerItemPropertyThresholdString = "Threshold"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.334 kScannerItemPropertyWarmUpTime = 6161

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.335 kScannerItemPropertyWarmUpTimeString = "Lamp Warm up Time"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.336 kScannerItemPropertyXextent = 6151

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.337 kScannerItemPropertyXextentString = "Horizontal Extent"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.338 kScannerItemPropertyXpos = 6149

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.339 kScannerItemPropertyXposString = "Horizontal Start Position"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.340 kScannerItemPropertyXres = 6147

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.341 kScannerItemPropertyXresString = "Horizontal Resolution"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.342 kScannerItemPropertyYextent = 6152

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.343 kScannerItemPropertyYextentString = "Vertical Extent"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.344 kScannerItemPropertyYpos = 6150

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.345 kScannerItemPropertyYposString = "Vertical Start Position"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.346 kScannerItemPropertyYres = 6148

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.347 kScannerItemPropertyYresString = "Vertical Resolution"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.348 kTymedCallback = 128

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA TYMED constants.

90.44.349 kTymedFile = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA TYMED constants.
Notes: Writes data to a file.

90.44.350 kTymedMultiPageCallback = 512

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA TYMED constants.

90.44.351 kTymedMultiPageFile = 256

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA TYMED constants.

90.44.352 kVideoCameraPropertyDShowDevicePath = 3588

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.353 kVideoCameraPropertyDShowDevicePathString = "Directshow Device Path"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.354 kVideoCameraPropertyImagesDirectory = 3587

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.355 kVideoCameraPropertyImagesDirectoryString = "Images Directory"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.356 kVideoCameraPropertyLastPictureTaken = 3586

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.44.357 kVideoCameraPropertyLastPictureTakenString = "Last Picture Taken"

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the WIA property constants.

90.45 class WIAStreamMBS

90.45.1 class WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIAStreamMBS interface lets you read and write data to stream objects.
Example:

```
dim ItemName as string = "Hello.jpg"
dim f as FolderItem = SpecialFolder.Desktop.Child(ItemName)
dim s as new WIAStreamMBS(WIAStreamMBS.kModeWrite + WIAStreamMBS.kModeCreate, f)
```

Notes: Stream objects contain the data in a structured storage object, where storages provide the structure. Simple data can be written directly to a stream but, most frequently, streams are elements nested within a storage object. They are similar to standard files.

90.45.2 Methods

90.45.3 Clone as WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Clone method creates a new stream object with its own seek pointer that references the same bytes as the original stream.
Notes:

The Clone method creates a new stream object for accessing the same bytes but using a separate seek pointer. The new stream object sees the same data as the source-stream object. Changes written to one object are immediately visible in the other. Range locking is shared between the stream objects.

The initial setting of the seek pointer in the cloned stream instance is the same as the current setting of the seek pointer in the original stream at the time of the clone operation.

Lasterror is set.

90.45.4 Commit(flags as Integer)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Commit method ensures that any changes made to a stream object open in transacted mode are reflected in the parent storage.
Notes:

If the stream object is open in direct mode, Commit has no effect other than flushing all memory buffers to the next-level storage object. The COM compound file implementation of streams does not support opening streams in transacted mode.
Lasterror is set.

Possible flags: kCommitConsolidate, kCommitDangerouslyCommitMerelyToDiskCache, kCommitDefault, kCommitOnlyIfCurrent and kCommitOverwrite.

90.45.5 Constructor(mode as Integer, file as folderitem)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens or creates a file and retrieves a stream to read or write to that file.
Example:

```
dim ItemName as string = "Hello.jpg"
dim f as FolderItem = SpecialFolder.Desktop.Child(ItemName)
dim s as new WIAStreamMBS(WIAStreamMBS.kModeWrite + WIAStreamMBS.kModeCreate, f)
```

Notes:

mode: the flags. Use the kMode* constants.
path: the file path.

Lasterror is set.
See also:

- 90.45.6 Constructor(mode as Integer, path as string) 15799

90.45.6 Constructor(mode as Integer, path as string)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens or creates a file and retrieves a stream to read or write to that file.
Notes:

mode: the flags. Use the kMode* constants.
path: the file path.

Lasterror is set.
See also:

- 90.45.5 Constructor(mode as Integer, file as folderitem) 15799

90.45.7 CopyTo(other as WIAStreamMBS, length as UInt64)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CopyTo method copies a specified number of bytes from the current seek pointer in the stream to the current seek pointer in another stream.
Notes:

other: The destination stream. The stream pointed to by pstm can be a new stream or a clone of the source stream.
length: The number of bytes to copy from the source stream.
ReadSize: Optional, a variable where the actual number of bytes read from the source.
WriteSize: Optional, a variable where the actual number of bytes written to the destination.

Lasterror is set.

The CopyTo method copies the specified bytes from one stream to another. It can also be used to copy a stream to itself. The seek pointer in each stream instance is adjusted for the number of bytes read or written. This method is equivalent to reading cb bytes into memory using Read and then immediately writing them to the destination stream using Write, although CopyTo will be more efficient.

The destination stream can be a clone of the source stream created by calling the Clone method.

If CopyTo returns an error, you cannot assume that the seek pointers are valid for either the source or destination. Additionally, the values of pcbRead and pcbWritten are not meaningful even though they are returned.

If CopyTo returns successfully, the actual number of bytes read and written are the same.

To copy the remainder of the source from the current seek pointer, specify the maximum large integer value for the cb parameter. If the seek pointer is the beginning of the stream, this operation copies the entire stream.
See also:

- 90.45.8 CopyTo(other as WIAStreamMBS, length as UInt64, byref ReadSize as UInt64, byref WriteSize as UInt64) 15800

90.45.8 CopyTo(other as WIAStreamMBS, length as UInt64, byref ReadSize as UInt64, byref WriteSize as UInt64)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CopyTo method copies a specified number of bytes from the current seek pointer in the stream to the current seek pointer in another stream.
Notes:

other: The destination stream. The stream pointed to by pstm can be a new stream or a clone of the source

stream.
length: The number of bytes to copy from the source stream.
ReadSize: Optional, a variable where the actual number of bytes read from the source.
WriteSize: Optional, a variable where the actual number of bytes written to the destination.

Lasterror is set.

The CopyTo method copies the specified bytes from one stream to another. It can also be used to copy a stream to itself. The seek pointer in each stream instance is adjusted for the number of bytes read or written. This method is equivalent to reading cb bytes into memory using Read and then immediately writing them to the destination stream using Write, although CopyTo will be more efficient.

The destination stream can be a clone of the source stream created by calling the Clone method.

If CopyTo returns an error, you cannot assume that the seek pointers are valid for either the source or destination. Additionally, the values of pcbRead and pcbWritten are not meaningful even though they are returned.

If CopyTo returns successfully, the actual number of bytes read and written are the same.

To copy the remainder of the source from the current seek pointer, specify the maximum large integer value for the cb parameter. If the seek pointer is the beginning of the stream, this operation copies the entire stream.
See also:

- 90.45.7 CopyTo(other as WIAStreamMBS, length as UInt64) 15800

90.45.9 Revert

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Revert method discards all changes that have been made to a transacted stream since the last Commit call.
Notes:

On streams open in direct mode and streams using the COM compound file implementation of Revert, this method has no effect.
Lasterror is set.

90.45.10 Seek(value as Int64, Origin as Integer) as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Seek method changes the seek pointer to a new location.
Notes:

The new location is relative to either the beginning of the stream, the end of the stream, or the current seek pointer.

value: The displacement to be added to the location indicated by the dwOrigin parameter. If dwOrigin is kSeekSet, this is interpreted as an unsigned value rather than a signed value.

Origin: The origin for the displacement specified in value. The origin can be the beginning of the file (kSeekSet), the current seek pointer (kSeekCur), or the end of the file (kSeekEnd). For more information about values, see the kSeek* constants.

Retruns the new seek pointer from the beginning of the stream.

Seek changes the seek pointer so that subsequent read and write operations can be performed at a different location in the stream object. It is an error to seek before the beginning of the stream. It is not, however, an error to seek past the end of the stream. Seeking past the end of the stream is useful for subsequent write operations, as the stream byte range will be extended to the new seek position immediately before the write is complete.

You can also use this method to obtain the current value of the seek pointer by calling this method with the Origin parameter set to kSeekCur and the value parameter set to 0 so that the seek pointer is not changed. The current seek pointer is returned.

Lasterror is set.

90.45.11 SetSize(size as UInt64)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetSize method changes the size of the stream object.
Notes:

SetSize changes the size of the stream object. Call this method to preallocate space for the stream. If the size parameter is larger than the current stream size, the stream is extended to the indicated size by filling the intervening space with bytes of undefined value. This operation is similar to the Write method if the seek pointer is past the current end of stream.

If the size parameter is smaller than the current stream, the stream is truncated to the indicated size.

The seek pointer is not affected by the change in stream size.

Calling SetSize can be an effective way to obtain a large chunk of contiguous space.

Lasterror is set.

90.45.12 Properties

90.45.13 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.45.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.45.15 Constants

90.45.16 kCommitConsolidate = 8

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flags for commit.
Notes: Windows 2000 and Windows XP: Indicates that a storage should be consolidated after it is committed, resulting in a smaller file on disk. This flag is valid only on the outermost storage object that has been opened in transacted mode. It is not valid for streams. The kCommitConsolidate flag can be combined with any other kCommit* flags.

90.45.17 kCommitDangerouslyCommitMerelyToDiskCache = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flags for commit.
Notes:

Commits the changes to a write-behind disk cache, but does not save the cache to the disk. In a write-behind disk cache, the operation that writes to disk actually writes to a disk cache, thus increasing performance. The cache is eventually written to the disk, but usually not until after the write operation has already returned. The performance increase comes at the expense of an increased risk of losing data if a problem occurs before the cache is saved and the data in the cache is lost.

If you do not specify this value, then committing changes to root-level storage objects is robust even if a disk cache is used. The two-phase commit process ensures that data is stored on the disk and not just to

the disk cache.

90.45.18 kCommitDefault = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flags for commit.
Notes: You can specify this condition with kCommitConsolidate, or some combination of the other three flags in this list of elements. Use this value to increase the readability of code.

90.45.19 kCommitOnlyIfCurrent = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flags for commit.
Notes: Prevents multiple users of a storage object from overwriting each other's changes. The commit operation occurs only if there have been no changes to the saved storage object because the user most recently opened it. Thus, the saved version of the storage object is the same version that the user has been editing. If other users have changed the storage object, the commit operation fails and returns the STG_E_NOTCURRENT value. To override this behavior, call the Commit method again using the kCommitDefault value.

90.45.20 kCommitOverwrite = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the flags for commit.
Notes:

The commit operation can overwrite existing data to reduce overall space requirements. This value is not recommended for typical usage because it is not as robust as the default value. In this case, it is possible for the commit operation to fail after the old data is overwritten, but before the new data is completely committed. Then, neither the old version nor the new version of the storage object will be intact.

You can use this value in the following cases:

- The user is willing to risk losing the data.
- The low-memory save sequence will be used to safely save the storage object to a smaller file.
- A previous commit returned STG_E_MEDIUMFULL, but overwriting the existing data would provide enough space to commit changes to the storage object.

Be aware that the commit operation verifies that adequate space exists before any overwriting occurs. Thus, even with this value specified, if the commit operation fails due to space requirements, the old data is safe. It is possible, however, for data loss to occur with the kCommitOverwrite value specified if the commit operation fails for any reason other than lack of disk space.

90.45.21 kModeConvert = & h20000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Creates the new object while preserving existing data in a stream named "Contents". In the case of a storage object or a byte array, the old data is formatted into a stream regardless of whether the existing file or byte array currently contains a layered storage object. This flag can only be used when creating a root storage object. It cannot be used within a storage object; for example, in CreateStream. It is also not valid to use this flag and the kModeDeleteOnRelease flag simultaneously.

90.45.22 kModeCreate = & h1000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes:

Undicates that an existing storage object or stream should be removed before the new object replaces it. A new object is created when this flag is specified only if the existing object has been successfully removed.

This flag is used when attempting to create:

- A storage object on a disk, but a file of that name exists.
- An object inside a storage object, but a object with the specified name exists.
- A byte array object, but one with the specified name exists.

90.45.23 kModeDeleteOnRelease = & h4000000

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Indicates that the underlying file is to be automatically destroyed when the root storage object is released. This feature is most useful for creating temporary files.

90.45.24 kModeFailIfThere = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Causes the create operation to fail if an existing object with the specified name exists. In this case, STG_E_FILEALREADYEXISTS is returned. This is the default creation mode; that is, if no other create flag is specified, kModeFailIfThere is implied.

90.45.25 kModeRead = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Indicates that the object is read-only, meaning that modifications cannot be made.

90.45.26 kModeReadWrite = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Enables access and modification of object data.

90.45.27 kModeShareDenyExclusive = & h10

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Prevents others from subsequently opening the object in any mode. Be aware that this value is not a simple bitwise OR operation of the kModeShareDenyRead and kModeShareDenyWrite values. In transacted mode, sharing of kModeShareDenyWrite or kModeShareDenyExclusive can significantly improve performance because they do not require snapshots. For more information about transactioning, see the Remarks section.

90.45.28 kModeShareDenyNone = & h40

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Specifies that subsequent openings of the object are not denied read or write access. If no flag from the sharing group is specified, this flag is assumed.

90.45.29 kModeShareDenyRead = & h30

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Prevents others from subsequently opening the object in STGM_READ mode. It is typically used on a root storage object.

90.45.30 kModeShareDenyWrite = & h20

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Prevents others from subsequently opening the object for kModeShareWrite or kModeShareRead-Write access. In transacted mode, sharing of kModeShareDenyWrite or kModeShareDenyExclusive can significantly improve performance because they do not require snapshots.

90.45.31 kModeWrite = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the mode constants for the file stream.
Notes: Enables you to save changes to the object, but does not permit access to its data.

90.45.32 kSeekCur = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the seek constants.
Notes: The new seek pointer is an offset relative to the current seek pointer location. In this case, the dlibMove parameter is the signed displacement from the current seek position.

90.45.33 kSeekEnd = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the seek constants.
Notes: The new seek pointer is an offset relative to the end of the stream. In this case, the dlibMove parameter is the new seek position relative to the end of the stream.

90.45.34 kSeekSet = 0

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the seek constants.
Notes: The new seek pointer is an offset relative to the beginning of the stream. In this case, the dlibMove parameter is the new seek position relative to the beginning of the stream.

90.46 class WIATransferCallbackMBS

90.46.1 class WIATransferCallbackMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for transfering data from the device into your application.
Notes: This class is only used for WIA 2.x.

90.46.2 Properties

90.46.3 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.46.4 Events

90.46.5 GetNextStream(ItemName as string, FullItemName as string) as WIAStreamMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gets a new stream for the specified item.
Notes:

ItemName: Specifies the name of the item to create stream for.
FullItemName: Specifies the full name of the item to create stream for.

Returns a new WIAStreamMBS object or nil for an error.

When this method is implemented by an image processing filter, the Windows Image Acquisition (WIA) 2.0 minidriver calls it during image acquisition to get the destination stream from the client.

A filter's WIATransferCallbackMBS.GetNextStream must delegate to the application's callback method. The filter uses the stream returned by the application callback's WIATransferCallbackMBS.GetNextStream implementation to create its own stream that it passes back to the WIA 2.0 service. The filtering is done when the filter's stream calls the IStream::Write method.

The filter's stream cannot make any assumptions on the number of bytes that are written to it on each write, since the unfiltered image data may come from the WIA 2.0 Preview Component rather than the driver.

The WIA 2.0 Preview Component always writes the whole unfiltered image data into the filter's stream only once, which means that the filter's stream has one source writing into it. If both the driver and the preview component write into the filter's stream, the filter's stream cannot assume, for example, that it will receive the full header the first time IStream::Write is called although its corresponding driver always writes the header data first in one write. Nor can it assume that a subsequent write contains exactly one scan line. So the filtering stream may have to count the number of bytes written to it to determine, for example, where the image data starts.

The image processing filter's WIATransferCallbackMBS.GetNextStream implementation should read the properties needed for its image processing from the item for which the image is being acquired. The filter does not read the properties directly from the pWiaItem2 passed into InitializeFilter. Instead the filter must call FindItemByName on this WIA 2.0 item to obtain the actual WIA 2.0 item. The reason for this is that the image being acquired may actually be a child item of pWiaItem2. For example, during a folder acquisition the filter uses pWiaItem2 to obtain pWiaItem2's child items in WIATransferCallbackMBS.GetNextStream (during a folder acquisition the driver returns the images represented by the child items of WiaItemMBS). The same is true when the WIA 2.0 Preview Component calls into the image processing filter passing a child WIA 2.0 item.

90.46.6 TransferCallback(w as WIATransferParamsMBS) as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Provides progress and other notifications during a transfer.
Notes: Returns an error value or zero on success.

90.47 class WIATransferMBS

90.47.1 class WIATransferMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WIATransferMBS class provides stream-based transfer of data.
Notes: This class is for WIA 2.x.

90.47.2 Methods

90.47.3 Cancel

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Cancels the current transfer operation.
Notes: Lasterror is set.

90.47.4 Download(TransferCallback as WIATransferCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initiates a data download to the caller.
Notes:

TransferCallback: The WIATransferCallbackMBS object to receive progress details and specify the destination.

If a folder is downloaded, then all the child items of that folder are also transferred. Each item is transferred in a separate stream.

Lasterror is set.

90.47.5 EnumerateFormatInfo as WIAFormatInfoEnumeratorMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates an enumerator for the transfer formats that the Windows Image Acquisition (WIA) 2.0 device supports.
Notes: Lasterror is set.

90.47.6 Upload(Source as WIAStreamMBS, TransferCallback as WIATransferCallbackMBS)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initiates a data upload of a single item from the caller.
Notes:

Source: Specifies a pointer to the Stream data.
TransferCallback: Specifies a pointer to the caller's WIATransferCallbackMBS interface.

Lasterror is set.

90.47.7 Properties

90.47.8 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.47.9 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

90.48 class WIATransferParamsMBS

90.48.1 class WIATransferParamsMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class you subclass to get progress of the image transfer.
Notes: The WiaTransferParams is transmitted to an application during a data transfer by the Windows Image Acquisition (WIA) run-time system to the WiaTransferCallbackMBS.TransferCallback method.

90.48.2 Properties

90.48.3 ErrorStatus as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The status, or error state, of the device set by the driver; for example, "warming up".
Notes: (Read and Write property)

90.48.4 Message as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the status of the data transfer.
Notes:

See the kMessage* constants
(Read and Write property)

90.48.5 PercentComplete as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the progress of the data transfer as a percentage.
Example:

```
dim w as WIATransferParamsMBS // your parameters
Progressbar1.maximum = 100
Progressbar1.value = w.PercentComplete
```

Notes: (Read and Write property)

90.48.6 TransferredBytes as UInt64

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the amount of data transferred.
Notes: (Read and Write property)

90.48.7 Constants

90.48.8 kMessageDeviceStatus = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the message constants.

90.48.9 kMessageEndOfStream = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the message constants.

90.48.10 kMessageEndOfTransfer = 3

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the message constants.

90.48.11 kMessageNewPage = 5

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the message constants.

90.48.12 kMessageStatus = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the message constants.

90.49 class WIAVideoMBS

90.49.1 class WIAVideoMBS

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The IWiaVideo interface provides methods that allow an application that uses Windows Image Acquisition (WIA) services to acquire still images from a streaming video device.
Notes: Note WIA does not support video devices in Windows Server 2003, Windows Vista, and later. For those versions of the Windows, use DirectShow to acquire images from video.

90.49.2 Methods

90.49.3 Constructor

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.
Notes: Requires Windows XP or Windows Server 2003.

90.49.4 CreateVideoByDevNum(DeviceNumber as Integer, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByDevNum method creates a connection to a streaming video device with the device number obtained from a Directshow enumeration.
Notes:

DeviceNumber: Specifies the video device's Directshow device number.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

- 90.49.5 CreateVideoByDevNum(DeviceNumber as Integer, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

90.49.5 CreateVideoByDevNum(DeviceNumber as Integer, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByDevNum method creates a connection to a streaming video device with the device number obtained from a Directshow enumeration.
Notes:

DeviceNumber: Specifies the video device's Directshow device number.
WindowHandle: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

- 90.49.4 CreateVideoByDevNum(DeviceNumber as Integer, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15814

90.49.6 CreateVideoByName(FriendlyName as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByName method creates a connection to a streaming video device with the friendly device name obtained from a Directshow enumeration.
Notes:

FriendlyName: Specifies the video device's friendly name obtained from a Directshow device enumeration.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

- 90.49.7 CreateVideoByName(FriendlyName as string, WindowHandle as Integer, StretchToFitParent

as boolean, AutoBeginPlayback as boolean) 15816

90.49.7 CreateVideoByName(FriendlyName as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByName method creates a connection to a streaming video device with the friendly device name obtained from a Directshow enumeration.
Notes:

FriendlyName: Specifies the video device's friendly name obtained from a Directshow device enumeration.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to TRUE to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.
See also:

- 90.49.6 CreateVideoByName(FriendlyName as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15815

90.49.8 CreateVideoByWiaDevID(WiaDeviceID as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByWiaDevID method creates a connection to a streaming video device from its DeviceID.
Notes:

WiaDeviceID: Specifies the value of the video device's DeviceID property.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to true to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

In order for the function to succeed, the ImagesDirectory property must be specified first.
See also:

- 90.49.9 CreateVideoByWiaDevID(WiaDeviceID as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15817

90.49.9 CreateVideoByWiaDevID(WiaDeviceID as string, WindowHandle as Integer, StretchToFitParent as boolean, AutoBeginPlayback as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateVideoByWiaDevID method creates a connection to a streaming video device from its DeviceID.
Notes:

WiaDeviceID: Specifies the value of the video device's DeviceID property.
win: Specifies the window in which to display the streaming video.
StretchToFitParent: Specifies whether the video display is stretched to fit the parent window. Set this parameter to true if the display should be stretched to fit the parent window; otherwise, set to false.
AutoBeginPlayback: Specifies whether the streaming video begins playback as soon as this method returns. Set this parameter to true to cause immediate playback; set it to false to require a call to Play before video playback begins.

Lasterror is set.
By default, the video is displayed in the video device's default resolution. If bStretchToFitParent is set to TRUE, the video display fills the window.

In order for the function to succeed, the ImagesDirectory property must be specified first.
See also:

- 90.49.8 CreateVideoByWiaDevID(WiaDeviceID as string, win as window, StretchToFitParent as boolean, AutoBeginPlayback as boolean) 15816

90.49.10 CurrentState as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the state of the video stream.
Notes: See the kState* constants.

90.49.11 DestroyVideo

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The DestroyVideo method shuts down the streaming video.
Notes:

To restart video playback, the application must call one of the CreateVideo methods again.
Lasterror is set.

Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.

90.49.12 Pause

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Pause method pauses video playback.
Notes:

Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.
Lasterror is set.

90.49.13 Play

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Begins playback of streaming video.
Notes:

Call this method only after a successful call to CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName.
Lasterror is set.

90.49.14 ResizeVideo(StretchToFitParent as boolean)

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ResizeVideo method resizes the video playback to the largest supported resolution that fits inside the parent window.
Notes:

Call this method whenever the parent window is moved or resized.

By default, the video is displayed in a supported resolution smaller than the parent window. If bStretchToFitParent is set to true, the video display fills the window.

Lasterror is set.

90.49.15 TakePicture as folderitem

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The TakePicture method extracts a still image from the video stream, and saves the image as a JPEG file.
Notes:

Returns the full path and filename of the JPEG file that this method creates.
Lasterror is set.

The path and directory where the image file is saved are specified by the ImagesDirectory or ImageFolder property.
See also:

- 90.49.16 TakePicture as string 15819

90.49.16 TakePicture as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The TakePicture method extracts a still image from the video stream, and saves the image as a JPEG file.
Notes:

Returns the full path and filename of the JPEG file that this method creates.
Lasterror is set.

The path and directory where the image file is saved are specified by the ImagesDirectory or ImageFolder property.
See also:

- 90.49.15 TakePicture as folderitem 15819

90.49.17 Properties

90.49.18 Handle as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes: (Read and Write property)

90.49.19 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.

Notes: (Read and Write property)

90.49.20 ImagesDirectory as string

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the full path and directory where images are stored when calling the TakePicture method.
Notes:

Lasterror is set.
(Read and Write computed property)

90.49.21 ImagesFolder as folderitem

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the folder where TakePicture stores the images.
Notes:

Lasterror is set.
(Read and Write computed property)

90.49.22 PreviewVisible as boolean

MBS Win Plugin, Plugin Version: 10.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The PreviewVisible property specifies whether the video playback is visible in its parent window.
Notes:

This does not affect the state of the video.
Lasterror is set.
(Read and Write computed property)

90.49.23 Constants

90.49.24 kStateCreatingVideo = 2

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: One of the WiaVideoMBS CreateVideo methods was called and WIA is in the process of creating the video stream.

90.49.25 kStateDestroyingVideo = 6

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: The application called DestroyVideo method, and WIA is in the process of destroying the video stream.

90.49.26 kStateNoVideo = 1

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: No video stream exists. Call CreateVideoByWiaDevID, CreateVideoByDevNum, or CreateVideoByName to create a video.

90.49.27 kStateVideoCreated = 3

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: A video stream has been successfully created, but playback has not yet started.

90.49.28 kStateVideoPaused = 5

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: A video stream has been successfully created, and the video is paused. The application can now call the TakePicture method.

90.49.29 kStateVideoPlaying = 4

MBS Win Plugin, Plugin Version: 10.3. **Function:** One of the constants for the video state.
Notes: A video stream has been successfully created, and the video is playing. The application can now call the TakePicture method.

Chapter 91

Image Magick

91.1 class ImageMagickQ16MBS

91.1.1 class ImageMagickQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for global functions from the Image Magick library
Notes:

Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

91.1.2 Methods

91.1.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The copyright notice for this format.

Notes: For more details please check the ImageMagick documentation.

91.1.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

91.1.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the home url of the library.
Notes: For more details please check the ImageMagick documentation.

91.1.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the ImageMagick environment.
Example:

```
dim i as new ImageMagickQ16MBS
i.InitializeMagick("")
```

Notes:

Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

91.1.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the ImageMagick environment is currently instantiated.
Notes:

In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

91.1.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error message from loading the image magick library.

91.1.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.
Example:

```
dim i as new ImageMagickQ16MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the

environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.1.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.
Example:

```
dim i as new ImageMagickQ16MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.1.11 MagickInfoList as IMMagickInfoListQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the list of known image formats.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.1.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes:

If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

91.1.13 NewImageInfo as IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new ImageInfo object.
Notes:

Returns nil on low memory.
For more details please check the ImageMagick documentation.

91.1.14 NewImageList as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new empty image list.

Notes: For more details please check the ImageMagick documentation.

91.1.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

91.1.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Quantum Depth of the library.
Notes: For more details please check the ImageMagick documentation.

91.1.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

91.1.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

91.1.19 ReadImage(info as IMImageInfoQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a file.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.1.20 ReadImageFromString(info as IMImageInfoQ16MBS, data as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a string.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.1.21 ReadImageHeaderFromString(info as IMImageInfoQ16MBS, data as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads the image header.
Notes:

Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

91.1.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

91.1.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

91.1.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

91.1.25 Properties

91.1.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.
Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.1.27 LastException as IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.2 class ImageMagickQ32MBS

91.2.1 class ImageMagickQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for global functions from the Image Magick library
Notes:

Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

91.2.2 Methods

91.2.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The copyright notice for this format.
Notes: For more details please check the ImageMagick documentation.

91.2.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

91.2.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the home url of the library.

Notes: For more details please check the ImageMagick documentation.

91.2.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the ImageMagick environment.
Example:

```
dim i as new ImageMagickQ32MBS
i.InitializeMagick("")
```

Notes:

Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

91.2.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the ImageMagick environment is currently instantiated.
Notes:

In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

91.2.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error message from loading the image magick library.

91.2.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.
Example:

```
dim i as new ImageMagickQ32MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.2.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.

Example:

```
dim i as new ImageMagickQ32MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.2.11 MagickInfoList as IMMagickInfoListQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the list of known image formats.
Notes:

Sets the last exception property.

For more details please check the ImageMagick documentation.

91.2.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes:

If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

91.2.13 NewImageInfo as IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new ImageInfo object.
Notes:

Returns nil on low memory.
For more details please check the ImageMagick documentation.

91.2.14 NewImageList as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new empty image list.
Notes: For more details please check the ImageMagick documentation.

91.2.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

91.2.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Quantum Depth of the library.

Notes: For more details please check the ImageMagick documentation.

91.2.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

91.2.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

91.2.19 ReadImage(info as IMImageInfoQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a file.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.2.20 ReadImageFromString(info as IMImageInfoQ32MBS, data as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a string.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.2.21 ReadImageHeaderFromString(info as IMImageInfoQ32MBS, data as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads the image header.
Notes:

Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

91.2.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

91.2.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

91.2.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

91.2.25 Properties

91.2.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.

Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.2.27 LastException as IMExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.3 class ImageMagickQ8MBS

91.3.1 class ImageMagickQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for global functions from the Image Magick library
Notes:

Before using this class you need to load the ImageMagick dylib or dll.

Not all functions from the library are available through the plugin. If you need something special, please ask.

For Mac OS X you need the ImageMagick dylib/bundle and for Windows the normal ImageMagick installation with the DLL.

For more details please check the ImageMagick documentation.

The plugin implements three versions of this ImageMagick classes. One with Q8 for 8 bit quantum depth, one with Q16 for 16 bit depth and Q32 for 32 bit depth.

91.3.2 Methods

91.3.3 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The copyright notice for this format.
Notes: For more details please check the ImageMagick documentation.

91.3.4 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick features.
Notes: For example whether library is compiled with OpenMP for faster performance.

91.3.5 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the home url of the library.

Notes: For more details please check the ImageMagick documentation.

91.3.6 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the ImageMagick environment.
Example:

```
dim i as new ImageMagickQ8MBS
i.InitializeMagick("")
```

Notes:

Path: The execution path of the current ImageMagick client.

For more details please check the ImageMagick documentation.
You need to call LoadLibrary functions to load the library before calling this.

91.3.7 IsMagickInstantiated as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the ImageMagick environment is currently instantiated.
Notes:

In other words: True if InitializeMagick has been called before.

For more details please check the ImageMagick documentation.

91.3.8 LoadErrorString as string

MBS GraphicsMagick Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error message from loading the image magick library.

91.3.9 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.
Example:

```
dim i as new ImageMagickQ8MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

On Windows you can just pass the name of the library and the system will search it on the paths in the environment variable "PATH" (or the Windows folder).

On Linux, pass the path or name of the library and the system will search for it.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a path to a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.3.10 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the dll/bundle on the give path.

Example:

```
dim i as new ImageMagickQ8MBS

if TargetLinux then
if i.LoadLibrary("libMagick.so.6") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
elseif TargetWin32 then
if i.LoadLibrary("CORE_RL_magick_.dll") then
//MsgBox "library loaded."
else
MsgBox "library failed."
end if
else
// Mac OS X
if i.LoadLibraryFile(GetFolderItem("ImageMagick.bundle")) then
//MsgBox "library loaded."
else
MsgBox "The library failed to load."
end if
end if
```

Notes:

In case the loading fails the library may be linked to some other libraries (e.g. X11) and you need to install them to get it working.

This is the preferred way for Mac OS X as paths may not be unique.

For more details please check the ImageMagick documentation.

With plugin version 6.1 the Mac OS X part accepts a folderitem for a dylib file, too.
Changed to a shared method in plugin version 10.4.

91.3.11 MagickInfoList as IMMagickInfoListQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the list of known image formats.
Notes:

Sets the last exception property.

For more details please check the ImageMagick documentation.

91.3.12 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes:

If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

For more details please check the ImageMagick documentation.

91.3.13 NewImageInfo as IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new ImageInfo object.
Notes:

Returns nil on low memory.
For more details please check the ImageMagick documentation.

91.3.14 NewImageList as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new empty image list.
Notes: For more details please check the ImageMagick documentation.

91.3.15 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The package name of the library.
Notes: For more details please check the ImageMagick documentation.

91.3.16 QuantumDepth as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Quantum Depth of the library.

Notes: For more details please check the ImageMagick documentation.

91.3.17 QuantumDepthLibrary as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum depth used to compile the library.
Notes: QuantumDepthLibrary and QuantumDepthPlugin must be equal for the plugin to work correctly. Currently it is compiled for 16bit support.

91.3.18 QuantumRange as String

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum range used by this library.
Notes: Should be a string like "Q16".

91.3.19 ReadImage(info as IMImageInfoQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a file.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.3.20 ReadImageFromString(info as IMImageInfoQ8MBS, data as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image from a string.
Notes:

Sets the last exception property.
Returns nil on any error.
You need to pass in an info object to describe the image.

For more details please check the ImageMagick documentation.

91.3.21 ReadImageHeaderFromString(info as IMImageInfoQ8MBS, data as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads the image header.
Notes:

Same as ReadImageFromString except the pixel data is not read.
Sets the last exception property.
For more details please check the ImageMagick documentation.

91.3.22 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The release date of the library.
Notes: For more details please check the ImageMagick documentation.

91.3.23 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

91.3.24 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The version of the library.
Notes: For more details please check the ImageMagick documentation.

91.3.25 Properties

91.3.26 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.

Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.3.27 LastException as IMExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.4 class IMColorQ16MBS

91.4.1 class IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image Magick class to represent a color.
Example:

```
dim i as IMImageInfoQ16MBS
dim c as IMColorQ16MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes:

As you see above the IMColorQ16MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

91.4.2 Methods

91.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a color object where all four properties are zero.
See also:

- 91.4.4 Constructor(c as color) 15847
- 91.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15848

91.4.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 91.4.3 Constructor 15847
- 91.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15848

91.4.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color object with the given values.
See also:

- 91.4.3 Constructor 15847
- 91.4.4 Constructor(c as color) 15847

91.4.6 Properties

91.4.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.4.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color as a Xojo color.
Notes:

Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down.
This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

91.4.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.4.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.4.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.5 class IMColorQ32MBS

91.5.1 class IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image Magick class to represent a color.
Example:

```
dim i as IMImageInfoQ32MBS
dim c as IMColorQ32MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes:

As you see above the IMColorQ32MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

91.5.2 Methods

91.5.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a color object where all four properties are zero.
See also:

- 91.5.4 Constructor(c as color) 15850
- 91.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15851

91.5.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 91.5.3 Constructor 15850
- 91.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15851

91.5.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color object with the given values.
See also:

- 91.5.3 Constructor 15850
- 91.5.4 Constructor(c as color) 15850

91.5.6 Properties

91.5.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.5.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color as a Xojo color.
Notes:

Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down.
This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

91.5.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.5.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.5.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.6 class IMColorQ8MBS

91.6.1 class IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image Magick class to represent a color.
Example:

```
dim i as IMImageInfoQ8MBS
dim c as IMColorQ8MBS

c=i.BackgroundColor
c.red=65535 // full red
i.BackgroundColor=c
```

Notes:

As you see above the IMColorQ8MBS object does not reference the original values, but contains a copy, so you must assign the modified color back to store it.
(Same as on the Xojo color class)

91.6.2 Methods

91.6.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a color object where all four properties are zero.
See also:

- 91.6.4 Constructor(c as color) 15853
- 91.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15854

91.6.4 Constructor(c as color)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color value and fills it with the given Xojo color.
See also:

- 91.6.3 Constructor 15853
- 91.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0) 15854

91.6.5 Constructor(red as UInt32, green as UInt32, blue as UInt32, Opacity as UInt32 = 0)

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new color object with the given values.
See also:

- 91.6.3 Constructor 15853
- 91.6.4 Constructor(c as color) 15853

91.6.6 Properties

91.6.7 Blue as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.6.8 ColorValue as Color

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color as a Xojo color.
Notes:

Please note that Xojo colors are 8 bit. So for Q16 and Q32 classes the colors are scaled up or down.
This reads/writes the red, green and blue property, but not the opacity property.
(Read and Write property)

91.6.9 Green as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.6.10 Opacity as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.6.11 Red as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red component.
Notes:

Value from 0 to 65535.
(Read and Write property)

91.7 class IMExceptionQ16MBS

91.7.1 class IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for information about an Image Magick Exception.
Notes:

Some functions can throw an exception and you find this exception object after calling the function inside the class. For Example after calling IMImageQ16MBS.resize, the IMImageQ16MBS.LastException property will be nil for no exception or just contain the exception from the resize operation.

For more details please check the ImageMagick documentation.
Subclass of the RuntimeException class.

91.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr10

91.7.3 Methods

91.7.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.7.5 Properties

91.7.6 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The description of the exception.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.7.7 Reason as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The reason of the exception.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.7.8 Severity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The exception type.
Notes:

some usefull constants:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.7.9 Signature as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The signature of the exception.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.10 class IMImageAffineMatrixQ16MBS

91.10.1 class IMImageAffineMatrixQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an Image Magick affine transformation matrix.

91.10.2 Methods

91.10.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an identity matrix.

91.10.4 Properties

91.10.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate x value.
Notes: (Read and Write property)

91.10.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate y value.
Notes: (Read and Write property)

91.10.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale x value.
Notes: (Read and Write property)

91.10.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale y value.
Notes: (Read and Write property)

91.10.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.10.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.11 class IMImageAffineMatrixQ32MBS

91.11.1 class IMImageAffineMatrixQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an Image Magick affine transformation matrix.

91.11.2 Methods

91.11.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an identity matrix.

91.11.4 Properties

91.11.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate x value.
Notes: (Read and Write property)

91.11.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate y value.
Notes: (Read and Write property)

91.11.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale x value.
Notes: (Read and Write property)

91.11.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale y value.
Notes: (Read and Write property)

91.11.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.11.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.12 class IMImageAffineMatrixQ8MBS

91.12.1 class IMImageAffineMatrixQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an Image Magick affine transformation matrix.

91.12.2 Methods

91.12.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an identity matrix.

91.12.4 Properties

91.12.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate x value.
Notes: (Read and Write property)

91.12.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotate y value.
Notes: (Read and Write property)

91.12.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale x value.
Notes: (Read and Write property)

91.12.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale y value.
Notes: (Read and Write property)

91.12.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.12.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate y value.
Notes: (Read and Write property)

91.13 class IMImageAttributeQ16MBS

91.13.1 class IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an image attribute.
Notes:

Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

91.13.2 Properties

91.13.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether compression is used.
Notes: (Read only property)

91.13.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The key of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.13.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The value of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.14 class IMImageAttributeQ32MBS

91.14.1 class IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an image attribute.
Notes:

Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

91.14.2 Properties

91.14.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether compression is used.
Notes: (Read only property)

91.14.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The key of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.14.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The value of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.15 class IMImageAttributeQ8MBS

91.15.1 class IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an image attribute.
Notes:

Used only for reading the attributes.
Do not keep references over long times as memory of key/value pairs may be released.

91.15.2 Properties

91.15.3 Compression as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether compression is used.
Notes: (Read only property)

91.15.4 Key as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The key of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.15.5 Value as String

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The value of this attribute.
Notes:

String is in binary text encoding.
(Read only property)

91.16 class IMImageInfoQ16MBS

91.16.1 class IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

91.16.2 Methods

91.16.3 Clone as IMImageInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

91.16.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.16.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image info and sets the handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.16.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.16.7 Properties

91.16.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Join images into a single multi-image file.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes:

Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.12 BackgroundColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.

Notes: (Read and Write property)

91.16.13 BorderColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.16.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel to use.
Notes:

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

(Read and Write property)

91.16.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Example:

```
dim im as ImageMagickQ16MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ16MBS
dim imageinfo as IMImageInfoQ16MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ16MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)
```

```
// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

91.16.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

useful constants:

```
const UndefinedCompression      = 0
const NoCompression             = 1
const BZipCompression           = 2
const FaxCompression            = 3
const Group4Compression         = 4
const JPEGCompression           = 5
const LosslessJPEGCompression   = 6
const LZWCompression            = 7
const RLECompression            = 8
const ZipCompression            = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Vertical and horizontal resolution in pixels of the image.
Notes:

This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

91.16.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.16.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.16.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font.
Notes:

If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

91.16.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if only the header was read from the image data.
Notes: (Read and Write property)

91.16.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files

(e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

91.16.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Example:

```
dim imageinfo as IMImageInfoQ16MBS
dim blob as string
dim image as IMImageQ16MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.30 MatteColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.16.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform the image to black and white.
Notes: (Read and Write property)

91.16.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

91.16.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font point size.
Notes: (Read and Write property)

91.16.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image manipulation preview option.
Notes:

Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12
ReduceNoisePreview	13
AddNoisePreview	14
SharpenPreview	15
BlurPreview	16
ThresholdPreview	17
EdgeDetectPreview	18
SpreadPreview	19
SolarizePreview	20
ShadePreview	21
RaisePreview	22
SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

91.16.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Notes:

Default value is 75.
(Read and Write property)

91.16.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.16.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.16.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.16.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X11 display to display to.
Notes:

obtain fonts from, or to capture image from.
(Read and Write property)

91.16.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Width and height of a raw image (an image which does not support width and height information).
Notes:

Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

91.16.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.16.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image filename to use as background texture.
Notes: (Read and Write property)

91.16.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image type.
Notes:

constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

91.16.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Print detailed information about the image if True.

Notes: (Read and Write property)

91.16.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FlashPix viewing parameters.
Notes: (Read and Write property)

91.17 class IMImageInfoQ32MBS

91.17.1 class IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

91.17.2 Methods

91.17.3 Clone as IMImageInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

91.17.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.17.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image info and sets the handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.17.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.17.7 Properties

91.17.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Join images into a single multi-image file.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes:

Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.12 BackgroundColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.

Notes: (Read and Write property)

91.17.13 BorderColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.17.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel to use.
Notes:

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

(Read and Write property)

91.17.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Example:

```
dim im as ImageMagickQ32MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ32MBS
dim imageinfo as IMImageInfoQ32MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ32MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)
```

```
// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

91.17.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

useful constants:

```
const UndefinedCompression      = 0
const NoCompression             = 1
const BZipCompression           = 2
const FaxCompression            = 3
const Group4Compression         = 4
const JPEGCompression           = 5
const LosslessJPEGCompression   = 6
const LZWCompression            = 7
const RLECompression            = 8
const ZipCompression            = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Vertical and horizontal resolution in pixels of the image.
Notes:

This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

91.17.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.17.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.17.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font.
Notes:

If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

91.17.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if only the header was read from the image data.
Notes: (Read and Write property)

91.17.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files

(e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

91.17.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Example:

```
dim imageinfo as IMImageInfoQ32MBS
dim blob as string
dim image as IMImageQ32MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.30 MatteColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.17.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform the image to black and white.
Notes: (Read and Write property)

91.17.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

91.17.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font point size.
Notes: (Read and Write property)

91.17.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image manipulation preview option.
Notes:

Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12
ReduceNoisePreview	13
AddNoisePreview	14
SharpenPreview	15
BlurPreview	16
ThresholdPreview	17
EdgeDetectPreview	18
SpreadPreview	19
SolarizePreview	20
ShadePreview	21
RaisePreview	22
SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

91.17.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Notes:

Default value is 75.
(Read and Write property)

91.17.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.17.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.17.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.17.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X11 display to display to.
Notes:

obtain fonts from, or to capture image from.
(Read and Write property)

91.17.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Width and height of a raw image (an image which does not support width and height information).
Notes:

Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

91.17.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.17.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image filename to use as background texture.
Notes: (Read and Write property)

91.17.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image type.
Notes:

constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

91.17.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Print detailed information about the image if True.

Notes: (Read and Write property)

91.17.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FlashPix viewing parameters.
Notes: (Read and Write property)

91.18 class IMImageInfoQ8MBS

91.18.1 class IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about an image.
Notes: For more details please check the ImageMagick documentation.

91.18.2 Methods

91.18.3 Clone as IMImageInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones the ImageInfo object.
Notes: For more details please check the ImageMagick documentation.

91.18.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.18.5 DestroyImageInfo

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image info and sets the handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.18.6 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.18.7 Properties

91.18.8 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Join images into a single multi-image file.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.9 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.10 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Control antialiasing of rendered Postscript and Postscript or TrueType fonts.
Notes:

Enabled by default.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.11 Authenticate as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.12 BackgroundColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.

Notes: (Read and Write property)

91.18.13 BorderColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.18.14 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel to use.
Notes:

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

(Read and Write property)

91.18.15 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.16 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Example:

```
dim im as ImageMagickQ8MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ8MBS
dim imageinfo as IMImageInfoQ8MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ8MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)
```

```
// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

(Read and Write property)

91.18.17 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

useful constants:

```
const UndefinedCompression        = 0
const NoCompression               = 1
const BZipCompression             = 2
const FaxCompression              = 3
const Group4Compression           = 4
const JPEGCompression             = 5
const LosslessJPEGCompression     = 6
const LZWCompression              = 7
const RLECompression              = 8
const ZipCompression              = 9
```

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.18 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Vertical and horizontal resolution in pixels of the image.
Notes:

This option specifies an image density when decoding a Postscript or Portable Document page.
(Read and Write property)

91.18.19 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.18.20 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.21 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.18.22 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.23 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.24 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font.
Notes:

If the font is a fully qualified X server font name, the font is obtained from an X server. To use a TrueType font, precede the TrueType filename with an @. Otherwise, specify a Postscript font name (e.g. "helvetica").
(Read and Write property)

91.18.25 Group as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.26 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a ImageInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.27 HeaderOnly as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if only the header was read from the image data.
Notes: (Read and Write property)

91.18.28 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files

(e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

91.18.29 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Example:

```
dim imageinfo as IMImageInfoQ8MBS
dim blob as string
dim image as IMImageQ8MBS

// Now lets convert to tiff
imageinfo.Filename = "image"
imageinfo.Magick="JPEG"
imageinfo.Quality = 10 //since we are displaying, lets use highest quality, lowest compression
blob = image.ImageToBlob(imageinfo)
```

Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.30 MatteColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.18.31 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transform the image to black and white.
Notes: (Read and Write property)

91.18.32 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.33 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Equivalent size of Postscript page.
Notes: (Read and Write property)

91.18.34 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Text rendering font point size.
Notes: (Read and Write property)

91.18.35 Preview as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image manipulation preview option.
Notes:

Used by 'display'.

constants:

UndefinedPreview	0
RotatePreview	1
ShearPreview	2
RollPreview	3
HuePreview	4
SaturationPreview	5
BrightnessPreview	6
GammaPreview	7
SpiffPreview	8
DullPreview	9
GrayscalePreview	10
QuantizePreview	11
DespecklePreview	12

SegmentPreview	23
SwirlPreview	24
ImplodePreview	25
WavePreview	26
OilPaintPreview	27
CharcoalDrawingPreview	28
JPEGPreview	29

(Read and Write property)

91.18.36 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Notes:

Default value is 75.
(Read and Write property)

91.18.37 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.18.38 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.18.39 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.40 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.41 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.42 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.18.43 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X11 display to display to.
Notes:

obtain fonts from, or to capture image from.
(Read and Write property)

91.18.44 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Width and height of a raw image (an image which does not support width and height information).
Notes:

Size may also be used to affect the image size read from a multi-resolution format (e.g. Photo CD, JBIG, or JPEG.
(Read and Write property)

91.18.45 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.18.46 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image filename to use as background texture.
Notes: (Read and Write property)

91.18.47 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Image type.
Notes:

constants:

UndefinedType	0
BilevelType	1
GrayscaleType	2
GrayscaleMatteType	3
PaletteType	4
PaletteMatteType	5
TrueColorType	6
TrueColorMatteType	7
ColorSeparationType	8
ColorSeparationMatteType	9
OptimizeType	10

(Read and Write property)

91.18.48 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Print detailed information about the image if True.

Notes: (Read and Write property)

91.18.49 View as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FlashPix viewing parameters.
Notes: (Read and Write property)

91.19 class IMImageQ16MBS

91.19.1 class IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an Image Magick Image in memory.
Notes:

Can exist with or without pixel data.

For more details please check the ImageMagick documentation.

91.19.2 Blog Entries

- ImageMagick 7 for Xojo
- MBS Xojo / Real Studio Plugins, version 15.1pr4

91.19.3 Methods

91.19.4 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes:

This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks. Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

91.19.5 AddNoise(NoiseType as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds random noise to the image.

Notes:

Constants

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

For more details please check the ImageMagick documentation.
Sets the last exception property.

91.19.6 AffineTransformImage(matrix as IMImageAffineMatrixQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transforms an image as dictated by the affine matrix.

91.19.7 AppendImageToList(img as IMImageQ16MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

91.19.8 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

91.19.9 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its

gamma appropriatally.
Notes:

Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

91.19.10 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

91.19.11 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

91.19.12 Average as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Average() method takes a set of images and averages them together.
Notes:

Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.13 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes:

The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.19.14 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes:

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.19.15 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

91.19.16 Blur(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

91.19.17 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.19.18 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

91.19.19 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

91.19.20 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

91.19.21 Charcoal(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

Notes:

radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

91.19.22 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.23 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

Returns true on success and false on any error.

pathname: name of clipping path resource. If name is preceded by # , use clipping path numbered by name.

inside: if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

91.19.24 Clone as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

91.19.25 CloneImageAttributes(image as IMImageAttributeQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

91.19.26 CloneImageProfiles(SourceImage as IMImageQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

91.19.27 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.19.28 ClutImage(clutImage as IMImageQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

91.19.29 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ16MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

```
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7fffffff
```

91.19.30 CoalesceImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CoalesceImages composites a set of images while respecting any page offsets and disposal methods.
Notes:

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

91.19.31 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes:

The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

91.19.32 Combine(channel as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines one or more images into a single image.
Notes:

The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

91.19.33 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes:

Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

91.19.34 Composite(ComposeOperator as Integer, Image as IMImageQ16MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the second image composited onto the first at the specified offsets.
Notes:

compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

91.19.35 ConsolidateCMYKImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Consolidates a sequence of CMYK images.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.36 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes:

Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

91.19.37 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.19.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15932

91.19.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.19.37 CopyPicture as picture 15931

91.19.39 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.19.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 15933

91.19.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ16MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.19.39 CopyPictureMask as picture 15932

91.19.41 CopyPixel(x as Integer, y as Integer) as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a pixel.
Notes:

Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

91.19.42 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

91.19.43 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.44 CropImageToTiles(CropGeometry as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

91.19.45 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Displaces an image's colormap by a given number of positions.
Notes:

If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.
displace: displace the colormap this amount.

91.19.46 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts cipher pixels to plain pixels.
Notes:

Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

91.19.47 DeconstructImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum

bounding region of all differences from the first image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.48 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

91.19.49 Despeckle() as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.50 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases the memory used for this image and sets handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.19.51 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Deallocates memory associated with the image attribute list.

91.19.52 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image list and sets the handle to 0.

Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.19.53 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases memory associated with an image profile map.

91.19.54 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes:

If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion

operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.

- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

91.19.56 Edge(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds edges in an image.
Notes:

Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.57 Emboss(radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a grayscale image with a three-dimensional effect.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.58 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts pixels to cipher-pixels.
Notes:

passkey: encipher pixels with this passphrase.
Returns true on success.

91.19.59 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

91.19.60 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

91.19.61 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

91.19.62 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes:

Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

91.19.63 FlattenImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flatten composites all images from the current image pointer to the end of the image list and

returns a single flattened image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.64 Flip as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.65 Flop as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.66 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

91.19.67 FxImage(expression as string) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

91.19.68 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.19.69 GetImageAttribute(key as string) as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

91.19.70 GetImageClippingPathAttribute as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

91.19.71 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

91.19.72 GetNextImageAttribute as IMImageAttributeQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

91.19.73 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

91.19.74 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

91.19.75 ImagesToBlob(info as IMImageInfoQ16MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.19.76 ImageToBlob(info as IMImageInfoQ16MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Example:

```
dim im as ImageMagickQ16MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ16MBS
dim imageinfo as IMImageInfoQ16MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ16MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)
```

```
// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.19.77 Implode(factor as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:

factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

91.19.78 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

91.19.79 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

91.19.80 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

91.19.81 Magnify as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to twice its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.82 MedianFilter(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a digital filter that improves the quality of a noisy image.
Notes:

Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.83 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes:

The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

91.19.84 Minify as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to half its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.85 MosaicImages as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes:

It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

91.19.86 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Simulates motion blur.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.87 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

91.19.88 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.

Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

91.19.89 NewImage(info as IMImageInfoQ16MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image.
Example:

```
dim im as ImageMagickQ16MBS // global
dim p as picture
dim imageinfo as IMImageInfoQ16MBS
dim image as IMImageQ16MBS
dim b as new IMMagickPixelPacketQ16MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1
```

```
//this should read any image IM understands
image = new IMImageQ16MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

91.19.90 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

91.19.91 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

91.19.92 OilPaint(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

Notes:

radius parameter: radius of the circular neighborhood.
Returns nil on any error.
Sets the last exception property.

91.19.93 OptimizeImageLayers as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes:

From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

91.19.94 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes:

Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

91.19.95 OptimizePlusImageLayers as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

91.19.96 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes:

If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

91.19.97 RadialBlur(angle as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: RadialBlur applies a radial blur to the image.
Notes:

angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.98 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges

of the image.
Notes:

Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

91.19.99 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes:

The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.19.100 ReduceNoise(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Smooths the contours of an image while still preserving edge information.
Notes:

The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

91.19.101 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that is exactly the same as the next image in the given image list.
Notes:

Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

91.19.102 RemoveFirstImageFromList as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the first image from the image list and returns the image.
Notes:

Returns nil on any error.
For more details please check the ImageMagick documentation.

91.19.103 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a profile from the image-map by its name.

91.19.104 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that as a zero delay time.
Notes:

Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

91.19.105 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

91.19.106 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

91.19.107 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions.
Notes:

Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.
Sets the last exception property.

91.19.108 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

91.19.109 Roll(x as Integer, y as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll offsets an image as defined by x and y.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Notes:

Returns nil on any error.
Sets the last exception property.

91.19.110 Rotate(degrees as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation of an image.
Notes:

Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.

For more details please check the ImageMagick documentation.

91.19.111 Sample(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions with pixel sampling.
Notes:

Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

91.19.112 Scale(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Example:

```
dim image as IMImageQ16MBS // your image
image=Image.Scale(100,80)
```

Notes:

This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.113 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

91.19.114 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

91.19.115 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a named profile to the image.
Notes:

If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

91.19.116 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
dim image as IMImageQ16MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

91.19.117 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
dim i as IMImageQ16MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

91.19.118 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ16MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets a pixel value.
Example:

```
dim image as IMImageQ16MBS // your image
dim co as IMColorQ16MBS

co=new IMColorQ16MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes:

The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

91.19.119 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shines a distant light on an image to create a three-dimensional effect.
Notes:

You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.120 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.121 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shave shaves pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

Sets the last exception property.

91.19.122 Shear(Xshear as Double, Yshear as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes:

Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.123 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes:

factor: An double value that defines the extent of the solarization.

Returns nil on any error.
Sets the last exception property.

91.19.124 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Splice splices a solid color into the image as defined by the geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.125 Spread(radius as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes:

radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.19.126 Stegano(watermarkImage as IMImageQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SteganoImage hides a digital watermark within the image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.19.127 Stereo(otherImage as IMImageQ16MBS) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes:

The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

91.19.128 Swirl(degrees as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes:

degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

91.19.129 Thumbnail(width as Integer, height as Integer) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Notes:

Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

91.19.130 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes:

This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.19.131 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes:

TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.19.132 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.19.133 TransposeImage as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

91.19.134 TransverseImage as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

91.19.135 Trim as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trim trims pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

91.19.136 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.19.137 Wave(amplitude as Double, wavelength as Double) as IMImageQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes:

Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

91.19.138 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes:

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.19.139 WriteImage(info as IMImageInfoQ16MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes:

You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

91.19.140 Properties

91.19.141 BackgroundColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.
Notes: (Read and Write property)

91.19.142 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.19.143 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)

91.19.144 BorderColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.19.145 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The desired number of colors.
Notes:

Used by Quantize().
(Read and Write property)

91.19.146 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

91.19.147 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

useful constants:

const UndefinedCompression	= 0
const NoCompression	= 1
const BZipCompression	= 2
const FaxCompression	= 3
const Group4Compression	= 4
const JPEGCompression	= 5
const LosslessJPEGCompression	= 6
const LZWCompression	= 7
const RLECompression	= 8
const ZipCompression	= 9

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.148 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.19.149 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile names from within an image montage.
Notes:

Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

91.19.150 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.19.151 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.152 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Filter to use when resizing image.
Notes:

Constants:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

91.19.153 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.19.154 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma level of the image.
Notes:

The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

91.19.155 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

91.19.156 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.19.157 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.158 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.159 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or

progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

91.19.160 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.
Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.19.161 LastException as IMExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.162 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

91.19.163 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.
(Read and Write property)

91.19.164 MatteColor as IMColorQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.19.165 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

91.19.166 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

91.19.167 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

For more details please check the ImageMagick documentation.
(Read and Write property)

```
const UndefinedOrientation        = 0
const TopLeftOrientation          = 1
const TopRightOrientation         = 2
const BottomRightOrientation      = 3
const BottomLeftOrientation       = 4
const LeftTopOrientation          = 5
const RightTopOrientation         = 6
const RightBottomOrientation      = 7
const LeftBottomOrientation       = 8
```

91.19.168 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Example:

```
dim im as ImageMagickQ16MBS // global

Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ16MBS ready initialized

dim image as IMImageQ16MBS
dim imageinfo as IMImageInfoQ16MBS
dim s,blob as string
dim p as Picture
dim i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
```

```
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo

Return p
Exception
Return nil
End Function
```

Notes:

Default value is 75.
(Read and Write property)

91.19.169 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.19.170 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rendering intent to use.
Notes:

constants:

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

(Read and Write property)

91.19.171 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.19.172 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The horizontal resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.173 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The vertical resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.174 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.19.175 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image storage class.
Notes:

If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

91.19.176 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

91.19.177 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.19.178 Constants

91.19.179 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.180 kAffineDistortion = 1 15980

91.19.180 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.179 kAffineDistortion = 1 15980

91.19.181 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.182 kAffineProjectionDistortion = 2 15980

91.19.182 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.181 kAffineProjectionDistortion = 2 15980

91.19.183 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.184 kArcDistortion = 9 15981

91.19.184 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.183 kArcDistortion = 9 15980

91.19.185 kBackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.19.186 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.187 kBarrelDistortion = 14 15981

91.19.187 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.186 kBarrelDistortion = 14 15981

91.19.188 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.189 kBarrelInverseDistortion = 15 15981

91.19.189 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.188 kBarrelInverseDistortion = 15 15981

91.19.190 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.191 kBarycentricColorInterpolate = 1 15982

91.19.191 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.190 kBarycentricColorInterpolate = 1 15982

91.19.192 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.193 kBilinearColorInterpolate = 7 15982

91.19.193 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.192 kBilinearColorInterpolate = 7 15982

91.19.194 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.195 kBilinearDistortion = 6 15982

91.19.195 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.194 kBilinearDistortion = 6 15982

91.19.196 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.197 kBilinearForwardDistortion = 6 15983

91.19.197 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.196 kBilinearForwardDistortion = 6 15983

91.19.198 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.199 kBilinearReverseDistortion = 7 15983

91.19.199 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.198 kBilinearReverseDistortion = 7 15983

91.19.200 kCoalesceLayer = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.201 kCompareAnyLayer = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.202 kCompareClearLayer = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.203 kCompareOverlayLayer = 4

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.204 kCompositeLayer = 12

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.205 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.206 kCylinder2PlaneDistortion = 12 15984

91.19.206 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.205 kCylinder2PlaneDistortion = 12 15984

91.19.207 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.208 kDePolarDistortion = 11 15984

91.19.208 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.207 kDePolarDistortion = 11 15984

91.19.209 kDisposeLayer = 5

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.210 kFlattenLayer = 14

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.211 kInverseColorInterpolate = 19

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.212 kInverseColorInterpolate = 19 15985

91.19.212 kInverseColorInterpolate = 19

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.211 kInverseColorInterpolate = 19 15985

91.19.213 kMergeLayer = 13

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.214 kMosaicLayer = 15

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.215 kNoneDispose = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.19.216 kOptimizeImageLayer = 7

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.217 kOptimizeLayer = 6

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.218 kOptimizePlusLayer = 8

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.219 kOptimizeTransLayer = 9

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.220 kPerspectiveDistortion = 4

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.221 kPerspectiveDistortion = 4 15986

91.19.221 kPerspectiveDistortion = 4

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.220 kPerspectiveDistortion = 4 15986

91.19.222 kPerspectiveProjectionDistortion = 5

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.223 kPerspectiveProjectionDistortion = 5 15986

91.19.223 kPerspectiveProjectionDistortion = 5

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.222 kPerspectiveProjectionDistortion = 5 15986

91.19.224 kPlane2CylinderDistortion = 13

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.225 kPlane2CylinderDistortion = 13 15987

91.19.225 kPlane2CylinderDistortion = 13

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.224 kPlane2CylinderDistortion = 13 15987

91.19.226 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.227 kPolarDistortion = 10 15987

91.19.227 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.226 kPolarDistortion = 10 15987

91.19.228 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.229 kPolynomialColorInterpolate = 8 15987

91.19.229 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.228 kPolynomialColorInterpolate = 8 15987

91.19.230 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.231 kPolynomialDistortion = 8 15988

91.19.231 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.230 kPolynomialDistortion = 8 15988

91.19.232 kPreviousDispose = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.19.233 kRemoveDupsLayer = 10

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.234 kRemoveZeroLayer = 11

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.235 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.236 kResizeDistortion = 17 15988

91.19.236 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.235 kResizeDistortion = 17 15988

91.19.237 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.238 kScaleRotateTranslateDistortion = 3 15989

91.19.238 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.237 kScaleRotateTranslateDistortion = 3 15989

91.19.239 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.240 kSentinelDistortion = 18 15989

91.19.240 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.239 kSentinelDistortion = 18 15989

91.19.241 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.242 kShepardsColorInterpolate = 16 15989

91.19.242 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.241 kShepardsColorInterpolate = 16 15989

91.19.243 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.244 kShepardsDistortion = 16 15990

91.19.244 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.243 kShepardsDistortion = 16 15990

91.19.245 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.246 kUndefinedColorInterpolate = 0 15990

91.19.246 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.245 kUndefinedColorInterpolate = 0 15990

91.19.247 kUndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.19.248 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.249 kUndefinedDistortion = 0 15991

91.19.249 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.19.248 kUndefinedDistortion = 0 15990

91.19.250 kUndefinedLayer = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.19.251 kUnrecognizedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.19.252 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.253 kVoronoiColorInterpolate = 18 15991

91.19.253 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.19.252 kVoronoiColorInterpolate = 18 15991

91.20 class IMImageQ32MBS

91.20.1 class IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an Image Magick Image in memory.
Notes:

Can exist with or without pixel data.

For more details please check the ImageMagick documentation.

91.20.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr4

91.20.3 Methods

91.20.4 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes:

This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks. Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

91.20.5 AddNoise(NoiseType as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds random noise to the image.
Notes:

Constants

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

For more details please check the ImageMagick documentation.
Sets the last exception property.

91.20.6 AffineTransformImage(matrix as IMImageAffineMatrixQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transforms an image as dictated by the affine matrix.

91.20.7 AppendImageToList(img as IMImageQ32MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

91.20.8 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

91.20.9 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes:

Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

91.20.10 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

91.20.11 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7ffffff
```

91.20.12 Average as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Average() method takes a set of images and averages them together.
Notes:

Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.13 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes:

The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7ffffff
```

For more details please check the ImageMagick documentation.

91.20.14 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes:

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.20.15 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

91.20.16 Blur(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable

radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

91.20.17 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.20.18 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

91.20.19 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

91.20.20 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

91.20.21 Charcoal(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

Notes:

radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

91.20.22 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.23 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

Returns true on success and false on any error.

pathname:	name of clipping path resource. If name is preceded by # , use clipping path numbered by name.
inside:	if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

91.20.24 Clone as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

91.20.25 CloneImageAttributes(image as IMImageAttributeQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

91.20.26 CloneImageProfiles(SourceImage as IMImageQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

91.20.27 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.20.28 ClutImage(clutImage as IMImageQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

91.20.29 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ32MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

91.20.30 CoalesceImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CoalesceImages composites a set of images while respecting any page offsets and disposal methods.
Notes:

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

91.20.31 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes:

The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

91.20.32 Combine(channel as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines one or more images into a single image.
Notes:

The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

91.20.33 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes:

Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

91.20.34 Composite(ComposeOperator as Integer, Image as IMImageQ32MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the second image composited onto the first at the specified offsets.
Notes:

compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

91.20.35 ConsolidateCMYKImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Consolidates a sequence of CMYK images.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.36 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes:

Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

91.20.37 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.20.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 16005

91.20.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.20.37 CopyPicture as picture 16004

91.20.39 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.20.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 16006

91.20.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ32MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.20.39 CopyPictureMask as picture 16005

91.20.41 CopyPixel(x as Integer, y as Integer) as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a pixel.
Notes:

Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

91.20.42 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

91.20.43 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.44 CropImageToTiles(CropGeometry as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

91.20.45 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Displaces an image's colormap by a given number of positions.
Notes:

If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.
displace: displace the colormap this amount.

91.20.46 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts cipher pixels to plain pixels.
Notes:

Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

91.20.47 DeconstructImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum

bounding region of all differences from the first image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.48 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

91.20.49 Despeckle() as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.50 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases the memory used for this image and sets handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.20.51 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Deallocates memory associated with the image attribute list.

91.20.52 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image list and sets the handle to 0.

Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.20.53 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases memory associated with an image profile map.

91.20.54 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes:

If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion

operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.

- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

91.20.56 Edge(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds edges in an image.
Notes:

Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.57 Emboss(radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a grayscale image with a three-dimensional effect.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.58 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts pixels to cipher-pixels.
Notes:

passkey: encipher pixels with this passphrase.
Returns true on success.

91.20.59 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

91.20.60 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7ffffff
```

91.20.61 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

91.20.62 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes:

Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

91.20.63 FlattenImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flatten composites all images from the current image pointer to the end of the image list and

returns a single flattened image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.64 Flip as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.65 Flop as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.66 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

91.20.67 FxImage(expression as string) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

91.20.68 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.
sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.20.69 GetImageAttribute(key as string) as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

91.20.70 GetImageClippingPathAttribute as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

91.20.71 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

91.20.72 GetNextImageAttribute as IMImageAttributeQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

91.20.73 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

91.20.74 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

91.20.75 ImagesToBlob(info as IMImageInfoQ32MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.20.76 ImageToBlob(info as IMImageInfoQ32MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Example:

```
dim im as ImageMagickQ32MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ32MBS
dim imageinfo as IMImageInfoQ32MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ32MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)
```

```
// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.20.77 Implode(factor as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:

factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

91.20.78 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

91.20.79 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

91.20.80 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

91.20.81 Magnify as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to twice its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.82 MedianFilter(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a digital filter that improves the quality of a noisy image.
Notes:

Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.83 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes:

The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

91.20.84 Minify as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to half its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.85 MosaicImages as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes:

It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

91.20.86 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Simulates motion blur.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.87 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

91.20.88 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.

Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7fffffff
```

91.20.89 NewImage(info as IMImageInfoQ32MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image.
Example:

```
dim im as ImageMagickQ32MBS // global
dim p as picture
dim imageinfo as IMImageInfoQ32MBS
dim image as IMImageQ32MBS
dim b as new IMMagickPixelPacketQ32MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1
```

```
//this should read any image IM understands
image = new IMImageQ32MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

91.20.90 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

91.20.91 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

91.20.92 OilPaint(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

Notes:

radius parameter: radius of the circular neighborhood.
Returns nil on any error.
Sets the last exception property.

91.20.93 OptimizeImageLayers as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes:

From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

91.20.94 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes:

Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

91.20.95 OptimizePlusImageLayers as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

91.20.96 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes:

If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

91.20.97 RadialBlur(angle as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: RadialBlur applies a radial blur to the image.
Notes:

angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.98 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges

of the image.
Notes:

Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

91.20.99 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes:

The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.20.100 ReduceNoise(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Smooths the contours of an image while still preserving edge information.
Notes:

The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

91.20.101 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that is exactly the same as the next image in the given image list.
Notes:

Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

91.20.102 RemoveFirstImageFromList as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the first image from the image list and returns the image.
Notes:

Returns nil on any error.
For more details please check the ImageMagick documentation.

91.20.103 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a profile from the image-map by its name.

91.20.104 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that as a zero delay time.
Notes:

Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

91.20.105 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

91.20.106 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

91.20.107 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions.
Notes:

Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.
Sets the last exception property.

91.20.108 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

91.20.109 Roll(x as Integer, y as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll offsets an image as defined by x and y.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

Notes:

Returns nil on any error.
Sets the last exception property.

91.20.110 Rotate(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation of an image.
Notes:

Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.

For more details please check the ImageMagick documentation.

91.20.111 Sample(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions with pixel sampling.
Notes:

Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

91.20.112 Scale(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Example:

```
dim image as IMImageQ32MBS // your image
image=Image.Scale(100,80)
```

Notes:

This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.113 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

91.20.114 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

91.20.115 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a named profile to the image.
Notes:

If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

91.20.116 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
dim image as IMImageQ32MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

91.20.117 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
dim i as IMImageQ32MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

91.20.118 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ32MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets a pixel value.
Example:

```
dim image as IMImageQ32MBS // your image
dim co as IMColorQ32MBS

co=new IMColorQ32MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes:

The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

91.20.119 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shines a distant light on an image to create a three-dimensional effect.
Notes:

You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.120 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.121 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shave shaves pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

Sets the last exception property.

91.20.122 Shear(Xshear as Double, Yshear as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes:

Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.123 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes:

factor: An double value that defines the extent of the solarization.

Returns nil on any error.
Sets the last exception property.

91.20.124 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Splice splices a solid color into the image as defined by the geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.125 Spread(radius as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes:

radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.20.126 Stegano(watermarkImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SteganoImage hides a digital watermark within the image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.20.127 Stereo(otherImage as IMImageQ32MBS) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes:

The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

91.20.128 Swirl(degrees as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes:

degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

91.20.129 Thumbnail(width as Integer, height as Integer) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Notes:

Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

91.20.130 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes:

This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.20.131 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes:

TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.20.132 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.20.133 TransposeImage as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

91.20.134 TransverseImage as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

91.20.135 Trim as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trim trims pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

91.20.136 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.20.137 Wave(amplitude as Double, wavelength as Double) as IMImageQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes:

Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

91.20.138 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes:

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.20.139 WriteImage(info as IMImageInfoQ32MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes:

You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

91.20.140 Properties

91.20.141 BackgroundColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.
Notes: (Read and Write property)

91.20.142 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.20.143 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)

91.20.144 BorderColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.20.145 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The desired number of colors.
Notes:

Used by Quantize().
(Read and Write property)

91.20.146 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

91.20.147 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

useful constants:

const UndefinedCompression	= 0
const NoCompression	= 1
const BZipCompression	= 2
const FaxCompression	= 3
const Group4Compression	= 4
const JPEGCompression	= 5
const LosslessJPEGCompression	= 6
const LZWCompression	= 7
const RLECompression	= 8
const ZipCompression	= 9

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.148 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.20.149 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile names from within an image montage.
Notes:

Only valid after calling MontageImages() or reading a MIFF file which contains a directory.
(Read and Write property)

91.20.150 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.20.151 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.152 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Filter to use when resizing image.
Notes:

Constants:

const PointFilter	=1
const BoxFilter	=2
const TriangleFilter	=3
const HermiteFilter	=4
const HanningFilter	=5
const HammingFilter	=6
const BlackmanFilter	=7
const GaussianFilter	=8
const QuadraticFilter	=9
const CubicFilter	=10
const CatromFilter	=11
const MitchellFilter	=12
const LanczosFilter	=13
const BesselFilter	=14
const SincFilter	=15

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

91.20.153 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.20.154 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma level of the image.
Notes:

The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

91.20.155 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

91.20.156 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.20.157 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.158 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.159 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or

progressive JPEG image.

constants:

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

(Read and Write property)

91.20.160 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.
Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.20.161 LastException as IMExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.162 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

91.20.163 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.
(Read and Write property)

91.20.164 MatteColor as IMColorQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.20.165 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

91.20.166 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

91.20.167 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

For more details please check the ImageMagick documentation.
(Read and Write property)

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

91.20.168 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Example:

```
dim im as ImageMagickQ32MBS // global

Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ32MBS ready initialized

dim image as IMImageQ32MBS
dim imageinfo as IMImageInfoQ32MBS
dim s,blob as string
dim p as Picture
dim i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
```

```
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo

Return p
Exception
Return nil
End Function
```

Notes:

Default value is 75.
(Read and Write property)

91.20.169 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.20.170 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rendering intent to use.
Notes:

constants:

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

(Read and Write property)

91.20.171 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.20.172 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The horizontal resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.173 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The vertical resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.174 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.20.175 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image storage class.
Notes:

If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

91.20.176 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

91.20.177 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.20.178 Constants

91.20.179 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.180 kAffineDistortion = 1 16053

91.20.180 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.179 kAffineDistortion = 1 16053

91.20.181 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.182 kAffineProjectionDistortion = 2 16053

91.20.182 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.181 kAffineProjectionDistortion = 2 16053

91.20.183 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.184 kArcDistortion = 9 16054

91.20.184 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.183 kArcDistortion = 9 16053

91.20.185 kBackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.20.186 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.187 kBarrelDistortion = 14 16054

91.20.187 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.186 kBarrelDistortion = 14 16054

91.20.188 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.189 kBarrelInverseDistortion = 15 16054

91.20.189 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.188 kBarrelInverseDistortion = 15 16054

91.20.190 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.191 kBarycentricColorInterpolate = 1 16055

91.20.191 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.190 kBarycentricColorInterpolate = 1 16055

91.20.192 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.193 kBilinearColorInterpolate = 7 16055

91.20.193 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.192 kBilinearColorInterpolate = 7 16055

91.20.194 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.195 kBilinearDistortion = 6 16055

91.20.195 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.194 kBilinearDistortion = 6 16055

91.20.196 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.197 kBilinearForwardDistortion = 6 16056

91.20.197 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.196 kBilinearForwardDistortion = 6 16056

91.20.198 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.199 kBilinearReverseDistortion = 7 16056

91.20.199 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.198 kBilinearReverseDistortion = 7 16056

91.20.200 kCoalesceLayer = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.201 kCompareAnyLayer = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.202 kCompareClearLayer = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.203 kCompareOverlayLayer = 4

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.204 kCompositeLayer = 12

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.205 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.206 kCylinder2PlaneDistortion = 12 16057

91.20.206 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.205 kCylinder2PlaneDistortion = 12 16057

91.20.207 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.208 kDePolarDistortion = 11 16057

91.20.208 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.207 kDePolarDistortion = 11 16057

91.20.209 kDisposeLayer = 5

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.210 kFlattenLayer = 14

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.211 kInverseColorInterpolate = 19

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants. See also:

- 91.20.212 kInverseColorInterpolate = 19 16058

91.20.212 kInverseColorInterpolate = 19

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants. See also:

- 91.20.211 kInverseColorInterpolate = 19 16058

91.20.213 kMergeLayer = 13

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.214 kMosaicLayer = 15

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.215 kNoneDispose = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.20.216 kOptimizeImageLayer = 7

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.217 kOptimizeLayer = 6

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.218 kOptimizePlusLayer = 8

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.219 kOptimizeTransLayer = 9

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.220 kPerspectiveDistortion = 4

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.221 kPerspectiveDistortion = 4 16059

91.20.221 kPerspectiveDistortion = 4

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.220 kPerspectiveDistortion = 4 16059

91.20.222 kPerspectiveProjectionDistortion = 5

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.223 kPerspectiveProjectionDistortion = 5 16059

91.20.223 kPerspectiveProjectionDistortion = 5

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.222 kPerspectiveProjectionDistortion = 5 16059

91.20.224 kPlane2CylinderDistortion = 13

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.225 kPlane2CylinderDistortion = 13 16060

91.20.225 kPlane2CylinderDistortion = 13

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.224 kPlane2CylinderDistortion = 13 16060

91.20.226 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.227 kPolarDistortion = 10 16060

91.20.227 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.226 kPolarDistortion = 10 16060

91.20.228 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.229 kPolynomialColorInterpolate = 8 16060

91.20.229 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.228 kPolynomialColorInterpolate = 8 16060

91.20.230 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.231 kPolynomialDistortion = 8 16061

91.20.231 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.230 kPolynomialDistortion = 8 16061

91.20.232 kPreviousDispose = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.20.233 kRemoveDupsLayer = 10

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.234 kRemoveZeroLayer = 11

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.235 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.236 kResizeDistortion = 17 16061

91.20.236 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.235 kResizeDistortion = 17 16061

91.20.237 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.238 kScaleRotateTranslateDistortion = 3 16062

91.20.238 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.237 kScaleRotateTranslateDistortion = 3 16062

91.20.239 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.240 kSentinelDistortion = 18 16062

91.20.240 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.239 kSentinelDistortion = 18 16062

91.20.241 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.242 kShepardsColorInterpolate = 16 16062

91.20.242 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.241 kShepardsColorInterpolate = 16 16062

91.20.243 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.244 kShepardsDistortion = 16 16063

91.20.244 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.243 kShepardsDistortion = 16 16063

91.20.245 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.246 kUndefinedColorInterpolate = 0 16063

91.20.246 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.245 kUndefinedColorInterpolate = 0 16063

91.20.247 kUndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.20.248 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.249 kUndefinedDistortion = 0 16064

91.20.249 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.
See also:

- 91.20.248 kUndefinedDistortion = 0 16063

91.20.250 kUndefinedLayer = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.20.251 kUnrecognizedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.20.252 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.253 kVoronoiColorInterpolate = 18 16064

91.20.253 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.
See also:

- 91.20.252 kVoronoiColorInterpolate = 18 16064

91.21 class IMImageQ8MBS

91.21.1 class IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an Image Magick Image in memory.
Notes:

Can exist with or without pixel data.

For more details please check the ImageMagick documentation.

91.21.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr4

91.21.3 Methods

91.21.4 AdaptiveThreshold(width as Integer, height as Integer, offset as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AdaptiveThreshold selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes:

This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks. Sets the last exception property.

width: The width of the local neighborhood.
height: The height of the local neighborhood.
offset: The mean offset.

For more details please check the ImageMagick documentation.

91.21.5 AddNoise(NoiseType as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds random noise to the image.
Notes:

Constants

UndefinedNoise	=0
UniformNoise	=1
GaussianNoise	=2
MultiplicativeGaussianNoise	=3
ImpulseNoise	=4
LaplacianNoise	=5
PoissonNoise	=6

For more details please check the ImageMagick documentation.
Sets the last exception property.

91.21.6 AffineTransformImage(matrix as IMImageAffineMatrixQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transforms an image as dictated by the affine matrix.

91.21.7 AppendImageToList(img as IMImageQ8MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds an image to the image list.
Notes: For more details please check the ImageMagick documentation.

91.21.8 AutoGammaImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: Returns true on success or false on failure.

91.21.9 AutoGammaImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoGammaImage extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes:

Returns true on success or false on failure.

channelType: The channels to auto-level. If the special 'SyncChannels' flag is set all given channels is adjusted in the same way using the mean average of those channels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

91.21.10 AutoLevelImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: Returns true on success or false on failure.

91.21.11 AutoLevelImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: AutoLevelImage adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

91.21.12 Average as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Average() method takes a set of images and averages them together.
Notes:

Each image in the set must have the same width and height. Average() returns a single image with each corresponding pixel component of each image averaged. On failure, a nil image is returned and exception describes the reason for the failure.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.13 BilevelChannel(channel as Integer, threshold as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes:

The result is a high-contrast image.

channel: The channel type.
threshold: define the threshold values.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7ffffff
```

For more details please check the ImageMagick documentation.

91.21.14 BlackThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: BlackThreshold is like Threshold but forces all pixels below the threshold into black while leaving all pixels above the threshold unchanged.
Notes:

No exceptions are generated.
threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.21.15 BlobSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The expected size for this image written to a file.
Notes: For more details please check the ImageMagick documentation.

91.21.16 Blur(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImage selects a suitable

radius for you.

radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

For more details please check the ImageMagick documentation.

91.21.17 BlurImageChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and BlurImageChannel selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel       = & h0001
const GrayChannel      = & h0001
const CyanChannel      = & h0001
const GreenChannel     = & h0002
const MagentaChannel   = & h0002
const BlueChannel      = & h0004
const YellowChannel    = & h0004
const AlphaChannel     = & h0008
const OpacityChannel   = & h0008
const BlackChannel     = & h0020
const IndexChannel     = & h0020
const AllChannels      = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.21.18 BorderImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Surrounds the image with a border of the color defined by the bordercolor member of the image.
Notes: The width and height of the border are defined by the corresponding parameters.

91.21.19 BrightnessContrastImage(brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

91.21.20 BrightnessContrastImageChannel(ChannelType as Integer, brightness as Double, contrast as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image. It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.
Notes:

Returns true on success or false on failure.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).
ChannelType: The channels to use.

Constants for channel:

91.21.21 Charcoal(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Charcoal creates a new image that is a copy of an existing one with the edge highlighted.

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

Notes:

radius: the radius of the pixel neighborhood.
sigma: The standard deviation of the Gaussian, in pixels.

Returns nil on any error.
Sets the last exception property.

91.21.22 Chop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Chop removes a region of an image and collapses the image to occupy the removed portion.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.23 ClipPath(path as string, inside as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the image clip mask based any clipping path information if it exists.
Notes:

Returns true on success and false on any error.

pathname: name of clipping path resource. If name is preceded by # , use clipping path numbered by name.

inside: if true, later operations take effect inside clipping path. Otherwise later operations take effect outside clipping path.

91.21.24 Clone as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of this image object.
Notes: For more details please check the ImageMagick documentation.

91.21.25 CloneImageAttributes(image as IMImageAttributeQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: CloneImageAttributes() clones one or more image attributes.
Notes: Returns false on any error.

91.21.26 CloneImageProfiles(SourceImage as IMImageQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones one or more image profiles.
Notes: Returns false on any error and true on success.

91.21.27 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.21.28 ClutImage(clutImage as IMImageQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.

Returns true on success or false on failure.

91.21.29 ClutImageChannel(ChannelType as Integer, clutImage as IMImageQ8MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is rarely used.

ClutImage: the color lookup table image for replacement color values.
ChannelType: The channels to use.

Returns true on success or false on failure.

Constants for channel:

```
const UndefinedChannel  = 0
const RedChannel        = & h0001
const GrayChannel       = & h0001
const CyanChannel       = & h0001
const GreenChannel      = & h0002
const MagentaChannel    = & h0002
const BlueChannel       = & h0004
const YellowChannel     = & h0004
const AlphaChannel      = & h0008
const OpacityChannel    = & h0008
const BlackChannel      = & h0020
const IndexChannel      = & h0020
const AllChannels       = & h7fffffff
```

91.21.30 CoalesceImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CoalesceImages composites a set of images while respecting any page offsets and disposal methods.
Notes:

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. CoalesceImages() returns a new sequence where each image in the sequence is the same size as the first and composited with the next image in the sequence.

Returns nil on any error.
Sets the last exception property.

91.21.31 Colorize(opacity as string, PenColorRed as Integer, PenColorGreen as Integer, PenColorBlue as Integer, PenColorOpacity as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method ColorizeImage creates a new image that is a copy of an existing one with the image pixels colorized.
Notes:

The colorization is controlled with the pen color and the opacity levels.

opacity: A character string indicating the level of opacity as a percentage (0-100).
PenColorRed, PenColorGreen, PenColorBlue and PenColorOpacity define the pen color used.

Returns nil on any error.
Sets the last exception property.

91.21.32 Combine(channel as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Combines one or more images into a single image.
Notes:

The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

The lastexception property is set.

91.21.33 CompareImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CompareImageLayers() compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the mageLayerMethod specified) it discovers.
Notes:

Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

ImageLayerMethod:
the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

Can raise an exception.

91.21.34 Composite(ComposeOperator as Integer, Image as IMImageQ8MBS, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the second image composited onto the first at the specified offsets.
Notes:

compose: Specifies an image composite operator.
Image: The second image.
x: An integer that specifies the column offset of the composited image.
y: An integer that specifies the row offset of the composited image.

No error code and exception!

91.21.35 ConsolidateCMYKImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Consolidates a sequence of CMYK images.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.36 ContrastImage(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes:

Returns true on success or false on failure.
Set sharpen to true to increase the image contrast otherwise the contrast is reduced.

91.21.37 CopyPicture as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.21.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture 16078

91.21.38 CopyPicture(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPicture(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.21.37 CopyPicture as picture 16077

91.21.39 CopyPictureMask as picture

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
See also:

- 91.21.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture 16079

91.21.40 CopyPictureMask(x as Integer, y as Integer, width as Integer, height as Integer) as picture

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a portion of the mask of the Image Magick Image and returns a Xojo picture.
Example:

```
dim image as IMImageQ8MBS // your image
Canvas1.Backdrop=image.CopyPictureMask(0,0,image.Width,image.Height)
```

Notes:

Sets the last exception property.
Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.
See also:

- 91.21.39 CopyPictureMask as picture 16078

91.21.41 CopyPixel(x as Integer, y as Integer) as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies a pixel.
Notes:

Returns nil on any error.
This method works only for bitmap images.
x and y are zero based.

91.21.42 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Creates a HBITMAP for the image for use with Windows Declares.
Notes: The HBITMAP returned needs to be freed when you are done with it or you risk having a memory leak.

91.21.43 Crop(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop extracts a region of the image starting at the offset defined by geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.44 CropImageToTiles(CropGeometry as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crops a single image, into a possible list of tiles.
Notes: This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

91.21.45 CycleColormap(displace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Displaces an image's colormap by a given number of positions.
Notes:

If you cycle the colormap a number of times you can produce a psychodelic effect.
Returns true on success.
displace: displace the colormap this amount.

91.21.46 DecipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts cipher pixels to plain pixels.
Notes:

Passkey: decipher cipher pixels with this passphrase.
Returns true on success.

91.21.47 DeconstructImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeconstructImages() compares each image with the next in a sequence and returns the minimum

bounding region of all differences from the first image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.48 DeleteImageAttribute(key as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DeleteImageAttribute() deletes an attribute from the image.
Notes: Returns false on any error.

91.21.49 Despeckle() as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.50 DestroyImage

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases the memory used for this image and sets handle to 0.
Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.21.51 DestroyImageAttributes

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Deallocates memory associated with the image attribute list.

91.21.52 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys the image list and sets the handle to 0.

Notes:

For more details please check the ImageMagick documentation.
The destructor will call this for you if release=true.

91.21.53 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases memory associated with an image profile map.

91.21.54 DistortImage(DistortImageMethod as Integer, values() as Double, bestfit as boolean) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DistortImage() distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes:

If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

A description of each parameter follows:
self: the image to be distorted.
m: the method of image distortion. ArcDistortion always ignores source image offset, and always 'bestfit' the destination image with the top left corner offset relative to the polar mapping center. Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided. Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.
values: arguments given.
bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion

operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.

- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

91.21.55 Edge(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds edges in an image.
Notes:

Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.56 Emboss(radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a grayscale image with a three-dimensional effect.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss selects a suitable radius for you.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.57 EncipherImage(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts pixels to cipher-pixels.
Notes:

passkey: encipher pixels with this passphrase.
Returns true on success.

91.21.58 EqualizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

91.21.59 EqualizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to use.

Constants for channel:

91.21.60 ExcerptImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a excerpt of the image as defined by the geometry.
Notes: Define the region of the image to extend with x, y, width, and height.

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

91.21.61 ExtentImage(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes:

Define the region of the image to extend with x, y, width, and height.

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

91.21.62 FlattenImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flatten composites all images from the current image pointer to the end of the image list and returns a single flattened image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.63 Flip as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flip creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.64 Flop as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Flop creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.65 FrameImage(x as Integer, y as Integer, width as Integer, height as Integer, innerBevel as Integer, OuterBevel as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a simulated three-dimensional border around the image.
Notes: The color of the border is defined by the MatteColor of image. Width and height specify the border width of the vertical and horizontal sides of the frame. innerBevel and OuterBevel indicate the width of the inner and outer shadows of the frame.

91.21.66 FxImage(expression as string) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: FxImage() applies a mathematical expression to the specified image.
Notes: Can raise an exception.

91.21.67 GaussianBlurChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you.
Sets the last exception property.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
channel: The channel type.

sigma: the standard deviation of the Gaussian, in pixels.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.21.68 GetImageAttribute(key as string) as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageAttribute searches the list of image attributes and returns a reference to the attribute if it exists otherwise nil.

91.21.69 GetImageClippingPathAttribute as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetImageClippingPathAttribute searches the list of image attributes and returns a reference to a clipping path if it exists otherwise nil.

91.21.70 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets a profile associated with an image by name.
Notes: Returns "" on any error.

91.21.71 GetNextImageAttribute as IMImageAttributeQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GetNextImageAttribute() gets the next image attribute.
Notes: Returns nil on any error.

91.21.72 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets the next profile name for an image.
Notes: Returns "" on any error.

91.21.73 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole Image structure copied into a memoryblock.
Notes: Returns nil on any error.

91.21.74 ImagesToBlob(info as IMImageInfoQ8MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.21.75 ImageToBlob(info as IMImageInfoQ8MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImagesToBlob implements direct to memory image formats.
Example:

```
dim im as ImageMagickQ8MBS // global

Function IMPictureToString(p as picture, magick as string, quality as Integer) As string
dim image as new IMImageQ8MBS
dim imageinfo as IMImageInfoQ8MBS
dim s,data as string
dim impp as new IMMagickPixelPacketQ8MBS

// empty string for nil picture
if p = nil then
Return ""
end if

// create a new picture info

imageinfo = im.NewImageInfo
imageinfo.ColorSpace=1
// only color space is needed. 1 for RGB.

// background color of image
impp.red = 0
impp.Green = 0
impp.Blue = 0

// creates a new image object
if not image.NewImage(imageinfo,p.Width,p.Height,impp) then
Return ""
end if

// copy RB picture into IM Image at position 0/0
image.ColorSpace = 1
image.SetPicture(p,0,0)

// set compression data
imageinfo.Magick = magick
imageinfo.Quality = quality

// and rendering intent: 2=PerceptualIntent
'image.RenderingIntent = 2

// create image data
data = image.ImageToBlob(imageinfo)

// release memory
image.DestroyImage
imageinfo.DestroyImageInfo

// return result
```

```
Return data

Exception
// in case of an exception return nothing
Return ""

End Function
```

Notes:

It returns the image sequence as a string. The magick member of the ImageInfo structure determines the format of the returned blob (GIF, JPEG, PNG, etc.)

Note, some image formats do not permit multiple images to the same image stream (e.g. JPEG). in this instance, just the first image of the sequence is returned as a blob.

Sets the last exception property and returns "" on any error.
For more details please check the ImageMagick documentation.

91.21.76 Implode(factor as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ImplodeImage creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:

factor: A double value that defines the extent of the implosion.

Returns nil on any error.
Sets the last exception property.

91.21.77 IsBlobExempt as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is exempt.
Notes: For more details please check the ImageMagick documentation.

91.21.78 IsBlobSeekable as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is seekable.
Notes: For more details please check the ImageMagick documentation.

91.21.79 IsBlobTemporary as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is temporary.
Notes: For more details please check the ImageMagick documentation.

91.21.80 Magnify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to twice its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.81 MedianFilter(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a digital filter that improves the quality of a noisy image.
Notes:

Each pixel is replaced by the median in a set of neighboring pixels as defined by radius.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.82 MergeImageLayers(ImageLayerMethod as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MergeImageLayers() composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes:

The inital canvas's size depends on the given ImageLayerMethod, and is initialized using the first images

images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

ImageLayerMethod:
the method of selecting the size of the initial canvas.

MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.

FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.

MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.

Can raise an exception.

91.21.83 Minify as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A convenience method that scales an image proportionally to half its size.
Notes:

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.84 MosaicImages as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: MosaicImages inlays an image sequence to form a single coherent picture.
Notes:

It returns a single image with each image in the sequence composited at the location defined by the page member of the image structure.
Returns nil on any error.
Sets the last exception property.

91.21.85 MotionBlur(radius as Double, sigma as Double, angle as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Simulates motion blur.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlur selects a suitable radius for you. Angle gives the angle of the blurring motion.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.86 NegateImage(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

gray: If true, only negate grayscale pixels within the image.

91.21.87 NegateImageChannel(ChannelType as Integer, gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.
Notes:

Returns true on success or false on failure.
The grayscale option means that only grayscale values within the image are negated.

ChannelType: The channels to use.
gray: If true, only negate grayscale pixels within the image.

Constants for channel:

```
const UndefinedChannel = 0
const RedChannel = & h0001
const GrayChannel = & h0001
const CyanChannel = & h0001
const GreenChannel = & h0002
const MagentaChannel = & h0002
const BlueChannel = & h0004
const YellowChannel = & h0004
const AlphaChannel = & h0008
const OpacityChannel = & h0008
const BlackChannel = & h0020
const IndexChannel = & h0020
const AllChannels = & h7ffffff
```

91.21.88 NewImage(info as IMImageInfoQ8MBS, width as Integer, height as Integer, background as IMMagickPixelPacketQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image.
Example:

```
dim im as ImageMagickQ8MBS // global
dim p as picture
dim imageinfo as IMImageInfoQ8MBS
dim image as IMImageQ8MBS
dim b as new IMMagickPixelPacketQ8MBS
b.Blue=65535
b.ColorSpace=1 // RGB
b.Depth=16

imageinfo = im.NewImageInfo
imageinfo.Depth=16
imageinfo.ColorSpace=1

//this should read any image IM understands
image = new IMImageQ8MBS
if image.NewImage(imageinfo,500,500,b) then
p=New Picture(300,300,32)
p.Graphics.ForeColor=Rgb(255,0,0)
p.Graphics.FillOval 0,0,300,300
image.SetPicture p,0,0
else
MsgBox "failed"
end if
```

Notes: Returns false on failure and true on success.

91.21.89 NormalizeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: Returns true on success or false on failure.

91.21.90 NormalizeImageChannel(ChannelType as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes:

Returns true on success or false on failure.

ChannelType: The channels to auto-level. If the special 'SyncChannels' flag is set the min/max/mean value of all given channels is used for all given channels, to all channels in the same way.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

91.21.91 OilPaint(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Method OilPaintImage creates a new image that is a copy of an existing one with each pixel component replaced with the color of greatest frequency in a circular neighborhood.
Notes:

radius parameter: radius of the circular neighborhood.
Returns nil on any error.
Sets the last exception property.

91.21.92 OptimizeImageLayers as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageLayers() compares each image the GIF disposed forms of the previous image in the sequence.
Notes:

From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

Can raise an exception.

91.21.93 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImageTransparency() takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes:

Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

Can raise an exception.

91.21.94 OptimizePlusImageLayers as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** OptimizeImagePlusLayers() is exactly as OptimizeImageLayers(), but may also add or even re-

move extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.
Notes: Can raise an exception.

91.21.95 ProfileImage(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds or removes a ICC, IPTC, or generic profile from an image.
Notes:

If the ProfileData is "", it is removed from the image otherwise added. Use a name of '*' and a ProfileData of "" to remove all profiles from the image.

Returns false on any error and true on success.

91.21.96 RadialBlur(angle as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: RadialBlur applies a radial blur to the image.
Notes:

angle: The angle of the radial blur.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.97 RaiseImage(x as Integer, y as Integer, width as Integer, height as Integer, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes:

Width and height define the width of the vertical and horizontal edge of the effect.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

91.21.98 RandomThresholdChannel(channel as Integer, thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Canges the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes:

The result is a low-contrast, two color image.

channel: The channel or channels to be thresholded.
thresholds: a geometry string containing low,high thresholds. If the string contains 2x2, 3x3, or 4x4, an ordered dither of order 2, 3, or 4 is performed instead. (ASCII string)

Sets the last exception property.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

For more details please check the ImageMagick documentation.

91.21.99 ReduceNoise(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Smooths the contours of an image while still preserving edge information.
Notes:

The algorithm works by replacing each pixel with its neighbor closest in value. A neighbor is defined by radius. Use a radius of 0 and ReduceNoise selects a suitable radius for you.

For more details please check the ImageMagick documentation.

91.21.100 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that is exactly the same as the next image in the given image list.
Notes:

Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

91.21.101 RemoveFirstImageFromList as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes the first image from the image list and returns the image.
Notes:

Returns nil on any error.
For more details please check the ImageMagick documentation.

91.21.102 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a profile from the image-map by its name.

91.21.103 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that as a zero delay time.
Notes:

Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This is a non-sensible situation, so no image will be removed and a 'Zero Time Animation'

warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

91.21.104 ResetImageAttributeIterator

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ResetImageAttributeIterator() resets the image attributes iterator.
Notes: Use it in conjunction with GetNextImageAttribute() to iterate over all the values associated with an image.

91.21.105 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image profile iterator.
Notes: Use it in conjunction with GetNextImageProfile() to iterate over all the profiles associated with an image.

91.21.106 Resize(width as Integer, height as Integer, FilterID as Integer, blur as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions.
Notes:

Constants for the FilterID:

```
const PointFilter      =1
const BoxFilter        =2
const TriangleFilter   =3
const HermiteFilter    =4
const HanningFilter    =5
const HammingFilter    =6
const BlackmanFilter   =7
const GaussianFilter   =8
const QuadraticFilter  =9
const CubicFilter      =10
const CatromFilter     =11
const MitchellFilter   =12
const LanczosFilter    =13
const BesselFilter     =14
const SincFilter       =15
```

Most of the filters are FIR (finite impulse response), however, Bessel, Gaussian, and Sinc are IIR (infinite impulse response). Bessel and Sinc are windowed (brought down to zero) with the Blackman filter.

Sets the last exception property.

91.21.107 RGBTransformImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method RGBTransformImage converts the reference image from RGB to an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates which colorspace to transform the image.

Returns false on any error and true on success.

constants:

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.21.108 Roll(x as Integer, y as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Roll offsets an image as defined by x and y.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.109 Rotate(degrees as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotation of an image.
Notes:

Method RotateImage creates a new image that is a rotated copy of an existing one. Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the color specified by the image background_color. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method RotateImage is based on the paper "A Fast Algorithm for General Raster Rotatation" by Alan W. Paeth. RotateImage is adapted from a similar method based on the Paeth paper written by Michael Halle of the Spatial Imaging Group, MIT Media Lab.

degrees: Specifies the number of degrees to rotate the image.

Sets the lastexception property.
Returns nil on low memory.
For more details please check the ImageMagick documentation.

91.21.110 Sample(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions with pixel sampling.
Notes:

Unlike other scaling methods, this method does not introduce any additional color into the scaled image.
For more details please check the ImageMagick documentation.
Sets the last exception property.

91.21.111 Scale(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Example:

```
dim image as IMImageQ8MBS // your image
image=Image.Scale(100,80)
```

Notes:

This method was designed by Bob Friesenhahn as a low cost thumbnail generator.

columns: The number of columns in the scaled image.
rows: The number of rows in the scaled image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.112 SetImageAttribute(key as string, value as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: SetImageAttribute searches the list of image attributes and replaces the attribute value.
Notes: If it is not found in the list, the attribute name and value is added to the list. If the attribute exists in the list, the value is concatenated to the attribute. SetImageAttribute returns True if the attribute is successfully concatenated or added to the list, otherwise False. If the value is "", the matching key is deleted from the list.

91.21.113 SetImageColorspace(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the colorspace member of the Image structure.
Notes: Returns false on any error and true on success.

91.21.114 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a named profile to the image.
Notes:

If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: The profile name.
profiledata: The binary data of the profile.

Returns false on any error and true on success.

91.21.115 SetPicture(pic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the Image Magick Image at the given location.
Example:

```
dim image as IMImageQ8MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

image.SetPicture(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.

91.21.116 SetPictureMask(maskpic as picture, x as Integer, y as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies the pixels from a given Xojo picture into the mask of the Image Magick Image at the given location.
Example:

```
dim i as IMImageQ8MBS // your image
dim p as picture

p=New Picture(32,32,32)
p.Graphics.ForeColor=rgb(0,255,0)
p.Graphics.FillRect 0,0,32,32

i.SetPictureMask(p,30,30)
```

Notes:

Sets the last exception property.
The method will do nothing on bad bounds.
This method works only for bitmap images.
x and y are zero based.
You may need to set matte=True after this.

91.21.117 SetPixel(x as Integer, y as Integer, newPixel as IMColorQ8MBS)

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets a pixel value.
Example:

```
dim image as IMImageQ8MBS // your image
dim co as IMColorQ8MBS

co=new IMColorQ8MBS
co.blue=65535 // max value
image.SetPixel 50,50,co // Makes Pixel 50/50 blue
```

Notes:

The method will fail silently if the values are out of bounds or the image is not a bitmap image.
This method works only for bitmap images.
x and y are zero based.

91.21.118 Shade(gray as boolean, azimuth as Double, elevation as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shines a distant light on an image to create a three-dimensional effect.
Notes:

You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.119 SharpenChannel(channel as Integer, radius as Double, sigma as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma) . For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

channel: The channel type.
radius: The radius of the Gaussian, in pixels, not counting the center pixel.
sigma: The standard deviation of the Laplacian, in pixels.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.120 Shave(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shave shaves pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.
Returns nil on any error.

Sets the last exception property.

91.21.121 Shear(Xshear as Double, Yshear as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method ShearImage creates a new image that is a shear_image copy of an existing one.
Notes:

Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, x_shear is measured relative to the Y axis, and similarly, for Y direction shears y_shear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the color defined by the pixel at location (0,0). ShearImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Xshear and YYshear specify the number of degrees to shear the image.

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.122 Solarize(factor as Double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SolarizeImage produces a 'solarization' effect seen when exposing a photographic film to light during the development process.
Notes:

factor: An double value that defines the extent of the solarization.
Returns nil on any error.
Sets the last exception property.

91.21.123 Splice(x as Integer, y as Integer, width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Splice splices a solid color into the image as defined by the geometry.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.124 Spread(radius as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This is a special effects method that randomly displaces each pixel in a block defined by the radius parameter.
Notes:

radius: Choose a random pixel in a neighborhood of this extent.
Sets the last exception property.

For more details please check the ImageMagick documentation.

91.21.125 Stegano(watermarkImage as IMImageQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SteganoImage hides a digital watermark within the image.
Notes:

Returns nil on any error.
Sets the last exception property.

91.21.126 Stereo(otherImage as IMImageQ8MBS) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method StereoImage combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes:

The left image is converted to gray scale and written to the red channel of the stereo image. The right image is converted to gray scale and written to the blue channel of the stereo image. View the composite image with red-blue glasses to create a stereo effect.

left image = self
right image = otherImage parameter

Returns nil on any error.
Sets the last exception property.

91.21.127 Swirl(degrees as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method SwirlImage creates a new image that is a copy of an existing one with the image pixels "swirl" at a specified angle.
Notes:

degrees: An double value that defines the tightness of the swirling.

Returns nil on any error.
Sets the last exception property.

91.21.128 Thumbnail(width as Integer, height as Integer) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Notes:

Sets the last exception property.
This method was designed by Bob Friesenhahn as a low cost thumbnail generator.
For more details please check the ImageMagick documentation.

91.21.129 TransformImage(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.
Notes:

This should only be used for single images.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.21.130 TransformImages(CropGeometry as string, ImageGeometry as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransformImages() calls TransformImage() on each image of a sequence.
Notes:

TransformImage() is a convenience method that behaves like ResizeImage() or CropImage() but accepts scaling and/or cropping information as a region geometry specification. If the operation fails, the original image handle is left as is.

CropGeometry: A crop geometry string. This geometry defines a subregion of the image to crop.
ImageGeometry: An image geometry string. This geometry defines the final size of the image.

Returns true on success.

91.21.131 TransformRGBImage(Colorspace as Integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method TransformRGBImage converts the reference image from an alternate colorspace.
Notes:

The transformation matrices are not the standard ones: the weights are rescaled to normalized the range of the transformed values to be [0..MaxRGB] .

colorspace: An integer value that indicates the colorspace the image is currently in. On return the image is in the RGB color space.

Returns false on any error and true on success.

constants:

91.21.132 TransposeImage as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransposeImage() creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.21.133 TransverseImage as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: TransverseImage() creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.

91.21.134 Trim as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 6.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trim trims pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Returns nil on any error.
Sets the last exception property.

91.21.135 UnsharpMaskChannel(channel as Integer, radius as Double, sigma as Double, amount as Double, threshold as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

Constants for channel:

```
const UndefinedChannel   = 0
const RedChannel         = & h0001
const GrayChannel        = & h0001
const CyanChannel        = & h0001
const GreenChannel       = & h0002
const MagentaChannel     = & h0002
const BlueChannel        = & h0004
const YellowChannel      = & h0004
const AlphaChannel       = & h0008
const OpacityChannel     = & h0008
const BlackChannel       = & h0020
const IndexChannel       = & h0020
const AllChannels        = & h7fffffff
```

Sets the last exception property.
For more details please check the ImageMagick documentation.

91.21.136 Wave(amplitude as Double, wavelength as Double) as IMImageQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method Wave creates a new image that is a copy of an existing one with the image pixels altered along a sine wave.
Notes:

Parameters are double values that indicates the amplitude and wavelength of the sine wave.
Returns nil on any error.
Sets the last exception property.

91.21.137 WhiteThreshold(threshold as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: WhiteThreshold is like Threshold but forces all pixels above the threshold into white while leaving all pixels below the threshold unchanged.
Notes:

No exceptions are generated.

threshold: Define the threshold value. (ASCII string)
For more details please check the ImageMagick documentation.

91.21.138 WriteImage(info as IMImageInfoQ8MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method WriteImage writes an image to a file as defined by image.filename.
Notes:

You can specify a particular image format by prefixing the file with the image type and a colon (i.e. ps:image) or specify the image type as the filename suffix (i.e. image.ps). The image may be modified to adapt it to the requirements of the image format. For example, DirectClass images must be color-reduced to PseudoClass if the format is GIF.

WriteImage returns True if the image is written. False is returned if there is a memory shortage or if the image file fails to write.

91.21.139 Properties

91.21.140 BackgroundColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image background color.
Notes: (Read and Write property)

91.21.141 Bias as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.21.142 BlurFactor as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blur factor to apply to the image when zooming. Default is 1.0 (no blur).
Notes: (Read and Write property)

91.21.143 BorderColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image border color.
Notes: (Read and Write property)

91.21.144 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The desired number of colors.
Notes:

Used by Quantize().
(Read and Write property)

91.21.145 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

91.21.146 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image compresion type.
Notes:

useful constants:

The default is the compression type of the specified image file.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.147 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes:

QuantumLeap must be defined before a depth of 16 is valid.
(Read and Write property)

91.21.148 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile names from within an image montage.
Notes:

Only valid after calling MontageImages() or reading a MIFF file which contains a directory.

(Read and Write property)

91.21.149 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The endian setting to use.
Notes:

constants:

UndefinedEndian	0	
LSBEndian	1	(Windows)
MSBEndian	2	(Mac)

e.g. tiff files support different endian settings.
(Read and Write property)

91.21.150 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path/name.
Notes:

The string must be in the encoding of the library and is limited to 4000 bytes.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.151 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Filter to use when resizing image.
Notes:

Constants:

The reduction filter employed has a sipngicant effect on the time required to resize an image and the resulting quality. The default filter is Lanczos which has been shown to produce high quality results when reducing most images.
(Read and Write property)

const PointFilter	=1
const BoxFilter	=2
const TriangleFilter	=3
const HermiteFilter	=4
const HanningFilter	=5
const HammingFilter	=6
const BlackmanFilter	=7
const GaussianFilter	=8
const QuadraticFilter	=9
const CubicFilter	=10
const CatromFilter	=11
const MitchellFilter	=12
const LanczosFilter	=13
const BesselFilter	=14
const SincFilter	=15

91.21.152 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.21.153 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma level of the image.
Notes:

The same color image displayed on two different workstations may look different due to differences in the display monitor. Use gamma correction to adjust for this color difference.
(Read and Write property)

91.21.154 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Preferred size of the image when encoding.
Notes: (Read and Write property)

91.21.155 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.21.156 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an Image structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.157 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.158 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of interlacing scheme (default NoInterlace).
Notes:

This option is used to specify the type of interlacing scheme for raw image formats such as RGB or YUV. NoInterlace means do not interlace, LineInterlace uses scanline interlacing, and PlaneInterlace uses plane interlacing. PartitionInterlace is like PlaneInterlace except the different planes are saved to individual files (e.g. image.R, image.G, and image.B). Use LineInterlace or PlaneInterlace to create an interlaced GIF or progressive JPEG image.

constants:

(Read and Write property)

UndefinedInterlace	0	Unset value.
NoInterlace	1	Don't interlace image (RGBRGBRGBRGBRGBRGB...)
LineInterlace	2	Use scanline interlacing (RRR...GGG...BBB...RRR...GGG...BBB...)
PlaneInterlace	3	Use plane interlacing (RRRRRR...GGGGGG...BBBBBB...)
PartitionInterlace	4	Similar to plane interlaing except that the different planes are saved to individual files (e.g. image.R, image.G, and image.B)

91.21.159 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code reported.
Notes:

If an exception is raised and it is not a warning exception, this exception code is saved in this property.
(Read and Write property)

91.21.160 LastException as IMExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception thrown by the Image Magick library.
Notes:

You should check this value after every call to the library, process the error and set the property to nil.

For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.161 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image encoding format (e.g. "GIF").
Notes: (Read and Write property)

91.21.162 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.

(Read and Write property)

91.21.163 MatteColor as IMColorQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image matte (transparent) color.
Notes: (Read and Write property)

91.21.164 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tile size and offset within an image montage. Only valid for montage images.
Notes: (Read and Write property)

91.21.165 Offset as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of initial bytes to skip over when reading raw image.
Notes: (Read and Write property)

91.21.166 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image orientation.
Notes:

constants:

```
const UndefinedOrientation      = 0
const TopLeftOrientation        = 1
const TopRightOrientation       = 2
const BottomRightOrientation    = 3
const BottomLeftOrientation     = 4
const LeftTopOrientation        = 5
const RightTopOrientation       = 6
const RightBottomOrientation    = 7
const LeftBottomOrientation     = 8
```

For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.167 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG/MIFF/PNG compression level.
Example:

```
dim im as ImageMagickQ8MBS // global

Function TestJPEG(f as folderitem) As picture
// Reads an image, compresses in memory to JPEG, decompresses using JPEGlib and returns the image
// if quality setting works, you see it in the result.
// no error checking included!

// needs: im as ImageMagickQ8MBS ready initialized

dim image as IMImageQ8MBS
dim imageinfo as IMImageInfoQ8MBS
dim s,blob as string
dim p as Picture
dim i as Integer

if f = nil then
Return nil
end if

imageinfo = im.NewImageInfo

imageinfo.Filename = f.NativePath

//this should read any image IM understands
image = im.ReadImage(imageinfo)
//check for error
if im.lastexception <>nil and im.LastException.Severity >= 400 then
s = "LastError: "+Format(im.LastError,"-0")+" - Severity: "+str(im.LastException.Severity)+EndOfLine+im.Las-
tException.Reason
MsgBox s
Return nil
elseif image = nil then
MsgBox "image=nil"
Return nil
end if

// Now lets convert to jpeg
```

```
imageinfo.Filename = "image.jpg"
imageinfo.Quality = 10 // 100 is max
blob = image.ImageToBlob(imageinfo)

// It may fail
if blob.lenb = 0 then
Return nil
end if
p = JPEGStringToPictureMBS(blob,true)

image.DestroyImage
imageinfo.DestroyImageInfo

Return p
Exception
Return nil
End Function
```

Notes:

Default value is 75.
(Read and Write property)

91.21.168 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If true, the destructor will release the handle.
Notes: (Read and Write property)

91.21.169 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rendering intent to use.
Notes:

constants:

(Read and Write property)

UndefinedIntent	0
SaturationIntent	1
PerceptualIntent	2
AbsoluteIntent	3
RelativeIntent	4

91.21.170 ResolutionUnits as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units of image resolution.
Notes:

constants:

UndefinedResolution	0	Unset value.
PixelsPerInchResolution	1	Density specifications are specified in units of pixels per inch (english units).
PixelsPerCentimeterResolution	2	Density specifications are specified in units of pixels per centimeter (metric units).

(Read and Write property)

91.21.171 ResolutionX as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The horizontal resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.172 ResolutionY as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The vertical resolution of the image.
Notes:

The unit for resolution must be specified.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.173 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: An undocumented property.
Notes: (Read and Write property)

91.21.174 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image storage class.
Notes:

If DirectClass then the image packets contain valid RGB or CMYK colors. If PseudoClass then the image has a colormap referenced by pixel's index member.

constants:

UndefinedClass	0	Unset value.
DirectClass	1	Image is composed of pixels which represent literal color values.
PseudoClass	2	Image is composed of pixels which specify an index in a color palette.

(Read and Write property)

91.21.175 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set to True if the image pixels have been modified.
Notes: (Read and Write property)

91.21.176 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the image in pixels.
Notes:

For more details please check the ImageMagick documentation.
(Read and Write property)

91.21.177 Constants

91.21.178 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.179 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.180 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.181 kBackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.21.182 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.183 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.184 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.185 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.186 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.187 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.188 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.189 kCoalesceLayer = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.190 kCompareAnyLayer = 2

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.191 kCompareClearLayer = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.192 kCompareOverlayLayer = 4

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.193 kCompositeLayer = 12

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.194 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.195 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.196 kDisposeLayer = 5

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.197 kFlattenLayer = 14

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.198 kInverseColorInterpolate = 19

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.199 kMergeLayer = 13

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.200 kMosaicLayer = 15

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.201 kNoneDispose = 1

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.21.202 kOptimizeImageLayer = 7

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.203 kOptimizeLayer = 6

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.204 kOptimizePlusLayer = 8

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.205 kOptimizeTransLayer = 9

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.206 kPerspectiveDistortion = 4

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.207 kPerspectiveProjectionDistortion = 5

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.208 kPlane2CylinderDistortion = 13

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.209 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.210 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.211 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.212 kPreviousDispose = 3

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.21.213 kRemoveDupsLayer = 10

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.214 kRemoveZeroLayer = 11

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.215 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.216 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.217 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.218 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.219 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.220 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.21.221 kUndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.21.222 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the distortion effect constants.

91.21.223 kUndefinedLayer = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer method constants.

91.21.224 kUnrecognizedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 8.3. **Function:** One of the Image layer Dispose Types.

91.21.225 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 12.5. **Function:** One of the interpolate method constants.

91.22 class IMMagickInfoListQ16MBS

91.22.1 class IMMagickInfoListQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

91.22.2 Methods

91.22.3 Item(index as Integer) as IMMagickInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The items inside this list.
Notes:

Index goes from 0 to count-1.
Returns nil on invalid index.

91.22.4 Properties

91.22.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items.
Notes:

Index goes from 0 to count-1.
(Read only property)

91.22.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

91.23 class IMMagickInfoListQ32MBS

91.23.1 class IMMagickInfoListQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

91.23.2 Methods

91.23.3 Item(index as Integer) as IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The items inside this list.
Notes:

Index goes from 0 to count-1.
Returns nil on invalid index.

91.23.4 Properties

91.23.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items.
Notes:

Index goes from 0 to count-1.
(Read only property)

91.23.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

91.24 class IMMagickInfoListQ8MBS

91.24.1 class IMMagickInfoListQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class with the list of the image formats supported in Image Magick.
Notes: For more details please check the ImageMagick documentation.

91.24.2 Methods

91.24.3 Item(index as Integer) as IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The items inside this list.
Notes:

Index goes from 0 to count-1.
Returns nil on invalid index.

91.24.4 Properties

91.24.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of items.
Notes:

Index goes from 0 to count-1.
(Read only property)

91.24.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo list.
For more details please check the ImageMagick documentation.
(Read only property)

91.25 class IMMagickInfoQ16MBS

91.25.1 class IMMagickInfoQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

91.25.2 Methods

91.25.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.25.4 Properties

91.25.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if this file format supports multi-frame images.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.25.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes:

As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.25.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.25.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether endian support is available.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.25.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.25.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of module (e.g. "GIF") which registered this format.
Notes:

Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).

(Read only property)

91.25.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magick string (e.g. "GIF") which identifies this format.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.25.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Additional notes for this format.
Notes:

e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.25.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes:

Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

91.25.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if the magick supports a seekable stream.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.25.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.25.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if threading is supported.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.25.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Version string.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.26 class IMMagickInfoQ32MBS

91.26.1 class IMMagickInfoQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

91.26.2 Methods

91.26.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.26.4 Properties

91.26.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if this file format supports multi-frame images.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.26.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes:

As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.26.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.26.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether endian support is available.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.26.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.26.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of module (e.g. "GIF") which registered this format.
Notes:

Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).

(Read only property)

91.26.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magick string (e.g. "GIF") which identifies this format.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.26.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Additional notes for this format.
Notes:

e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.26.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes:

Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

91.26.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if the magick supports a seekable stream.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.26.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.26.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if threading is supported.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.26.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Version string.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.27 class IMMagickInfoQ8MBS

91.27.1 class IMMagickInfoQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for information about a file import/export format Image Magick can handle.
Notes: For more details please check the ImageMagick documentation.

91.27.2 Methods

91.27.3 Close

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The destructor.
Notes: There is no need to call this method except you want to free all resources used by this object now without waiting for Xojo to do it for you.

91.27.4 Properties

91.27.5 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if this file format supports multi-frame images.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.27.6 BlobSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if the encoder and decoder for this format supports operating on arbitrary BLOBs (rather than only disk files).
Notes:

As currently disc read/write does not work with the 5.1 plugins, we really need that to use the classes.
Returns false for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.27.7 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Long form image format description (e.g. "CompuServe graphics interchange format").
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.27.8 EndianSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether endian support is available.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.27.9 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to a MagickInfo structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.27.10 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Name of module (e.g. "GIF") which registered this format.
Notes:

Value is "" if format is not registered by a module.
For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).

(Read only property)

91.27.11 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Magick string (e.g. "GIF") which identifies this format.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.27.12 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Additional notes for this format.
Notes:

e.g. compilation parameters or copyright notices.
Returns "" for an invalid MagickInfo (handle=0).

For more details please check the ImageMagick documentation.
(Read only property)

91.27.13 Raw as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if Image format does not contain size (must be specified in ImageInfo).
Notes:

Returns false for an invalid MagickInfo (handle=0).
For more details please check the ImageMagick documentation.
(Read only property)

91.27.14 SeekableStream as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns True if the magick supports a seekable stream.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.27.15 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unknown.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.27.16 ThreadSupport as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: True if threading is supported.
Notes:

For more details please check the ImageMagick documentation.
Returns false for an invalid MagickInfo (handle=0).
(Read only property)

91.27.17 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 5.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Version string.
Notes:

For more details please check the ImageMagick documentation.
Returns "" for an invalid MagickInfo (handle=0).
(Read only property)

91.28 class IMMagickPixelPacketQ16MBS

91.28.1 class IMMagickPixelPacketQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class to describe a picture background.
Notes: Needed for IMImageQ16MBS.NewImage function.

91.28.2 Methods

91.28.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.28.4 Properties

91.28.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color value.
Notes: (Read and Write property)

91.28.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.28.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes: (Read and Write property)

91.28.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.28.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color value.
Notes: (Read and Write property)

91.28.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.28.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The index color value.
Notes:

Only for indexed color spaces.
(Read and Write property)

91.28.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.
(Read and Write property)

91.28.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color value.
Notes: (Read and Write property)

91.28.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color value.
Notes: (Read and Write property)

91.29 class IMMagickPixelPacketQ32MBS

91.29.1 class IMMagickPixelPacketQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class to describe a picture background.
Notes: Needed for IMImageQ32MBS.NewImage function.

91.29.2 Methods

91.29.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.29.4 Properties

91.29.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color value.
Notes: (Read and Write property)

91.29.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.29.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes: (Read and Write property)

91.29.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.29.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color value.
Notes: (Read and Write property)

91.29.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.29.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The index color value.
Notes:

Only for indexed color spaces.
(Read and Write property)

91.29.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.
(Read and Write property)

91.29.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color value.
Notes: (Read and Write property)

91.29.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color value.
Notes: (Read and Write property)

91.30 class IMMagickPixelPacketQ8MBS

91.30.1 class IMMagickPixelPacketQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class to describe a picture background.
Notes: Needed for IMImageQ8MBS.NewImage function.

91.30.2 Methods

91.30.3 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The content of the whole ImageInfo structure copied into a memoryblock.
Notes: Returns nil on any error.

91.30.4 Properties

91.30.5 Blue as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color value.
Notes: (Read and Write property)

91.30.6 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image pixel interpretation.
Notes:

If the colorspace is RGB the pixels are red, green, blue. If matte is true, then red, green, blue, and index. If it is CMYK, the pixels are cyan, yellow, magenta, black. Otherwise the colorspace is ignored.

constants:

(Read and Write property)

UndefinedColorspace	0
RGBColorspace	1
GRAYColorspace	2
TransparentColorspace	3
OHTAColorspace	4
LABColorspace	5
XYZColorspace	6
YCbCrColorspace	7
YCCColorspace	8
YIQColorspace	9
YPbPrColorspace	10
YUVColorspace	11
CMYKColorspace	12
sRGBColorspace	13
HSBColorspace	14
HSLColorspace	15
HWBColorspace	16

91.30.7 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image depth (8 or 16).
Notes: (Read and Write property)

91.30.8 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colors within this distance are considered equal.
Notes:

A number of algorithms search for a target color. By default the color must be exact. Use this to match colors that are close to the target color in RGB space.
(Read and Write property)

91.30.9 Green as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color value.
Notes: (Read and Write property)

91.30.10 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The handle used internally by the plugin.
Notes:

A pointer to an MagickPixelPacket structure.
For more details please check the ImageMagick documentation.
(Read and Write property)

91.30.11 Index as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The index color value.
Notes:

Only for indexed color spaces.
(Read and Write property)

91.30.12 Matte as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether an alpha channel is used/present.
Notes:

Set to true to enable masks.
(Read and Write property)

91.30.13 Opacity as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The opacity part of the color value.
Notes: (Read and Write property)

91.30.14 Red as Single

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color value.
Notes: (Read and Write property)

91.31 class IMMissingFunctionExceptionQ16MBS

91.31.1 class IMMissingFunctionExceptionQ16MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an exception in Image Magick.
Notes:

This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

91.32 class IMMissingFunctionExceptionQ32MBS

91.32.1 class IMMissingFunctionExceptionQ32MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an exception in Image Magick.
Notes:

This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

91.33 class IMMissingFunctionExceptionQ8MBS

91.33.1 class IMMissingFunctionExceptionQ8MBS

MBS GraphicsMagick Plugin, Plugin Version: 5.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: A class for an exception in Image Magick.
Notes:

This exception is raised on every IM function if the library function behind is not available.
(this can be a plugin bug or a bad compiled library or simply a too old library.)
Subclass of the RuntimeException class.

Chapter 92

ImageKit

92.1 class IKImageBrowserCellMBS

92.1.1 class IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for an image browser cell.
Notes:

The IKImageBrowserCell class is used to display a cell conforming to the IKImageBrowserItem Protocol protocol in an IKImageBrowserView.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

92.1.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

92.1.3 Methods

92.1.4 cellState as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current cell state of the receiver.
Notes:

The IKImageBrowserView creates thumbnails asynchronously. This method returns the current state.
Available in OS X v10.6 and later.

92.1.5 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

92.1.6 frame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's frame rectangle, which defines its position in its IKImageBrowserView.
Notes: Available in OS X v10.6 and later.

92.1.7 IKImageBrowserCellBackgroundLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the layer types you can pass to layerForType.
Notes:

Layer displayed in the background.
Available in OS X v10.6 and later.

92.1.8 IKImageBrowserCellForegroundLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the layer types you can pass to layerForType.
Notes:

Layer displayed in the foreground.
Available in OS X v10.6 and later.

92.1.9 IKImageBrowserCellPlaceHolderLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the layer types you can pass to layerForType.
Notes:

Layer displayed as a placeholder when an image is not yet available.
Available in OS X v10.6 and later.

92.1.10 IKImageBrowserCellSelectionLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the layer types you can pass to layerForType.
Notes:

Layer displayed as the selection.
Available in OS X v10.6 and later.

92.1.11 imageAlignment as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the position of the cell's image in the frame.

92.1.12 imageBrowserView as IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the view the receiver uses to display the cell.
Notes: Available in OS X v10.6 and later.

92.1.13 imageContainerFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's image container frame rectangle, which defines the position of the container of the thumbnail.
Notes:

The coordinates of image container frame, in the IKImageBrowserView coordinate space.
The image frame is computed automatically from the image container frame by taking in account the image alignment and the image aspect ratio.
Subclasses can override this method to customize the position of the thumbnail container.
Available in OS X v10.6 and later.

92.1.14 imageFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's image frame rectangle, which defines the position of the thumbnail in its IKImageBrowserView.
Notes:

Returns the coordinates of the frame, in the IKImageBrowserView coordinate space.
It is the developer's responsibility to compute the imageFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the thumbnail.
Available in OS X v10.6 and later.

92.1.15 indexOfRepresentedItem as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the index of the receiver's represented object in the datasource.
Notes: Available in OS X v10.6 and later.

92.1.16 isSelected as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the cell is selected.
Notes:

Returns true if the cell is selected, otherwise false.
Subclasses should not override this method.
Available in OS X v10.6 and later.

92.1.17 layerForType(type as string) as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a layer for the specified position.
Notes:

type: A string representing the layer location. See Cell Layer Positions for possible values.
Return the CALayer to display in the specified position.
Subclasses can override this method to add a Core Animation layer to the cell
Available in OS X v10.6 and later.

92.1.18 opacity as Double

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the opacity of the receiver.
Notes:

Possible values are between 0.0 (transparent) and 1.0 (opaque).
Subclasses can override this method to customize the opacity of the cell.

Available in OS X v10.6 and later.

92.1.19 representedItem as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's represented object.
Notes:

Subclasses should not override this method.
Available in OS X v10.6 and later.

92.1.20 selectionFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's selection frame rectangle, which defines the position of the selection rectangle in its IKImageBrowserView.
Notes:

Subclasses can override this method to customize the position of the selection frame.
Available in OS X v10.6 and later.

92.1.21 subtitleFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's subtitle frame rectangle.
Notes:

The coordinates of the subtitle frame, in the IKImageBrowserView coordinate space.

It is the developer's responsibility to compute the subtitleFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the subtitle.

Available in OS X v10.6 and later.

92.1.22 titleFrame as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the receiver's title frame rectangle.
Notes:

The coordinates of the title frame, in the IKImageBrowserView coordinate space.

It is the developer's responsibility to compute the titleFrame such that it lies entirely within the cell's frame rectangle.
Subclasses can override this method to customize the position of the title.

Available in OS X v10.6 and later.

92.1.23 Properties

92.1.24 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

92.1.25 Constants

92.1.26 IKImageStateInvalid = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell state constants.
Notes:

The thumbnail is invalid. For example, an unsupported image is provided.
Available in OS X v10.6 and later.

92.1.27 IKImageStateNoImage = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell state constants.
Notes:

Returned until a thumbnail has been created from the represented object.
Available in OS X v10.6 and later.

92.1.28 IKImageStateReady = 2

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell state constants.
Notes:

The receiver's represented object has been set and the cell is ready to display.
Available in OS X v10.6 and later.

92.2 class IKImageBrowserItemMBS

92.2.1 class IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for items in image browser.

92.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

92.2.3 Methods

92.2.4 Constructor(imageUID as string, imageRepresentationType as string, imageRepresentation as Variant, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new item with given values.

92.2.5 ItemWithCGImage(imageUID as string, Image as Variant, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new item with given image.

92.2.6 ItemWithData(imageUID as string, Data as Memoryblock, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new item with given data.

92.2.7 ItemWithFile(imageUID as string, file as folderitem, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new item with given file.

92.2.8 ItemWithNSImage(imageUID as string, Image as NSImageMBS, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new item with given image.

92.2.9 ItemWithPath(imageUID as string, path as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new item with given path.

92.2.10 ItemWithURL(imageUID as string, URL as string, imageVersion as Integer = 1, imageTitle as string = "", imageSubtitle as string = "", isSelectable as boolean = true) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new item with given URL.

92.2.11 Properties

92.2.12 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object handle.
Notes: (Read and Write property)

92.2.13 imageRepresentation as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the image to display.
Notes: (Read and Write computed property)

92.2.14 imageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the representation type of the image to display.
Notes: (Read and Write computed property)

92.2.15 imageSubtitle as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the display subtitle of the image.
Notes: (Read and Write computed property)

92.2.16 imageTitle as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the display title of the image.
Notes: (Read and Write computed property)

92.2.17 imageUID as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a unique string that identifies the data source item.
Notes:

The image browser view uses this identifier to associate the data source item and its cache.
(Read and Write computed property)

92.2.18 imageVersion as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the version of the item.
Notes:

The receiver can return a new version to let the image browser know that it should not use its cache for the item.
(Read and Write computed property)

92.2.19 isSelectable as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns whether this item is selectable.
Notes:

True if the item is selectable; false otherwise.
(Read and Write computed property)

92.3 control IKImageBrowserViewControlMBS

92.3.1 control IKImageBrowserViewControlMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control to wrap a IKImageBrowserViewMBS.

92.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr2
- MBS Xojo / Real Studio Plugins, version 14.2pr3

92.3.3 Properties

92.3.4 Scrollview as NSScrollViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The scrollview we embed the image browser view inside.
Notes: (Read only property)

92.3.5 View as IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The image browser view.
Notes: (Read only property)

92.3.6 Events

92.3.7 backgroundWasRightClickedWithEvent(e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes:

event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.

Available in OS X v10.5 and later.

92.3.8 BoundsChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the bounds, but not the frame, changed.

92.3.9 cellWasDoubleClickedAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes:

index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.3.10 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes:

index: The index of the cell.
event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.3.11 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

92.3.12 draggingEnded(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

92.3.13 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the

overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

92.3.14 draggingExited(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

92.3.15 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is

within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

92.3.16 EnableMenuItems

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event where you can enable menu items.

92.3.17 FrameChanged

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when the frame changed.

92.3.18 GotFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

92.3.19 groupAtIndex(index as Integer) as Dictionary

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the group at the specified index.
Notes:

index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView Class Reference.

This method is optional.
Available in OS X v10.5 and later.

92.3.20 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes:

index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

92.3.21 LostFocus

MBS AVFoundation Plugin, Plugin Version: 16.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

92.3.22 MenuAction(HitItem as MenuItem) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

92.3.23 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

92.3.24 MouseDrag(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

92.3.25 MouseUp(x as Integer, y as Integer)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

92.3.26 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that the specified items should be moved to the specified destination.
Notes:

indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

92.3.27 numberOfGroups as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of groups in an image browser view.

Notes:

Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

92.3.28 numberOfItems as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of records managed by the data source object.
Notes:

Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display.
Available in OS X v10.5 and later.

92.3.29 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

92.3.30 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this event.

92.3.31 removeItemsAtIndexes(indexes as NSIndexSetMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that a remove operation should be applied to the specified items.
Notes:

indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

92.3.32 ScaleFactorChanged(NewFactor as Double)

MBS AVFoundation Plugin, Plugin Version: 17.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

92.3.33 selectionDidChange

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the selection changes.
Notes:

This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.3.34 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging images should be changed.
Notes:

sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

92.3.35 wantsPeriodicDraggingUpdates as boolean

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes:

Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even if nothing changes.

92.3.36 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 14.2, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that a drag should begin.
Notes:

itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.

Returns the number of items written to the pasteboard.

This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

92.4 class IKImageBrowserViewMBS

92.4.1 class IKImageBrowserViewMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The IKImageBrowserView class is a view for displaying and browsing a large amount of images and movies efficiently.
Notes:

Available in OS X v10.5 and later.
Subclass of the NSViewMBS class.

92.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr14
- MBS Real Studio Plugins, version 13.1pr9

92.4.3 Methods

92.4.4 cellForItemAtIndex(index as Integer) as IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the browser cell for the item at the specified index.
Notes:

Subclasses must not override this method.
Available in OS X v10.6 and later.

92.4.5 collapseGroupAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Collapses a group at the specified index.
Notes: index: The index of the group you want to collapse.

92.4.6 columnIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the column indexes in the specified rectangle.
Notes:

rect: The rectangle in the view's coordinate system.
Returns an index set containing the cell indexes.
Available in OS X v10.6 and later.

92.4.7 Constructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with size 100/100 and position 0/0
Example:

```
dim t as new IKImageBrowserViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 92.4.8 Constructor(Handle as Integer) 16184
- 92.4.9 Constructor(left as Double, top as Double, width as Double, height as Double) 16184

92.4.8 Constructor(Handle as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given IKImageBrowserView handle.
Example:

```
dim t as new IKImageBrowserViewMBS(0, 0, 100, 100)
dim v as new IKImageBrowserViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a IKImageBrowserView and the plugin retains this handle.
See also:

- 92.4.7 Constructor 16184
- 92.4.9 Constructor(left as Double, top as Double, width as Double, height as Double) 16184

92.4.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.

Example:

```
dim x as new IKImageBrowserViewMBS(0, 0, 100, 20)
```

Notes: On success the handle property is not zero.
See also:

- 92.4.7 Constructor 16184
- 92.4.8 Constructor(Handle as Integer) 16184

92.4.10 Destructor

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

92.4.11 dropOperation as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current drop operation.
Notes:

Returns IKImageBrowserDropOn if the drop occurs on an item, otherwise IKImageBrowserDropBefore.
The returned value is valid when a drop occurred and until next drop.
For example, given a browser with N cells , a cell of N-1 and operation of IKImageBrowserDropOn would specify a drop on the last cell. To specify a drop after the last cell, one would use an index of N and IKImageBrowserDropBefore for the operation.
Available in OS X v10.6 and later.

92.4.12 expandGroupAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Expands a group at the specified index.
Notes:

index: The index of the group you want to expand.
Available in OS X v10.5 and later.

92.4.13 getValue(name as String) as Variant

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries a value for a given key.

92.4.14 IKImageBrowserBackgroundColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Notes:

A key for the background color of the image browser view. The associated value is a NSColorMBS object.
Available in OS X v10.5 and later.

92.4.15 IKImageBrowserCellsHighlightedTitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Notes:

A key for the highlighted title attribute for an item in the image browser view. The associated value is a Dictionary.
Available in OS X v10.5 and later.

92.4.16 IKImageBrowserCellsOutlineColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Notes:

A key for the outline color for an item in the image browser view. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

92.4.17 IKImageBrowserCellsSubtitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Notes:

A key for a subtitle attribute for an item in the image browser view. The associated value is a dictionary.

Available in OS X v10.5 and later.

92.4.18 IKImageBrowserCellsTitleAttributesKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Example:

```
dim Imagebrowser as IKImageBrowserViewMBS // your control
dim d as new Dictionary
d.Value(NSAttributedStringMBS.NSForegroundColorAttributeName) = NSColorMBS.redColor

Imagebrowser.setValue Imagebrowser.IKImageBrowserCellsTitleAttributesKey, d
```

Notes:

A key for title attribute of an item in the image browser view. The associated value is a dDictionary.
Available in OS X v10.5 and later.

92.4.19 IKImageBrowserCGImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A CGImageRef object.

92.4.20 IKImageBrowserCGImageSourceRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A CGImageSourceRef object.

92.4.21 IKImageBrowserGroupBackgroundColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the background color of a group. The associated value is an NSColor object. This color is used only for the bezel style.

Available in OS X v10.5 and later.

92.4.22 IKImageBrowserGroupFooterLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

92.4.23 IKImageBrowserGroupHeaderLayer as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the header layer of the group. The associated value is a CALayer.
Available in OS X v10.6 and later.

92.4.24 IKImageBrowserGroupRangeKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the range of a group. The associated value is a NSRangeMBS. This is required if the view uses grouping
Available in OS X v10.5 and later.

92.4.25 IKImageBrowserGroupStyleKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the style of a group. The associated value is one of the constants defined in "Group Style Attributes".
Available in OS X v10.5 and later.

92.4.26 IKImageBrowserGroupTitleKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the group attribute keys.
Notes:

A key for the title of a group. The associated value is a string. This string is used for the disclosure style only.
Available in OS X v10.5 and later.

92.4.27 IKImageBrowserIconRefPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A path to an icon.

92.4.28 IKImageBrowserIconRefRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: An icon.

92.4.29 IKImageBrowserNSBitmapImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: An NSBitmapImageRep object.

92.4.30 IKImageBrowserNSDataRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: Value for this key is a memoryblock.

92.4.31 IKImageBrowserNSImageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.

Notes: An NSImage object.

92.4.32 IKImageBrowserNSURLRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: An NSURL object.

92.4.33 IKImageBrowserPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A path representation (string).

92.4.34 IKImageBrowserPDFPageRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A PDFPage instance or a CGPDFPageRef.

92.4.35 IKImageBrowserQCCompositionPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A path (String) or URL (NSURL) to a Quartz Composer composition.

92.4.36 IKImageBrowserQCCompositionRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A QCComposition object.

92.4.37 IKImageBrowserQTMoviePathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.

Notes: A path (string) or URL to a QuickTime movie.

92.4.38 IKImageBrowserQTMovieRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A QTMovie object.

92.4.39 IKImageBrowserQuickLookPathRepresentationType as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the image representation types.
Notes: A path (string) or URL (NSURL) to load data using QuickLook.

92.4.40 IKImageBrowserSelectionColorKey as string

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys for image browser view options.
Notes:

A key for the color that indicates a selection. The associated value is an NSColorMBS object.
Available in OS X v10.5 and later.

92.4.41 indexAtLocationOfDroppedItem as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the index of the cell where the drop operation occurred.
Notes:

Returns the index of the cell where the drop operation occurred.
The returned index is valid until the next drop occurs.
Available in OS X v10.5 and later.

92.4.42 indexOfItemAtPoint(point as NSPointMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the index of the item at the specified location.
Notes: Returns the index of the item or NSNotFound (-1) if no item at this location.

92.4.43 isGroupExpandedAtIndex(index as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the group at the provided index is expanded.
Notes: Return true if the group is expanded; false otherwise.

92.4.44 itemFrameAtIndex(index as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the frame rectangle for the item located at the specified index.
Notes:

index: The index of the item whose frame rectangle you want to obtain.
Return the frame rectangle of the item.

92.4.45 newCellForRepresentedItem(item as IKImageBrowserItemMBS) as IKImageBrowserCellMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the cell to use for the specified item.
Notes:

Subclasses can override this method to customize the appearance of the cell that will represent anItem.
Available in OS X v10.6 and later.

92.4.46 numberOfColumns as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current number of columns.
Notes: Available in OS X v10.6 and later.

92.4.47 numberOfRows as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the current number of rows.
Notes: Available in OS X v10.6 and later.

92.4.48 rectOfColumn(columnIndex as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the rectangle containing the specified column.
Notes:

Return a rectangle containing the column. Specified in the view's coordinate system.
Available in OS X v10.6 and later.

92.4.49 rectOfRow(rowIndex as Integer) as NSRectMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the rectangle containing the specified row.
Notes:

Returns a rectangle containing the column. Specified in the view's coordinate system.
Available in OS X v10.6 and later.

92.4.50 reloadData

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Marks the receiver as needing its data reloaded.

92.4.51 rowIndexesInRect(rect as NSRectMBS) as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the row indexes in the specified rectangle.
Notes:

rect: A rectangle in the view's coordinate system.
Returns an index set containing the item indexes.
Available in OS X v10.6 and later.

92.4.52 scrollIndexToVisible(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Scrolls the receiver to the item at the specified index.

92.4.53 selectionIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the indexes of the selected cells.

92.4.54 setDropIndex(index as Integer, operation as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Allows the class to retarget the drop action.
Notes:

index: The requested drop index.
operation: The requested drop operation. The possible values are described in IKImageBrowserDropOperation.

For example, To specify a drop on the second item, one would specify index as 1, and operation as IKImageBrowserDropOn. To specify a drop after the last item, one would specify index as the number of items and operation as IKImageBrowserDropBefore.

Passing a value of –1 for index, and IKImageBrowserDropOn as the operation causes the entire browser view to be highlighted rather than a specific item. This is useful if the data displayed by the receiver does not allow the user to drop items at a specific item location.

92.4.55 setSelectionIndexes(indexes as NSIndexSetMBS, extendSelection as boolean = false)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Selects cells at the specified indexes.
Notes:

indexes: The indexes of the cells you want to select.
extendSelection: A boolean value that specifies whether to extend the current selection. Pass true to extends the selection; false replaces the current selection.
Available in OS X v10.5 and later.

92.4.56 setValue(name as String, value as Variant)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a value for a given key.

92.4.57 visibleItemIndexes as NSIndexSetMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the indexes of the view's currently visible items.
Notes: Available in OS X v10.6 and later.

92.4.58 Properties

92.4.59 allowsDroppingOnItems as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the user can drop on items.
Notes:

True if the user is able to drop on items, otherwise false.
Available in OS X v10.6 and later.
(Read and Write computed property)

92.4.60 allowsEmptySelection as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether an empty selection is allowed.
Notes: (Read and Write computed property)

92.4.61 allowsMultipleSelection as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the user can select more than one cell at a time.
Notes: (Read and Write computed property)

92.4.62 allowsReordering as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the user can reorder items.
Notes: (Read and Write computed property)

92.4.63 animates as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the receiver animates reordering and changes of the data source.
Notes: (Read and Write computed property)

92.4.64 backgroundLayer as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The Core Animation layer used as the view's background.
Notes:

The background layer can have sublayers. Additionally, the layers can also contain animations.
The layer is optional.
Available in OS X v10.6 and later.
(Read and Write computed property)

92.4.65 canControlQuickLookPanel as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the view can automatically take control of the QuickLook panel.
Notes:

When the browser view displays the QuickLook panel it sets itself as the QuickLook datasource. If the browser cells returned by the datasource return items that are URLs or paths, then the QuickLook panel will display the image at that location. Otherwise, the browser cell must implement the QLPreviewItem protocol and return the requested URL for the custom cell.
Available in OS X v10.6 and later.
(Read and Write computed property)

92.4.66 cellSize as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The cell size.
Notes:

You must use CellSize or ZoomValue, but not both. Setting the zoom value changes the cell size, and vice versa.
Available in OS X v10.5 and later.
(Read and Write computed property)

92.4.67 cellsStyleMask as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The appearance style of the cells.
Notes: (Read and Write computed property)

92.4.68 constrainsToOriginalSize as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the receiver constrains the cell's image to its original size.
Notes:

The default value is false.
(Read and Write computed property)

92.4.69 contentResizingMask as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The content resizing mask, which determines how its content is resized while zooming.
Notes:

You specify a mask by combining any of the following options using the bitwise OR operator: NSViewWidthSizable (2), NSViewHeightSizable (16). Other values are ignored.
(Read and Write computed property)

92.4.70 foregroundLayer as CALayerMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the foreground Core Animation layer
Notes:

Returns a CALayer instance.
Available in OS X v10.6 and later.
(Read and Write computed property)

92.4.71 intercellSpacing as NSSizeMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the spacing between cells in the view.
Notes:

Returns the vertical and horizontal spacing between cells.
Available in OS X v10.6 and later.
(Read and Write computed property)

92.4.72 zoomValue as Double

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The zoom value.
Notes:

The zoom value. This value should be greater or equal to zero and less or equal than one. A zoom value of zero corresponds to the minimum size (40x40 pixels). A zoom value of one means images fits the browser bounds. Other values are interpolated.
Discussion
You must use ZoomValue or CellSize, but not both. Setting the zoom value changes the cell size, and vice versa.
Available in OS X v10.5 and later.
(Read and Write computed property)

92.4.73 Events

92.4.74 backgroundWasRightClickedWithEvent(e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user right-clicks the image browser view background.
Notes:

event: The event that invoked the method.

This method signals that the user either right-clicked the background or left-clicked it with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.4.75 cellWasDoubleClickedAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user double-clicks an item in the image browser view.
Notes:

index: The index of the cell.

This method signals that the user double-clicked an item in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.4.76 cellWasRightClickedAtIndex(index as Integer, e as NSEventMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the user right-clicks an item in the image browser view.
Notes:

index: The index of the cell.
event: The event that invoked the method.

This method signals that the user either right-clicked an item in the browser or left-clicked the item with the Alt key pressed. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.4.77 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary clean-up.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

92.4.78 draggingEnded(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.
This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

92.4.79 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

Invoked when a dragged image enters the destination but only if the destination has registered for the pasteboard data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated: and draggingExited: even if NSDragOperationNone is returned by this method.

92.4.80 draggingExited(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

92.4.81 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked periodically as the image is held within the destination area, allowing modification of the dragging operation or mouse-pointer position.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Returns one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered: message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

92.4.82 groupAtIndex(index as Integer) as Dictionary

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the group at the specified index.
Notes:

index: The index of the group you want to retrieve.

Returns a dictionary that defines the group. The keys in this dictionary can be any of the following constants: IKImageBrowserGroupStyle, IKImageBrowserGroupBackgroundColorKey, IKImageBrowserGroupTitleKey, and IKImageBrowserGroupRangeKey. For more information on these constants, see IKImageBrowserView

Class Reference.

This method is optional.
Available in OS X v10.5 and later.

92.4.83 itemAtIndex(index as Integer) as IKImageBrowserItemMBS

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns an object for the item in an image browser view that corresponds to the specified index.
Notes:

index: The index of the item you want to retrieve.

Return an IKImageBrowserItem object.

Your data source must implement this method. The returned object must implement the required methods of the IKImageBrowserItem protocol.
Available in OS X v10.5 and later.

92.4.84 moveItemsAtIndexes(indexes as NSIndexSetMBS, destinationIndex as Integer) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that the specified items should be moved to the specified destination.
Notes:

indexes: The indexes of the items that should be reordered.
destinationIndex: The starting index of the destination the items should be moved to.

Returns true if successful; false otherwise.

This method is optional. It is invoked by the image browser view after Image Kit determines that a reordering operation should be applied. The data source should update itself by reordering its elements.
Available in OS X v10.5 and later.

92.4.85 numberOfGroups as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of groups in an image browser view.

Notes:

Return the number of groups.

This method is optional.
Available in OS X v10.5 and later.

92.4.86 numberOfItems as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of records managed by the data source object.
Notes:

Return the number of records managed by the image browser view.

Your data source must implement this method. An IKImageView object uses this method to determine how many cells it should create and display.
Available in OS X v10.5 and later.

92.4.87 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Returns if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

92.4.88 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return true if the receiver agrees to perform the drag operation and false if not.

This method is invoked only if the most recent draggingEntered or draggingUpdated event returned an acceptable drag-operation value.

If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this event.

92.4.89 removeItemsAtIndexes(indexes as NSIndexSetMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that a remove operation should be applied to the specified items.
Notes:

indexes: The indexes of the items that should be removed.

This method is optional. It is invoked by the image browser after Image Kit determines that a remove operation should be applied. In response, the data source should update itself by removing the specified items.
Available in OS X v10.5 and later.

92.4.90 selectionDidChange

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Performs custom tasks when the selection changes.
Notes:

This method signals that the user changes the selection in the image browser view. You can implement this method if you want to perform custom tasks at that time.
Available in OS X v10.5 and later.

92.4.91 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the dragging images should be changed.
Notes:

sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

During enumerateDraggingItemsWithOptions you may set non-acceptable drag items images to nil to hide them or use the enumeration option of NSDraggingItemEnumerationClearNonenumeratedImages If there are items that you hide, then after enumeration, you need to set the numberOfValidItemsForDrop to the number of non-hidden drag items. However, if the valid item count is 0, then it is better to return NSDragOperationNone from your implementation of draggingEntered and, or draggingUpdated instead of hiding all drag items during enumeration.
Available in OS X v10.7 and later.

92.4.92 wantsPeriodicDraggingUpdates as boolean

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Asks the destination object whether it wants to receive periodic draggingUpdated events.
Notes:

Returns true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated events even if nothing changes.

92.4.93 writeItemsAtIndexes(indexes as NSIndexSetMBS, pasteboard as NSPasteboardMBS) as Integer

MBS AVFoundation Plugin, Plugin Version: 13.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Signals that a drag should begin.
Notes:

itemIndexes: The indexes of the items that should be dragged.
pasteboard: The pasteboard to copy the items to.

Returns the number of items written to the pasteboard.

This method is optional. It is invoked after Image Kit determines that a drag should begin, but before the drag has been started.
Available in OS X v10.5 and later.

92.4.94 Constants

92.4.95 IKCellsStyleNone = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell style constants.
Notes: No style.

92.4.96 IKCellsStyleOutlined = 2

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell style constants.
Notes: Cells are outlined.

92.4.97 IKCellsStyleShadowed = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell style constants.
Notes: Cells use shadows.

92.4.98 IKCellsStyleSubtitled = 8

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell style constants.
Notes: Cells display a subtitle.

92.4.99 IKCellsStyleTitled = 4

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the cell style constants.
Notes: Cells display a title.

92.4.100 IKGroupBezelStyle = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the bevel styles.
Notes:

A bezel style.
Available in OS X v10.5 and later.

92.4.101 IKGroupDisclosureStyle = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the bevel styles.
Notes:

A disclosure triangle.
Available in OS X v10.5 and later.

92.4.102 IKImageBrowserDropBefore = 1

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the constants to specify the locations for dropping items onto the browser view.
Notes:

Drop the item before the cell.
Available in OS X v10.6 and later.
Used by the method setDropIndex.

92.4.103 IKImageBrowserDropOn = 0

MBS AVFoundation Plugin, Plugin Version: 13.1. **Function:** One of the constants to specify the locations for dropping items onto the browser view.
Notes:

Drop the item on the cell.
Available in OS X v10.6 and later.
Used by the method setDropIndex.

92.5 class IKImageEditPanelMBS

92.5.1 class IKImageEditPanelMBS

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The class for the image edit panel from Mac OS X 10.5.
Notes: Subclass of the NSPanelMBS class.

92.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr8

92.5.3 Methods

92.5.4 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new image edit panel.

92.5.5 reloadData

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Requests the panel to reload the image.
Notes: Do call this if you have a new image to return in the image event.

92.5.6 Properties

92.5.7 LastImage as Picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The last image passed to you or requested from you.
Notes:

This property is set with the picture you return with the image event and is set with the image sent to you useing the Changed event.
(Read and Write property)

92.5.8 Events

92.5.9 Changed(pic as picture, CGImageHandle as Integer, metaData as dictionary)

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The image changed and you should update your GUI.
Notes:

pic: The image as a picture.
CGImageHandle: The internal handle to the original CGImage which is used to make the picture.
metaData: additional image data.

92.5.10 hasAdjustMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the adjust mode view tab should be displayed.
Notes:

Return true if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

92.5.11 hasDetailsMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the details mode view tab should be displayed.
Notes:

True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

92.5.12 hasEffectsMode as Boolean

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the effects mode view tab should be displayed.
Notes:

True if the tab should be displayed, otherwise false.
Available on Mac OS X 10.6 or newer.

92.5.13 Image as picture

MBS AVFoundation Plugin, Plugin Version: 8.1, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The panel needs an image to start with.
Notes: Return your image in this event whenever the panel needs it.

92.5.14 imageProperties as Dictionary

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns a dictionary of the image properties associated with the image in the image edit panel.
Notes: Available on Mac OS X 10.5 or newer.

92.5.15 thumbnailWithMaximumSize(Width as Double, Height as Double) as picture

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns a thumbnail image whose size is no larger than the specified size.
Notes: Available in OS X v 10.5 and later.

92.6 class IKPictureTakerMBS

92.6.1 class IKPictureTakerMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: An IKPictureTaker object is a panel that allows users to choose and crop an image.
Notes:

It supports browsing of the file system and includes a recents popup-menu. The IKPictureTaker lets the user to crop a choosen image or to take snapshot from a camera like the built-in iSight.

Requires Mac OS X 10.5.
Subclass of the NSPanelMBS class.

92.6.2 Methods

92.6.3 Available as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the picture taker is available on that platform or not.
Example:

```
dim n as Integer

dim p as new IKPictureTakerMBS

if not p.Available then
MsgBox "This application requires Mac OS X 10.5 and a Macho Target"
Return
end if
```

Notes: True on Mac OS X 10.5.

92.6.4 beginPictureTaker as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Launch the PictureTaker.
Example:

```
dim p as IKPictureTakerMBS // your picture taker
```

```
if not p.beginPictureTaker then
MsgBox "Can't show picture taker!?"
end if
```

Notes:

You will later receive an event for the case the user clicks on OK or Cancel buttons.
Returns true on success and false on failure.

92.6.5 beginPictureTakerSheet(parent as NSWindowMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes:

parent: The parent window of the picture taker sheet.

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.
See also:

- 92.6.6 beginPictureTakerSheet(parent as window) as boolean 16212

92.6.6 beginPictureTakerSheet(parent as window) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Opens a picture taker as a sheet whose parent is the specified window.
Notes:

parent: The parent window of the picture taker sheet.

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.
See also:

- 92.6.5 beginPictureTakerSheet(parent as NSWindowMBS) as boolean 16212

92.6.7 Constructor

MBS AVFoundation Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The constructor to create a new picture taker panel.

92.6.8 CropAreaSizeHeight as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The height of the crop area.

92.6.9 CropAreaSizeWidth as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The width of the crop area.

92.6.10 outputImage as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Return the edited image.

92.6.11 OutputImageMaxSizeKeyHeight as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The maximum height of the output image.

92.6.12 OutputImageMaxSizeKeyWidth as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The maximum width of the output image.

92.6.13 popUpRecentsMenuForView(parent as NSViewMBS) as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Displays the Open Recent popup menu associated with the picture taker.
Notes:

You will later receive an event for the case the user clicks on OK or Cancel buttons.

Available in Mac OS X v10.5 and later.

92.6.14 runModal as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Launches a modal PictureTaker session.
Example:

```
dim p as IKPictureTakerMBS // global property
dim n as Integer

p=new IKPictureTakerMBS

if not p.Available then
MsgBox "This application requires Mac OS X 10.5 and a Macho Target"
Return
end if

p.AllowsFileChoosing=true
p.AllowsEditing=true
p.AllowsVideoCapture=true
p.ShowEffects=FALSE // disable if you run modal!
p.ShowRecentPicture=true
p.UpdateRecentPicture=true
p.InformationalText="Please take a picture"

n=p.runModal

if n=1 then // ok
Backdrop=p.outputImage.CopyPictureWithMask
else
Title=Str(n)
end if
```

Notes:

Returns NSOKButton (1) if the user edits or chooses an image and confirm panel, NSCancelButton (0) if the user canceled or didn't change the image.

You may want to disable effects as they won't work in Xojo in a modal picture taker dialog.

92.6.15 SetCropAreaSize(width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sets the crop area.

92.6.16 SetOutputImageMaxSize(width as Double, height as Double)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Sets the maximum output image size.

92.6.17 Properties

92.6.18 AllowsEditing as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether editing is allowed or not.
Notes: (Read and Write computed property)

92.6.19 AllowsFileChoosing as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether choosing a file is allowed or not.
Notes: (Read and Write computed property)

92.6.20 AllowsVideoCapture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether video capture is allowed or not.
Notes: (Read and Write computed property)

92.6.21 InformationalText as NSAttributedStringMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The information text as a plain string.
Notes:

On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a plain text, it will return the plain text as a NSAttributedStringMBS.

(Read and Write computed property)
See also:

- 92.6.22 InformationalText as string 16216

92.6.22 InformationalText as string

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The information text as a plain string.
Example:

```
dim p as IKPictureTakerMBS // your picture taker
p.InformationalText="Please take a picture"
```

Notes:

On getting the value the plugin will check whether the value is a formatted or a plain text. if it is a formatted text, it will return the formatted text as plain text.
(Read and Write computed property)
See also:

- 92.6.21 InformationalText as NSAttributedStringMBS 16215

92.6.23 inputImage as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The input image.
Notes:

The input image is never modified by the PictureTaker.
(Read and Write computed property)

92.6.24 mirroring as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: True if video mirroring is enabled, false otherwise.
Notes:

Controls whether the receiver enable/disable video mirroring durring snapshots (default is true).
(Read and Write computed property)

92.6.25 RemainOpenAfterValidate as boolean

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the picture taker reamins open.
Notes:

Requires Mac OS X 10.6.
(Read and Write computed property)

92.6.26 ShowAddressBookPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether the addressbook picture is shown or not.
Notes: (Read and Write computed property)

92.6.27 ShowEffects as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether effects are shown or not.
Notes: (Read and Write computed property)

92.6.28 ShowEmptyPicture as NSImageMBS

MBS AVFoundation Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The image to use for an empty image.
Notes: (Read and Write computed property)

92.6.29 ShowRecentPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether recent pictures should be shown.
Notes: (Read and Write computed property)

92.6.30 UpdateRecentPicture as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Whether recent pictures should be updated.

Notes: (Read and Write computed property)

92.6.31 Events

92.6.32 Finished(returnCode as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: beginPictureTaker has finished work.
Notes: ReturnCode is 1 if the user clicked OK and 0 if the user clicked false.

92.6.33 Screenshots

92.6.34 PictureTaker1.jpg

Function: The picture taker with an image choosed.

92.6.35 PictureTaker2.jpg

Function: The picture taker doing effects on a photo taken with the iSight.

92.6.36 QuartzFilterPanel.jpg

Function: The Quartz filter manager panel.

92.7 class IKSlideshowMBS

92.7.1 class IKSlideshowMBS

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The ImageKit class for a slideshow.
Notes:

Requires Mac OS X 10.5.
Slideshows can be only with pictures, with PDF pages or with file references.
Those files can be picture files, pdf files or anything you want.

92.7.2 Methods

92.7.3 addFile(file as folderitem, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a file to the items list.

92.7.4 addImage(image as NSImageMBS, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an image to the items list.
Example:

```
dim p as picture
dim n as NSImageMBS
dim s as new IKSlideshowMBS

// get picture to p
n=new NSImageMBS(p)
s.addImage n
```

92.7.5 addPage(page as Variant, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a PDF page to the items list.
Notes: Page must be a PDFPageMBS object.

92.7.6 Available as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the slide show functions are available.
Example:

```
if IKSlideshowMBS.Available=False then
MsgBox "You need Mac OS X 10.5 for this and a MachO application."
quit
end if
```

Notes: Value is true for Mac OS X 10.5.

92.7.7 canExportToApplication(applicationBundleIdentifier as string) as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: is exporting to a given application possible?
Notes: (application installed?, right version?, ...)

92.7.8 exportSlideshowItems(applicationBundleIdentifier as string)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Export items to the given application.
Example:

```
dim i,c as Integer
dim s as new IKSlideshowMBS

// add items here

if false=IKSlideshowMBS.canExportToApplication(IKSlideshowMBS.iPhotoBundleIdentifier) then
MsgBox "Can't export to iPhoto."
else

if s.itemcount>0 then

s.exportSlideshowItems IKSlideshowMBS.iPhotoBundleIdentifier

else
MsgBox "no slides?"
end if
end if
```

92.7.9 indexOfCurrentSlideshowItem as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The index of the current slide.
Notes: Index is from 0 to count-1.

92.7.10 ItemCount as Integer

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of items.

92.7.11 reloadData

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reloads all slides.

92.7.12 reloadSlideshowItemAtIndex(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reloads the slide show with the given index.

92.7.13 removeItem(index as Integer)

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes an item from the item list.

92.7.14 removeItems

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes all items from the item list.

92.7.15 runSlideshow

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Start the slideshow.
Example:

```
dim s as new IKSlideshowMBS
// add items
s.runSlideshow
```

Notes: You may want to set all the properties before.

92.7.16 setFile(index as Integer, file as folderitem, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the file in the items list with the given index.

92.7.17 setImage(index as Integer, image as NSImageMBS, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the image in the items list with the given index.

92.7.18 setPage(index as Integer, page as Variant, name as string="")

MBS AVFoundation Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a PDF page in the items list with the given index.
Notes: Page must be a PDFPageMBS object.

92.7.19 stopSlideshow

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Stops the slideshow.

92.7.20 Properties

92.7.21 AudioFile as Folderitem

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Optional audio file to play while running slide show.
Notes:

Only used for Mac OS X 10.6.
(Read and Write property)

92.7.22 PDFDisplayBox as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDF display box mode to use.
Notes:

Default value is -1 which means that we use the framework default mode.
(Read and Write property)

92.7.23 PDFDisplayMode as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The PDF display mode you want.
Notes:

Default value is -1 which means that we use the framework default mode.
(Read and Write property)

92.7.24 PDFDisplaysAsBook as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether PDF should display as book.
Notes:

Default value is false.
(Read and Write property)

92.7.25 ScreenIndex as Integer

MBS AVFoundation Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The screen to use.
Notes:

Default is main screen.
Only used for Mac OS X 10.6.
(Read and Write property)

92.7.26 StartIndex as Integer

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The index of the first slide to show.
Notes:

Index is from 0 to count-1.
Default value is -1 which means that we use the framework default mode.
(Read and Write property)

92.7.27 StartPaused as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether to start paused.
Notes:

Default is false.
(Read and Write property)

92.7.28 WrapAround as Boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether to wrap around when the slideshow runs.
Notes:

Default is false.
(Read and Write property)

92.7.29 autoPlayDelay as Double

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The time to wait before the slideshow will start automatically.
Notes:

Value is in seconds.
(Read and Write computed property)

92.7.30 Events

92.7.31 canExportSlideshowItemAtIndex(index as Integer, applicationBundleIdentifier as string) as boolean

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Should the export button be enabled for a given item at index?
Notes: This event is optional.

92.7.32 slideshowDidChangeCurrentIndex(newIndex as Integer)

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Slideshow did change current item index.

92.7.33 slideshowDidStop

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Slideshow did stop
Notes: This event is optional.

92.7.34 slideshowWillStart

MBS AVFoundation Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Slideshow will start.
Notes: This event is optional.

92.7.35 Constants

92.7.36 iPhotoBundleIdentifier="com.apple.iPhoto"

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** The iPhoto application identifier.
Notes: May be used on the export functions.

92.7.37 kPDFDisplayBoxArtBox=4

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

92.7.38 kPDFDisplayBoxBleedBox=2

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

92.7.39 kPDFDisplayBoxCropBox=1

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

92.7.40 kPDFDisplayBoxMediaBox=0

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

92.7.41 kPDFDisplayBoxTrimBox=3

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the possible values for the PDFDisplayBox property.

92.7.42 kPDFDisplaySinglePage=0

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

92.7.43 kPDFDisplaySinglePageContinuous=1

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

92.7.44 kPDFDisplayTwoUp=2

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

92.7.45 kPDFDisplayTwoUpContinuous=3

MBS AVFoundation Plugin, Plugin Version: 7.7. **Function:** One of the PDF display mode constants.

Chapter 93

ImageMagick7

93.1 module ImageMagick7MBS

93.1.1 module ImageMagick7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The module for global functions.
Notes:

The MBS Plugin can load 8, 16, 32 or 64 bit ImageMagick libraries with or without HDRI support. We detect what library is loaded and adjust in various functions. Check QuantumDepth, QuantumSize and HDRI properties.

All class names have currently 7 in the class name to give users of the older classes time for the transition. Currently we use ImageMagick 7.0.9. The plugin may work with older/newer versions of 7.x.

We do have functions to use Xojo pictures with CopyPicture and SetPicture. Those move pixels as they are, so it is up to you to do proper color management. As Xojo pictures are just 8bit RGB, you may loose information on conversion. ExportPixels and ImportPixels functions can move pixel data into/from memory blocks.

Best to avoid Xojo pictures and load image here, modify it and save it again.

93.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

93.1.3 Methods

93.1.4 ClampToQuantum(value as Double) as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clamps given value to the range for quantum.
Notes: Limits range between 0 and QuantumRange and for non-HDRI rounds value.

93.1.5 InitializeMagick(path as string = "")

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the MagickCore environment.
Notes:

path: the execution path of the current ImageMagick client.

See MagickCoreGenesis function in ImageMagick documentation.

93.1.6 LoadLibrary(path as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the MagickCore library file.
Example:

```
If ImageMagick7MBS.LoadLibrary("CORE_RL_MagickCore_.dll") Then

msgbox ImageMagick7MBS.Version

Else

MsgBox "failed to load: "+ImageMagick7MBS.LoadErrorString

End If
```

Notes:

Returns true on success and false on failure.
LoadErrorString is set with error string if available.

93.1.7 LoadLibraryFile(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Loads the MagickCore library file.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("libMagickCore-7.Q16HDRI.7.dylib")

If ImageMagick7MBS.LoadLibraryFile(f) Then

MsgBox "loaded"

Else

MsgBox "failed to load: "+ImageMagick7MBS.LoadErrorString

End If
```

Notes:

Returns true on success and false on failure.
LoadErrorString is set with error string if available.

93.1.8 MagickInfoList as IMMagickInfoList7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries list of MagickInfo objects.
Notes: See GetMagickInfoList function in ImageMagick documentation.

93.1.9 MagickToMime(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the officially registered (or de facto) MIME media-type corresponding to a magick string.
Notes:

If there is no registered media-type, then the string "image/x-magick" (all lower case) is returned.

See MagickToMime function in ImageMagick documentation.

93.1.10 NewImageInfo as IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates new image info object.
Notes: See CloneImageInfo function in ImageMagick documentation.

93.1.11 NewImageList as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty image list.
Notes: See NewImageList function in ImageMagick documentation.

93.1.12 PrintMagickVersion

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Identifies the ImageMagick version by printing its attributes to the file. Attributes include the copyright, features, and delegates.
Notes: See ListMagickVersion function in ImageMagick documentation.

93.1.13 ScaleQuantumToChar(value as Double) as UInt8

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a quantum value to 8 bit unsigned integer.
Notes:

Depending on which library is loaded a quantum is an UInt8, UInt16, UInt32, Single or Double value.
This function normalizes and rounds values to nearest 8 bit integer value.

93.1.14 SetCurrentDirectory(path as folderitem) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the current working directory.
Notes: This is needed for most installations to point to the folder with the libraries in order for LoadLibrary to find the dependencies.

93.1.15 Properties

93.1.16 Copyright as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick API copyright as a string.
Notes:

See GetMagickCopyright function in ImageMagick documentation.
(Read only property)

93.1.17 Delegates as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick delegate libraries.
Notes:

See GetMagickDelegates function in ImageMagick documentation.
(Read only property)

93.1.18 Epsilon as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Small value.
Notes:

Two values are considered equal if the difference is smaller than epsilon.
(Read only property)

93.1.19 Features as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick features.
Example:

MsgBox ImageMagick7MBS.Features

Notes:

See GetMagickFeatures function in ImageMagick documentation.
e.g. "Cipher DPC Modules OpenCL OpenMP(2.0)".

(Read only property)

93.1.20 HDRI as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether HDRI is used.
Notes:

If the plugin detects HDRI mode for the library, we use floats (8 and 16 bit depth) or doubles (32 and 64 bit depth).
(Read only property)

93.1.21 HomeURL as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick home URL.
Notes:

See GetMagickHomeURL function in ImageMagick documentation.
(Read only property)

93.1.22 Huge as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Huge value.
Notes:

Values bigger than Huge are far over the range of a quantum.
(Read only property)

93.1.23 License as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick API license as a string.
Notes:

See GetMagickLicense function in ImageMagick documentation.
(Read only property)

93.1.24 LoadErrorString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error from LoadLibrary call.
Notes: (Read only property)

93.1.25 MagickPrecision as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the maximum number of significant digits to be printed.
Notes:

See GetMagickPrecision function in ImageMagick documentation.
(Read and Write property)

93.1.26 MagickSignature as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a signature that uniquely encodes the MagickCore libary version, quantum depth, HDRI status, OS word size, and endianness.
Notes:

See GetMagickSignature function in ImageMagick documentation.
(Read only property)

93.1.27 MaxColormapSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The maximum size of a color map.
Notes:

Value is 256 for 8 bit or 65536 for higher bit depths.
(Read only property)

93.1.28 MaxMap as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The maximum index in a color map.
Notes:

Either 255 for 8 bit or 65535 for 16 bit or higher.

(Read only property)

93.1.29 PackageName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick package name.
Notes:

See GetMagickPackageName function in ImageMagick documentation.
(Read only property)

93.1.30 QuantumDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The quantum depth.
Notes:

Can be 8, 16, 32 or 64 bit depending on the loaded image magick library.
(Read only property)

93.1.31 QuantumDepthString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick quantum depth.
Notes:

Returns the quantum depth is returned as a number.
See GetMagickQuantumDepth function in ImageMagick documentation.
(Read only property)

93.1.32 QuantumRange as UInt32

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The maximum value for the range of quantums.
Notes:

Depending on quantum depth ranges from 255 to & hFFFFFFFF.
(Read only property)

93.1.33 QuantumRangeString as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick quantum range.
Notes:

See GetMagickQuantumRange function in ImageMagick documentation.
e.g. "((Quantum) 65535)"
(Read only property)

93.1.34 QuantumSize as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The size of a quantum value in bytes.
Notes:

Used to allocate memoryblocks of right size.
e.g. Width * Height * QuantumSize * ChannelCount.
(Read only property)

93.1.35 ReleaseDate as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick release date.
Notes:

See GetMagickReleaseDate function in ImageMagick documentation.
(Read only property)

93.1.36 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick API version as a string.
Example:

```
MsgBox ImageMagick7MBS.Version
// e.g. "ImageMagick 7.0.9-2 Q16 x86 2019-10-30 http://www.imagemagick.org"
```

Notes:

See GetMagickVersion function in ImageMagick documentation.
(Read only property)

93.1.37 VersionNumber as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the ImageMagick API version as a number.
Notes:

See GetMagickVersion function in ImageMagick documentation.
e.g. & h709 for 7.0.9.
(Read only property)

93.2 class IMChannelStatistics7MBS

93.2.1 class IMChannelStatistics7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for channel statistics.
Notes:

Obtain image statistics. Statistics are normalized to the range of 0.0 to 1.0 and are output into this class. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

93.2.2 Methods

93.2.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The private constructor.

93.2.4 Properties

93.2.5 Area as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Area.
Notes: (Read only property)

93.2.6 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The depth.
Notes: (Read only property)

93.2.7 Entropy as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Entropy.
Notes: (Read only property)

93.2.8 Kurtosis as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Kurtosis
Notes: (Read only property)

93.2.9 Maxima as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum value observed.
Notes: (Read only property)

93.2.10 Mean as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Average (mean) value observed.
Notes: (Read only property)

93.2.11 Minima as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Minimum value observed.
Notes: (Read only property)

93.2.12 Skewness as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Skewness.
Notes: (Read only property)

93.2.13 StandardDeviation as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Standard deviation, sqrt(variance)
Notes: (Read only property)

93.2.14 Sum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sum.
Notes: (Read only property)

93.2.15 SumCubed as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sum cubed
Notes: (Read only property)

93.2.16 SumFourthPower as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sum fourth power.
Notes: (Read only property)

93.2.17 SumSquared as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sum squared.
Notes: (Read only property)

93.2.18 Variance as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Variance.
Notes: (Read only property)

93.3 class IMException7MBS

93.3.1 class IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an exception.
Notes: Subclass of the RuntimeException class.

93.3.2 Properties

93.3.3 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The description text.
Notes: (Read and Write property)

93.3.4 Reason as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The reason text.
Notes: (Read and Write property)

93.3.5 Severity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The error code for exception.
Notes: (Read and Write property)

93.3.6 Constants

93.3.7 BlobError = 435

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.8 BlobFatalError = 735

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.9 BlobWarning = 335

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.10 CacheError = 445

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.11 CacheFatalError = 745

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.12 CacheWarning = 345

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.13 CoderError = 450

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.14 CoderWarning = 350

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.15 ConfigureError = 495

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.16 ConfigureWarning = 395

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.17 CorruptImageError = 425

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.18 CorruptImageFatalError = 725

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.19 CorruptImageWarning = 325

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.20 DelegateError = 415

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.21 DelegateFatalError = 715

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.22 DelegateWarning = 315

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.23 DrawError = 460

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.24 DrawWarning = 360

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.25 ErrorException = 400

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.26 FatalErrorException = 700

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.27 FileOpenError = 430

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.28 FileOpenFatalError = 730

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.29 FileOpenWarning = 330

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.30 FilterError = 452

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.31 FilterWarning = 352

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.32 ImageError = 465

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the error types.

93.3.33 ImageWarning = 365

93.4 class IMFrameInfo7MBS

93.4.1 class IMFrameInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a frame.

93.4.2 Methods

93.4.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with zero values.
See also:

- 93.4.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer) 16253

93.4.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with given values.
See also:

- 93.4.3 Constructor 16253

93.4.5 Properties

93.4.6 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the rectangle.
Notes: (Read and Write property)

93.4.7 InnerBevel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The inner bevel size.
Notes: (Read and Write property)

93.4.8 OuterBevel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The outer bevel size.
Notes: (Read and Write property)

93.4.9 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the rectangle.
Notes: (Read and Write property)

93.4.10 X as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

93.4.11 Y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

93.5 class IMGeometryInfo7MBS

93.5.1 class IMGeometryInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for geometry info.

93.5.2 Methods

93.5.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

93.5.4 Properties

93.5.5 chi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The chi value.
Notes: (Read and Write property)

93.5.6 psi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The psi value.
Notes: (Read and Write property)

93.5.7 rho as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rho value.
Notes: (Read and Write property)

93.5.8 sigma as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The sigma value.
Notes: (Read and Write property)

93.5.9 xi as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The xi value.
Notes: (Read and Write property)

93.6 class IMImage7MBS

93.6.1 class IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an ImageMagick image.
Notes: See xx function in ImageMagick documentation.

93.6.2 Methods

93.6.3 AcquireImageColormap(count as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Allocates an image colormap and initializes it to a linear gray colorspace.
Notes:

If the image already has a colormap, it is replaced. AcquireImageColormap() returns true if successful, otherwise false if there is not enough memory.

colors: the number of colors in the image colormap.

See AcquireImageColormap function in ImageMagick documentation.

93.6.4 AdaptiveBlur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adaptively blurs the image by blurring less intensely near image edges and more intensely far from edges.
Notes:

We blur the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and AdaptiveBlur selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See AdaptiveBlurImage function in ImageMagick documentation.

93.6.5 AdaptiveResize(columns as Integer, Rows as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adaptively resize image with pixel resampling.
Notes:

This is shortcut function for a fast interpolative resize using mesh interpolation. It works well for small resizes of less than +/- 50 of the original image size. For larger resizing on images a full filtered and slower resize function should be used instead.

columns: the number of columns in the resized image.
rows: the number of rows in the resized image.

See AdaptiveResizeImage function in ImageMagick documentation.

93.6.6 AdaptiveSharpen(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adaptively sharpens the image by sharpening more intensely near image edges and less intensely far from edges.
Notes:

We sharpen the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and AdaptiveSharpen selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See AdaptiveSharpenImage function in ImageMagick documentation.

93.6.7 AdaptiveThreshold(width as Integer, height as integer, bias as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Selects an individual threshold for each pixel based on the range of intensity values in its local neighborhood.
Notes:

This allows for thresholding of an image whose global intensity histogram doesn't contain distinctive peaks.

width: the width of the local neighborhood.

height: the height of the local neighborhood.
bias: the mean bias.

See AdaptiveThresholdImage function in ImageMagick documentation.

93.6.8 AddNoise(NoiseType as integer, value as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds random noise to the image.
Notes:

channel: the channel type.
noise_type: The type of noise: Uniform, Gaussian, Multiplicative, Impulse, Laplacian, or Poisson.
attenuate: attenuate the random distribution.

See AddNoiseImage function in ImageMagick documentation.

93.6.9 AffineTransform(matrix as IMImageAffineMatrix7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transforms an image as dictated by the affine matrix.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See xx function in ImageMagick documentation.

93.6.10 AppendImageToList(img as IMImage7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Appends the second image list to the end of the first list. The given image list pointer is left unchanged, unless it was empty.
Notes: See xx function in ImageMagick documentation.

93.6.11 AuthenticPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Obtains a pixel region for read/write access.

Notes:

If the region is successfully accessed, a pointer to a Quantum array representing the region is returned, otherwise NULL is returned.

The returned pointer may point to a temporary working copy of the pixels or it may point to the original pixels in memory. Performance is maximized if the selected region is part of one row, or one or more full rows, since then there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image has corresponding metacontent,call GetAuthenticMetacontent() after invoking GetAuthenticPixels() to obtain the meta-content corresponding to the region. Once the Quantum array has been updated, the changes must be saved back to the underlying image using SyncAuthenticPixels() or they may be lost.

See xx function in ImageMagick documentation.

93.6.12 AutoGamma as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extract the 'mean' from the image and adjust the image to try make set its gamma appropriatally.
Notes: See AutoGammaImage function in ImageMagick documentation.

93.6.13 AutoLevel as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adjusts the levels of a particular image channel by scaling the minimum and maximum values to the full quantum range.
Notes: See AutoLevelImage function in ImageMagick documentation.

93.6.14 AutoOrient(OrientationType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adjusts an image so that its orientation is suitable for viewing (i.e. top-left orientation).
Notes:

orientation: Current image orientation.

See AutoOrientImage function in ImageMagick documentation.

93.6.15 AutoThreshold(autoThresholdMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Automatically performs image thresholding dependent on which method you specify.
Notes:

method: choose from Kapur, OTSU, or Triangle.

See AutoThresholdImage function in ImageMagick documentation.

93.6.16 Bilevel(threshold as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel channel.
Notes:

The result is a high-contrast image.

More precisely each channel value of the image is 'thresholded' so that if it is equal to or less than the given value it is set to zero, while any value greater than that give is set to it maximum or QuantumRange.

This function is what is used to implement the "-threshold" operator for the command line API.

If the default channel setting is given the image is thresholded using just the gray 'intensity' of the image, rather than the individual channels.

threshold: define the threshold values.

See BilevelImage function in ImageMagick documentation.

93.6.17 BlackThreshold(thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is like Threshold but forces all pixels below the threshold into black while leaving all pixels at or above the threshold unchanged.
Notes:

threshold: define the threshold value.

See BlackThresholdImage function in ImageMagick documentation.

93.6.18 BlueShift(factor as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Mutes the colors of the image to simulate a scene at nighttime in the moonlight.
Notes:

factor: the shift factor.

See BlueShiftImage function in ImageMagick documentation.

93.6.19 Blur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, the radius should be larger than sigma. Use a radius of 0 and Blur selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.

See BlurImage function in ImageMagick documentation.

93.6.20 Border(rectangle as IMRectangleInfo7MBS, CompositeOperator as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Surrounds the image with a border of the color defined by the bordercolor member of the image structure.
Notes:

The width and height of the border are defined by the corresponding members of the rectangle.

rectangle: define the width and height of the border.
CompositeOperator: the composite operator.

See BorderImage function in ImageMagick documentation.

93.6.21 BrightnessContrast(brightness as double, contrast as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the brightness and/or contrast of an image.
Notes:

It converts the brightness and contrast parameters into slope and intercept and calls a polynomical function to apply to the image.

brightness: the brightness percent (-100 .. 100).
contrast: the contrast percent (-100 .. 100).

See BrightnessContrastImage function in ImageMagick documentation.

93.6.22 Charcoal(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image that is a copy of an existing one with the edge highlighted.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

radius: the radius of the pixel neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See CharcoalImage function in ImageMagick documentation.

93.6.23 Chop(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a region of an image and collapses the image to occupy the removed portion.
Notes:

rect: Define the region of the image to chop.

See ChopImage function in ImageMagick documentation.

93.6.24 CLAHE(Width as Integer, Height as Integer, NumberBins as Integer, ClipLimit as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is a variant of adaptive histogram equalization in which the contrast amplification is limited, so as to reduce this problem of noise amplification.
Notes:

width: the width of the tile divisions to use in horizontal direction.
height: the height of the tile divisions to use in vertical direction.
NumberBins: number of bins for histogram ("dynamic range").
ClipLimit: contrast limit for localised changes in contrast. A limit less than 1 results in standard non-contrast limited AHE.

See CLAHEImage function in ImageMagick documentation.

93.6.25 Clamp as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clamps image pixels.
Notes:

Set each pixel whose value is below zero to zero and any the pixel whose value is above the quantum range to the quantum range (e.g. 65535) otherwise the pixel value remains unchanged.

See xx function in ImageMagick documentation.

93.6.26 ClampToQuantum(value as Double) as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clamps given value to the range for quantum.
Notes: Limits range between 0 and QuantumRange and for non-HDRI rounds value.

93.6.27 Clip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clips along the first path from the 8BIM profile, if present.

Notes: See ClipImage function in ImageMagick documentation.

93.6.28 Clone as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies an image and returns the copy as a new image object.
Notes: See CloneImage function in ImageMagick documentation.

93.6.29 CloneImageProfiles(SourceImage as IMImage7MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones one or more image profiles.
Notes: See xx function in ImageMagick documentation.

93.6.30 CloneProperties(Source as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones all the image properties from source image to current image.
Notes: See CloneImageProperties function in ImageMagick documentation.

93.6.31 Clut(clutImage as IMImage7MBS, pixelInterpolateMethod as integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces each color value in the given image, by using it as an index to lookup a replacement color value in a Color Look UP Table in the form of an image.
Notes:

The values are extracted along a diagonal of the CLUT image so either a horizontal or vertial gradient image can be used.

Typically this is used to either re-color a gray-scale image according to a color gradient in the CLUT image, or to perform a freeform histogram (level) adjustment according to the (typically gray-scale) gradient in the CLUT image.

When the 'channel' mask includes the matte/alpha transparency channel but one image has no such channel it is assumed that that image is a simple gray-scale image that will effect the alpha channel values, either for gray-scale coloring (with transparent or semi-transparent colors), or a histogram adjustment of existing alpha channel values. If both images have matte channels, direct and normal indexing is applied, which is

rarely used.

clutImage: the color lookup table image for replacement color values.
method: the pixel interpolation method.

See ClutImage function in ImageMagick documentation.

93.6.32 CoalesceImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composites a set of images while respecting any page offsets and disposal methods.
Notes:

GIF, MIFF, and MNG animation sequences typically start with an image background and each subsequent image varies in size and offset. A new image sequence is returned with all images the same size as the first images virtual canvas and composited with the next image in the sequence.

See CoalesceImages function in ImageMagick documentation.

93.6.33 ColorDecisionList(ColorCorrectionCollection as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Accepts a lightweight Color Correction Collection (CCC) file which solely contains one or more color corrections and applies the correction to the image.
Notes:

Here is a sample CCC file:

```
<ColorCorrectionCollection xmlns="urn:ASC:CDL:v1.2">
<ColorCorrection id="cc03345">
<SOPNode>
<Slope>0.9 1.2 0.5 </Slope>
<Offset>0.4 -0.5 0.6 </Offset>
<Power>1.0 0.8 1.5 </Power>
</SOPNode>
<SATNode>
<Saturation>0.85 </Saturation>
</SATNode>
</ColorCorrection>
</ColorCorrectionCollection>
```

which includes the slop, offset, and power for each of the RGB channels as well as the saturation.

ColorCorrectionCollection: the color correction collection in XML.

See ColorDecisionListImage function in ImageMagick documentation.

93.6.34 Colorize(opacity as string, pixelInfo as IMPixelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blends the fill color with each pixel in the image.
Notes:

A percentage blend is specified with opacity. Control the application of different color components by specifying a different percentage for each component (e.g. 90/100/10 is 90 red, 100 green, and 10 blue).

blend: A character string indicating the level of blending as a percentage.
colorize: A color value.

See ColorizeImage function in ImageMagick documentation.

93.6.35 ColorspaceType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the potential type of image: sRGBColorspaceType, RGBColorspaceType, GRAYColorspaceType, etc.
Notes: See xx function in ImageMagick documentation.

93.6.36 Combine(Colorspace as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Combines one or more images into a single image.
Notes:

The grayscale value of the pixels of each image in the sequence is assigned in order to the specified channels of the combined image. The typical ordering would be image 1 =>Red, 2 =>Green, 3 =>Blue, etc.

See CombineImages function in ImageMagick documentation.

93.6.37 CompareImagesLayers(ImageLayerMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compares each image with the next in a sequence and returns the minimum bounding region of all the pixel differences (of the LayerMethod specified) it discovers.
Notes:

Images do NOT have to be the same size, though it is best that all the images are 'coalesced' (images are all the same size, on a flattened canvas, so as to represent exactly how an specific frame should look).

No GIF dispose methods are applied, so GIF animations must be coalesced before applying this image operator to find differences to them.

method: the layers type to compare images with. Must be one of... CompareAnyLayer, CompareClearLayer, CompareOverlayLayer.

See xx function in ImageMagick documentation.

93.6.38 ComplexImages(ComplexOperator as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs complex mathematics on an image sequence.
Notes: See ComplexImages function in ImageMagick documentation.

93.6.39 Composite(ComposeOperator as integer, Image as IMImage7MBS, ClipToSelf as boolean, xOffset as integer, yOffset as integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the second image composited onto the first at the specified offset, using the specified composite method.
Notes: See xx function in ImageMagick documentation.

93.6.40 CompositeLayers(CompositeOperator as Integer, Source as IMImage7MBS, XOffset as Integer, YOffset as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the source image sequence over the destination image sequence, starting with the current image in both lists.
Notes:

Each layer from the two image lists are composted together until the end of one of the image lists is reached. The offset of each composition is also adjusted to match the virtual canvas offsets of each layer. As such the given offset is relative to the virtual canvas, and not the actual image.

Composition uses given x and y offsets, as the 'origin' location of the source images virtual canvas (not the real image) allowing you to compose a list of 'layer images' into the destiantioni images. This makes it well sutiable for directly composing 'Clears Frame Animations' or 'Coaleased Animations' onto a static or other 'Coaleased Animation' destination image list. GIF disposal handling is not looked at.

Special case:- If one of the image sequences is the last image (just a single image remaining), that image is repeatally composed with all the images in the other image list. Either the source or destination lists may be the single image, for this situation.

In the case of a single destination image (or last image given), that image will ve cloned to match the number of images remaining in the source image list.

This is equivelent to the "-layer Composite" Shell API operator.

See xx function in ImageMagick documentation.

93.6.41 CompressColormap as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: compresses an image colormap by removing any duplicate or unused color entries.
Notes:

Returns true on success.
See CompressImageColormap function in ImageMagick documentation.

93.6.42 ConsolidateCMYKImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Consolidates separate C, M, Y, and K planes into a single image.
Notes: See ConsolidateCMYKImages function in ImageMagick documentation.

93.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an image from the pixel data you supply.
Notes:

The pixel data must be in scanline order top-to-bottom. The data can be char, short int, int, float, or double. Float and double require the pixels to be normalized [0..1] , otherwise [0..QuantumRange] . For example, to create a 640x480 image from unsigned red-green-blue character data, use:

image = new IMImage7MBS(640,480,"RGB", kCharPixel, pixels)

columns: width in pixels of the image.
rows: height in pixels of the image.
map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
storage: Define the data type of the pixels. Float and double types are expected to be normalized [0..1] otherwise [0..QuantumRange] . Choose from these types: CharPixel, DoublePixel, FloatPixel, IntegerPixel, LongPixel, QuantumPixel, or ShortPixel.
pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ConstituteImage function in ImageMagick documentation.
See also:

- 93.6.44 Constructor(info as IMImageInfo7MBS) 16270
- 93.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 16271
- 93.6.46 Constructor(Pic as Picture) 16271

93.6.44 Constructor(info as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image.
Notes:

Returns a pointer to an image initialized to default values.
Many of the image default values are set from the image info. For example, filename, compression, depth, background color, and others.

See AcquireImage function in ImageMagick documentation.
See also:

- 93.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 16270
- 93.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 16271
- 93.6.46 Constructor(Pic as Picture) 16271

93.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a blank image canvas of the specified size and background color.
Notes:

info: the image details.
width: the image width.
height: the image height.
background: the image color.

See NewMagickImage function in ImageMagick documentation.
See also:

- 93.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 16270
- 93.6.44 Constructor(info as IMImageInfo7MBS) 16270
- 93.6.46 Constructor(Pic as Picture) 16271

93.6.46 Constructor(Pic as Picture)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new picture based on Xojo picture.
Notes:

Creates a new image and uses SetPicture method to fill it.

See NewMagickImage function in ImageMagick documentation.
See also:

- 93.6.43 Constructor(columns as Integer, Rows as Integer, map as String, StorageType as Integer, Pixels as MemoryBlock) 16270
- 93.6.44 Constructor(info as IMImageInfo7MBS) 16270
- 93.6.45 Constructor(info as IMImageInfo7MBS, width as integer, height as integer, background as IMPixelInfo7MBS) 16271

93.6.47 Contrast(sharpen as boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Enhances the intensity differences between the lighter and darker elements of the image.
Notes:

Set sharpen to a True to increase the image contrast otherwise the contrast is reduced.

sharpen: Increase or decrease image contrast.

See ContrastImage function in ImageMagick documentation.

93.6.48 ContrastStretch(BlackPoint as double, WhitePoint as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is a simple image enhancement technique that attempts to improve the contrast in an image by 'stretching' the range of intensity values it contains to span a desired range of values.
Notes:

It differs from the more sophisticated histogram equalization in that it can only apply a linear scaling function to the image pixel values. As a result the 'enhancement' is less harsh.

BlackPoint: the black point.
WhitePoint: the white point.

See ContrastStretchImage function in ImageMagick documentation.

93.6.49 Convolve(kernelInfo as IMKernelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a custom convolution kernel to the image.
Notes: See ConvolveImage function in ImageMagick documentation.

93.6.50 CopyPicture as Picture

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Copies RGB or gray pixels into a new Xojo picture.
Notes:

You must make sure you have the right color space to make this work well with colorspaces.

Xojo on Mac uses Generic RGB, while Windows may use the colorspace of the display.

As conversion between various quantum depths can be slow, please use rarely.

See also ExportPixels and ImportPixels to read/write pixel data to/from memory blocks.
See GetAuthenticPixels function in ImageMagick documentation.

93.6.51 CreateHBITMAP as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a Windows HBITMAP from an image.
Notes: See ImageToHBITMAP function in ImageMagick documentation.

93.6.52 Crop(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extracts a region of the image starting at the offset defined by geometry.
Notes:

Region must be fully defined, and no special handling of geometry flags is performed.

See CropImage function in ImageMagick documentation.

93.6.53 CropToTiles(CropGeometry as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crops a single image, into a possible list of tiles.
Notes:

This may include a single sub-region of the image. This basically applies all the normal geometry flags for Crop.

CropGeometry: A crop geometry string.

See CropImageToTiles function in ImageMagick documentation.

93.6.54 CycleColormap(displace as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Displaces an image's colormap by a given number of positions.
Notes:

If you cycle the colormap a number of times you can produce a psychodelic effect.

WARNING: this assumes an images colormap is in a well know and defined order. Currently Imagemagick has no way of setting that order.

displace: displace the colormap this amount.

See CycleColormap function in ImageMagick documentation.

93.6.55 Decipher(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts cipher pixels to plain pixels.
Notes: See xx function in ImageMagick documentation.

93.6.56 DefineProperty(PropertyKeyValue as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Associates an assignment string of the form "key=value" with an artifact or options.
Notes:

It is equivelent to SetProperty().
See DefineImageProperty function in ImageMagick documentation.

93.6.57 DeleteImageProfile(Name as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Deletes a profile from the image by its name.
Notes: See xx function in ImageMagick documentation.

93.6.58 DeleteProperty(Key as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Deletes an image property.
Notes:

key: the image property.
See DeleteImageProperty function in ImageMagick documentation.

93.6.59 Deskew(x as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes skew from the image.
Notes:

Skew is an artifact that occurs in scanned images because of the camera being misaligned, imperfections in the scanning or surface, or simply because the paper was not placed completely flat when scanned.

The result will be auto-croped if the artifact "deskew:auto-crop" is defined, while the amount the image is to be deskewed, in degrees is also saved as the artifact "deskew:angle".

threshold: separate background from foreground.

See DeskewImage function in ImageMagick documentation.

93.6.60 Despeckle as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reduces the speckle noise in an image while perserving the edges of the original image.
Notes:

A speckle removing filter uses a complementary hulling technique (raising pixels that are darker than their surrounding neighbors, then complementarily lowering pixels that are brighter than their surrounding neighbors) to reduce the speckle index of that image (reference Crimmins speckle removal).

See DespeckleImage function in ImageMagick documentation.

93.6.61 DestroyImageList

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys an image list.
Notes: See DestroyImageList function in ImageMagick documentation.

93.6.62 DestroyImageProfiles

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Releases memory associated with an image profile map.
Notes: See xx function in ImageMagick documentation.

93.6.63 DestroyProperties

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Destroys all properties and associated memory attached to the given image.
Notes: See DestroyImageProperties function in ImageMagick documentation.

93.6.64 DisposeImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the coalesced frames of a GIF animation as it would appear after the GIF dispose method of that frame has been applied.
Notes:

That is it returned the appearance of each frame before the next is overlaid.

See DisposeImages function in ImageMagick documentation.

93.6.65 Distort(DistortImageMethod as integer, values() as double, bestfit as boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Distorts an image using various distortion methods, by mapping color lookups of the source image to a new destination image usally of the same size as the source image, unless 'bestfit' is set to true.
Notes:

If 'bestfit' is enabled, and distortion allows it, the destination image is adjusted to ensure the whole source 'image' will just fit within the final destination image, which will be sized and offset accordingly. Also in

many cases the virtual offset of the source image will be taken into account in the mapping.

If the '-verbose' control option has been set print to standard error the equicelent '-fx' formula with coefficients for the function, if practical.

method: the method of image distortion.
ArcDistortion always ignores source image offset, and always 'bestfit' the destination image with the top left corner offset relative to the polar mapping center.
Affine, Perspective, and Bilinear, do least squares fitting of the distrotion when more than the minimum number of control point pairs are provided.
Perspective, and Bilinear, fall back to a Affine distortion when less than 4 control point pairs are provided. While Affine distortions let you use any number of control point pairs, that is Zero pairs is a No-Op (viewport only) distortion, one pair is a translation and two pairs of control points do a scale-rotate-translate, without any shearing.

values: an array of floating point arguments for this method.

bestfit: Attempt to 'bestfit' the size of the resulting image. This also forces the resulting image to be a 'layered' virtual canvas image. Can be overridden using 'distort:viewport' setting.

Extra Controls from Image meta-data (artifacts)...

- "verbose" Output to stderr alternatives, internal coefficents, and FX equivalents for the distortion operation (if feasible). This forms an extra check of the distortion method, and allows users access to the internal constants IM calculates for the distortion.
- "distort:viewport" Directly set the output image canvas area and offest to use for the resulting image, rather than use the original images canvas, or a calculated 'bestfit' canvas.
- "distort:scale" Scale the size of the output canvas by this amount to provide a method of Zooming, and for super-sampling the results.

Other settings that can effect results include

- 'interpolate' For source image lookups (scale enlargements)
- 'filter' Set filter to use for area-resampling (scale shrinking). Set to 'point' to turn off and use 'interpolate' lookup instead

See DistortImage function in ImageMagick documentation.

93.6.66 DistortResize(x as Integer, y as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image using the equivalent but slower image distortion operator.
Notes:

The filter is applied using a EWA cylindrical resampling. But like resize the final image size is limited to whole pixels with no effects by virtual-pixels on the result.

Note that images containing a transparency channel will be twice as slow to resize as images one without transparency.

See DistortResizeImage function in ImageMagick documentation.

93.6.67 Edge(radius as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Finds edges in an image.
Notes:

Radius defines the radius of the convolution filter. Use a radius of 0 and Edge selects a suitable radius for you.

radius: the radius of the pixel neighborhood.

See EdgeImage function in ImageMagick documentation.

93.6.68 Emboss(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a grayscale image with a three-dimensional effect.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Emboss() selects a suitable radius for you.

radius: the radius of the pixel neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See EmbossImage function in ImageMagick documentation.

93.6.69 Encipher(passkey as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts pixels to cipher-pixels.
Notes: See xx function in ImageMagick documentation.

93.6.70 Enhance as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a digital filter that improves the quality of a noisy image.
Notes: See xx function in ImageMagick documentation.

93.6.71 Equalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a histogram equalization to the image.
Notes: See xx function in ImageMagick documentation.

93.6.72 Excerpt(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a excerpt of the image as defined by the geometry.
Notes:

geometry: Define the region of the image to extend with members x, y, width, and height.

See ExcerptImage function in ImageMagick documentation.

93.6.73 ExportPixels(x as integer, y as integer, width as integer, height as integer, map as string, storageType as integer, data as Ptr) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extracts pixel data from an image and returns it to you.
Notes:

The method returns MagickTrue on success otherwise MagickFalse if an error is encountered. The data is returned as char, short int, Quantum, unsigned int, unsigned long long, float, or double in the order specified by map.

Suppose you want to extract the first scanline of a 640x480 image as character data in red-green-blue order:

image.ExportImagePixels(0, 0, 640, 480, "RGB", kCharPixel, pixels)

- x,y,width,height: These values define the perimeter of a region of pixels you want to extract.
- map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
- type: Define the data type of the pixels. Float and double types are normalized to [0..1] otherwise [0..QuantumRange] . Choose from these types: CharPixel (char *), DoublePixel (double *), FloatPixel (float *), LongPixel (unsigned int *), LongLongPixel (unsigned long long *), QuantumPixel (Quantum *), or ShortPixel (unsigned short *).

pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ExportImagePixels function in ImageMagick documentation.

93.6.74 Extent(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extends the image as defined by the geometry, gravity, and image background color.
Notes:

Set the (x,y) offset of the geometry to move the original image relative to the extended image.

rect: Define the region of the image to extend with members x, y, width, and height.

See ExtentImage function in ImageMagick documentation.
See also:

- 93.6.235 extent as Integer 16330

93.6.75 Flip as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a vertical mirror image by reflecting the pixels around the central x-axis.
Notes: See FlipImage function in ImageMagick documentation.

93.6.76 Flop as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a horizontal mirror image by reflecting the pixels around the central y-axis.
Notes: See FlopImage function in ImageMagick documentation.

93.6.77 ForwardFourierTransformImage(modulus as Boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Implements the discrete Fourier transform (DFT) of the image either as a magnitude / phase or real / imaginary image pair.
Notes:

modulus: if true, return as transform as a magnitude / phase pair otherwise a real / imaginary image pair.
See ForwardFourierTransformImage function in ImageMagick documentation.

93.6.78 Frame(frameInfo as IMFrameInfo7MBS, CompositeOperator as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a simulated three-dimensional border around the image.
Notes:

The color of the border is defined by the matte_color member of image. Members width and height of frame_info specify the border width of the vertical and horizontal sides of the frame. Members inner and outer indicate the width of the inner and outer shadows of the frame.

frameInfo: Define the width and height of the frame and its bevels.
CompositeOperator: the composite operator.

See FrameImage function in ImageMagick documentation.

93.6.79 Fx(expression as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a mathematical expression to the specified image.
Notes:

expression: A mathematical expression.

See FxImage function in ImageMagick documentation.

93.6.80 Gamma(level as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gamma-corrects a particular image channel.
Notes:

The same image viewed on different devices will have perceptual differences in the way the image's intensities are represented on the screen. Specify individual gamma levels for the red, green, and blue channels, or adjust all three with the gamma parameter. Values typically range from 0.8 to 2.3.

You can also reduce the influence of a particular channel with a gamma value of 0.

level: the image gamma as a string (e.g. 1.6,1.2,1.0).

See GammaImage function in ImageMagick documentation.
See also:

- 93.6.240 Gamma as Double 16331

93.6.81 GaussianBlur(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Blurs an image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, the radius should be larger than sigma. Use a radius of 0 and GaussianBlur selects a suitable radius for you

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.

See GaussianBlurImage function in ImageMagick documentation.

93.6.82 GetImageDynamicThreshold(clusterThreshold as Double, smoothThreshold as Double, byref pixelinfo as IMPixelInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the dynamic threshold for an image.

Notes:

clusterThreshold: This double represents the minimum number of pixels contained in a hexahedra before it can be considered valid (expressed as a percentage).
smoothThreshold: the smoothing threshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative.
pixelinfo: return the dynamic threshold here.

Returns true on success.
See GetImageDynamicThreshold function in ImageMagick documentation.

93.6.83 GetImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets a profile associated with an image by name.
Notes: See xx function in ImageMagick documentation.

93.6.84 GetImageQuantizeError as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Measures the difference between the original and quantized images.
Notes:

This difference is the total quantization error.
The error is computed by summing over all pixels in an image the distance squared in RGB space between each reference pixel value and its quantized value. These values are computed:

- mean_error_per_pixel: This value is the mean error for any single pixel in the image.
- normalized_mean_square_error: This value is the normalized mean quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in the image.
- normalized_maximum_square_error: This value is the normalized maximum quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in your image.

See GetImageQuantizeError function in ImageMagick documentation.

93.6.85 GetMagickProperty(ImageInfo as IMImageInfo7MBS = nil, embedText as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets attributes or calculated values that is associated with a fixed known property name, or single letter property.
Notes:

It may be called if no image is defined (IMv7), in which case only global ImageInfo values are available:

\n newline
\r carriage return
<less-than character.
>greater-than character.
& ampersand character.
% % a percent sign
% b file size of image read in
% c comment meta-data property
% d directory component of path
% e filename extension or suffix
% f filename (including suffix)
% g layer canvas page geometry (equivalent to "% Wx% H% X% Y")
% h current image height in pixels
% i image filename (note: becomes output filename for "info:")
% k CALCULATED: number of unique colors
% l label meta-data property
% m image file format (file magic)
% n number of images in current image sequence
% o output filename (used for delegates)
% p index of image in current image list
% q quantum depth (compile-time constant)
% r image class and colorspace
% s scene number (from input unless re-assigned)
% t filename without directory or extension (suffix)
% u unique temporary filename (used for delegates)
% w current width in pixels
% x x resolution (density)
% y y resolution (density)
% z image depth (as read in unless modified, image save depth)
% A image transparency channel enabled (true/false)
% B file size of image in bytes
% C image compression type
% D image GIF dispose method
% G original image size (% wx% h; before any resizes)
% H page (canvas) height
% M Magick filename (original file exactly as given, including read mods)
% O page (canvas) offset (= % X% Y)

% P page (canvas) size (= % Wx% H)
% Q image compression quality (0 = default)
% S ?? scenes ??
% T image time delay (in centi-seconds)
% U image resolution units
% W page (canvas) width
% X page (canvas) x offset (including sign)
% Y page (canvas) y offset (including sign)
% Z unique filename (used for delegates)
% @ CALCULATED: trim bounding box (without actually trimming)
% # CALCULATED: 'signature' hash of image values

This routine only handles specifically known properties. It does not handle special prefixed properties, profiles, or expressions. Nor does it return any free-form property strings.

The returned string is stored in a structure somewhere, and should not be directly freed. If the string was generated (common) the string will be stored as as either as artifact or option 'get-property'. These may be deleted (cleaned up) when no longer required, but neither artifact or option is guranteed to exist.
See GetMagickProperty function in ImageMagick documentation.

93.6.86 GetNextImageProfile as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets the next profile name for an image.
Notes: See xx function in ImageMagick documentation.

93.6.87 GetNextImageProperty as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets the next free-form string property name.
Notes: See GetNextImageProperty function in ImageMagick documentation.

93.6.88 GetProperty(PropertyKey as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gets a value associated with an image property.
Notes:

This includes, profile prefixes, such as "exif:", "iptc:" and "8bim:" It does not handle non-prifile prefixes, such as "fx:", "option:", or "artifact:".

The returned string is stored as a properity of the same name for faster lookup later.
See GetImageProperty function in ImageMagick documentation.

93.6.89 Grayscale(PixelIntensityMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Converts the image to grayscale.
Notes:

PixelIntensityMethod: the pixel intensity method.

See GrayscaleImage function in ImageMagick documentation.

93.6.90 HaldClut(clutImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a Hald color lookup table to the image.
Notes:

A Hald color lookup table is a 3-dimensional color cube mapped to 2 dimensions. Create it with the HALD coder. You can apply any color transformation to the Hald image and then use this method to apply the transform to the image.

clutImage: the color lookup table image for replacement color values.

See HaldClutImage function in ImageMagick documentation.

93.6.91 HandleMemory as memoryblock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a memoryblock with a copy of the internal image structure.
Notes: See xx function in ImageMagick documentation.

93.6.92 Histogram as IMPixelInfo7MBS()

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the unique colors in an image.
Notes:

Returns array of colors.
See GetImageHistogram function in ImageMagick documentation.

93.6.93 IdentifyImageGray as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns grayscale if all the pixels in the image have the same red, green, and blue intensities, and bi-level is the intensity is either 0 or QuantumRange.
Notes:

Returns one of the image type constants.
Otherwise undefined is returned.
See IdentifyImageGray function in ImageMagick documentation.

93.6.94 IdentifyImageMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if all the pixels in the image have the same red, green, and blue intensities and the intensity is either 0 or QuantumRange.
Notes: See IdentifyImageMonochrome function in ImageMagick documentation.

93.6.95 IdentifyImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the potential type of image.
Notes:

Bilevel Grayscale GrayscaleMatte Palette PaletteMatte TrueColor TrueColorMatte ColorSeparation ColorSeparationMatte

To ensure the image type matches its potential, use SetImageType.

See IdentifyImageType function in ImageMagick documentation.

93.6.96 IdentifyPaletteImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the image has 256 unique colors or less.

Notes: See IdentifyPaletteImage function in ImageMagick documentation.

93.6.97 ImageDepth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the depth of a particular image channel.
Notes: See GetImageDepth function in ImageMagick documentation.

93.6.98 ImageQuantumDepth(constrain as Boolean = false) as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the depth of the image rounded to a legal quantum depth: 8, 16, or 32.
Notes:

constrain: A value other than false, constrains the depth to a maximum of MAGICKCORE_QUANTUM_DEPTH.

See GetImageQuantumDepth function in ImageMagick documentation.

93.6.99 ImageStatistics as IMChannelStatistics7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns statistics for each channel in the image.
Notes:

The statistics include the channel depth, its minima, maxima, mean, standard deviation, kurtosis and skewness.

See GetImageStatistics function in ImageMagick documentation.

93.6.100 ImagesToBlob(info as IMImageInfo7MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImageToBlobs saves multiple images in a blob.
Notes:

It returns the image as a formatted blob. The magick member of the Image determines the format of the returned blob (GIF, JPEG, PNG, etc.). This method is the equivalent of WriteImage, but writes the formatted "file" to a memory buffer rather than to an actual file.

See ImagesToBlob function in ImageMagick documentation.

93.6.101 ImageToBlob(info as IMImageInfo7MBS) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: ImageToBlob implements direct to memory image formats.
Notes:

It returns the image as a formatted blob. The magick member of the Image determines the format of the returned blob (GIF, JPEG, PNG, etc.). This method is the equivalent of WriteImage, but writes the formatted "file" to a memory buffer rather than to an actual file.
See ImageToBlob function in ImageMagick documentation.

93.6.102 Implode(amount as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image that is a copy of an existing one with the image pixels "implode" by the specified percentage.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Method ImplodeImage returns a pointer to the image after it is implode. A null image is returned if there is a memory shortage.

amount: Define the extent of the implosion.
method: the pixel interpolation method.

See ImplodeImage function in ImageMagick documentation.

93.6.103 ImportPixels(x as integer, y as integer, width as integer, height as integer, map as string, storageType as integer, data as Ptr) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Accepts pixel data and stores in the image at the location you specify.
Notes:

The method returns true on success otherwise false if an error is encountered. The pixel data can be either char, Quantum, short int, unsigned int, unsigned long long, float, or double in the order specified by map.

Suppose your want to upload the first scanline of a 640x480 image from character data in red-green-blue order:

image.ImportImagePixels(0, 0, 640, 480, "RGB", kCharPixel, pixels)

- x,y,width,height: These values define the perimeter of a region of pixels you want to define.
- map: This string reflects the expected ordering of the pixel array. It can be any combination or order of R = red, G = green, B = blue, A = alpha (0 is transparent), O = opacity (0 is opaque), C = cyan, Y = yellow, M = magenta, K = black, I = intensity (for grayscale), P = pad.
- type: Define the data type of the pixels. Float and double types are normalized to [0..1] otherwise [0..QuantumRange] . Choose from these types: CharPixel (char *), DoublePixel (double *), FloatPixel (float *), LongPixel (unsigned int *), LongLongPixel (unsigned long long *), QuantumPixel (Quantum *), or ShortPixel (unsigned short *).
- pixels: This array of values contain the pixel components as defined by map and type. You must preallocate this array where the expected length varies depending on the values of width, height, map, and type.

See ImportImagePixels function in ImageMagick documentation.

93.6.104 IntegralRotate(degrees as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rotates the image an integral of 90 degrees.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the rotated image.

rotations: Specifies the number of 90 degree rotations.

See IntegralRotateImage function in ImageMagick documentation.

93.6.105 InterpolativeResize(columns as Integer, Rows as Integer, PixelInterpolateMethod as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resizes an image using the specified interpolation method.
Notes:

columns: the number of columns in the resized image.
rows: the number of rows in the resized image.
method: the pixel interpolation method.

See xx function in ImageMagick documentation.

93.6.106 InterpretProperties(ImageInfo as IMImageInfo7MBS = nil, embedText as String) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces any embedded formatting characters with the appropriate image property and returns the interpreted text.
Notes:

This searches for and replaces \n \r \replaced by newline, return, and percent resp. & lt; & gt; & amp; replaced by '<', '>', '& ' resp. replaced by percent

x [x] where 'x' is a single letter properity, case sensitive). [type:name] where 'type' a is special and known prefix. [name] where 'name' is a specifically known attribute, calculated value, or a per-image property string name, or a per-image 'artifact' (as generated from a global option). It may contain ':' as long as the prefix is not special.

Single letter substitutions will only happen if the character before the percent is NOT a number. But braced substitutions will always be performed. This prevents the typical usage of percent in a interpreted geometry argument from being substituted when the percent is a geometry flag.

If 'glob-expresions' ('*' or '?' characters) is used for 'name' it may be used as a search pattern to print multiple lines of "name=value\n" pairs of the associacted set of properties.

ImageInfo: the image info. (required)
image: the image.
embedText: the address of a character string containing the embedded formatting characters.
See InterpretImageProperties function in ImageMagick documentation.

93.6.107 InverseFourierTransformImage(phaseImage as IMImage7MBS, modulus as Boolean) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Implements the inverse discrete Fourier transform (DFT) of the image either as a magnitude / phase or real / imaginary image pair.
Notes:

self: the magnitude or real image.
phaseImage: the phase or imaginary image.
modulus: if true, return transform as a magnitude / phase pair otherwise a real / imaginary image pair.
See InverseFourierTransformImage function in ImageMagick documentation.

93.6.108 IsEqual(other as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compare the pixels of two images and returns immediately if any pixel is not identical.
Notes: See IsImagesEqual function in ImageMagick documentation.

93.6.109 IsHighDynamicRangeImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns MagickTrue if any pixel component is non-integer or exceeds the bounds of the quantum depth.
Notes:

e.g. for Q16 0..65535.

See IsHighDynamicRangeImage function in ImageMagick documentation.

93.6.110 IsHistogram as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns MagickTrue if the image has 1024 unique colors or less.
Notes: See IsHistogramImage function in ImageMagick documentation.

93.6.111 IsImageOpaque as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if none of the pixels in the image have an alpha value other than OpaqueAlpha

(QuantumRange).
Notes:

Will return true immediatally if alpha channel is not available.

See IsImageOpaque function in ImageMagick documentation.

93.6.112 Kuwahara(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Kuwahara is an edge preserving noise reduction filter.
Notes:

radius: the square window radius.
sigma: the standard deviation of the Gaussian, in pixels.

See KuwaharaImage function in ImageMagick documentation.

93.6.113 Level(BlackPoint as double, WhitePoint as double, gamma as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adjusts the levels of a particular image channel by scaling the colors falling between specified white and black points to the full available quantum range.
Notes:

The parameters provided represent the black, and white points. The black point specifies the darkest color in the image. Colors darker than the black point are set to zero. White point specifies the lightest color in the image. Colors brighter than the white point are set to the maximum quantum value.

If a '!' flag is given, map black and white colors to the given levels rather than mapping those levels to black and white. See LevelizeImage() below.

Gamma specifies a gamma correction to apply to the image.

BlackPoint: The level to map zero (black) to.
WhitePoint: The level to map QuantumRange (white) to.

See LevelImage function in ImageMagick documentation.

93.6.114 LevelImageColors(BlackColor as IMPixelInfo7MBS, WhiteColor as IMPixelInfo7MBS, invert as Boolean) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Levels image colors.
Notes:

Maps the given color to "black" and "white" values, linearly spreading out the colors, and level values on a channel by channel bases, as per LevelImage(). The given colors allows you to specify different level ranges for each of the color channels separately.

If the boolean 'invert' is set true the image values will modifyed in the reverse direction. That is any existing "black" and "white" colors in the image will become the color values given, with all other values compressed appropriatally. This effectively maps a greyscale gradient into the given color gradient.

BlackColor: The color to map black to/from
WhiteColor: The color to map white to/from
invert: if true map the colors (levelize), rather than from (level)

See LevelImageColors function in ImageMagick documentation.

93.6.115 Levelize(BlackPoint as double, WhitePoint as double, gamma as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies the reversed LevelImage() operation to just the specific channels specified.
Notes:

It compresses the full range of color values, so that they lie between the given black and white points. Gamma is applied before the values are mapped.

LevelizeImage() can be called with by using a +level command line API option, or using a '!' on a -level or LevelImage() geometry string.

It can be used to de-contrast a greyscale image to the exact levels specified. Or by using specific levels for each channel of an image you can convert a gray-scale image to any linear color gradient, according to those levels.

BlackPoint: The level to map zero (black) to.
WhitePoint: The level to map QuantumRange (white) to.
gamma: adjust gamma by this factor before mapping values.

See LevelizeImage function in ImageMagick documentation.

93.6.116 LinearStretch(BlackPoint as double, WhitePoint as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Discards any pixels below the black point and above the white point and levels the remaining pixels.
Notes:

blackPoint: the black point.
whitePoint: the white point.

See LinearStretchImage function in ImageMagick documentation.

93.6.117 LiquidRescale(columns as Integer, Rows as Integer, deltaX as Double, rigidity as Double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Rescales image with seam carving.
Notes:

columns: the number of columns in the rescaled image.
rows: the number of rows in the rescaled image.
deltaX: maximum seam transversal step (0 means straight seams).
rigidity: introduce a bias for non-straight seams (typically 0).

See LiquidRescaleImage function in ImageMagick documentation.

93.6.118 LocalContrast(radius as double, strength as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Attempts to increase the appearance of large-scale light-dark transitions.
Notes:

Local contrast enhancement works similarly to sharpening with an unsharp mask, however the mask is instead created using an image with a greater blur distance.

radius: the radius of the Gaussian blur, in percentage with 100 resulting in a blur radius of 20 of largest dimension.
strength: the strength of the blur mask in percentage.

See LocalContrastImage function in ImageMagick documentation.

93.6.119 Magnify as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Doubles the size of the image with a pixel art scaling algorithm.
Notes: See xx function in ImageMagick documentation.

93.6.120 MergeImageLayers(ImageLayerMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Composes all the image layers from the current given image onward to produce a single image of the merged layers.
Notes:

The inital canvas's size depends on the given LayerMethod, and is initialized using the first images background color. The images are then compositied onto that image in sequence using the given composition that has been assigned to each individual image.

method: the method of selecting the size of the initial canvas.
MergeLayer: Merge all layers onto a canvas just large enough to hold all the actual images. The virtual canvas of the first image is preserved but otherwise ignored.
FlattenLayer: Use the virtual canvas size of first image. Images which fall outside this canvas is clipped. This can be used to 'fill out' a given virtual canvas.
MosaicLayer: Start with the virtual canvas of the first image, enlarging left and right edges to contain all images. Images with negative offsets will be clipped.
TrimBoundsLayer: Determine the overall bounds of all the image layers just as in "MergeLayer", then adjust the the canvas and offsets to be relative to those bounds, without overlaying the images.
WARNING: a new image is not returned, the original image sequence page data is modified instead.

See MergeImageLayers function in ImageMagick documentation.

93.6.121 Minify as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is a convenience method that scales an image proportionally to half its size.
Notes: See xx function in ImageMagick documentation.

93.6.122 MinMaxStretch(black as double, white as double, gamma as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Stretches image colors.
Notes:

Uses the exact minimum and maximum values found in each of the channels given, as the BlackPoint and WhitePoint to linearly stretch the colors (and histogram) of the image. The stretch points are also moved further inward by the adjustment values given.

If the adjustment values are both zero this function is equivalent to a perfect normalization (or autolevel) of the image.

Each channel is stretched independantally of each other (producing color distortion) unless the special 'SyncChannels' flag is also provided in the channels setting. If this flag is present the minimum and maximum point will be extracted from all the given channels, and those channels will be stretched by exactly the same amount (preventing color distortion).

In the special case that only ONE value is found in a channel of the image that value is not stretched, that value is left as is.

The 'SyncChannels' is turned on in the 'DefaultChannels' setting by default.

See MinMaxStretchImage function in ImageMagick documentation.

black, white: move the black / white point inward from the minimum and maximum points by this color value.
gamma: the gamma.

93.6.123 Modify as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Ensures that there is only a single reference to the image to be modified, updating the provided image pointer to point to a clone of the original image if necessary.
Notes: See ModifyImage function in ImageMagick documentation.

93.6.124 Modulate(modulate as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Lets you control the brightness, saturation, and hue of an image.
Notes:

Modulate represents the brightness, saturation, and hue as one parameter (e.g. 90,150,100). If the image colorspace is HSL, the modulation is lightness, saturation, and hue. For HWB, use blackness, whiteness, and hue. And for HCL, use chrome, luma, and hue.

modulate: Define the percent change in brightness, saturation, and hue.

See ModulateImage function in ImageMagick documentation.

93.6.125 Morphology(MorphologyMethod as Integer, iterations as Integer, kernel as IMKernelInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a user supplied kernel to the image according to the given mophology method.
Notes:

This function applies any and all user defined settings before calling the above internal function MorphologyApply().

User defined settings include... * Output Bias for Convolution and correlation (”-define convolve:bias=??”) * Kernel Scale/normalize settings (”-define convolve:scale=??”) This can also includes the addition of a scaled unity kernel. * Show Kernel being applied (”-define morphology:showKernel=1”)

Other operators that do not want user supplied options interfering, especially ”convolve:bias” and ”morphology:showKernel” should use MorphologyApply() directly.

See MorphologyImage function in ImageMagick documentation.

93.6.126 MotionBlur(radius as double, sigma as double, angle as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Simulates motion blur.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and MotionBlurImage() selects a

suitable radius for you. Angle gives the angle of the blurring motion.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
angle: Apply the effect along this angle.

See MotionBlurImage function in ImageMagick documentation.

93.6.127 Negate(gray as boolean = false) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Negates the colors in the reference image.
Notes:

The grayscale option means that only grayscale values within the image are negated.

grayscale: If True, only negate grayscale pixels within the image.

See xx function in ImageMagick documentation.

93.6.128 Normalize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Normalize method enhances the contrast of a color image by mapping the darkest 2 percent of all pixel to black and the brightest 1 percent to white.
Notes: See NormalizeImage function in ImageMagick documentation.

93.6.129 NumberColors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the number of unique colors in an image.
Notes: See GetNumberColors function in ImageMagick documentation.

93.6.130 OilPaint(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a special effect filter that simulates an oil painting.
Notes:

Each pixel is replaced by the most frequent color occurring in a circular region defined by radius.

radius: the radius of the circular neighborhood.
sigma: the standard deviation of the Gaussian, in pixels.

See xx function in ImageMagick documentation.

93.6.131 OneAuthenticPixel(X as Integer, Y as Integer) as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a single pixel at the specified (x,y) location.
Notes:

The image background color is returned if an error occurs.
See GetOneAuthenticPixel function in ImageMagick documentation.

Memoryblock should have size of ChannelCount * QuantumSize.
Format of pixel values depend on what quantum size/type your library copy uses!

Use OneVirtualPixelInfo for a type independent color information.

93.6.132 OneVirtualPixel(X as Integer, Y as Integer) as MemoryBlock

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a single virtual pixel at the specified (x,y) location.
Notes:

The image background color is returned if an error occurs.
If you plan to modify the pixel, use GetOneAuthenticPixel() instead.
See GetOneVirtualPixel function in ImageMagick documentation.

Memoryblock should have size of ChannelCount * QuantumSize.
Format of pixel values depend on what quantum size/type your library copy uses!

Use OneVirtualPixelInfo for a type independent color information.

93.6.133 OneVirtualPixelInfo(virtualPixelMethod as Integer, X as Integer, Y as Integer) as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a single pixel at the specified (x,y) location.
Notes:

The image background color is returned if an error occurs.
If you plan to modify the pixel, use GetOneAuthenticPixel() instead.
See GetOneVirtualPixelInfo function in ImageMagick documentation.

93.6.134 OptimizeImageLayers as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compares each image the GIF disposed forms of the previous image in the sequence.
Notes:

From this it attempts to select the smallest cropped image to replace each frame, while preserving the results of the GIF animation.

See OptimizeImageLayers function in ImageMagick documentation.

93.6.135 OptimizeImageTransparency

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Takes a frame optimized GIF animation, and compares the overlayed pixels against the disposal image resulting from all the previous frames in the animation.
Notes:

Any pixel that does not change the disposal image (and thus does not effect the outcome of an overlay) is made transparent.

WARNING: This modifies the current images directly, rather than generate a new image sequence.

See OptimizeImageTransparency function in ImageMagick documentation.

93.6.136 OptimizePlusImageLayers as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: OptimizePlusImageLayers is exactly as OptimizeImageLayers(), but may also add or even remove extra frames in the animation, if it improves the total number of pixels in the resulting GIF animation.

Notes: See OptimizeImagePlusLayers function in ImageMagick documentation.

93.6.137 OrderedDither(threshold as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Will perform a ordered dither based on a number of pre-defined dithering threshold maps, but over multiple intensity levels, which can be different for different channels, according to the input argument.
Notes:

threshold: A string containing the name of the threshold dither map to use, followed by zero or more numbers representing the number of color levels tho dither between.
Any level number less than 2 will be equivalent to 2, and means only binary dithering will be applied to each color channel.
No numbers also means a 2 level (bitmap) dither will be applied to all channels, while a single number is the number of levels applied to each channel in sequence. More numbers will be applied in turn to each of the color channels.
For example: "o3x3,6" will generate a 6 level posterization of the image with a ordered 3x3 diffused pixel dither being applied between each level. While checker,8,8,4 will produce a 332 colormaped image with only a single checkerboard hash pattern (50 grey) between each color level, to basically double the number of color levels with a bare minimim of dithering.

See OrderedDitherImage function in ImageMagick documentation.

93.6.138 Perceptible(epsilon as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Set each pixel whose value is less than | epsilon | to epsilon or -epsilon (whichever is closer) otherwise the pixel value remains unchanged.
Notes:

epsilon: the epsilon threshold (e.g. 1.0e-9).

See PerceptibleImage function in ImageMagick documentation.

93.6.139 Ping(path as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the properties of an image or image sequence except for the pixels.
Notes:

It is much faster and consumes far less memory than Read(). On failure, a nil image is returned and exception describes the reason for the failure.

See PingImage function in ImageMagick documentation.
See also:

- 93.6.273 Ping as Boolean 16337

93.6.140 Posterize(levels as Integer, DitherMethod as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reduces the image to a limited number of colors for a "poster" effect.
Notes:

levels: Number of color levels allowed in each channel. Very low values (2, 3, or 4) have the most visible effect.
DitherMethod: choose from UndefinedDitherMethod, NoDitherMethod, RiemersmaDitherMethod, Floyd-SteinbergDitherMethod.

Returns true on success.
See PosterizeImage function in ImageMagick documentation.

93.6.141 Preview(PreviewType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tiles 9 thumbnails of the specified image with an image processing operation applied with varying parameters.
Notes:

This may be helpful pin-pointing an appropriate parameter for a particular image processing operation.

preview: the image processing operation. See preview constants.

See xx function in ImageMagick documentation.

93.6.142 Profile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Associates, applies, or removes an ICM, IPTC, or generic profile with / to / from an image.
Notes:

If the profile is nil, it is removed from the image otherwise added or applied. Use a name of '*' and a profile of nil to remove all profiles from the image.

ICC and ICM profiles are handled as follows: If the image does not have an associated color profile, the one you provide is associated with the image and the image pixels are not transformed. Otherwise, the colorspace transform defined by the existing and new profile are applied to the image pixels and the new profile is associated with the image.

name: Name of profile to add or remove: ICC, IPTC, or generic profile.
ProfileData: the profile data.

See ProfileImage function in ImageMagick documentation.

93.6.143 Properties as Dictionary

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries all properties with values.
Example:

```
Dim f As FolderItem = GetFolderItem("/Users/cs/Pictures/IMG_3625.jpg", FolderItem.PathTypeNative)
Dim i As New IMImageInfo7MBS

i.Filename = f.NativePath

Dim p As IMImage7MBS = i.ReadImage
Dim d As Dictionary = p.Properties
Break // see in debugger
```

Notes: See ResetImagePropertyIterator, GetNextImageProperty and GetImageProperty functions in ImageMagick documentation.

93.6.144 Quantize(quantizeInfo as IMQuantizeInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Analyzes the colors within a reference image and chooses a fixed number of colors to represent the image.
Notes:

The goal of the algorithm is to minimize the color difference between the input and output image while minimizing the processing time.

quantizeInfo: Specifies a QuantizeInfo object.

Returns true on success.

See QuantizeImage function in ImageMagick documentation.

93.6.145 QuantizeImages(quantizeInfo as IMQuantizeInfo7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: analyzes the colors within a set of reference images and chooses a fixed number of colors to represent the set.
Notes:

The goal of the algorithm is to minimize the color difference between the input and output images while minimizing the processing time.

quantizeInfo: Specifies an QuantizeInfo structure.
self: Specifies a list of Images.
See QuantizeImages function in ImageMagick documentation.

93.6.146 QueueAuthenticPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queues a mutable pixel region.
Notes:

If the region is successfully initialized a pointer to a Quantum array representing the region is returned, otherwise nil is returned. The returned pointer may point to a temporary working buffer for the pixels or it may point to the final location of the pixels in memory.

Write-only access means that any existing pixel values corresponding to the region are ignored. This is useful if the initial image is being created from scratch, or if the existing pixel values are to be completely replaced without need to refer to their pre-existing values. The application is free to read and write the pixel buffer returned by QueueAuthenticPixels() any way it pleases. QueueAuthenticPixels() does not initialize the pixel array values. Initializing pixel array values is the application's responsibility.

Performance is maximized if the selected region is part of one row, or one or more full rows, since then there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image type is CMYK or the storage class is PseudoClass, call GetAuthenticMetacontent() after invoking GetAuthenticPixels() to obtain the meta-content (of type void) corresponding to the region. Once the Quantum (and/or Quantum) array has been updated, the changes must be saved back to the underlying image using SyncAuthenticPixels() or they may be lost.

x, y, width and height define the perimeter of a region of pixels.

See QueueAuthenticPixels function in ImageMagick documentation.
Format of pixel values depend on what quantum size/type your library copy uses!

93.6.147 RaiseImage(rectangle as IMRectangleInfo7MBS, raise as boolean) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a simulated three-dimensional button-like effect by lightening and darkening the edges of the image.
Notes:

Members width and height of raise_info define the width of the vertical and horizontal edge of the effect.

rectangle: Define the width and height of the raise area.
raise: A value other than zero creates a 3-D raise effect, otherwise it has a lowered effect.

See RaiseImage function in ImageMagick documentation.

93.6.148 RandomThreshold(minThreshold as Double, maxThreshold as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the value of individual pixels based on the intensity of each pixel compared to a random threshold.
Notes:

The result is a low-contrast, two color image.

low,high: Specify the high and low thresholds. These values range from 0 to QuantumRange.

See xx function in ImageMagick documentation.

93.6.149 RangeThreshold(lowBlack as Double, lowWhite as double, highWhite as double, highBlack as double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies soft and hard thresholding.
Notes:

lowBlack: Define the minimum black threshold value.
lowWhite: Define the minimum white threshold value.
highWhite: Define the maximum white threshold value.
highBlack: Define the maximum black threshold value.

See RangeThresholdImage function in ImageMagick documentation.

93.6.150 Read(path as string) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image or image sequence from a file or file handle.
Notes:

The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadImage function in ImageMagick documentation.

93.6.151 Remap(quantizeInfo as IMQuantizeInfo7MBS, remapImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the colors of an image with the closest of the colors from the reference image.
Notes:

quantizeInfo: Specifies an QuantizeInfo object.
remapImage: the reference image.

Returns true on success.
See RemapImage function in ImageMagick documentation.

93.6.152 RemapImages(quantizeInfo as IMQuantizeInfo7MBS, remapImage as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Replaces the colors of a sequence of images with the closest color from a reference image.
Notes:

quantizeInfo: Specifies an QuantizeInfo object.
remapImage: the reference image.

Returns true on success.
See RemapImages function in ImageMagick documentation.

93.6.153 RemoveDuplicateLayers

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that is exactly the same as the next image in the given image list.
Notes:

Image size and virtual canvas offset must also match, though not the virtual canvas size itself.

No check is made with regards to image disposal setting, though it is the dispose setting of later image that is kept. Also any time delays are also added together. As such coalesced image animations should still produce the same result, though with duplicte frames merged into a single frame.

See xx function in ImageMagick documentation.

93.6.154 RemoveFirstImageFromList as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes and returns the first image in the list.
Notes:

If the given image list pointer pointed to the removed first image, it is set to the new first image of list, or nil if list was emptied, otherwise it is left as is.

See RemoveFirstImageFromList function in ImageMagick documentation.

93.6.155 RemoveImageProfile(name as string) as string

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a named profile from the image and returns its value.
Notes: See xx function in ImageMagick documentation.

93.6.156 RemoveProperty(Key as String)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes a property from the image and returns its value.
Notes: See RemoveImageProperty function in ImageMagick documentation.

93.6.157 RemoveZeroDelayLayers

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Removes any image that as a zero delay time.
Notes:

Such images generally represent intermediate or partial updates in GIF animations used for file optimization. They are not ment to be displayed to users of the animation. Viewable images in an animation should have a time delay of 3 or more centi-seconds (hundredths of a second).

However if all the frames have a zero time delay, then either the animation is as yet incomplete, or it is not a GIF animation. This a non-sensible situation, so no image will be removed and a 'Zero Time Animation' warning (exception) given.

No warning will be given if no image was removed because all images had an appropriate non-zero time delay set.

Due to the special requirements of GIF disposal handling, GIF animations should be coalesced first, before calling this function, though that is not a requirement.

See RemoveZeroDelayLayers function in ImageMagick documentation.

93.6.158 Resample(xResolution as Double, yResolution as Double, filter as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize image in terms of its pixel size, so that when displayed at the given resolution it will be

the same size in terms of real world units as the original image at the original resolution.
Notes:

xResolution: the new image x resolution.
yResolution: the new image y resolution.
filter: Image filter to use.

See ResampleImage function in ImageMagick documentation.

93.6.159 ResetImageProfileIterator

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image profile iterator.
Notes:

Use it in conjunction with GetNextImageProfile to iterate over all the profiles associated with an image.

See ResetImageProfileIterator function in ImageMagick documentation.

93.6.160 ResetPropertyIterator

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resets the image properties iterator.
Notes:

Use it in conjunction with GetNextImageProperty() to iterate over all the values associated with an image property.
See ResetImagePropertyIterator function in ImageMagick documentation.

93.6.161 Resize(columns as integer, rows as integer, FilterID as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions, using the given filter (see AcquireFilterInfo()).
Notes:

If an undefined filter is given the filter defaults to Mitchell for a colormapped image, a image with a matte channel, or if the image is enlarged. Otherwise the filter defaults to a Lanczos.

columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.

filterID: Image filter to use.

See ResizeImage function in ImageMagick documentation.

93.6.162 Roll(x as integer, y as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Offsets an image as defined by x and y offsets.
Notes:

x: the number of columns to roll in the horizontal direction.
y: the number of rows to roll in the vertical direction.

See RollImage function in ImageMagick documentation.

93.6.163 Rotate(degrees as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image that is a rotated copy of an existing one.
Notes:

Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'background_color' of the image. RotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

degrees: Specifies the number of degrees to rotate the image.

See RotateImage function in ImageMagick documentation.

93.6.164 RotationalBlur(Angle as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a radial blur to the image.
Notes:

angle: the angle of the radial blur.
blur: the blur.

See RotationalBlurImage function in ImageMagick documentation.

93.6.165 Sample(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales an image to the desired dimensions with pixel sampling.
Notes:

Unlike other scaling methods, this method does not introduce any additional color into the scaled image.

columns: the number of columns in the sampled image.
rows: the number of rows in the sampled image.

See SampleImage function in ImageMagick documentation.

93.6.166 Scale(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions.
Notes:

columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.

See ScaleImage function in ImageMagick documentation.

93.6.167 ScaleQuantumToChar(value as Double) as UInt8

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales a quantum value to 8 bit unsigned integer.
Notes:

Depending on which library is loaded a quantum is an UInt8, UInt16, UInt32, Single or Double value.
This function normalizes and rounds values to nearest 8 bit integer value.

93.6.168 Segment(colorspaceType as Integer, verbose as Boolean, clusterThreshold as Double, smoothThreshold as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Segment an image by analyzing the histograms of the color components and identifying units that are homogeneous with the fuzzy C-means technique.
Notes:

colorspace: Indicate the colorspace.
verbose: Set to true to print detailed information about the identified classes.
clusterThreshold: This represents the minimum number of pixels contained in a hexahedra before it can be considered valid (expressed as a percentage).
smoothThreshold: the smoothing threshold eliminates noise in the second derivative of the histogram. As the value is increased, you can expect a smoother second derivative.

Returns true on success.
See SegmentImage function in ImageMagick documentation.

93.6.169 SelectiveBlur(radius as double, sigma as double, threshold as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Selectively blur pixels within a contrast threshold.
Notes:

It is similar to the unsharpen mask that sharpens everything with contrast above a certain threshold.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
threshold: only pixels within this contrast threshold are included in the blur operation.

See SelectiveBlurImage function in ImageMagick documentation.

93.6.170 Separate(ChannelType as Integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Separates a channel from the image and returns it as a grayscale image.
Notes:

See ChannelType constants for parameter.
See SeparateImage function in ImageMagick documentation.

93.6.171 SeparateImages as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns a separate grayscale image for each channel specified.
Notes: See SeparateImages function in ImageMagick documentation.

93.6.172 SetGray as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if all the pixels in the image have the same red, green, and blue intensities and changes the type of the image to bi-level or grayscale.
Notes: See xx function in ImageMagick documentation.

93.6.173 SetImageAlphaChannel(AlphaChannelOption as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Activates, deactivates, resets, or sets the alpha channel.
Notes:

The alpha channel types: ActivateAlphaChannel, AssociateAlphaChannel, CopyAlphaChannel, DeactivateAlphaChannel, DisassociateAlphaChannel, ExtractAlphaChannel, OffAlphaChannel, OnAlphaChannel, OpaqueAlphaChannel, SetAlphaChannel, ShapeAlphaChannel, and TransparentAlphaChannel.

see AlphaChannel constants.

See SetImageAlphaChannel function in ImageMagick documentation.

93.6.174 SetImageColorMetric(other as IMImage7MBS) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Measures the difference between colors at each pixel location of two images.
Notes:

A value other than 0 means the colors match exactly. Otherwise an error measure is computed by summing over all pixels in an image the distance squared in RGB space between each image pixel and its corresponding pixel in the reconstruct image. The error measure is assigned to these image members:

- mean_error_per_pixel: The mean error for any single pixel in the image.
- normalized_mean_error: The normalized mean quantization error for any single pixel in the image.

This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in the image.

- normalized_maximum_error: The normalized maximum quantization error for any single pixel in the image. This distance measure is normalized to a range between 0 and 1. It is independent of the range of red, green, and blue values in your image.

A small normalized mean square error, accessed as image->normalized_mean_error, suggests the images are very similar in spatial layout and color.

See SetImageColorMetric function in ImageMagick documentation.

93.6.175 SetImageColorspace(Colorspace as integer) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the colorspace member of the Image object.
Notes: See SetImageColorspace function in ImageMagick documentation.

93.6.176 SetImageDepth(depth as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the depth of the image.
Notes: See SetImageDepth function in ImageMagick documentation.

93.6.177 SetImageProfile(name as string, ProfileData as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a named profile to the image.
Notes:

If a profile with the same name already exists, it is replaced. This method differs from the ProfileImage() method in that it does not apply CMS color profiles.

name: the profile name, for example icc, exif, and 8bim (8bim is the Photoshop wrapper for iptc profiles).
profile: A String that contains the named profile.

See SetImageProfile function in ImageMagick documentation.

93.6.178 SetImageType(type as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets the type of image.
Notes:

Choose from these types:
Bilevel Grayscale GrayscaleMatte Palette PaletteMatte TrueColor TrueColorMatte ColorSeparation ColorSeparationMatte OptimizeType

See SetImageType function in ImageMagick documentation.

93.6.179 SetMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Checks if image is monochrome and changes type to black & white.
Notes:

Returns true if all the pixels in the image have the same red, green, and blue intensities and the intensity is either 0 or QuantumRange and changes the type of the image to bi-level.

See SetImageMonochrome function in ImageMagick documentation.

93.6.180 SetPicture(pic as Picture) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sets pixel to the values in the picture.
Notes:

You must make sure you have the right color space to make this work well with colorspaces.
Xojo on Mac uses Generic RGB, while Windows may use the colorspace of the display.

Returns true in case of success and false in case of failure.
As conversion between various quantum depths can be slow, please use rarely.

See also ExportPixels and ImportPixels to read/write pixel data to/from memory blocks.
See GetAuthenticPixels and SyncAuthenticPixels functions in ImageMagick documentation.

93.6.181 SetProperty(PropertyKey as String, Value as String) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Saves the given string value either to specific known attribute or to a freeform property string.
Notes:

Attempting to set a property that is normally calculated will produce an exception.
See SetImageProperty function in ImageMagick documentation.

93.6.182 Shade(gray as boolean, azimuth as double, elevation as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shines a distant light on an image to create a three-dimensional effect.
Notes:

You control the positioning of the light with azimuth and elevation; azimuth is measured in degrees off the x axis and elevation is measured in pixels above the Z axis.

gray: A value other than zero shades the intensity of each pixel.
azimuth, elevation: Define the light source direction.

See ShadeImage function in ImageMagick documentation.

93.6.183 Sharpen(radius as double, sigma as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens the image.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and Sharpen selects a suitable radius for you.

Using a separable kernel would be faster, but the negative weights cancel out on the corners of the kernel producing often undesirable ringing in the filtered result; this can be avoided by using a 2D gaussian shaped image sharpening kernel instead.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Laplacian, in pixels.

See SharpenImage function in ImageMagick documentation.

93.6.184 Shave(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Shaves pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

Shave returns a pointer to the shaved image. A null image is returned if there is a memory shortage or if the image width or height is zero.

rect: Specifies a RectangleInfo which defines the region of the image to crop.

See ShaveImage function in ImageMagick documentation.

93.6.185 Shear(Xshear as double, Yshear as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image that is an image copy of an existing one.
Notes:

Shearing slides one edge of an image along the X or Y axis, creating a parallelogram. An X direction shear slides an edge along the X axis, while a Y direction shear slides an edge along the Y axis. The amount of the shear is controlled by a shear angle. For X direction shears, Xshear is measured relative to the Y axis, and similarly, for Y direction shears Yshear is measured relative to the X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'backgroundColor' of the image.. Shear() allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See ShearImage function in ImageMagick documentation.

93.6.186 ShearRotate(degrees as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new image that is a rotated copy of an existing one.
Notes:

Positive angles rotate counter-clockwise (right-hand rule), while negative angles rotate clockwise. Rotated images are usually larger than the originals and have 'empty' triangular corners. X axis. Empty triangles left over from shearing the image are filled with the background color defined by member 'background_color'

of the image. ShearRotateImage allocates the memory necessary for the new Image structure and returns a pointer to the new image.

degrees: Specifies the number of degrees to rotate the image.

See ShearRotateImage function in ImageMagick documentation.

93.6.187 SigmoidalContrast(sharpen as boolean, contrast as Double, midpoint as Double) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: adjusts the contrast of an image with a non-linear sigmoidal contrast algorithm.
Notes:

Increase the contrast of the image using a sigmoidal transfer function without saturating highlights or shadows. Contrast indicates how much to increase the contrast (0 is none; 3 is typical; 20 is pushing it); mid-point indicates where midtones fall in the resultant image (0 is white; 50 is middle-gray; 100 is black). Set sharpen to MagickTrue to increase the image contrast otherwise the contrast is reduced.

sharpen: Increase or decrease image contrast.
contrast: strength of the contrast, the larger the number the more 'threshold-like' it becomes.
midpoint: midpoint of the function as a color value 0 to QuantumRange.

See SigmoidalContrastImage function in ImageMagick documentation.

93.6.188 Solarize(threshold as double) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Applies a special effect to the image, similar to the effect achieved in a photo darkroom by selectively exposing areas of photo sensitive paper to light.
Notes:

Threshold ranges from 0 to QuantumRange and is a measure of the extent of the solarization.

threshold: Define the extent of the solarization.

See SolarizeImage function in ImageMagick documentation.

93.6.189 SortColormapByIntensity as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: sorts the colormap of a PseudoClass image by decreasing color intensity.
Notes: See SortColormapByIntensity function in ImageMagick documentation.

93.6.190 SparseColor(SparseColorMethod as Integer, arguments() as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Given a set of coordinates, interpolates the colors found at those coordinates, across the whole image, using various methods.
Notes:

method: the method to fill in the gradient between the control points.
The methods used for SparseColor() are often simular to methods used for DistortImage(), and even share the same code for determination of the function coefficents, though with more dimensions (or resulting values).
values: array of floating point arguments for this method– x,y,color_values– with color_values given as normalized values.

See SparseColorImage function in ImageMagick documentation.

93.6.191 Splice(rect as IMRectangleInfo7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Splices a solid color into the image as defined by the geometry.
Notes:

rect: Define the region of the image to splice with members x, y, width, and height.

See SpliceImage function in ImageMagick documentation.

93.6.192 Spread(pixelInterpolateMethod as integer, radius as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is a special effects method that randomly displaces each pixel in a square area defined by the radius parameter.
Notes:

method: intepolation method.
radius: choose a random pixel in a neighborhood of this extent.

See SpreadImage function in ImageMagick documentation.

93.6.193 Stegano(watermarkImage as IMImage7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Hides a digital watermark within the image.
Notes:

Recover the hidden watermark later to prove that the authenticity of an image. Offset defines the start position within the image to hide the watermark.

See SteganoImage function in ImageMagick documentation.

93.6.194 Stereo(otherImage as IMImage7MBS) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Combines two images and produces a single image that is the composite of a left and right image of a stereo pair.
Notes:

Special red-green stereo glasses are required to view this effect.

See StereoImage function in ImageMagick documentation.

93.6.195 Strip as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Strips an image of all profiles and comments.
Notes: See StripImage function in ImageMagick documentation.

93.6.196 Swirl(degrees as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Swirls the pixels about the center of the image, where degrees indicates the sweep of the arc

through which each pixel is moved.
Notes:

You get a more dramatic effect as the degrees move from 1 to 360.

degrees: Define the tightness of the swirling effect.
method: the pixel interpolation method.

See xx function in ImageMagick documentation.

93.6.197 Sync as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Synchronizes image properties.
Notes: See SyncImage function in ImageMagick documentation.

93.6.198 SyncAuthenticPixels as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Saves the image pixels to the in-memory or disk cache.
Notes:

The method returns MagickTrue if the pixel region is flushed, otherwise MagickFalse.
See SyncAuthenticPixels function in ImageMagick documentation.

93.6.199 Texture(Image as IMImage7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Layer a texture on pixels matching image background color.
Notes: See xx function in ImageMagick documentation.

93.6.200 Thumbnail(columns as integer, rows as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Changes the size of an image to the given dimensions and removes any associated profiles.
Notes:

The goal is to produce small low cost thumbnail images suited for display on the Web.

columns: the number of columns in the scaled image.
rows: the number of rows in the scaled image.

See ThumbnailImage function in ImageMagick documentation.

93.6.201 TransformColorspace(ColorSpace as Integer) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Transforms an image colorspace, changing the image data to reflect the new colorspace.
Notes: See TransformImageColorspace function in ImageMagick documentation.

93.6.202 Transpose as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a horizontal mirror image by reflecting the pixels around the central y-axis while rotating them by 90 degrees.
Notes: See TransposeImage function in ImageMagick documentation.

93.6.203 Transverse as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a vertical mirror image by reflecting the pixels around the central x-axis while rotating them by 270 degrees.
Notes: See TransverseImage function in ImageMagick documentation.

93.6.204 Trim as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Trims pixels from the image edges.
Notes:

It allocates the memory necessary for the new Image structure and returns a pointer to the new image.

See TrimImage function in ImageMagick documentation.

93.6.205 UniqueColors as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the unique colors of an image.
Notes: See UniqueImageColors function in ImageMagick documentation.

93.6.206 UnsharpMask(radius as double, sigma as double, amount as double, threshold as double) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Sharpens one or more image channels.
Notes:

We convolve the image with a Gaussian operator of the given radius and standard deviation (sigma). For reasonable results, radius should be larger than sigma. Use a radius of 0 and UnsharpMask selects a suitable radius for you.

radius: the radius of the Gaussian, in pixels, not counting the center pixel.
sigma: the standard deviation of the Gaussian, in pixels.
gain: the percentage of the difference between the original and the blur image that is added back into the original.
threshold: the threshold in pixels needed to apply the diffence gain.

See UnsharpMaskImage function in ImageMagick documentation.

93.6.207 VirtualPixels(X as Integer, Y as Integer, Width as Integer, Height as Integer) as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns an immutable pixel region.
Notes:

If the region is successfully accessed, a pointer to it is returned, otherwise nil is returned. The returned pointer may point to a temporary working copy of the pixels or it may point to the original pixels in memory. Performance is maximized if the selected region is part of one row, or one or more full rows, since there is opportunity to access the pixels in-place (without a copy) if the image is in memory, or in a memory-mapped file. The returned pointer must *never* be deallocated by the user.

Pixels accessed via the returned pointer represent a simple array of type Quantum. If the image type is CMYK or the storage class is PseudoClass, call AuthenticMetacontent after invoking AuthenticPixels to access the meta-content (of type void) corresponding to the the region.

If you plan to modify the pixels, use GetAuthenticPixels() instead.

Note, the VirtualPixels() and AuthenticPixels() methods are not thread-safe. In a threaded environment, use CacheViewVirtualPixels() or CacheViewAuthenticPixels() instead.

See GetVirtualPixels function in ImageMagick documentation.
Format of pixel values depend on what quantum size/type your library copy uses!

93.6.208 Wave(amplitude as double, wavelength as double, pixelInterpolateMethod as integer) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a "ripple" effect in the image by shifting the pixels vertically along a sine wave whose amplitude and wavelength is specified by the given parameters.
Notes:

amplitude, wavelength: Define the amplitude and wave length of the sine wave.
pixelInterpolateMethod: the pixel interpolation method.

See WaveImage function in ImageMagick documentation.

93.6.209 WhiteThreshold(thresholds as string) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Is like ThresholdImage() but forces all pixels above the threshold into white while leaving all pixels at or below the threshold unchanged.
Notes:

threshold: Define the threshold value.

See WhiteThresholdImage function in ImageMagick documentation.

93.6.210 Properties

93.6.211 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha color.
Notes:

When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

93.6.212 AlphaTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The pixel trait for alpha channel.
Notes:

Is transparency channel defined and active?
(Read and Write property)

93.6.213 AuthenticMetacontent as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the authentic metacontent corresponding with the last call to QueueAuthenticPixels() or GetVirtualPixels().
Notes:

Nil is returned if the associated pixels are not available.
See GetAuthenticMetacontent function in ImageMagick documentation.
(Read only property)

93.6.214 AuthenticPixelQueue as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the authentic pixels associated corresponding with the last call to QueueAuthenticPixels or GetAuthenticPixels.
Notes:

See GetAuthenticPixelQueue function in ImageMagick documentation.
(Read only property)

93.6.215 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Current background color attribute.
Notes:

When you query this value, you get a copy in a new object.

To modify, you need to change copy and assign back.
(Read and Write property)

93.6.216 BlackPointCompensation as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to enable black point compensation for color space conversions.
Notes: (Read and Write property)

93.6.217 BlobSize as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The size of the blob.
Notes: (Read only property)

93.6.218 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Current bordercolor attribute.
Notes:

When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

93.6.219 ChannelMask as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel mask field.
Notes:

See Channel constants.
(Read and Write property)

93.6.220 Channels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel mask.

Notes: (Read and Write property)

93.6.221 Colors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Size of color table, or actual color count.
Notes:

Only valid if image is not DirectClass.
(Read only property)

93.6.222 Colorspace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorspace of image data.
Notes: (Read only property)

93.6.223 Columns as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Physical width of image in pixel.
Notes: (Read only property)

93.6.224 Compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Alpha composition method for layered images.
Notes: (Read and Write property)

93.6.225 CompositeMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to composite with mask.
Notes: (Read and Write property)

93.6.226 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compression of image when read/write.
Notes: (Read and Write property)

93.6.227 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Debug output attribute.
Notes: (Read and Write property)

93.6.228 Delay as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Animation delay time.
Notes: (Read and Write property)

93.6.229 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Depth of image on read/write.
Notes: (Read only property)

93.6.230 Directory as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The directory.
Notes: (Read and Write property)

93.6.231 Dispose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: GIF animation disposal method.
Notes: (Read and Write property)

93.6.232 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Dithering on/off.
Notes: (Read and Write property)

93.6.233 Duration as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Total animation duration.
Notes:

sum(delay*iterations)
(Read and Write property)

93.6.234 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Raw data integer ordering on read/write.
Notes: (Read and Write property)

93.6.235 extent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Size of image read from disk.
Notes: (Read only property)
See also:

- 93.6.74 Extent(rect as IMRectangleInfo7MBS) as IMImage7MBS 16280

93.6.236 ExtractInfo as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Extract Info.
Notes: (Read and Write property)

93.6.237 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path of the image.
Notes: (Read and Write property)

93.6.238 Filter as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resize/distort filter to apply.
Notes: (Read and Write property)

93.6.239 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Current color fuzz attribute.
Notes: (Read and Write property)

93.6.240 Gamma as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The gamme of the image.
Notes: (Read only property)
See also:

- 93.6.80 Gamma(level as double) as Boolean 16282

93.6.241 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geomtry.
Notes: (Read and Write property)

93.6.242 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Gravity attribute for positioning in image.
Notes: (Read and Write property)

93.6.243 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

93.6.244 HasAlphaChannel as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns false if the image alpha channel is not activated.
Notes:

That is, the image is RGB rather than RGBA or CMYK rather than CMYKA.
See GetImageAlphaChannel function in ImageMagick documentation.
(Read only property)

93.6.245 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Physical height of image in pixel.
Notes: (Read only property)

93.6.246 ImageExtent as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries image extent.
Notes:

See GetImageExtent function in ImageMagick documentation.
(Read only property)

93.6.247 ImageType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image type.
Notes:

See Type constants like TrueColorType for RGB images.
(Read only property)

93.6.248 Intensity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Method to generate an intensity value from a pixel.
Notes: (Read and Write property)

93.6.249 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The interlace setting.
Notes: (Read and Write property)

93.6.250 Interpolate as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Interpolation of color for between pixel lookups.
Notes: (Read and Write property)

93.6.251 IsBlobExempt as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is exempt.
Notes:

See IsBlobExempt function in ImageMagick documentation.
(Read only property)

93.6.252 IsBlobSeekable as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is seekable.
Notes:

See IsBlobSeekable function in ImageMagick documentation.
(Read only property)

93.6.253 IsBlobTemporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the blob is temporary.
Notes:

See IsBlobTemporary function in ImageMagick documentation.
(Read only property)

93.6.254 IsImageGray as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the type of the image is grayscale or bi-level.
Notes:

See IsImageGray function in ImageMagick documentation.
(Read only property)

93.6.255 IsImageMonochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if type of the image is bi-level.
Notes:

See IsImageMonochrome function in ImageMagick documentation.
(Read only property)

93.6.256 IsImageObject as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true if the image sequence contains a valid set of image objects.
Notes:

See IsImageObject function in ImageMagick documentation.
(Read only property)

93.6.257 IsPaletteImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns MagickTrue if the image is PseudoClass and has 256 unique colors or less.
Notes:

See IsPaletteImage function in ImageMagick documentation.
(Read only property)

93.6.258 IsTaintImage as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns true any pixel in the image has been altered since it was first constituted.
Notes:

has image been modified since reading
(Read only property)

93.6.259 Iterations as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Number of interations for GIF animations.
Notes: (Read and Write property)

93.6.260 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code.
Notes: (Read and Write property)

93.6.261 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception raised.
Notes: (Read and Write property)

93.6.262 ListImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image list links.
Notes: (Read only property)

93.6.263 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The magick module to use for encode/decode.
Notes: (Read and Write property)

93.6.264 MaskTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The pixel trait for the mask.
Notes:

Apply the clip or composite mask .
(Read and Write property)

93.6.265 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The matte color.
Notes:

When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

93.6.266 MetacontentExtent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The size of meta content.
Notes: (Read only property)

93.6.267 Montage as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The montage setting.
Notes: (Read and Write property)

93.6.268 NextImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image list links.
Notes: (Read only property)

93.6.269 NumberChannels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of channels.
Notes: (Read only property)

93.6.270 NumberMetaChannels as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of meta channels..
Notes: (Read only property)

93.6.271 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Photo orientation of image.
Notes: (Read and Write property)

93.6.272 Page as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Virtual canvas size and offset of image.
Notes: (Read and Write property)

93.6.273 Ping as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: No image data read, just attributes.
Notes: (Read only property)
See also:

- 93.6.139 Ping(path as string) as IMImage7MBS 16302

93.6.274 PixelCacheFilename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries file path for cache file.
Notes:

See GetPixelCacheFilename function in ImageMagick documentation.
(Read only property)

93.6.275 PixelCacheType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries pixel cache type.
Notes:

See GetImagePixelCacheType function in ImageMagick documentation.
(Read only property)

93.6.276 PreviousImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image list links.
Notes: (Read only property)

93.6.277 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compression quality setting, meaning varies.
Notes: (Read and Write property)

93.6.278 ReadMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to read mask.
Notes: (Read and Write property)

93.6.279 ReferenceCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns reference count for this image.
Notes:

Several image objects can share pixel memory.
Calling Modify function makes sure you have your own pixels to modify.
(Read only property)

93.6.280 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to release the object in destructor.
Notes: (Read and Write property)

93.6.281 RenderingIntent as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rendering intent.
Notes: (Read and Write property)

93.6.282 Resolution as IMPointInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image resolution/density.
Notes:

See also Units property for the resolution unit.
(Read and Write property)

93.6.283 Rows as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Physical height of image in pixel.
Notes: (Read only property)

93.6.284 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Index of image in multi-image file.
Notes: (Read and Write property)

93.6.285 StartLoop as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The start loop value.
Notes:

For GIF.
(Read and Write property)

93.6.286 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The storage class of the image.
Notes: (Read only property)

93.6.287 Taint as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Has image been modified since reading.
Notes: (Read and Write property)

93.6.288 TicksPerSecond as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Units for delay time, default 100 for GIF.
Notes: (Read and Write property)

93.6.289 TileOffset as IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The tile offset.

Notes: (Read and Write property)

93.6.290 TotalColors as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Total number of colors.
Notes: (Read and Write property)

93.6.291 TransparentColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Color for 'transparent' color index in GIF.
Notes:

When you query this value, you get a copy in a new object.
To modify, you need to change copy and assign back.
(Read and Write property)

93.6.292 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image type.
Notes: (Read only property)

93.6.293 Units as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Resolution/density ppi or ppc.
Notes: (Read and Write property)

93.6.294 VirtualMetacontent as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the virtual metacontent corresponding with the last call to QueueAuthenticPixels or GetVirtualPixels.
Notes:

Nil is returned if the meta-content are not available.
See GetVirtualMetacontent function in ImageMagick documentation.

(Read only property)

93.6.295 VirtualPixelQueue as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns the virtual pixels associated corresponding with the last call to QueueAuthenticPixels or GetVirtualPixels.
Notes:

See GetVirtualPixelQueue function in ImageMagick documentation.
(Read only property)

93.6.296 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Physical width of image in pixel.
Notes: (Read only property)

93.6.297 WriteMask as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to write mask.
Notes: (Read and Write property)

93.6.298 Constants

93.6.299 kAbsoluteIntent = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the intent constants.

93.6.300 kActivateAlphaChannel = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.301 kAddComplexOperator = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants. **Notes:** Add

93.6.302 kAddNoisePreview = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.303 kAffineDistortion = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.304 kAffineProjectionDistortion = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.305 kAlphaCompositeOp = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.306 kArcDistortion = 9

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.307 kAssociateAlphaChannel = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.308 kAtopCompositeOp = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.309 kBackgroundAlphaChannel = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.310 kBackgroundDispose = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dispose constants.

93.6.311 kBarrelDistortion = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.312 kBarrelInverseDistortion = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.313 kBarycentricColorInterpolate = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.314 kBilevelType = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.315 kBilinearColorInterpolate = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.316 kBilinearDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.317 kBilinearForwardDistortion = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.318 kBilinearReverseDistortion = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.319 kBlendCompositeOp = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.320 kBlurCompositeOp = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.321 kBlurPreview = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.322 kBottomLeftOrientation = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.323 kBottomRightOrientation = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.324 kBrightnessPreview = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.325 kBumpmapCompositeOp = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.326 kChangeMaskCompositeOp = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.327 kCharcoalDrawingPreview = 28

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.328 kClearCompositeOp = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.329 kCMYColorspace = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.330 kCMYKColorspace = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.331 kCoalesceLayer = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.332 kColorBurnCompositeOp = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.333 kColorDodgeCompositeOp = 9

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.334 kColorizeCompositeOp = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.335 kColorSeparationAlphaType = 9

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.336 kColorSeparationType = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.337 kCompareAnyLayer = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.338 kCompareClearLayer = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.339 kCompareOverlayLayer = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.340 kCompositeLayer = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.341 kConjugateComplexOperator = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants. **Notes:** ConjugateC

93.6.342 kCopyAlphaChannel = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.343 kCopyAlphaCompositeOp = 17

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.344 kCopyBlackCompositeOp = 11

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.345 kCopyBlueCompositeOp = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.346 kCopyCompositeOp = 13

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.347 kCopyCyanCompositeOp = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.348 kCopyGreenCompositeOp = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.349 kCopyMagentaCompositeOp = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.350 kCopyRedCompositeOp = 18

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.351 kCopyYellowCompositeOp = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.352 kCylinder2PlaneDistortion = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.353 kDarkenCompositeOp = 20

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.354 kDarkenIntensityCompositeOp = 21

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.355 kDeactivateAlphaChannel = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.356 kDePolarDistortion = 11

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.357 kDespecklePreview = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.358 kDifferenceCompositeOp = 22

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.359 kDisassociateAlphaChannel = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.360 kDiscreteAlphaChannel = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.361 kDiskCache = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the cache constants.

93.6.362 kDisplaceCompositeOp = 23

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.363 kDisposeLayer = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.364 kDissolveCompositeOp = 24

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.365 kDistortCompositeOp = 25

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.366 kDistributedCache = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the cache constants.

93.6.367 kDivideComplexOperator = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants.
Notes: Divide

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the interlace constants.

93.6.466 kPlusCompositeOp = 58

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.467 kPNGInterlace = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the interlace constants.

93.6.468 kPolarDistortion = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.469 kPolynomialColorInterpolate = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.470 kPolynomialDistortion = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.471 kPreviousDispose = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dispose constants.

93.6.472 kQuantizePreview = 11

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.473 kRaisePreview = 22

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.474 kRealImaginaryComplexOperator = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants.
Notes: Real Imaginary

93.6.475 kRec601YCbCrColorspace = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.476 kRec709YCbCrColorspace = 20

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.477 kReduceNoisePreview = 13

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.478 kRelativeIntent = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the intent constants.

93.6.479 kRemoveAlphaChannel = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.480 kRemoveDupsLayer = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.481 kRemoveZeroLayer = 11

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.482 kReplaceCompositeOp = 59

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.483 kResizeDistortion = 17

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.484 kRGBColorspace = 21

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.485 kRightBottomOrientation = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.486 kRightTopOrientation = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.487 kRollPreview = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.488 kRotatePreview = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.489 kSaturateCompositeOp = 60

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.490 kSaturationIntent = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the intent constants.

93.6.491 kSaturationPreview = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.492 kScaleRotateTranslateDistortion = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.493 kScreenCompositeOp = 61

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.494 kscRGBColorspace = 22

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.495 kSegmentPreview = 23

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.496 kSentinelDistortion = 18

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.497 kSetAlphaChannel = 13

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.498 kShadePreview = 21

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.499 kShapeAlphaChannel = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.500 kSharpenPreview = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.501 kShearPreview = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.502 kShepardsColorInterpolate = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.503 kShepardsDistortion = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.504 kSoftLightCompositeOp = 62

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.505 kSolarizePreview = 20

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.506 kSpiffPreview = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.507 kSpreadPreview = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.510 kSrcInCompositeOp = 65

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.511 kSrcOutCompositeOp = 66

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.512 kSrcOverCompositeOp = 67

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.513 ksRGBColorspace = 23

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.514 kStereoCompositeOp = 71

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.515 kSubtractComplexOperator = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants.
Notes: Subtract

93.6.516 kSwirlPreview = 24

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.517 kThresholdCompositeOp = 68

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.518 kThresholdPreview = 17

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.519 kTopLeftOrientation = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.520 kTopRightOrientation = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.521 kTransparentAlpha = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** The value for transparent alpha.

93.6.522 kTransparentAlphaChannel = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.523 kTransparentColorspace = 24

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.524 kTriangleThresholdMethod = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the threshold method constants.

93.6.525 kTrimBoundsLayer = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.526 kTrueColorAlphaType = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.527 kTrueColorType = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.528 kUndefinedAlphaChannel = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the alpha channel constants.

93.6.529 kUndefinedCache = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the cache constants.

93.6.530 kUndefinedColorInterpolate = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.531 kUndefinedColorspace = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.532 kUndefinedComplexOperator = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the complex operator constants.
Notes: Undefined

93.6.533 kUndefinedCompositeOp = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.534 kUndefinedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dispose constants.

93.6.535 kUndefinedDistortion = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the distortion constants.

93.6.536 kUndefinedIntent = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the intent constants.

93.6.537 kUndefinedInterlace = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the interlace constants.

93.6.538 kUndefinedLayer = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the layer constants.

93.6.539 kUndefinedOrientation = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the orientation constants.

93.6.540 kUndefinedPreview = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.541 kUndefinedResolution = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the resolution constants.

93.6.542 kUndefinedThresholdMethod = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the threshold method constants.

93.6.543 kUndefinedType = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color type constants.

93.6.544 kUnrecognizedDispose = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dispose constants.

93.6.545 kVividLightCompositeOp = 69

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.546 kVoronoiColorInterpolate = 18

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color interpolate constants.

93.6.547 kWavePreview = 26

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the preview constants.

93.6.548 kXorCompositeOp = 70

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the composite operator constants.

93.6.549 kxyYColorspace = 25

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.550 kXYZColorspace = 26

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.551 kYCbCrColorspace = 27

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.552 kYCCColorspace = 28

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.553 kYDbDrColorspace = 29

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.554 kYIQColorspace = 30

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.555 kYPbPrColorspace = 31

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.6.556 kYUVColorspace = 32

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the color space constants.

93.7 class IMImageAffineMatrix7MBS

93.7.1 class IMImageAffineMatrix7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an affine transformation matrix.

93.7.2 Methods

93.7.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.
Notes: Initializes with an identity matrix.

93.7.4 Properties

93.7.5 RX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotation-x part of the affine transformation.
Notes: (Read and Write property)

93.7.6 RY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The rotation-y part of the affine transformation.
Notes: (Read and Write property)

93.7.7 SX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale-x part of the affine transformation.
Notes: (Read and Write property)

93.7.8 SY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The scale-y part of the affine transformation.
Notes: (Read and Write property)

93.7.9 TX as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate-x part of the affine transformation.
Notes: (Read and Write property)

93.7.10 TY as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The translate-y part of the affine transformation.
Notes: (Read and Write property)

93.8 class IMImageInfo7MBS

93.8.1 class IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for image info.
Notes: This represents usually an image you want to load or save.

93.8.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

93.8.3 Methods

93.8.4 BlobToImage(Data as MemoryBlock) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: BlobToImage implements direct to memory image formats. It returns the blob as an image.
Notes: See BlobToImage function in ImageMagick documentation.
See also:

- 93.8.5 BlobToImage(Data as String) as IMImage7MBS 16377

93.8.5 BlobToImage(Data as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: BlobToImage implements direct to memory image formats. It returns the blob as an image.
Notes: See BlobToImage function in ImageMagick documentation.
See also:

- 93.8.4 BlobToImage(Data as MemoryBlock) as IMImage7MBS 16377

93.8.6 Clone as IMImageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Makes a copy of the given image info object.
Notes: See CloneImageInfo function in ImageMagick documentation.

93.8.7 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty image info.
Notes: See CloneImageInfo function in ImageMagick documentation.
See also:

- 93.8.8 Constructor(ImageInfo as IMImageInfo7MBS) 16378

93.8.8 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of an existing image info.
Notes: See CloneImageInfo function in ImageMagick documentation.
See also:

- 93.8.7 Constructor 16378

93.8.9 PingBlob(Data as MemoryBlock) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pings a blob.
Notes:

Reads image attributes, but not image data.
See PingBlob function in ImageMagick documentation.
See also:

- 93.8.10 PingBlob(Data as String) as IMImage7MBS 16378

93.8.10 PingBlob(Data as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pings a blob.
Notes:

Reads image attributes, but not image data.
See PingBlob function in ImageMagick documentation.
See also:

- 93.8.9 PingBlob(Data as MemoryBlock) as IMImage7MBS 16378

93.8.11 PingImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns all the properties of an image or image sequence except for the pixels.
Notes:

It is much faster and consumes far less memory than ReadImage. On failure, a nil image is returned and exception describes the reason for the failure.

See PingImage function in ImageMagick documentation.

93.8.12 PingImages(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Pings one or more images and returns them as an image list.
Notes: See xx function in ImageMagick documentation.

93.8.13 ReadImage as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads an image or image sequence from a file or file handle.
Notes:

The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadImage function in ImageMagick documentation.

93.8.14 ReadImages(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads one or more images and returns them as an image list.
Notes: See xx function in ImageMagick documentation.

93.8.15 ReadInlineImage(filename as String) as IMImage7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Reads a Base64-encoded inline image or image sequence.
Notes:

The method returns a nil if there is a memory shortage or if the image cannot be read. On failure, a nil image is returned and exception describes the reason for the failure.

See ReadInlineImage function in ImageMagick documentation.

93.8.16 WriteImage(image as IMImage7MBS) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes an image or an image sequence to a file or file handle.
Notes:

If writing to a file is on disk, the name is defined by the filename member of the image object. WriteImage returns False is there is a memory shortage or if the image cannot be written. Check the exception member of image to determine the cause for any failure.

See WriteImage function in ImageMagick documentation.

93.8.17 WriteImages(image as IMImage7MBS, filename as String) as boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Writes an image sequence into one or more files.
Notes:

While WriteImage can write an image sequence, it is limited to writing the sequence into a single file using a format which supports multiple frames. WriteImages, however, does not have this limitation, instead it generates multiple output files if necessary (or when requested). When ImageInfo's adjoin flag is set to False, the file name is expected to include a printf-style formatting string for the frame number (e.g. "image02d.png").

See WriteImages function in ImageMagick documentation.

93.8.18 Properties

93.8.19 Adjoin as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Save images to separate scene files.
Notes: (Read and Write property)

93.8.20 Affirm as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Affirm flag.
Notes: (Read and Write property)

93.8.21 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha color value.
Notes: (Read and Write property)

93.8.22 Antialias as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The anti alias flag.
Notes: (Read and Write property)

93.8.23 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The background color.
Notes: (Read and Write property)

93.8.24 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The border color.
Notes: (Read and Write property)

93.8.25 Channel as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The channel types.
Notes:

See ChannelType constants.
(Read and Write property)

93.8.26 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Colorspace of image data.
Notes:

See Colorspace constants.
(Read and Write property)

93.8.27 Compose as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Alpha composition method for layered images.
Notes: (Read and Write property)

93.8.28 Compression as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compression of image when read/write.
Notes: (Read and Write property)

93.8.29 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Debug enabled.
Notes: (Read and Write property)

93.8.30 Density as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: DUP for image and draw_info.
Notes: (Read and Write property)

93.8.31 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Depth of image on read/write.
Notes: (Read and Write property)

93.8.32 Dither as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: dithering on/off.
Notes: (Read and Write property)

93.8.33 Endian as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: raw data integer ordering on read/write.
Notes: (Read and Write property)

93.8.34 Extract as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Crop/resize string on image read.
Notes: (Read and Write property)

93.8.35 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The file path of the image.
Notes: (Read and Write property)

93.8.36 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Font name for drawing functions.
Notes: (Read and Write property)

93.8.37 Fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Current color fuzz attribute.
Notes: (Read and Write property)

93.8.38 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

93.8.39 Interlace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Interlace for image write.
Notes:

See Interlace constants.
(Read and Write property)

93.8.40 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code.
Notes: (Read and Write property)

93.8.41 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception raised.
Notes: (Read and Write property)

93.8.42 Length as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Length of data.

Notes: (Read and Write property)

93.8.43 Magick as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The magick module to use for encode/decode.
Notes: (Read and Write property)

93.8.44 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The matte color.
Notes: (Read and Write property)

93.8.45 Monochrome as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to read/write pcl,pdf,ps,xps as monocrome image.
Notes: (Read and Write property)

93.8.46 Orientation as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The orientation of the image.
Notes:

See orientation constants.
(Read and Write property)

93.8.47 Page as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The page number.
Notes: (Read and Write property)

93.8.48 Ping as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: If enabled only fast read image attributes, not image data.
Notes: (Read and Write property)

93.8.49 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The point size.
Notes: (Read and Write property)

93.8.50 Quality as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Compression quality setting, meaning varies.
Notes: (Read and Write property)

93.8.51 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Wether to release the object in destructor.
Notes: (Read and Write property)

93.8.52 SamplingFactor as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: JPEG write sampling factor.
Notes: (Read and Write property)

93.8.53 Scene as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Starting value for image save numbering.
Notes: (Read and Write property)

93.8.54 SceneCount as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Total number of images in list - for escapes.
Notes: (Read and Write property)

93.8.55 Scenes as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scene numbers that is to be read in.
Notes: (Read and Write property)

93.8.56 ServerName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X windows server name - display/animate.
Notes: (Read and Write property)

93.8.57 Size as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Image generation size.
Notes: (Read and Write property)

93.8.58 Synchronize as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The Synchronize flag.
Notes: (Read and Write property)

93.8.59 Temporary as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether image file is temporary.
Notes:

image file to be deleted after read ”empemeral:”.
(Read and Write property)

93.8.60 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: montage/display background tile.
Notes: (Read and Write property)

93.8.61 TransparentColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: color for transparent index in color tables.
Notes: (Read and Write property)

93.8.62 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The image type.
Notes:

e.g. TrueColorAlphaType.
(Read and Write property)

93.8.63 Unique as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Unique tempory filename - delegates.
Notes: (Read and Write property)

93.8.64 Units as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The resolution unit.
Notes:

Density pixels/inch or pixel/cm.
Either kPixelsPerInchResolution or kPixelsPerCentimeterResolution.
(Read and Write property)

93.8.65 Verbose as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Verbose output enable/disable.
Notes: (Read and Write property)

93.9 class IMKernelInfo7MBS

93.9.1 class IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The kernel information details.

93.9.2 Methods

93.9.3 Clone as IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Clones the kernel info object.
Notes: Creates a new clone of the given Kernel List so that its can be modified without effecting the original.

93.9.4 Constructor(KernelInfo as IMKernelInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the kernel.
See also:

- 93.9.5 Constructor(kernelString as String) 16390
- 93.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS) 16392

93.9.5 Constructor(kernelString as String)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Takes the given string (generally supplied by the user) and converts it into a Morphology/Convolution Kernel.
Notes:

This allows users to specify a kernel from a number of pre-defined kernels, or to fully specify their own kernel for a specific Convolution or Morphology Operation.

The kernel so generated can be any rectangular array of floating point values (doubles) with the 'control point' or 'pixel being affected' anywhere within that array of values.

Previously IM was restricted to a square of odd size using the exact center as origin, this is no longer the case, and any rectangular kernel with any value being declared the origin. This in turn allows the use of

highly asymmetrical kernels.

The floating point values in the kernel can also include a special value known as 'nan' or 'not a number' to indicate that this value is not part of the kernel array. This allows you to shaped the kernel within its rectangular area. That is 'nan' values provide a 'mask' for the kernel shape. However at least one non-nan value must be provided for correct working of a kernel.

The returned kernel should be freed using the DestroyKernelInfo() when you are finished with it. Do not free this memory yourself.

Input kernel defintion strings can consist of any of three types.

"name:args [[@><] " Select from one of the built in kernels, using the name and geometry arguments supplied. See AcquireKernelBuiltIn()

"WxH [+X+Y] [@><] :num, num, num ..." a kernel of size W by H, with W*H floating point numbers following. the 'center' can be optionally be defined at +X+Y (such that +0+0 is top left corner). If not defined the pixel in the center, for odd sizes, or to the immediate top or left of center for even sizes is automatically selected.

"num, num, num, num, ..." list of floating point numbers defining an 'old style' odd sized square kernel. At least 9 values should be provided for a 3x3 square kernel, 25 for a 5x5 square kernel, 49 for 7x7, etc. Values can be space or comma separated. This is not recommended.

You can define a 'list of kernels' which can be used by some morphology operators A list is defined as a semi-colon separated list kernels.

" kernel ; kernel ; kernel ; "

Any extra ';' characters, at start, end or between kernel defintions are simply ignored.

The special flags will expand a single kernel, into a list of rotated kernels. A '@' flag will expand a 3x3 kernel into a list of 45-degree cyclic rotations, while a '>' will generate a list of 90-degree rotations. The '<' also exands using 90-degree rotates, but giving a 180-degree reflected kernel before the +/- 90-degree rotations, which can be important for Thinning operations.

Note that 'name' kernels will start with an alphabetic character while the new kernel specification has a ':' character in its specification string. If neither is the case, it is assumed an old style of a simple list of numbers generating a odd-sized square kernel has been given.

kernelString: the Morphology/Convolution kernel wanted.

See also AcquireKernelInfo in ImageMagick documentation.
See also:

- 93.9.4 Constructor(KernelInfo as IMKernelInfo7MBS) 16390
- 93.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS) 16392

93.9.6 Constructor(Type as Integer, GeometryInfo as IMGeometryInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Returns one of the 'named' built-in types of kernels used for special purposes such as gaussian blurring, skeleton pruning, and edge distance determination.
Notes:

They take a KernelType, and a set of geometry style arguments, which were typically decoded from a user supplied string, or from a more complex Morphology Method that was requested.

A description of each parameter follows:

type: the pre-defined type of kernel wanted
args: arguments defining or modifying the kernel

Convolution Kernels
Unity The a No-Op or Scaling single element kernel.
Gaussian: { radius } , { sigma } Generate a two-dimensional gaussian kernel, as used by -gaussian. The sigma for the curve is required. The resulting kernel is normalized,
If 'sigma' is zero, you get a single pixel on a field of zeros.
NOTE: that the 'radius' is optional, but if provided can limit (clip) the final size of the resulting kernel to a square 2*radius+1 in size. The radius should be at least 2 times that of the sigma value, or sever clipping and aliasing may result. If not given or set to 0 the radius will be determined so as to produce the best minimal error result, which is usally much larger than is normally needed.
LoG: { radius } , { sigma } "Laplacian of a Gaussian" or "Mexician Hat" Kernel. The supposed ideal edge detection, zero-summing kernel.
An alturnative to this kernel is to use a "DoG" with a sigma ratio of approx 1.6 (according to wikipedia).
DoG: { radius } , { sigma1 } , { sigma2 } "Difference of Gaussians" Kernel. As "Gaussian" but with a gaussian produced by 'sigma2' subtracted from the gaussian produced by 'sigma1'. Typically sigma2 >sigma1. The result is a zero-summing kernel.
Blur: { radius } , { sigma } [, { angle }] Generates a 1 dimensional or linear gaussian blur, at the angle given (current restricted to orthogonal angles). If a 'radius' is given the kernel is clipped to a width of 2*radius+1. Kernel can be rotated by a 90 degree angle.
If 'sigma' is zero, you get a single pixel on a field of zeros.
Note that two convolutions with two "Blur" kernels perpendicular to each other, is equivalent to a far larger "Gaussian" kernel with the same sigma value, However it is much faster to apply. This is how the "-blur" operator actually works.

Comet: { width } , { sigma } , { angle } Blur in one direction only, much like how a bright object leaves a comet like trail. The Kernel is actually half a gaussian curve, Adding two such blurs in opposite directions produces a Blur Kernel. Angle can be rotated in multiples of 90 degrees.
Note that the first argument is the width of the kernel and not the radius of the kernel.
Binomial: [{ radius }] Generate a discrete kernel using a 2 dimentional Pascel's Triangle of values. Used for special forma of image filters.

- 93.9.5 Constructor(kernelString as String) 16390

93.9.7 Scale(scaleFactor as double, GeometryFlags as integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales the given kernel.
Notes:

Scales the given kernel list by the given amount, with or without normalization of the sum of the kernel values (as per given flags).

By default (no flags given) the values within the kernel is scaled directly using given scaling factor without change.

If either of the two 'normalize_flags' are given the kernel will first be normalized and then further scaled by the scaling factor value given.

Kernel normalization ('normalize_flags' given) is designed to ensure that any use of the kernel scaling factor with 'Convolve' or 'Correlate' morphology methods will fall into -1.0 to +1.0 range. Note that for non-HDRI versions of IM this may cause images to have any negative results clipped, unless some 'bias' is used.

More specifically. Kernels which only contain positive values (such as a 'Gaussian' kernel) will be scaled so that those values sum to +1.0, ensuring a 0.0 to +1.0 output range for non-HDRI images.

For Kernels that contain some negative values, (such as 'Sharpen' kernels) the kernel will be scaled by the absolute of the sum of kernel values, so that it will generally fall within the +/- 1.0 range.

For kernels whose values sum to zero, (such as 'Laplician' kernels) kernel will be scaled by just the sum of the postive values, so that its output range will again fall into the +/- 1.0 range.

For special kernels designed for locating shapes using 'Correlate', (often only containing +1 and -1 values, representing foreground/brackground matching) a special normalization method is provided to scale the positive values separately to those of the negative values, so the kernel will be forced to become a zero-sum

kernel better suited to such searches.

WARNING: Correct normalization of the kernel assumes that the '*_range' attributes within the kernel structure have been correctly set during the kernels creation.

NOTE: The values used for 'normalize_flags' have been selected specifically to match the use of geometry options, so that '!' means NormalizeValue, '^' means CorrelateNormalizeValue. All other GeometryFlags values are ignored.

scaleFactor: zero. If the kernel is normalized regardless of any flags.
GeometryFlags: specifically: NormalizeValue, CorrelateNormalizeValue, and/or PercentValue.

See also ScaleKernelInfo in ImageMagick documentation.

93.9.8 ScaleGeometry(Geometry as string)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Scales using a geometry.
Notes:

Takes a geometry argument string, typically provided as a "-set option:convolve:scale { geometry } " user setting, and modifies the kernel according to the parsed arguments of that setting.

The first argument (and any normalization flags) are passed to ScaleKernelInfo() to scale/normalize the kernel. The second argument is then passed to UnityAddKernelInfo() to add a scled unity kernel into the scaled/normalized kernel.

geometry: "-set option:convolve:scale { geometry } " setting.

See also ScaleGeometryKernelInfo in ImageMagick documentation.

93.9.9 UnityAddKernelInfo(scale as double)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Adds a given amount of the 'Unity' Convolution Kernel to the given pre-scaled and normalized Kernel.
Notes:

This in effect adds that amount of the original image into the resulting convolution kernel. This value is usually provided by the user as a percentage value in the 'convolve:scale' setting.

The resulting effect is to convert the defined kernels into blended soft-blurs, unsharp kernels or into sharpening kernels.

See also UnityAdditionKernelInfo in ImageMagick documentation.

93.9.10 Properties

93.9.11 Angle as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The angle parameter.
Notes: (Read and Write property)

93.9.12 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

93.9.13 Height as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height value.
Notes: (Read and Write property)

93.9.14 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Last error code.
Notes: (Read and Write property)

93.9.15 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Last exception raised.

Notes: (Read and Write property)

93.9.16 Maximum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Maximum parameter.
Notes: (Read and Write property)

93.9.17 Minimum as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Minimum parameter.
Notes: (Read and Write property)

93.9.18 NegativeRange as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The negative range parameter.
Notes: (Read and Write property)

93.9.19 NextKernel as IMKernelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Next kernel in a list of kernels.
Notes: (Read only property)

93.9.20 PositiveRange as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The postive range parameter.
Notes: (Read and Write property)

93.9.21 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to release to kernel info structure in destructor.

Notes: (Read and Write property)

93.9.22 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of kernel.
Notes:

See Kernel constants.
(Read and Write property)

93.9.23 Values as Ptr

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The pointer to the values.
Notes: (Read only property)

93.9.24 Width as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Width value.
Notes: (Read and Write property)

93.9.25 X as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: X coordinate.
Notes: (Read and Write property)

93.9.26 Y as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Y coordinate.
Notes: (Read and Write property)

93.9.27 Constants

93.9.28 KernelBinomial = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Binomial

93.9.29 KernelBlur = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernels, Gaussian Based.

93.9.30 KernelChebyshev = 33

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** One Distance Measuring Kernel.

93.9.31 KernelComet = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernels, Gaussian Based.

93.9.32 KernelCompass = 13

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernel.

93.9.33 KernelConvexHull = 30

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A Hit And Miss Kernel.

93.9.34 KernelCorners = 25

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A Hit And Miss Kernel.

93.9.35 KernelCross = 21

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A shape kernel.

93.9.36 KernelDiagonals = 26

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A Hit And Miss Kernel.

93.9.37 KernelDiamond = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A shape kernel.

93.9.38 KernelDisk = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A shape kernel.

93.9.39 KernelDoG = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernels, Gaussian Based.

93.9.40 KernelEdges = 24

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A Hit And Miss Kernel.

93.9.41 KernelEuclidean = 36

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** One Distance Measuring Kernel.

93.9.42 KernelFreiChen = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernel.

93.9.43 KernelGaussian = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernels, Gaussian Based.

93.9.44 KernelKirsch = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernel.

93.9.45 KernelLaplacian = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** Convolution Kernel.

93.9.46 KernelLineEnds = 27

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Kernel Type constants. **Notes:** A Hit And Miss Kernel.

93.9.47 KernelLineJunctions = 28

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.82 MorphologyOpenIntensity = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.83 MorphologySmooth = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.84 MorphologyThicken = 20

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.85 MorphologyThinning = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.86 MorphologyTopHat = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.87 MorphologyUndefined = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.9.88 MorphologyVoronoi = 22

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the Morphology constants.

93.10 class IMMagickInfo7MBS

93.10.1 class IMMagickInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an encoder/decoder module.

93.10.2 Properties

93.10.3 Description as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The description field.
Notes:

e.g. "Joint Photographic Experts Group JFIF format" for JPEG format.
(Read only property)

93.10.4 flags as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Various flags.
Notes: (Read only property)

93.10.5 FormatType as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of format defined.
Notes: (Read only property)

93.10.6 MimeType as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The mime type.
Notes:

e.g. "image/jpeg" for JPEG format.
(Read only property)

93.10.7 ModuleName as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The module name.
Notes: (Read only property)

93.10.8 Name as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The name of the encoder/decoder.
Notes: (Read only property)

93.10.9 Note as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The note for this magick.
Notes: (Read only property)

93.10.10 Version as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The version number.
Notes:

e.g. "libjpeg 90" for JPEG library.
(Read only property)

93.10.11 Constants

93.10.12 FlagAdjoin = & h0001

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Supports adjoin.

93.10.13 FlagBlobSupport = & h0002

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Supports blob handling, e.g. reading image from memory.

93.10.14 FlagDecoderSeekableStream = & h0200

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** Decoder supports seakable streams.

93.10.15 FlagDecoderThreadSupport = & h0004

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** Supports decoding with threads.

93.10.16 FlagEncoderSeekableStream = & h0400

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** Encoder supports seekable streams.

93.10.17 FlagEncoderThreadSupport = & h0008

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** Supports encoding with threads.

93.10.18 FlagEndianSupport = & h0010

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** Supports endian.

93.10.19 FlagNone = & h0000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants. **Notes:** No flags set.

93.10.20 FlagRawSupport = & h0020

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Whether RAW processing is supported.

93.10.21 FlagSeekableStream = & h0040

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Supports seakable streams.

93.10.22 FlagStealth = & h0080

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Stealth flag (hidden).

93.10.23 FlagUseExtension = & h0100

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Uses extension.

93.10.24 FormatTypeExplicit = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the format type constants.
Notes: Explicit defined format type.

93.10.25 FormatTypeImplicit = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the format type constants.
Notes: Implicit defined format type.

93.10.26 FormatTypeUndefined = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the format type constants.
Notes: Not defined.

93.11 class IMMagickInfoList7MBS

93.11.1 class IMMagickInfoList7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for an array of magick info objects.

93.11.2 Methods

93.11.3 Item(index as integer) as IMMagickInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries an item by the index.
Notes: Index is zero based to Count-1.

93.11.4 Properties

93.11.5 Count as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of entries.
Notes: (Read only property)

93.11.6 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read only property)

93.12 class IMMissingFunctionException7MBS

93.12.1 class IMMissingFunctionException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: The exception for a missing function.
Notes: Subclass of the RuntimeException class.

93.13 class IMMontageInfo7MBS

93.13.1 class IMMontageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for montage settings.

93.13.2 Methods

93.13.3 Clone(ImageInfo as IMImageInfo7MBS) as IMMontageInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a copy of the montage settings.

93.13.4 Close

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Closes object.
Notes: Same as destructor.

93.13.5 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

93.13.6 Properties

93.13.7 AlphaColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha color.
Notes: (Read and Write property)

93.13.8 BackgroundColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The background color.
Notes: (Read and Write property)

93.13.9 BorderColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The border color.
Notes: (Read and Write property)

93.13.10 BorderWidth as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The border width.
Notes: (Read and Write property)

93.13.11 Debug as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to output debug messages.
Notes: (Read and Write property)

93.13.12 Filename as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The filename.
Notes: (Read and Write property)

93.13.13 Fill as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The fill color.
Notes: (Read and Write property)

93.13.14 Font as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The font name.
Notes: (Read and Write property)

93.13.15 Frame as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The frame.
Notes: (Read and Write property)

93.13.16 Geometry as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The geometry.
Notes: (Read and Write property)

93.13.17 Gravity as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The gravity setting.
Notes: (Read and Write property)

93.13.18 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

93.13.19 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code.
Notes: (Read and Write property)

93.13.20 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception raised.
Notes: (Read and Write property)

93.13.21 MatteColor as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The matte color.
Notes: (Read and Write property)

93.13.22 PointSize as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The point size.
Notes: (Read and Write property)

93.13.23 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to release object in destructor.
Notes: (Read and Write property)

93.13.24 Shadow as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to use shadow.
Notes: (Read and Write property)

93.13.25 Stroke as IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The stroke color.
Notes: (Read and Write property)

93.13.26 Texture as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The texture string.
Notes: (Read and Write property)

93.13.27 Tile as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The tile string.
Notes: (Read and Write property)

93.13.28 Title as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The title string.
Notes: (Read and Write property)

93.13.29 Constants

93.13.30 MontageModeConcatenate = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the montage mode constants.
Notes: Concatenate

93.13.31 MontageModeFrame = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the montage mode constants.
Notes: Frame

93.13.32 MontageModeUndefined = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the montage mode constants.
Notes: Undefined

93.13.33 MontageModeUnframe = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the montage mode constants. **Notes:** Unframe

93.14 class IMOptionInfo7MBS

93.14.1 class IMOptionInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for options.

93.14.2 Methods

93.14.3 CommandOptionToMnemonic(option as integer, type as integer) as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries command name for a given option number.

93.14.4 GetCommandOptionInfo(name as string) as IMOptionInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries option info for given command code.

93.14.5 IsCommandOption(name as string) as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether the given option is a command option.

93.14.6 Properties

93.14.7 Flags as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The flags.
Notes: (Read and Write property)

93.14.8 Mnemonic as String

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The name of the option.
Notes: (Read and Write property)

93.14.9 Stealth as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The stealth property.
Notes:

This option is hidden.
(Read and Write property)

93.14.10 Type as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The type of option.
Notes: (Read and Write property)

93.14.11 Constants

93.14.12 AllValidate = & h7fffffff

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.13 AlwaysInterpretArgsFlag = & h0400

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Always Interpret escapes in Args. CF: ”convert” compatibility mode

93.14.14 ColorspaceValidate = & h00001

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.15 CompareValidate = & h00002

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.16 CompositeValidate = & h00004

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.17 ConvertValidate = & h00008

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.18 DeprecateOptionFlag = & h4000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Deprecate option (no code).

93.14.19 DrawInfoOptionFlag = & h0002

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Setting stored in DrawInfo

93.14.20 FireOptionFlag = & h2000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Convert operation seq firing point

93.14.21 FormatsDiskValidate = & h00010

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.22 FormatsMapValidate = & h00020

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.23 FormatsMemoryValidate = & h00040

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.24 GenesisOptionFlag = & h0080

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: MagickCommandGenesis() Only Option

93.14.25 GlobalOptionFlag = & h0008

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Global Setting or Control

93.14.26 IdentifyValidate = & h00080

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.27 ImageInfoOptionFlag = & h0001

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Setting stored in ImageInfo

93.14.28 ImportExportValidate = & h00100

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.29 ListOperatorFlag = & h0040

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Multi-Image processing operator

93.14.30 MagickAlignOptions = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.31 MagickAlphaChannelOptions = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.32 MagickAutoThresholdOptions = 77

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.33 MagickBooleanOptions = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.34 MagickCacheOptions = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.35 MagickChannelOptions = 4

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.36 MagickClassOptions = 5

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.37 MagickCLIOptions = 79

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.38 MagickClipPathOptions = 6

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.39 MagickCoderOptions = 7

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.40 MagickColorOptions = 8

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.41 MagickColorspaceOptions = 9

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.42 MagickCommandOptions = 10

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.43 MagickComplexOptions = 11

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.44 MagickComplianceOptions = 12

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.45 MagickComposeOptions = 13

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.46 MagickCompressOptions = 14

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.47 MagickConfigureOptions = 15

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.48 MagickDataTypeOptions = 16

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.49 MagickDebugOptions = 17

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.50 MagickDecorateOptions = 18

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.51 MagickDelegateOptions = 19

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.52 MagickDirectionOptions = 20

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.53 MagickDisposeOptions = 21

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.54 MagickDistortOptions = 22

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.55 MagickDitherOptions = 23

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.56 MagickEndianOptions = 24

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.57 MagickEvaluateOptions = 25

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.58 MagickFillRuleOptions = 26

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.59 MagickFilterOptions = 27

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.60 MagickFontOptions = 28

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.61 MagickFontsOptions = 29

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.62 MagickFormatOptions = 30

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.63 MagickFunctionOptions = 31

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.64 MagickGradientOptions = 32

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.65 MagickGravityOptions = 33

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.66 MagickIntensityOptions = 34

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.67 MagickIntentOptions = 35

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.68 MagickInterlaceOptions = 36

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.69 MagickInterpolateOptions = 37

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.70 MagickKernelOptions = 38

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.71 MagickLayerOptions = 39

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.72 MagickLineCapOptions = 40

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.73 MagickLineJoinOptions = 41

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.74 MagickListOptions = 42

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.75 MagickLocaleOptions = 43

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.76 MagickLogEventOptions = 44

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.77 MagickLogOptions = 45

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.78 MagickMagicOptions = 46

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.79 MagickMethodOptions = 47

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.80 MagickMetricOptions = 48

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.81 MagickMimeOptions = 49

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.82 MagickModeOptions = 50

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.83 MagickModuleOptions = 51

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.84 MagickMorphologyOptions = 52

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.85 MagickNoiseOptions = 53

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.86 MagickOrientationOptions = 54

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.87 MagickPixelChannelOptions = 55

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.88 MagickPixelIntensityOptions = 56

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.89 MagickPixelMaskOptions = 57

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.90 MagickPixelTraitOptions = 58

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.91 MagickPolicyDomainOptions = 60

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.92 MagickPolicyOptions = 59

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.93 MagickPolicyRightsOptions = 61

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.94 MagickPreviewOptions = 62

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.95 MagickPrimitiveOptions = 63

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.96 MagickQuantumFormatOptions = 64

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.97 MagickResolutionOptions = 65

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.98 MagickResourceOptions = 66

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.99 MagickSparseColorOptions = 67

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.100 MagickStatisticOptions = 68

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.101 MagickStorageOptions = 69

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.102 MagickStretchOptions = 70

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.103 MagickStyleOptions = 71

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.104 MagickThresholdOptions = 72

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.105 MagickToolOptions = 78

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.106 MagickTypeOptions = 73

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.107 MagickUndefinedOptions = -1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.108 MagickValidateOptions = 74

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.109 MagickVirtualPixelOptions = 75

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.110 MagickWeightOptions = 76

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the command options constants.

93.14.111 MontageValidate = & h00200

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.112 NeverInterpretArgsFlag = & h0800

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Never Interpret escapes in Args. EG: filename, or delayed escapes.

93.14.113 NoImageOperatorFlag = & h0010

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Images not required operator

93.14.114 NonMagickOptionFlag = & h1000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Option not used by Magick Command.

93.14.115 NoValidate = & h00000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.116 QuantizeInfoOptionFlag = & h0004

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Setting stored in QuantizeInfo

93.14.117 ReplacedOptionFlag = & h8800

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Replaced Option (but still works).

93.14.118 SettingOptionFlags = & h000F

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: mask any setting option

93.14.119 SimpleOperatorFlag = & h0020

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Simple Image processing operator

93.14.120 SpecialOptionFlag = & h0100

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: Operator with Special Requirements. EG: for specific CLI commands

93.14.121 StreamValidate = & h00400

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.14.122 UndefinedOptionFlag = & h0000

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the flag constants.
Notes: option flag is not in use

93.14.123 UndefinedValidate = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the validate type constants.

93.15 class IMPixelInfo7MBS

93.15.1 class IMPixelInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a pixel info.

93.15.2 Methods

93.15.3 Constructor(Image as IMImage7MBS = nil)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The constructor.

93.15.4 Properties

93.15.5 alpha as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha quantum.
Notes:

Defaults to opaque value, e.g. 65535 for 16 bit.
(Read and Write property)

93.15.6 AlphaTrait as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The alpha channel pixel trait.
Notes:

If zero, no alpha.
(Read and Write property)

93.15.7 black as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The black color quantum.

Notes: (Read and Write property)

93.15.8 blue as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The blue color quantum.
Notes: (Read and Write property)

93.15.9 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color space.
Notes:

Defaults to ksRGBColorspace.
(Read and Write property)

93.15.10 Count as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The count value.
Notes: (Read and Write property)

93.15.11 Depth as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color depth.
Notes:

Defaults to quantum depth.
(Read and Write property)

93.15.12 fuzz as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The fuzz value.
Notes: (Read and Write property)

93.15.13 green as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The green color quantum.
Notes: (Read and Write property)

93.15.14 index as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The index quantum.
Notes: (Read and Write property)

93.15.15 red as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The red color quantum.
Notes: (Read and Write property)

93.15.16 StorageClass as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The storage class.
Notes:

Defaults to kDirectClass.
(Read and Write property)

93.16 class IMPointInfo7MBS

93.16.1 class IMPointInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a x/y point.

93.16.2 Methods

93.16.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with 0/0 values.
See also:

- 93.16.4 Constructor(X as Double, Y as Double) 16439

93.16.4 Constructor(X as Double, Y as Double)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with given values.
See also:

- 93.16.3 Constructor 16439

93.16.5 Properties

93.16.6 X as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x coordinate.
Notes: (Read and Write property)

93.16.7 Y as Double

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y coordinate.
Notes: (Read and Write property)

93.17 class IMQuantizeInfo7MBS

93.17.1 class IMQuantizeInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for quantize settings.

93.17.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

93.17.3 Methods

93.17.4 Clone as IMQuantizeInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Makes a copy of the given quantize info object.
Notes: See CloneQuantizeInfo function in ImageMagick documentation.

93.17.5 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates an empty quantize info.
Notes: See AcquireQuantizeInfo function in ImageMagick documentation.
See also:

- 93.17.6 Constructor(ImageInfo as IMImageInfo7MBS) 16440
- 93.17.7 Constructor(QuantizeInfo as IMQuantizeInfo7MBS) 16441

93.17.6 Constructor(ImageInfo as IMImageInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Creates a new quantize info.
Notes:

If ImageInfo is not empty, copies a few settings from there.
See AcquireQuantizeInfo function in ImageMagick documentation.
See also:

- 93.17.5 Constructor 16440
- 93.17.7 Constructor(QuantizeInfo as IMQuantizeInfo7MBS) 16441

93.17.7 Constructor(QuantizeInfo as IMQuantizeInfo7MBS)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Makes a copy of the given quantize info object.
Notes: See CloneQuantizeInfo function in ImageMagick documentation.
See also:

- 93.17.5 Constructor 16440
- 93.17.6 Constructor(ImageInfo as IMImageInfo7MBS) 16440

93.17.8 Properties

93.17.9 ColorSpace as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The color space.
Notes: (Read and Write property)

93.17.10 DitherMethod as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The dither method.
Notes: (Read and Write property)

93.17.11 Handle as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The internal object reference.
Notes: (Read and Write property)

93.17.12 LastError as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last error code.
Notes: (Read and Write property)

93.17.13 LastException as IMException7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The last exception raised.
Notes: (Read and Write property)

93.17.14 MeasureError as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to measure error.
Notes: (Read and Write property)

93.17.15 NumberColors as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The number of colors.
Notes: (Read and Write property)

93.17.16 Release as Boolean

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Whether to release memory in destructor.
Notes: (Read and Write property)

93.17.17 TreeDepth as UInt64

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Tree depth.
Notes: (Read and Write property)

93.17.18 Constants

93.17.19 DitherMethodFloydSteinberg = 3

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dither method constants.
Notes: FloydSteinberg

93.17.20 DitherMethodNo = 1

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dither method constants. **Notes:** No

93.17.21 DitherMethodRiemersma = 2

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dither method constants. **Notes:** Riemersma

93.17.22 DitherMethodUndefined = 0

MBS GraphicsMagick Plugin, Plugin Version: 20.0. **Function:** One of the dither method constants. **Notes:** Undefined

93.18 class IMRectangleInfo7MBS

93.18.1 class IMRectangleInfo7MBS

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The class for a rectangle.

93.18.2 Methods

93.18.3 Constructor

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with zero values.
See also:

- 93.18.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer) 16444

93.18.4 Constructor(X as Integer, Y as Integer, Width as Integer, Heigth as Integer)

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Initializes the point object with given values.
See also:

- 93.18.3 Constructor 16444

93.18.5 Properties

93.18.6 Height as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The height of the rectangle.
Notes: (Read and Write property)

93.18.7 Width as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The width of the rectangle.
Notes: (Read and Write property)

93.18.8 X as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

93.18.9 Y as Integer

MBS GraphicsMagick Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

Chapter 94

Instant Message

94.1 class IMServiceMBS

94.1.1 class IMServiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An IMService object represents a service available to a user through iChat, such as AIM, Jabber, and Bonjour.
Notes:

Each IMService object represents one service available through iChat. Class methods such as allServices and serviceWithName will return these objects. Each object acts as the liaison to its single service, allowing you to access the individual user's global status, the user's list of acquaintances, and other information which can be integrated into your application.

You may want to subclass the InstantMessageMBS class to get events for changes.

All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

94.1.2 Methods

94.1.3 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the folderitem of the image corresponding to the IMPersonStatus specified by status.
Notes: Convenience function which does the same as InstantMessageMBS.imageFileForStatus.

94.1.4 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the image name for the given status.
Example:

MsgBox IMServiceMBS.imageNameForStatus(IMServiceMBS.IMPersonStatusIdle)

Notes:

Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

94.1.5 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the URL of the image corresponding to the IMPersonStatus specified by status.
Notes: Convenience function which does the same as InstantMessageMBS.imageURLForStatus.

94.1.6 IMCapabilityAudioConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.7 IMCapabilityDirectIM as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.8 IMCapabilityFileSharing as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.9 IMCapabilityFileTransfer as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.10 IMCapabilityText as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.11 IMCapabilityVideoConference as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.

94.1.12 IMPersonAVBusyKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's busy status. The value is a number set to 0 if the person's audio/video capabilities are available, or 1 if they are busy.

94.1.13 IMPersonCapabilitiesKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's iChat capabilities. The value is an array of capability properties. Check for IMCapability* strings in this array.

94.1.14 IMPersonEmailKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's email address. The value is a string containing the person's email address. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first email address of that person.

94.1.15 IMPersonFirstNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's first name. The value is a string containing the person's first name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the first name of that person.

94.1.16 IMPersonIdleSinceKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's idle status. The value is a date containing the time, in seconds, since the last user activity. Available if the person's status is idle.

94.1.17 IMPersonLastNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's last name. The value is a string containing the person's last name. This is a key used directly by Bonjour; however, if a person has an Address Book entry associated with a relevant AIM account, this key reflects the last name of that person.

94.1.18 IMPersonPictureDataKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's image. The value is a string containing the image for the person's icon.

94.1.19 IMPersonScreenNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's screen name. The value is a string containing the service-specific identifier for a person. For example, "User123" or "steve@mac.com" for AIM, and "John Doe" for Bonjour.

94.1.20 IMPersonServiceNameKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's service name. The value is a string containing the name of the service this person belongs to.

94.1.21 IMPersonStatusKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's online status. The value is a number representing the current online status of the person, if known.

94.1.22 IMPersonStatusMessageKey as string

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the info dictionaries.
Notes: Used to obtain a person's status message. The value is a string containing the person's current status message.

94.1.23 infoForAllScreenNames as dictionary()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about all people and all accounts currently logged in to the service.
Notes:

If a person is logged in on multiple accounts (determined by the user's Address Book), this method will return the information for all of the logged-in accounts.

Returns an Array of the dictionaries. Use IMPerson*Key strings for the keys in that dictionary.

94.1.24 infoForPreferredScreenNames as dictionary()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about all people and their primary accounts currently logged in to the service.
Notes:

If a person is logged in on multiple accounts (determined by the user's Address Book), this method will only return the information for the preferred account. The preferred account is determined by iChat, using a combination of capabilities (video chat capability, audio chat capability, and so on), status (available, idle, away), and other user attributes.

Returns an Array of the dictionaries for all people and is guaranteed to provide only one array entry for any logged-in person. Use IMPerson*Key strings for the keys in that dictionary.

94.1.25 infoForScreenName(name as string) as dictionary

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about the person specified by his/her screenName.
Notes:

screenName: A string containing the screen name identifier of a person.

Returns a dictionary on success and nil on failure. Use IMPerson*Key strings for the keys in that dictionary.

94.1.26 LocalizedName as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the user-visible localized name of the service.
Example:

```
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedName
next
```

Notes: Returns a String. Will contain the localized service name, such as "AOL Instant Messenger", "Jabber", or "Bonjour", for example. This string will be localized if required.

94.1.27 LocalizedShortName as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a shorter version, if available, of the user-visible localized name of the service.
Example:

```
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedShortName
next
```

Notes: Returns a "" on failure. Will return a localized string if required.

94.1.28 Name as String

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the fixed canonical name of the service.
Example:

```
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.Name
next
```

Notes: Returns a "" on failure. This string is not localized.

94.1.29 peopleWithScreenName(screenName as string) as ABPersonMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Address Book person objects that correspond to the person with the screenName matched by screenName.
Notes:

screenName: An string containing the screen name identifier of a person or persons.

Returns an array of ABPersonMBS objects that match the screen name matched by screenName. Can return an empty array or an array with one or more items.

Returns empty array on failure.

94.1.30 screenNamesForPerson(person as ABPersonMBS) as string()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list of valid screen names for any given person.
Example:

```
// show my screennames on all services

dim AddressBook as new ABAddressBookMBS
dim owner as ABPersonMBS = AddressBook.owner
dim services() as IMServiceMBS = InstantMessageMBS.allServices

for each service as IMServiceMBS in Services
MsgBox service.LocalizedName+":"+EndOfLine+join(service.screenNamesForPerson(owner), EndOfLine)
next
```

Notes:

person: An Address Book ABPerson object.
Returns an Array of Strings that are valid screen names for the person specified by person. See Address Book documentation for more information on ABPerson and accessing the user's address book. Can return an empty array or an array with one or more items.

Returns an empty array on failure.

94.1.31 Status as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the login status of the service.
Notes: Returns the appropriate IMServiceStatus number.

94.1.32 Properties

94.1.33 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Handle to the internal used IMService reference.
Notes: (Read and Write property)

94.1.34 Constants

94.1.35 IMPersonStatusAvailable = 4

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.36 IMPersonStatusAway = 3

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.37 IMPersonStatusIdle = 2

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.38 IMPersonStatusNoStatus = 5

MBS MacCocoa Plugin, Plugin Version: 7.7. **Function:** The status constant for persons where the status is unknown.
Notes: Mac OS X 10.5 only.

94.1.39 IMPersonStatusOffline = 1

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.40 IMPersonStatusUnknown = 0

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.41 IMServiceStatusDisconnected = 1

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.42 IMServiceStatusLoggedIn = 4

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.43 IMServiceStatusLoggedOut = 0

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.44 IMServiceStatusLoggingIn = 3

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.1.45 IMServiceStatusLoggingOut = 2

MBS MacCocoa Plugin, Plugin Version: 7.1. **Function:** A status constant.

94.2 class InstantMessageMBS

94.2.1 class InstantMessageMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to handle Instant Message support for Mac OS X 10.4 and newer.
Notes:

This class is based on the Instant Message framework from Apple.
it can be used to get the status of iChat.

94.2.2 Blog Entries

- Addressbook classes updated

94.2.3 Methods

94.2.4 allServices as IMServiceMBS()

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of services currently available to the user, regardless of their status.
Notes:

Returns nil on failure.

Returns a array with IMServiceMBS objects corresponding to the current available services (AIM, Bonjour, Jabber, and so on.)

94.2.5 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the InstantMessaging framework is available or not.
Notes: Should be true on Mac OS X 10.4.

94.2.6 imageFileForStatus(status as Integer) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the folderitem of the image corresponding to the IMPersonStatus specified by status.
Notes:

This image reflects the status of the user, and is usually reflected by a colored bubble or triangle.

Returns nil on failure.
This is a convenience function which will call imageFileForStatus and return the folderitem matching the URL in case it points to a disc file.

For Mac OS X 10.4 all images are stored as TIFF files on hard disc. Use the TiffPictureMBS class to load them (OpenAsPicture will not work because of the masks).

values:

IMPersonStatusUnknown	= 0
IMPersonStatusOffline	= 1
IMPersonStatusIdle	= 2
IMPersonStatusAway	= 3
IMPersonStatusAvailable	= 4

94.2.7 imageNameForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the image name for the given status.
Notes:

Mac OS X 10.5 only.
On Mac OS X the NSImage class can be used to access system images by name and there you can use this name.

94.2.8 imageURLForStatus(status as Integer) as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the URL of the image corresponding to the IMPersonStatus specified by status.
Notes:

This image reflects the status of the user, and is usually reflected by a colored bubble or triangle.

Returns nil on failure.

values:

IMPersonStatusUnknown = 0
IMPersonStatusOffline = 1
IMPersonStatusIdle = 2
IMPersonStatusAway = 3
IMPersonStatusAvailable = 4

94.2.9 myIdleTime as Double

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Class method to return the idle time of the active user.
Notes: Returns in seconds the time since the currently active user went idle.

94.2.10 myStatus as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Class method to return the status of the currently active user.
Notes:

This status is global across all services.

values:

IMPersonStatusUnknown = 0
IMPersonStatusOffline = 1
IMPersonStatusIdle = 2
IMPersonStatusAway = 3
IMPersonStatusAvailable = 4

94.2.11 notificationCenter as NSNotificationCenterMBS

MBS MacCocoa Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the custom notification center for the service.
Notes:

A custom notification center that manages IMService notifications.
Available in Mac OS X v10.4 and later.

94.2.12 serviceWithName(name as string) as IMServiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns only the service specified by a given name.
Notes:

name: A String containing a service name as returned by a previous call to name.
Hard-coding the service names internally is not recommended.

Returns an IMService object corresponding to the available service specified by name.
Returns nil on any failure.

94.2.13 Events

94.2.14 MyStatusChanged

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called when the local user changes online status.
Notes: The client should call myStatus function to get the new status.

94.2.15 PersonInfoChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when a screenName changes some aspect of their published information.
Notes: The user information dictionary will always contain an ScreenName and may contain any of the following values: StatusMessage, IdleSince, FirstName, LastName, IMPersonEmailKey, PictureData, AVAvailable and AVBusy, Capabilities values.

94.2.16 PersonStatusChanged(info as dictionary)

MBS MacCocoa Plugin, Plugin Version: 11.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when a different user (screenName) logs in, logs off, goes away, and so on.
Notes: The info object knows the ScreenName and the Status of the person.

94.2.17 ServiceStatusChanged

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when the user logs in, logs off, goes away, and so on.

Notes: Call MyStatus to get the new state.

94.2.18 StatusImagesChangedAppearance

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event sent when the user changes their preferred images for displaying status.
Notes: Clients that display status information graphically (using the green/yellow/red dots) should call imageURLForStatus to get the new image.

Chapter 95

IO Registry

95.1 class DarwinDriveStatisticsMBS

95.1.1 class DarwinDriveStatisticsMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for an iterator over the IORegistry drives.
Example:

```
dim d as DarwinDriveStatisticsMBS
dim l as CFDictionaryMBS

d=new DarwinDriveStatisticsMBS
l=d.NextDrive
while l<>Nil
CFShowMBS l
l=d.NextDrive
wend
```

95.1.2 Methods

95.1.3 close

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

95.1.4 kIOBlockStorageDriverStatisticsBytesReadKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of bytes read since the block storage driver was instantiated.

This property describes the number of bytes read since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.5 kIOBlockStorageDriverStatisticsBytesWrittenKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of bytes written since the block storage driver was instantiated.

This property describes the number of bytes written since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.6 kIOBlockStorageDriverStatisticsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key value used to get a statistics dictionary from the drive information dictionary.

95.1.7 kIOBlockStorageDriverStatisticsLatentReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of nanoseconds of latency during reads since the block storage driver was instantiated.

This property describes the number of nanoseconds of latency during reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.8 kIOBlockStorageDriverStatisticsLatentWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of nanoseconds of latency during writes since the block storage driver was instantiated.

This property describes the number of nanoseconds of latency during writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.9 kIOBlockStorageDriverStatisticsReadErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of read errors encountered since the block storage driver was instantiated.
This property describes the number of read errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.10 kIOBlockStorageDriverStatisticsReadRetriesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of read retries required since the block storage driver was instantiated.

This property describes the number of read retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.11 kIOBlockStorageDriverStatisticsReadsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of read operations processed since the block storage driver was instantiated.

This property describes the number of read operations processed since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.12 kIOBlockStorageDriverStatisticsTotalReadTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of nanoseconds spent performing reads since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing reads since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.13 kIOBlockStorageDriverStatisticsTotalWriteTimeKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of nanoseconds spent performing writes since the block storage driver was instantiated.

This property describes the number of nanoseconds spent performing writes since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

95.1.14 kIOBlockStorageDriverStatisticsWriteErrorsKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of write errors encountered since the block storage driver was instantiated.
This property describes the number of write errors encountered since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.15 kIOBlockStorageDriverStatisticsWriteRetriesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of write retries required since the block storage driver was instantiated.

This property describes the number of write retries required since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an OSNumber value.

95.1.16 kIOBlockStorageDriverStatisticsWritesKey as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the keys for the statistics dictionary.
Notes:

Describes the number of write operations processed since the block storage driver was instantiated.

This property describes the number of write operations processed since the block storage driver was instantiated. It is one of the statistic entries listed under the top-level kIOBlockStorageDriverStatisticsKey property table. It has an CFNumber value.

95.1.17 NextDrive as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the dictionary describing the next drive in the list.

95.1.18 Reset

MBS MacCF Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves you back to the beginning of the list.

95.1.19 Properties

95.1.20 Handle as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

95.2 module IORegistryMBS

95.2.1 module IORegistryMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A module for accessing the Mac OS X IO Registry.
Notes: The IORegistryMBS stores information about the installed hardware.

95.2.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr3
- MBS Xojo Plugins, version 19.0pr9
- MBS Xojo / Real Studio Plugins, version 16.3pr4
- MBS Xojo / Real Studio Plugins, version 15.1pr7
- MBS Real Studio Plugins, version 11.2pr7
- Addressbook classes updated

95.2.3 Methods

95.2.4 AudioRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Audio tree inside the IO Registry.

95.2.5 DeviceRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Device tree inside the IO Registry.

95.2.6 FirewireRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Firewire tree inside the IO Registry.

95.2.7 MatchingServices(servicename as string) as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the nodes matching the servicename.
Example:

```
// search for Serial devices
dim devices() as IORegistryNodeMBS = IORegistryMBS.MatchingServices("IOSerialBSDClient")
dim names(-1) as string

// check devices and query names
for each dev as IORegistryNodeMBS in devices
dim dic as Dictionary = dev.Properties
names.Append dic.Lookup("IOTTYBaseName","")
next

// show all names
MsgBox Join(names,EndOfLine)
```

95.2.8 PerformanceStatistics(index as Integer = 0) as Dictionary

MBS MacCF Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries performance statistics for first graphics card on a Mac.
Example:

```
dim d as Dictionary = IORegistryMBS.PerformanceStatistics

if d <>nil then

dim gpuCoreUse as Int64 = d.Value("GPU Core Utilization")
dim freeVramCount as Int64 = d.Value("vramFreeBytes")
dim usedVramCount as Int64 = d.Value("vramUsedBytes")

dim sum as int64 = (freeVramCount+usedVramCount)

List.AddRow format(gpuCoreUse/1000000000.0, "0% "), Format(freeVramCount/1024.0/1024.0, "0")+" MB
of "+Format(sum/1024.0/1024.0, "0")+" MB", Format(usedVramCount / sum, "0% ")
list.ScrollPosition = list.ListCount
else
Break
end if
```

Notes:

The dictionary contains details about performance of graphics card.
This includes vramFreeBytes and vramUsedBytes for memory usage as well as "GPU Core Utilization" key with GPU time used.
Returns nil on any error.

Index is zero for first graphics card.
Or 1 for second graphics card.

95.2.9 PowerRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Power tree inside the IO Registry.

95.2.10 Present as Boolean

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Is the IORegistryMBS working?
Notes: Returns true on Mac OS X and false on other platforms.

95.2.11 Root(plane as string) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the IORegistry tree with the given plane name.
Example:

```
// shows names of all USB devices
dim u as IORegistryNodeMBS = IORegistryMBS.Root("IOUSB") // same as USBRoot function

// now loop over all devices with all children (non recursive)
dim names(-1) as string
dim nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>=0
dim p as IORegistryNodeMBS = nodes.pop

names.Append p.Name
for each c as IORegistryNodeMBS in p.Children
nodes.Append c
next
wend

// and display array with names
```

```
MsgBox Join(names,EndOfLine)
```

95.2.12 ServiceRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the Service tree inside the IO Registry.

95.2.13 USBRoot as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the root of the USB tree inside the IO Registry.
Example:

```
// shows names of all USB devices
dim u as IORegistryNodeMBS = IORegistryMBS.USBRoot

// now loop over all devices with all children (non recursive)
dim names(-1) as string
dim nodes(-1) as IORegistryNodeMBS = array(u)

while UBound(nodes)>=0
dim p as IORegistryNodeMBS = nodes.pop

names.Append p.Name
for each c as IORegistryNodeMBS in p.Children
nodes.Append c
next
wend

// and display array with names
MsgBox Join(names,EndOfLine)
```

95.3 class IORegistryNodeMBS

95.3.1 class IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class for a node inside the IO Registry.

95.3.2 Methods

95.3.3 CFProperties as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a CFDictionary object with all the properties of this note.

95.3.4 Child(index as Integer) as IORegistryNodeMBS

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the IORegistryNodeMBS with the given index.
Notes: Index from 0 to ChildCount-1.

95.3.5 Children as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with all child nodes.

95.3.6 Parents as IORegistryNodeMBS()

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with all parent nodes.

95.3.7 Properties as Dictionary

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a Xojo dictionary with all the properties of this note.

95.3.8 Properties

95.3.9 Busy as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the busyState of an IOService.
Notes:

Many activities in IOService are asynchronous. When registration, matching, or termination is in progress on an IOService, its busyState is increased by one. Change in busyState to or from zero also changes the IOService's provider's busyState by one, which means that an IOService is marked busy when any of the above activities is ocurring on it or any of its clients.
(Read only property)

95.3.10 ChildCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of sub nodes.
Notes: (Read only property)

95.3.11 DataCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Count of data items.
Notes: (Read only property)

95.3.12 IOClass as String

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the IOKit class.
Notes: (Read only property)

95.3.13 Name as String

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this node.
Notes: (Read only property)

95.3.14 ParentCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of parent nodes for this node.
Notes:

Typically one.
(Read only property)

95.3.15 Path as String

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The path of this node.
Notes:

Useful for finding a node again.
(Read only property)

95.3.16 RetainCount as Integer

MBS MacCF Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retain count of this object.
Notes: (Read only property)

Chapter 96

IO Warrior

96.1 class IOWarriorCarbonDeviceMBS

96.1.1 class IOWarriorCarbonDeviceMBS

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to describe

96.1.2 Properties

96.1.3 InterfaceHandle as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle of this interface.
Notes:

This value is needed for WriteToInterface and ReadFromInterface calls.
(Read and Write property)

96.1.4 InterfaceOpen as Boolean

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this Interface is open or not.
Notes: (Read and Write property)

96.1.5 InterfaceType as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Type of interface.
Notes:

One of the values in the kIOWarrior*Interface* constants.
(Read and Write property)

96.1.6 SerialNumber as String

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The serial number of this device.
Notes:

Not available on very old devices.
(Read and Write property)

96.2 class IOWarriorCarbonMBS

96.2.1 class IOWarriorCarbonMBS

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class to control the IOWarrior Device on Mac OS X.
Notes:

This is the software for the IOWarrior USB Device from codemercs.com. The SDK from May 2003 is used.

http://www.codemercs.com

96.2.2 Methods

96.2.3 CountInterfaces as Integer

MBS USB Plugin, Plugin Version: 6.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Counts the number of interfaces.
Notes: Please email support if you need more functions to handle more than one device.

96.2.4 FirstInterfaceOfType(InterfaceType as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches the first device of the given type.
Notes:

Returns 0 on any error.
This value is needed for WriteToInterface and ReadFromInterface calls.

96.2.5 Init as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Inits the device functions.
Notes: Return 0 if successfull.

96.2.6 InterfaceAtIndex(index as Integer) as IOWarriorCarbonDeviceMBS

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The interface with the given index.

Notes:

Returns nil on any error.
Index is zero based and goes till CountInterfaces-1.

96.2.7 IsPresent as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Counts the devices found.

96.2.8 ReadFromInterface(InterfaceHandle as Integer, reportID as Integer, size as Integer, data as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes bytes from the interface.
Notes: Size must match the device's report size.

96.2.9 ReadInterface0(byref int32 as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Reads a 32bit value from interface 0.

96.2.10 ReadInterface1(reportid as Integer, m as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Reads from interface 0.

96.2.11 WriteInterface0(value as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes to interface 0.

96.2.12 WriteInterface1(reportid as Integer, m as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes to interface 1.

96.2.13 WriteToInterface(InterfaceHandle as Integer, size as Integer, data as memoryblock) as Integer

MBS USB Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Writes bytes to the interface.
Notes: Size must match the device's report size.

96.2.14 Properties

96.2.15 USB24DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 24 device.
Notes: (Read and Write property)

96.2.16 USB24PVDeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 24 PV device.
Notes: (Read and Write property)

96.2.17 USB40DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 40 device.
Notes: (Read and Write property)

96.2.18 USB56DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB Device ID used for a IOWarrior 56 device.
Notes: (Read and Write property)

96.2.19 USBVendorID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The USB vendor ID of this device.
Notes: (Read and Write property)

96.2.20 Constants

96.2.21 kIOWarrior24Interface0 = 2

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.22 kIOWarrior24Interface1 = 3

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.23 kIOWarrior24PVInterface0 = 6

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.24 kIOWarrior24PVInterface1 = 7

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.25 kIOWarrior40Interface0 = 0

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.26 kIOWarrior40Interface1 = 1

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.27 kIOWarrior56Interface0 = 4

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.2.28 kIOWarrior56Interface1 = 5

MBS USB Plugin, Plugin Version: 7.1. **Function:** One of the interface type constants.

96.3 class IOWarriorWindowsMBS

96.3.1 class IOWarriorWindowsMBS

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A class to control the IOWarrior Device on Windows.
Notes:

This is the software for the IOWarrior USB Device from codemercs.com. The SDK 1.5 vom 21. September 2006 is used.
http://www.codemercs.com/

To work the stuff needs as a minimum the SetupAPI DLL on Windows which is part of Windows 98 or newer.
The plugin can be changed to simply do nothing on Window 95 or NT4 if someone needs this. (A RB application using this plugin can't launch on Windows 95 or NT4 because of the missing DLL.)

96.3.2 Methods

96.3.3 CancelIO(Pipe as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Cancels current IO processing.
Notes:

Returns true for success.

Cancel a read or write operation under way on one of the pipes.
This function is seldom used, because you need several threads in your program to be able to call it at all.
Read() blocks the thread so you need another thread for cancelling. Setting the timeouts is an easier way for handling read or write problems.
The function cancels pending read and write operations simultaneously.

96.3.4 close

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Closes the connection to the hardware.
Notes:

Close all IO-Warriors.
You must call this function when you are done using IO-Warriors in your program.
If multiple IO-Warriors are present all will be closed by this function.

96.3.5 DeviceCount as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the number of IO-Warrior devices present.
Notes:

The function has to be called after Open() to return meaningful results.
Plugging or unplugging IO-Warriors after calling IowKitOpenDevice() is not handled. The number DeviceCount() returns stays the same.

96.3.6 GetProductID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The product ID of the USB device used.
Notes:

You can compare this with the values from USB40DeviceID, USB56DeviceID and USB24DeviceID.

Return the Product ID of the IO-Warrior device identified by iowHandle.
The Product ID is a 16-bit Word identifying the specific kind of IO-Warrior.
The value is cached in the dynamic library because access to the device needs some msecs.

96.3.7 GetRevision as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Return the revision of the firmware of the current IO-Warrior device.
Notes: 0 on any error.

96.3.8 Open as boolean

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Opens a connection to the hardware.

96.3.9 Read(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reads bytes from the device into the buffer.
Notes:

Read data from IO-Warrior.
This function reads length bytes from IO-Warrior and returns the number of bytes read if successful.
Note that you must specify the number of the pipe (see IO-Warrior specs) to read from. numPipe ranges from 0 to IOWKIT_MAX_PIPES-1.
Since the IO-Warriors are HID devices, you can only read the data in chunks called reports. Each report is preceded by a ReportID byte. The "IOWarriorDatasheet.pdf" elaborates about that.
The function returns the number of bytes read, so you should always check if it reads the correct number of bytes, you can use GetLastError() to get error details. Keep in mind that data is always returned in report chunks, so reading 5 bytes from the IO-pins of an IO-Warrior 24 would only return 3 bytes of data because the IO-Warrior 24 has a 3 byte report whereas an IO-Warrior 40 has a 5 byte report.
The Special Mode pipe has a report size of 8 bytes for all IO-Warriors.
Linux does not have a ReportID byte of 0 for pipe 0 (I/O pins). To be completely compatible with Windows libiowkit.so adds that ReportID to the data.
As of dynamic library version 1.4 the function correctly reads several reports at once.

ATTENTION!
This function blocks the current thread until something changes on IO-Warrior (i.e. until user presses a button connected to an input pin, or until IIC data arrives), so if you do not want your program to be blocked you should use a separate thread for reading from IO-Warrior. If you do not want a blocking read use ReadImmediate(). Alternatively you can set the read timeout with SetTimeout() to force Read() to fail when the timeout elapsed.

96.3.10 ReadImmediate(byref value as UInt32) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Returns the last value readed in the parameter.
Notes:

Return last value read from IO-Warrior pipe 0 (I/O pins).
The function returns TRUE (1) if a new value has arrived otherwise it returns FALSE and places the last value read into value.
The function can only read the I/O pins via pipe 0 so it does not need a numPipe parameter. It also abstracts from the number of I/O pins the device has.

Until the first report has been read the function returns -1 because the I/O pins are initially high.

Internally 8 reports are buffered to allow using a timer to call ReadImmediate() without losing fast bursts of reports. Read() also uses the buffered reports so do not mix calls to Read() and ReadImmediate() without careful consideration.
This is not true for the Linux version yet.
There is no non-blocking read for pipe 1 (Special Mode Functions) because pipe 1 has a command interface where you write a command and then read the answer.

96.3.11 ReadNonBlocking(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Reads bytes from the device into the buffer in non blocking mode.

96.3.12 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The serialnumber of this IOWarrior device.
Notes:

Returns an empty string if there is no serial number available.
The serialnumber is an eight byte long string.

96.3.13 SetTimeout(timeout as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the timeout.
Example:

```
dim w as IOWarriorWindowsMBS // your instance

if w.SetTimeout(1000) then
MsgBox "OK. Set one second timeout"
else
MsgBox "Failed."
end if
```

Notes:

Default is infinity.

Set read I/O timeout in milliseconds.
It is possible to lose reports with HID devices. Since reading a HID device is a blocking call it is possible to block your application in that case.
SetTimeout() makes Read() fail if it does not read a report in the allotted time.
If Read() times out, you have to restart any pending transaction (for example, IIC write or read transaction) from the beginning.
It is recommended to use 1 second (1000) or bigger timeout values.

Returns true on success.

96.3.14 SetWriteTimeout(timeout as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the write timeout.
Notes:

Default is infinity.

Set write I/O timeout in milliseconds.
SetWriteTimeout() makes Write() fail if it does not write a report in the
allotted time.
If Write() times out, you have to restart any pending transaction (for example, IIC write transaction) from the beginning.
Failure of Write() is uncommon. Check your hardware if you encounter write errors.
The Linux library does not implement SetWriteTimeout() yet.
It is recommended to use 1 second (1000) or bigger timeout values.

96.3.15 Version as string

MBS USB Plugin, Plugin Version: 7.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The version of the IOWarrior library used for this class.
Notes: returns e.g. "IO-Warrior Kit V1.4".

96.3.16 Write(pipe as Integer, buffer as memoryblock, bufferSize as Integer) as Integer

MBS USB Plugin, Plugin Version: 3.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Writes bytes from the buffer to the device.
Notes:

Write length bytes of data to pipe numPipe of IO-Warrior. The return value is the number of bytes written. Writing something else than a single report of the correct size and a valid report ID for the pipe fails for Windows. The function allows writing to the I/O pins through pipe 0 and Special Mode functions
through pipe 1. To be completely compatible with the Windows version libiowkit.so expects a ReportID 0 for pipe 0 (I/O pins) even if Linux does not have a ReportID on pipe 0. The ReportID is stripped from the data sent to the device.
Sample write to pipe 0 of an IO-Warrior 40:
Integer value consists of 32 bits, which correspond to the 32 IO-Warrior 40 I/O pins. Each bit has the following meaning:
When a 1 is written to a pin the output driver of that pin is off and the pin is pulled high by an internal resistor. The pin can now be used as an input or an output with high state.

When a 0 is written to a pin the output driver is switched on pulling the pin to ground. The pin is now a output driving low.
For example, writing 0 (all 32 bits are zero) to IO-Warrior sets all pins as outputs driving low (so if you have LEDs connected to them they will be on).
Reading the status of the pins does always return the logic level on the pins, not the value written to the pin drivers.
Writing -1 (value in hex, all 32 bits set) sets all pins as inputs.
Note that if you want to use a pin as an input, you must first set it up as input, in other words, you must write 1 to it. For connected LEDs this means they go off.

96.3.17 Properties

96.3.18 DeviceIndex as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The index of the current used IOWarrior device.
Notes:

Index is one based.
You can switch between the IO-Warrior devices by setting this parameter.
(Read and Write property)

96.3.19 Handle as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle of the current IOWarrior device.
Notes: (Read and Write property)

96.3.20 USB24DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB Device ID used for a IOWarrior 24 device.
Notes: (Read and Write property)

96.3.21 USB40DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB Device ID used for a IOWarrior 40 device.
Notes: (Read and Write property)

96.3.22 USB56DeviceID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB Device ID used for a IOWarrior 56 device.
Notes: (Read and Write property)

96.3.23 USBVendorID as Integer

MBS USB Plugin, Plugin Version: 7.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The USB vendor ID of this device.
Notes: (Read and Write property)

Chapter 97

iTunes

97.1 class iTunesLibraryAlbumMBS

97.1.1 class iTunesLibraryAlbumMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Represents an album where a given media item (MediaItem) is contained.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.1.2 Methods

97.1.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.1.4 Properties

97.1.5 AlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The artist associated with this album.
Notes: (Read only property)

97.1.6 Artist as iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The artist.
Notes:

Deprecated. Will be removed in future versions.
(Read only property)

97.1.7 Compilation as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this album is a compilation.
Notes: (Read only property)

97.1.8 DiscCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of discs in this album.
Notes: (Read only property)

97.1.9 DiscNumber as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The index (i.e. 1, 2, 3, etc.) of the disc this album refers to within a compilation.0
Notes: (Read only property)

97.1.10 Gapless as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this track's album is gapless.
Notes: (Read only property)

97.1.11 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.

Notes: (Read and Write property)

97.1.12 Rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rating of this track's album.
Notes: (Read only property)

97.1.13 RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rating of this track's album.
Notes: (Read only property)

97.1.14 SortAlbumArtist as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The artist associated with this album. This field should be used when sorting.
Notes: (Read only property)

97.1.15 SortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this that should be used for sorting purposes.
Notes: (Read only property)

97.1.16 Title as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this album.
Notes: (Read only property)

97.1.17 TrackCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of tracks in this album.

Notes: (Read only property)

97.2 class iTunesLibraryArtistMBS

97.2.1 class iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Represents an artist, such as the performer of a song.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.2.2 Methods

97.2.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.2.4 Properties

97.2.5 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

97.2.6 name as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this artist.
Notes: (Read only property)

97.2.7 sortName as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of this artist that should be used for sorting purposes.
Notes: (Read only property)

97.3 class iTunesLibraryArtworkMBS

97.3.1 class iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Represents a media item artwork.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.3.2 Methods

97.3.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.3.4 Properties

97.3.5 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

97.3.6 image as NSImageMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The NSImage formed by using image Data.
Notes: (Read only property)

97.3.7 imageData as Memoryblock

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The data (bytes) of this artwork image.
Notes: (Read only property)

97.3.8 imageDataFormat as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The fortmat of the data returned by the imageData method.
Notes: (Read only property)

97.3.9 Constants

97.3.10 ITLibArtworkFormatBitmap = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data format is a bitmap.

97.3.11 ITLibArtworkFormatBMP = 6

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a BMP image.

97.3.12 ITLibArtworkFormatGIF = 4

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a GIF image.

97.3.13 ITLibArtworkFormatJPEG = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a JPEG image.

97.3.14 ITLibArtworkFormatJPEG2000 = 3

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.

Notes: The image data corresponds to a JPEG2000 image.

97.3.15 ITLibArtworkFormatNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data format is unknown.

97.3.16 ITLibArtworkFormatPICT = 8

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a PICT image.

97.3.17 ITLibArtworkFormatPNG = 5

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a PNG image.

97.3.18 ITLibArtworkFormatTIFF = 7

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible formats of the data returned by ITLibArtwork's imageData method.
Notes: The image data corresponds to a TIFF image.

97.4 class iTunesLibraryMBS

97.4.1 class iTunesLibraryMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A class representing an iTunes library whose metadata is being queried.
Notes: Requires iTunes 11 on Mac OS X. And your app must be code signed.

97.4.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 20.0r7
- MBS Xojo / Real Studio plug-ins in version 13.5

97.4.3 Xojo Developer Magazine

- 12.1, page 9: News

97.4.4 Methods

97.4.5 allMediaItems as iTunesLibraryMediaItemMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All media items in the library.

97.4.6 allPlaylists as iTunesLibraryPlaylistMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** All playlists in the library.

97.4.7 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Retrieves the artwork from a media file.
Notes:

mediaFile: The folderitem of the media file whose artwork should be extracted.
Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was

not found or could not be extracted.

- 97.4.8 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS 16500

97.4.8 artworkForMediaFile(mediaFileURL as string) as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Retrieves the artwork from a media file.
Notes:

mediaFileURL: The URL of the media file whose artwork should be extracted.
Returns a iTunesLibraryArtworkMBS instance represeting the media file artwork, or nil if the artwork was not found or could not be extracted.
See also:

- 97.4.7 artworkForMediaFile(mediaFile as folderitem) as iTunesLibraryArtworkMBS 16499

97.4.9 Constructor(requestedAPIVersion as string, byref error as NSErrorMBS, threaded as boolean = false)

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes an instance of ITLibrary which can be used to retrieve media entities.
Notes:

Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.
At this point all media entities will be cached in memory until the time the object is deallocated.
requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.
error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

If handle is 0, the initialization failed.
Requires that your app is code signed.

Added threaded parameter in version 20.0 of the MBS Plugins. If true, the work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

97.4.10 libraryWithAPIVersion(requestedAPIVersion as string, byref error as NSErrorMBS) as iTunesLibraryMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an instance of ITLibrary which can be used to retrieve media entities.
Notes:

Upon initialization of the library class, the default iTunes database for the current user will be read and parsed.
At this point all media entities will be cached in memory until the time the object is deallocated.
requestedAPIVersion: The version of the iTunesLibrary API that the application is requesting, provide "1.0" if unknown.
error: A variable that will receive an NSError if this method fails. May be nil if caller does not care about error.

Returns a Library instance, or nil if this method fails.
Requires that your app is code signed.

97.4.11 Properties

97.4.12 apiMajorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The major version number of this API.
Notes: (Read only property)

97.4.13 apiMinorVersion as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minor version number of this API.
Notes: (Read only property)

97.4.14 applicationVersion as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The version of iTunes being accessed.
Notes: (Read only property)

97.4.15 features as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A bitwise OR combination of the features of this library.
Notes: (Read only property)

97.4.16 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

97.4.17 musicFolderLocation as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of the iTunes music folder.
Notes: (Read only property)

97.4.18 showContentRating as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to show content rating labels.
Notes: (Read only property)

97.4.19 Constants

97.4.20 ITLibExportFeatureNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants describe the features supported by a given iTunes library.
Notes: No features are supported.

97.5 class iTunesLibraryMediaEntityMBS

97.5.1 class iTunesLibraryMediaEntityMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Abstract superclass for MediaItem and Playlist instances.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.5.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr2

97.5.3 Methods

97.5.4 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.5.5 enumerateValuesExceptForProperties(propertyNames() as string) as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries all keys and values for all properties except the given property names.

97.5.6 enumerateValuesForAllProperties as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries all keys and values.

97.5.7 enumerateValuesForProperties(propertyNames() as string) as dictionary

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries all keys and values with the given property names.

97.5.8 ITLibMediaEntityPropertyPersistentID as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The property key for the persistent id.

97.5.9 valueForProperty(PropertyName as string) as Variant

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the value for a specified media property key.
Notes:

The media property keys you can use with this property are listed in this document and in Media Item Property Keys and Playlist Property Keys.
property: The media property key that you want the corresponding value of.
Returns the value for the media property key.

97.5.10 Properties

97.5.11 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

97.5.12 persistentID as Int64

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique identifier of this media entity.
Notes: (Read only property)

97.6 class iTunesLibraryMediaItemMBS

97.6.1 class iTunesLibraryMediaItemMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A media item represents a single piece of media (such as a song, a video, a podcast, etc) in the iTunes library.
Notes:

A media item has an overall unique identifier, accessed using the persistentID property. The media item metadata may be accessed through its individual properties or via the iTunesLibraryMediaEntityMBS general property accessor methods.
Subclass of the iTunesLibraryMediaEntityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.6.2 Methods

97.6.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.6.4 ITLibMediaItemPropertyAddedDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.5 ITLibMediaItemPropertyAlbumArtist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.6 ITLibMediaItemPropertyAlbumDiscCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.7 ITLibMediaItemPropertyAlbumDiscNumber as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.8 ITLibMediaItemPropertyAlbumIsCompilation as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.9 ITLibMediaItemPropertyAlbumIsGapless as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.10 ITLibMediaItemPropertyAlbumRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.11 ITLibMediaItemPropertyAlbumRatingComputed as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.12 ITLibMediaItemPropertyAlbumTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.13 ITLibMediaItemPropertyAlbumTrackCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.14 ITLibMediaItemPropertyArtistName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.15 ITLibMediaItemPropertyArtwork as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.16 ITLibMediaItemPropertyBeatsPerMinute as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.17 ITLibMediaItemPropertyBitRate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.18 ITLibMediaItemPropertyCategory as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.19 ITLibMediaItemPropertyComments as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.20 ITLibMediaItemPropertyComposer as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.21 ITLibMediaItemPropertyContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.22 ITLibMediaItemPropertyDescription as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.23 ITLibMediaItemPropertyFileType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.24 ITLibMediaItemPropertyGenre as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.25 ITLibMediaItemPropertyGrouping as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.26 ITLibMediaItemPropertyHasArtwork as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.27 ITLibMediaItemPropertyIsDRMProtected as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.28 ITLibMediaItemPropertyIsPurchased as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.29 ITLibMediaItemPropertyIsUserDisabled as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.30 ITLibMediaItemPropertyIsVideo as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.31 ITLibMediaItemPropertyKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.32 ITLibMediaItemPropertyLastPlayDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.33 ITLibMediaItemPropertyLocation as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.34 ITLibMediaItemPropertyLocationType as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.35 ITLibMediaItemPropertyLyricsContentRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.36 ITLibMediaItemPropertyMediaKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.37 ITLibMediaItemPropertyModifiedDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.38 ITLibMediaItemPropertyPlayCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.39 ITLibMediaItemPropertyRating as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.40 ITLibMediaItemPropertyRatingComputed as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.41 ITLibMediaItemPropertyReleaseDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.42 ITLibMediaItemPropertySampleRate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.43 ITLibMediaItemPropertySize as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.44 ITLibMediaItemPropertySkipDate as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.45 ITLibMediaItemPropertySortAlbumArtist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.46 ITLibMediaItemPropertySortAlbumTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.47 ITLibMediaItemPropertySortArtistName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.48 ITLibMediaItemPropertySortComposer as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.49 ITLibMediaItemPropertySortTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.50 ITLibMediaItemPropertyStartTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.51 ITLibMediaItemPropertyStopTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.52 ITLibMediaItemPropertyTitle as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.53 ITLibMediaItemPropertyTotalTime as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.54 ITLibMediaItemPropertyTrackNumber as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.55 ITLibMediaItemPropertyUserSkipCount as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.56 ITLibMediaItemPropertyVideoEpisode as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.57 ITLibMediaItemPropertyVideoEpisodeOrder as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.58 ITLibMediaItemPropertyVideoHeight as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.59 ITLibMediaItemPropertyVideoIsHD as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.60 ITLibMediaItemPropertyVideoSeason as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.61 ITLibMediaItemPropertyVideoSeries as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.62 ITLibMediaItemPropertyVideoSortSeries as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.63 ITLibMediaItemPropertyVideoWidth as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.64 ITLibMediaItemPropertyVoiceOverLanguage as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.65 ITLibMediaItemPropertyVolumeAdjustment as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.66 ITLibMediaItemPropertyVolumeNormalizationEnergy as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.67 ITLibMediaItemPropertyYear as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for properties.

97.6.68 Properties

97.6.69 addedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and media item this media item was added to the iTunes database.
Notes: (Read only property)

97.6.70 album as iTunesLibraryAlbumMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The album where this media item belongs.
Notes: (Read only property)

97.6.71 artist as iTunesLibraryArtistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The artist associated with this media item.
Notes: (Read only property)

97.6.72 artwork as iTunesLibraryArtworkMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item has artwork.
Notes: (Read only property)

97.6.73 ArtworkAvailable as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item has artwork.
Notes: (Read only property)

97.6.74 beatsPerMinute as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The BPM (beats per minute) of this media item.
Notes: (Read only property)

97.6.75 bitrate as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The bitrate of this media item in kbps.
Notes: (Read only property)

97.6.76 category as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The podcast category of this media item (implies this media item is a podcast).
Notes: (Read only property)

97.6.77 comments as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Any comments associated with this media item.
Notes: (Read only property)

97.6.78 composer as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the composer associated with this media item.
Notes: (Read only property)

97.6.79 contentRating as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The extended content rating of this media item.
Notes: (Read only property)

97.6.80 description as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Any podcast description of with this media item (implies this media item is a podcast).
Notes: (Read only property)

97.6.81 DRMProtected as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item is DRM protected.
Notes: (Read only property)

97.6.82 fileType as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of the file this media item refers to.
Notes: (Read only property)

97.6.83 genre as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The genre associated with this media item.
Notes: (Read only property)

97.6.84 grouping as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The grouping of this media item.
Notes: (Read only property)

97.6.85 kind as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This media item's file kind (ex. MPEG audio file).
Notes: (Read only property)

97.6.86 lastPlayedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time this media item was last played in iTunes, or nil if this media item has not been played.
Notes: (Read only property)

97.6.87 location as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of this media item on disk.
Notes: (Read only property)

97.6.88 locationFile as FolderItem

MBS MacExtras Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The location of this media item on disk.
Notes:

For your convenience we provide this folderitem if location points to a valid file.
(Read only property)

97.6.89 locationType as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of this media item with respect to its location.
Notes: (Read only property)

97.6.90 lyricsContentRating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The content rating of this media item's lyrics.
Notes: (Read only property)

97.6.91 mediaKind as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This media item's media kind.
Notes: (Read only property)

97.6.92 modifiedDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time this media item was last modified.
Notes: (Read only property)

97.6.93 playCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of times this media item has been played in iTunes.

Notes: (Read only property)

97.6.94 Purchased as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item was purchased.
Notes: (Read only property)

97.6.95 rating as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rating of this media item.
Notes: (Read only property)

97.6.96 RatingComputed as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item's rating is computed.
Notes: (Read only property)

97.6.97 releaseDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date this media item was released.
Notes: (Read only property)

97.6.98 sampleRate as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sample rate of this media item in samples per second.
Notes: (Read only property)

97.6.99 size as UInt64

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size in bytes of this media item on disk.

Notes: (Read only property)

97.6.100 skipCount as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of times this media item has been skiped.
Notes: (Read only property)

97.6.101 skipDate as Date

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date and time when this media item was last skipped.
Notes: (Read only property)

97.6.102 sortComposer as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the composer associated with this media item that should be used for sorting purposes.
Notes: (Read only property)

97.6.103 sortTitle as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title of this media item that should be used for sorting purposes.
Notes: (Read only property)

97.6.104 startTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The start time of this media item given that the media item is a podcast.
Notes: (Read only property)

97.6.105 stopTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The stop time of this media item given that the media item is a podcast.
Notes: (Read only property)

97.6.106 title as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title of this media item.
Notes: (Read only property)

97.6.107 totalTime as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The length of this media item in seconds.
Notes: (Read only property)

97.6.108 trackNumber as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The position of this media item within its album.
Notes: (Read only property)

97.6.109 userDisabled as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the user has disabled this media item.
Notes: (Read only property)

97.6.110 video as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this media item is a video media item (video podcast, movie, etc).
Notes: (Read only property)

97.6.111 videoInfo as iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The video information of this media item (implies this media item is a video media item).
Notes: (Read only property)

97.6.112 voiceOverLanguage as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The voice-over language of this media item.
Notes: (Read only property)

97.6.113 volumeAdjustment as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume adjustment used for this media item if any.
Notes: (Read only property)

97.6.114 volumeNormalizationEnergy as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume normalization energy applied to this media item.
Notes: (Read only property)

97.6.115 year as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The year when this media item was released.
Notes: (Read only property)

97.6.116 Constants

97.6.117 ITLibMediaItemLocationTypeFile = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
Notes: The media item location refers to a local file.

97.6.118 ITLibMediaItemLocationTypeRemote = 3

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
Notes: The media item location refers to a remote file.

97.6.119 ITLibMediaItemLocationTypeUnknown = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
Notes: The media item type is not known.

97.6.120 ITLibMediaItemLocationTypeURL = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify possible the type of a media item with respect to its location.
Notes: The media item location refers to a URL (for example, a podcast).

97.6.121 ITLibMediaItemLyricsContentRatingClean = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible ratings of media item lyrics.
Notes: The media item lyrics do not contain explicit language.

97.6.122 ITLibMediaItemLyricsContentRatingExplicit = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible ratings of media item lyrics.

Notes: The media item lyrics contain explicit language.

97.6.123 ITLibMediaItemLyricsContentRatingNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible ratings of media item lyrics.
Notes: No rating information for the media item lyrics.

97.6.124 ITLibMediaItemMediaKindAlertTone = 21

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an audio tone on an iOS device which is not a protected ringtone.

97.6.125 ITLibMediaItemMediaKindAudiobook = 5

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an audiobook.

97.6.126 ITLibMediaItemMediaKindBook = 19

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an EPUB or iBooks Author book.

97.6.127 ITLibMediaItemMediaKindDigitalBooklet = 15

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iTunes Extra or an iTunes LP.

97.6.128 ITLibMediaItemMediaKindHomeVideo = 12

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.

Notes: The media item is a non-iTunes Store movie.

97.6.129 ITLibMediaItemMediaKindInteractiveBooklet = 9

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a QuickTime movie with embedded flash (deprecated)

97.6.130 ITLibMediaItemMediaKindIOSApplication = 16

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iPhone or iPod touch application.

97.6.131 ITLibMediaItemMediaKindiTunesU = 18

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iTunesU audio of video file.

97.6.132 ITLibMediaItemMediaKindMovie = 3

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a movie.

97.6.133 ITLibMediaItemMediaKindMusicVideo = 7

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a music video.

97.6.134 ITLibMediaItemMediaKindPDFBook = 20

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.

Notes: The media item is a PDF treated as Books in the UI unless overridden by the user.

97.6.135 ITLibMediaItemMediaKindPDFBooklet = 6

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an unwrapped PDF file that is part of a Music album.

97.6.136 ITLibMediaItemMediaKindPodcast = 4

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an audio or video podcast.

97.6.137 ITLibMediaItemMediaKindRingtone = 14

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is an iOS ringtone.

97.6.138 ITLibMediaItemMediaKindSong = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a song.

97.6.139 ITLibMediaItemMediaKindTVShow = 8

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a TV show.

97.6.140 ITLibMediaItemMediaKindUnknown = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.

Notes: The media item kind is unknown.

97.6.141 ITLibMediaItemMediaKindVoiceMemo = 17

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible media kinds of a iTunes media item.
Notes: The media item is a voice memo recorded on iPod/iPhone.

97.7 class iTunesLibraryMediaItemVideoInfoMBS

97.7.1 class iTunesLibraryMediaItemVideoInfoMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Encapsulates the video information of a video media item.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.7.2 Methods

97.7.3 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.7.4 Properties

97.7.5 episode as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TV episode the video is associated with (implies the track is a TV show).
Notes: (Read only property)

97.7.6 episodeOrder as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TV episode order the video is associated with (implies the track is a TV show).
Notes: (Read only property)

97.7.7 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

97.7.8 HD as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the video is high definition.
Notes: (Read only property)

97.7.9 season as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of TV season the video is associated with (implies the track is a TV show).
Notes: (Read only property)

97.7.10 series as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of TV series the video is associated with (implies track is a TV show).
Notes: (Read only property)

97.7.11 sortSeries as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the TV series the video is associated with that should be used for when sorting (implies the track is a TV show).
Notes: (Read only property)

97.7.12 videoHeight as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The height of the video.
Notes: (Read only property)

97.7.13 videoWidth as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The width of the video.
Notes: (Read only property)

97.8 class iTunesLibraryPlaylistMBS

97.8.1 class iTunesLibraryPlaylistMBS

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A playlist is a collection of related media items.
Notes:

(Media items are described in iTunesLibraryMediaItemMBS Class Reference.)
Each playlist has a name, a set of attributes, and a unique identifier that persists across application launches.
Subclass of the iTunesLibraryMediaEntityMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

97.8.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr6

97.8.3 Methods

97.8.4 Constructor

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

97.8.5 items(threaded as boolean = false) as iTunesLibraryMediaItemMBS()

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The media items contained within this playlist.

97.8.6 ITLibPlaylistPropertyAllItemsPlaylist as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.7 ITLibPlaylistPropertyDistinguisedKind as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.8 ITLibPlaylistPropertyItems as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.9 ITLibPlaylistPropertyMaster as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.10 ITLibPlaylistPropertyName as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.11 ITLibPlaylistPropertyParentPersistentID as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.12 ITLibPlaylistPropertyVisible as string

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the playlist property.

97.8.13 Properties

97.8.14 AllItemsPlaylist as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is an "all items" playlist.
Notes:

i.e. marked items in playlist exceeds the total tracks in the playlist so the playlist is a discreet object.
(Read only property)

97.8.15 DistinguishedKind as Integer

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distinguished kind of this playlist.
Notes: (Read only property)

97.8.16 Master as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is a master playlist.
Notes: (Read only property)

97.8.17 name as String

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name or title of this playlist.
Notes: (Read only property)

97.8.18 ParentID as Int64

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique identifier of this playlist' parent.
Notes:

Changed to Int64 for MBS Plugin 19.5.
(Read only property)

97.8.19 Visible as Boolean

MBS MacExtras Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this playlist is visible.
Notes: (Read only property)

97.8.20 Constants

97.8.21 ITLibDistinguishedPlaylistKind90sMusic = 42

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default 90's music iTunes playlist.

97.8.22 ITLibDistinguishedPlaylistKindBooks = 4

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all the books in the iTunes Library

97.8.23 ITLibDistinguishedPlaylistKindClassicalMusic = 48

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default Classical Music smart playlist generated by iTunes.

97.8.24 ITLibDistinguishedPlaylistKindHomeVideos = 50

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all homes videos in the iTunes Library.

97.8.25 ITLibDistinguishedPlaylistKindiTunesU = 26

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains the user's iTunesU items.

97.8.26 ITLibDistinguishedPlaylistKindLibraryMusicVideos = 49

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all music videos in the iTunes Library. This is NOT the same as the default

Music Videos smart playlist.

97.8.27 ITLibDistinguishedPlaylistKindMovies = 1

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all the movies in the iTunes Library.

97.8.28 ITLibDistinguishedPlaylistKindMusic = 3

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all the music items in the iTunes Library.

97.8.29 ITLibDistinguishedPlaylistKindMusicVideos = 47

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default Music Videos smart playlist generated by iTunes.

97.8.30 ITLibDistinguishedPlaylistKindMyTopRated = 43

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default Top Rated smart playlist generated by iTunes.

97.8.31 ITLibDistinguishedPlaylistKindNone = 0

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is not a distinguished playlist.

97.8.32 ITLibDistinguishedPlaylistKindPodcasts = 7

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.

Notes: The playlist contains all the podcasts in the iTunes library.

97.8.33 ITLibDistinguishedPlaylistKindPurchases = 16

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all the user's purchases in the iTunes Store.

97.8.34 ITLibDistinguishedPlaylistKindRecentlyAdded = 46

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default Recently Added smart playlist generated by iTunes.

97.8.35 ITLibDistinguishedPlaylistKindRecentlyPlayed = 45

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default Recently Played smart playlist generated by iTunes .

97.8.36 ITLibDistinguishedPlaylistKindRingtones = 5

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all the ringtones in the iTunes Library.

97.8.37 ITLibDistinguishedPlaylistKindTop25MostPlayed = 44

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist is the default 25 Most Played smart playlist generated by iTunes.

97.8.38 ITLibDistinguishedPlaylistKindTVShows = 2

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.

Notes: The playlists contains all the TV shows in the iTunes Library.

97.8.39 ITLibDistinguishedPlaylistKindVoiceMemos = 14

MBS MacExtras Plugin, Plugin Version: 13.5. **Function:** One of the constants to specify the possible kinds of playlists.
Notes: The playlist contains all voice memos.

Chapter 98

Java

98.1 class JavaArrayMBS

98.1.1 class JavaArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for a java array object.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.1.2 Blog Entries

- Upgrading our Java Support for Xojo
- MBS Xojo Plugins, version 19.2pr5

98.1.3 Methods

98.1.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.1.5 Properties

98.1.6 Length as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of items in the array.
Notes:

Returns 0 on any error.
(Read only property)

98.2 class JavaBooleanArrayMBS

98.2.1 class JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java boolean array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.2.2 Methods

98.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.2.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.byte(index) to access.

98.2.5 Values as Boolean()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.2.6 Properties

98.2.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.2.8 Value(index as Integer) as Boolean

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.3 class JavaByteArrayMBS

98.3.1 class JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java byte array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.3.2 Methods

98.3.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.3.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.Byte(index) to access.

98.3.5 Values as Int8()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.3.6 Properties

98.3.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.3.8 Value(index as Integer) as Int8

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.4 class JavaCharArrayMBS

98.4.1 class JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java char array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.4.2 Methods

98.4.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.4.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.UShortMBS(index*2) to access.

98.4.5 Values as UInt16()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.4.6 Properties

98.4.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.4.8 Value(index as Integer) as UInt16

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.5 class JavaClassMBS

98.5.1 class JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for a Java class.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.5.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr6
- Upgrading our Java Support for Xojo
- MBS Real Studio Plugins, version 12.5pr1

98.5.3 Methods

98.5.4 AllocateObject as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Allocates a new Java object without invoking any of the constructors for the object. #
Notes:

Returns a reference to the object or nil on any error.

Does not work for array classes.
Throws InstantiationException if the class is an interface or an abstract class.

98.5.5 CallStaticBooleanMethod(MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a boolean return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.6 CallStaticByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a byte return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.7 CallStaticCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a char return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.8 CallStaticDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a double return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.9 CallStaticFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a float return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.10 CallStaticIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with an integer return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID

argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.11 CallStaticLongMethod(MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a long return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.12 CallStaticMain(args() as string)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static main method and passes the String array.

98.5.13 CallStaticMethod(MethodID as JavaMethodMBS, args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method.
Example:

```
Dim vm As JavaVMMBS // your initialized VM
```

```
// 1. Find class
Dim jclass As JavaClassMBS =vm.FindClass("stringtest")

if jclass=nil then
msgbox "Can't find stringtest class"
Return
end if

// 2. lookup method
Dim jmethod3 As JavaMethodMBS = jclass.GetStaticMethod("setValue","(Ljava/lang/String;)V")
if jmethod3=nil then
MsgBox "Failed to find setValue method."
Return
end if

// 3. Call static method
Dim param3() As Variant
param3.append "Hello World"
Call jclass.CallStaticMethod(jmethod3,param3)

MsgBox "done"
```

Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

98.5.14 CallStaticObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with an object return value.

Example:

```
dim e as JavaVMMBS // global

// Call "public static String getMessage()" and "public static void setMessage(String theMessage)" from class "test".

dim jclass, sclass as JavaClassMBS
dim jmethod as JavaMethodMBS
dim jstring as JavaStringMBS
dim args as JavaObjectArrayMBS
dim m as MemoryBlock
dim s as String
dim jfield as JavaFieldMBS

jclass=e.FindClass("test")

if jclass=nil then
msgbox "Can't find test class"
else
jmethod = jclass.GetStaticMethod("setMessage", "(Ljava/lang/String;)V")

if jmethod=nil then
msgbox "Can't find HelloWorld.setMessage"
else
jstring = e.NewStringUTF8("Hello from Xojo!")
if jstring=nil then
msgbox "Out of memory"
else
m=NewMemoryBlock(8) // 8 bytes per parameter
m.long(0)=jstring.Handle

jclass.CallStaticVoidMethod(jmethod, m)

jmethod = jclass.GetStaticMethod("getMessage", "()Ljava/lang/String;")

if jmethod=nil then
msgbox "Can't find HelloWorld.getMessage"
else
m=NewMemoryBlock(8) // 8 bytes per parameter
m.long(0)=jstring.Handle

jstring=JavaStringMBS(jclass.CallStaticObjectMethod(jmethod,m))

MsgBox jstring.CopyStringUTF
end if
end if
end if
```

end if

Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.15 CallStaticShortMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with a short return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.16 CallStaticVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a static method with no return value.
Notes:

This call invokes a static method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling JavaClassMBS.GetMethod().

The method ID must be derived from this class, not from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.5.17 Constructor

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.5.18 GetField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches for the Field with the given Name and Signature.
Notes:

Nil on any error.

The signature is a string derived from the field's type or method's arguments and return type, as shown here:

Java Type	Signature
boolean	Z
byte	B
char	C
short	S
int	I
long	L
float	F
double	D
void	V
objects	Lfully-qualified-class-name;
arrays	[array-type
methods	(argument-types)return-type

98.5.19 GetMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the method with the given name and signature.
Example:

```
dim jclass as JavaClassMBS
dim method as JavaMethodMBS

method=jclass.GetMethod("mymethod", "( [ Ljava/lang/String;)V")
```

Notes:

Returns the method ID for an instance (non-static) method of a class or interface. The method may be defined in one of the the class's super classes and inherited by the class. The method is determined by its name and signature.

To obtain the method ID of a constructor, supply <init>as the method name and void (V) as the return type.

Nil on any error.

Throws NoSuchMethodError if the specified method cannot be found.

The signature is a string derived from the field's type or method's arguments and return type, as shown here:

Java Type	Signature
boolean	Z
byte	B
char	C
short	S
int	I
long	L
float	F
double	D
void	V
objects	Lfully-qualified-class-name;
arrays	[array-type
methods	(argument-types)return-type

98.5.20 GetStaticField(name as string, sig as string) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the static field with the given name and signature.
Notes: Nil on any error.

98.5.21 GetStaticMethod(name as string, sig as string) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the method ID for a static method of a class. The method is specified by its name and signature.
Example:

```
dim jclass as JavaClassMBS
dim method as JavaMethodMBS

method=jclass.GetStaticMethod("main", "( [ Ljava/lang/String;)V")
```

Notes:

Nil on any error.
e.g. the signature of the default static main method is "([Ljava/lang/String;)V" which means return type void at the end and before an array of string.

98.5.22 NewObject(methodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs a new Java object.
Notes:

The method ID indicates which constructor method to invoke. This ID must be obtained by calling GetMethod with <init>as the method name and void (V) as the return type.

Returns nil on any error.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

Throws Java InstantiationException if the class is an interface or an abstract class.

See also:

- 98.5.23 NewObject(MethodID as JavaMethodMBS, args() as Variant) as JavaObjectMBS 16555

98.5.23 NewObject(MethodID as JavaMethodMBS, args() as Variant) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs a new Java object.
Example:

```
dim vm as JavaVMMBS // your initialized VM

// 1. Find class
Dim jclass As JavaClassMBS=vm.FindClass("stringtest")

If jclass = Nil Then
MsgBox "Can't find stringtest class"
Return
End If

// 2. Call constructor
Dim jmethod As JavaMethodMBS = jclass.GetMethod("<init>", "(ILjava/lang/String;D)V")

If jmethod = Nil Then
MsgBox "Can't find constructor"
Return
End If

Dim param() As Variant
// 1. Parameter with Integer: I
param.Append 123
// 2. Parameter with string: Ljava/lang/String;
param.Append "Hello World"
// 3. Parameter with double: D
param.Append 3.14
Dim jobject As JavaObjectMBS = jclass.NewObject(jmethod, param)

If jobject = Nil Then
MsgBox "Constructor failed!?"
Else
MsgBox "OK: "+jobject.ClassName
End If
```

Notes:

The method ID indicates which constructor method to invoke. This ID must be obtained by calling GetMethod with <init>as the method name and void (V) as the return type.

Returns nil on any error.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

Throws Java InstantiationException if the class is an interface or an abstract class.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.
See also:

- 98.5.22 NewObject(methodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS 16554

98.5.24 Superclass as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Points to the superclass of this class.
Notes: Nil if no superclass exists.

98.5.25 Properties

98.5.26 StaticBooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static boolean field in this class.
Notes: (Read and Write computed property)

98.5.27 StaticByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static byte field in this class.
Notes: (Read and Write computed property)

98.5.28 StaticCharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static char field in this class.
Notes: (Read and Write computed property)

98.5.29 StaticDoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static double field in this class.
Notes: (Read and Write computed property)

98.5.30 StaticField(TheField as JavaFieldMBS) as Variant

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static field in this class.
Example:

```
Dim jclass As JavaClassMBS=vm.FindClass("stringtest")

If jclass = Nil Then
MsgBox "Can't find stringtest class"
Return
End If

Dim field As JavaFieldMBS = jclass.GetField("Name", "Ljava/lang/String;")
Dim v As Variant = jclass.StaticField(field)
Dim js As JavaStringMBS = v
MsgBox js
```

Notes:

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

Do not use for generic fields!
(Read and Write computed property)

98.5.31 StaticFloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static float field in this class.
Notes: (Read and Write computed property)

98.5.32 StaticIntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static integer field in this class.
Example:

```
dim f as FolderItem

f=SpecialFolder.Desktop.Child("ojdbc14.jar")

dim j as new JavaVMMBS(f)

dim c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")

dim field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c.StaticIntField(field))
```

Notes: (Read and Write computed property)

98.5.33 StaticLongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static long field in this class.
Notes: (Read and Write computed property)

98.5.34 StaticObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static object field in this class.
Notes: (Read and Write computed property)

98.5.35 StaticShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a static short field in this class.
Notes: (Read and Write computed property)

98.6 class JavaDoubleArrayMBS

98.6.1 class JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java double array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.6.2 Methods

98.6.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.6.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.DoubleValue(index*4) to access.

98.6.5 Values as Double()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.6.6 Properties

98.6.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.6.8 Value(index as Integer) as Double

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.7 class JavaFieldMBS

98.7.1 class JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java field ID.
Example:

```
dim f as FolderItem

f=SpecialFolder.Desktop.Child("ojdbc14.jar")

dim j as new JavaVMMBS(f)

dim c as JavaClassMBS = j.FindClass("oracle/jdbc/driver/OracleTypes")

dim field as JavaFieldMBS

// this are all static integer fields in this class:

field = c.GetStaticField("CURSOR","I")
MsgBox str(c.StaticIntField(field))

field = c.GetStaticField("BLOB","I")
MsgBox str(c.StaticIntField(figield))

field = c.GetStaticField("DOUBLE","I")
MsgBox str(c.StaticIntField(field))
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.7.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr6

- Upgrading our Java Support for Xojo

98.7.3 Methods

98.7.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.7.5 Properties

98.7.6 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fieldID of this field.
Notes: (Read only property)

98.7.7 Name as String

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the field.
Notes:

This is the name you passed in to GetField or GetStaticField functions.
(Read only property)

98.7.8 Signature as String

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The signature of the field.
Notes:

This is the signature you passed in to GetField or GetStaticField functions.
(Read only property)

98.8 class JavaFloatArrayMBS

98.8.1 class JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java float array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.8.2 Methods

98.8.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.8.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.SingleValue(index*4) to access.

98.8.5 Values as Single()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.8.6 Properties

98.8.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.8.8 Value(index as Integer) as Single

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.9 class JavaHandleNilExceptionMBS

98.9.1 class JavaHandleNilExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception which is raised whenever a Java function is operations on an object and there is none.
Notes:

For example if you call a method on the JavaObjectMBS class which requires the handle value being not zero, the exception raises if the handle value is zero.
Subclass of the RuntimeException class.

98.10 class JavaIntArrayMBS

98.10.1 class JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java int array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.10.2 Methods

98.10.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.10.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.Long(index*4) to access.

98.10.5 Values as Integer()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.10.6 Properties

98.10.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.10.8 Value(index as Integer) as Int32

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.11 class JavaLongArrayMBS

98.11.1 class JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java long array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.11.2 Methods

98.11.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.11.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.Int64DoubleMBS(index*8) to access.

98.11.5 Values as Int64()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.11.6 Properties

98.11.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.11.8 Value(index as Integer) as Int64

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.12 class JavaMethodMBS

98.12.1 class JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java method ID.
Notes:

In terminal you can use "javap -s <classname>" to display the class with the method names and parameters. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.12.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr6
- Upgrading our Java Support for Xojo

98.12.3 Methods

98.12.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.12.5 Properties

98.12.6 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The methodID of this method.
Notes: (Read only property)

98.12.7 Name as String

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the method.
Notes:

This is the name you passed in to GetMethod or GetStaticMethod functions.
(Read only property)

98.12.8 Signature as String

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The signature of the method.
Notes:

This is the signature you passed in to GetMethod or GetStaticMethod functions.
(Read only property)

98.13 class JavaNotInitializedExceptionMBS

98.13.1 class JavaNotInitializedExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception which is raised whenever a Java function is called which requires you to initialize the JVM before calling it.
Notes: Subclass of the RuntimeException class.

98.14 class JavaObjectArrayMBS

98.14.1 class JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java object array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.14.2 Methods

98.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.14.4 Values as JavaObjectMBS()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.14.5 Properties

98.14.6 ArrayElement(index as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The object at the given index in the array.
Deprecated: This item is deprecated and should no longer be used. You can use Value instead. **Notes:**

May return nil if the array is empty on the given index or if the index is out of bounds or any other error occurs.

Index is 0 based.

Throws
ArrayIndexOutOfBoundsException: if index does not specify a valid index in the array.
ArrayStoreException: if the class of value is not a subclass of the element class of the array.

(Read and Write computed property)

98.14.7 Value(index as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.15 class JavaObjectMBS

98.15.1 class JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.15.3 Methods

98.15.4 CallBooleanMethod(MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a boolean value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.5 CallByteMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a byte value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.6 CallCharMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a char value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.7 CallDoubleMethod(MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a double value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.8 CallFloatMethod(MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a float value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.9 CallIntMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with an integer value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.10 CallLongMethod(MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a long value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.11 CallMethod(MethodID as JavaMethodMBS, args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method.
Example:

```
Dim vm As JavaVMMBS // your initialized VM

// 1. Find class
Dim jclass As JavaClassMBS =vm.FindClass("stringtest")

if jclass=nil then
msgbox "Can't find stringtest class"
Return
end if

// 2. Call constructor
```

```
dim jmethod1 as JavaMethodMBS = jclass.GetMethod("<init>", "()V")

if jmethod1=nil then
msgbox "Can't find constructor"
Return
end if

// 3. Create object
Dim param1() As Variant
dim jobject1 as JavaObjectMBS=jclass.NewObject(jmethod1, param1)

if jobject1=nil then
MsgBox "Constructor failed!?"
Return
end if

// 4. lookup method
Dim jmethod3 As JavaMethodMBS = jclass.GetMethod("setValue","(Ljava/lang/String;)V")
if jmethod3=nil then
MsgBox "Failed to find setValue method."
Return
end if

// 5. Call method
Dim param3() As Variant
param3.append "Hello World"
Call jobject1.CallMethod(jmethod3,param3)

MsgBox "done"
```

Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), dou-

ble, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

98.15.12 CallNonvirtualBooleanMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a boolean value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.13 CallNonvirtualByteMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a byte value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on

platform)

98.15.14 CallNonvirtualCharMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a char value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.15 CallNonvirtualDoubleMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a double value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.16 CallNonvirtualFloatMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a float value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.17 CallNonvirtualIntMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with an integer value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.18 CallNonvirtualLongMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a long value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.19 CallNonvirtualMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args() as Variant) as Variant

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args variant array that immediately follows the methodID argument.

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

98.15.20 CallNonvirtualObjectMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with an object value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.21 CallNonvirtualShortMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with a short value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.22 CallNonvirtualVoidMethod(TheClass as JavaClassMBS, MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a non virtual method with no return value.
Notes:

This call invokes an instance (non-static) method on a Java object, according to the specified class and method ID. The methodID argument must be obtained by calling GetMethodID on the class TheClass.

The CallNonvirtualMethod family of routines and the CallMethod family of routines are different. CallMethod routines invoke the method based on the class of the object, while CallNonvirtualMethod routines invoke the method based on the class, designated by the TheClass parameter, from which the method ID is obtained. The method ID must be obtained from the real class of the object or from one of its superclasses.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.23 CallObjectMethod(MethodID as JavaMethodMBS, args as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with an object value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.24 CallShortMethod(MethodID as JavaMethodMBS, args as memoryblock) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with a short value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.25 CallVoidMethod(MethodID as JavaMethodMBS, args as memoryblock)

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a virtual method with no return value.
Notes:

This family of operations invokes an instance (non-static) method on a Java object, according to the specified method ID. The methodID argument must be obtained by calling GetMethodID.

When this function is used to call private methods and constructors, the method ID must be derived from the real class of obj, not from one of its super classes.

Programmers place all arguments to the method in an args memoryblock that immediately follows the methodID argument.
In the memoryblock you need to use 8 bytes per argument and align them correctly. (alignment depends on platform)

98.15.26 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.15.27 GetDirectBufferAddress(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the address of the memory from a directbuffer object.
Notes: Returns 0 on any error.

98.15.28 GetDirectBufferCapacity(directbuffer as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the size of the memory from a directbuffer object.
Notes: Returns 0 on any error.

98.15.29 IsInstanceOf(TheClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether an object is an instance of a class.
Notes: Returns true if obj can be cast to TheClass; otherwise, returns false. A nil object can be cast to any class.

98.15.30 IsSameObject(obj as JavaObjectMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether two references refer to the same Java object.
Notes:

Returns true if ref1 and ref2 refer to the same Java object, or are both nil; otherwise, returns false.

False on any error.

98.15.31 ObjectClass as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the class of an object.
Notes: Returns nil on any error.

98.15.32 Properties

98.15.33 ClassName as String

MBS Java Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries class name of object.
Notes: (Read only property)

98.15.34 Database as Variant

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference to the database object.
Notes:

The variant is a JavaDatabaseMBS.
Do not assign new values, please.
This is set for all database classes, so the database isn't release from memory before you finished using this object.
(Read and Write property)

98.15.35 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle to the jobject.
Notes: (Read and Write property)

98.15.36 Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes: (Read and Write property)

98.15.37 Tag as Variant

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is a property you can use for whatever you like.
Notes:

The property value is stored as long as the RB object lives. The Java object may live longer.
(Read and Write property)

98.15.38 VM as JavaVMMBS

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference to the virtual machine.
Notes:

Please do not assign new value unless you know what you do.
(Read and Write property)

98.15.39 BooleanField(TheField as JavaFieldMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a boolean field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.40 ByteField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a byte field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.41 CharField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a char field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.42 DoubleField(TheField as JavaFieldMBS) as Double

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a double field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.43 Field(TheField as JavaFieldMBS) as Variant

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a field in this class.
Notes:

This is generic version, where our plugin translates between native Xojo data types and Java data types. We support conversion of boolean, byte (integer), char (integer), short (integer), int (integer), long (int64), double, float (single) and Java objects. Objects can be JavaObjectMBS or subclasses including JavaStringMBS and the JavaArrayMBS subclasses. For your convenience you can pass in string and we convert to JavaStringMBS for you.

Do not use for static fields!
(Read and Write computed property)

98.15.44 FloatField(TheField as JavaFieldMBS) as single

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a single field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.45 IntField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for an integer field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.46 LongField(TheField as JavaFieldMBS) as Int64

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a long field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.47 ObjectField(TheField as JavaFieldMBS) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for an object field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.15.48 ShortField(TheField as JavaFieldMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value for a short field in this class.
Notes:

Do not use for static fields!
(Read and Write computed property)

98.16 class JavaShortArrayMBS

98.16.1 class JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java short array object.
Notes:

Subclass of the JavaArrayMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.16.2 Methods

98.16.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.16.4 Elements as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** All the elements in this array as one memoryblock.
Notes: Use memoryblock.short(index*2) to access.

98.16.5 Values as Int16()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a Xojo array with values.

98.16.6 Properties

98.16.7 Region(start as Integer, len as Integer) as memoryblock

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a region of the array.
Notes:

Start is the starting index (0 based) and len the number of items to copy.
Throws ArrayIndexOutOfBoundsException if (start + len - 1) does not specify a valid index in the array.

(Read and Write computed property)

98.16.8 Value(index as Integer) as Int16

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set the value with given index.
Notes:

May raise OutOfBoundsException if index is out of range.
(Read and Write computed property)

98.17 class JavaStringMBS

98.17.1 class JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java string class.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.17.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr6
- MBS Xojo Plugins, version 19.2pr5

98.17.3 Methods

98.17.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

98.17.5 CopyString as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a Xojo string.
Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Notes:

Returns "" on any error. The string returned is marked as being Unicode (16bit).
Deprecated in favor of StringValue property and auto conversion with Operator_Convert.
See also:

- 98.17.6 CopyString(start as Integer, len as Integer) as string 16595

98.17.6 CopyString(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a Xojo string.
Example:

```
dim s as string
dim js as JavaStringMBS // your java string

s=js.CopyString(0,1) // copies first character
s=js.CopyString(3,6) // copies six charcters from starting at the forth
```

Notes:

Returns "" on any error. The string returned is marked as being Unicode (16bit).
For the first character to be the start use start=0.
For the first character to be the end use len=1 and start=0.
May crash on bad values for start and len.
See also:

- 98.17.5 CopyString as string 16595

98.17.7 CopyStringUTF as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a Xojo string.
Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Notes:

Returns "" on any error. The string returned is marked as being UTF8.
Deprecated in favor of StringValue property and auto conversion with Operator_Convert.
See also:

- 98.17.8 CopyStringUTF(start as Integer, len as Integer) as string 16596

98.17.8 CopyStringUTF(start as Integer, len as Integer) as string

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the content of the string into a Xojo string.
Notes:

Returns "" on any error. The string returned is marked as being UTF8.
Start is 0 based.
May crash on bad values for start and len.
See also:

- 98.17.7 CopyStringUTF as string 16596

98.17.9 Operator_Convert as string

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts to a string automatically.
Notes: Do not call it, just assign JavaStringMBS to a string an Xojo calls this internally.

98.17.10 UTFLength as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length of the string in bytes encoded as UTF8.
Deprecated: This item is deprecated and should no longer be used. You can use StringValue instead.
Notes: Returns 0 on any error.

98.17.11 Properties

98.17.12 Length as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length of this string in unicode characters.
Notes:

Returns 0 on any error.
(Read only property)

98.17.13 StringValue as String

MBS Java Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value as property.
Notes:

Uses UTF-8 internally.
(Read only property)

98.18 class JavaThrowableMBS

98.18.1 class JavaThrowableMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The wrapper class for the java throwable object.
Notes:

Subclass of the JavaObjectMBS class.
This is a subclass of an abstract class. You can't create an instance, but you can get one from various plugin functions.

98.19 class JavaVMMBS

98.19.1 class JavaVMMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a java virtual machine.
Example:

```
dim vm as JavaVMMBS // global

const JNI_VERSION_1_1 = & h00010001
const JNI_VERSION_1_2 = & h00010002
const JNI_VERSION_1_4 = & h00010004

if TargetLinux then
// change path for your linux PC!
JavaVMMBS.SetLibraryPath("/home/cs/jre1.6.0_05/lib/i386/client/libjvm.so")
end if

dim options(-1) as string
dim f as FolderItem=GetFolderItem("test.jar")

vm=new JavaVMMBS(JNI_VERSION_1_4, options, f, false)

if vm.Handle = 0 then
MsgBox "Can't create Java VM"
else
MsgBox "Java Initialized."
end if
```

Notes:

Add Linux support plugin version 8.7.

Releasing the java vm (by releasing all java objects), and reinitializing can fail.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.

While the plugin supports to have several instances, it seems like JNI does not support that.

On Windows, we look into Local Machine\SOFTWARE\JavaSoft\Java Runtime Environment in registry to

find the newest entry and the path to the jvm.dll file. Please note that on Windows you can install 32-bit and 64-bit version of Java and you need the matching bit number to FileMaker application.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites spreading malware!

98.19.3 Methods

98.19.4 Constructor(path as folderitem)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the Java virtual machine.
Notes:

This is a convenience function which initializes the java with version=JNI_VERSION_1_4 and no options except the specified path.
The path can be a folderitem pointing to a jar file or a folder with class files.

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.
See also:

- 98.19.5 Constructor(path as string)

- 98.19.6 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean) 16601
- 98.19.7 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16603
- 98.19.8 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean) 16604

98.19.5 Constructor(path as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the Java virtual machine.
Notes:

This is a convenience function which initializes the java engine with version=JNI_VERSION_1_4 and no options except the specified path.
The path can be a path pointing to a jar file or a folder with class files. If you use more than one path, you need to separate them with ";". Seems like on Mac OS X and Linux the separator is ":".

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.
See also:

- 98.19.4 Constructor(path as folderitem) 16600
- 98.19.6 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean) 16601
- 98.19.7 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16603
- 98.19.8 Constructor(version as Integer, options() as string, path as string, ignoreUnrecognizedOptions as boolean) 16604

98.19.6 Constructor(version as Integer, options() as string, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the java virtual machine.
Notes:

Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI_VERSION_1_x constants.

A note for Mac OS X and Java versions:

To specify the current preferred JDK in a family of JVM's, say the 1.5.x family, applications should set the environment variable JAVA_JVM_VERSION to 1.5, and then pass JNI_VERSION_1_4 into JNI_CreateJavaVM as the vm_args.version. To get a specific Java 1.5 JVM, say Java 1.5.0, set the environment variable JAVA_JVM_VERSION to 1.5.0. For Java 1.6 it will be the same in that applications will need to set the environment variable JAVA_JVM_VERSION to 1.6 to specify the current preferred 1.6 Java VM, and to get a specific Java 1.6 JVM, say Java 1.6.1, set the environment variable JAVA_JVM_VERSION to 1.6.1.

To make this sample bring up the current preferred 1.5 JVM, set the environment variable JAVA_JVM_VERSION to 1.5 before calling JNI_CreateJavaVM as shown below. Applications must currently check for availability of JDK 1.5 before requesting it. If your application requires JDK 1.5 and it is not found, it is your responsibility to report an error to the user. To verify if a JVM is installed, check to see if the symlink, or directory exists for the JVM in /System/Library/Frameworks/JavaVM.framework/Versions/ before setting the environment variable JAVA_JVM_VERSION.

If the environment variable JAVA_JVM_VERSION is not set, and JNI_VERSION_1_4 is passed into JNI_CreateJavaVM as the vm_args.version, JNI_CreateJavaVM will return the current preferred JDK. Java 1.4.2 is the preferred JDK as of the release of this sample and the release of Mac OS X 10.4.

Useful option strings:

"-verbose:jni"	show debug output on the console
"-Xms256M"	initial memory
"-Xmx512M"	maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

If you get error 126 on Windows, maybe MSVCR100.DLL is missing. So install Visual Studio 2010 runtime libraries. You can download them from Microsoft website. Do not download them from other websites spreading malware!

98.19.7 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the Java virtual machine.
Example:

```
dim JarPath as folderitem = specialfolder.desktop.child("test.jar")
dim options() as string

options.append "-Xms256M"
options.append "-Xmx512M"

dim v as new JavaVMMBS( JavaVMMBS.JNI_VERSION_1_4, options, JarPath, false)
```

Notes:

This is a convenience function which initializes the java engine with adding the given path to the options.

Only one VM can run at a time with this plugin.
You can specify whatever command line options you need in the options array.
Version must be one of the JNI_VERSION_1_x constants.
The path can be a folderitem pointing to a jar file or a folder with class files.

Useful option strings:

"-verbose:jni"	show debug output on the console
"-Xms256M"	initial memory
"-Xmx512M"	maximum memory

This method raises UnsupportedOperationException with error about missing CreateJavaVM function if there is no Java found. Either because it is not installed or the bit number (32 vs. 64) does not match.

Since version 16.5 the plugin will no longer raise exception if an existing JavaVM was found. In that case we use that JavaVM and return normally. Lasterror will be set to -5 which indicates this. In that case your options and paths are not passed to VM.

- 98.19.7 Constructor(version as Integer, options() as string, path as folderitem, ignoreUnrecognizedOptions as boolean) 16603

98.19.9 FindClass(name as string) as JavaClassMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches a class based on the name.
Example:

```
dim e as JavaVMMBS // global
dim c as JavaClassMBS
c=e.FindClass("java/lang/String")
```

Notes:

This function loads a locally defined class. It searches the directories and zip files specified by the CLASSPATH environment variable for the class with the specified name.

name: a fully qualified class name (that is, a package name, delimited by "/", followed by the class name). If the name begins with " [" (the array signature character), it returns an array class.

Returns nil on any error.

If your class is not found, it may be possible that it can't be loaded as the jar archive has dependencies to other jar archives.

98.19.10 FreeCurrentThread

MBS Java Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases the thread in Java.
Example:

```
dim w as JavaVMMBS // your vm object
w.FreeCurrentThread
```

Notes: The plugin is written to detect if you use it in a thread. But when the thread ends you need to deregister it with the Java runtime.

98.19.11 FromReflectedField(field as JavaObjectMBS) as JavaFieldMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searchs the field which matches the reflected field object.

98.19.12 FromReflectedMethod(method as JavaObjectMBS) as JavaMethodMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searchs the method which matches the reflected method object.

98.19.13 IsAssignableFrom(TheSubClass as JavaClassMBS, TheSuperClass as JavaClassMBS) as boolean

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if the class is assignable from the other class.
Notes: That means that the sub class is somewhere down the class tree from the super class.

98.19.14 MonitorEnter(obj as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enters the monitor associated with the underlying Java object referred to by obj.
Notes:

Returns zero on success; otherwise, returns a negative value on failure.

Each Java objects has a monitor associated with it. If the current thread already owns the monitor associated with ref, it increments a counter in the monitor indicating the number of times this thread has entered the monitor. If the monitor associated with ref is not owned by any thread, the current thread becomes the owner of the monitor, setting the entry count of this monitor to 1. If another thread already owns the monitor associated with ref, the current thread waits until the monitor is released, then tries again to gain ownership.

98.19.15 MonitorExit(obj as JavaObjectMBS) as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases the monitor.
Notes:

The current thread must be the owner of the monitor associated with the underlying Java object referred to by ref. The thread decrements the counter indicating the number of times it has entered this monitor. If as a result the value of the counter becomes zero, the current thread releases the montior.

Returns zero on success; otherwise, returns a negative value on failure.

98.19.16 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.17 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS 16607
- 98.19.18 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS 16607

98.19.17 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for booleans with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.16 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS 16607
- 98.19.18 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS 16607

98.19.18 NewBooleanArray(values() as Boolean) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new boolean array with given values.
See also:

- 98.19.16 NewBooleanArray(ref as JavaObjectMBS) as JavaBooleanArrayMBS 16607
- 98.19.17 NewBooleanArray(size as Integer) as JavaBooleanArrayMBS 16607

98.19.19 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.20 NewByteArray(size as Integer) as JavaByteArrayMBS 16608
- 98.19.21 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS 16608

98.19.20 NewByteArray(size as Integer) as JavaByteArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for bytes with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.19 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS 16608
- 98.19.21 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS 16608

98.19.21 NewByteArray(values() as UInt8) as JavaBooleanArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new byte array with given values.
See also:

- 98.19.19 NewByteArray(ref as JavaObjectMBS) as JavaByteArrayMBS 16608
- 98.19.20 NewByteArray(size as Integer) as JavaByteArrayMBS 16608

98.19.22 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.23 NewCharArray(size as Integer) as JavaCharArrayMBS 16609
- 98.19.24 NewCharArray(values() as UInt16) as JavaCharArrayMBS 16609

98.19.23 NewCharArray(size as Integer) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for chars (16bit) with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.22 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS 16608
- 98.19.24 NewCharArray(values() as UInt16) as JavaCharArrayMBS 16609

98.19.24 NewCharArray(values() as UInt16) as JavaCharArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new char array with given values.
See also:

- 98.19.22 NewCharArray(ref as JavaObjectMBS) as JavaCharArrayMBS 16608
- 98.19.23 NewCharArray(size as Integer) as JavaCharArrayMBS 16609

98.19.25 NewDirectByteBuffer(address as Integer, size as Integer) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new DirectBuffer object based on the values in address and size.
See also:

- 98.19.26 NewDirectByteBuffer(mem as memoryblock) as JavaObjectMBS 16609

98.19.26 NewDirectByteBuffer(mem as memoryblock) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new DirectBuffer object based on a memoryblock.
Notes: Keep the memoryblock until this object is destroyed.
See also:

- 98.19.25 NewDirectByteBuffer(address as Integer, size as Integer) as JavaObjectMBS 16609

98.19.27 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.

Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.28 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS 16610
- 98.19.29 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS 16610

98.19.28 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for doubles with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.27 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS 16609
- 98.19.29 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS 16610

98.19.29 NewDoubleArray(values() as Double) as JavaDoubleArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new double array with given values.
See also:

- 98.19.27 NewDoubleArray(ref as JavaObjectMBS) as JavaDoubleArrayMBS 16609
- 98.19.28 NewDoubleArray(size as Integer) as JavaDoubleArrayMBS 16610

98.19.30 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.31 NewFloatArray(size as Integer) as JavaFloatArrayMBS 16610
- 98.19.32 NewFloatArray(values() as Single) as JavaFloatArrayMBS 16611

98.19.31 NewFloatArray(size as Integer) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for singles with the given size.

Notes: Returns nil on any error.
See also:

- 98.19.30 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS 16610
- 98.19.32 NewFloatArray(values() as Single) as JavaFloatArrayMBS 16611

98.19.32 NewFloatArray(values() as Single) as JavaFloatArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new float array with given values.
See also:

- 98.19.30 NewFloatArray(ref as JavaObjectMBS) as JavaFloatArrayMBS 16610
- 98.19.31 NewFloatArray(size as Integer) as JavaFloatArrayMBS 16610

98.19.33 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.34 NewIntArray(size as Integer) as JavaIntArrayMBS 16611
- 98.19.35 NewIntArray(values() as Int32) as JavaIntArrayMBS 16611

98.19.34 NewIntArray(size as Integer) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for integers with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.33 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS 16611
- 98.19.35 NewIntArray(values() as Int32) as JavaIntArrayMBS 16611

98.19.35 NewIntArray(values() as Int32) as JavaIntArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new Int32 array with given values.
See also:

- 98.19.33 NewIntArray(ref as JavaObjectMBS) as JavaIntArrayMBS 16611
- 98.19.34 NewIntArray(size as Integer) as JavaIntArrayMBS 16611

98.19.36 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.37 NewLongArray(size as Integer) as JavaLongArrayMBS 16612
- 98.19.38 NewLongArray(values() as Int64) as JavaLongArrayMBS 16612

98.19.37 NewLongArray(size as Integer) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for 64 bit integers with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.36 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS 16612
- 98.19.38 NewLongArray(values() as Int64) as JavaLongArrayMBS 16612

98.19.38 NewLongArray(values() as Int64) as JavaLongArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new Int64 array with given values.
See also:

- 98.19.36 NewLongArray(ref as JavaObjectMBS) as JavaLongArrayMBS 16612
- 98.19.37 NewLongArray(size as Integer) as JavaLongArrayMBS 16612

98.19.39 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.40 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS 16613
- 98.19.41 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS 16613

98.19.40 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs a new array holding objects in class elementClass.
Notes:

All elements are initially set to initialElement.
Returns nil on any error.
See also:

- 98.19.39 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS 16612
- 98.19.41 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS 16613

98.19.41 NewObjectArray(values() as JavaObjectMBS) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Java object array with given size.
See also:

- 98.19.39 NewObjectArray(ref as JavaObjectMBS) as JavaObjectArrayMBS 16612
- 98.19.40 NewObjectArray(size as Integer, TheClass as JavaClassMBS, InitialValue as JavaObjectMBS = nil) as JavaObjectArrayMBS 16613

98.19.42 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array object based on the given java object.
Notes: This function is a convenience function to convert a java object array reference to a java array object in Xojo. It can crash if the java object used is not the array of the requested type.
See also:

- 98.19.43 NewShortArray(size as Integer) as JavaShortArrayMBS 16614
- 98.19.44 NewShortArray(values() as Int16) as JavaShortArrayMBS 16614

98.19.43 NewShortArray(size as Integer) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new array for shorts with the given size.
Notes: Returns nil on any error.
See also:

- 98.19.42 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS 16613
- 98.19.44 NewShortArray(values() as Int16) as JavaShortArrayMBS 16614

98.19.44 NewShortArray(values() as Int16) as JavaShortArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new short array with given values.
See also:

- 98.19.42 NewShortArray(ref as JavaObjectMBS) as JavaShortArrayMBS 16613
- 98.19.43 NewShortArray(size as Integer) as JavaShortArrayMBS 16614

98.19.45 NewStringArray(size as integer, InitialValue as JavaStringMBS = nil) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Java string array with given size.
See also:

- 98.19.46 NewStringArray(values() as String) as JavaObjectArrayMBS 16614

98.19.46 NewStringArray(values() as String) as JavaObjectArrayMBS

MBS Java Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates new string array with given values.
See also:

- 98.19.45 NewStringArray(size as integer, InitialValue as JavaStringMBS = nil) as JavaObjectArrayMBS 16614

98.19.47 NewStringUnicode(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string.
Notes: Preferres an Unicode encoded string.

98.19.48 NewStringUTF8(s as string) as JavaStringMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string.
Example:

```
// init Java
dim options() as string
dim javaVm as new JavaVMMBS(JavaVMMBS.JNI_VERSION_1_4, options, true)

// Get system class
Dim system As JavaClassMBS = javaVm.FindClass("java/lang/System")

If system <>Nil Then

// query method
dim transfomerGetPropertyId as JavaMethodMBS = system.GetStaticMethod("getProperty", "(Ljava/lang/String;)Ljava/la
If transfomerGetPropertyId <>Nil Then

// make parameters
Dim keyString As JavaStringMBS = javaVm.NewStringUTF8("os.version")
dim m as New MemoryBlock(8)
m.long(0)=keyString.Handle

// run it
dim r as JavaObjectMBS = system.CallStaticObjectMethod(transfomerGetPropertyId, m)

if r<>Nil then
// show result
dim s as JavaStringMBS = JavaStringMBS(r)
MsgBox s.CopyStringUTF
end if

End If
End If
```

Notes: Preferres an UTF8 encoded string.

98.19.49 Runtime as JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the runtime object for the current VM so you can query the memory statistics.

98.19.50 SetLibraryPath(path as folderitem)

MBS Java Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the path where to find the java library.
Notes:

Must be called before you use the constructor.
If this is empty on Windows, we will look into registry.
If this is empty on MacOS, we ask the Java.framework for the functions.
See also:

- 98.19.51 SetLibraryPath(path as string) 16616

98.19.51 SetLibraryPath(path as string)

MBS Java Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the path where to find the java library.
Example:

```
if TargetLinux then
// change path for your linux PC!
JavaVMMBS.SetLibraryPath("/home/cs/jre1.6.0_05/lib/i386/client/libjvm.so")
end if
```

Notes:

Must be called before you use the constructor.
If this is empty on Windows, we will look into registry.
If this is empty on MacOS, we ask the Java.framework for the functions.
See also:

- 98.19.50 SetLibraryPath(path as folderitem) 16616

98.19.52 ToReflectedField(TheClass as JavaClassMBS, fieldID as JavaFieldMBS, isStatic as boolean) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new reflected field object for the given field.

98.19.53 ToReflectedMethod(TheClass as JavaClassMBS, methodID as JavaMethodMBS, isStatic as boolean) as JavaObjectMBS

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new reflected method object for the given method.

98.19.54 Version as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version of the java engine.
Notes:

Currently the plugin always uses version 1.4.

Returns the major version number in the higher 16 bits and the minor version number in the lower 16 bits.

In JDK1.1, GetVersion() returns 0x00010001.

98.19.55 Properties

98.19.56 Handle as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle of the JavaVM.
Notes: (Read only property)

98.19.57 Lasterror as Integer

MBS Java Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes: (Read and Write property)

98.19.58 Constants

98.19.59 JNI_VERSION_1_1 = & h00010001

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

98.19.60 JNI_VERSION_1_2 = & h00010002

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

98.19.61 JNI_VERSION_1_4 = & h00010004

MBS Java Plugin, Plugin Version: 8.5. **Function:** One of the constants to specify the JNI version in the constructor.

98.19.62 JNI_VERSION_1_6 = & h00010006

MBS Java Plugin, Plugin Version: 16.5. **Function:** One of the constants to specify the JNI version in the constructor.

Chapter 99

Java Database

99.1 class JavaBlobMBS

99.1.1 class JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The java class for a binary large object.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.1.2 Methods

99.1.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.1.4 getBytes(Position as Int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves all or part of the BLOB value that this Blob object represents, as an array of bytes.
Notes:

This byte array contains up to length consecutive bytes starting at position pos.

pos: the ordinal position of the first byte in the BLOB value to be extracted; the first byte is at position 1
length: the number of consecutive bytes to be copied

Returns a byte array (as string) containing up to length consecutive bytes from the BLOB value designated by this Blob object, starting with the byte at position pos

99.1.5 length as int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of bytes in the BLOB value designated by this Blob object.

99.1.6 position(SearchString as JavaBlobMBS, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the byte position in the BLOB value designated by this Blob object at which pattern begins. The search begins at position start.
Notes:

pattern: the Blob object designating the BLOB value for which to search
start: the position in the BLOB value at which to begin searching; the first position is 1

Returns the position at which the pattern begins, else -1
See also:

- 99.1.7 position(SearchString as String, Position as Int64) as Int64 16620

99.1.7 position(SearchString as String, Position as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the byte position at which the specified byte array pattern begins within the BLOB value that this Blob object represents.
Notes:

The search for pattern begins at position start.

pattern: the byte array for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the pattern appears, else -1
See also:

- 99.1.6 position(SearchString as JavaBlobMBS, Position as Int64) as Int64 16620

99.1.8 setBytes(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the given array of bytes to the BLOB value that this Blob object represents, starting at position pos, and returns the number of bytes written.
Notes:

pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to the BLOB value that this Blob object represents

Returns the number of bytes written
See also:

- 99.1.9 setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer 16621

99.1.9 setBytes(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes all or part of the given byte array to the BLOB value that this Blob object represents and returns the number of bytes written.
Notes:

Writing starts at position pos in the BLOB value; len bytes from the given byte array are written.

pos: the position in the BLOB object at which to start writing
bytes: the array of bytes to be written to this BLOB object
offset: the offset into the array bytes at which to start reading the bytes to be set
len: the number of bytes to be written to the BLOB value from the array of bytes bytes

Returns the number of bytes written
See also:

- 99.1.8 setBytes(Position as Int64, Value as String) as Integer 16621

99.1.10 truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Truncates the BLOB value that this Blob object represents to be len bytes in length.
Notes: len: the length, in bytes, to which the BLOB value that this Blob object represents should be truncated

99.2 class JavaCallableStatementMBS

99.2.1 class JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Xojo class to handle a CallableStatement in Java.
Notes:

The interface used to execute SQL stored procedures. The JDBC API provides a stored procedure SQL escape syntax that allows stored procedures to be called in a standard way for all RDBMSs. This escape syntax has one form that includes a result parameter and one that does not. If used, the result parameter must be registered as an OUT parameter. The other parameters can be used for input, output or both. Parameters are referred to sequentially, by number, with the first parameter being 1.

{ ?= call <procedure-name>[<arg1>,<arg2>, ...] }
{ call <procedure-name>[<arg1>,<arg2>, ...] }

IN parameter values are set using the set methods inherited from PreparedStatement. The type of all OUT parameters must be registered prior to executing the stored procedure; their values are retrieved after execution via the get methods provided here.

A CallableStatement can return one ResultSet object or multiple ResultSet objects. Multiple ResultSet objects are handled using operations inherited from Statement.

For maximum portability, a call's ResultSet objects and update counts should be processed prior to getting the values of output parameters.
Subclass of the JavaStatementMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.2.2 Methods

99.2.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC BLOB parameter as a Blob object in the Java programming

language.
Notes:

Parameters:
i - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 99.2.5 getBlob(parameterName as string) as JavaBlobMBS 16623

99.2.5 getBlob(parameterName as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC BLOB parameter as a Blob object in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value as a Blob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 99.2.4 getBlob(parameterIndex as Integer) as JavaBlobMBS 16622

99.2.6 getBoolean(parameterIndex as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC BIT parameter as a boolean in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is false.
See also:

- 99.2.7 getBoolean(parameterName as string) as boolean 16623

99.2.7 getBoolean(parameterName as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC BIT parameter as a boolean in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is false.
See also:

- 99.2.6 getBoolean(parameterIndex as Integer) as boolean 16623

99.2.8 getByte(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC TINYINT parameter as a byte in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.9 getByte(parameterName as string) as Integer 16624

99.2.9 getByte(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC TINYINT parameter as a byte in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.8 getByte(parameterIndex as Integer) as Integer 16624

99.2.10 getClob(parameterIndex as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC CLOB parameter as a Clob object in the Java programming language.
Notes:

Parameters:
i - the first parameter is 1, the second is 2, and so on

Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 99.2.11 getClob(parameterName as string) as JavaClobMBS 16625

99.2.11 getClob(parameterName as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC CLOB parameter as a Clob object in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value as a Clob object in the Java programming language. If the value was SQL NULL, the value null is returned.
See also:

- 99.2.10 getClob(parameterIndex as Integer) as JavaClobMBS 16624

99.2.12 getDouble(parameterIndex as Integer) as Double

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC DOUBLE parameter as a double in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.13 getDouble(parameterName as string) as Double 16625

99.2.13 getDouble(parameterName as string) as Double

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC DOUBLE parameter as a double in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter

Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.12 getDouble(parameterIndex as Integer) as Double 16625

99.2.14 getFloat(parameterIndex as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC FLOAT parameter as a float in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.15 getFloat(parameterName as string) as single 16626

99.2.15 getFloat(parameterName as string) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC FLOAT parameter as a float in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.14 getFloat(parameterIndex as Integer) as single 16626

99.2.16 getInt(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC INTEGER parameter as an int in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

• 99.2.17 getInt(parameterName as string) as Integer 16627

99.2.17 getInt(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC INTEGER parameter as an int in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

• 99.2.16 getInt(parameterIndex as Integer) as Integer 16626

99.2.18 getLong(parameterIndex as Integer) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC BIGINT parameter as a long in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

• 99.2.19 getLong(parameterName as string) as Int64 16627

99.2.19 getLong(parameterName as string) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC BIGINT parameter as a long in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

• 99.2.18 getLong(parameterIndex as Integer) as Int64 16627

99.2.20 getShort(parameterIndex as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC SMALLINT parameter as a short in the Java programming language.
Notes:

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.21 getShort(parameterName as string) as Integer 16628

99.2.21 getShort(parameterName as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC SMALLINT parameter as a short in the Java programming language.
Notes:

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is 0.
See also:

- 99.2.20 getShort(parameterIndex as Integer) as Integer 16628

99.2.22 getString(parameterIndex as Integer) as String

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.
Notes:

For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, and so on
Returns:
the parameter value. If the value is SQL NULL, the result is null.
See also:

- 99.2.23 getString(parameterName as string) as String 16629

99.2.23 getString(parameterName as string) as String

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of a JDBC CHAR, VARCHAR, or LONGVARCHAR parameter as a String in the Java programming language.
Notes:

For the fixed-length type JDBC CHAR, the String object returned has exactly the same value the JDBC CHAR value had in the database, including any padding added by the database.

Parameters:
parameterName - the name of the parameter
Returns:
the parameter value. If the value is SQL NULL, the result is null.
See also:

- 99.2.22 getString(parameterIndex as Integer) as String 16628

99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the OUT parameter in ordinal position parameterIndex to the JDBC type sqlType.
Notes:

All OUT parameters must be registered before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.
See also:

- 99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16630
- 99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16630
- 99.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16631
- 99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16632
- 99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16632

99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the parameter in ordinal position parameterIndex to be of JDBC type sqlType.
Notes:

This method must be called before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

parameterIndex - the first parameter is 1, the second is 2, and so on
sqlType - the SQL type code defined by java.sql.Types.
scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.
See also:

- 99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16629
- 99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16630
- 99.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16631
- 99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16632
- 99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16632

99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the designated output parameter.
Notes:

This version of the method registerOutParameter should be used for a user-defined or REF output parameter. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-defined parameter, the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-defined and REF parameters. Although it is intended for user-defined and REF parameters, this method may be used to register a parameter of any JDBC type. If the parameter does not have a user-defined or

REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getter method whose Java type corresponds to the parameter's registered SQL type.

Parameters:
paramIndex - the first parameter is 1, the second is 2,...
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16629
- 99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16630
- 99.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16631
- 99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16632
- 99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16632

99.2.27 registerOutParameter(parameterName as string, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the OUT parameter named parameterName to the JDBC type sqlType.
Notes:

Registers the OUT parameter named parameterName to the JDBC type sqlType. All OUT parameters must be registered before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

If the JDBC type expected to be returned to this output parameter is specific to this particular database, sqlType should be java.sql.Types.OTHER. The method getObject(int) retrieves the value.

Parameters:
parameterName - the name of the parameter
sqlType - the JDBC type code defined by java.sql.Types. If the parameter is of JDBC type NUMERIC or DECIMAL, the version of registerOutParameter that accepts a scale value should be used.
See also:

- 99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16629
- 99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16630
- 99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16630
- 99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16632
- 99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16632

99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the parameter named parameterName to be of JDBC type sqlType.
Notes:

This method must be called before a stored procedure is executed.
The JDBC type specified by sqlType for an OUT parameter determines the Java type that must be used in the get method to read the value of that parameter.

This version of registerOutParameter should be used when the parameter is of JDBC type NUMERIC or DECIMAL.

Parameters:
parameterName - the name of the parameter
sqlType - SQL type code defined by java.sql.Types.
scale - the desired number of digits to the right of the decimal point. It must be greater than or equal to zero.
See also:

- 99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16629
- 99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16630
- 99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16630
- 99.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16631
- 99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string) 16632

99.2.29 registerOutParameter(parameterName as string, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the designated output parameter.
Notes:

This version of the method registerOutParameter should be used for a user-named or REF output parameter. Examples of user-named types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types. Before executing a stored procedure call, you must explicitly call registerOutParameter to register the type from java.sql.Types for each OUT parameter. For a user-named parameter the fully-qualified SQL type name of the parameter should also be given, while a REF parameter requires that the fully-qualified type name of the referenced type be given. A JDBC driver that does not need the type code and type name information may ignore it. To be portable, however, applications should always provide these values for user-named and REF parameters. Although it is intended for user-named and REF parameters, this method

may be used to register a parameter of any JDBC type. If the parameter does not have a user-named or REF type, the typeName parameter is ignored.
Note: When reading the value of an out parameter, you must use the getXXX method whose Java type XXX corresponds to the parameter's registered SQL type.

Parameters:
parameterName - the name of the parameter
sqlType - a value from Types
typeName - the fully-qualified name of an SQL structured type
See also:

- 99.2.24 registerOutParameter(parameterIndex as Integer, sqlType as Integer) 16629
- 99.2.25 registerOutParameter(parameterIndex as Integer, sqlType as Integer, scale as Integer) 16630
- 99.2.26 registerOutParameter(parameterIndex as Integer, sqlType as Integer, typeName as string) 16630
- 99.2.27 registerOutParameter(parameterName as string, sqlType as Integer) 16631
- 99.2.28 registerOutParameter(parameterName as string, sqlType as Integer, scale as Integer) 16632

99.2.30 setBoolean(parameterName as string, x as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java boolean value.
Notes:

The driver converts this to an SQL BIT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.31 setByte(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java byte value.
Notes:

The driver converts this to an SQL TINYINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.32 setDouble(parameterName as string, x as Double)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java double value.
Notes:

The driver converts this to an SQL DOUBLE value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.33 setFloat(parameterName as string, x as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java float value.
Notes:

The driver converts this to an SQL FLOAT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.34 setInt(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java int value.
Notes:

The driver converts this to an SQL INTEGER value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.35 setLong(parameterName as string, x as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java long value.
Notes:

The driver converts this to an SQL BIGINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter

x - the parameter value

99.2.36 setNull(parameterName as string, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to SQL NULL.
Notes:

Note: You must specify the parameter's SQL type.

Parameters:
parameterName - the name of the parameter
sqlType - the SQL type code defined in java.sql.Types
See also:

- 99.2.37 setNull(parameterName as string, sqlType as Integer, typeName as string) 16635

99.2.37 setNull(parameterName as string, sqlType as Integer, typeName as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to SQL NULL.
Notes:

This version of the method setNull should be used for user-defined types and REF type parameters. Examples of user-defined types include: STRUCT, DISTINCT, JAVA_OBJECT, and named array types.
Note: To be portable, applications must give the SQL type code and the fully-qualified SQL type name when specifying a NULL user-defined or REF parameter. In the case of a user-defined type the name is the type name of the parameter itself. For a REF parameter, the name is the type name of the referenced type. If a JDBC driver does not need the type code or type name information, it may ignore it. Although it is intended for user-defined and Ref parameters, this method may be used to set a null parameter of any JDBC type. If the parameter does not have a user-defined or REF type, the given typeName is ignored.

Parameters:
parameterName - the name of the parameter
sqlType - a value from java.sql.Types
typeName - the fully-qualified name of an SQL user-defined type; ignored if the parameter is not a user-defined type or SQL REF value
See also:

- 99.2.36 setNull(parameterName as string, sqlType as Integer) 16635

99.2.38 setShort(parameterName as string, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java short value.
Notes:

The driver converts this to an SQL SMALLINT value when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.39 setString(parameterName as string, x as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java String value.
Notes:

The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.
Parameters:
parameterName - the name of the parameter
x - the parameter value

99.2.40 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the last OUT parameter read had the value of SQL NULL.
Notes:

Note that this method should be called only after calling a getter method; otherwise, there is no value to use in determining whether it is null or not.

Returns:
true if the last parameter read was SQL NULL; false otherwise

99.3 class JavaClobMBS

99.3.1 class JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The java class for large character objects.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.3.2 Methods

99.3.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.3.4 getSubString(Position as int64, Length as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a copy of the specified substring in the CLOB value designated by this Clob object.
Notes:

The substring begins at position pos and has up to length consecutive characters.

Parameters:
pos: the first character of the substring to be extracted. The first character is at position 1.
length: the number of consecutive characters to be copied

Returns a String that is the specified substring in the CLOB value designated by this Clob object

99.3.5 length as int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the number of characters in the CLOB value designated by this Clob object.
Notes: Returns length of the CLOB in characters.

99.3.6 position(SearchString as JavaClobMBS, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the character position at which the specified Clob object searchstr appears in this Clob object.
Notes:

The search begins at position start.

SearchString: the Clob object for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the Clob object appears or -1 if it is not present; the first position is 1
See also:

- 99.3.7 position(SearchString as String, Start as Int64) as Int64 16638

99.3.7 position(SearchString as String, Start as Int64) as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the character position at which the specified substring searchstr appears in the SQL CLOB value represented by this Clob object.
Notes:

The search begins at position start.

searchstr: the substring for which to search
start: the position at which to begin searching; the first position is 1

Returns the position at which the substring appears or -1 if it is not present; the first position is 1
See also:

- 99.3.6 position(SearchString as JavaClobMBS, Start as Int64) as Int64 16638

99.3.8 setString(Position as Int64, Value as String) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes the given Java String to the CLOB value that this Clob object designates at the position pos.
Notes:

Position: the position at which to start writing to the CLOB value that this Clob object represents
Value: the string to be written to the CLOB value that this Clob designates

Returns the number of characters written
See also:

- 99.3.9 setString(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer 16639

99.3.9 setString(Position as Int64, Value as String, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes Length characters of Value, starting at character offset, to the CLOB value that this Clob represents.
Notes:

Position: the position at which to start writing to this CLOB object
Value: the string to be written to the CLOB value that this Clob object represents
Offset: the offset into str to start reading the characters to be written
Length: the number of characters to be written

Returns the number of characters written
See also:

- 99.3.8 setString(Position as Int64, Value as String) as Integer 16638

99.3.10 truncate(len as int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Truncates the CLOB value that this Clob designates to have a length of len characters.
Notes: len: the length, in bytes, to which the CLOB value should be truncated

99.4 class JavaConnectionMBS

99.4.1 class JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a java connection.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.4.2 Blog Entries

- Encrypted Access database in Xojo
- MBS Real Studio Plugins, version 11.3pr11

99.4.3 Methods

99.4.4 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all warnings reported for this Connection object.
Notes: After a call to this method, the method getWarnings returns null until a new warning is reported for this Connection object.

99.4.5 close

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases this Connection object's database and JDBC resources immediately instead of waiting for them to be automatically released.

99.4.6 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

99.4.7 commit

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Makes all changes made since the previous commit/rollback permanent and releases any database locks currently held by the Connection.
Notes: See the java documentation for details on java.sql.Connection.Commit.

99.4.8 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

99.4.9 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may be updated.

99.4.10 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.4.11 createBlob as JavaBlobMBS

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs an object that implements the Blob interface.
Notes: The object returned initially contains no data. The setBinaryStream and setBytes methods of the Blob interface may be used to add data to the Blob.

99.4.12 createClob as JavaClobMBS

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructs an object that implements the Clob interface.
Notes: The object returned initially contains no data. The setAsciiStream, setCharacterStream and setString methods of the Clob interface may be used to add data to the Clob.

99.4.13 createStatement as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a Statement object for sending SQL statements to the database.
Notes:

SQL statements without parameters are normally executed using Statement objects. If the same SQL statement is executed many times, it may be more efficient to use a PreparedStatement object.
Result sets created using the returned Statement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Returns:
a new default Statement object
See also:

- 99.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS 16642

- 99.4.15 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS 16643

99.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a Statement object that will generate ResultSet objects with the given type and concurrency.
Notes:

This method is the same as the createStatement method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
Returns:
a new Statement object that will generate ResultSet objects with the given type and concurrency
See also:

- 99.4.13 createStatement as JavaStatementMBS 16642

- 99.4.15 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS 16643

99.4.15 createStatement(resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a Statement object that will generate ResultSet objects with the given type, concurrency, and holdability.
Notes:

This method is the same as the createStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.
Parameters:
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new Statement object that will generate ResultSet objects with the given type, concurrency, and holdability
See also:

- 99.4.13 createStatement as JavaStatementMBS 16642
- 99.4.14 createStatement(resultSetType as Integer, resultSetConcurrency as Integer) as JavaStatementMBS 16642

99.4.16 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.4.17 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.4.18 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.4.19 getMetaData as JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a DatabaseMetaData object that contains metadata about the database to which this Connection object represents a connection.
Notes:

The metadata includes information about the database's tables, its supported SQL grammar, its stored procedures, the capabilities of this connection, and so on.
Returns:
a DatabaseMetaData object for this Connection object

99.4.20 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

99.4.21 isClosed as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this Connection object has been closed.
Notes:

A connection is closed if the method close has been called on it or if certain fatal errors have occurred. This method is guaranteed to return true only when it is called after the method Connection.close has been called. This method generally cannot be called to determine whether a connection to a database is valid or invalid. A typical client can determine that a connection is invalid by catching any exceptions that might be thrown when an operation is attempted.

Returns:
true if this Connection object is closed; false if it is still open

99.4.22 nativeSQL(sql as string) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts the given SQL statement into the system's native SQL grammar.
Notes:

A driver may convert the JDBC SQL grammar into its system's native SQL grammar prior to sending it. This method returns the native form of the statement that the driver would have sent.
Parameters:
sql - an SQL statement that may contain one or more '?' parameter placeholders
Returns:
the native form of this statement

99.4.23 prepareCall(sql as string) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object for calling database stored procedures.
Notes:

The CallableStatement object provides methods for setting up its IN and OUT parameters, and methods for executing the call to a stored procedure.
Note: This method is optimized for handling stored procedure call statements. Some drivers may send the call statement to the database when the method prepareCall is done; others may wait until the CallableStatement object is executed. This has no direct effect on users; however, it does affect which method throws certain SQLExceptions.

Result sets created using the returned CallableStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' parameter placeholders. Typically this statement is a JDBC function call escape string.
Returns:
a new default CallableStatement object containing the pre-compiled SQL statement
See also:

- 99.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS 16646

- 99.4.25 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS 16646

99.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.
Notes:

This method is the same as the prepareCall method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain on or more ? parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
Returns:
a new CallableStatement object containing the pre-compiled SQL statement that will produce ResultSet objects with the given type and concurrency
See also:

- 99.4.23 prepareCall(sql as string) as JavaCallableStatementMBS 16645
- 99.4.25 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS 16646

99.4.25 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaCallableStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a CallableStatement object that will generate ResultSet objects with the given type and concurrency.
Notes:

This method is the same as the prepareCall method above, but it allows the default result set type, result set concurrency type and holdability to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain on or more ? parameters
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new CallableStatement object, containing the pre-compiled SQL statement, that will generate ResultSet

objects with the given type, concurrency, and holdability
See also:

- 99.4.23 prepareCall(sql as string) as JavaCallableStatementMBS 16645
- 99.4.24 prepareCall(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaCallableStatementMBS 16646

99.4.26 prepareStatement(sql as string) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object for sending parameterized SQL statements to the database.
Notes:

A SQL statement with or without IN parameters can be pre-compiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLException objects.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' IN parameter placeholders
See also:

- 99.4.27 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16647
- 99.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16648
- 99.4.29 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16649

99.4.27 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a default PreparedStatement object that has the capability to retrieve auto-generated keys.
Notes:

The given constant tells the driver whether it should make auto-generated keys available for retrieval. This parameter is ignored if the SQL statement is not an INSERT statement.
Note: This method is optimized for handling parametric SQL statements that benefit from precompilation. If the driver supports precompilation, the method prepareStatement will send the statement to the database for precompilation. Some drivers may not support precompilation. In this case, the statement may not be sent to the database until the PreparedStatement object is executed. This has no direct effect on users; however, it does affect which methods throw certain SQLExceptions.

Result sets created using the returned PreparedStatement object will by default be type TYPE_FORWARD_ONLY and have a concurrency level of CONCUR_READ_ONLY.

Parameters:
sql - an SQL statement that may contain one or more '?' IN parameter placeholders
autoGeneratedKeys - a flag indicating whether auto-generated keys should be returned; one of Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS
Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will have the capability of returning auto-generated keys
See also:

- 99.4.26 prepareStatement(sql as string) as JavaPreparedStatementMBS 16647
- 99.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16648
- 99.4.29 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16649

99.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object that will generate ResultSet objects with the given type and concurrency.
Notes:

This method is the same as the prepareStatement method above, but it allows the default result set type and concurrency to be overridden.
Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN parameters
resultSetType - a result set type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - a concurrency type; one of ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
Returns:
a new PreparedStatement object containing the pre-compiled SQL statement that will produce ResultSet

objects with the given type and concurrency
See also:

- 99.4.26 prepareStatement(sql as string) as JavaPreparedStatementMBS 16647
- 99.4.27 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16647
- 99.4.29 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS 16649

99.4.29 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer, resultSetHoldability as Integer) as JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedStatement object that will generate ResultSet objects with the given type, concurrency, and holdability.
Notes:

This method is the same as the prepareStatement method above, but it allows the default result set type, concurrency, and holdability to be overridden.

Parameters:
sql - a String object that is the SQL statement to be sent to the database; may contain one or more ? IN parameters
resultSetType - one of the following ResultSet constants: ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE
resultSetConcurrency - one of the following ResultSet constants: ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE
resultSetHoldability - one of the following ResultSet constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
a new PreparedStatement object, containing the pre-compiled SQL statement, that will generate ResultSet objects with the given type, concurrency, and holdability
See also:

- 99.4.26 prepareStatement(sql as string) as JavaPreparedStatementMBS 16647
- 99.4.27 prepareStatement(sql as string, autoGeneratedKeys as Integer) as JavaPreparedStatementMBS 16647
- 99.4.28 prepareStatement(sql as string, resultSetType as Integer, resultSetConcurrency as Integer) as JavaPreparedStatementMBS 16648

99.4.30 releaseSavepoint(safepoint as JavaSavepointMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes the given Savepoint object from the current transaction.
Notes:

Any reference to the savepoint after it have been removed will cause an SQLException to be thrown.

savepoint: the Savepoint object to be removed

99.4.31 rollback

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Drops all changes made since the previous commit/rollback and releases any database locks currently held by this Connection.
Notes:

This method should be used only when auto- commit has been disabled.

See the java documentation for details on java.sql.Connection.Rollback.
See also:

- 99.4.32 rollback(safepoint as JavaSavepointMBS) 16650

99.4.32 rollback(safepoint as JavaSavepointMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Undoes all changes made after the given Savepoint object was set.
Notes:

This method should be used only when auto-commit has been disabled.

savepoint: the Savepoint object to roll back to
See also:

- 99.4.31 rollback 16650

99.4.33 setSavepoint as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an unnamed savepoint in the current transaction and returns the new Savepoint object that represents it.
See also:

• 99.4.34 setSavepoint(name as string) as JavaSavepointMBS 16651

99.4.34 setSavepoint(name as string) as JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a savepoint with the given name in the current transaction and returns the new Savepoint object that represents it.
Notes:

name: a String containing the name of the savepoint
returns the new Savepoint object
See also:

• 99.4.33 setSavepoint as JavaSavepointMBS 16650

99.4.35 TRANSACTION_NONE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that transactions are not supported.

99.4.36 TRANSACTION_READ_COMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads are prevented; non-repeatable reads and phantom reads can occur.
Notes: This level only prohibits a transaction from reading a row with uncommitted changes in it.

99.4.37 TRANSACTION_READ_UNCOMMITTED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads, non-repeatable reads and phantom reads can occur.
Notes: This level allows a row changed by one transaction to be read by another transaction before any changes in that row have been committed (a "dirty read"). If any of the changes are rolled back, the second transaction will have retrieved an invalid row.

99.4.38 TRANSACTION_REPEATABLE_READ as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads and non-repeatable reads are prevented; phantom reads can occur.
Notes: This level prohibits a transaction from reading a row with uncommitted changes in it, and it also prohibits the situation where one transaction reads a row, a second transaction alters the row, and the first

transaction rereads the row, getting different values the second time (a "non-repeatable read").

99.4.39 TRANSACTION_SERIALIZABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A constant indicating that dirty reads, non-repeatable reads and phantom reads are prevented.
Notes: This level includes the prohibitions in TRANSACTION_REPEATABLE_READ and further prohibits the situation where one transaction reads all rows that satisfy a WHERE condition, a second transaction inserts a row that satisfies that WHERE condition, and the first transaction rereads for the same condition, retrieving the additional "phantom" row in the second read.

99.4.40 typeARRAY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type ARRAY.

99.4.41 typeBIGINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BIGINT.
Example:

```
dim d as JavaConnectionMBS
MsgBox str(d.typeBIGINT)
```

99.4.42 typeBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BINARY.

99.4.43 typeBIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the

generic SQL type BIT.

99.4.44 typeBLOB as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type BLOB.

99.4.45 typeCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CHAR.

99.4.46 typeCLOB as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type CLOB.

99.4.47 typeDATE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DATE.

99.4.48 typeDECIMAL as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DECIMAL.

99.4.49 typeDISTINCT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the

generic SQL type DISTINCT.

99.4.50 typeDOUBLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type DOUBLE.

99.4.51 typeFLOAT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type FLOAT.

99.4.52 typeINTEGER as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type INTEGER.

99.4.53 typeJAVA_OBJECT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type JAVA_OBJECT.

99.4.54 typeLONGVARBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type LONGVARBINARY.

99.4.55 typeLONGVARCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the

generic SQL type LONGVARCHAR.

99.4.56 typeNULL as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type NULL.

99.4.57 typeNUMERIC as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type NUMERIC.

99.4.58 typeOTHER as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language that indicates that the SQL type is database-specific and gets mapped to a Java object that can be accessed via the methods getObject and setObject.

99.4.59 typeREAL as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REAL.

99.4.60 typeREF as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type REF.

99.4.61 typeSMALLINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the

generic SQL type SMALLINT.

99.4.62 typeSTRUCT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type STRUCT.

99.4.63 typeTIME as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIME.

99.4.64 typeTIMESTAMP as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TIMESTAMP.

99.4.65 typeTINYINT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type TINYINT.

99.4.66 typeVARBINARY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the generic SQL type VARBINARY.

99.4.67 typeVARCHAR as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant in the Java programming language, sometimes referred to as a type code, that identifies the

generic SQL type VARCHAR.

99.4.68 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object whose cursor may move only forward.

99.4.69 TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

99.4.70 TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

99.4.71 Properties

99.4.72 AutoCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current auto-commit state.
Notes:

See the java documentation for details on java.sql.Connection.SetAutoCommit.
(Read and Write computed property)

99.4.73 Catalog as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets or gets the given catalog name in order to select a subspace of this Connection object's database in which to work.
Notes:

If the driver does not support catalogs, it will silently ignore this request.
(Read and Write computed property)

99.4.74 Holdability as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes or retrieves the holdability of ResultSet objects created using this Connection object to the given holdability.
Notes:

Parameters:
holdability - a ResultSet holdability constant; one of ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
(Read and Write computed property)

99.4.75 ReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this connection in read-only mode as a hint to enable database optimizations.
Notes:

See the java documentation for details on java.sql.Connection.SetReadOnly.
(Read and Write computed property)

99.4.76 TransactionIsolation as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to change the transaction isolation level for this Connection object to the one given.
Notes:

The constants defined in the interface Connection are the possible transaction isolation levels.
Note: If this method is called during a transaction, the result is implementation-defined.

Parameters:
level - one of the following Connection constants: Connection.TRANSACTION_READ_UNCOMMITTED, Connection.TRANSACTION_READ_COMMITTED, Connection.TRANSACTION_REPEATABLE_READ, or Connection.TRANSACTION_SERIALIZABLE. (Note that Connection.TRANSACTION_NONE cannot be used because it specifies that transactions are not supported.)
(Read and Write computed property)

99.5 class JavaDatabaseMBS

99.5.1 class JavaDatabaseMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to handle database access using JDBC drivers.
Notes:

This class is not a subclass of RB's database class, so you can use it with Xojo Standard Edition.

Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)

Add Linux support plugin version 8.7.

Please make sure this Java VM object stays alive until you are done with all your java stuff. So all the java objects go away and this vm object is destroyed on the end. Because if some java code is still running like an background java thread, quitting the VM can lead into crashes.
Subclass of the JavaObjectMBS class.

99.5.2 Blog Entries

- Prefetching records from databases
- Encrypted Access database in Xojo
- MBS Real Studio Plugins, version 12.1pr6

99.5.3 Methods

99.5.4 connect(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects directly to the database calling the Drivers's connect method.
Notes:

While getConnection calls DriverManager, this calls directly the driver.

Attempts to make a database connection to the given URL. The driver should return "null" if it realizes it is the wrong kind of driver to connect to the given URL. This will be common, as when the JDBC driver manager is asked to connect to a given URL it passes the URL to each loaded driver in turn.
The driver should throw an SQLException if it is the right driver to connect to the given URL but has

trouble connecting to the database.

The java.util.Properties argument can be used to pass arbitrary string tag/value pairs as connection arguments. Normally at least "user" and "password" properties should be included in the Properties object. (the plugin passes empty Properties object)

url - the URL of the database to which to connect

Returns a Connection object that represents a connection to the URL
Throws SQLException - if a database access error occurs

99.5.5 Constructor(vm as JavaVMMBS, driverclass as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new java database object.
Example:

```
dim vm as JavaVMMBS // your VM
dim db as JavaDatabaseMBS

db=new JavaDatabaseMBS(vm,"com.mysql.jdbc.Driver")
```

Notes: The driverclass is the name of the main class of the jdbc driver.

99.5.6 getConnection(url as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to establish a connection to the given database URL.
Example:

```
dim d as JavaDatabaseMBS
dim c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

Notes:

The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

Parameters:
url - a database url of the form jdbc:subprotocol:subname
Returns:
a connection to the URL
See also:

- 99.5.7 getConnection(url as string, username as string, password as string) as JavaConnectionMBS 16661

99.5.7 getConnection(url as string, username as string, password as string) as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to establish a connection to the given database URL.
Example:

```
dim d as JavaDatabaseMBS
dim c as JavaConnectionMBS

// get database

// connect to Oracle database using service name:
c=d.getConnection("jdbc:oracle:thin:@//192.168.10.20:1521/adbprod","user","pw")

// connect with SID:
c=d.getConnection("jdbc:oracle:thin:@192.168.10.20:1521:adbprod","user","pw")
```

Notes:

The DriverManager attempts to select an appropriate driver from the set of registered JDBC drivers.

Parameters:
url - a database url of the form jdbc:subprotocol:subname
user - the database user on whose behalf the connection is being made
password - the user's password

Returns:
a connection to the URL
See also:

• 99.5.6 getConnection(url as string) as JavaConnectionMBS 16660

99.5.8 IsDriverLoaded as Boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether a driver has been loaded.

99.5.9 println(message as string)

MBS Java Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints a message to the current JDBC log stream.

99.5.10 Properties

99.5.11 LoginTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum time in seconds that a driver will wait while attempting to connect to a database.
Notes:

The login time limit in seconds.
(Read and Write computed property)

99.6 class JavaDatabaseMetaDataMBS

99.6.1 class JavaDatabaseMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Comprehensive information about the database as a whole.
Notes:

This interface is implemented by driver vendors to let users know the capabilities of a Database Management System (DBMS) in combination with the driver based on JDBCTM technology ("JDBC driver") that is used with it. Different relational DBMSs often support different features, implement features in different ways, and use different data types. In addition, a driver may implement a feature on top of what the DBMS offers. Information returned by methods in this interface applies to the capabilities of a particular driver and a particular DBMS working together. Note that as used in this documentation, the term "database" is used generically to refer to both the driver and DBMS.

A user for this interface is commonly a tool that needs to discover how to deal with the underlying DBMS. This is especially true for applications that are intended to be used with more than one DBMS. For example, a tool might use the method getTypeInfo to find out what data types can be used in a CREATE TABLE statement. Or a user might call the method supportsCorrelatedSubqueries to see if it is possible to use a correlated subquery or supportsBatchUpdates to see if it is possible to use batch updates.

Some DatabaseMetaData methods return lists of information in the form of ResultSet objects. Regular ResultSet methods, such as getString and getInt, can be used to retrieve the data from these ResultSet objects. If a given form of metadata is not available, the ResultSet getter methods throw an SQLException.

Some DatabaseMetaData methods take arguments that are String patterns. These arguments all have names such as fooPattern. Within a pattern String, "% " means match any substring of 0 or more characters, and "_" means match any one character. Only metadata entries matching the search pattern are returned. If a search pattern argument is set to null, that argument's criterion will be dropped from the search.

A method that gets information about a feature that the driver does not support will throw an SQLException. In the case of methods that return a ResultSet object, either a ResultSet object (which may be empty) is returned or an SQLException is thrown.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.6.2 Methods

99.6.3 allProceduresAreCallable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current user can call all the procedures returned by the method getProcedures.

Notes: Returns true if so; false otherwise

99.6.4 allTablesAreSelectable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current user can use all the tables returned by the method getTables in a SELECT statement.
Notes: Returns true if so; false otherwise

99.6.5 attributeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that NULL values might not be allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

99.6.6 attributeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that NULL values are definitely allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

99.6.7 attributeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that whether NULL values are allowed is not known.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getAttributes.

99.6.8 bestRowNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the best row identifier is NOT a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

99.6.9 bestRowPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the best row identifier is a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

99.6.10 bestRowSession as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is the remainder of the current session.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

99.6.11 bestRowTemporary as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is very temporary, lasting only while the row is being used.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

99.6.12 bestRowTransaction as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the scope of the best row identifier is the remainder of the current transaction.
Notes: A possible value for the column SCOPE in the ResultSet object returned by the method getBestRowIdentifier.

99.6.13 bestRowUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the best row identifier may or may not be a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getBestRowIdentifier.

99.6.14 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column might not allow NULL values.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

99.6.15 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column definitely allows NULL values.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

99.6.16 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the nullability of columns is unknown.
Notes: A possible value for the column NULLABLE in the ResultSet returned by the method getColumns.

99.6.17 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.6.18 dataDefinitionCausesTransactionCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a data definition statement within a transaction forces the transaction to commit.

99.6.19 dataDefinitionIgnoredInTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database ignores a data definition statement within a transaction.

99.6.20 deletesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether or not a visible row delete can be detected by calling the method ResultSet.rowDeleted.
Notes:

If the method deletesAreDetected returns false, it means that deleted rows are removed from the result set.

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if deletes are detected by the given result set type; false otherwise

99.6.21 doesMaxRowSizeIncludeBlobs as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the return value for the method getMaxRowSize includes the SQL data types LONGVARCHAR and LONGVARBINARY.
Notes: Returns true if so; false otherwise.

99.6.22 getAttributes(catalog as string, schemaPattern as string, typeNamePattern as string, attributeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the given attribute of the given type for a user-defined type (UDT) that is available in the given schema and catalog.
Notes:

Descriptions are returned only for attributes of UDTs matching the catalog, schema, type, and attribute name criteria. They are ordered by TYPE_SCHEM, TYPE_NAME and ORDINAL_POSITION. This description does not contain inherited attributes.

The ResultSet object that is returned has the following columns:

TYPE_CAT String =>type catalog (may be null)
TYPE_SCHEM String =>type schema (may be null)
TYPE_NAME String =>type name
ATTR_NAME String =>attribute name
DATA_TYPE int =>attribute type SQL type from java.sql.Types
ATTR_TYPE_NAME String =>Data source dependent type name. For a UDT, the type name is fully

qualified. For a REF, the type name is fully qualified and represents the target type of the reference type.
ATTR_SIZE int =>column size. For char or date types this is the maximum number of characters; for numeric or decimal types this is precision.
DECIMAL_DIGITS int =>the number of fractional digits
NUM_PREC_RADIX int =>Radix (typically either 10 or 2)
NULLABLE int =>whether NULL is allowed
attributeNoNulls - might not allow NULL values
attributeNullable - definitely allows NULL values
attributeNullableUnknown - nullability unknown
REMARKS String =>comment describing column (may be null)
ATTR_DEF String =>default value (may be null)
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
CHAR_OCTET_LENGTH int =>for char types the maximum number of bytes in the column

ORDINAL_POSITION int =>index of column in table (starting at 1)

IS_NULLABLE String =>"false" means column definitely does not allow NULL values; "true" means the column might allow NULL values. An empty string means unknown.
SCOPE_CATALOG String =>catalog of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_SCHEMA String =>schema of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_TABLE String =>table name that is the scope of a reference attribute (null if the DATA_TYPE isn't REF)
SOURCE_DATA_TYPE short =>source type of a distinct type or user-generated Ref type,SQL type from java.sql.Types (null if DATA_TYPE isn't DISTINCT or user-generated REF)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
typeNamePattern - a type name pattern; must match the type name as it is stored in the database
attributeNamePattern - an attribute name pattern; must match the attribute name as it is declared in the database

Returns:
a ResultSet object in which each row is an attribute description

Throws:
SQLException - if a database access error occurs

99.6.23 getCatalogs as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the catalog names available in this database. The results are ordered by catalog name.
Notes:

The catalog column is:

TABLE_CAT String =>catalog name

Returns:
a ResultSet object in which each row has a single String column that is a catalog name

Throws:
SQLException - if a database access error occurs

99.6.24 getCatalogSeparator as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the String that this database uses as the separator between a catalog and table name.

99.6.25 getCatalogTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the database vendor's preferred term for "catalog".

99.6.26 getColumnPrivileges(catalog as string, schema as string, table as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the access rights for a table's columns.
Notes:

Only privileges matching the column name criteria are returned. They are ordered by COLUMN_NAME and PRIVILEGE.

Each privilige description has the following columns:

TABLE_CAT String =>table catalog (may be null)

TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
COLUMN_NAME String =>column name
GRANTOR =>grantor of access (may be null)
GRANTEE String =>grantee of access
PRIVILEGE String =>name of access (SELECT, INSERT, UPDATE, REFRENCES, ...)
IS_GRANTABLE String =>"true" if grantee is permitted to grant to others; "false" if not; null if unknown
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row is a column privilege description

Throws:
SQLException - if a database access error occurs

99.6.27 getColumns(catalog as string, schemaPattern as string, tableNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of table columns available in the specified catalog.
Notes:

Only column descriptions matching the catalog, schema, table and column name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and ORDINAL_POSITION.

Each column description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
COLUMN_NAME String =>column name
DATA_TYPE int =>SQL type from java.sql.Types
TYPE_NAME String =>Data source dependent type name, for a UDT the type name is fully qualified
COLUMN_SIZE int =>column size. For char or date types this is the maximum number of characters, for numeric or decimal types this is precision.
BUFFER_LENGTH is not used.
DECIMAL_DIGITS int =>the number of fractional digits
NUM_PREC_RADIX int =>Radix (typically either 10 or 2)

NULLABLE int =>is NULL allowed.
columnNoNulls - might not allow NULL values
columnNullable - definitely allows NULL values
columnNullableUnknown - nullability unknown
REMARKS String =>comment describing column (may be null)
COLUMN_DEF String =>default value (may be null)
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
CHAR_OCTET_LENGTH int =>for char types the maximum number of bytes in the column

ORDINAL_POSITION int =>index of column in table (starting at 1)

IS_NULLABLE String =>"false" means column definitely does not allow NULL values; "true" means the column might allow NULL values. An empty string means nobody knows.
SCOPE_CATLOG String =>catalog of table that is the scope of a reference attribute (null if DATA_TYPE isn't REF)
SCOPE_SCHEMA String =>schema of table that is the scope of a reference attribute (null if the DATA_TYPE isn't REF)
SCOPE_TABLE String =>table name that this the scope of a reference attribure (null if the DATA_TYPE isn't REF)
SOURCE_DATA_TYPE short =>source type of a distinct type or user-generated Ref type, SQL type from java.sql.Types (null if DATA_TYPE isn't DISTINCT or user-generated REF)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database

Returns:
ResultSet - each row is a column description

Throws:
SQLException - if a database access error occurs

99.6.28 getConnection as JavaConnectionMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the connection that produced this metadata object.

99.6.29 getCrossReference(primaryCatalog as string, primarySchema as string, primaryTable as string, foreignCatalog as string, foreignSchema as string, foreignTable as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the foreign key columns in the given foreign key table that reference the primary key columns of the given primary key table (describe how one table imports another's key).
Notes:

This should normally return a single foreign key/primary key pair because most tables import a foreign key from a table only once. They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ.
Each foreign key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog (may be null)
PKTABLE_SCHEM String =>primary key table schema (may be null)
PKTABLE_NAME String =>primary key table name
PKCOLUMN_NAME String =>primary key column name
FKTABLE_CAT String =>foreign key table catalog (may be null) being exported (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null) being exported (may be null)
FKTABLE_NAME String =>foreign key table name being exported
FKCOLUMN_NAME String =>foreign key column name being exported
KEY_SEQ short =>sequence number within foreign key
UPDATE_RULE short =>What happens to foreign key when primary is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition
Parameters:
primaryCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
primarySchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
primaryTable - the name of the table that exports the key; must match the table name as it is stored in the

database
foreignCatalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
foreignSchema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means drop schema name from the selection criteria
foreignTable - the name of the table that imports the key; must match the table name as it is stored in the database
Returns:
ResultSet - each row is a foreign key column description
Throws:
SQLException - if a database access error occurs

99.6.30 getDatabaseMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the major version number of the underlying database.

99.6.31 getDatabaseMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the minor version number of the underlying database.

99.6.32 getDatabaseProductName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of this database product.

99.6.33 getDatabaseProductVersion as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the version number of this database product.

99.6.34 getDefaultTransactionIsolation as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves this database's default transaction isolation level.
Notes: The possible values are defined in java.sql.Connection.

99.6.35 getDriverMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves this JDBC driver's major version number.

99.6.36 getDriverMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves this JDBC driver's minor version number.

99.6.37 getDriverName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of this JDBC driver.

99.6.38 getDriverVersion as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the version number of this JDBC driver as a String.

99.6.39 getExportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the foreign key columns that reference the given table's primary key columns (the foreign keys exported by a table).
Notes:

They are ordered by FKTABLE_CAT, FKTABLE_SCHEM, FKTABLE_NAME, and KEY_SEQ.
Each foreign key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog (may be null)
PKTABLE_SCHEM String =>primary key table schema (may be null)
PKTABLE_NAME String =>primary key table name
PKCOLUMN_NAME String =>primary key column name
FKTABLE_CAT String =>foreign key table catalog (may be null) being exported (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null) being exported (may be null)
FKTABLE_NAME String =>foreign key table name being exported
FKCOLUMN_NAME String =>foreign key column name being exported

KEY_SEQ short =>sequence number within foreign key
UPDATE_RULE short =>What happens to foreign key when primary is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in this database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in this database

Returns:
a ResultSet object in which each row is a foreign key column description

Throws:
SQLException - if a database access error occurs

99.6.40 getExtraNameCharacters as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves all the "extra" characters that can be used in unquoted identifier names (those beyond a-z, A-Z, 0-9 and _).

99.6.41 getIdentifierQuoteString as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the string used to quote SQL identifiers. This method returns a space " " if identifier quoting is not supported.

99.6.42 getImportedKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the primary key columns that are referenced by a table's foreign key columns (the primary keys imported by a table).
Notes:

They are ordered by PKTABLE_CAT, PKTABLE_SCHEM, PKTABLE_NAME, and KEY_SEQ.
Each primary key column description has the following columns:

PKTABLE_CAT String =>primary key table catalog being imported (may be null)
PKTABLE_SCHEM String =>primary key table schema being imported (may be null)
PKTABLE_NAME String =>primary key table name being imported
PKCOLUMN_NAME String =>primary key column name being imported
FKTABLE_CAT String =>foreign key table catalog (may be null)
FKTABLE_SCHEM String =>foreign key table schema (may be null)
FKTABLE_NAME String =>foreign key table name
FKCOLUMN_NAME String =>foreign key column name
KEY_SEQ short =>sequence number within a foreign key
UPDATE_RULE short =>What happens to a foreign key when the primary key is updated:
importedNoAction - do not allow update of primary key if it has been imported
importedKeyCascade - change imported key to agree with primary key update
importedKeySetNull - change imported key to NULL if its primary key has been updated
importedKeySetDefault - change imported key to default values if its primary key has been updated
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
DELETE_RULE short =>What happens to the foreign key when primary is deleted.
importedKeyNoAction - do not allow delete of primary key if it has been imported
importedKeyCascade - delete rows that import a deleted key
importedKeySetNull - change imported key to NULL if its primary key has been deleted
importedKeyRestrict - same as importedKeyNoAction (for ODBC 2.x compatibility)
importedKeySetDefault - change imported key to default if its primary key has been deleted
FK_NAME String =>foreign key name (may be null)
PK_NAME String =>primary key name (may be null)
DEFERRABILITY short =>can the evaluation of foreign key constraints be deferred until commit
importedKeyInitiallyDeferred - see SQL92 for definition
importedKeyInitiallyImmediate - see SQL92 for definition
importedKeyNotDeferrable - see SQL92 for definition
Parameters:

catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

Throws:
SQLException - if a database access error occurs

99.6.43 getJDBCMajorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the major JDBC version number for this driver.

99.6.44 getJDBCMinorVersion as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the minor JDBC version number for this driver.

99.6.45 getMaxBinaryLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of hex characters this database allows in an inline binary literal.
Notes: Returns the maximum length (in hex characters) for a binary literal; a result of zero means that there is no limit or the limit is not known

99.6.46 getMaxCatalogNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a catalog name.
Notes: Returns the maximum number of characters allowed in a catalog name; a result of zero means that there is no limit or the limit is not known

99.6.47 getMaxCharLiteralLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows for a character literal.
Notes: Returns the maximum number of characters allowed for a character literal; a result of zero means that there is no limit or the limit is not known

99.6.48 getMaxColumnNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows for a column name.
Notes: Returns the maximum number of characters allowed for a column name; a result of zero means that there is no limit or the limit is not known

99.6.49 getMaxColumnsInGroupBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a GROUP BY clause.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

99.6.50 getMaxColumnsInIndex as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in an index.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

99.6.51 getMaxColumnsInOrderBy as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in an ORDER BY clause.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

99.6.52 getMaxColumnsInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a SELECT list.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

99.6.53 getMaxColumnsInTable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of columns this database allows in a table.
Notes: Returns the maximum number of columns allowed; a result of zero means that there is no limit or the limit is not known

99.6.54 getMaxConnections as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of concurrent connections to this database that are possible.
Notes: Returns the maximum number of active connections possible at one time; a result of zero means that there is no limit or the limit is not known

99.6.55 getMaxCursorNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a cursor name.
Notes: Returns the maximum number of characters allowed in a cursor name; a result of zero means that there is no limit or the limit is not known

99.6.56 getMaxIndexLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of bytes this database allows for an index, including all of the parts of the index.
Notes: Returns the maximum number of bytes allowed; this limit includes the composite of all the constituent parts of the index; a result of zero means that there is no limit or the limit is not known

99.6.57 getMaxProcedureNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a procedure name.
Notes: Returns the maximum number of characters allowed in a procedure name; a result of zero means that there is no limit or the limit is not known

99.6.58 getMaxRowSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of bytes this database allows in a single row.
Notes: Returns the maximum number of bytes allowed for a row; a result of zero means that there is no limit or the limit is not known

99.6.59 getMaxSchemaNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters that this database allows in a schema name.
Notes: Returns the maximum number of characters allowed in a schema name; a result of zero means that there is no limit or the limit is not known

99.6.60 getMaxStatementLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in an SQL statement.
Notes: Returns the maximum number of characters allowed for an SQL statement; a result of zero means that there is no limit or the limit is not known

99.6.61 getMaxStatements as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of active statements to this database that can be open at the same time.
Notes: Returns the maximum number of statements that can be open at one time; a result of zero means that there is no limit or the limit is not known

99.6.62 getMaxTableNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in a table name.
Notes: Returns the maximum number of characters allowed for a table name; a result of zero means that there is no limit or the limit is not known

99.6.63 getMaxTablesInSelect as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of tables this database allows in a SELECT statement.
Notes: Returns the maximum number of tables allowed in a SELECT statement; a result of zero means that there is no limit or the limit is not known

99.6.64 getMaxUserNameLength as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the maximum number of characters this database allows in a user name.
Notes: Returns the maximum number of characters allowed for a user name; a result of zero means that there is no limit or the limit is not known

99.6.65 getNumericFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of math functions available with this database.
Notes: These are the Open /Open CLI math function names used in the JDBC function escape clause.

99.6.66 getPrimaryKeys(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the given table's primary key columns. They are ordered by COLUMN_NAME.
Notes:

Each primary key column description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name

COLUMN_NAME String =>column name
KEY_SEQ short =>sequence number within primary key
PK_NAME String =>primary key name (may be null)
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a primary key column description

99.6.67 getProcedureColumns(catalog as string, schemaPattern as string, procedureNamePattern as string, columnNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the given catalog's stored procedure parameter and result columns.
Notes:

Only descriptions matching the schema, procedure and parameter name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME. Within this, the return value, if any, is first. Next are the parameter descriptions in call order. The column descriptions follow in column number order.

Each row in the ResultSet is a parameter description or column description with the following fields:

PROCEDURE_CAT String =>procedure catalog (may be null)
PROCEDURE_SCHEM String =>procedure schema (may be null)
PROCEDURE_NAME String =>procedure name
COLUMN_NAME String =>column/parameter name
COLUMN_TYPE Short =>kind of column/parameter:
procedureColumnUnknown - nobody knows
procedureColumnIn - IN parameter
procedureColumnInOut - INOUT parameter
procedureColumnOut - OUT parameter
procedureColumnReturn - procedure return value
procedureColumnResult - result column in ResultSet
DATA_TYPE int =>SQL type from java.sql.Types
TYPE_NAME String =>SQL type name, for a UDT type the type name is fully qualified
PRECISION int =>precision
LENGTH int =>length in bytes of data
SCALE short =>scale

RADIX short =>radix
NULLABLE short =>can it contain NULL.
procedureNoNulls - does not allow NULL values
procedureNullable - allows NULL values
procedureNullableUnknown - nullability unknown
REMARKS String =>comment describing parameter/column
Note: Some databases may not return the column descriptions for a procedure. Additional columns beyond REMARKS can be defined by the database.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the database
columnNamePattern - a column name pattern; must match the column name as it is stored in the database
Returns:
ResultSet - each row describes a stored procedure parameter or column
Throws:
SQLException - if a database access error occurs

99.6.68 getProcedures(catalog as string, schemaPattern as string, procedureNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the stored procedures available in the given catalog.
Notes:

Only procedure descriptions matching the schema and procedure name criteria are returned. They are ordered by PROCEDURE_SCHEM and PROCEDURE_NAME.

Each procedure description has the the following columns:

PROCEDURE_CAT String =>procedure catalog (may be null)
PROCEDURE_SCHEM String =>procedure schema (may be null)
PROCEDURE_NAME String =>procedure name
reserved for future use
reserved for future use
reserved for future use
REMARKS String =>explanatory comment on the procedure
PROCEDURE_TYPE short =>kind of procedure:
procedureResultUnknown - May return a result
procedureNoResult - Does not return a result

procedureReturnsResult - Returns a result
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
procedureNamePattern - a procedure name pattern; must match the procedure name as it is stored in the database

Returns:
ResultSet - each row is a procedure description

Throws:
SQLException - if a database access error occurs

99.6.69 getProcedureTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the database vendor's preferred term for "procedure".

99.6.70 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the default holdability of this ResultSet object.
Notes:

Returns:
the default holdability; either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

99.6.71 getSchemas as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the schema names available in this database.
Notes:

The results are ordered by schema name.

The schema column is:

TABLE_SCHEM String =>schema name
TABLE_CATALOG String =>catalog name (may be null)
Returns:
a ResultSet object in which each row is a schema decription

Throws:
SQLException - if a database access error occurs

99.6.72 getSchemaTerm as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the database vendor's preferred term for "schema".

99.6.73 getSearchStringEscape as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the string that can be used to escape wildcard characters.
Notes:

This is the string that can be used to escape '_' or '% ' in the catalog search parameters that are a pattern (and therefore use one of the wildcard characters).
The '_' character represents any single character; the '% ' character represents any sequence of zero or more characters.

99.6.74 getSQLKeywords as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of all of this database's SQL keywords that are NOT also SQL92 keywords.

99.6.75 getSQLStateType as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the SQLSTATE returned by SQLException.getSQLState is X/Open (now known as Open Group) SQL CLI or SQL99.
Notes:

Returns:
the type of SQLSTATE; one of: sqlStateXOpen or sqlStateSQL99

99.6.76 getStringFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of string functions available with this database.
Notes: These are the Open Group CLI string function names used in the JDBC function escape clause.

99.6.77 getSuperTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the table hierarchies defined in a particular schema in this database.
Notes:

Only supertable information for tables matching the catalog, schema and table name are returned. The table name parameter may be a fully- qualified name, in which case, the catalog and schemaPattern parameters are ignored. If a table does not have a super table, it is not listed here. Supertables have to be defined in the same catalog and schema as the sub tables. Therefore, the type description does not need to include this information for the supertable.

Each type description has the following columns:

TABLE_CAT String =>the type's catalog (may be null)
TABLE_SCHEM String =>type's schema (may be null)
TABLE_NAME String =>type name
SUPERTABLE_NAME String =>the direct super type's name
Note: If the driver does not support type hierarchies, an empty result set is returned.

Parameters:
catalog - a catalog name; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
schemaPattern - a schema name pattern; "" retrieves those without a schema
tableNamePattern - a table name pattern; may be a fully-qualified name

Returns:
a ResultSet object in which each row is a type description

Throws:
SQLException - if a database access error occurs

99.6.78 getSuperTypes(catalog as string, schemaPattern as string, typeNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the user-defined type (UDT) hierarchies defined in a particular schema in this database.
Notes:

Only the immediate super type/ sub type relationship is modeled.
Only supertype information for UDTs matching the catalog, schema, and type name is returned. The type name parameter may be a fully-qualified name. When the UDT name supplied is a fully-qualified name, the catalog and schemaPattern parameters are ignored.

If a UDT does not have a direct super type, it is not listed here. A row of the ResultSet object returned by this method describes the designated UDT and a direct supertype. A row has the following columns:

TYPE_CAT String =>the UDT's catalog (may be null)
TYPE_SCHEM String =>UDT's schema (may be null)
TYPE_NAME String =>type name of the UDT
SUPERTYPE_CAT String =>the direct super type's catalog (may be null)
SUPERTYPE_SCHEM String =>the direct super type's schema (may be null)
SUPERTYPE_NAME String =>the direct super type's name
Note: If the driver does not support type hierarchies, an empty result set is returned.

Parameters:
catalog - a catalog name; "" retrieves those without a catalog; null means drop catalog name from the selection criteria
schemaPattern - a schema name pattern; "" retrieves those without a schema
typeNamePattern - a UDT name pattern; may be a fully-qualified name

Returns:
a ResultSet object in which a row gives information about the designated UDT

Throws:
SQLException - if a database access error occurs

99.6.79 getSystemFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of system functions available with this database.
Notes: These are the Open Group CLI system function names used in the JDBC function escape clause.

99.6.80 getTablePrivileges(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the access rights for each table available in a catalog.
Notes:

Note that a table privilege applies to one or more columns in the table. It would be wrong to assume that this privilege applies to all columns (this may be true for some systems but is not true for all.)
Only privileges matching the schema and table name criteria are returned. They are ordered by TABLE_SCHEM, TABLE_NAME, and PRIVILEGE.

Each privilige description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name
GRANTOR =>grantor of access (may be null)
GRANTEE String =>grantee of access
PRIVILEGE String =>name of access (SELECT, INSERT, UPDATE, REFRENCES, ...)
IS_GRANTABLE String =>"true" if grantee is permitted to grant to others; "false" if not; null if unknown
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database

Returns:
ResultSet - each row is a table privilege description

Throws:
SQLException - if a database access error occurs

99.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the tables available in the given catalog.
Notes:

Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are ordered by TABLE_TYPE, TABLE_SCHEM and TABLE_NAME.
Each table description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name

TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

REMARKS String =>explanatory comment on the table
TYPE_CAT String =>the types catalog (may be null)
TYPE_SCHEM String =>the types schema (may be null)
TYPE_NAME String =>type name (may be null)
SELF_REFERENCING_COL_NAME String =>name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String =>specifies how values in SELF_REFERENCING_COL_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)
Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs
See also:

- 99.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS 16689

99.6.82 getTables(catalog as string, schemaPattern as string, tableNamePattern as string, types() as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of the tables available in the given catalog.
Notes:

Only table descriptions matching the catalog, schema, table name and type criteria are returned. They are

ordered by TABLE_TYPE, TABLE_SCHEM and TABLE_NAME.
Each table description has the following columns:

TABLE_CAT String =>table catalog (may be null)
TABLE_SCHEM String =>table schema (may be null)
TABLE_NAME String =>table name

TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW", "SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

REMARKS String =>explanatory comment on the table
TYPE_CAT String =>the types catalog (may be null)
TYPE_SCHEM String =>the types schema (may be null)
TYPE_NAME String =>type name (may be null)
SELF_REFERENCING_COL_NAME String =>name of the designated "identifier" column of a typed table (may be null)
REF_GENERATION String =>specifies how values in SELF_REFERENCING_COL_NAME are created. Values are "SYSTEM", "USER", "DERIVED". (may be null)
Note: Some databases may not return information for all tables.

Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schemaPattern - a schema name pattern; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
tableNamePattern - a table name pattern; must match the table name as it is stored in the database
types - a list of table types to include (optionally)

Returns:
ResultSet - each row is a table description

Throws:
SQLException - if a database access error occurs
See also:

- 99.6.81 getTables(catalog as string, schemaPattern as string, tableNamePattern as string) as JavaResultSetMBS 16688

99.6.83 getTableTypes as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the table types available in this database.
Notes:

The table type is:

TABLE_TYPE String =>table type. Typical types are "TABLE", "VIEW",	"SYSTEM TABLE", "GLOBAL TEMPORARY", "LOCAL TEMPORARY", "ALIAS", "SYNONYM".

Returns:
a ResultSet object in which each row has a single String column that is a table type

Throws:
SQLException - if a database access error occurs

99.6.84 getTimeDateFunctions as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a comma-separated list of the time and date functions available with this database.

99.6.85 getTypeInfos as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of all the standard SQL types supported by this database.
Notes:

They are ordered by DATA_TYPE and then by how closely the data type maps to the corresponding JDBC SQL type.

Each type description has the following columns:

TYPE_NAME String =>Type name
DATA_TYPE int =>SQL data type from java.sql.Types
PRECISION int =>maximum precision
LITERAL_PREFIX String =>prefix used to quote a literal (may be null)
LITERAL_SUFFIX String =>suffix used to quote a literal (may be null)
CREATE_PARAMS String =>parameters used in creating the type (may be null)
NULLABLE short =>can you use NULL for this type.
typeNoNulls - does not allow NULL values
typeNullable - allows NULL values
typeNullableUnknown - nullability unknown
CASE_SENSITIVE boolean=>is it case sensitive.
SEARCHABLE short =>can you use "WHERE" based on this type:
typePredNone - No support
typePredChar - Only supported with WHERE .. LIKE
typePredBasic - Supported except for WHERE .. LIKE

typeSearchable - Supported for all WHERE ..
UNSIGNED_ATTRIBUTE boolean =>is it unsigned.
FIXED_PREC_SCALE boolean =>can it be a money value.
AUTO_INCREMENT boolean =>can it be used for an auto-increment value.
LOCAL_TYPE_NAME String =>localized version of type name (may be null)
MINIMUM_SCALE short =>minimum scale supported
MAXIMUM_SCALE short =>maximum scale supported
SQL_DATA_TYPE int =>unused
SQL_DATETIME_SUB int =>unused
NUM_PREC_RADIX int =>usually 2 or 10

Returns:
a ResultSet object in which each row is an SQL type description

Throws:
SQLException - if a database access error occurs

This method is named getTypeInfo in Java and getTypeInfos in this plugin because Xojo has a global method and sees a conflict.

99.6.86 getURL as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the URL for this DBMS.
Notes: Returns the URL for this DBMS or "" if it cannot be generated.

99.6.87 getUserName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the user name as known to this database.

99.6.88 getVersionColumns(catalog as string, schema as string, table as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 9.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a description of a table's columns that are automatically updated when any value in a row is updated. They are unordered.
Notes:

Each column description has the following columns:

SCOPE short =>is not used
COLUMN_NAME String =>column name
DATA_TYPE int =>SQL data type from java.sql.Types
TYPE_NAME String =>Data source-dependent type name
COLUMN_SIZE int =>precision
BUFFER_LENGTH int =>length of column value in bytes

DECIMAL_DIGITS short =>scale

PSEUDO_COLUMN short =>whether this is pseudo column like an Oracle ROWID
versionColumnUnknown - may or may not be pseudo column
versionColumnNotPseudo - is NOT a pseudo column
versionColumnPseudo - is a pseudo column
Parameters:
catalog - a catalog name; must match the catalog name as it is stored in the database; "" retrieves those without a catalog; null means that the catalog name should not be used to narrow the search
schema - a schema name; must match the schema name as it is stored in the database; "" retrieves those without a schema; null means that the schema name should not be used to narrow the search
table - a table name; must match the table name as it is stored in the database

Returns:
a ResultSet object in which each row is a column description

99.6.89 importedKeyCascade as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the column UPDATE_RULE, indicates that when the primary key is updated, the foreign key (imported key) is changed to agree with it.
Notes:

For the column DELETE_RULE, it indicates that when the primary key is deleted, rows that imported that key are deleted.
A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.90 importedKeyInitiallyDeferred as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the meth-

ods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.91 importedKeyInitiallyImmediate as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.92 importedKeyNoAction as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key has been imported, it cannot be updated or deleted.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.93 importedKeyNotDeferrable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates deferrability. See SQL-92 for a definition.
Notes: A possible value for the column DEFERRABILITY in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.94 importedKeyRestrict as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the column UPDATE_RULE, indicates that a primary key may not be updated if it has been imported by another table as a foreign key.
Notes:

For the column DELETE_RULE, indicates that a primary key may not be deleted if it has been imported by another table as a foreign key.
A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.95 importedKeySetDefault as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the columns UPDATE_RULE and DELETE_RULE, indicates that if the primary key is updated or deleted, the foreign key (imported key) is set to the default value.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.96 importedKeySetNull as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For the columns UPDATE_RULE and DELETE_RULE, indicates that when the primary key is updated or deleted, the foreign key (imported key) is changed to NULL.
Notes: A possible value for the columns UPDATE_RULE and DELETE_RULE in the ResultSet objects returned by the methods getImportedKeys, getExportedKeys, and getCrossReference.

99.6.97 insertsAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether or not a visible row insert can be detected by calling the method ResultSet.rowInserted.
Notes:

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the specified result set type; false otherwise

99.6.98 isCatalogAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog appears at the start of a fully qualified table name. If not, the catalog appears at the end.

99.6.99 isReadOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database is in read-only mode.

99.6.100 locatorsUpdateCopy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether updates made to a LOB are made on a copy or directly to the LOB.
Notes:

Returns:
true if updates are made to a copy of the LOB; false if updates are made directly to the LOB

99.6.101 nullPlusNonNullIsNull as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports concatenations between NULL and non-NULL values being NULL.

99.6.102 nullsAreSortedAtEnd as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted at the end regardless of sort order.

99.6.103 nullsAreSortedAtStart as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted at the start regardless of sort order.

99.6.104 nullsAreSortedHigh as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted high.
Notes: Sorted high means that NULL values sort higher than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the end. By contrast, the method nullsAreSortedAtEnd indicates whether NULL values are sorted at the end regardless of sort order.

99.6.105 nullsAreSortedLow as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether NULL values are sorted low.
Notes: Sorted low means that NULL values sort lower than any other value in a domain. In an ascending order, if this method returns true, NULL values will appear at the beginning. By contrast, the method nullsAreSortedAtStart indicates whether NULL values are sorted at the beginning regardless of sort order.

99.6.106 othersDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether deletes made by others are visible.
Notes:

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if deletes made by others are visible for the given result set type; false otherwise

99.6.107 othersInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether inserts made by others are visible.
Notes:

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if inserts made by others are visible for the given result set type; false otherwise

99.6.108 othersUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether updates made by others are visible.
Notes:

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if updates made by others are visible for the given result set type; false otherwise

99.6.109 ownDeletesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a result set's own deletes are visible.
Notes:

type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if deletes are visible for the given result set type; false otherwise

99.6.110 ownInsertsAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a result set's own inserts are visible.
Notes:

type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns true if inserts are visible for the given result set type; false otherwise

99.6.111 ownUpdatesAreVisible(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether for the given type of ResultSet object, the result set's own updates are visible.
Notes: type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

99.6.112 procedureColumnIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores IN parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.113 procedureColumnInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores INOUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.114 procedureColumnOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores OUT parameters.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.115 procedureColumnResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores results.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.116 procedureColumnReturn as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the column stores return values.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.117 procedureColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that type of the column is unknown.
Notes: A possible value for the column COLUMN_TYPE in the ResultSet returned by the method getProcedureColumns.

99.6.118 procedureNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that NULL values are not allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

99.6.119 procedureNoResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the procedure does not return a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

99.6.120 procedureNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that NULL values are allowed.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

99.6.121 procedureNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that whether NULL values are allowed is unknown.
Notes: A possible value for the column NULLABLE in the ResultSet object returned by the method getProcedureColumns.

99.6.122 procedureResultUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that it is not known whether the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

99.6.123 procedureReturnsResult as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the procedure returns a result.
Notes: A possible value for column PROCEDURE_TYPE in the ResultSet object returned by the method getProcedures.

99.6.124 sqlStateSQL99 as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the value is an SQL99 SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

99.6.125 sqlStateXOpen as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the value is an X/Open (now know as Open Group) SQL CLI SQLSTATE value.
Notes: A possible return value for the method SQLException.getSQLState.

99.6.126 storesLowerCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores

them in lower case.

99.6.127 storesLowerCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in lower case.

99.6.128 storesMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in mixed case.

99.6.129 storesMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

99.6.130 storesUpperCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case insensitive and stores them in upper case.

99.6.131 storesUpperCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case insensitive and stores them in upper case.

99.6.132 supportsAlterTableWithAddColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports ALTER TABLE with add column.

99.6.133 supportsAlterTableWithDropColumn as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports ALTER TABLE with drop column.

99.6.134 supportsANSI92EntryLevelSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 entry level SQL grammar.

99.6.135 supportsANSI92FullSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 full SQL grammar supported.

99.6.136 supportsANSI92IntermediateSQL as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ANSI92 intermediate SQL grammar supported.

99.6.137 supportsBatchUpdates as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports batch updates.
Notes:

Returns:
true if this database supports batch upcates; false otherwise

99.6.138 supportsCatalogsInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a data manipulation statement.

99.6.139 supportsCatalogsInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

99.6.140 supportsCatalogsInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

99.6.141 supportsCatalogsInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a procedure call statement.

99.6.142 supportsCatalogsInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in a table definition statement.

99.6.143 supportsColumnAliasing as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports column aliasing.
Notes: If so, the SQL AS clause can be used to provide names for computed columns or to provide alias names for columns as required.

99.6.144 supportsConvert as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the CONVERT function between SQL types.
See also:

- 99.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean

99.6.145 supportsConvert(fromType as Integer, toType as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the CONVERT for two given SQL types.
Notes:

Parameters:
fromType - the type to convert from; one of the type codes from the class JavaDatabaseMBS
toType - the type to convert to; one of the type codes from the class JavaDatabaseMBS

Returns:
true if so; false otherwise
See also:

- 99.6.144 supportsConvert as boolean 16704

99.6.146 supportsCoreSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Core SQL grammar.

99.6.147 supportsCorrelatedSubqueries as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports correlated subqueries.

99.6.148 supportsDataDefinitionAndDataManipulationTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports both data definition and data manipulation statements within a transaction.

99.6.149 supportsDataManipulationTransactionsOnly as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports only data manipulation statements within a transaction.

99.6.150 supportsDifferentTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether, when table correlation names are supported, they are restricted to being different from the names of the tables.

99.6.151 supportsExpressionsInOrderBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports expressions in ORDER BY lists.

99.6.152 supportsExtendedSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Extended SQL grammar.

99.6.153 supportsFullOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports full nested outer joins.

99.6.154 supportsGetGeneratedKeys as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether auto-generated keys can be retrieved after a statement has been executed.
Notes:

Returns:
true if auto-generated keys can be retrieved after a statement has executed; false otherwise

99.6.155 supportsGroupBy as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports some form of GROUP BY clause.

99.6.156 supportsGroupByBeyondSelect as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports using columns not included in the SELECT statement in a GROUP BY clause provided that all of the columns in the SELECT statement are included in the GROUP BY clause.

99.6.157 supportsGroupByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports using a column that is not in the SELECT statement in a GROUP BY clause.

99.6.158 supportsIntegrityEnhancementFacility as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the SQL Integrity Enhancement Facility.

99.6.159 supportsLikeEscapeClause as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports specifying a LIKE escape clause.

99.6.160 supportsLimitedOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database provides limited support for outer joins.
Notes: (This will be true if the method supportsFullOuterJoins returns true).

99.6.161 supportsMinimumSQLGrammar as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the ODBC Minimum SQL grammar.

99.6.162 supportsMixedCaseIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case unquoted SQL identifiers as case sensitive and as a result stores them in mixed case.

99.6.163 supportsMixedCaseQuotedIdentifiers as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database treats mixed case quoted SQL identifiers as case sensitive and as a result stores them in mixed case.

99.6.164 supportsMultipleOpenResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether it is possible to have multiple ResultSet objects returned from a CallableStatement object simultaneously.
Notes:

Returns:
true if a CallableStatement object can return multiple ResultSet objects simultaneously; false otherwise

99.6.165 supportsMultipleResultSets as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports getting multiple ResultSet objects from a single call to the method execute.

99.6.166 supportsMultipleTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database allows having multiple transactions open at once (on different connections).

99.6.167 supportsNamedParameters as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports named parameters to callable statements.
Notes:

Returns:
true if named parameters are supported; false otherwise

99.6.168 supportsNonNullableColumns as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether columns in this database may be defined as non-nullable.

99.6.169 supportsOpenCursorsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports keeping cursors open across commits.

99.6.170 supportsOpenCursorsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports keeping cursors open across rollbacks.

99.6.171 supportsOpenStatementsAcrossCommit as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports keeping statements open across commits.

99.6.172 supportsOpenStatementsAcrossRollback as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports keeping statements open across rollbacks.

99.6.173 supportsOrderByUnrelated as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports using a column that is not in the SELECT statement in an ORDER BY clause.

99.6.174 supportsOuterJoins as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports some form of outer join.

99.6.175 supportsPositionedDelete as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a catalog name can be used in an index definition statement.

99.6.176 supportsPositionedUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports positioned UPDATE statements.

99.6.177 supportsResultSetConcurrency(type as Integer, concurrency as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given concurrency type in combination with the given result set type.

99.6.178 supportsResultSetHoldability(holdability as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given result set holdability.
Notes:

Parameters:
holdability - one of the following constants: ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT
Returns:
true if so; false otherwise

99.6.179 supportsResultSetType(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given result set type.

99.6.180 supportsSavepoints as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports savepoints.
Notes:

Returns:
true if savepoints are supported; false otherwise

99.6.181 supportsSchemasInDataManipulation as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a data manipulation statement.

99.6.182 supportsSchemasInIndexDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in an index definition statement.

99.6.183 supportsSchemasInPrivilegeDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a privilege definition statement.

99.6.184 supportsSchemasInProcedureCalls as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a procedure call statement.

99.6.185 supportsSchemasInTableDefinitions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a schema name can be used in a table definition statement.

99.6.186 supportsSelectForUpdate as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports SELECT FOR UPDATE statements.

99.6.187 supportsStatementPooling as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports statement pooling.
Notes:

Returns:
true if so; false otherwise

99.6.188 supportsStoredProcedures as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports stored procedure calls that use the stored procedure escape syntax.

99.6.189 supportsSubqueriesInComparisons as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in comparison expressions.

99.6.190 supportsSubqueriesInExists as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in EXISTS expressions.

99.6.191 supportsSubqueriesInIns as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in IN statements.

99.6.192 supportsSubqueriesInQuantifieds as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports subqueries in quantified expressions.

99.6.193 supportsTableCorrelationNames as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports table correlation names.

99.6.194 supportsTransactionIsolationLevel(level as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports the given transaction isolation level.
Notes:

Parameters:
level - one of the transaction isolation levels defined in javaConnectionMBS

Returns:
true if so; false otherwise

99.6.195 supportsTransactions as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports transactions.
Notes: If not, invoking the method commit is a noop, and the isolation level is TRANSACTION_NONE.

99.6.196 supportsUnion as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports SQL UNION.

99.6.197 supportsUnionAll as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database supports SQL UNION ALL.

99.6.198 tableIndexClustered as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is a clustered index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

99.6.199 tableIndexHashed as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is a hashed index.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

99.6.200 tableIndexOther as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this table index is not a clustered index, a hashed index, or table statistics; it is something other than these.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

99.6.201 tableIndexStatistic as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this column contains table statistics that are returned in conjunction with a table's index descriptions.
Notes: A possible value for column TYPE in the ResultSet object returned by the method getIndexInfo.

99.6.202 typeNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that a NULL value is NOT allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

99.6.203 typeNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

99.6.204 typeNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that it is not known whether a NULL value is allowed for this data type.
Notes: A possible value for column NULLABLE in the ResultSet object returned by the method getTypeInfo.

99.6.205 typePredBasic as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that one can base all WHERE search clauses except WHERE . . . LIKE on this data type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

99.6.206 typePredChar as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that the only WHERE search clause that can be based on this type is WHERE . . . LIKE.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

99.6.207 typePredNone as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that WHERE search clauses are not supported for this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

99.6.208 typeSearchable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that all WHERE search clauses can be based on this type.
Notes: A possible value for column SEARCHABLE in the ResultSet object returned by the method getTypeInfo.

99.6.209 updatesAreDetected(type as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether or not a visible row update can be detected by calling the method ResultSet.rowUpdated.
Notes:

Parameters:
type - the ResultSet type; one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

Returns:
true if changes are detected by the result set type; false otherwise

99.6.210 usesLocalFilePerTable as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database uses a file for each table.

99.6.211 usesLocalFiles as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether this database stores tables in a local file.

99.6.212 versionColumnNotPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column is NOT a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

99.6.213 versionColumnPseudo as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column is a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

99.6.214 versionColumnUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates that this version column may or may not be a pseudo column.
Notes: A possible value for the column PSEUDO_COLUMN in the ResultSet object returned by the method getVersionColumns.

99.7 class JavaExceptionMBS

99.7.1 class JavaExceptionMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception class used to report java exception.
Notes:

For SQLExceptions the ErrorNumber property will be filled.
For all java exceptions the message property is filled.
Subclass of the RuntimeException class.

99.7.2 Blog Entries

- Encrypted Access database in Xojo

99.7.3 Methods

99.7.4 RaiseJavaException(message as string)

MBS Java Plugin, Plugin Version: 9.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A method to test exception handling.
Example:

JavaExceptionMBS.RaiseJavaException "Just a test!"

Notes: This method raises a new JavaExceptionMBS with the given message.

99.8 class JavaInputStreamMBS

99.8.1 class JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The plugin class for an inputstream.
Example:

```
// your result set
dim r as JavaResultSetMBS

// get binary data for BLOB column nameed 'data'
dim myInputStream as JavaInputStreamMBS = r.getBinaryStream( "data" )
if myInputStream <>nil Then

// read byte for byte in a loop
// better use other read() method with buffer
dim data as string

Do
dim c as Integer = myInputStream.read
If c = -1 then exit

data = data + chrb(c)
Loop

Dim myPicture as Picture = Picture.FromData(data)

// work with picture here
End If
```

Notes:

This abstract class in java is the superclass of all classes representing an input stream of bytes.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MBS Real Studio Plugins, version 13.1pr7

99.8.3 Methods

99.8.4 available as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking by the next invocation of a method for this input stream.
Notes:

The next invocation might be the same thread or another thread. A single read or skip of this many bytes will not block, but may read or skip fewer bytes.
Note that while some implementations of InputStream will return the total number of bytes in the stream, many will not. It is never correct to use the return value of this method to allocate a buffer intended to hold all data in this stream.

A subclass' implementation of this method may choose to throw an IOException if this input stream has been closed by invoking the close() method.

The available method for class InputStream always returns 0.

This method should be overridden by subclasses.

Returns an estimate of the number of bytes that can be read (or skipped over) from this input stream without blocking or 0 when it reaches the end of the input stream.

Throws:
IOException - if an I/O error occurs.

99.8.5 close

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes this input stream and releases any system resources associated with the stream.

99.8.6 Constructor

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.8.7 mark(readlimit as Integer)

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Marks the current position in this input stream.
Notes:

A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
The readlimit arguments tells this input stream to allow that many bytes to be read before the mark position gets invalidated.

The general contract of mark is that, if the method markSupported returns true, the stream somehow remembers all the bytes read after the call to mark and stands ready to supply those same bytes again if and whenever the method reset is called. However, the stream is not required to remember any data at all if more than readlimit bytes are read from the stream before reset is called.

Marking a closed stream should not have any effect on the stream.

The mark method of InputStream does nothing.

Parameters:
readlimit - the maximum limit of bytes that can be read before the mark position becomes invalid.

99.8.8 markSupported as boolean

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests if this input stream supports the mark and reset methods.
Notes:

Whether or not mark and reset are supported is an invariant property of a particular input stream instance. The markSupported method of InputStream returns false.

Returns true if this stream instance supports the mark and reset methods; false otherwise.

99.8.9 read as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the next byte of data from the input stream.
Notes:

The value byte is returned as an int in the range 0 to 255. If no byte is available because the end of the stream has been reached, the value -1 is returned. This method blocks until input data is available, the end

of the stream is detected, or an exception is thrown.
A subclass must provide an implementation of this method.

Returns the next byte of data, or -1 if the end of the stream is reached.

Throws:
IOException - if an I/O error occurs.
See also:

- 99.8.10 read(bytes as JavaByteArrayMBS) as Integer 16722
- 99.8.11 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16723

99.8.10 read(bytes as JavaByteArrayMBS) as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads some number of bytes from the input stream and stores them into the buffer array bytes.
Notes:

The number of bytes actually read is returned as an integer. This method blocks until input data is available, end of file is detected, or an exception is thrown.
If the length of bytes is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at the end of the file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [0] , the next one into bytes [1] , and so on. The number of bytes read is, at most, equal to the length of bytes. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [0] through bytes [k-1] , leaving elements bytes [k] through bytes [bytes.length-1] unaffected.

The read(bytes) method for class InputStream has the same effect as:

read(bytes, 0, bytes.length)

Parameters:
bytes: the buffer into which the data is read.

Returns the total number of bytes read into the buffer, or -1 is there is no more data because the end of the stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than the end of the file, if the input stream has been closed, or if some other I/O error occurs.

NullPointerException - if bytes is null.
See also:

- 99.8.9 read as Integer 16721
- 99.8.11 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer 16723

99.8.11 read(bytes as JavaByteArrayMBS, Offset as Integer, Length as Integer) as Integer

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads up to Length bytes of data from the input stream into an array of bytes.
Notes:

An attempt is made to read as many as Length bytes, but a smaller number may be read. The number of bytes actually read is returned as an integer.
This method blocks until input data is available, end of file is detected, or an exception is thrown.

If Length is zero, then no bytes are read and 0 is returned; otherwise, there is an attempt to read at least one byte. If no byte is available because the stream is at end of file, the value -1 is returned; otherwise, at least one byte is read and stored into bytes.

The first byte read is stored into element bytes [Offset] , the next one into bytes [Offset+1] , and so on. The number of bytes read is, at most, equal to Length. Let k be the number of bytes actually read; these bytes will be stored in elements bytes [Offset] through bytes [Offset+k-1] , leaving elements bytes [Offset+k] through bytes [Offset+Length-1] unaffected.

In every case, elements bytes [0] through bytes [Offset] and elements bytes [Offset+Length] through bytes [bytes.length-1] are unaffected.

The read(bytes, Offset, Length) method for class InputStream simply calls the method read() repeatedly. If the first such call results in an IOException, that exception is returned from the call to the read(bytes, Offset, Length) method. If any subsequent call to read() results in a IOException, the exception is caught and treated as if it were end of file; the bytes read up to that point are stored into bytes and the number of bytes read before the exception occurred is returned. The default implementation of this method blocks until the requested amount of input data len has been read, end of file is detected, or an exception is thrown. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters:
bytes: the buffer into which the data is read.
Offset: the start offset in array bytes at which the data is written.
Length: the maximum number of bytes to read.

Returns the total number of bytes read into the buffer, or -1 if there is no more data because the end of the

stream has been reached.

Throws:
IOException - If the first byte cannot be read for any reason other than end of file, or if the input stream has been closed, or if some other I/O error occurs.
NullPointerException - If bytes is null.
IndexOutOfBoundsException - If Offset is negative, Length is negative, or Length is greater than bytes.length - Offset
See also:

- 99.8.9 read as Integer 16721
- 99.8.10 read(bytes as JavaByteArrayMBS) as Integer 16722

99.8.12 reset

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Repositions this stream to the position at the time the mark method was last called on this input stream.
Notes:

The general contract of reset is:

- If the method markSupported returns true, then:
- If the method mark has not been called since the stream was created, or the number of bytes read from the stream since mark was last called is larger than the argument to mark at that last call, then an IOException might be thrown.
- If such an IOException is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset.
- If the method markSupported returns false, then:
- The call to reset may throw an IOException.
- If an IOException is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

The method reset for class InputStream does nothing except throw an IOException.

Throws:
IOException - if this stream has not been marked or if the mark has been invalidated.

99.8.13 skip(count as Int64) as Int64

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Skips over and discards count bytes of data from this input stream.
Notes:

The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before count bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If count is negative, no bytes are skipped.
The skip method of this class creates a byte array and then repeatedly reads into it until count bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method. For instance, the implementation may depend on the ability to seek.

Parameters:
count: the number of bytes to be skipped.

Returns the actual number of bytes skipped.

Throws:
IOException - if the stream does not support seek, or if some other I/O error occurs.

99.9 class JavaParameterMetaDataMBS

99.9.1 class JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object that can be used to get information about the types and properties of the parameters in a PreparedStatement object.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.9.2 Methods

99.9.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.9.4 getParameterClassName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the fully-qualified name of the Java class whose instances should be passed to the method PreparedStatement.setObject.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method PreparedStatement.setObject to set the value in the specified parameter. This is the class name used for custom mapping.

99.9.5 getParameterCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the number of parameters in the PreparedStatement object for which this ParameterMetaData object contains information.
Notes:

Returns:
the number of parameters

99.9.6 getParameterMode(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated parameter's mode.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
mode of the parameter; one of ParameterMetaData.parameterModeIn, ParameterMetaData.parameterModeOut, or ParameterMetaData.parameterModeInOut ParameterMetaData.parameterModeUnknown.

99.9.7 getParameterType(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated parameter's SQL type.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

99.9.8 getParameterTypeName(param as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated parameter's database-specific type name.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
type the name used by the database. If the parameter type is a user-defined type, then a fully-qualified type name is returned.

99.9.9 getPrecision(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated parameter's number of decimal digits.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
precision

99.9.10 getScale(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated parameter's number of digits to right of the decimal point.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
scale

99.9.11 isNullable(param as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether null values are allowed in the designated parameter.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
the nullability status of the given parameter; one of ParameterMetaData.parameterNoNulls, ParameterMetaData.parameterNullable, or ParameterMetaData.parameterNullableUnknown

99.9.12 isSigned(param as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether values for the designated parameter can be signed numbers.
Notes:

Parameters:
param - the first parameter is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.9.13 parameterModeIn as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the parameter's mode is IN.

99.9.14 parameterModeInOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the parameter's mode is INOUT.

99.9.15 parameterModeOut as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the parameter's mode is OUT.

99.9.16 parameterModeUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the mode of the parameter is unknown.

99.9.17 parameterNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a parameter will not allow NULL values.

99.9.18 parameterNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a parameter will allow NULL values.

99.9.19 parameterNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the nullability of a parameter is unknown.

99.10 class JavaPreparedStatementMBS

99.10.1 class JavaPreparedStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object that represents a precompiled SQL statement.
Notes:

A SQL statement is precompiled and stored in a PreparedStatement object. This object can then be used to efficiently execute this statement multiple times.

Note: The setter methods (setShort, setString, and so on) for setting IN parameter values must specify types that are compatible with the defined SQL type of the input parameter. For instance, if the IN parameter has SQL type INTEGER, then the method setInt should be used.

If arbitrary parameter type conversions are required, the method setObject should be used with a target SQL type.

In the following example of setting a parameter, con represents an active connection:

PreparedStatement pstmt = con.prepareStatement("UPDATE EMPLOYEES SET SALARY = ? WHERE ID = ?");
pstmt.setBigDecimal(1, 153833.00)
pstmt.setInt(2, 110592)
Subclass of the JavaStatementMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.10.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

99.10.3 Methods

99.10.4 addBatch

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a set of parameters to this PreparedStatement object's batch of commands.

99.10.5 clearParameters

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the current parameter values immediately.
Notes: In general, parameter values remain in force for repeated use of a statement. Setting a parameter value automatically clears its previous value. However, in some cases it is useful to immediately release the resources used by the current parameter values; this can be done by calling the method clearParameters.

99.10.6 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.10.7 execute as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL statement in this PreparedStatement object, which may be any kind of SQL statement.
Notes:

Some prepared statements return multiple results; the execute method handles these complex statements as well as the simpler form of statements handled by the methods executeQuery and executeUpdate.
The execute method returns a boolean to indicate the form of the first result. You must call either the method getResultSet or getUpdateCount to retrieve the result; you must call getMoreResults to move to any subsequent result(s).

Returns:
true if the first result is a ResultSet object; false if the first result is an update count or there is no result

99.10.8 executeQuery as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL query in this PreparedStatement object and returns the ResultSet object generated by the query.
Notes:

Returns:
a ResultSet object that contains the data produced by the query; never null

99.10.9 executeUpdate as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the SQL statement in this PreparedStatement object, which must be an SQL INSERT, UPDATE or DELETE statement; or an SQL statement that returns nothing, such as a DDL statement.
Notes:

Returns:
either (1) the row count for INSERT, UPDATE, or DELETE statements or (2) 0 for SQL statements that return nothing.

99.10.10 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a ResultSetMetaData object that contains information about the columns of the ResultSet object that will be returned when this PreparedStatement object is executed.
Notes:

Because a PreparedStatement object is precompiled, it is possible to know about the ResultSet object that it will return without having to execute it. Consequently, it is possible to invoke the method getMetaData on a PreparedStatement object rather than waiting to execute it and then invoking the ResultSet.getMetaData method on the ResultSet object that is returned.

NOTE: Using this method may be expensive for some drivers due to the lack of underlying DBMS support.

Returns:
the description of a ResultSet object's columns or null if the driver cannot return a ResultSetMetaData object

99.10.11 getParameterMetaData as JavaParameterMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the number, types and properties of this PreparedStatement object's parameters.
Notes:

Returns:
a ParameterMetaData object that contains information about the number, types and properties of this PreparedStatement object's parameters

99.10.12 setBlob(parameterIndex as Integer, x as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Blob object.

Notes:

The driver converts this to an SQL BLOB value when it sends it to the database.

Parameters:
i - the first parameter is 1, the second is 2, ...
x - a Blob object that maps an SQL BLOB value

99.10.13 setBoolean(parameterIndex as Integer, x as boolean)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java boolean value.
Notes:

The driver converts this to an SQL BIT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.14 setByte(parameterIndex as Integer, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java byte value.
Notes:

The driver converts this to an SQL TINYINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.15 setBytes(parameterIndex as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java array of bytes.
Notes:

The driver converts this to an SQL VARBINARY or LONGVARBINARY (depending on the argument's size relative to the driver's limits on VARBINARY values) when it sends it to the database.

parameterIndex: the first parameter is 1, the second is 2, ...
Value: the parameter value as a string.

99.10.16 setClob(parameterIndex as Integer, x as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Clob object.
Notes:

The driver converts this to an SQL CLOB value when it sends it to the database.

Parameters:
i - the first parameter is 1, the second is 2, ...
x - a Clob object that maps an SQL CLOB value

99.10.17 setDouble(parameterIndex as Integer, x as Double)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java double value.
Notes:

The driver converts this to an SQL DOUBLE value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.18 setFloat(parameterIndex as Integer, x as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java float value.
Notes:

The driver converts this to an SQL FLOAT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.19 setInt(parameterIndex as Integer, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java int value.
Notes:

The driver converts this to an SQL INTEGER value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.20 setLong(parameterIndex as Integer, x as Int64)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java long value.
Notes:

The driver converts this to an SQL BIGINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.21 setNull(parameterIndex as Integer, sqlType as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to SQL NULL.
Notes:

You must specify the parameter's SQL type.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
sqlType - the SQL type code defined in java.sql.Types

99.10.22 setShort(parameterIndex as Integer, x as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java short value.
Notes:

The driver converts this to an SQL SMALLINT value when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.10.23 setString(parameterIndex as Integer, x as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the designated parameter to the given Java String value.
Notes:

The driver converts this to an SQL VARCHAR or LONGVARCHAR value (depending on the argument's size relative to the driver's limits on VARCHAR values) when it sends it to the database.

Parameters:
parameterIndex - the first parameter is 1, the second is 2, ...
x - the parameter value

99.11 class JavaResultSetMBS

99.11.1 class JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a recordset in Java.
Notes:

Nearly all methods on this class can raise java exceptions which you can get using the error property. (and errorstring and errorcode)
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.11.2 Blog Entries

- Prefetching records from databases
- Encrypted Access database in Xojo
- MBS Real Studio Plugins, version 13.1pr7
- MBS Real Studio Plugins, version 11.3pr1

99.11.3 Methods

99.11.4 absolute(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the given row number in this ResultSet object.
Example:

```
dim db as JavaConnectionMBS // your database
dim r as JavaResultSetMBS
dim s as JavaStatementMBS

// check second row
s=db.createStatement
r=s.executeQuery("SELECT * from myTable")

if r<>Nil then
if r.absolute(2) then
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
end if
end if
```

Notes: See the java documentation for details on java.sql.ResultSet.absolute.

99.11.5 afterLast

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the end of this ResultSet object, just after the last row.
Notes: See the java documentation for details on java.sql.ResultSet.afterLast.

99.11.6 beforeFirst

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the front of this ResultSet object, just before the first row.
Notes: See the java documentation for details on java.sql.ResultSet.beforeFirst.

99.11.7 cancelRowUpdates

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels the updates made to the current row in this ResultSet object.
Notes:

This method may be called after calling an updater method(s) and before calling the method updateRow to roll back the updates made to a row. If no updates have been made or updateRow has already been called, this method has no effect.

See the java documentation for details on java.sql.ResultSet.cancelRowUpdates.

99.11.8 clearWarnings

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all warnings reported on this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.clearWarnings.

99.11.9 CLOSE_CURSORS_AT_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should be closed when the method Connection.commit is called.

99.11.10 CONCUR_READ_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may NOT be updated.

99.11.11 CONCUR_UPDATABLE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the concurrency mode for a ResultSet object that may be updated.

99.11.12 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.11.13 deleteRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes the current row from this ResultSet object and from the underlying database.
Notes: See the java documentation for details on java.sql.ResultSet.deleteRow.

99.11.14 FETCH_FORWARD as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a forward direction; first-to-last.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.11.15 FETCH_REVERSE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the rows in a result set will be processed in a reverse direction; last-to-first.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.11.16 FETCH_UNKNOWN as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the order in which rows in a result set will be processed is unknown.
Notes: This constant is used by the method setFetchDirection as a hint to the driver, which the driver may ignore.

99.11.17 findColumn(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maps the given ResultSet column name to its ResultSet column index.
Example:

```
dim r as JavaResultSetMBS // your result set
MsgBox str(r.findColumn("test_id"))+" "+str(r.findColumn("test_val"))
```

Notes:

Returns 0 on any error.
See the java documentation for details on java.sql.ResultSet.findColumn.

99.11.18 first as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the first row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.first.

99.11.19 getAsciiStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters.
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method

InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set.
See also:

- 99.11.20 getAsciiStream(column as string) as JavaInputStreamMBS 16741

99.11.20 getAsciiStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as an Array object in the Java programming language.
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of ASCII characters. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC driver will do any necessary conversion from the database format into ASCII.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of one-byte ASCII characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 99.11.19 getAsciiStream(column as Integer) as JavaInputStreamMBS 16740

99.11.21 getBinaryStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 99.11.22 getBinaryStream(column as string) as JavaInputStreamMBS 16742

99.11.22 getBinaryStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes.
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of uninterpreted bytes. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARBINARY values.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method available is called whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of uninterpreted bytes; if the value is SQL NULL, the result is null.

Throws SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
See also:

- 99.11.21 getBinaryStream(column as Integer) as JavaInputStreamMBS 16742

99.11.23 getBlob(column as Integer) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes:

Column: the first column is 1, the second is 2, ...

Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 99.11.24 getBlob(column as string) as JavaBlobMBS 16743

99.11.24 getBlob(column as string) as JavaBlobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Blob object in the Java programming language.
Notes:

column: the name of the column from which to retrieve the value
Returns a Blob object representing the SQL BLOB value in the specified column
See also:

- 99.11.23 getBlob(column as Integer) as JavaBlobMBS 16743

99.11.25 getBoolean(column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 99.11.26 getBoolean(column as string) as boolean 16744

99.11.26 getBoolean(column as string) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a boolean.
Notes: See the java documentation for details on java.sql.ResultSet.getBoolean.
See also:

- 99.11.25 getBoolean(column as Integer) as boolean 16743

99.11.27 getByte(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 99.11.28 getByte(column as string) as Integer 16744

99.11.28 getByte(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte in the Java programming language.
Notes:

Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 99.11.27 getByte(column as Integer) as Integer 16744

99.11.29 getBytes(column as Integer) as string

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes:

column: the first column is 1, the second is 2, ...
the plugin gives you the bytes as a string with no encoding.
See also:

- 99.11.30 getBytes(column as string) as string 16745

99.11.30 getBytes(column as string) as string

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a byte array in the Java programming language.
Notes: the plugin gives you the bytes as a string with no encoding.
See also:

- 99.11.29 getBytes(column as Integer) as string 16744

99.11.31 getClob(column as Integer) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes:

Column: the first column is 1, the second is 2, ...
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 99.11.32 getClob(column as string) as JavaClobMBS 16745

99.11.32 getClob(column as string) as JavaClobMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a Clob object in the Java programming language.
Notes:

column: the name of the column from which to retrieve the value
Returns a Clob object representing the SQL CLOB value in the specified column
See also:

- 99.11.31 getClob(column as Integer) as JavaClobMBS 16745

99.11.33 getConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the concurrency mode of this ResultSet object.
Notes:

The concurrency used is determined by the Statement object that created the result set.
Returns:
the concurrency type, either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

99.11.34 getCursorName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of the SQL cursor used by this ResultSet object.
Notes:

In SQL, a result table is retrieved through a cursor that is named. The current row of a result set can be updated or deleted using a positioned update/delete statement that references the cursor name. To insure that the cursor has the proper isolation level to support update, the cursor's SELECT statement should be of the form SELECT FOR UPDATE. If FOR UPDATE is omitted, the positioned updates may fail.

The JDBC API supports this SQL feature by providing the name of the SQL cursor used by a ResultSet object. The current row of a ResultSet object is also the current row of this SQL cursor.

Note: If positioned update is not supported, a SQLException is thrown.

Returns:
the SQL name for this ResultSet object's cursor

99.11.35 getDouble(column as Integer) as Double

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a double.
Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 99.11.36 getDouble(column as string) as Double 16746

99.11.36 getDouble(column as string) as Double

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a double.

Notes: See the java documentation for details on java.sql.ResultSet.getDouble.
See also:

- 99.11.35 getDouble(column as Integer) as Double 16746

99.11.37 getFloat(column as Integer) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 99.11.38 getFloat(column as string) as single 16747

99.11.38 getFloat(column as string) as single

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a float in the Java programming language.
Notes:

Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 99.11.37 getFloat(column as Integer) as single 16747

99.11.39 getInt(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int.
Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0

See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 99.11.40 getInt(column as string) as Integer 16748

99.11.40 getInt(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int.
Example:

```
dim r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getInt.
See also:

- 99.11.39 getInt(column as Integer) as Integer 16747

99.11.41 getLong(column as Integer) as int64

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 99.11.42 getLong(column as string) as int64 16748

99.11.42 getLong(column as string) as int64

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as an int64.
Notes: See the java documentation for details on java.sql.ResultSet.getLong.
See also:

- 99.11.41 getLong(column as Integer) as int64 16748

99.11.43 getMetaData as JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the number, types and properties of this ResultSet object's columns.
Notes:

Returns:
the description of this ResultSet object's columns

99.11.44 getRow as Integer

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current row number.
Notes: See the java documentation for details on java.sql.ResultSet.getRow.

99.11.45 getShort(column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes:

Parameters:
columnIndex - the first column is 1, the second is 2, ...
Returns:
the column value; if the value is SQL NULL, the value returned is 0.
See also:

- 99.11.46 getShort(column as string) as Integer 16749

99.11.46 getShort(column as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of the designated column in the current row of this ResultSet object as a short in the Java programming language.
Notes:

Parameters:
columnName - the SQL name of the column
Returns:
the column value; if the value is SQL NULL, the value returned is 0
See also:

- 99.11.45 getShort(column as Integer) as Integer 16749

99.11.47 getString(column as Integer) as string

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a String.

Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 99.11.48 getString(column as string) as string 16750

99.11.48 getString(column as string) as string

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the value of the designated column in the current row of this ResultSet object as a String.
Example:

```
dim r as JavaResultSetMBS // your result set
MsgBox str(R.getInt("test_id"))+" "+r.getString("test_val")
```

Notes: See the java documentation for details on java.sql.ResultSet.getString.
See also:

- 99.11.47 getString(column as Integer) as string 16749

99.11.49 getType as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the type of this ResultSet object.
Notes:

The type is determined by the Statement object that created the result set.
Returns:
ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_SENSITIVE

99.11.50 getUnicodeStream(column as Integer) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deprecated. use getCharacterStream in place of getUnicodeStream
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as as a stream of two-byte 3 characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHARvalues. The JDBC driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method

InputStream.available is called, whether there is data available or not.

Parameters:
column: the first column is 1, the second is 2, ...

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters; if the value is SQL NULL, the value returned is null

Throws:
SQLException - if the columnIndex is not valid; if a database access error occurs or this method is called on a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

- 99.11.51 getUnicodeStream(column as string) as JavaInputStreamMBS 16751

99.11.51 getUnicodeStream(column as string) as JavaInputStreamMBS

MBS Java Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deprecated. use getCharacterStream instead
Notes:

Retrieves the value of the designated column in the current row of this ResultSet object as a stream of two-byte Unicode characters. The first byte is the high byte; the second byte is the low byte. The value can then be read in chunks from the stream. This method is particularly suitable for retrieving large LONGVARCHAR values. The JDBC technology-enabled driver will do any necessary conversion from the database format into Unicode.
Note: All the data in the returned stream must be read prior to getting the value of any other column. The next call to a getter method implicitly closes the stream. Also, a stream may return 0 when the method InputStream.available is called, whether there is data available or not.

Parameters:
column: the label for the column specified with the SQL AS clause. If the SQL AS clause was not specified, then the label is the name of the column

Returns a Java input stream that delivers the database column value as a stream of two-byte Unicode characters. If the value is SQL NULL, the value returned is null.

Throws:
SQLException - if the columnLabel is not valid; if a database access error occurs or this method is called on a closed result set
SQLFeatureNotSupportedException - if the JDBC driver does not support this method
See also:

• 99.11.50 getUnicodeStream(column as Integer) as JavaInputStreamMBS 16750

99.11.52 HOLD_CURSORS_OVER_COMMIT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that ResultSet objects should not be closed when the method Connection.commit is called.

99.11.53 insertRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts the contents of the insert row into this ResultSet objaect and into the database.
Notes: See the java documentation for details on java.sql.ResultSet.insertRow.

99.11.54 isAfterLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is after the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isAfterLast.

99.11.55 isBeforeFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the cursor is before the first row in this ResultSet object.
Notes:

Returns:
true if the cursor is before the first row; false if the cursor is at any other position or the result set contains no rows

See the java documentation for details on java.sql.ResultSet.isBeforeFirst.

99.11.56 isFirst as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is on the first row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isFirst.

99.11.57 isLast as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the cursor is on the last row of this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.isLast.

99.11.58 last as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the last row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.last.

99.11.59 moveToCurrentRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the remembered cursor position, usually the current row.
Notes:

This method has no effect if the cursor is not on the insert row.

See the java documentation for details on java.sql.ResultSet.moveToCurrentRow.

99.11.60 moveToInsertRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the insert row.
Notes:

The current cursor position is remembered while the cursor is positioned on the insert row. The insert row is a special row associated with an updatable result set. It is essentially a buffer where a new row may be constructed by calling the updater methods prior to inserting the row into the result set. Only the updater, getter, and insertRow methods may be called when the cursor is on the insert row. All of the columns in a result set must be given a value each time this method is called before calling insertRow. An updater method must be called before a getter method can be called on a column value.

See the java documentation for details on java.sql.ResultSet.moveToInsertRow.

99.11.61 NextRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor down one row from its current position.
Notes: See the java documentation for details on java.sql.ResultSet.next.

99.11.62 previousRecord as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor to the previous row in this ResultSet object.
Notes: See the java documentation for details on java.sql.ResultSet.previous.

99.11.63 refreshRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Refreshes the current row with its most recent value in the database.
Notes:

This method cannot be called when the cursor is on the insert row.
The refreshRow method provides a way for an application to explicitly tell the JDBC driver to refetch a row(s) from the database. An application may want to call refreshRow when caching or prefetching is being done by the JDBC driver to fetch the latest value of a row from the database. The JDBC driver may actually refresh multiple rows at once if the fetch size is greater than one.

All values are refetched subject to the transaction isolation level and cursor sensitivity. If refreshRow is called after calling an updater method, but before calling the method updateRow, then the updates made to the row are lost. Calling the method refreshRow frequently will likely slow performance.

99.11.64 relative(row as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor a relative number of rows, either positive or negative.
Notes: See the java documentation for details on java.sql.ResultSet.relative.

99.11.65 rowDeleted as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether a row has been deleted.
Notes:

A deleted row may leave a visible "hole" in a result set. This method can be used to detect holes in a result set. The value returned depends on whether or not this ResultSet object can detect deletions.
Returns:
true if a row was deleted and deletions are detected; false otherwise

99.11.66 rowInserted as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current row has had an insertion.
Notes:

The value returned depends on whether or not this ResultSet object can detect visible inserts.
Returns:
true if a row has had an insertion and insertions are detected; false otherwise

99.11.67 rowUpdated as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves whether the current row has been updated.
Notes:

The value returned depends on whether or not the result set can detect updates.
Returns:
true if both (1) the row has been visibly updated by the owner or another and (2) updates are detected

99.11.68 TYPE_FORWARD_ONLY as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object whose cursor may move only forward.

99.11.69 TYPE_SCROLL_INSENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable but generally not sensitive to changes made by others.

99.11.70 TYPE_SCROLL_SENSITIVE as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating the type for a ResultSet object that is scrollable and generally sensitive to changes made by others.

99.11.71 updateBlob(column as Integer, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Blob value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 99.11.72 updateBlob(column as string, value as JavaBlobMBS) 16756

99.11.72 updateBlob(column as string, value as JavaBlobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Blob value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 99.11.71 updateBlob(column as Integer, value as JavaBlobMBS) 16756

99.11.73 updateBoolean(column as Integer, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a boolean value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 99.11.74 updateBoolean(column as string, value as boolean) 16757

99.11.74 updateBoolean(column as string, value as boolean)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a boolean value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.73 updateBoolean(column as Integer, value as boolean) 16756

99.11.75 updateByte(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 99.11.76 updateByte(column as string, value as Integer) 16758

99.11.76 updateByte(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.75 updateByte(column as Integer, value as Integer) 16757

99.11.77 updateBytes(column as Integer, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte array value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: column index starting at 1.
Value: The new byte array as a string.
See also:

- 99.11.78 updateBytes(column as string, Value as String) 16758

99.11.78 updateBytes(column as string, Value as String)

MBS Java Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a byte array value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
column: The column name.
Value: The new byte array as a string.
See also:

- 99.11.77 updateBytes(column as Integer, Value as String) 16758

99.11.79 updateClob(column as Integer, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Clob value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the first column is 1, the second is 2, ...
value: the new column value
See also:

- 99.11.80 updateClob(column as string, value as JavaClobMBS) 16759

99.11.80 updateClob(column as string, value as JavaClobMBS)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a java.sql.Clob value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

column: the name of the column
value: the new column value
See also:

- 99.11.79 updateClob(column as Integer, value as JavaClobMBS) 16759

99.11.81 updateDouble(column as Integer, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a double value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

• 99.11.82 updateDouble(column as string, value as Double) 16760

99.11.82 updateDouble(column as string, value as Double)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a double value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

• 99.11.81 updateDouble(column as Integer, value as Double) 16759

99.11.83 updateFloat(column as Integer, value as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a float value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

• 99.11.84 updateFloat(column as string, value as single) 16760

99.11.84 updateFloat(column as string, value as single)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a float value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called

to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.83 updateFloat(column as Integer, value as single) 16760

99.11.85 updateInt(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with an int value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 99.11.86 updateInt(column as string, value as Integer) 16761

99.11.86 updateInt(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with an int value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.85 updateInt(column as Integer, value as Integer) 16761

99.11.87 updateLong(column as Integer, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a long value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 99.11.88 updateLong(column as string, value as int64) 16762

99.11.88 updateLong(column as string, value as int64)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a long value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.87 updateLong(column as Integer, value as int64) 16762

99.11.89 updateNull(column as Integer)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives a nullable column a null value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
See also:

• 99.11.90 updateNull(column as string) 16763

99.11.90 updateNull(column as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a null value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
See also:

• 99.11.89 updateNull(column as Integer) 16762

99.11.91 updateRow

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the underlying database with the new contents of the current row of this ResultSet object.
Example:

```
dim r as JavaResultSetMBS
dim db as JavaConnectionMBS // your database
dim s as JavaStatementMBS

s=db.createStatement
r=s.executeQuery("SELECT test_id from myTable")

if r<>Nil then
while r.NextRecord
r.updateInt("test_id",10+r.getInt("test_id"))
r.updateRow
wend
end if
```

Notes:

This method cannot be called when the cursor is on the insert row.

See the java documentation for details on java.sql.ResultSet.updateRow.

99.11.92 updateShort(column as Integer, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a short value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnIndex - the first column is 1, the second is 2, ...
x - the new column value
See also:

- 99.11.93 updateShort(column as string, value as Integer) 16764

99.11.93 updateShort(column as string, value as Integer)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a short value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.92 updateShort(column as Integer, value as Integer) 16764

99.11.94 updateString(column as Integer, value as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a String value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.

Parameters:
columnIndex - the first column is 1, the second is 2, ...

x - the new column value
See also:

- 99.11.95 updateString(column as string, value as string) 16765

99.11.95 updateString(column as string, value as string)

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Updates the designated column with a String value.
Notes:

The updater methods are used to update column values in the current row or the insert row. The updater methods do not update the underlying database; instead the updateRow or insertRow methods are called to update the database.
Parameters:
columnName - the name of the column
x - the new column value
See also:

- 99.11.94 updateString(column as Integer, value as string) 16764

99.11.96 wasNull as boolean

MBS Java Plugin, Plugin Version: 8.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reports whether the last column read had a value of SQL NULL.
Notes: See the java documentation for details on java.sql.ResultSet.wasNull.

99.11.97 Properties

99.11.98 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives a hint as to the direction in which the rows in this ResultSet object will be processed.
Notes:

The initial value is determined by the Statement object that produced this ResultSet object. The fetch direction may be changed at any time.

Parameters:
direction - an int specifying the suggested fetch direction; one of ResultSet.FETCH_FORWARD, ResultSet.FETCH_REVERSE, or ResultSet.FETCH_UNKNOWN
(Read and Write computed property)

99.11.99 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed for this ResultSet object.
Notes:

If the fetch size specified is zero, the JDBC driver ignores the value and is free to make its own best guess as to what the fetch size should be. The default value is set by the Statement object that created the result set. The fetch size may be changed at any time.

Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

99.12 class JavaResultSetMetaDataMBS

99.12.1 class JavaResultSetMetaDataMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An object that can be used to get information about the types and properties of the columns in a ResultSet object.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.12.2 Methods

99.12.3 columnNoNulls as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a column does not allow NULL values.

99.12.4 columnNullable as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a column allows NULL values.

99.12.5 columnNullableUnknown as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the nullability of a column's values is unknown.

99.12.6 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.12.7 getCatalogName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the designated column's table's catalog name.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the name of the catalog for the table in which the given column appears or "" if not applicable

99.12.8 getColumnClassName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the fully-qualified name of the Java class whose instances are manufactured if the method ResultSet.getObject is called to retrieve a value from the column.
Notes:

ResultSet.getObject may return a subclass of the class returned by this method.

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the fully-qualified name of the class in the Java programming language that would be used by the method ResultSet.getObject to retrieve the value in the specified column. This is the class name used for custom mapping.

99.12.9 getColumnCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of columns in this ResultSet object.

99.12.10 getColumnDisplaySize(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates the designated column's normal maximum width in characters.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:

the normal maximum number of characters allowed as the width of the designated column

99.12.11 getColumnLabel(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the designated column's suggested title for use in printouts and displays.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the suggested column title

99.12.12 getColumnName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the designated column's name.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
column name

99.12.13 getColumnType(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated column's SQL type.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
SQL type from java.sql.Types

99.12.14 getColumnTypeName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the designated column's database-specific type name.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
type name used by the database. If the column type is a user-defined type, then a fully-qualified type name is returned.

99.12.15 getPrecision(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the designated column's number of decimal digits.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
precision

99.12.16 getScale(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the designated column's number of digits to right of the decimal point.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
scale

99.12.17 getSchemaName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the designated column's table's schema.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
schema name or "" if not applicable

99.12.18 getTableName(Column as Integer) as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the designated column's table name.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
table name or "" if not applicable

99.12.19 isAutoIncrement(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is automatically numbered, thus read-only.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.20 isCaseSensitive(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether a column's case matters.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.21 isCurrency(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is a cash value
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:

true if so; false otherwise

99.12.22 isDefinitelyWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether a write on the designated column will definitely succeed.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.23 isNullable(Column as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates the nullability of values in the designated column.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
the nullability status of the given column; one of columnNoNulls, columnNullable or columnNullableUnknown

99.12.24 isReadOnly(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column is definitely not writable.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.25 isSearchable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether the designated column can be used in a where clause.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.26 isSigned(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether values in the designated column are signed numbers.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.12.27 isWritable(Column as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Indicates whether it is possible for a write on the designated column to succeed.
Notes:

Parameters:
column - the first column is 1, the second is 2, ...
Returns:
true if so; false otherwise

99.13 class JavaRuntimeMBS

99.13.1 class JavaRuntimeMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The java class for runtime information.
Notes:

Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.13.2 Methods

99.13.3 availableProcessors as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of processors available to the Java virtual machine.
Notes: This value may change during a particular invocation of the virtual machine. Applications that are sensitive to the number of available processors should therefore occasionally poll this property and adjust their resource usage appropriately.

99.13.4 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.13.5 freeMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the amount of free memory in the Java Virtual Machine.
Notes: Calling the gc method may result in increasing the value returned by freeMemory.

99.13.6 gc

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Invokes the garbage collection.
Notes: Calls "System.gc" in Java.

99.13.7 maxMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the maximum amount of memory that the Java virtual machine will attempt to use.
Notes: If there is no inherent limit then the value Long.MAX_VALUE will be returned.

99.13.8 totalMemory as Int64

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the total amount of memory in the Java virtual machine.
Notes:

The value returned by this method may vary over time, depending on the host environment.
Note that the amount of memory required to hold an object of any given type may be implementation-dependent.

99.14 class JavaSavepointMBS

99.14.1 class JavaSavepointMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The representation of a savepoint, which is a point within the current transaction that can be referenced from the Connection.rollback method. When a transaction is rolled back to a savepoint all changes made after that savepoint are undone.
Notes:

Savepoints can be either named or unnamed. Unnamed savepoints are identified by an ID generated by the underlying data source.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.14.2 Methods

99.14.3 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.14.4 getSavepointId as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the generated ID for the savepoint that this Savepoint object represents.

99.14.5 getSavepointName as string

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the name of the savepoint that this Savepoint object represents.

99.15 class JavaStatementMBS

99.15.1 class JavaStatementMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The object used for executing a static SQL statement and returning the results it produces.
Notes:

By default, only one ResultSet object per Statement object can be open at the same time. Therefore, if the reading of one ResultSet object is interleaved with the reading of another, each must have been generated by different Statement objects. All execution methods in the Statement interface implicitly close a statment's current ResultSet object if an open one exists.
Subclass of the JavaObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

99.15.2 Blog Entries

- Prefetching records from databases
- MBS Xojo / Real Studio Plugins, version 15.1pr1

99.15.3 Methods

99.15.4 addBatch(sql as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds the given SQL command to the current list of commmands for this Statement object.
Notes:

The commands in this list can be executed as a batch by calling the method executeBatch.

NOTE: This method is optional.

Parameters:
sql - typically this is a static SQL INSERT or UPDATE statement

99.15.5 cancel

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels this Statement object if both the DBMS and driver support aborting an SQL statement.
Notes: This method can be used by one thread to cancel a statement that is being executed by another

thread.

99.15.6 clearBatch

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Empties this Statement object's current list of SQL commands.
Notes: NOTE: This method is optional.

99.15.7 clearWarnings

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all the warnings reported on this Statement object.
Notes: After a call to this method, the method getWarnings will return null until a new warning is reported for this Statement object.

99.15.8 close

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases this Statement object's database and JDBC resources immediately instead of waiting for this to happen when it is automatically closed.
Notes:

It is generally good practice to release resources as soon as you are finished with them to avoid tying up database resources.
Calling the method close on a Statement object that is already closed has no effect.

Note: A Statement object is automatically closed when it is garbage collected. When a Statement object is closed, its current ResultSet object, if one exists, is also closed.

99.15.9 CLOSE_ALL_RESULTS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that all ResultSet objects that have previously been kept open should be closed when calling getMoreResults.

99.15.10 CLOSE_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the current ResultSet object should be closed when calling getMoreResults.

99.15.11 Constructor

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

99.15.12 execute(sql as string) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which may return multiple results.
Notes:

In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may return multiple results or (2) you are dynamically executing an unknown SQL string.
The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement

Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 99.15.13 execute(sql as string, autoGeneratedKeys as Integer) as boolean 16779

99.15.13 execute(sql as string, autoGeneratedKeys as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which may return multiple results, and signals the driver that any auto-generated keys should be made available for retrieval.
Notes:

The driver will ignore this signal if the SQL statement is not an INSERT statement.
In some (uncommon) situations, a single SQL statement may return multiple result sets and/or update counts. Normally you can ignore this unless you are (1) executing a stored procedure that you know may

return multiple results or (2) you are dynamically executing an unknown SQL string.

The execute method executes an SQL statement and indicates the form of the first result. You must then use the methods getResultSet or getUpdateCount to retrieve the result, and getMoreResults to move to any subsequent result(s).

Parameters:
sql - any SQL statement
autoGeneratedKeys - a constant indicating whether auto-generated keys should be made available for retrieval using the method getGeneratedKeys; one of the following constants: Statement.RETURN_GENERATED_KEYS or Statement.NO_GENERATED_KEYS
Returns:
true if the first result is a ResultSet object; false if it is an update count or there are no results
See also:

- 99.15.12 execute(sql as string) as boolean 16779

99.15.14 executeBatch as Integer()

MBS Java Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Submits a batch of commands to the database for execution and if all commands execute successfully, returns an array of update counts.

99.15.15 executeQuery(sql as string) as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which returns a single ResultSet object.
Notes:

Parameters:
sql - an SQL statement to be sent to the database, typically a static SQL SELECT statement
Returns:
a ResultSet object that contains the data produced by the given query; never null

99.15.16 executeUpdate(Sql as string) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement, which may be an INSERT, UPDATE, or DELETE statement or an SQL statement that returns nothing, such as an SQL DDL statement.
Notes:

Parameters:

sql - an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 99.15.17 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer 16781

99.15.17 executeUpdate(Sql as string, autoGeneratedKeys as Integer) as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given SQL statement and signals the driver with the given flag about whether the auto-generated keys produced by this Statement object should be made available for retrieval.
Notes:

Parameters:
sql - must be an SQL INSERT, UPDATE or DELETE statement or an SQL statement that returns nothing
autoGeneratedKeys - a flag indicating whether auto-generated keys should be made available for retrieval; one of the following constants: Statement.RETURN_GENERATED_KEYS Statement.NO_GENERATED_KEYS
Returns:
either the row count for INSERT, UPDATE or DELETE statements, or 0 for SQL statements that return nothing
See also:

- 99.15.16 executeUpdate(Sql as string) as Integer 16780

99.15.18 EXECUTE_FAILED as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that an error occured while executing a batch statement.

99.15.19 getGeneratedKeys as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves any auto-generated keys created as a result of executing this Statement object.
Notes:

If this Statement object did not generate any keys, an empty ResultSet object is returned.

Returns:
a ResultSet object containing the auto-generated key(s) generated by the execution of this Statement object

99.15.20 getMoreResults as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves to this Statement object's next result, returns true if it is a ResultSet object, and implicitly closes any current ResultSet object(s) obtained with the method getResultSet.
Notes:

There are no more results when the following is true:

// stmt is a Statement object
((stmt.getMoreResults() == false) & & (stmt.getUpdateCount() == -1))

Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 99.15.21 getMoreResults(current as Integer) as boolean 16782

99.15.21 getMoreResults(current as Integer) as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves to this Statement object's next result, deals with any current ResultSet object(s) according to the instructions specified by the given flag, and returns true if the next result is a ResultSet object.
Notes:

There are no more results when the following is true:

// stmt is a Statement object
((stmt.getMoreResults() == false) & & (stmt.getUpdateCount() == -1))

Parameters:
current - one of the following Statement constants indicating what should happen to current ResultSet objects obtained using the method getResultSet: Statement.CLOSE_CURRENT_RESULT, Statement.KEEP_CURRENT_RESULT, or Statement.CLOSE_ALL_RESULTS
Returns:
true if the next result is a ResultSet object; false if it is an update count or there are no more results
See also:

- 99.15.20 getMoreResults as boolean 16782

99.15.22 getResultSet as JavaResultSetMBS

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current result as a ResultSet object.

Notes:

This method should be called only once per result.

Returns:
the current result as a ResultSet object or null if the result is an update count or there are no more results

99.15.23 getResultSetConcurrency as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set concurrency for ResultSet objects generated by this Statement object.
Notes:

Returns:
either ResultSet.CONCUR_READ_ONLY or ResultSet.CONCUR_UPDATABLE

99.15.24 getResultSetHoldability as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set holdability for ResultSet objects generated by this Statement object.
Notes:

Returns:
either ResultSet.HOLD_CURSORS_OVER_COMMIT or ResultSet.CLOSE_CURSORS_AT_COMMIT

99.15.25 getResultSetType as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the result set type for ResultSet objects generated by this Statement object.
Notes:

Returns:
one of ResultSet.TYPE_FORWARD_ONLY, ResultSet.TYPE_SCROLL_INSENSITIVE, or ResultSet.TYPE_SCROLL_S
SITIVE

99.15.26 getUpdateCount as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current result as an update count; if the result is a ResultSet object or there are no more results, -1 is returned.
Notes:

This method should be called only once per result.

Returns:
the current result as an update count; -1 if the current result is a ResultSet object or there are no more results

99.15.27 KEEP_CURRENT_RESULT as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that the current ResultSet object should not be closed when calling getMoreResults.

99.15.28 NO_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that generated keys should not be made available for retrieval.

99.15.29 RETURN_GENERATED_KEYS as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that generated keys should be made available for retrieval.

99.15.30 setCursorName(name as string)

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the SQL cursor name to the given String, which will be used by subsequent Statement object execute methods.
Notes:

This name can then be used in SQL positioned update or delete statements to identify the current row in the ResultSet object generated by this statement. If the database does not support positioned update/delete, this method is a noop. To insure that a cursor has the proper isolation level to support updates, the cursor's SELECT statement should have the form SELECT FOR UPDATE. If FOR UPDATE is not present, positioned updates may fail.
Note: By definition, the execution of positioned updates and deletes must be done by a different Statement object than the one that generated the ResultSet object being used for positioning. Also, cursor names must be unique within a connection.

Parameters:
name - the new cursor name, which must be unique within a connection

99.15.31 SUCCESS_NO_INFO as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constant indicating that a batch statement executed successfully but that no count of the number of rows it affected is available.

99.15.32 Properties

99.15.33 EscapeProcessing as boolean

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether escape processing is on or off.
Notes:

If escape scanning is on (the default), the driver will do escape substitution before sending the SQL statement to the database. Note: Since prepared statements have usually been parsed prior to making this call, disabling escape processing for PreparedStatements objects will have no effect.
Parameters:
enable - true to enable escape processing; false to disable it
(Read and Write computed property)

99.15.34 FetchDirection as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fetch direction.
Notes:

Gives the driver a hint as to the direction in which rows will be processed in ResultSet objects created using this Statement object. The default value is ResultSet.FETCH_FORWARD.
Note that this method sets the default fetch direction for result sets generated by this Statement object. Each result set has its own methods for getting and setting its own fetch direction.

Parameters:
direction - the initial direction for processing rows
(Read and Write computed property)

99.15.35 FetchSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives the JDBC driver a hint as to the number of rows that should be fetched from the database when more rows are needed.
Notes:

The number of rows specified affects only result sets created using this statement. If the value specified is zero, then the hint is ignored. The default value is zero.
Parameters:
rows - the number of rows to fetch
(Read and Write computed property)

99.15.36 MaxFieldSize as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum number of bytes that can be returned for character and binary column values in a ResultSet object produced by this Statement object.
Notes:

This limit applies only to BINARY, VARBINARY, LONGVARBINARY, CHAR, VARCHAR, and LONGVARCHAR columns. If the limit is exceeded, the excess data is silently discarded.
(Read and Write computed property)

99.15.37 MaxRows as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum number of rows that a ResultSet object produced by this Statement object can contain.
Notes:

If this limit is exceeded, the excess rows are silently dropped.
(Read and Write computed property)

99.15.38 QueryTimeout as Integer

MBS Java Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of seconds the driver will wait for a Statement object to execute. If the limit is exceeded, a SQLException is thrown.
Notes:

Returns:
the current query timeout limit in seconds; zero means there is no limit
(Read and Write computed property)

Chapter 100

JavaScript

100.1 class JavaScriptDateComponentsMBS

100.1.1 class JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for date components in JavaScript.
Example:

```
Dim j As New JavaScriptEngineMBS

// get now
Dim t1 As Double = j.Now

// as compoents
Dim d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Dim s1 As String = d1.SQLDateTime
// looks right?

// now convert back
Dim t2 As Double = j.DateComponentsToTime(d1)
Dim d2 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t2)
Dim s2 As String = d2.SQLDateTime
// still looks right?

Dim t3 As Double = j.DateComponentsToTime(d2)
// should be same time as above, but without fractions

Break
```

100.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.1
- MBS Xojo Plugins, version 20.1pr1

100.1.3 Properties

100.1.4 DateValue as Date

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The components as Xojo date.
Notes:

Convenience function to create date with UTC and values from this object.
(Read only property)

100.1.5 Day as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The day value.
Notes:

Ranges from 1 to 31.
(Read and Write property)

100.1.6 Hour as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hour.
Notes: (Read and Write property)

100.1.7 Millisecond as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The milliseconds.
Notes: (Read and Write property)

100.1.8 Minute as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minutes.
Notes: (Read and Write property)

100.1.9 Month as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The month value.
Notes:

Range is 1 to 12.
(Read and Write property)

100.1.10 Second as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds.
Notes: (Read and Write property)

100.1.11 SQLDateTime as String

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL date and time.
Notes:

Convenience property to see value in debugger.
(Read only property)

100.1.12 WeekDay as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The week day value.
Notes:

Range is 0 to 6. Sunday is 0, Monday is 1, Tuesday is 2, Wednesday is 3, Thursday is 4, Friday is 5 and Saturday is 6.
(Read and Write property)

100.1.13 Year as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The year value.
Notes: (Read and Write property)

100.2 class JavaScriptEngineExceptionMBS

100.2.1 class JavaScriptEngineExceptionMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a fatal exception in our JavaScript engine.
Notes:

See message property for reason of the exception.
Subclass of the RuntimeException class.

100.2.2 Blog Entries

- Our JavaScript engine for Xojo

100.3 class JavaScriptEngineMBS

100.3.1 class JavaScriptEngineMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for our embedded JavaScript engine.
Notes:

We use DukTape, an embeddable Javascript engine, with a focus on portability and compact footprint.
https://duktape.org

Your own JavaScript engine is useful for:

- Running some snippet of JavaScript code without HTMLViewer.
- Using various JavaScript libraries
- Providing a scripting language to your own application.
- An lightweight alternative to XojoScript.
- Working with JSON data
- Enjoy using regular expressions, unicode text functions, number parsing and formatting with no platform dependencies

MBS Plugin added Input(), Yield() and Print() functions for your convenience.
Yield will pass CPU control to other threads, so background tasks continue to run.

MBS Plugin can convert JavaScript values to variant.
Boolean ->Boolean
Number ->Double
String ->String
Buffer ->MemoryBlock
Pointer ->Ptr
Array ->Variant array
Object ->JSON string
null ->nil

We convert variant to JavaScript:
nil ->null
Int32, Int64, Single, Double, Currency ->Number
Boolean ->Boolean
String, Text, Date ->String
Ptr ->Pointer
all other ->undefined

This class is like XojoScript, but using JavaScript as language.

100.3.4 Methods

100.3.5 AddFunction(Name as String, JavaScript as String, FileName as String = "")

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a global function defined as a text string.
Example:

```
Dim j As New JavaScriptEngineMBS
j.AddFunction "adder", "function (x,y) { return x+y; } "
```

Notes:

Optional provide a file name to show in stack traces.
Function source code may contain a function name, but we use only the name parameter to register the function as global one.

100.3.6 CallFunction(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a global function given the name.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Dim r As Variant = j.CallFunction("adder", 2, 3)
Break // check result in debugger
```

Notes:

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 100.3.7 CallFunction(Name as String, Params() as Variant) as Variant 16794

100.3.7 CallFunction(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a global function given the name.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// call it
Dim Params() As Variant
params.Append 3
params.Append 4
params.Append 5 // one too much ->will be ignored
Dim r As Variant = j.CallFunction("adder", params)
Break // check result in debugger
```

Notes:

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.
See also:

- 100.3.6 CallFunction(Name as String, ParamArray Params as Variant) as Variant 16794

100.3.8 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a global function given the name.
Notes:

Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 100.3.9 CallFunctionMT(Name as String, Params() as Variant) as Variant 16795

100.3.9 CallFunctionMT(Name as String, Params() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calls a global function given the name.
Notes:

Threaded version of CallFunction. If events or delegates are called on main thread, the preemptive thread waits for answer.

Parameters are passed to the function.
If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 100.3.8 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant 16795

100.3.10 DateComponentsToTime(date as JavaScriptDateComponentsMBS) as Double

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts date components to time.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim d As New JavaScriptDateComponentsMBS
d.Year = 1970
d.Month = 1
d.day = 1

// shows zero as that's the start point in time for unix
MsgBox "Start Time: "+Str(j.DateComponentsToTime(d))
```

Notes:

Convert components (year, month, day, etc), interpreted in UTC, into a time value. The weekday argument is ignored in the conversion. If the component values are invalid, an error is thrown.

There are some differences to the ECMAScript Date.UTC() built-in:

- There's no special handling of two-digit years. For example, Date.UTC(99, 0, 1) gets interpreted as 1999-01-01. If time is 99, it's interpreted as the year 99.
- The milliseconds component is allowed fractions (sub-millisecond resolution) so that the resulting time value may have fractions.

Like the ECMAScript primitives, the components can exceed their natural range and are normalized. For example, specifying minute as 120 is interpreted as adding 2 hours to the time value. The components are expressed as Integers to allow large and negative values to be used.

100.3.11 Destructor

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

100.3.12 Evaluate(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates a JavaScript expression.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim v As Variant = j.Evaluate("2+3")
MsgBox v.StringValue
```

Notes:

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

100.3.13 EvaluateMT(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates a JavaScript expression.
Notes:

Threaded version of Evaluate. If events or delegates are called on main thread, the preemptive thread waits for answer.

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will

block, but keep other background threads running.

100.3.14 EvaluateToString(JavaScript as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Evaluates a JavaScript expression.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim s As String = j.EvaluateToString("2+3")
MsgBox s
```

Notes:

This may include definition of functions and objects and using them.
Result is converted to string in JavaScript and returned as Xojo string.

100.3.15 LoadFunction(Name as String, Data as Memoryblock) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a global function from byte code.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Dim m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
dim b as Boolean = j.LoadFunction("adder2", m)

// call it
Dim r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes:

Load a buffer containing bytecode, recreating the original ECMAScript function (with some limitations).

You must ensure that the bytecode has been dumped with a compatible Duktape version and that the bytecode has not been modified since. Loading bytecode from an untrusted source is memory unsafe and may lead to exploitable vulnerabilities.

Returns true in case of success or false on failure.

100.3.16 Now as Double

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current time as double value.
Notes:

This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches Date.now() with the reservation that sub-millisecond resolution may be available.

100.3.17 RegisterFunction(Name as String, theDelegate as JavaScriptEngineDelegateMBS, ArgCount as Integer = -1, tag as Variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers a global function with given name to call delegate.
Example:

```
Dim j As New JavaScriptEngineMBS

j.RegisterFunction "MyFunction", AddressOf testFunction, 1, Nil

// call in JavaScript
Dim x As Variant = j.Evaluate("MyFunction(123);")

// call via plugin
Dim r As Variant = j.CallFunction("MyFunction", "Hello")

Break

'Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
' MsgBox params(0).StringValue
' Return "ok"
'End Function
```

Notes:

ArgCount can be in range from -1 to 15.
If -1 is passed, we allow variable number of arguments.
Tag is passed to delegate and allows you to pass a context object to the delegate.

100.3.18 SaveFunction(Name as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries byte code for global JavaScript function.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Dim m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
dim b as Boolean = j.LoadFunction("adder2", m)

// call it
Dim r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Dump an ECMAScript function at stack top into bytecode, replacing the function with a buffer containing the bytecode data. The bytecode can be loaded back using LoadFunction().

100.3.19 TimeToDateComponents(time as Double) as JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts time to date components.
Example:

```
Dim j As New JavaScriptEngineMBS

// get now
Dim t1 As Double = j.Now

// as compoents
Dim d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Dim s1 As String = d1.SQLDateTime
```

// looks right?

Break

Notes:

Convert a time value to components (year, month, day, etc) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

There are some differences to the ECMAScript Date UTC accessors like Date.prototype.getUTCMinutes():

The time value is allowed to have fractions (sub-millisecond resolution) so that the millisecond component may also have fractions.

100.3.20 Properties

100.3.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

100.3.22 MemoryBlocks as Dictionary

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the dictionary with references memoryblocks.
Notes:

Just for debugging to inspect.
Memoryblocks need to stay here to avoid them being destructed too early, which can cause crashes.
(Read only property)

100.3.23 ObjectCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries global object counter.
Notes:

A fresh JavaScript engine already has about 400 objects for the built-in functionality.
(Read only property)

100.3.24 StringCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries global string counter.
Notes:

A fresh JavaScript engine already has about 1000 strings.
(Read only property)

100.3.25 GlobalMemoryBlock(PropertyName as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Query or assign a global property to reference memoryblock.
Notes:

A normal memoryblock passed as parameter to a function or property would be copied.
This method allows you to define a buffer in JavaScript to reference the bytes in a memoryblock, so all changes are visible in Xojo directly.

You can assign nil as value to clear a memoryblock.
(Read and Write computed property)

100.3.26 GlobalProperty(PropertyName as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a global property.
Example:

```
Dim j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MsgBox j.GlobalProperty("Hello")
```

Notes:

Values are converted to/from variant.
(Read and Write computed property)

100.3.27 GlobalPropertyJSON(PropertyName as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set a global property as JSON.
Example:

```
Dim j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MsgBox j.GlobalPropertyJSON("Hello")

j.GlobalPropertyJSON("test") = " [ 1,2,3 ] "
MsgBox j.GlobalPropertyJSON("test")
```

Notes:

Same as GlobalProperty, but needs JSON text.
(Read and Write computed property)

100.3.28 Events

100.3.29 Input(values() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input event.
Notes:

Called in JavaScript with Input() function call.
Takes variable number of arguments, which are provided as variants here.
Return a value, which we pass through to JavaScript as function result.

100.3.30 Print(values() as Variant)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The print event.
Notes:

Called in JavaScript with Print() function call.
Takes variable number of arguments, which are provided as variants here.

100.3.31 Delegates

100.3.32 JavaScriptEngineDelegateMBS(Name as String, Params() as Variant, tag as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The delegate definition for RegisterFunction function.
Example:

```
Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
MsgBox params(0).StringValue
Return "ok"
End Function
```

Notes:

We pass name of function, parameters and tag value.
Result is returned to JavaScript.

100.4 class JSClassMBS

100.4.1 class JSClassMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a class in javascript.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.4.2 Methods

100.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

100.4.4 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript object for current class.

100.4.5 Properties

100.4.6 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The context for this class.
Notes: (Read only property)

100.4.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The handle for the class object.
Notes: (Read and Write property)

100.4.8 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The tag value.
Notes:

You can store anything here and as long as the JSClass object exists, this value is kept referenced.
(Read and Write property)

100.5 class JSContextMBS

100.5.1 class JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a javascript execution context.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+2", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes: See also JavaScriptEngineMBS class for cross platform projects.

100.5.2 Methods

100.5.3 CheckScriptSyntax(script as string, sourceURL as String, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks for syntax errors in a string of JavaScript.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
if c.CheckScriptSyntax("1+", "", e) then
MsgBox "OK"
else
// show error

MsgBox e.StringValue
end if
```

Notes:

Script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValue in which to store a syntax error exception, if any.

Returns true if the script is syntactically correct, otherwise false.

100.5.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.
Notes: Creates a global JavaScript execution context.

100.5.5 EvaluateScript(script as string, sourceURL as String, thisObject as JSValueMBS, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Evaluates a string of JavaScript.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes:

script: A string containing the script to evaluate.
thisObject: The object to use as "this," or nil to use the global object as "this."
sourceURL: A string containing a URL for the script's source file. This is used by debuggers and when reporting exceptions. Pass "" if you do not care to include source file information.

startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from evaluating script, or nil if an exception is thrown.

100.5.6 GarbageCollect

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs a JavaScript garbage collection.
Notes:

JavaScript values that are on the machine stack, in a register, protected by JSValueProtect, set as the global object of an execution context, or reachable from any such value will not be collected.

During JavaScript execution, you are not required to call this function; the JavaScript engine will garbage collect as needed. JavaScript values created within a context group are automatically destroyed when the last reference to the context group is released.

100.5.7 NewArray(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript Array object.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
v.SetPropertyAtIndex(0, c.valueWithString("Hello"), e)
v.SetPropertyAtIndex(1, c.valueWithString("World"), e)
MsgBox v.JSONString
```

Notes:

arguments: A JSValue array of data to populate the Array with.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is an Array.
The behavior of this function does not exactly match the behavior of the built-in Array constructor. Specifically, if one argument is supplied, this function returns an array with one element.

Requires Mac OS X 10.6 or newer.

100.5.8 NewDate(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript Date object, as if by invoking the built-in Date constructor.
Example:

```
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS // exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox d.JSONString
```

Notes:

arguments: A JSValue array of arguments to pass to the Date Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a Date.
Requires Mac OS X 10.6 or newer.

100.5.9 NewError(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript Error object, as if by invoking the built-in Error constructor.
Example:

```
dim c as new JSContextMBS

dim parameters() as JSValueMBS
Parameters.Append c.valueWithString("Hello")

dim ex as JSValueMBS
dim e as JSValueMBS = c.NewError(Parameters, ex)
MsgBox e.StringValue
```

Notes:

arguments: A JSValue array of arguments to pass to the Error Constructor.
JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a Error.
Requires Mac OS X 10.6 or newer.

100.5.10 NewFunction(name as string) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience method for creating a JavaScript function which raises FunctionCalled event on invokation.
Notes:

name: A string containing the function's name. This will be used when converting the function to string. Pass NULL to create an anonymous function.
Returns a JSObject that is a function. The object's prototype will be the default function prototype.
See also:

- 100.5.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS 16811

100.5.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a function with a given script as its body.
Example:

```
dim c as new JSContextMBS

// create a function
dim parameterNames() as string = array("value")
dim body as string = "return value*value;"
dim name as string = "test"

dim e as JSValueMBS
dim v as JSValueMBS = c.NewFunction(name, parameterNames, body, e )

MsgBox v.StringValue
```

```
// put it in global memory
c.globalObject.SetProperty "test", v, e

// and call it
dim r as JSValueMBS = c.EvaluateScript("test(5)", "", nil, e)
MsgBox r.StringValue
```

Notes:

name: A string containing the function's name. This will be used when converting the function to string. Pass "" to create an anonymous function.
parameterNames: A string array containing the names of the function's parameters.
body: A string containing the script to use as the function's body.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store a syntax error exception, if any. Pass nil if you do not care to store a syntax error exception.
A JSObject that is a function, or nil if either body or parameterNames contains a syntax error. The object's prototype will be the default function prototype.
Use this method when you want to execute a script repeatedly, to avoid the cost of re-parsing the script before each execution.
See also:

- 100.5.10 NewFunction(name as string) as JSObjectMBS 16811

100.5.12 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new object.

100.5.13 NewRegExp(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript RegExp object, as if by invoking the built-in RegExp constructor.
Notes:

arguments: A JSValue array of arguments to pass to the RegExp Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a RegExp.

Requires Mac OS X 10.6 or newer.

100.5.14 valueWithBool(value as boolean) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value of the boolean type.
Example:

```
dim c as new JSContextMBS
dim v as JSValueMBS = c.valueWithBool(true)
MsgBox v.JSONString
```

100.5.15 valueWithDouble(value as Double) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value of the number type.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithDouble(5.6)
MsgBox v.StringValue
```

100.5.16 valueWithJSON(JSON as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value from a JSON formatted string.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.GetProperty("length", e)

MsgBox p.StringValue // shows 3
```

Notes:

Returns a JSValue containing the parsed value, or nil if the input is invalid.
Available on Mac OS X 10.7 and newer

100.5.17 valueWithNull as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value of the null type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
MsgBox "null"
end if
```

100.5.18 valueWithString(value as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value of the string type.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

100.5.19 valueWithUndefined as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript value of the undefined type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MsgBox "undefined"
end if
```

100.5.20 Properties

100.5.21 globalObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets the global object of a JavaScript execution context.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox c.globalObject.JSONString
```

Notes: (Read only property)

100.5.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

100.5.23 Name as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name.
Example:

```
dim c as new JSContextMBS

c.Name = "Hello"
MsgBox c.Name
```

Notes:

Requires Mac OS X 10.10 and newer.
(Read and Write property)

100.5.24 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The tag value.
Notes:

You can store anything here and as long as the JSContext object exists, this value is kept referenced.
(Read and Write property)

100.5.25 Events

100.5.26 FunctionCalled(functionObject as JSObjectMBS, thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The event called when your custom function is called.
Notes: Please return a value and in case of error set exception.

100.6 class JSObjectMBS

100.6.1 class JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a Javascript Object.
Notes:

Subclass of the JSValueMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.6.2 Methods

100.6.3 CallAsConstructor(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Calls an object as a constructor.
Notes:

self: The JSObject to call as a constructor.
arguments: A JSValueMBS array of arguments to pass to the constructor.
JSException A pointer to a JSValueMBS in which to store an exception, if any.
Returns the JSObject that results from calling object as a constructor, or nil if an exception is thrown or object is not a constructor.

100.6.4 CallAsFunction(thisObject as JSValueMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Calls an object as a function.
Notes:

self: The JSObject to call as a function.
thisObject: The object to use as "this," or nil to use the global object as "this."
arguments: A JSValueMBS array of arguments to pass to the function.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from calling object as a function, or nil if an exception is thrown or object is not a function.

100.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

100.6.6 DeleteProperty(name as string, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Deletes a property from an object.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox v.JSONString

call v.DeleteProperty "Hello", e

MsgBox v.JSONString
```

Notes:

Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if the delete operation succeeds, otherwise false (for example, if the property has the kJSPropertyAttributeDontDelete attribute set).

100.6.7 GetProperty(name as string, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets a property from an object.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
```

```
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e

MsgBox v.GetProperty("Hello", e).StringValue
```

Notes:

object: The JSObject whose property you want to get.
Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns the property's value if object has the property, otherwise the undefined value.

100.6.8 GetPropertyAtIndex(propertyIndex as Integer, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets a property from an object by numeric index.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.GetProperty("length", e)

MsgBox "Length: "+p.StringValue

dim n as JSValueMBS = o.GetPropertyAtIndex(2, e)
MsgBox "3rd value in array: "+n.StringValue
```

Notes:

The JSObject whose property you want to get.
propertyIndex: An integer value that is the property's name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the property's value if object has the property, otherwise the undefined value.

Calling GetPropertyAtIndex is equivalent to calling GetProperty with a string containing propertyIndex,

but GetPropertyAtIndex provides optimized access to numeric properties.

100.6.9 HasProperty(name as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether an object has a given property.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
MsgBox str(v.HasProperty("length"))
```

Notes:

name: A string containing the property's name.
Returns true if the object has a property whose name matches propertyName, otherwise false.

100.6.10 PropertyNames as String()

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Gets the names of an object's enumerable properties.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox Join(v.PropertyNames, EndOfLine)
```

100.6.11 SetProperty(name as string, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a property on an object.

Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
```

Notes:

Name: A string containing the property's name.
Value: A JSValue to use as the property's value.
JSException A pointer to a JSValueRef in which to store an exception, if any.

100.6.12 SetPropertyAtIndex(propertyIndex as Integer, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets a property on an object by numeric index.
Notes:

propertyIndex: The property's name as a number.
value: A JSValue to use as the property's value.
exception: A JSValueMBS in which to store an exception, if any.

Calling SetPropertyAtIndex is equivalent to calling SetProperty with a string containing propertyIndex, but SetPropertyAtIndex provides optimized access to numeric properties.

100.6.13 Properties

100.6.14 isConstructor as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether an object can be called as a constructor.
Notes:

Returns true if the object can be called as a constructor, otherwise false.
(Read only property)

100.6.15 isFunction as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether an object can be called as a function.
Example:

```
dim c as new JSContextMBS
dim f as JSObjectMBS = c.NewFunction("Hello")

MsgBox str(f.isFunction)
```

Notes:

Returns true if the object can be called as a function, otherwise false.
(Read only property)

100.6.16 Prototype as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object's prototype.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

dim o as JSObjectMBS = JSObjectMBS(j)
MsgBox "object prototyp: "+o.Prototype.StringValue
```

Notes: (Read and Write property)

100.7 class JSValueMBS

100.7.1 class JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a Javascript value.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1)
MsgBox j.StringValue
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

100.7.2 Methods

100.7.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

100.7.4 DoubleValue(byref JSException as JSValueMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to number and returns the resulting number.
Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
See also:

- 100.7.15 doubleValue as Double 16826

100.7.5 IsEqual(OtherValue as JSValueMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether two JavaScript values are equal, as compared by the JS == operator.
Example:

```
dim c as new JSContextMBS
dim s1 as JSValueMBS = c.valueWithJSON("""Hello""")
dim s2 as JSValueMBS = c.valueWithJSON("""Hello""")
```

```
dim e as JSValueMBS
MsgBox str(s1.IsEqual(s2, e))
```

Notes:

OtherValue The second value to test.
exception: A JSValueMBS in which to store an exception, if any.
Returns true if the two values are equal, false if they are not equal or an exception is thrown.

100.7.6 IsInstanceOfConstructor(ConstructorFunction as JSObjectMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value is an object constructed by a given constructor, as compared by the JS instanceof operator.
Notes:

ConstructorFunction: The constructor to test against.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if value is an object constructed by constructor, as compared by the JS instanceof operator, otherwise false.

100.7.7 IsObjectOfClass(ClassObject as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value is an object with a given class in its class chain.
Notes:

ClassObject The JSClass to test against.
Returns true if value is an object and has jsClass in its class chain, otherwise false.

100.7.8 IsStrictEqual(OtherValue as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether two JavaScript values are strict equal, as compared by the JS === operator.
Example:

```
dim c as new JSContextMBS
dim j1 as JSValueMBS = c.valueWithDouble(1)
dim j2 as JSValueMBS = c.valueWithDouble(2)

MsgBox str(j1.IsStrictEqual(j2)) // false
```

```
MsgBox str(j1.IsStrictEqual(j1)) // true
```

Notes:

OtherValue: The second value to test.
Returns true if the two values are strict equal, otherwise false.

100.7.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"":""Hello"", ""value"":1 } ")
dim e as JSValueMBS
MsgBox j.JSONString(5, e)
```

Notes:

Requires Mac OS X 10.7 and newer.

The number of spaces to indent when nesting. If 0, the resulting JSON will not contains newlines. The size of the indent is clamped to 10 spaces.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of serialization, or nil if an exception is thrown.
See also:

- 100.7.25 JSONString as string 16830

100.7.10 ObjectValue(byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to object and returns the resulting object.
Notes:

JSException: A JSValueMBS in which to store an exception, if any.
Returns the JSObject result of conversion, or nil if an exception is thrown.

100.7.11 StringValue(byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Notes:

JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of conversion, or nil if an exception is thrown.
See also:

- 100.7.26 StringValue as String 16831

100.7.12 Properties

100.7.13 booleanValue as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to boolean and returns the resulting boolean.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.booleanValue)
```

Notes: (Read only property)

100.7.14 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The context for this value.
Notes: (Read only property)

100.7.15 doubleValue as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to number and returns the resulting number.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(5.3)
MsgBox str(j.doubleValue)
```

Notes:

Returns the numeric result of conversion, or NaN if an exception is thrown.
(Read only property)
See also:

- 100.7.4 DoubleValue(byref JSException as JSValueMBS) as Double 16823

100.7.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

100.7.17 isArray as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value is an array.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isArray)
```

Notes:

Returns true if value is an array, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

100.7.18 isBoolean as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the boolean type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.isBoolean)
```

Notes:

Returns true if value's type is the boolean type, otherwise false.
(Read only property)

100.7.19 isDate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value is a date.
Example:

```
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS // exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox str(d.isDate)
```

Notes:

Returns true if value is a date, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

100.7.20 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the null type.
Example:

```
dim c as new JSContextMBS
dim n as JSValueMBS = c.valueWithNull

MsgBox str(n.isNull)
```

Notes:

Returns true if value's type is the null type, otherwise false.
(Read only property)

100.7.21 isNumber as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the number type.
Example:

```
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithDouble(5)
MsgBox str(j.isNumber)
```

Notes:

Returns true if value's type is the number type, otherwise false.
(Read only property)

100.7.22 isObject as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the object type.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isObject)
```

Notes:

Returns true if value's type is the object type, otherwise false.
(Read only property)

100.7.23 isString as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the string type.
Example:

```
dim c as new JSContextMBS
dim s as JSValueMBS = c.valueWithJSON("""Hello""")
MsgBox str(s.isString)
```

Notes:

Returns true if value's type is the string type, otherwise false.
(Read only property)

100.7.24 isUndefined as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Tests whether a JavaScript value's type is the undefined type.
Example:

```
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithUndefined
MsgBox str(j.isUndefined)
```

Notes:

Returns true if value's type is the undefined type, otherwise false.
(Read only property)

100.7.25 JSONString as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.JSONString
```

Notes:

Requires Mac OS X 10.7 and newer.
(Read only property)
See also:

- 100.7.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string 16825

100.7.26 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

Notes:

Returns a JSString with the result of conversion, or NULL if an exception is thrown.
(Read only property)
See also:

- 100.7.11 StringValue(byref JSException as JSValueMBS) as string 16826

100.7.27 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The tag value.
Notes:

You can store anything here and as long as the JSValue object exists, this value is kept referenced.
(Read and Write property)

100.7.28 Type as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a JavaScript value's type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS

j = c.valueWithDouble(1) // double
'j = c.valueWithNull // null
'j = c.valueWithUndefined // undefined
'j = c.valueWithString("Hello") // string
'j = c.valueWithJSON(" { ""tag"": 1 } ") // object
'j = c.valueWithBool(true)

Select case j.Type
case JSValueMBS.kJSTypeUndefined
MsgBox "undefined"
case JSValueMBS.kJSTypeNull
MsgBox "null"
case JSValueMBS.kJSTypeBoolean
MsgBox "boolean "+str(j.booleanValue)
case JSValueMBS.kJSTypeNumber
MsgBox "number "+str(j.doubleValue)
case JSValueMBS.kJSTypeString
MsgBox "string "+j.StringValue
case JSValueMBS.kJSTypeObject
MsgBox "object "+j.JSONString
else
Break
end Select
```

Notes: (Read only property)

100.7.29 Constants

100.7.30 kJSTypeBoolean = 2

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)

if j.Type = JSValueMBS.kJSTypeBoolean then
MsgBox "boolean "+str(j.booleanValue)
end if
```

Notes: A primitive boolean value, one of true or false.

100.7.31 kJSTypeNull = 1

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
MsgBox "null"
end if
```

Notes: The unique null value.

100.7.32 kJSTypeNumber = 3

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1) // double

if j.Type = JSValueMBS.kJSTypeNumber then
MsgBox "number "+str(j.doubleValue)
end if
```

Notes: A primitive number value.

100.7.33 kJSTypeObject = 5

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

if j.Type = JSValueMBS.kJSTypeBoolean then
MsgBox "object "+j.JSONString
end if
```

Notes: An object value (meaning that this JSValueMBS is a JSObjectMBS).

100.7.34 kJSTypeString = 4

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithString("Hello")

if j.Type = JSValueMBS.kJSTypeString then
MsgBox "string "+j.StringValue
end if
```

Notes: A primitive string value.

100.7.35 kJSTypeUndefined = 0

MBS MacFrameworks Plugin, Plugin Version: 15.4. **Function:** One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MsgBox "undefined"
end if
```

Notes: The unique undefined value.

Chapter 101

JavaScript Object Notation

101.1 class JSONMBS

101.1.1 class JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for JSON object parsing and creating.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "Hello", JSONMBS.NewNumberNode(1)
o.AddItemToObject "World", JSONMBS.NewNumberNode(2)

MsgBox o.toString
```

101.1.4 Methods

101.1.5 AddItemToArray(item as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an item to an array.
Notes:

If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

101.1.6 AddItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds an item to an object with given label.
Notes:

If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

101.1.7 ArrayItem(index as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries array item with given index.

101.1.8 Child(label as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Child node for the node with the given label.
Example:

```
dim jv as JSONMBS = JSONMBS.NewStringNode("value")
dim jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox jo.Child("key").ValueString
```

Notes: Similar to JSONItem.Child()

101.1.9 Clone as JSONMBS

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the JSON tree.

101.1.10 Close

MBS Util Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Frees node.
Notes:

No need to call this as destructor does the same.
But this call allows you to release circular references.

101.1.11 Constructor

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an empty object.
Notes: Lasterror is set.
See also:

- 101.1.12 Constructor(text as string) 16838

101.1.12 Constructor(text as string)

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses the given JSON String into the tree where this node is the root.
Example:

```
dim o as new JSONMBS(" { ""text"":""Hello World"" } ")
MsgBox o.toString
```

Notes:

Lasterror is set.
Text should be UTF-8.

Starting with version 15.0, you may see a ParseError and still have all the content which was parsed until that error.
See also:

- 101.1.11 Constructor 16837

101.1.13 Convert as Variant

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts JSON object to Xojo variant.
Example:

```
// build some JSON:

Dim j As New JSONMBS

j.AddItemToObject "test", JSONMBS.NewNumberNode(123)
j.AddItemToObject "name", JSONMBS.NewStringNode("Joe")

// convert to Dictionary
Dim v As Variant = j.Convert

// and back
Dim o As JSONMBS = JSONMBS.Convert(v)

// show
MsgBox o.toString
```

Notes: Depending on the JSON content, you get variants containing values (string, double, boolean or nil), dictionaries or array of variants.

See also:

- 101.1.14 Convert(value as variant) as JSONMBS 16839

101.1.14 Convert(value as variant) as JSONMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts Xojo variant to JSON object.
Example:

```
Dim d As New Dictionary
dim n as Double = 1/3

d.Value("number") = n // default double handling

// custom formatted number
Dim j As JSONMBS = JSONMBS.NewNumberNode(Str(n, "-0.0000000000"))

d.value("customNumber") = j
d.Value( "int64") = 1000000000000000000
d.Value("uint64") = 8000000000000000000

Dim a() As String
a.Append "Hello"
a.Append "World"

d.Value("array") = a
d.Value("dictionary") = New Dictionary("a":1, "b":2, "c":3)

Dim r As JSONMBS = JSONMBS.Convert(d)
MsgBox r.toString
```

Notes:

Converts values in variant to matching JSON structures.
Currency is converted to double. Color is converted to integer. Dates are converted to string.
We detect arrays of String, Object, Variant, Single, Double, Int32, Int64, Boolean and Currency and convert them to JSON arrays. Dictionaries are converted to JSON objects with texts for keys.
Anything else can raise an exception about an unsupported type.

Please note that Xojo variants don't make a difference between signed and unsigned integers, so we always convert using signed integers.

With version 19.3, the array/dictionary can also contain JSONMBS objects.
See also:

- 101.1.13 Convert as Variant 16838

101.1.15 DeleteItem(index as Integer)

MBS Util Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes an item from an array/object by index.
Example:

```
Dim j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"

MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

Notes: Index is zero based.
See also:

- 101.1.16 DeleteItem(label as string) 16840

101.1.16 DeleteItem(label as string)

MBS Util Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes a named item from an object.
Example:

```
Dim j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"
```

```
MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

See also:

- 101.1.15 DeleteItem(index as Integer) 16840

101.1.17 EqualContent(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks two JSON objects for equality in content.
Notes: We compare the values, so 1 as number and "1" as text are the same.

101.1.18 Equals(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if two JSON are equal.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j2 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j3 as JSONMBS = JSONMBS.NewNumberNode(6)

if not j1.Equals(j2) then
break // failed
end if

if j3.Equals(j2) then
break // failed
end if

Break // okay
```

Notes:

We compare recursively all nodes.
If structure and values are the same, we return true, otherwise false.

Objects do not need to have same order for entries.

101.1.19 FindValueInArray(Other as JSONMBS, ByContent as boolean = false) as Integer

MBS Util Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries index of value in array.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewIntegerArray(array(3,4,5,6,7))
dim j2 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j3 as JSONMBS = JSONMBS.NewNumberNode(8)
dim j4 as JSONMBS = JSONMBS.NewStringNode("5")

dim index1 as integer = j1.FindValueInArray(j2) // we can find this
dim index2 as integer = j1.FindValueInArray(j3) // value not found
dim index3 as integer = j1.FindValueInArray(j4) // can't find string in number array

if index1 = 2 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes:

Returns zero based index or -1 if not found.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

101.1.20 FindValueInObjectArray(Name as String, Other as JSONMBS, ByContent as boolean = false) as Integer

MBS Util Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries index of value in object array.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewArrayNode
dim j2 as JSONMBS = JSONMBS.NewObjectNode

j2.AddItemToObject "Hello", JSONMBS.NewStringNode("World")
```

```
j2.AddItemToObject "ID", JSONMBS.NewStringNode("123")

j1.AddItemToArray j2

dim index1 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("123")) // we can find this
dim index2 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("456")) // value not found
dim index3 as integer = j1.FindValueInObjectArray("xxx", JSONMBS.NewStringNode("123")) // value not found

if index1 = 0 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes:

Returns zero based index or -1 if not found.
We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

101.1.21 hasChild(label as string) as Boolean

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a child node for the node with the given label exists.
Example:

```
dim jv as JSONMBS = JSONMBS.NewStringNode("value")
dim jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.hasChild("key"))
```

Notes: Similar to JSONMBS.Child(), but without returning the actual objct.

101.1.22 JSONObjectCount as Integer

MBS Util Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** For debugging, the plugin counts how many JSONMBS objects we have.

101.1.23 NewArrayNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new node for an array.
Example:

```
dim n as JSONMBS = JSONMBS.NewArrayNode
MsgBox str(n.Type)+" = "+str(n.kTypeArray)
```

101.1.24 NewBoolNode(value as boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new boolean node.
Example:

```
dim j as JSONMBS = JSONMBS.NewBoolNode(true)
MsgBox j.toString
```

101.1.25 NewDoubleArray(values() as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.
Example:

```
dim n() as Double = array(1.0,2,3)
dim j as JSONMBS = JSONMBS.NewDoubleArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

101.1.26 NewFalseNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new false node.
Example:

```
dim n as JSONMBS = JSONMBS.NewFalseNode
MsgBox str(n.Type)+" = "+str(n.kTypeFalse)
```

Notes: This is a node which represents a boolean false value.

101.1.27 NewInt64Node(value as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new node based on Int64 value.
Example:

```
dim x as int64 = 92233720368547758
dim n as JSONMBS = JSONMBS.NewInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

101.1.28 NewIntegerArray(values() as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.
Example:

```
dim n() as Integer = array(1,2,3)
dim j as JSONMBS = JSONMBS.NewIntegerArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

101.1.29 NewNullNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new null node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNullNode
MsgBox str(n.Type)+" = "+str(n.kTypeNull)
```

Notes: This is a node which represents a nil value.

101.1.30 NewNumberNode(value as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNumberNode(123)
MsgBox str(n.Type)+" = "+str(n.kTypeNumber)
```

See also:

- 101.1.31 NewNumberNode(value as string) as JSONMBS 16846

101.1.31 NewNumberNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number node with given number as text.
Example:

```
dim n as JSONMBS = JSONMBS.NewNumberNode("92233720368547758")

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

Notes: This allows you to control formatting of large integer and floating point values.
See also:

- 101.1.30 NewNumberNode(value as Double) as JSONMBS 16846

101.1.32 NewObjectNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new object node.
Example:

```
dim n as JSONMBS = JSONMBS.NewObjectNode
MsgBox str(n.Type)+" = "+str(n.kTypeObject)
```

101.1.33 NewStringArray(values() as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a json array object with the given values.
Example:

```
dim n() as string = array("Hello", "World")
dim j as JSONMBS = JSONMBS.NewStringArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

101.1.34 NewStringNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string node.
Example:

```
// some string with single/double quote and EndOfLine
dim s as string = "Hello'World"+EndOfLine+"this is "" a test."

// make string node
```

```
dim j as JSONMBS = JSONMBS.NewStringNode(s)

// get as JSON
dim d as string = j.toString
// show
MsgBox d

// parse again
j = new JSONMBS(d)

MsgBox j.ValueString
```

101.1.35 NewTrueNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new true node.
Example:

```
dim n as JSONMBS = JSONMBS.NewTrueNode
MsgBox str(n.Type)+" = "+str(n.kTypeTrue)
```

Notes: This is a node which represents a boolean true value.

101.1.36 NewUInt64Node(value as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new node based on UInt64 value.
Example:

```
dim x as UInt64 = 92233720368547758
dim n as JSONMBS = JSONMBS.NewUInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

101.1.37 Sort

MBS Util Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sorts the JSON array or object.

Example:

```
Dim j As JSONMBS = JSONMBS.NewDoubleArray(Array(123.0,3.1,3.2,5, -5))
j.Sort
MsgBox j.toString
```

Notes:

Sorts either array values or object key names.
If two values in array are both number in type, we compare the numeric values.

101.1.38 SuffixObject(nextItem as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends an array item on a previous item in the same array.
Example:

```
// test code for SuffixObject:
const UseFastMode = true

dim o as JSONMBS = JSONMBS.NewArrayNode

dim startTime as Double = Microseconds
dim last as JSONMBS
for i as Integer = 0 to 10000

dim j as JSONMBS = JSONMBS.NewStringNode("test" + str(i))

# if UseFastMode = False
// slow
o.AddItemToArray(j)

# else
// 10 times faster

if last = nil then
o.AddItemToArray(j)
last = o.ChildNode
else
last = last.SuffixObject(j)
end if
# endif
next

dim endTime as Double = Microseconds
```

MsgBox (str(endTime - startTime))

Notes:

This method is an optimization for AddItemToArray.
You can call SuffixObject only on the last item of an array to add another one.
Only add new nodes there.
Any other use could lead into crashes or memory leaks.

Returns in version 16.0 and newer the new reference node.

101.1.39 ToHTML(NoHeader as boolean = false, CSS as string = "") as String

MBS Util Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts JSON to HTML.
Notes:

We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.
If NoHeader is true, you get just the raw table without header/footer.
Anything in CSS parameter is inserted before the table.
Returns HTML, which can be loaded in htmlviewer.

Example for CSS to do even/odd line backgrounds:

```
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}

.odd
{
background-color: white;
}

.even
{
background-color: # DDD;
}
```

</style>”

101.1.40 toString(formatted as boolean) as string

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Produces a JSON markup text document from a document tree.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
See also:

- 101.1.52 toString as String 16854

101.1.41 Properties

101.1.42 ArraySize as Integer

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries size of array.
Notes: (Read only property)

101.1.43 ChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The first child node.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim n as JSONMBS = o.ChildNode // first child
```

```
MsgBox n.ValueString // shows 1
```

Notes: (Read only property)

101.1.44 Handle as Integer

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal handle to the JSON object.
Notes:

It is possible to have two Xojo objects with the same handle pointing to the same JSON node.
(Read only property)

101.1.45 IsInt64 as Boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is an 64-bit integer number.
Notes:

Returns true if

- it is type number
- it has no significant part after decimal point
- it is in the range for int64.

(Read only property)

101.1.46 LastChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last child node.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)
```

```
dim k as JSONMBS = o.LastChildNode
MsgBox k.ValueString // shows 4
```

Notes: (Read only property)

101.1.47 Name as String

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of this node.
Notes: (Read only property)

101.1.48 NextNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The next node on the same level.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.ChildNode
while k<>nil
MsgBox k.ValueString // shows 1, 2, 3, 4

k=k.NextNode
wend
```

Notes: (Read only property)

101.1.49 ParseError as String

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parse error string.
Notes:

When parsing fails, this may be an useful message so you know what went wrong.
(Read only property)

101.1.50 PreviousNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The previous node on the same level.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.LastChildNode
while k<>nil
MsgBox k.valuestring // shows 4, 3, 2, 1

k=k.PreviousNode
wend
```

Notes: (Read only property)

101.1.51 Root as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The root object.
Notes:

The root node owns the references to all children.
(Read only property)

101.1.52 toString as String

MBS Util Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Produces a JSON markup text document from a document tree.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes:

Returns "" on any error. Lasterror is set.
(Read only property)
See also:

- 101.1.40 toString(formatted as boolean) as string 16851

101.1.53 Type as Integer

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of the node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNullNode

MsgBox str(n.Type)
```

Notes: (Read only property)

101.1.54 TypeName as String

MBS Util Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shows type of this node as string.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode
MsgBox o.TypeName
```

Notes:

This property was added for debugging so you can see type in debugger.
(Read only property)

101.1.55 Valid as Boolean

MBS Util Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether node is valid.
Notes:

The handle is not zero and there are no error nodes in JSON tree.
Returns true if valid, else false.
(Read only property)

101.1.56 ValueBoolean as Boolean

MBS Util Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The boolean value of this json node.
Notes:

Returns true if type is kTypeTrue, false if kTypeFalse or true if ValueInteger <>0.
(Read only property)

101.1.57 ValueDouble as Double

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the node.
Notes: (Read only property)

101.1.58 ValueInteger as Int64

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the node.
Notes: (Read only property)

101.1.59 ValueString as String

MBS Util Plugin, Plugin Version: 13.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the node.
Notes: (Read only property)

101.1.60 Constants

101.1.61 kTypeArray = 6

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For an array node.

101.1.62 kTypeError = 0

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** The parse failed and you got an invalid node.

101.1.63 kTypeFalse = 1

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For a false node.

101.1.64 kTypeNull = 3

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For a null node.

101.1.65 kTypeNumber = 4

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For a number node.

101.1.66 kTypeObject = 7

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants. **Notes:** For an object node.

101.1.67 kTypeString = 5

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants.
Notes: For a string node.

101.1.68 kTypeTrue = 2

MBS Util Plugin, Plugin Version: 13.3. **Function:** One of the node type constants.
Notes: For a true node.

Chapter 102

JPEG

102.1 class JPEG2000MBS

102.1.1 class JPEG2000MBS

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for compress/decompress of JPEG 2000 images.
Example:

```
dim file as FolderItem = GetFolderItem("test.jp2")
dim stream as BinaryStream = BinaryStream.Open(file)
dim data as string = stream.Read(stream.Length)

dim jp2 as new JPEG2000MBS
if jp2.InitDecompress(data) then
MsgBox str(jp2.Width)+" x "+str(jp2.Height)
end if
```

Notes:

Currently only supports RGB, RGBA and Grayscale images.

Please note that Jasper library used here is not very memory efficient and may run out of memory with huge images.

102.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr4

102.1.3 Methods

102.1.4 Close

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs cleanup.
Notes:

Called automatically by destructor for you.
You can call it after you are done to free memory now.

102.1.5 Compress as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compresses image.
Notes:

Please use first InitCompress, than loop over rows and use SetRow to fill in data.
This method will compress image and set ImageData property.
Returns true on success and false on failure.

102.1.6 Decode(Data as MemoryBlock) as Picture

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a JPEG 2000 images.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
dim p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes:

Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 102.1.7 Decode(Data as string) as Picture

102.1.7 Decode(Data as string) as Picture

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decodes a JPEG 2000 images.
Notes:

Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 102.1.6 Decode(Data as MemoryBlock) as Picture 16860

102.1.8 Encode(pic as picture, Quality as Integer = 80) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Encodes a picture as JPEG 2000 image.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
dim p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes: Returns image data on success or nil on failure.

102.1.9 GetRow(Index as Integer, Row as MemoryBlock = nil) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries image data for a row.
Notes:

If you pass in a memoryblock, we use it, else we create a new one.
So you can pass in memoryblock from last call to GetRow.
Returns nil in case of error.

102.1.10 InitCompress(Width as Integer, Height as Integer, BytesPerPixel as Integer, BytesPerRow as Integer = 0) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the compression for a new image.
Example:

```
dim p as Picture = LogoMBS(200)
dim pp as new PictureMBS(p)

// compress RGB in PictureMBS
dim je as new JPEG2000MBS
if je.InitCompress(pp.Width, pp.Height, 3, pp.RowSize) then
dim h as Integer = pp.Height-1

for i as Integer = 0 to h
dim rowData as MemoryBlock = pp.RowInFormat(i, pp.ImageFormatRGB)
if not je.SetRow(i, rowData) then
Break
exit
end if
next
if je.Compress then
dim ImageData as MemoryBlock = je.ImageData
if ImageData <>nil then
// and decode to show
dim pic as Picture = JPEG2000MBS.Decode(ImageData)
window1.Backdrop = pic
end if
end if
end if
```

Notes:

Returns true on success or false on failure.
If BytesPerRow is zero, we calculate it based on BytesPerPixel and Width.
BytesPerPixel can be 1 for gray, 3 for RGB and 4 for RGBA.

102.1.11 InitDecompress(ImageData as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the decompression for given image data.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)

// decompress to PictureMBS
dim jd as new JPEG2000MBS

if jd.InitDecompress(j80) then
dim pi as new PictureMBS(jd.Width, jd.Height, PictureMBS.ImageFormatRGB)
dim h as Integer = pi.Height-1

dim r as MemoryBlock
for i as Integer = 0 to h
// get row. Recycle MemoryBlock, so we don't create new one each row.
r = jd.getRow(i, r)
pi.RowInFormat(i, pi.ImageFormatRGB) = r
next

// get picture
window1.Backdrop = pi.CopyPicture
end if
```

Notes:

Returns true on success or false on failure.
BytesPerPixel is set to 1 for gray, 3 for RGB and 4 for RGBA.

102.1.12 SetRow(Index as Integer, Row as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets data for a row.
Notes: Returns true on success.

102.1.13 Properties

102.1.14 BytesPerPixel as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of bytes per pixel.
Notes:

One for gray, 3 for RGB and 4 for RGBA.
Set by InitCompress or InitDecompress.

(Read only property)

102.1.15 BytesPerRow as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bytes per row.
Notes:

Only used to create memoryblock or check memoryblock size.
Set by InitCompress or InitDecompress.
(Read only property)

102.1.16 Height as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the image.
Notes:

Set by InitCompress or InitDecompress.
(Read only property)

102.1.17 ImageData as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The image data.
Notes:

Set by Compress method on success.
(Read only property)

102.1.18 Options as String

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Options to pass to Jasper library for compression.
Notes:

e.g. ”rate=80”
(Read and Write property)

102.1.19 Width as Integer

MBS Images Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the image.
Notes:

Set by InitCompress or InitDecompress.
(Read only property)

102.2 class JPEGExporterMBS

102.2.1 class JPEGExporterMBS

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for JPEG Exporting.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

102.2.3 Methods

102.2.4 Export

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports the picture. **Example:**

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
```

```
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This methods saves 32bit pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

This method uses the YieldTicks property and may yield time to other threads.

102.2.5 ExportCMYK(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports a picture from CMYK data in a memoryblock.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock
```

```
// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

This methods saves 32bit CMYK pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

The picture must be in the format that one byte is used for each channel and the channels are ordered in memory in Cyan, Magenta, Yellow and Black.
If rowbytes is 0, the plugin uses width*4 for rowbytes.

This method uses the YieldTicks property and may yield time to other threads.

102.2.6 ExportGray

MBS Images Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture. The picture from picture property is converted to grayscale internally for this.
See also:

- 102.2.7 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

16870

102.2.7 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports an 8 bit grayscale picture.
Notes:

Same as Export, but writes grayscale picture using data in memoryblock.
If rowbytes is 0, the plugin uses width for rowbytes.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 102.2.6 ExportGray 16869

102.2.8 ExportRGB(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports a picture from RGB data in a memoryblock.
Example:

```
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")
```

```
je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: The memoryblock data must be in the format with bytes in the order RGB.

102.2.9 ExportRGBwithRowDataEvent(width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 9.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exports a picture from RGB data in memoryblocks from the GetRowData event.
Notes:

You need to implement the GetRowData event by subclassing this class.
The memoryblock data must be in the format with bytes in the order RGB.

102.2.10 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

102.2.11 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes:

Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGExporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

102.2.12 Properties

102.2.13 API as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries name of API used.
Notes:

Either libjpeg or libjpeg-turbo.
(Read only property)

102.2.14 data as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination string.
Notes:

If file is nil, the compressed data is saved in this property.

The returned string has the encoding set to MacRoman. If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.
(Read and Write property)

102.2.15 DCTMethod as Integer

MBS Images Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which DCT/IDCT algorithm to use.
Notes:

Possible values:

-1	Plugin does not change setting
0	slow but accurate integer algorithm (default)
1	faster, less accurate integer method
2	floating-point: accurate, fast on fast Hardware

Default is Integer slow.

(Read and Write property)

102.2.16 ErrorCode as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error code from the Export method.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox str(j.ErrorCode)+" "+j.ErrorMessage
```

Notes:

The last function was successfull if ErrorCode is 0.
If the parameters are not valid, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

102.2.17 ErrorMessage as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message reported.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox j.ErrorMessage
```

Notes: (Read and Write property)

102.2.18 EXIFData as String

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The EXIF data for this file.
Example:

```
// Read a picture file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim ji as new JPEGImporterMBS

ji.ReadExifData=true
ji.File=f
ji.Import

// Write a new picture file
dim o as FolderItem = SpecialFolder.Desktop.Child("out.jpg")
dim je as new JPEGExporterMBS

je.File=o
je.EXIFData = ji.ExifData
je.Picture = ji.Picture
je.Export
```

Notes:

The export methods use this property.
(Read and Write property)

102.2.19 file as folderitem

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination file.
Example:

```
dim p as Picture = LogoMBS(500)

'Save the scan
dim je as new JPEGExporterMBS
je.file = SpecialFolder.Desktop.Child("just a test.jpg")
je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes:

If file is nil and path is "", the destination is the data property.
(Read and Write property)

102.2.20 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal resolution.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

102.2.21 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should ask the compressor to optimize the huffman coding tables.
Example:

```
dim j as new JPEGExporterMBS
j.OptimizeCoding = true
```

Notes:

This usually provides a small percentage decrease in file size.
(Read and Write property)

102.2.22 Path as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destination file.
Example:

```
Dim p As Picture = LogoMBS(500)

'Save the scan
Dim je As New JPEGExporterMBS
```

```
// using file
'je.file = SpecialFolder.Desktop.Child("just a test via file.jpg")

// using path
Dim f As folderitem = SpecialFolder.Desktop.Child("just a test via path.jpg")
Dim pa As String = f.NativePath
je.path = pa

je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes:

If file is nil and path is "", the destination is the data property.
(Read and Write property)

102.2.23 Picture as Picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture to use.
Example:

```
dim MyPic as Picture = LogoMBS(500)
dim j as JPEGExporterMBS // your exporter
j.picture=MyPic
```

Notes:

Should be a bitmap picture without alpha channel or mask.
(Read and Write property)

102.2.24 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An ICC profile to write to the file.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS
dim p as LCMS2ProfileMBS
dim e as JPEGExporterMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.CreatesRGBProfile

f=SpecialFolder.Desktop.Child("test3.jpg")
e=new JPEGExporterMBS
e.File=f
e.Picture=j.Picture
e.ProfileData=p.SaveProfileToString
e.Quality=75
e.Export
```

Notes:

the string must contain the binary data of the profile. For example SaveProfileToString of the CMProfileMBS class returns such a string.
If the string is empty, no profile is written.
(Read and Write property)

102.2.25 Progressive as Boolean

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to make a progressive compressed image.
Example:

```
dim j as new JPEGExporterMBS
j.Progressive = true
```

Notes:

Default is true.
(Read and Write property)

102.2.26 Quality as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The quality to use.
Example:

```
dim je as new JPEGExporterMBS
je.quality = 75
```

Notes:

Range from 0 to 100. Default is 75.
(Read and Write property)

102.2.27 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The unit of the resolution properties.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes:

Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

102.2.28 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical resolution.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

102.2.29 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last warning message reported.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox j.WarningMessage
```

Notes: (Read and Write property)

102.2.30 XMPData as String

MBS Images Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XMP data for this file.
Notes:

The export methods use this property.
(Read and Write property)

102.2.31 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to Xojo for other ticks.
Example:

```
dim j as JPEGExporterMBS // your exporter

j.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

102.2.32 Markers(Index as Integer) as string

MBS Images Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Additional markers.
Example:

```
dim j as new JPEGExporterMBS

j.Picture = LogoMBS(500)
j.Markers(5) = "Hello World"
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Export

// now open jpeg file in text editor and you see hello world near beginning
```

Notes:

Index from 0 to 15.
Index zero is used for JFIF header.
Index one is normally used for EXIF or XMP.
Index 13 is often used for Photoshop.

see also
http://www.ozhiker.com/electronics/pjmt/jpeg_info/app_segments.html

You can use this markers to embed a given string in the file. You can encrypt data and store it next to the image as you like.
Of course this will not survive if image is loaded and saved again. But can work as a container to hide data and user sees only image.
(Read and Write computed property)

102.2.33 Events

102.2.34 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all error messages from the jpeg library.

102.2.35 GetRowData(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called to query for the next data block.
Notes:

The memoryblock data must be in the format with bytes in the order RGB.
Index is from 0 to height-1.
Returning nil will result in an error on the JPEG compression.

102.2.36 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

102.2.37 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all warning messages from the jpeg library.

102.3 class JPEGImporterMarkerMBS

102.3.1 class JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a JPEG marker.

102.3.2 Properties

102.3.3 Data as String

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The actual data read as a binary string.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

Notes: (Read and Write property)

102.3.4 DataLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data length in bytes of the data string.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS
```

```
j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).DataLength)

// work with data
```

Notes: (Read and Write property)

102.3.5 Marker as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type of this datablock.
Example:

```
dim j as JPEGImporterMBS
dim f as folderitem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).Marker)

// work with data
```

Notes:

For example & hE0 for the first user defined block.
(Read and Write property)

102.3.6 OriginalLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original data length in the file.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).OriginalLength)

// work with data
```

Notes:

Maybe smaller than datalength because of compression.
(Read and Write property)

102.4 class JPEGImporterMBS

102.4.1 class JPEGImporterMBS

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for JPEG Importing.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

102.4.4 Methods

102.4.5 BlueTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture filles with RGB(0,0,255).
Notes: Just for testing how well the plugin picture code works.

102.4.6 CleanMarkers

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the marker list.

102.4.7 FinishJPEG

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Releases all memory buffers needed for the JPEG decompression.
Notes:

This must be called if you used InitJPEG!
Else you have a memory leak.

102.4.8 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

102.4.9 GreenTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture filles with RGB(0,255,0).
Notes: Just for testing how well the plugin picture code works.

102.4.10 Import

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports the picture.
Example:

```
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
```

```
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes:

This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

This method uses the YieldTicks property and may yield time to other threads.
Depending on the mode this method can read CMYK and RGB. RGB either to memoryblock or to a picture object.
The memoryblock data must be in the format with bytes in the order RGB.

102.4.11 ImportCMYK

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Imports a CMYK picture.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
```

```
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

The read CMYK values are stored in the picturedata property.

This method uses the YieldTicks property and may yield time to other threads.

102.4.12 InitJPEG as boolean

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the JPEG decompressor for use with LoopJPEG.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
```

```
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

Call FinishJPEG even if this failes.
Returns true if you can loop using LoopJPEG.

102.4.13 LoopJPEG as Integer

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decompresses one line of the picture.
Example:

```
dim j as new JPEGImporterMBS
// fill properties...

if j.initJPEG then
do
loop until j.LoopJPEG<>0
end if
j.FinishJPEG

backdrop=j.Picture // nil if failed
```

Notes:

Return values:

0	Decompression was okay
1	Finished decompression
2	if there was an error.
3	Not initialized
4	Header only was requested

102.4.14 MarkerCount as Integer

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of markers found in the JPEG data stream.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

102.4.15 MarkerItem(index as Integer) as JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the marker with the given index.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property
```

```
// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

102.4.16 ReadHeader as boolean

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read the header of the JPEG data in a file or a memoryblock.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS

f=SpecialFolder.Desktop.Child("Jaguar1600.jpg")
j=new JPEGImporterMBS
j.file=f
if j.ReadHeader then
MsgBox str(j.Width)+" x "+str(j.Height)
else
MsgBox "no JPEG"
end if
```

Notes:

You can use this function to see if the file is a JPEG image and which dimension it has.
This function calls InitJPEG and FinishJPEG, so we get all the metadata, but no picture.

102.4.17 RedTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a 100x100 pixel big picture filles with RGB(255,0,0).
Notes: Just for testing how well the plugin picture code works.

102.4.18 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes:

Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGImporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

102.4.19 Properties

102.4.20 AllowDamaged as boolean

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether you want damaged pictures to be returned.
Notes:

If AllowDamaged is false, nil will be returned if the picture is damaged.
Default value is false.
(Read and Write property)

102.4.21 API as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries name of API used.
Notes:

Either libjpeg or libjpeg-turbo.
(Read only property)

102.4.22 BlockSmoothing as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to do interblock smoothing.
Notes:

Default value is true.

This setting is relevant only when decoding a progressive JPEG image. During the first DC-only scan, block smoothing provides a very "fuzzy" look instead of the very "blocky" look seen without it; which is better seems a matter of personal taste. But block smoothing is nearly always a win during later stages, especially when decoding a successive-approximation image: smoothing helps to hide the slight blockiness that otherwise shows up on smooth gradients until the lowest coefficient bits are sent.
(Read and Write property)

102.4.23 CMYK as Boolean

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the decompressor has imported the picture as a CMYK image into a memoryblock.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS

g=getFolderItem("a_auf")
ji=new JPEGImporterMBS
ji.File=g
if ji.InitJPEG then

if ji.CMYK then
MsgBox "CMYK"
else
MsgBox "not"
end if
end if
```

Notes:

This property sets the Mode property to ModeCMYK.
(Read and Write property)

102.4.24 ColorComponentCount as Integer

MBS Images Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of color components.
Notes:

1	Grayscale
3	RGB
4	CMYK

(Read and Write property)

102.4.25 ColorSpace as Integer

MBS Images Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color space of the image.
Example:

```
dim j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes:

See also the Colorspace constants.
(Read and Write property)

102.4.26 CurrentDepth as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The depth of the picture property.
Notes:

In the current implementation always 32bit.
0 if the loading of the picture failed.
(Read and Write property)

102.4.27 data as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source string.
Notes:

If file is nil, the compressed data is taken from this property.
(Read and Write property)

102.4.28 ErrorMessage as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message reported.
Notes: (Read and Write property)

102.4.29 ExifData as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exif data stored in the file.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

dim data as string = j.ExifData

// work with data
```

Notes:

Only used when ReadExifData is set to true before you import the image.
The string contains the binary content of a exif data on disc.
Value is "" if no data was found.
(Read and Write property)

102.4.30 ExifOrientation as Integer

MBS Images Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries orientation from EXIF data.
Notes:

ReadExifData property must be set earlier to have the import process load EXIF data.
Returns -1 in case of error.
Valid values are in range of 1 to 8. See kOrientation* constants.

For new development, please use ExifTagsMBS class instead.
(Read only property)

102.4.31 ExifThumbnail as String

MBS Images Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts an embedded thumbnail in EXIF data.
Example:

```
Dim g As New JPEGImporterMBS

g.File = SpecialFolder.Desktop.Child("test.jpg")
g.ReadExifData = True

// not load, but just read header & metadata
If g.ReadHeader Then

// get thumbnail
Dim Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)

// if nil, use ScaleFactor and read scaled down version
End If
```

Notes:

ReadExifData property must be set earlier to have the import process load EXIF data.
Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

102.4.32 FancyUpsampling as Boolean

MBS Images Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to do fancy upsampling.
Notes:

Default value is true.

If true, use direct DCT scaling with DCT size >8 for downsampling of chroma components. If false, use only DCT size <= 8 and simple separate downsampling. Default is true. For better image stability in multiple generation compression cycles it is preferable that this value matches the corresponding FancyUpsampling value in decompression.
(Read and Write property)

102.4.33 file as folderitem

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source file.
Example:

```
Dim ji As New JPEGImporterMBS

ji.file = SpecialFolder.Desktop.Child("test.jpg")
ji.Import

Backdrop = ji.Picture
```

Notes:

If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

102.4.34 FileOffset as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The offset inside the file.
Notes: (Read and Write property)

102.4.35 Height as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the picture.
Notes:

0 if the loading of the picture failed.
(Read and Write property)

102.4.36 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal resolution.
Notes: (Read and Write property)

102.4.37 Mode as Integer

MBS Images Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The operation mode.
Notes:

Can be either ModePicture (Default), ModeRGB or ModeCMYK.
(Read and Write property)

102.4.38 OriginalDepth as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The original depth of the picture.
Notes:

Value maybe 8 for grayscale pictures and 24 or 32 for colored pictures.
0 if the loading of the picture failed.
(Read and Write property)

102.4.39 Path as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source file.
Example:

```
Dim ji As New JPEGImporterMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
ji.path = f.NativePath
ji.Import

Backdrop = ji.Picture
```

Notes:

If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

102.4.40 Picture as Picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The picture as the result.
Notes:

Set to nil on any error.
(Read and Write property)

102.4.41 PictureData as MemoryBlock

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The cmyk picture data after importing.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getFolderItem("CMYK Example.jpg")
ji=new JPEGImporterMBS
```

```
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData
msgBox g.name
// export it
f=SpecialFolder.Desktop.child("CMYK Example2.jpg")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

Basicly a memoryblock with one byte for each channel.
For ReadByRow methods this property contains memoryblock for a row of the image.
(Read and Write property)

102.4.42 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ICC profile stored in the file.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS
dim p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.OpenProfileFromString(j.ProfileData)
MsgBox p.Name
```

Notes:

Only used when ReadProfileData is set to true before you import the image.
The string contains the binary content of a profile file on disc. So you can pass it to the CMOpenProfileFromDataMBS function or write it to a file using the binarystream class.
Value is "" if no profile was found.
(Read and Write property)

102.4.43 ProgressiveMode as Boolean

MBS Images Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this is a progressive jpeg file.
Notes:

Loading progressive files needs more memory.
(Read and Write property)

102.4.44 ReadExifData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the exif data.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

dim data as string = j.ExifData

// work with data
```

Notes:

If there is exif data, it will be stored in the ExifData property.
Setting this value to true will set ReadMarkers to true, too.

The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

102.4.45 ReadMarkers as Boolean

MBS Images Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether importer should read markers.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: (Read and Write property)

102.4.46 ReadProfileData as Boolean

MBS Images Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the icc profile.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadProfileData=true // needed to fill ProfileData property

// do the import

dim Profile as string = j.ProfileData

// work with profile data
```

Notes:

If there is a profile, it will be stored in the ProfileData property.
Setting this value to true will set ReadMarkers to true, too.
A profile is stored in one or more markers, so it is needed to read them before extracting the profile.
(Read and Write property)

102.4.47 ReadXMPData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin should read in the xmp data.
Notes:

If there is xmp data, it will be stored in the XMPData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

102.4.48 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The unit of the resolution properties.
Notes:

Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

102.4.49 ScaleFactor as Integer

MBS Images Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The JPEG Library can scale down the picture on the fly.
Notes:

Allowed values: 0, 1, 2, 4, 8
0 and 1 disable scaling.
Default valus is 0 for no scaling.
(Read and Write property)

102.4.50 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical resolution.
Notes: (Read and Write property)

102.4.51 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last warning message reported.
Notes: (Read and Write property)

102.4.52 Width as Integer

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The width of the picture.
Notes:

0 if the loading of the picture failed.
(Read and Write property)

102.4.53 XMPData as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XMP Data stored in the file.
Notes:

Only used when ReadXMPData is set to true before you import the image.
The string contains the binary content of a xmp data on disc.
Value is "" if no data was found.
(Read and Write property)

102.4.54 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How much time is given back to Xojo for other ticks.
Example:

```
dim j as JPEGImporterMBS // your importer
j.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

102.4.55 Events

102.4.56 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all error messages from the jpeg library.

102.4.57 HeadersRead as boolean

MBS Images Plugin, Plugin Version: 15.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called when headers are read.
Notes:

This allows you to set Mode, ScaleFactor, FancyUpsampling, BlockSmoothing properties.
Return true to cancel Import/InitJPEG methods early.

102.4.58 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

102.4.59 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all warning messages from the jpeg library.

102.4.60 Constants

102.4.61 ColorSpaceCMYK = 4

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Example:

```
dim j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes: C/M/Y/K

102.4.62 ColorSpaceGrayScale = 1

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Notes: Gray

102.4.63 ColorSpaceRGB = 2

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Notes: red/green/blue

102.4.64 ColorSpaceUnknown = 0

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Notes: Not set.

102.4.65 ColorSpaceYCbCr = 3

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Notes: Y/Cb/Cr (also known as YUV)

102.4.66 ColorSpaceYCCK = 5

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the color spaces.
Notes: Y/Cb/Cr/K

102.4.67 kOrientationBottomLeft = 4

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 bottom, col 0 lhs

102.4.68 kOrientationBottomRight = 3

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 bottom, col 0 rhs

102.4.69 kOrientationLeftBottom = 8

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 lhs, col 0 bottom

102.4.70 kOrientationLeftTop = 5

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 lhs, col 0 top

102.4.71 kOrientationRightBottom = 7

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 rhs, col 0 bottom

102.4.72 kOrientationRightTop = 6

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 rhs, col 0 top

102.4.73 kOrientationTopLeft = 1

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 top, col 0 lhs

102.4.74 kOrientationTopRight = 2

MBS Images Plugin, Plugin Version: 20.1. **Function:** One of the orientation constants.
Notes: row 0 top, col 0 rhs

102.4.75 ModeAuto = 30

MBS Images Plugin, Plugin Version: 15.2. **Function:** One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Mode = j.ModeAuto
j.Import
// check Mode after to see if we got ModeRGB, ModeGray or ModeCMYK here.
```

Notes:

Load the image into the picturedata property.
Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.

102.4.76 ModeAutoByRow = 31

MBS Images Plugin, Plugin Version: 15.2. **Function:** One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Mode = j.ModeAutoByRow
j.Import
// check Mode after to see if we got ModeRGBbyRow, ModeGraybyRow or ModeCMYKbyRow here.
```

Notes:

Load the image into the picturedata property.
Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.

102.4.77 ModeCMYK = 2

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.
Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 4 bytes per pixel.

102.4.78 ModeCMYKbyRow = 12

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the mode constants.
Notes:

Same as ModeCMYK, but PictureData contains only the current row
The PictureData Memoryblock uses 4 bytes per pixel.

102.4.79 ModeGray = 3

MBS Images Plugin, Plugin Version: 8.7. **Function:** One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS

j.Mode=j.ModeGray
j.File=SpecialFolder.Desktop.Child("testGray.JPG")
j.Import

MsgBox str(j.Width)+" x "+str(j.Height)
```

Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses one byte per pixel.

102.4.80 ModeGraybyRow = 13

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the mode constants.
Notes:

Same as ModeGray, but PictureData contains only the current row
The PictureData Memoryblock uses one byte per pixel.

102.4.81 ModePicture = 0

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.
Notes: Load the image into the picture property.

102.4.82 ModeRaw = 20

MBS Images Plugin, Plugin Version: 13.4. **Function:** One of the mode constants.
Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 1 to 4 bytes per pixel.

Check the colorspace property to know which color space is used.

102.4.83 ModeRGB = 1

MBS Images Plugin, Plugin Version: 8.4. **Function:** One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS

j.Mode=j.ModeRGB
j.File=SpecialFolder.Desktop.Child("testRGB.JPG")
j.Import

MsgBox str(j.Width)+" x "+str(j.Height)
```

Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 3 bytes per pixel.

102.4.84 ModeRGBbyRow = 11

MBS Images Plugin, Plugin Version: 9.1. **Function:** One of the mode constants.
Notes:

Same as ModeRGB, but PictureData contains only the current row
The PictureData Memoryblock uses 3 bytes per pixel.

102.5 class JPEGMovieMBS

102.5.1 class JPEGMovieMBS

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to write a movie with JPEGs.
Example:

```
// get a picture
dim p as Picture = LogoMBS(500)

// start movie building
dim m as new JPEGMovieMBS

m.Width = 500
m.Height = 500
m.SecondsPerFrame = 0.5

// add frames where we count up
for i as integer = 1 to 20
dim c as new Picture(500, 500)
dim g as Graphics = c.Graphics
g.ForeColor = & c000000
g.TextSize = 50
g.DrawPicture p, 0, 0
g.DrawString str(i), 20, 50

dim j as string = c.GetData(c.FormatJPEG)
m.AddFrame j

next

// generate movie
dim MovieData as string = m.BuildMovie

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write MovieData
```

Notes:

This is a self written class to create a QuickTime Movie with one video track using JPEG images.
You can use this to quickly write a slideshow video if needed.

Does play in Quicktime player and VLC, but not Windows Media Player.

- MBS Xojo Plugins, version 17.2pr1
- JPEGs to Movie

102.5.3 Xojo Developer Magazine

- 15.4, page 9: News

102.5.4 Methods

102.5.5 AddFrame(Image as MemoryBlock)

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 102.5.6 AddFrame(Image as String) 16915

102.5.6 AddFrame(Image as String)

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 102.5.5 AddFrame(Image as MemoryBlock) 16915

102.5.7 BuildMovie as String

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds the movie.
Notes: Either you get an exception or you get a movie which you can write to a file on disk.

102.5.8 Properties

102.5.9 Duration as Double

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The duration of the video.
Notes:

In Seconds.
(Read only property)

102.5.10 FrameCount as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of frames.
Notes: (Read only property)

102.5.11 Height as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The height of the video.
Notes:

Must match the JPEGs you use.
(Read and Write property)

102.5.12 SecondsPerFrame as Double

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds to show a frame.
Notes:

Default 1 second.
(Read and Write property)

102.5.13 TimeScale as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time scale to use.
Notes:

Defines how fine granular you can define time.
Default is 600 units per second.
(Read and Write property)

102.5.14 Width as Integer

MBS Images Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The target width of the video.
Notes:

Must match the JPEGs you use.
(Read and Write property)

102.6 class JPEGTransformationMBS

102.6.1 class JPEGTransformationMBS

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class to wrap the jpegtran utility.
Notes:

Although rotating and flipping data expressed as DCT coefficients is not hard, there is an asymmetry in the JPEG format specification for images whose dimensions aren't multiples of the iMCU size. The right and bottom image edges are padded out to the next iMCU boundary with junk data; but no padding is possible at the top and left edges. If we were to flip the whole image including the pad data, then pad garbage would become visible at the top and/or left, and real pixels would disappear into the pad margins — perhaps permanently, since encoders & decoders may not bother to preserve DCT blocks that appear to be completely outside the nominal image area. So, we have to exclude any partial iMCUs from the basic transformation.

Transpose is the only transformation that can handle partial iMCUs at the right and bottom edges completely cleanly. Mirror horizontal can flip partial iMCUs at the bottom, but leaves any partial iMCUs at the right edge untouched. Similarly mirror vertical leaves any partial iMCUs at the bottom edge untouched. The other transforms are defined as combinations of these basic transforms and process edge blocks in a way that preserves the equivalence.

The "trim" option causes untransformable partial iMCUs to be dropped; this is not strictly lossless, but it usually gives the best-looking result for odd-size images. Note that when this option is active, the expected mathematical equivalences between the transforms may not hold. (For example, -rot 270 -trim trims only the bottom edge, but -rot 90 -trim followed by -rot 180 -trim trims both edges.)

We also offer a "force to grayscale" option, which simply discards the chrominance channels of a YCbCr image. This is lossless in the sense that the luminance channel is preserved exactly. It's not the same kind of thing as the rotate/flip transformations, but it's convenient to handle it as part of this package, mainly because the transformation routines have to be aware of the option to know how many components to work on.

Bases on libjpeg.

102.6.2 Blog Entries

- MBS REALbasic Plugins, version 11.2pr1

102.6.3 Methods

102.6.4 close

MBS Images Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

102.6.5 Transform as boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the transformation.
Notes:

Outputfile and Inputfile should never be identical, because this will corrupt the file.

Returns only false if the file specifications are invalid.
So after true is returned you still need to check the errorcode property.

102.6.6 Properties

102.6.7 CopyOption as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What to copy from the meta information.
Notes:

Values:

JCOPYOPT_NONE	0	copy no optional markers
JCOPYOPT_COMMENTS	1	copy only comment (COM) markers
JCOPYOPT_ALL	2	copy all optional markers

(Read and Write property)

102.6.8 DebugLevel as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The debug level for the jpeg library.

Notes: (Read and Write property)

102.6.9 ErrorCode as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes: (Read and Write property)

102.6.10 ErrorMessage as String

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message reported.
Notes: (Read and Write property)

102.6.11 Grayscale as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to reduce to grayscale (omit color data).
Notes:

If true the a color image is converted to grayscale.
(Read and Write property)

102.6.12 InputFile as Folderitem

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The input file.
Notes:

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

102.6.13 MaxMemoryToUse as Integer

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum memory to use.
Notes:

Unit is bytes.
(Read and Write property)

102.6.14 MirrorHorizonal as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to use the left-right mirror transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.15 MirrorVertical as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to use the top-bottom mirror transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.16 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Optimize Huffman table (smaller file, but slow compression)
Notes: (Read and Write property)

102.6.17 OutputFile as Folderitem

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output file.
Notes:

On Mac OS X, this function uses the short file name (31 characters).
So you may consider to save to a temporary file and rename it after the transformation was successfull.

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

102.6.18 Progressive as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to create progressive JPEG file.
Notes: (Read and Write property)

102.6.19 Rotate180 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to use the 180° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.20 Rotate270 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to use the 270° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.21 Rotate90 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to use the 90° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.22 Transpose as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to transpose the image across UR-to-LL axis.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.23 Transverse as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to tanspose the image across UL-to-LR axis.
Notes:

Only one transformation can be used.
(Read and Write property)

102.6.24 Trim as Boolean

MBS Images Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** whether to drop non-transformable edge blocks.
Notes:

if true, trim partial MCUs as needed.
(Read and Write property)

102.6.25 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last warning message reported.
Notes: (Read and Write property)

102.6.26 Events

102.6.27 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all error messages from the jpeg library.

102.6.28 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

102.6.29 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This events reports all warning messages from the jpeg library.

102.7 module JPEGTurboMBS

102.7.1 module JPEGTurboMBS

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A module to use libjpeg-turbo in Xojo.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

102.7.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr7
- libjpeg-turbo for Xojo

102.7.3 Methods

102.7.4 API as Ptr

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns API pointer.
Notes: This returns pointer to internal MBS data structure with function pointers to JPEG library functions.

102.7.5 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries JPEG library version.
Notes: Currently reporting 8.0 for version 8.0.

102.7.6 Constants

102.7.7 Version = "2.0.3"

MBS Images Plugin, Plugin Version: 19.5. **Function:** The version string for JPEG Turbo library.

102.8 Globals

102.8.1 JPEGStringToPictureMBS(buf as string) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file.
Example:

```
dim s as string
dim h as new HTTPSocket

s=h.Get("http://www.monkeybreadsoftware.de/xojo/images/rbplugin.jpg",90)

Backdrop=JPEGStringToPictureMBS(s)
```

Notes: Short version of the "JPEGStringToPicture(buf as string,allowdamaged as Boolean) as picture" method. allowdamaged is set to false.
See also:

- 102.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture 16926

102.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a picture from a JPEG file.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)

s = leftb(s, lenb(s)-1000) // remove last 1000 bytes

dim q as Picture = JPEGStringToPictureMBS(s, true)

Backdrop = q
```

Notes:

This methods should read all JPEG file data you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full down-

loaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the "JPEGToString example", "jpeg load crashtest" and "SaveJPEG without QuickTime" examples.
See also:

- 102.8.1 JPEGStringToPictureMBS(buf as string) as picture 16926

102.8.3 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string

MBS Images Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a picture into a string using JPEG compression.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)
dim q as Picture = JPEGStringToPictureMBS(s)

Backdrop = q
```

Notes:

This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

The picture should be a bitmap picture without alpha channel or mask.
Use the JPEGExporterMBS class for more options.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

The picture is always encoded with 72 dpi. If you want to set a different dpi value, please use the JPEGExporterMBS class.

Chapter 103

Keychain

103.1 class KeychainAccessControlMBS

103.1.1 class KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines access rights for items.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

103.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr5

103.1.3 Methods

103.1.4 Constructor

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

103.1.5 CreateWithFlags(protection as String, Flags as Integer, byref error as Variant) as KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates new access control object based on protection type and additional flags.
Notes:

Created access control object should be used as a value for kSecAttrAccessControl attribute in AddItem or UpdateItem functions. Accessing keychain items or performing operations on keys which are protected by access control objects can block the execution because of UI which can appear to satisfy the access control conditions, therefore it is recommended to either move those potentially blocking operations out of the main application thread or use combination of kSecUseAuthenticationContext and kSecUseAuthenticationUI attributes to control where the UI interaction can appear.

protection: Protection class to be used for the item. One of kSecAttrAccessible constants.
flags: If no flags are set then all operations are allowed.
error: Additional error information filled in case of failure. a CFErrorMBS object.

Returns newly created access control object.

103.1.6 kSecAttrAccessibleAfterFirstUnlock as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

103.1.7 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.

103.1.8 kSecAttrAccessibleAlways as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended

for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.

103.1.9 kSecAttrAccessibleAlwaysThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

103.1.10 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.

103.1.11 kSecAttrAccessibleWhenUnlocked as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.

103.1.12 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

103.1.13 Properties

103.1.14 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

103.1.15 Constants

103.1.16 kSecAccessControlAnd = & h8000

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Constraint logic operation: when using more than one constraint, all must be satisfied.

103.1.17 kSecAccessControlApplicationPassword = & h80000000

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Application provided password for data encryption key generation. This is not a constraint but additional item encryption mechanism.

103.1.18 kSecAccessControlBiometryAny = 2

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Touch ID (any finger) or Face ID. Touch ID or Face ID must be available. With Touch ID at least one finger must be enrolled. With Face ID user has to be enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

103.1.19 kSecAccessControlBiometryCurrentSet = 8

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Touch ID from the set of currently enrolled fingers. Touch ID must be available and at least one finger must be enrolled. When fingers are added or removed, the item is invalidated. When Face ID is re-enrolled this item is invalidated.

103.1.20 kSecAccessControlDevicePasscode = 16

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Device passcode

103.1.21 kSecAccessControlOr = & h4000

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Constraint logic operation: when using more than one constraint, at least one of them must be satisfied.

103.1.22 kSecAccessControlPrivateKeyUsage = & h40000000

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Create access control for private key operations (i.e. sign operation)

103.1.23 kSecAccessControlTouchIDAny = 2

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Touch ID (any finger) or Face ID. Touch ID or Face ID must be available. With Touch ID at least one finger must be enrolled. With Face ID user has to be enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

103.1.24 kSecAccessControlTouchIDCurrentSet = 8

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: Touch ID from the set of currently enrolled fingers. Touch ID must be available and at least one finger must be enrolled. When fingers are added or removed, the item is invalidated. When Face ID is re-enrolled this item is invalidated.

103.1.25 kSecAccessControlUserPresence = 1

MBS MacClassic Plugin, Plugin Version: 18.5. **Function:** One of the control flags.
Notes: User presence policy using biometry or Passcode. Biometry does not have to be available or enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

103.2 class KeychainItemMBS

103.2.1 class KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a keychain item.
Example:

```
Const kDomain = "koingosw.com"
Const kUsername = "koingosoftware"
Const kPath = ""
Const kProtocol = "http"

Dim xPassword As MemoryBlock = "testpassword"
Dim xAdded As KeychainItemMBS

Dim dQuery as new Dictionary
dQuery.Value(KeychainManagerMBS.kSecAttrAuthenticationType) = KeychainManagerMBS.kSecAttrAuthen-
ticationTypeHTMLForm
dQuery.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassInternetPassword
If Len(kDomain) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrServer) = kDomain
If Len(kUsername) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrAccount) = kUsername
If Len(kProtocol) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrProtocol) = kProtocol
dQuery.Value(KeychainManagerMBS.kSecAttrComment) = "default"
dQuery.Value(KeychainManagerMBS.kSecAttrDescription) = "Web form password"
dQuery.Value(KeychainManagerMBS.kSecAttrLabel) = kDomain + " (" + kUsername + ")"
dQuery.Value(KeychainManagerMBS.kSecValueData) = xPassword

If Not KeychainManagerMBS.AddItem(KeychainManagerMBS.Default,dQuery) Then
Break
End If
```

103.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr12
- Keychain Plugin rewritten

103.2.3 Methods

103.2.4 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Deletes a keychain item from the default keychain's permanent data store.

Notes: Lasterror is set.

103.2.5 ItemClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries the item class for this item.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.itemclass // shows genp for generic password
```

Notes: Lasterror is set.

103.2.6 Keychain as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the keychain object of a given keychain item.
Notes: Lasterror is set.

103.2.7 PersistentReference as Memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a persistent reference for a keychain item.
Notes:

Unlike normal references, a persistent reference may be stored on disk or passed between processes. You can convert a persistent reference into an ordinary keychain item reference (KeychainItemMBS) by calling the KeychainManagerMBS.ItemFromPersistentReference function.
Lasterror is set.

103.2.8 Properties

103.2.9 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

103.2.10 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last error code returned by one of the methods.
Notes:

You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

103.2.11 Account as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Convenience property to get/set the account attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.12 AttributeData(attributeName as string) as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set an attribute as raw data (memoryblock).
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim data as MemoryBlock = item.AttributeData(item.kSecCreationDateItemAttr)
dim text as string = DefineEncoding(data, encodings.UTF8)
MsgBox text
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.13 AttributeText(attributeName as string) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Get or set an attribute as an UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim text as string = item.AttributeText(item.kSecCreationDateItemAttr)
MsgBox text
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.14 Comment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience property to get/set the comment attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.15 Description as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience property to get/set the description attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Description
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.16 Label as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience property to get/set the label attribute as UTF-8 text.
Example:

```
dim items() as KeychainItemMBS = KeychainManagerMBS.AllItems(nil, KeychainManagerMBS.kSecGenericPasswordItemClass)
dim labels() as string

for each item as KeychainItemMBS in items
labels.append item.label
next

break // see array of labels
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.17 Password as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the password or sets a new one.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim passwordData as MemoryBlock = item.Password
dim password as string = DefineEncoding(passwordData, encodings.UTF8)
MsgBox Password
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.18 Service as string

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Convenience property to get/set the service attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Service
```

Notes:

Lasterror is set.
(Read and Write computed property)

103.2.19 Constants

103.2.20 kSecAccountItemAttr = "acct"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the account attribute.
You use this tag to set or get a string that represents the user account. It also applies to generic, Internet, and AppleShare password items. Keychain strings should use UTF-8 encoding.

103.2.21 kSecAddressItemAttr = "addr"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the address attribute.
You use this tag to set or get a value of type string that represents the AppleTalk zone name, or the IP or domain name that represents the server address. This is unique to AppleShare password attributes. Keychain strings should use UTF-8 encoding.

103.2.22 kSecAlias = "alis"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes: Indicates an alias.

103.2.23 kSecAuthenticationTypeItemAttr = "atyp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the authentication type attribute.
You use this tag to set or get a value of type SecAuthenticationType that represents the Internet authentication scheme. For possible authentication values, see "Keychain Authentication Type Constants." This is unique to Internet password attributes.

103.2.24 kSecCertificateEncoding = "cenc"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes: Indicates a CSSM_CERT_ENCODING type.

103.2.25 kSecCertificateType = "ctyp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes: Indicates a CSSM_CERT_TYPE type.

103.2.26 kSecCommentItemAttr = "icmt"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the comment attribute.
You use this tag to set or get a string value that represents a user-editable string containing comments for this item. Keychain strings should use UTF-8 encoding.

103.2.27 kSecCreationDateItemAttr = "cdat"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the creation date attribute.
You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example, SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

103.2.28 kSecCreatorItemAttr = "crtr"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the creator attribute.
You use this tag to set or get a value of type FourCharCode that represents the item's creator.

103.2.29 kSecCrlEncoding = "crnc"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes: Indicates a CSSM_CRL_ENCODING type.

103.2.30 kSecCrlType = "crtp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes: Indicates a CSSM_CRL_TYPE type.

103.2.31 kSecCustomIconItemAttr = "cusi"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the custom icon attribute.
Use of this attribute is deprecated. Custom icons for keychains are not supported in OS X.

103.2.32 kSecDescriptionItemAttr = "desc"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the description attribute.
You use this tag to set or get a string value that represents a user-visible string describing this particular kind of item, for example "disk image password". Keychain strings should use UTF-8 encoding.

103.2.33 kSecGenericItemAttr = "gena"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the generic attribute.
You use this tag to set or get a value of untyped bytes that represents a user-defined attribute. This is unique to generic password attributes.

103.2.34 kSecInvisibleItemAttr = "invi"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the invisible attribute.
You use this tag to set or get a value of type Boolean that indicates whether the item is invisible (that is, should not be displayed).

103.2.35 kSecLabelItemAttr = "labl"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the label attribute.
You use this tag to set or get a string value that represents a user-editable string containing the label for this item. Keychain strings should use UTF-8 encoding.

103.2.36 kSecModDateItemAttr = "mdat"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the modification date attribute.
You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example,

SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

103.2.37 kSecNegativeItemAttr = "nega"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the negative attribute.
You use this tag to set or get a value of type Boolean that indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn't want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user. The item, which is typically invisible and with zero-length data, acts as a placeholder.

103.2.38 kSecPathItemAttr = "path"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the path attribute.
You use this tag to set or get a string value that represents the path. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

103.2.39 kSecPortItemAttr = "port"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the port attribute.
You use this tag to set or get a value of type UInt32 that represents the Internet port number. This is unique to Internet password attributes.

103.2.40 kSecProtocolItemAttr = "ptcl"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the protocol attribute.
You use this tag to set or get a value of type SecProtocolType that represents the Internet protocol. For possible protocol type values, see "Keychain Protocol Type Constants." This is unique to AppleShare and

Internet password attributes.

103.2.41 kSecScriptCodeItemAttr = "scrp"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the script code attribute.
You use this tag to set or get a value of type ScriptCode that represents the script code for all strings. Use of this attribute is deprecated; string attributes should always be stored in UTF-8 encoding.

103.2.42 kSecSecurityDomainItemAttr = "sdmn"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the security domain attribute.
You use this tag to set or get a value that represents the Internet security domain. This is unique to Internet password attributes.

103.2.43 kSecServerItemAttr = "srvr"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the server attribute.
You use this tag to set or get a string that represents the Internet server's domain name or IP address. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

103.2.44 kSecServiceItemAttr = "svce"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the service attribute.
You use this tag to set or get a string that represents the service associated with this item, for example, "iTools". This is unique to generic password attributes. Keychain strings should use UTF-8 encoding.

103.2.45 kSecSignatureItemAttr = "ssig"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the server signature attribute.
You use this tag to set or get a value of type SecAFPServerSignature that represents the server signature block. This is unique to AppleShare password attributes.

103.2.46 kSecTypeItemAttr = "type"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the type attribute.
You use this tag to set or get a value of type FourCharCode that represents the item's type.

103.2.47 kSecVolumeItemAttr = "vlme"

MBS MacClassic Plugin, Plugin Version: 13.1. **Function:** One of the keychain item attributes.
Notes:

Identifies the volume attribute.
You use this tag to set or get a string value that represents the AppleShare volume. This is unique to AppleShare password attributes. Keychain strings should use UTF-8 encoding.

103.3 module KeychainManagerMBS

103.3.1 module KeychainManagerMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The module for global keychain functions.
Example:

```
// build query
dim query as new Dictionary

dim domain as string = "test.test"
dim username as string = "testuser"

query.value( KeychainManagerMBS.kSecAttrServer ) = Domain
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassInternetPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne

// Build Dictionary with new values
dim newValues as new Dictionary
