MBS Main Plugin, Plugin Version: 9.5. **Function:** The plugin copyright string.
Example:

```
MsgBox mbs.Copyright
```

143.1.10 HasAudioPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Audio plugin is installed.
Example:

```
# if MBS.HasAudioPlugin then
MsgBox "Audio Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.11 HasAVFoundationPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the AVFoundation plugin is installed.
Example:

```
# if MBS.HasAVFoundationPlugin then
MsgBox "AVFoundation Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be

missing.

143.1.12 HasBarcodePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Barcode plugin is installed.
Example:

```
# if MBS.HasBarcodePlugin then
MsgBox "Barcode Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.13 HasCanonEOSDigitalPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CanonEOSDigital plugin is installed.
Example:

```
# if MBS.HasCanonEOSDigitalPlugin then
MsgBox "CanonEOSDigital Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.14 HasChartDirectorPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ChartDirector plugin is installed.
Example:

```
# if MBS.HasChartDirectorPlugin then
MsgBox "ChartDirector Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed.

This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.15 HasCocoaBasePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaBase plugin is installed.
Example:

```
# if MBS.HasCocoaBasePlugin then
MsgBox "CocoaBase Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.16 HasCocoaControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaControls plugin is installed.
Example:

```
# if MBS.HasCocoaControlsPlugin then
MsgBox "CocoaControls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.17 HasCocoaExtrasPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CocoaExtras plugin is installed.
Example:

```
# if MBS.HasCocoaExtrasPlugin then
MsgBox "CocoaExtras Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.18 HasCocoaPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Cocoa plugin is installed.
Example:

```
# if MBS.HasCocoaPlugin then
MsgBox "Cocoa Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.19 HasCompressionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Compression plugin is installed.
Example:

```
# if MBS.HasCompressionPlugin then
MsgBox "Compression Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.20 HasComputerControlPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ComputerControl plugin is installed.
Example:

```
# if MBS.HasComputerControlPlugin then
MsgBox "ComputerControl Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.21 HasControlsPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Controls plugin is installed.
Example:

```
# if MBS.HasControlsPlugin then
MsgBox "Controls Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.22 HasCUPSPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CUPS plugin is installed.
Example:

```
# if MBS.HasCUPSPlugin then
MsgBox "CUPS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.23 HasCURLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the CURL plugin is installed.
Example:

```
# if MBS.HasCURLPlugin then
MsgBox "CURL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.24 HasDataTypesPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DataTypes plugin is installed.
Example:

```
# if MBS.HasDataTypesPlugin then
MsgBox "DataTypes Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.25 HasDirectShowPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DirectShow plugin is installed.
Example:

```
# if MBS.HasDirectShowPlugin then
MsgBox "DirectShow Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.26 HasDonglePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Dongle plugin is installed.
Example:

```
# if MBS.HasDonglePlugin then
MsgBox "Dongle Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.27 HasDynaPDFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the DynaPDF plugin is installed.
Example:

```
# if MBS.HasDynaPDFPlugin then
MsgBox "DynaPDF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.28 HasEncryptionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Encryption plugin is installed.
Example:

```
# if MBS.HasEncryptionPlugin then
MsgBox "Encryption Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.29 HasGIFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the GIF plugin is installed.
Example:

```
# if MBS.HasGIFPlugin then
MsgBox "GIF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.30 HasGraphicsMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the GraphicsMagick plugin is installed.
Example:

```
# if MBS.HasGraphicsMagickPlugin then
MsgBox "GraphicsMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.31 HasImageMagickPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the ImageMagick plugin is installed.
Example:

```
# if MBS.HasImageMagickPlugin then
MsgBox "ImageMagick Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.32 HasJavaPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Java plugin is installed.
Example:

```
# if MBS.HasJavaPlugin then
MsgBox "Java Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.33 HasJPEGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the JPEG plugin is installed.
Example:

```
# if MBS.HasJPEGPlugin then
MsgBox "JPEG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.34 HasLargePicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LargePicture plugin is installed.
Example:

```
# if MBS.HasLargePicturePlugin then
MsgBox "LargePicture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.35 HasLCMS2Plugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LCMS2 plugin is installed.
Example:

```
# if MBS.HasLCMS2Plugin then
MsgBox "LCMS2 Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.36 HasLCMSPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the LCMS plugin is installed.
Example:

```
# if MBS.HasLCMSPlugin then
MsgBox "LCMS Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.37 HasLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Leopard plugin is installed.
Example:

```
# if MBS.HasLeopardPlugin then
MsgBox "Leopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.38 HasLinuxPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Linux plugin is installed.
Example:

```
# if MBS.HasLinuxPlugin then
MsgBox "Linux Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.39 HasLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Lion plugin is installed.
Example:

```
# if MBS.HasLionPlugin then
MsgBox "Lion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.40 HasMac64bitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mac64bit plugin is installed.
Example:

```
# if MBS.HasMac64bitPlugin then
MsgBox "Mac64bit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.41 HasMacOSXCFPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSXCF plugin is installed.
Example:

```
# if MBS.HasMacOSXCFPlugin then
MsgBox "MacOSXCF Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.42 HasMacOSXCGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSXCG plugin is installed.
Example:

```
# if MBS.HasMacOSXCGPlugin then
MsgBox "MacOSXCG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.43 HasMacOSXPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MacOSX plugin is installed.
Example:

```
# if MBS.HasMacOSXPlugin then
MsgBox "MacOSX Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.44 HasMacPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mac plugin is installed.
Example:

```
# if MBS.HasMacPlugin then
MsgBox "Mac Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.45 HasMainPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Main plugin is installed.
Example:

```
# if MBS.HasMainPlugin then
MsgBox "Main Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.46 HasMarkDownPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MarkDown plugin is installed.
Example:

```
# if MBS.HasMarkDownPlugin then
MsgBox "MarkDown Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.47 HasMavericksPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Mavericks plugin is installed.
Example:

```
# if MBS.HasMavericksPlugin then
MsgBox "Mavericks Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.48 HasMountainLionPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the MountainLion plugin is installed.
Example:

```
# if MBS.HasMountainLionPlugin then
MsgBox "MountainLion Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.49 HasNetworkPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Network plugin is installed.
Example:

```
# if MBS.HasNetworkPlugin then
MsgBox "Network Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.50 HasNikonCameraPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the NikonCamera plugin is installed.
Example:

```
# if MBS.HasNikonCameraPlugin then
MsgBox "NikonCamera Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.51 HasOCRPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the OCR plugin is installed.
Example:

```
# if MBS.HasOCRPlugin then
MsgBox "OCR Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.52 HasOverlayPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Overlay plugin is installed.
Example:

```
# if MBS.HasOverlayPlugin then
MsgBox "Overlay Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.53 HasPHPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the PHP plugin is installed.
Example:

```
# if MBS.HasPHPPlugin then
MsgBox "PHP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.54 HasPicturePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Picture plugin is installed.
Example:

```
# if MBS.HasPicturePlugin then
MsgBox "Picture Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.55 HasPNGPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the PNG plugin is installed.
Example:

```
# if MBS.HasPNGPlugin then
MsgBox "PNG Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.56 HasQTKitPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the QTKit plugin is installed.
Example:

```
# if MBS.HasQTKitPlugin then
MsgBox "QTKit Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.57 HasQuickTimePlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the QuickTime plugin is installed.
Example:

```
# if MBS.HasQuickTimePlugin then
MsgBox "QuickTime Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.58 HasRegExPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the RegEx plugin is installed.
Example:

```
# if MBS.HasRegExPlugin then
MsgBox "RegEx Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.59 HasSmartCardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SmartCard plugin is installed.
Example:

```
# if MBS.HasSmartCardPlugin then
MsgBox "SmartCard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.60 HasSnowLeopardPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SnowLeopard plugin is installed.
Example:

```
# if MBS.HasSnowLeopardPlugin then
MsgBox "SnowLeopard Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.61 HasSQLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the SQL plugin is installed.
Example:

```
# if MBS.HasSQLPlugin then
MsgBox "SQL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.62 HasTAPIPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the TAPI plugin is installed.
Example:

```
# if MBS.HasTAPIPlugin then
MsgBox "TAPI Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.63 HasTidyPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tidy plugin is installed.
Example:

```
# if MBS.HasTidyPlugin then
MsgBox "Tidy Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.64 HasTiffPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Tiff plugin is installed.
Example:

```
# if MBS.HasTiffPlugin then
MsgBox "Tiff Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.65 HasTwainPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Twain plugin is installed.
Example:

```
# if MBS.HasTwainPlugin then
MsgBox "Twain Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.66 HasUSBPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the USB plugin is installed.
Example:

```
# if MBS.HasUSBPlugin then
MsgBox "USB Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.67 HasUtilPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Util plugin is installed.
Example:

```
# if MBS.HasUtilPlugin then
MsgBox "Util Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.68 HasVLCPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the VLC plugin is installed.
Example:

```
# if MBS.HasVLCPlugin then
MsgBox "VLC Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.69 HasWIAPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WIA plugin is installed.
Example:

```
# if MBS.HasWIAPlugin then
MsgBox "WIA Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.70 HasWinDragDropPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WinDragDrop plugin is installed.
Example:

```
# if MBS.HasWinDragDropPlugin then
MsgBox "WinDragDrop Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.71 HasWinICMPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the WinICM plugin is installed.
Example:

```
# if MBS.HasWinICMPlugin then
MsgBox "WinICM Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.72 HasWinPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the Win plugin is installed.
Example:

```
# if MBS.HasWinPlugin then
MsgBox "Win Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.73 HasXLPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XL plugin is installed.
Example:

```
# if MBS.HasXLPlugin then
MsgBox "XL Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.74 HasXMPPlugin = true

MBS Main Plugin, Plugin Version: 16.4. **Function:** Whether the XMP plugin is installed.
Example:

```
# if MBS.HasXMPPlugin then
MsgBox "XMP Plugin is installed."
# endif
```

Notes: The MBS Main Plugin will check on startup of the Xojo or Xojo IDE what plugins are is installed. This constant will be true if plugin is installed. If no plugins are found by our plugin, the constants will be missing.

143.1.75 HostName = "MyMac"

MBS Main Plugin, Plugin Version: 14.0. **Function:** The host the IDE was launched on for building an app.
Example:

MsgBox mbs.HostName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

143.1.76 IsPrerelease = false

MBS Main Plugin, Plugin Version: 20.0. **Function:** Wether this is a prerelease version of the plugin.
Notes: Value is true for beta versions and false for release.

143.1.77 UserName = "Christian Schmitz"

MBS Main Plugin, Plugin Version: 14.0. **Function:** The user name of the user who launched the IDE.
Example:

MsgBox mbs.UserName

Notes:

Using this constant allows you to include details on who build the app in the application itself, e.g. for documentation.
The constant value is not in this documentation as it changes too often.

143.1.78 Version = "MBS Xojo Plugin 20.2 (build 20248) Sun May 10 07:59:19 2020 (GMT)"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The plugin version string.
Example:

MsgBox mbs.Version

143.1.79 VersionNumber = 20.2

MBS Main Plugin, Plugin Version: 19.5. **Function:** The plugin version as number.
Example:

// use newer code

Notes: // use older code

143.1.80 VersionString = "20.2"

MBS Main Plugin, Plugin Version: 11.1. **Function:** The plugin version string (only, the number part).
Example:

MsgBox mbs.VersionString

Notes: e.g. "11.1"

143.1.81 Website = "http://www.monkeybreadsoftware.de"

MBS Main Plugin, Plugin Version: 9.5. **Function:** The URL for the Monkeybread Software website.
Notes: ShowURL mbs.Website

143.1.82 Year = 2020

MBS Main Plugin, Plugin Version: 9.5. **Function:** The year of the plugin.
Example:

MsgBox str(mbs.Year)

143.2 Globals

143.2.1 LogoMBS(size as Integer = 0, WithAlphaChannel as boolean = false) as Picture

MBS Main Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the MBS logo picture.
Example:

window1.Backdrop = LogoMBS(500)

Notes:

Best size is 500 pixel.
This function exists to provide a sample picture for examples.
If WithAlphaChannel is true and alpha channel pictures are supported, the plugin returns a picture with alpha channel. (Cocoa, Windows or Linux target on Xojo 2011r4).

Due to a bug in console runtime from Real Software this function can only produce useful pictures with 500 pixel size in console or web applications.

143.2.2 MBSPluginCompileDate as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation date of the plugins.
Example:

MsgBox MBSPluginCompileDate

Notes:

e.g. "Aug 27 2006"
Actually the compilation date of the Version Plugin part which defines this function.

143.2.3 MBSPluginCompileTime as string

MBS Main Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compilation Time of the plugins.
Example:

MsgBox MBSPluginCompileTime

Notes:

e.g. "19:40:16"
Actually the compilation date of the Version Plugin part which defines this function.

143.2.4 MBSPluginVersion as string

MBS Main Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a version string from the plugin.
Example:

```
MsgBox "Build with Xojo "+RBVersionString+" and "+MBSPluginVersion
```

Notes: You can show that in your about box so your users can tell you which plugin they use.

143.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean

MBS Main Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function to register the plugins.
Example:

```
const name = "Joe Smith"
const serialnumber = 123456789
const enddate = 200710

if not RegisterMBSPlugin(name,"MBS2007", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

Notes:

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2007 and newer serial numbers.
See also:

- 143.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean 19942

143.2.6 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as string) as boolean

MBS Main Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The function to register the plugins.
Example:

```
const name = "Joe Smith"
const serialnumber = "123456"
const enddate = 200710

if not RegisterMBSPlugin(name, "MBS Complete", enddate, serialnumber) then
msgBox "something wrong with the serial number of the plugins!"
end if
```

Notes:

Returns true if name and serial number is accepted.

While you are running your project in Xojo (or Xojo) you don't need to register, but if you compile for any target, you should or nice popup windows will show that the app is not registered.

Register in an application subclass to make registering as early as possible.

In case you get this message: "RegisterMBSPlugin()', giving the message "This
item conflicts with another item of the same name" you have something else in your plugins folder, e.g. a html file.

Possible reasons for this failing:
- The calculations you make on the strings or serial number do not create the same value on every machine (Intel vs. PPC, e.g. endian problems)
- You use MBS functions before calling registration function (e.g. you register in window.open event and use the plugin for a control.)
- You mix different plugin versions in your Xojo folder.

This function works only for 2015 and newer serial numbers.
See also:

- 143.2.5 RegisterMBSPlugin(name as string, product as string, enddate as Integer, serial as Integer) as boolean 19941

143.2.7 SetRegistrationMessageMBS(ID as Integer, message as string)

MBS Main Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines what messages to show.
Example:

SetRegistrationMessageMBS(0, "This application is broken. Please reinstall!")

Notes:

ID currently can only be 0 and is reserved for future flags.

Currently this changes the message which is shown if plugins of different versions are found.
This typically happens if installers mix old and new libraries in an app and the user should be asked to reinstall the application.

143.3 class RegistrationEngineMBS

143.3.1 class RegistrationEngineMBS

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An engine to add serial number generation to your application.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If you want to add serial numbers to your application, you can use this class to write yourself a serial number generator application.
You can later in your application use this class to verify the serial number.

You may want to design your application that the serial number is written to your preferences file so you can verify it every time your application is launched. But if you do this, also save some computer related value there so you can avoid people cloning the system. For example the MAC ID, the user name, the systemfolder creation date. This way you detect whenever a preferences file is copied to another machine.

For generate and later verify serial numbers the setup of the class must match. So carefully check how your serial number should look like. A format like "MA-1234-5678-9012-V1" can be good. Use a prefix and suffix so make serial numbers from different products and different major versions look different. 12 letters are normally enough for a serial number. Especially if you use alpha numeric characters. You can of course change the alphabet string and use lower case letters.

143.3.3 Methods

143.3.4 Calc as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the serial number.

143.3.5 Verify(s as string) as boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Verifies the serial number.
Notes:

If you only use upper case letter for your serial numbers, use a function like uppercase before calling verify. This way you avoid that a serial number "abc" is invalid because it is not "ABC".
Returns true on success and false on failure.

143.3.6 Properties

143.3.7 Alphabet as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The characters to use for serial numbers.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.Alphabet="ABC123"
MsgBox r.Calc // shows: A1AC-2312-12CC

r.Alphabet="0123456789"
MsgBox r.Calc // shows: 4308-2905-4013
```

Notes:

Must have at least two characters.
Characters must be unique.
Default is "0123456789ABCDEFGHIJKLMNOPQRSTUVWXYZ".
(Read and Write property)

143.3.8 BlockLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Length of the blocks in the serial number.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes:

If this value is 0, no delimeters are used.
(Read and Write property)

143.3.9 Delimiter as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The delimiter string to use for separating blocks in the serial number.
Notes:

Default is "-".
(Read and Write property)

143.3.10 Mode as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The mode of operation.
Notes:

Currently always 0.
Set to 1 to use 128bit instead of 64bit number.
(Read and Write property)

143.3.11 NumberLength as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum length of the number.

Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="MyProduct 2008"

r.NumberLength=10
r.BlockLength=5
MsgBox r.Calc // shows: ICYRR-ES4UX

r.NumberLength=16
r.BlockLength=4
MsgBox r.Calc // shows: ICYR-RES4-UXQ1
```

Notes: (Read and Write property)

143.3.12 Platform as Integer

MBS Util Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Which platform to use for platform specific keys.
Notes:

Value is set in the constructor to current platform, but you can change it if you want to run the key generator on a different platform.

Values are:

1 Mac
2 Windows
3 Linux

All other values behave like PlatformSpecificKeys is false.
This value is only used if PlatformSpecificKeys is true.
(Read and Write property)

143.3.13 PlatformSpecificKeys as Boolean

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether you want platform specific keys.

Notes:

Set to false if you want to have Windows, Mac OS X and Linux all use the same serial numbers.
Set to true if you want to different serial numbers depending on the platform.

Default is false.
(Read and Write property)

143.3.14 Prefix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The prefix for the serial number string.
Notes: (Read and Write property)

143.3.15 Seed as Integer

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A seed value you can set to get your serial number more unique.
Notes: (Read and Write property)

143.3.16 Suffix as String

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The suffix for the serial number string.
Example:

```
dim r as new RegistrationEngineMBS

r.Field(0)="Hello World"
r.Field(1)="Xojo"
r.suffix="-RB600CPFUSA-MAC"

r.BlockLength=8
r.NumberLength=32

MsgBox r.Calc
// shows: EV6GG9P2-DI533EV6-GG9P2DI5-33EV6GG9-RB600CPFUSA-MAC
// looks like a Xojo serial number ;-)
```

Notes: (Read and Write property)

143.3.17 Field(index as Integer) as string

MBS Util Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The data fields you can use for personalized serial numbers.
Notes:

Fill this fields with all the values you want to use for personalized serial numbers. You should use the name of the user, maybe the postal address. You can use hardware values like the MAC address or software values like the system folder creation date.
Also you may have serial numbers different between version 1.x and 2.x of your application. So you pass version information like "1" or "2". Do not pass values like "1.2.3" as this serial number won't work on "1.2.4".

Index is from 0 to 7.
(Read and Write computed property)

Chapter 144

Regular Expressions

144.1 class RegExMBS

144.1.1 class RegExMBS

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for fast Regular Expression Search in a perl compatible way.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="Hello World"

dim start as Integer = 0
while r.Execute(s,start)>0

dim p as Integer = r.OffsetCharacters(0)
dim l as Integer = r.OffsetCharacters(1)-r.OffsetCharacters(0)

MsgBox "Found "+searchString+" on position "+str(p)+" with length "+str(l)+" in """+s+"""

start = r.Offset(1)
wend

else
MsgBox "failed to compile"
end if
```

Notes:

uses the PCRE library. You may check the PCRE documentation.

The RegExMBS class has different defaults as the built in RegEx class in Xojo.

You may want to set options like this:

RB: CaseSensitive = false
MBS: CompileOptionCaseLess = true

RB: DotMatchAll = false
MBS: CompileOptionDotAll = false

RB: Greedy = true
MBS: CompileOptionUngreedy = false

RB: LineEndType = 0
MBS: CompileOptionNewLineAnyCRLF = true and ExecuteOptionNewLineAnyCRLF = true

RB: MatchEmpty = true
MBS: ExecuteOptionNotEmpty = false

and you want to set CompileOptionMultiline to true for multi line match.

144.1.4 Methods

144.1.5 Compile(pattern as string) as boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compiles a pattern.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then
msgbox "OK"
else
MsgBox "failed to compile"
end if
```

Notes:

Some predefined patterns like \b do not support Unicode well, so you may work around that by using your own pattern.

Returns true on success and false on failure.
ErrorMessage, Lasterror, ErrorOffset and Handle are set.

The following table lists the error codes than may be returned by Compile(), along with the error messages that may be returned by both compiling functions.

144.1.6 CompileMemory(pattern as memoryblock, ByteOffset as Integer) as boolean

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compiles a pattern.
Notes:

Same as Compile, but the text is stored in a memoryblock and must be a 0 terminated C string.
Be careful to use valid UTF8 input and provide offset in byte units and not in characters.

144.1.7 ConfigBSR as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer whose value indicates what character sequences the \R escape sequence matches by default.
Notes: A value of 0 means that \R matches any Unicode line ending sequence; a value of 1 means that \R matches only CR, LF, or CRLF. The default can be overridden when a pattern is compiled or matched.

144.1.8 ConfigLinkSize as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that contains the number of bytes used for internal linkage in compiled regular expressions.
Notes: The value is 2, 3, or 4. Larger values allow larger regular expressions to be compiled, at the expense of slower matching. The default value of 2 is sufficient for all but the most massive patterns, since it allows the compiled pattern to be up to 64K in size.

144.1.9 ConfigMallocThreshold as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The output is an integer that contains the threshold above which the POSIX interface uses malloc() for output vectors.

144.1.10 ConfigMatchLimit as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that gives the default limit for the number of internal matching function calls in a Execute execution.

144.1.11 ConfigMatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that gives the default limit for the depth of recursion when calling the internal matching function in a Execute() execution.

144.1.12 ConfigNewLine as Integer

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** What newline character is used as default.
Notes: The output is an integer whose value specifies the default character sequence that is recognized as meaning "newline". The four values that are supported are: 10 for LF, 13 for CR, 3338 for CRLF, -2 for ANYCRLF, and -1 for ANY. Though they are derived from ASCII, the same values are returned in EBCDIC environments. The default should normally correspond to the standard sequence for your operating system.

144.1.13 ConfigStackRecurse as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an integer that is set to one if internal recursion when running Execute() is implemented by recursive function calls that use the stack to remember their state.
Notes: This is the usual way that PCRE is compiled. The output is zero if PCRE was compiled to use blocks of data on the heap instead of recursive function calls. In this case, malloc and free are called to manage memory blocks on the heap, thus avoiding the use of the stack.

144.1.14 ConfigUnicodeProperties as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if unicode properties are available.
Notes: Should be true for the plugin.

144.1.15 ConfigUTF8 as boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether UTF8 is supported.
Notes: If this ever is false, please complain. This plugin is designed to work only on UTF8 strings for best performance.

144.1.16 Constructor(VecSize as Integer = 0)

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes:

You pass here the internal vector size which limits how many substrings you can find.
For 20 substrings, you need to pass (20+1)*3 for vector size.

144.1.17 Escape(text as string) as string

MBS Tools Plugin, Plugin Version: 7.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Escapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

144.1.18 Execute(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern again.
Notes: You can use this variant of execute to continue a search in the same string/memoryblock at a new starting offset.
See also:

- 144.1.19 Execute(text as string, start as Integer = 0) as Integer 19956

144.1.19 Execute(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 ABC 456"

r=new RegExMBS
if r.Compile(" \D+ ") then
```

```
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 3 8
// 1 for number of results
// 3 for 3 bytes before the matched pattern
// 8 for the 8 bytes before the end of the matched pattern
end if
```

Notes:

Returns the number of found offsets.
text must be in UTF-8 text encoding.
Start must be 0 for the first character and the byte offset for other chacters. Do not pass values from OffsetCharacters here!

Return values from Execute:
If Execute() fails, it returns a negative number. The following are defined in the header file:

See also:

- 144.1.18 Execute(start as Integer = 0) as Integer 19956

144.1.20 ExecuteMemory(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but the text is stored in a memoryblock.
Be careful to use valid UTF8 input and provide offset and length in byte units and not in characters.
If ByteLength is zero, we take the length of the memoryblock.

144.1.21 ExecuteMemoryMT(text as memoryblock, ByteOffset as Integer = 0, ByteLength as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as ExecuteMemory, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

144.1.22 ExecuteMT(start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 144.1.23 ExecuteMT(text as string, start as Integer = 0) as Integer 19958

144.1.23 ExecuteMT(text as string, start as Integer = 0) as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Performs a search with the compiled pattern.
Notes:

Same as Execute, but more thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 144.1.22 ExecuteMT(start as Integer = 0) as Integer 19958

144.1.24 InfoNameEntry(Index as Integer) as string

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a name entry in the list of captures.
Notes: Only valid after pattern was compiled.

144.1.25 Match(text as string) as boolean

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text.
Example:

```
dim r as new RegExMBS

if r.Compile("e.l") then

if r.Match("Hello") then
MsgBox "match"
end if

if r.Match("Helro") then
MsgBox "wrong match"
end if
end if
```

Notes:

Returns true if text matches.

Does not set properties like Execute, so subString() won't work.
See also:

- 144.1.26 Match(text() as string, inverse as boolean = false) as string() 19959
- 144.1.27 Match(text() as Variant, inverse as boolean = false) as string() 19960

144.1.26 Match(text() as string, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given text array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim t() as string = array("Hello", "World", "Xojo", "test")

dim match1() as string = r.Match(t)
dim match2() as string = r.Match(t, true)
```

```
MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 144.1.25 Match(text as string) as boolean 19959
- 144.1.27 Match(text() as Variant, inverse as boolean = false) as string() 19960

144.1.27 Match(text() as Variant, inverse as boolean = false) as string()

MBS Tools Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if current search pattern matches against given variant array.
Example:

```
dim r as new RegExMBS

r.CompileOptionCaseLess = true

if r.Compile("e.l") then

dim dic as new Dictionary
dic.Value("Hello") = 1
dic.Value("World") = 2
dic.Value("Xojo") = 3
dic.Value("Test") = 4

dim match1() as string = r.Match(dic.keys)
dim match2() as string = r.Match(dic.keys, true)

MsgBox "Matching: "+Join(match1, ", ")+EndOfLine+"Other: "+Join(match2, ", ")
end if
```

Notes:

The variant array should have entries which convert well to string.
Returns the list of matching values.
If inverse is set to true, it returns the list of non matching values.
See also:

- 144.1.25 Match(text as string) as boolean 19959

- 144.1.26 Match(text() as string, inverse as boolean = false) as string() 19959

144.1.28 Offset(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the offset in the offset list with given index in bytes.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 äöü ABC 456"

r=new RegExMBS
if r.Compile(".ö.") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(".\xF6.") then // finds ö using Unicode codepoint
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if
```

Notes:

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

144.1.29 OffsetCharacters(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get the offset in the offset list with given index in characters.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

Notes:

This function is identical to Offset(), but returns characters instead of bytes.
Works only with valid UTF-8 strings as input.
Value is calculated on each function call based on Offset(index) and current text.

If you found a pattern in a string you get here:

Invalid indexes return 0.
Count is the number of entries here.

Please note that if you just need offsets for calling Mid() function, you can get better performance by using just Offset and MidB function. Than neither Mid and OffsetCharacters need to calculate the character offset.

144.1.30 Replace(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces the text on the current found position and returns the complete new text.
Notes:

You need to call Execute before.
Lasterror is set.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

144.1.31 ReplaceAll(Target as string, NewText as string = "") as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Searches the target string for current pattern and replaces all occurrences with the new text.
Notes:

You need to call Compile before to initialize the pattern and you should call Study before to optimize the pattern.
Lasterror is set.
Target and NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

144.1.32 ReplaceSelection(NewText as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces the text on the current found position and returns new text for that selection.
Notes:

This method is for text editors where you will store result in editfield.seltext to replace the current selection.
Lasterror is set.
You need to call Execute before.
NewText must have UTF-8 text encoding.

\0 references the whole found pattern, \1 to \15 the subexpressions.
\t is replaced with chr(9), \r and \n with chr(13) and \\with \.

144.1.33 StringNumber(name as string) as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This convenience function finds the number of a named substring capturing parenthesis in a compiled pattern.
Notes:

name: Name whose number is required
The yield of the function is the number of the parenthesis if the name is found, or PCRE_ERROR_NOSUBSTRING otherwise.

144.1.34 Study as boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** After you compiled a pattern study can optimize it.
Notes:

Only useful if you use Execute several times.
In that case you call one time Compile, one time Study and several times Execute.
Errormessage is set.

144.1.35 Substring(index as Integer) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given index.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 144.1.36 Substring(name as string) as string 19964

144.1.36 Substring(name as string) as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the subexpression found with the given name.
Notes:

Returns "" on any error.
Lasterror is set.
See also:

- 144.1.35 Substring(index as Integer) as string 19964

144.1.37 Unescape(text as string) as string

MBS Tools Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unescapes the string.
Example:

```
dim r as new RegExMBS

dim s as string = "Hello [ ] "
dim e as string = r.Escape(s)
MsgBox e // shows Hello \[ \]

dim d as string = r.Unescape(e)
MsgBox d // shows original string
```

Notes:

The string is converted to UTF8 and all the RegEx special characters are escaped.
Returns "" on low memory.

144.1.38 Version as string

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version of the PCRE library as an ASCII string.

144.1.39 Properties

144.1.40 CompileOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Force pattern anchoring
Notes: (Read and Write property)

144.1.41 CompileOptionAutoCallOut as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Compile automatic callouts
Notes: (Read and Write property)

144.1.42 CompileOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

144.1.43 CompileOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and CompileOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.CompileOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default

is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

144.1.44 CompileOptionCaseLess as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Do caseless matching
Example:

```
dim r as new RegExMBS
dim searchString as string = "hello"

r.CompileOptionCaseLess=True

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

144.1.45 CompileOptionDollarEndOnly as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: $ not to match newline at end
Notes: (Read and Write property)

144.1.46 CompileOptionDotAll as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: . matches anything including endofline

Example:

```
dim r as new RegExMBS
dim searchString as string = "<.+>"

r.CompileOptionDotAll = false // finds only if true

if r.Compile(searchString) then

dim s as string="<Step enable=""True""+EndOfLine.unix+"id=""93"" name=""Beep""/>"

if r.Execute(s,0)>0 then
MsgBox "Found: "+mid(s, r.OffsetCharacters(0)+1, r.OffsetCharacters(1)-r.OffsetCharacters(0))
else
MsgBox "nothing found"
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read and Write property)

144.1.47 CompileOptionDuplicateNames as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this bit is set, names used to identify capturing subpatterns need not be unique.
Notes:

This can be helpful for certain types of pattern when it is known that only one instance of the named subpattern can ever be matched. There are more details of named subpatterns below; see also the pcrepattern documentation.
(Read and Write property)

144.1.48 CompileOptionExtended as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Ignore whitespace and # comments
Notes: (Read and Write property)

144.1.49 CompileOptionFirstLine as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Force matching to be before newline
Notes: (Read and Write property)

144.1.50 CompileOptionJavaScriptCompat as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If this option is set, PCRE's behaviour is changed in some ways so that it is compatible with JavaScript rather than Perl.
Notes:

The changes are as follows:

(1) A lone closing square bracket in a pattern causes a compile-time error, because this is illegal in JavaScript (by default it is treated as a data character). Thus, the pattern AB] CD becomes illegal when this option is set.

(2) At run time, a back reference to an unset subpattern group matches an empty string (by default this causes the current matching alternative to fail). A pattern such as (\1)(a) succeeds when this option is set (assuming it can find an "a" in the subject), whereas it fails by default, for Perl compatibility.
(Read and Write property)

144.1.51 CompileOptionMultiline as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: ^and $ match newlines within data
Example:

```
dim r as RegExMBS
dim n,i,c as Integer
dim s as string

s=ReplaceLineEndings(EditField1.text,EndOfLine.UNIX)

r=new RegExMBS

'r.CompileOptionFirstLine=True
r.CompileOptionMultiline=True

if r.Compile("^....$ ") then
n=0
```

```
do
c=r.Execute(s,n)

if c>0 then
MsgBox r.Substring(0)
n=r.Offset(1)
end if

loop until c=0
end if
```

Notes: (Read and Write property)

144.1.52 CompileOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting CompileOptionNewLineCR or CompileOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting CompileOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting CompileOptionNewLineAnyCRLF specifies that any of the three preceding sequences should be recognized. Setting CompileOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, CompileOptionNewLineCR with CompileOptionNewLineLF is equivalent to CompileOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

144.1.53 CompileOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

144.1.54 CompileOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

144.1.55 CompileOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

144.1.56 CompileOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See CompileOptionNewLineAny for more details.
(Read and Write property)

144.1.57 CompileOptionNoAutoCapture as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Disable numbered capturing parentheses (named ones available)

Notes: (Read and Write property)

144.1.58 CompileOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is an option that acts at matching time; that is, it is really an option for Execute.
Notes:

If it is set at compile time, it is remembered with the compiled pattern and assumed at matching time.
(Read and Write property)

144.1.59 CompileOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Do not check the pattern for UTF-8 validity.
Notes: (Read and Write property)

144.1.60 CompileOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the compile options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

144.1.61 CompileOptionUngreedy as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Invert greediness of quantifiers.
Notes:

Basicly this is about whether to find the next matching item or the last matching item in the whole string. Matching the next item is always much faster.
(Read and Write property)

144.1.62 CompileOptionUnicodeCodePoints as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to support unicode code points for character classes.
Notes:

This option changes the way PCRE processes \B, \b, \D, \d, \S, \s, \W, \w, and some of the POSIX character classes. By default, only ASCII characters are recognized, but if PCRE_UCP is set, Unicode properties are used instead to classify characters. More details are given in the section on generic character types in the pcrepattern page. If you set PCRE_UCP, matching one of the items it affects takes much longer. The option is available only if PCRE has been compiled with Unicode property support.
(Read and Write property)

144.1.63 CompileOptionUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Compile: Run in UTF-8 mode.
Notes: (Read and Write property)

144.1.64 Count as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of offsets found.
Example:

```
dim r as new RegExMBS
dim searchString as string = ".o"

if r.Compile(searchString) then

dim s as string="äöü Hello World"

if r.Execute(s,0)>0 then
dim lines(-1) as string

lines.Append str(R.Count)+" offset found."
lines.Append "In Bytes:"
lines.Append " Start of matched patern: "+str(R.Offset(0))
lines.Append " End of matched patern: "+str(R.Offset(1))
lines.Append " Length of matched patern: "+str(R.Offset(1)-r.Offset(0))

lines.Append "In Characters:"
lines.Append " Start of matched patern: "+str(R.OffsetCharacters(0))
lines.Append " End of matched patern: "+str(R.OffsetCharacters(1))
```

```
lines.Append " Length of matched patern: "+str(R.OffsetCharacters(1)-r.OffsetCharacters(0))

MsgBox Join(lines,EndOfLine)
end if

else
MsgBox "failed to compile"
end if
```

Notes: (Read only property)

144.1.65 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last message reported.
Notes:

Set by Study and Compile.
(Read only property)

144.1.66 ErrorOffset as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error offset from the compile function.
Notes: (Read only property)

144.1.67 ExecuteOptionAnchored as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Match only at the first position
Notes: (Read and Write property)

144.1.68 ExecuteOptionBSRAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRUnicode (which are mutually exclusive) control what the \R escape sequence matches.
Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

144.1.69 ExecuteOptionBSRUnicode as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option and ExecuteOptionBSRAnyCRLF (which are mutually exclusive) control what the \R escape sequence matches.
Example:

```
dim rg As new RegExMBS
rg.CompileOptionUngreedy = false
rg.ExecuteOptionBSRUnicode = true

dim ts as string = "one" + EndOfLine.UNIX + "test" + chr(& h2028) + "more"

// replace all end lines with #
if rg.Compile("\R+") then

ts = rg.ReplaceAll(ts,"# ")

end if

MsgBox ts
```

Notes:

The choice is either to match only CR, LF, or CRLF, or to match any Unicode newline sequence. The default is specified when PCRE is built. It can be overridden from within the pattern, or by setting an option when a compiled pattern is matched.
(Read and Write property)

144.1.70 ExecuteOptionNewLineAny as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

Setting ExecuteOptionNewLineCR or ExecuteOptionNewLineLF specifies that a newline is indicated by a single character (CR or LF, respectively). Setting ExecuteOptionNewLineCRLF specifies that a newline is indicated by the two-character CRLF sequence. Setting ExecuteOptionNewLineAnyCRLF specifies that

any of the three preceding sequences should be recognized. Setting ExecuteOptionNewLineAny specifies that any Unicode newline sequence should be recognized. The Unicode newline sequences are the three just mentioned, plus the single characters VT (vertical tab, U+000B), FF (formfeed, U+000C), NEL (next line, U+0085), LS (line separator, U+2028), and PS (paragraph separator, U+2029). The last two are recognized only in UTF-8 mode.
The newline setting in the options word uses three bits that are treated as a number, giving eight possibilities. Currently only six are used (default plus the five values above). This means that if you set more than one newline option, the combination may or may not be sensible. For example, ExecuteOptionNewLineCR with ExecuteOptionNewLineLF is equivalent to ExecuteOptionNewLineCRLF, but other combinations may yield unused numbers and cause an error.

The only time that a line break in a pattern is specially recognized when compiling is when PCRE_EXTENDED is set. CR and LF are whitespace characters, and so are ignored in this mode. Also, an unescaped # outside a character class indicates a comment that lasts until after the next line break sequence. In other circumstances, line break sequences in patterns are treated as literal data.
(Read and Write property)

144.1.71 ExecuteOptionNewLineAnyCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

144.1.72 ExecuteOptionNewLineCR as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

144.1.73 ExecuteOptionNewLineCRLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.

(Read and Write property)

144.1.74 ExecuteOptionNewLineLF as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option override the default newline definition that was chosen when PCRE was built.
Notes:

See ExecuteOptionNewLineAny for more details.
(Read and Write property)

144.1.75 ExecuteOptionNoStartOptimize as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** There are a number of optimizations that Execute uses at the start of a match, in order to speed up the process.
Notes:

For example, if it is known that an unanchored match must start with a specific character, it searches the subject for that character, and fails immediately if it cannot find it, without actually running the main matching function. This means that a special item such as (*COMMIT) at the start of a pattern is not considered until after a suitable starting point for the match has been found. When callouts or (*MARK) items are in use, these "start-up" optimizations can cause them to be skipped if the pattern is never actually used. The start-up optimizations are in effect a pre-scan of the subject that takes place before the pattern is run.
The ExecuteOptionNoStartOptimize option disables the start-up optimizations, possibly causing performance to suffer, but ensuring that in cases where the result is "no match", the callouts do occur, and that items such as (*COMMIT) and (*MARK) are considered at every possible starting position in the subject string. If ExecuteOptionNoStartOptimize is set at compile time, it cannot be unset at matching time.

Setting ExecuteOptionNoStartOptimize can change the outcome of a matching operation. Consider the pattern

(*COMMIT)ABC
When this is compiled, PCRE records the fact that a match must start with the character "A". Suppose the subject string is "DEFABC". The start-up optimization scans along the subject, finds "A" and runs the first match attempt from there. The (*COMMIT) item means that the pattern must match the current starting position, which in this case, it does. However, if the same match is run with ExecuteOptionNoStartOptimize set, the initial scan along the subject string does not happen. The first match attempt is run starting from "D" and when this fails, (*COMMIT) prevents any further matches being tried, so the overall result is "no match". If the pattern is studied, more start-up optimizations may be used. For example, a minimum length for the subject may be recorded. Consider the pattern
(*MARK:A)(X | Y)

The minimum length for a match is one character. If the subject is "ABC", there will be attempts to match "ABC", "BC", "C", and then finally an empty string. If the pattern is studied, the final attempt does not take place, because PCRE knows that the subject is too short, and so the (*MARK) is never encountered. In this case, studying the pattern does not affect the overall match result, which is still "no match", but it does affect the auxiliary information that is returned.
(Read and Write property)

144.1.76 ExecuteOptionNotBOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the beginning of a line
Notes: (Read and Write property)

144.1.77 ExecuteOptionNotEmpty as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: An empty string is not a valid match
Notes: (Read and Write property)

144.1.78 ExecuteOptionNotEmptyAtStart as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** One of the options.
Notes:

This is like ExecuteOptionNotEmpty, except that an empty string match that is not at the start of the subject is permitted. If the pattern is anchored, such a match can occur only if the pattern contains \K.
Perl has no direct equivalent of ExecuteOptionNotEmpty or ExecuteOptionNotEmptyAtStart, but it does make a special case of a pattern match of the empty string within its split() function, and when using the /g modifier. It is possible to emulate Perl's behaviour after matching a null string by first trying the match again at the same offset with ExecuteOptionNotEmptyAtStart and ExecuteOptionAnchored, and then if that fails, by advancing the starting offset (see below) and trying an ordinary match again. There is some code that demonstrates how to do this in the pcredemo sample program. In the most general case, you have to check to see if the newline convention recognizes CRLF as a newline, and if so, and the current character is CR followed by LF, advance the starting offset by two characters instead of one.
(Read and Write property)

144.1.79 ExecuteOptionNotEOL as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Subject is not the end of a line
Notes: (Read and Write property)

144.1.80 ExecuteOptionNoUTF8Check as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Do not check the subject for UTF-8 validity
Notes: (Read and Write property)

144.1.81 ExecuteOptionPartial as Boolean

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Option for Execute: Return PCRE_ERROR_PARTIAL for a partial match
Notes: (Read and Write property)

144.1.82 ExecuteOptionPartialHard as Boolean

MBS Tools Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This option (and ExecuteOptionPartial) turn on the partial matching feature.
Notes:

A partial match occurs if the end of the subject string is reached successfully, but there are not enough subject characters to complete the match. If this happens when ExecuteOptionPartial (but not ExecuteOptionPartialHard) is set, matching continues by testing any remaining alternatives. Only if no complete match can be found is ErrorPartial returned instead of PCRE_ERROR_NOMATCH. In other words, ExecuteOptionPartial says that the caller is prepared to handle a partial match, but only if no complete match can be found.
If ExecuteOptionPartialHard is set, it overrides ExecuteOptionPartial. In this case, if a partial match is found, Execute() immediately returns ErrorPartial, without considering any other alternatives. In other words, when ExecuteOptionPartialHard is set, a partial match is considered to be more important that an alternative complete match.

In both cases, the portion of the string that was inspected when the partial match was found is set as the first matching string. There is a more detailed discussion of partial and multi-segment matching, with examples, in the pcrepartial documentation.
(Read and Write property)

144.1.83 ExecuteOptions as Integer

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal value of all the execute options.
Notes:

You can get and set the bits using the CompileOption* Boolean properties.
(Read and Write property)

144.1.84 Handle as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The handle to the pattern data structure.
Notes: (Read only property)

144.1.85 InfoCaptureCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of captures defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

144.1.86 InfoNameCount as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of names defined in the pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

144.1.87 InfoSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the size of the compiled pattern.
Notes:

Only valid after pattern was compiled.
(Read only property)

144.1.88 InfoStudySize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the study details size.
Notes:

Only valid after calling Study.
(Read only property)

144.1.89 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code reported.
Notes:

0 is no error and -1 is some parameter error.
See Error* constants for other values.
(Read only property)

144.1.90 MatchLimit as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The match limit.
Notes:

You can set it to a limit value. If set to zero, the plugin will use the default.

The default value for the limit can be set when PCRE is built; the default default is 10 million, which handles all but the most extreme cases. You can override the default by setting this property.
(Read and Write property)

144.1.91 MatchLimitRecursion as Integer

MBS Tools Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The limit for recursion.
Notes:

The MatchLimitRecursion field is similar to MatchLimit, but instead of limiting the total number of times that match() is called, it limits the depth of recursion. The recursion depth is a smaller number than the total number of calls, because not all calls to match() are recursive. This limit is of use only if it is set

smaller than MatchLimit.

Limiting the recursion depth limits the amount of stack that can be used.

The default value for MatchLimitRecursion can be set when PCRE is built; the default default is the same value as the default for MatchLimit. You can override the default by setting this property. If value is zero, the plugin uses the default.
(Read and Write property)

144.1.92 Text as String

MBS Tools Plugin, Plugin Version: 6.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compile call.
Notes: (Read only property)

144.1.93 TextMemory as Memoryblock

MBS Tools Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text used for the last successfull compiletext call.
Notes: (Read only property)

144.1.94 VectorSize as Integer

MBS Tools Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal vector size.
Notes: (Read only property)

144.1.95 Constants

144.1.96 ErrorBadCount = -15

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This error is given if the value of the ovecsize argument is negative.

144.1.97 ErrorBadMagic = -4

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: PCRE stores a 4-byte "magic number" at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.

144.1.98 ErrorBadNewLine = -23

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An invalid combination of Newline options was given.

144.1.99 ErrorBadOffset = -24

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The value of startoffset was negative or greater than the length of the subject, that is, the value in length.

144.1.100 ErrorBadOption = -3

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An unrecognized bit was set in the options argument.

144.1.101 ErrorBadPartial = -13

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This code is no longer in use. It was formerly returned when the PCRE_PARTIAL option was used with a compiled pattern containing items that were not supported for partial matching. From release 8.00 onwards, there are no restrictions on partial matching.

144.1.102 ErrorBadUTF8 = -10

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: A string that contains an invalid UTF-8 byte sequence was passed as a subject. However, if PCRE_PARTIAL_HARD is set and the problem is a truncated UTF-8 character at the end of the subject, ErrorShortUTF8 is used instead.

144.1.103 ErrorBadUTF8Offset = -11

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character or the end of the subject.

144.1.104 ErrorCallOut = -9

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.105 ErrorDFARecurse = -20

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.106 ErrorDFAUCond = -17

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

0 no error
1 \at end of pattern
2 \c at end of pattern
3 unrecognized character follows \
4 numbers out of order in { } quantifier
5 number too big in { } quantifier
6 missing terminating] for character class
7 invalid escape sequence in character class
8 range out of order in character class
9 nothing to repeat
10 operand of unlimited repeat could match the empty string
11 internal error: unexpected repeat
12 unrecognized character after (?
13 POSIX named classes are supported only within a class
14 missing)
15 reference to non-existent subpattern
16 erroffset passed as NULL
17 unknown option bit(s) set
18 missing) after comment
19 parentheses nested too deeply
20 regular expression too large
21 failed to get memory
22 unmatched parentheses
23 internal error: code overflow
24 unrecognized character after (?<
25 lookbehind assertion is not fixed length
26 malformed number after (?(
27 conditional group contains more than two branches
28 assertion expected after (?(
29 (?R or (?digits must be followed by)
30 unknown POSIX class name
31 POSIX collating elements are not supported
32 this version of PCRE is not compiled with PCRE_UTF8 support
33 spare error
34 character value in \x { ... } sequence is too large
35 invalid condition (?(0)
36 \C not allowed in lookbehind assertion
37 PCRE does not support \L, \l, \N, \U, or \u
38 number after (?C is >255
39 closing) for (?C expected
40 recursive call could loop indefinitely
41 unrecognized character after (?P
42 syntax error after (?P
43 two named groups have the same name
44 invalid UTF-8 string
45 support for \P, \p, and \X has not been compiled
46 malformed \P or \p sequence
47 unknown property name after \P or \p

PCRE_ERROR_NOMATCH	-1	The subject string did not match the pattern.
PCRE_ERROR_NULL	-2	Either code or subject was passed as ””.
PCRE_ERROR_BADOPTION	-3	An unrecognized bit was set in the options argument.
PCRE_ERROR_BADMAGIC	-4	PCRE stores a 4-byte ”magic number” at the start of the compiled code, to catch the case when it is passed a junk pointer and to detect when a pattern that was compiled in an environment of one endianness is run in an environment with the other endianness. This is the error that PCRE gives when the magic number is not present.
PCRE_ERROR_UNKNOWN_NODE	-5	While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_NOMEMORY	-6	If a pattern contains back references, but the ovector that is passed to Execute() is not big enough to remember the referenced substrings, PCRE gets a block of memory at the start of matching to use for this purpose. If the call via pcre_malloc() fails, this error is given. The memory is automatically freed at the end of matching.
PCRE_ERROR_MATCHLIMIT	-8	The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_RECURSIONLIMIT	-21	The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached.
PCRE_ERROR_CALLOUT	-9	This error is never generated by Execute() itself. It is provided for use by callout functions that want to yield a distinctive error code. See the pcrecallout documentation for details.
PCRE_ERROR_BADUTF8	-10	A string that contains an invalid UTF-8 byte sequence was passed as a subject.
PCRE_ERROR_BADUTF8_OFFSET	-11	The UTF-8 byte sequence that was passed as a subject was valid, but the value of startoffset did not point to the beginning of a UTF-8 character.
PCRE_ERROR_PARTIAL	-12	The subject string did not match, but it did match partially. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_BADPARTIAL	-13	The PCRE_PARTIAL option was used with a compiled pattern containing items that are not supported for partial matching. See the pcrepartial documentation for details of partial matching.
PCRE_ERROR_INTERNAL	-14	An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.
PCRE_ERROR_BADCOUNT	-15	This error is given if the value of the ovecsize argument is negative.

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

index	offset
0	start of matched pattern
1	end of matched pattern
2	start of subexpression 1
3	end of subexpression 1
2*n	start of subexpression n
2*n+1	end of subexpression n

144.1.107 ErrorDFAUItem = -16

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.108 ErrorDFAUMLimit = -18

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.109 ErrorDFAWSSize = -19

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.110 ErrorInternal = -14

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: An unexpected internal error has occurred. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

144.1.111 ErrorMatchLimit = -8

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The backtracking limit, as specified by the match_limit field in a pcre_extra structure (or defaulted) was reached.

144.1.112 ErrorNoMatch = -1

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string did not match the pattern.

144.1.113 ErrorNoSubstring = -7

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: This error is used by the substring functions.

144.1.114 ErrorNull = -2

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: Either code or subject was passed as "", or ovector was "" and ovecsize was not zero.

144.1.115 ErrorNullWSLimit = -22

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.116 ErrorPartial = -12

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string did not match, but it did match partially.

144.1.117 ErrorPlugin = -99

MBS Tools Plugin, Plugin Version: 13.1. **Function:** One of the RegEx error constants.
Notes:

Generic error for something wrong with the plugin state.
Like no current regex object internally or wrong function parameters.

144.1.118 ErrorRecursionLimit = -21

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The internal recursion limit, as specified by the match_limit_recursion field in a pcre_extra structure (or defaulted) was reached. See the description above.

144.1.119 ErrorShortUTF8 = -25

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: The subject string ended with an incomplete (truncated) UTF-8 character, and the PCRE_PARTIAL_HARD option was set. Without this option, ErrorBadUTF8 is returned in this situation.

144.1.120 ErrorUnknownNode = -6

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.

144.1.121 ErrorUnknownOpcode = -5

MBS Tools Plugin, Plugin Version: 11.2. **Function:** One of the RegEx error constants.
Notes: While running the pattern match, an unknown item was encountered in the compiled pattern. This error could be caused by a bug in PCRE or by overwriting of the compiled pattern.

Chapter 145

Remote Control

145.1 class GammaFadeMBS

145.1.1 class GammaFadeMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class to perform gamma fades on Mac OS X and Windows.
Notes: On Mac OS X a system API is used. On Windows the GammaMBS class is used internally.

145.1.2 Methods

145.1.3 Constructor

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma fade class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 145.1.4 Constructor(mainwindow as window) 19991

145.1.4 Constructor(mainwindow as window)

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma fade class and queries the current gamma values.

Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
See also:

- 145.1.3 Constructor 19991

145.1.5 GammaFadeIn(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Fades back to the normal screen.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.3 seconds.
Returns true on success and false on failure.

145.1.6 GammaFadeOut(seconds as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Fades to a solid color.
Notes:

Seconds is the duration of the fade in seconds. Typical 0.5 seconds.
Returns true on success and false on failure.

145.1.7 Properties

145.1.8 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if there is another gamma fade running.
On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

145.1.9 FadeColor as Color

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The color to use for the fade.
Example:

```
dim g as new GammaFadeMBS
g.FadeColor=& c0000FF // blue
```

Notes:

Default is black.
(Read and Write property)

145.2 class GammaMBS

145.2.1 class GammaMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class to change the gamma settings of the display.
Notes:

You can use that class to change the gamma table. For example to invert the screen or increase/decrease one of the colors.

Works on Mac OS X and Windows.

145.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

145.2.3 Xojo Developer Magazine

- 6.6, page 8: News

145.2.4 Methods

145.2.5 Constructor(mainwindow as window = nil, displayIndex as Integer = 0)

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: No.
Function: Initializes the gamma class and queries the current gamma values.
Notes:

On Windows a window is needed to get the exclusive access to the gamma controls.

The Available property is set to true if the constructor was successful.
Added displayIndex parameter in plugin version 14.1 to specify on Mac which display to handle.

145.2.6 SetGamma(gammaScale as Double = 1.0) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Sets the gamma values.
Notes:

The current table assigned to the main screen.
All values are multiplied with gammaScale

145.2.7 Properties

145.2.8 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Whether the constructor was successful.
Notes:

True if the initialization code worked.

On Mac OS X the constructor fails to get access if it does not find a display with gamma controls.

On Windows the access to the gamma controls can fail if you don't provide a window, the hardware can't do gamma fades (e.g. running in VMWare) or DirectX is not available.
(Read and Write property)

145.2.9 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last error code.
Notes: (Read and Write property)

145.2.10 Size as Integer

MBS ComputerControl Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The number of entries in the gamma table.
Notes:

Should be 256 for Windows.
And 256 or 1024 for Mac.
(Read only property)

145.2.11 Blue(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The blue value with the given index.

Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

145.2.12 Green(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The green value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

145.2.13 Red(Index as Integer) as Double

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The red value with the given index.
Notes:

Index is from 0 to 255 and value from 0.0 to 1.0.
(Read and Write computed property)

145.3 class KeyCodesMBS

145.3.1 class KeyCodesMBS

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: A class for translating between key codes and ASCII characters.
Notes:

This class is outdated, please use RemoteControlMBS module.

The list of key codes on a Mac is the same as the one used in the RB documentation for the sprite surface. Some special keys:

Modifier keys

kVirtualCapsLockKey	& h039
kVirtualShiftKey	& h038
kVirtualControlKey	& h03B
kVirtualOptionKey	& h03A
kVirtualCommandKey	& h037

Editing/utility keys

kVirtualHelpKey	& h072
kVirtualDeleteKey	& h033
kVirtualTabKey	& h030
kVirtualEnterKey	& h04C
kVirtualReturnKey	& h024
kVirtualEscapeKey	& h035
kVirtualForwardDeleteKey	& h075

Navigation keys

kVirtualHomeKey	& h073
kVirtualEndKey	& h002
kVirtualPageUpKey	& h074
kVirtualPageDownKey	& h079
kVirtualLeftArrowKey	& h07B
kVirtualRightArrowKey	& h07C
kVirtualUpArrowKey	& h07E
kVirtualDownArrowKey	& h07D

Key codes for Windows:

145.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

- MBS Real Studio Plugins, version 11.3pr14

145.3.3 Methods

145.3.4 AsciiToKeyCode(ascii as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the keycode which is needed to be pressed to create this ASCII character.
Notes: You get the main key, not any modifier which may also be pressed.

145.3.5 KeyCodeToAscii(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the ASCII code which matches the key code.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

// makes a big A on a german keyboard:
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0+512))
```

Notes:

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.
See MacTextForKeyCode method in RemoteControlMBS module.

145.3.6 KeyCodeToAsciiWithSecondKeyCode(keycode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns the ASCII code which matches the key code with the current state.
Example:

```
dim k as KeyCodesMBS

k=new KeyCodesMBS

MsgBox str(k.KeyCodeToAscii(& h0A))
MsgBox chr(k.KeyCodeToAsciiWithSecondKeyCode(0))

// gives â on a German Keyboard
```

Notes:

On the first call of KeyCodeToAscii you get the ASCII char, but if you call KeyCodeToAsciiWithSecondKeyCode and the state property is not changed, you can get what the user gets if he presses several keys.
KeyCodeToAscii resets state to 0 before calling.
On Windows, KeyCodeToAscii and KeyCodeToAsciiWithSecondKeyCode are equal.

Note on a Mac:
Bit 0 to 6 are the keycode, bit 7 is 1 if key goes up and 0 if key goes down.
Bit 8 to 15 are modifier keys:

Constants for the modifier keys:

Not available in 64-bit.

145.3.7 TestForAsciiKeyDown(ascii as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns true if the key with the given ascii code is pressed.

145.3.8 TestForKeyDown(keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Returns true if the key with the given key code is pressed.
Example:

```
Dim k As New KeyCodesMBS

Const VK_SHIFT = & h10 // for Windows
If k.TestForKeyDown(VK_SHIFT) Then
MsgBox "shift"
Else
```

```
MsgBox "no shift"
End If
```

145.3.9 Update

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Updates the layout so it is the current one.

145.3.10 Properties

145.3.11 LastError as Integer

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last error code.
Notes:

The last function was successfull if lasterror is 0.
If the last function was not available on this machine, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

145.3.12 Name as String

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The name for the current keyboard layout.
Notes:

On Mac OS 9 e.g. "Deutsch".
On Mac OS X e.g. "German".
On Windows 98 e.g. "00020407".
(Read only property)

145.3.13 State as Integer

MBS ComputerControl Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: The last state.
Notes:

The function KeyCodeToAscii stores a code here which the function KeyCodeToAsciiWithSecondKeyCode will use on further calls.

(Read and Write property)

VK_LBUTTON	& h01
VK_RBUTTON	& h02
VK_CANCEL	& h03
VK_MBUTTON	& h04
VK_XBUTTON1	& h05 (Windows 2000 and newer)
VK_XBUTTON2	& h06 (Windows 2000 and newer)
VK_BACK	& h08
VK_TAB	& h09
VK_CLEAR	& h0C
VK_RETURN	& h0D
VK_SHIFT	& h10
VK_CONTROL	& h11
VK_MENU	& h12
VK_PAUSE	& h13
VK_CAPITAL	& h14
VK_KANA	& h15
VK_HANGUL	& h15
VK_JUNJA	& h17
VK_FINAL	& h18
VK_HANJA	& h19
VK_KANJI	& h19
VK_ESCAPE	& h1B
VK_CONVERT	& h1C
VK_NONCONVERT	& h1D
VK_ACCEPT	& h1E
VK_MODECHANGE	& h1F
VK_SPACE	& h20
VK_PRIOR	& h21
VK_NEXT	& h22
VK_END	& h23
VK_HOME	& h24
VK_LEFT	& h25
VK_UP	& h26
VK_RIGHT	& h27
VK_DOWN	& h28
VK_SELECT	& h29
VK_PRINT	& h2A
VK_EXECUTE	& h2B
VK_SNAPSHOT	& h2C
VK_INSERT	& h2D
VK_DELETE	& h2E
VK_HELP	& h2F
VK_0 - VK_9	are the same as ASCII "0" - "9" (& h30 - & h39)
VK_A - VK_Z	are the same as ASCII "A" - "Z" (& h41 - & h5A)
VK_LWIN	& h5B
VK_RWIN	& h5C
VK_APPS	& h5D
VK_SLEEP	& h5F
VK_NUMPAD0	& h60
VK_NUMPAD1	& h61
VK_NUMPAD2	& h62
VK_NUMPAD3	& h63
VK_NUMPAD4	& h64
VK_NUMPAD5	& h65

shiftKey	512	shift key down?
alphaLock	1024	alpha lock down?
optionKey	2048	option key down?
controlKey	4096	control key down?
rightShiftKey	8192	right shift key down?
rightOptionKey	16384	right Option key down?
rightControlKey	32768	right Control key down?

shiftKey	512	shift key down?
alphaLock	1024	alpha lock down?
optionKey	2048	option key down?
controlKey	4096	control key down?
rightShiftKey	8192	right shift key down?
rightOptionKey	16384	right Option key down?
rightControlKey	32768	right Control key down?

145.4 class PresskeyMBS

145.4.1 class PresskeyMBS

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** This class allows you to simulate keyboard activity.
Deprecated: This item is deprecated and should no longer be used. You can use RemoteControlMBS instead. **Notes:** This class is deprecated, please use RemoteControlMBS module.

145.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

145.4.3 Methods

145.4.4 clear

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Resets this object.

145.4.5 mouseclick(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse button.
Notes:

Clicks the mouse at current position.
Left button is used.
If you forget the mouseup you may loose control about a Mac with Mac OS X, but if you have enabled external terminal login you can login via SSH and quit Xojo from outside.

The Mac version sets the lasterror property.
See also:

- 145.4.6 MouseClick(down as boolean, rightdown as boolean) 20004

145.4.6 MouseClick(down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Clicks the mouse with the given buttons.

Notes: Same as MouseClick, but with an additional rightdown parameter.
See also:

- 145.4.5 mouseclick(down as boolean) 20004

145.4.7 MouseMove(globalx as Integer,globaly as Integer)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Moves the mouse.
Example:

```
dim x,y as Integer
dim p as PresskeyMBS
p=new PresskeyMBS
x=system.mousex
y=system.mousey+10 // move ten pixels down
p.mousemove x,y
```

Notes:

Moves the mouse on screen.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

145.4.8 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean)

MBS ComputerControl Plugin, Plugin Version: 2.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Moves the mouse.
Notes:

Moves the mouse on screen and clicks.
The destination must be specified in global screen coordinates.
Requires Mac OS 8.5 or newer for Mac OS Classic.

The Mac version sets the lasterror property.

Mac OS X only:
Based on the values entered, the appropriate mouse-down, mouse-up, mouse-move, or mouse-drag events are generated, by comparing the new state with the current state.
See also:

- 145.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean) 20006

145.4.9 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean, rightdown as boolean)

MBS ComputerControl Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No.
Function: Moves the mouse cursor and clicks the mouse with the given buttons.
Notes: Same as MouseMoveClick, but with an additional rightdown parameter.
See also:

- 145.4.8 MouseMoveClick(globalx as Integer,globaly as Integer,down as boolean) 20005

145.4.10 press

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Presses a key.
Example:

```
' example for Mac OS X:
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.keycode=4
p.press 'press H
p.shift=false
p.charcode=asc("e")
p.keycode=14
p.press 'press e
p.charcode=asc("l")
p.keycode=37
p.press 'press l
p.press 'press l
p.charcode=asc("o")
p.keycode=31
p.press 'press o

' example for Windows:

editfield1.setfocus 'so we get something in it!

p=new PresskeyMBS
p.shift=true
p.charcode=asc("H")
p.virtualCode=-1 'automatically try to get this code
p.press 'press H
p.shift=false
p.virtualCode=-1 'after a call you find the virtualCode there
```

```
p.charcode=asc("e")
p.press 'press e
p.virtualCode=-1
p.charcode=asc("l")
p.press 'press l
p.press 'press l
p.virtualCode=-1
p.charcode=asc("o")
p.press 'press o
```

Notes:

Simulates a keypress and handles the Settings for Shift, Control, Command and Option key.
Command shows no reaction in my tests for Mac OS Classic
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

145.4.11 pressraw(down as boolean)

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Presses a key.
Example:

```
' Works perfectly on Mac OS X but Shift can't be done Raw on Mac OS 9:
dim p as PresskeyMBS

p=new PresskeyMBS

p.charcode=0
p.keycode=& h38
p.pressraw true 'shift down

p.charcode=asc("H")
p.keycode=4
p.pressraw true 'press H
p.pressraw false

p.charcode=0
p.keycode=& h38
p.pressraw false 'shift up

p.charcode=asc("e")
p.keycode=14
```

```
p.pressraw true 'press e
p.pressraw false
p.charcode=asc("l")
p.keycode=37
p.pressraw true 'press l
p.pressraw false
p.pressraw true 'press l
p.pressraw false
p.charcode=asc("o")
p.keycode=31
p.pressraw true 'press o
p.pressraw false
```

Notes:

Simulates a keypress and doesn't handle the Settings for Shift, Control, Command and Option key.
On Windows, if you set virtualcode=-1 this method will set it to the code matching the charcode property.

The Mac version sets the lasterror property.

145.4.12 Properties

145.4.13 Charcode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The character you want to press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.charcode=8
p.keycode=& h33
p.press // press backspace on Mac OS
```

Notes:

On Mac OS Classic the final printed charcode inside an editfield is the one you pass.
(Read and Write property)

145.4.14 Command as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down command key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.command=True
```

Notes:

It looks like the command key is not working for Mac OS Classic.
On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

145.4.15 Control as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down control key before and release it after it simulates the key press.
Example:

```
dim p as new PresskeyMBS
p.Control=True
```

Notes:

On Windows the control key is pressed if control or command properties are true.
(Read and Write property)

145.4.16 Keycode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** For Mac OS the number of the key on the keyboard which is pressed.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.keycode=2
p.charcode=asc("d")
p.press 'shows a "d" on Mac OS
```

Notes:

You find this codes in that nice tables for the codes of the Spritesurface in the Xojo books.
(Read and Write property)

145.4.17 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

Not all functions of this class fill this property!
(Read and Write property)

145.4.18 Option as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down option key before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS
p.option=True
```

Notes: (Read and Write property)

145.4.19 Shift as boolean

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Tells the Press method to press down shift before and release it after it simulates the key press.
Example:

```
dim p as PresskeyMBS

p=new PresskeyMBS
p.shift=true
p.charcode=asc("1")
p.keycode=18
p.press 'press !
```

Notes: (Read and Write property)

145.4.20 VirtualCode as Integer

MBS ComputerControl Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** The virtual keycode to press.
Example:

```
dim p as PresskeyMBS
p=new PresskeyMBS
p.charcode=asc("m")
p.virtualcode=-1
p.press ' makes a "m" on Windows.
```

Notes:

If you don't know this code, just pass -1 and this value will be filled automatically using the charcode property.
After you call press or pressraw you'll find the matching virtualcode in this property.
(Read and Write property)

145.5 module RemoteControlMBS

145.5.1 module RemoteControlMBS

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: This module collects methods for simulating user input with mouse and keyboard.
Notes:

You can use this class for GUI scripting.
Requires libXtst.so.6 on Linux to be installed.

145.5.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr4
- MBS Xojo Plugins, version 19.4pr1
- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.2
- MBS Xojo Plugins, version 18.2pr5

- MBS Xojo / Real Studio Plugins, version 13.2pr8
- MBS Real Studio Plugins, version 12.0pr6

145.5.3 Methods

145.5.4 LinuxConvertCase(keysymbol as Integer, byref lowerSymbol as Integer, byref upperSymbol as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Converts the case of the given keysymbol.
Notes:

In lowerSymbol you will receive the key symbol for a lower case key and in upperSymbol the uppercase keys.

So passing in the key symbol of "a" or "A" will both return "a" and "A".

145.5.5 LinuxKeyCodeToKeySymbol(keycode as Integer, index as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Returns from the keyboard mapping tables the key symbol for the given key code.
Notes: Index is the offset in the tables. 0 for the first key symbol and 1 for the second. If the user presses shift the keyboard driver uses index=1 to access the capital letters.

145.5.6 LinuxKeyNameToKeySymbol(keyname as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Searches the key mapping list for the key symbol for a given name.
Notes: Returns 0 on failure.

145.5.7 LinuxKeySymbolToKeyCode(keysymbol as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Searches the hardware dependend key code for the given key symbol.
Notes: Returns 0 on any error.

145.5.8 LinuxKeySymbolToKeyName(keysymbol as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Returns the name of the key symbol.
Notes: Can return "" on an invalide keysymbol value.

145.5.9 LinuxMouseClick(ButtonID as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Simulates a mouse click with the given button.
Notes:

ButtonID=1 is the left mouse button.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.

145.5.10 LinuxMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Queries the current mouse position.

145.5.11 LinuxMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Queries the current mouse position.

145.5.12 LinuxMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Moves the mouse to the given position.
Notes: Returns true on success.

145.5.13 LinuxPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.14 LinuxPressKey(Keycode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the key with the given keycode.
Notes:

Performs a key down and a key up event.
Returns true on success.
See also:

- 145.5.15 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

145.5.15 LinuxPressKey(Keycode as Integer, ButtonDown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Performs a key event.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 145.5.14 LinuxPressKey(Keycode as Integer) as boolean 20014

145.5.16 LinuxPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.17 LinuxPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.18 LinuxSupported as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: No, Linux: Yes.
Function: Whether the functions are available for simulation of keyboard and mouse events.
Notes: Returns true if the Xtest extension is installed.

145.5.19 MacCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

145.5.20 MacCurrentProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the name of the current process.
Example:

msgbox RemoteControlMBS.MacCurrentProcessName

Notes: This is the name of your application.

145.5.21 MacDescriptionForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string for displaying.
Notes: Keycodes which match a special key like "Return", "F1" or "Backspace" are returned as descriptive strings.

145.5.22 MacDisplayNameForKeyCode(keycode as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string for displaying.
Notes: Same as MacTextForKeyCode(keycode, 4)

145.5.23 MacForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the process ID of the application in the foreground.
Notes: Returns 0 on any error.

145.5.24 MacFrontProcessName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the front process.
Example:

```
RemoteControlMBS.MacFrontProcessName="iChat" // move iChat to front
```

Notes: (Read and Write computed property)

145.5.25 MacKeyboardLocalizedName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The localized name of the current keyboard layout.
Notes: Returns "" on any error.

145.5.26 MacKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the current keyboard layout.
Notes:

Returns "" on any error.

Added 64-bit support for version 17.0.

145.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Example:

```
// doing a context menu click with control key:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.PressControlKey true
```

```
call RemoteControlMBS.MacMouseClick x, y, true, true
call RemoteControlMBS.MacMouseClick x, y, true, false
call RemoteControlMBS.PressControlKey false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 20018
- 145.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 20019

145.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Example:

```
// do a right click:

dim x,y as Integer
x=System.MouseX
y=System.MouseY

call RemoteControlMBS.MacMouseClick x, y, true, false, true
call RemoteControlMBS.MacMouseClick x, y, true, false, false
```

Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 20017
- 145.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 20019

145.5.29 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Clicks the mouse buttons on the given position.
Notes:

Returns true on success.
If updateMouseCursorPosition is true the mouse position is updated on screen.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.27 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean) as boolean 20017
- 145.5.28 MacMouseClick(x as Double, y as Double, updateMouseCursorPosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 20018

145.5.30 MacMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the current mouse position.

145.5.31 MacMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Queries the current mouse position.

145.5.32 MacMouseWheel(wheel1 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs a wheel event.
Example:

call RemoteControlMBS.MacMouseWheel 1

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 145.5.33 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean 20020

145.5.33 MacMouseWheel(wheel1 as Integer, wheel2 as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Performs a wheel event.
Example:

call RemoteControlMBS.MacMouseWheel 10,5

Notes:

Returns true on success.
A typical value for the wheel changes are in range from -10 to 10.
See also:

- 145.5.32 MacMouseWheel(wheel1 as Integer) as boolean 20019

145.5.34 MacMoveMouse(x as Double, y as Double) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Moves the mouse to the given position.
Example:

call RemoteControlMBS.MacMoveMouse(100,100)

Notes:

Returns true on success.
On Mac does not generate mouse events.

145.5.35 MacPressCommandKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the command key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.36 MacPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.37 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.
Peforms a key down and a key up event.
See also:

- 145.5.38 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean 20021

145.5.38 MacPressKey(keychar as Integer, virtualkey as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the given key.
Notes:

keychar is the ASCII code of the key you press and virtualkey is the key code.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 145.5.37 MacPressKey(keychar as Integer, virtualkey as Integer) as boolean 20021

145.5.39 MacPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the option key. (labeled with alt)
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.40 MacPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.41 MacProcessCount as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Counts the high level processes.
Example:

msgBox str(remoteControlMBS.macprocessCount)

145.5.42 MacProcessName(index as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The name of the process with the given index.
Example:

```
dim i,c as Integer

// search iChat and make it visible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="iChat" then
remoteControlMBS.macprocessVisible(i)=true
end if
next
```

Notes: Index is from 0 to MacProcessCount-1.

145.5.43 MacProcessVisible(index as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether a process is visible or not.
Example:

```
dim i,c as Integer

// search Safari and make it invisible
c=remoteControlMBS.macprocesscount
for i=0 to c-1
if remoteControlMBS.macprocessname(i)="Safari" then
remoteControlMBS.macprocessVisible(i)=false
end if
next
```

Notes:

Index is from 0 to MacProcessCount-1.
(Read and Write computed property)

145.5.44 MacTextForKeyCode(keycode as Integer, KeyAction as Integer, ModifierState as Integer) as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Translates a keycode to a string.
Example:

```
// try some keycodes like e, E, € or é
dim key as string = "@"

const kCommandKey = 1
const kShift = 2
const kCapsLock = 4
const kOption = 8
const kControl = 16

// with no modifiers
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, 0)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)
Return
end if

next

// with shift
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kShift)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Shift"
Return
end if

next

// with option
for i as Integer = 0 to 127

dim s as string = RemoteControlMBS.MacTextForKeyCode(i, 3, kOption)

if StrComp(key, s, 0) = 0 then
MsgBox "Found with keycode "+str(i)+" with Option"
Return
```

```
end if

next
```

Notes:

Works only with Unicode keyboard layouts which need Mac OS X 10.5.

Modifier values:

Command Key	1
Shift	2
CapsLock	4
Option	8
Control	16

Possible constants for the Key Action:

kUCKeyActionDown	0	The user is pressing the key.
kUCKeyActionUp	1	The user is releasing the key.
kUCKeyActionAutoKey	2	The user has the key in an "auto-key" pressed state that is, the user is holding down the key for an extended period of time and is thereby generating multiple key strokes from the single key.
kUCKeyActionDisplay	3	The user is requesting information for key display, as in the Key Caps application.

145.5.45 MouseClick(x as Integer, y as Integer, down as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Performs a mouse click.
Notes:

The mouse cursor is moved to the given position and the first mouse button is pressed.
Returns true on success.

145.5.46 MousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries the current mouse position.

145.5.47 MousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Queries the current mouse position.

145.5.48 MoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Moves the mouse to the given location.
Notes:

Returns true on success.
On Mac does not generate mouse events.

145.5.49 PressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the ctrl key.
Notes: Returns true on success.

145.5.50 PressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the option key.
Notes: Returns true on success.

145.5.51 PressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Presses the shift key.
Notes: Returns true on success.

145.5.52 WinBringProcessToTop(ProcessID as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 18.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes.
Function: Brings all windows of process to the front.
Notes: Returns true if function found at least one window.

145.5.53 WinBringWindowToTop(WindowHandle as Integer, SetFocus as boolean = true) as boolean

MBS ComputerControl Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Brings a given window to front.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("", "Calculator")
call RemoteControlMBS.WinBringWindowToTop h
```

Notes:

Pass any window handle, including windows from other applications.
If SetFocus is true, we also set the focus.
Returns true on success.

145.5.54 WinCurrentProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the process ID of your application.
Notes: Returns 0 on any error.

145.5.55 WinFindWindow(ClassName as string, WindowName as string) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Finds a window based on the classname and/or the window name.
Example:

```
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")
msgbox hex(h)
```

Notes:

One of the names can be an empty string so only the other name is used. Normally you should prefer the class name as it is not localized. The WindowsListMBS class can help you finding the class name of a window.
Returns 0 on any error.

145.5.56 WinForegroundProcessID as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the process ID of the application which owns the foreground window.
Notes: Returns 0 on any error.

145.5.57 WinFrontWindowTitle as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: The title of the window which has the focus.
Example:

title=remoteControlMBS.winfrontWindowTitle

Notes: May return "" on any error.

145.5.58 WinIsWindowMinimized(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Checks whether the specified window is minimized.
Notes:

Returns true if minimized.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

145.5.59 WinIsWindowVisible(WindowHandle as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Checks the visibility state of the specified window.
Notes:

Returns true if visible or false if not.
Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

145.5.60 WinKeyboardName as string

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns the name of the current Windows keyboard layout.

145.5.61 WinKeyIsDown(virtualkey as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Tests whether a given key is currently pressed.

145.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 20029
- 145.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 20030

145.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 20029
- 145.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean 20030

145.5.64 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean, MouseButton3 as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Peforms a mouse click on the given position.
Notes:

If AbsolutePosition is false the given coordinates are relative to the current position.
Returns true on success.

Be aware that the user may get into trouble if you forget to release a mouse button you pressed before. So always call this method another time to release the mouse buttons.
See also:

- 145.5.62 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean) as boolean 20029
- 145.5.63 WinMouseClick(x as Integer, y as Integer, AbsolutePosition as boolean, MouseButton1 as boolean, MouseButton2 as boolean) as boolean 20029

145.5.65 WinMousePositionX as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the current mouse position.

145.5.66 WinMousePositionY as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the current mouse position.

145.5.67 WinMoveMouse(x as Integer, y as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Moves the mouse cursor to the given position.
Notes:

Returns true on success.
Internally the coordinates are converted to normalized absolute coordinates which can lead to have the mouse one pixel off the requested position due to rounding.

145.5.68 WinPressControlKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the ctrl key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.69 WinPressKey(ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 145.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 20031
- 145.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 20032
- 145.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 20032

145.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 145.5.69 WinPressKey(ScanCode as Integer) as boolean 20031
- 145.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 20032
- 145.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 20032

145.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

This methods creates a keydown and a keyup event.
Returns true on success.
See also:

- 145.5.69 WinPressKey(ScanCode as Integer) as boolean 20031
- 145.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 20031
- 145.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean 20032

145.5.72 WinPressKey(virtualkey as Integer, ScanCode as Integer, keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Performs a key event with the given data.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.
See also:

- 145.5.69 WinPressKey(ScanCode as Integer) as boolean 20031
- 145.5.70 WinPressKey(ScanCode as Integer, keydown as boolean) as boolean 20031
- 145.5.71 WinPressKey(virtualkey as Integer, ScanCode as Integer) as boolean 20032

145.5.73 WinPressOptionKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the alt key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.74 WinPressShiftKey(keydown as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Presses the shift key.
Notes:

Returns true on success.

Be aware that the user may get into trouble if you forget to release a key you pressed before. So always call this method another time to release the key.

145.5.75 WinScanCodeToVirtualKeyCode(ScanCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Searches the virtual key code for the given scancode.
Notes:

Each key has a hardware dependend scan code. For each scancode you can get the virtual key code which is hardware independend.

Returns 0 on failure.

145.5.76 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: No, Mac: No, Win: Yes, Linux: No.
Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010

call RemoteControlMBS.WinSendMessage(window1, WM_CLOSE, 0, 0)
```

Notes: The result depends on the message command.
See also:

- 145.5.77 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

145.5.77 WinSendMessage(WindowHandle as Integer, Msg as Integer, lParam as Integer, WParam as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Sends a Windows message to a given window.
Example:

```
const WM_CLOSE = & h0010
dim h as Integer = RemoteControlMBS.WinFindWindow("SciCalc","")

call RemoteControlMBS.WinSendMessage(h, WM_CLOSE, 0, 0) // Closes Calc
```

Notes: The result depends on the message command.
See also:

- 145.5.76 WinSendMessage(Win as window, Msg as Integer, lParam as Integer, WParam as Integer) as Integer 20033

145.5.78 WinShowWindow(WindowHandle as Integer, CmdShow as Integer) as Boolean

MBS ComputerControl Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Shows or hides a window.
Notes:

CmdShow can be:

0	Hide
1	Show normal
2	Show minimized
3	Maximize
4	Show without activating
5	Show
6	Minimize
7	Show minimized without activating
8	Show normal without activating
9	Restore
10	Show default
11	Force minimized

Use RemoteControlMBS.WinFindWindow if you need to find a window handle.

145.5.79 WinVirtualKeyCodeToCharCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Queries the char code for a virtual key code.
Notes: Returns 0 on failure.

145.5.80 WinVirtualKeyCodeToScanCode(VirtualKeyCode as Integer) as Integer

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Finds the scan code to match the given virtual key code.
Notes: Returns 0 on failure.

145.5.81 WinVirtualKeyForASCII(Character as Integer, byref VirtualKeyCode as Integer, Byref ShiftKey as boolean, byref ControlKey as Boolean, byref AltKey as boolean) as boolean

MBS ComputerControl Plugin, Plugin Version: 8.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Returns for a given character which combination of key code and modifiers created the character.
Notes:

For Character, you should use asc(string), but you may need to convert the string to Windows ANSI text encoding.

Returns 0 on failure.

Chapter 146

Resolution

146.1 class DisplayMBS

146.1.1 class DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the displays of the screen.

146.1.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3
- MBS Xojo Plugins, version 17.2pr6
- MBS REALbasic Plugins, version 10.4pr11
- MBS REALbasic Plugins, version 10.4pr4

146.1.3 Xojo Developer Magazine

- 17.5, page 43: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

146.1.4 Methods

146.1.5 CanDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns true if the monitor supports the given color depth at the current ResolutionMBS.

Notes: none.

146.1.6 FadeGamma(intensity as Integer, col As Color)

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Sets the gamma of the DisplayMBS
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole DisplayMBS is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.

See the NativeGamma documentation for more details on Windows Gamma details.

146.1.7 FadeGammaTo(intensity as Integer, col As Color, ticks as Integer)

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Fades the intensity and color of the gamma slowly in the given number of milliseconds.
Notes:

Intensity has to be between 0 and 1000. 1000 is normal, when it is 0, the whole display is in the color GammaColor.
Direct color display modes do not use color lookup tables and are usually 16, 24, or 32 bit. Not all direct color video boards support loadable gamma ramps.
See the NativeGamma documentation for more details on Windows Gamma details.

146.1.8 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the given depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 146.1.9 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

146.1.9 GetBestResolution(width as Integer, height as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the best matching resolution.
Notes:

Returns the best resolution which size is not smaller that the dimensions given, which has the highest depth and, if safe is true, which is safe. If safe is not true, be sure that the frequency works, if you want to switch to it (for example by asking the user).
On Mac OS X till now no resolution can be called safe.
See also:

- 146.1.8 GetBestResolution(width as Integer, height as Integer, depth as Integer, safe As Boolean) As ResolutionMBS 20038

146.1.10 GetCurrentResolution As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the current resolution.
Notes: Returns the resolution the display is currently set to. This is useful if you want to switch back to the old resolution after you switched to another resolution.

146.1.11 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution with the given depth.
Notes:

The same as GetBestResolution(width, height, depth, safe), the only difference is that it does not search for the smallest resolution but for the biggest one.
On Mac OS X till now no resolution can be called safe.
See also:

- 146.1.12 GetLargestResolution(safe As Boolean) As ResolutionMBS 20039

146.1.12 GetLargestResolution(safe As Boolean) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Searches for the largest resolution.
Notes:

If safe is true, this method returns only safe resolutions.
On Mac OS X till now no resolution can be called safe.
See also:

- 146.1.11 GetLargestResolution(depth as Integer, safe As Boolean) As ResolutionMBS 20039

146.1.13 GetResolution(num as Integer) As ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a resolution.
Notes: Num has to be between 0 and ResolutionCount(safe)-1.

146.1.14 ResolutionCount(depth as Integer, safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions for a given depth.
Notes:

This method returns the number of resolutions that have the given depth and, if safe is true, which are safe.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 146.1.15 ResolutionCount(safe As Boolean) as Integer 20040

146.1.15 ResolutionCount(safe As Boolean) as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns the number of resolutions.
Notes:

This method returns the total number of resolutions this monitor supports and, if safe is true, which are safe. Safe resolutions are resolutions which will always work.
On Mac OS X till now no ResolutionMBS can be called safe.
See also:

- 146.1.14 ResolutionCount(depth as Integer, safe As Boolean) as Integer 20040

146.1.16 SetDepth(depth as Integer) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches the color depth to the depth given. Returns true if attempt was successful.
Notes: none.

146.1.17 SwitchTo(width as Integer, height as Integer, depth as Integer, safe As Boolean) As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Switches to the given ResolutionMBS if possible.
Notes:

This method tries to switch directly to the best ResolutionMBS which size is bigger or the same as the given dimensions and which depth is the same as the given parameter. It returnes true if it was successful. Try this function first with safe set to true. If that fails, try again with false, but after that show a dialog asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS.
On Mac OS X till now no ResolutionMBS can be called safe.

146.1.18 Update

MBS Util Plugin, Plugin Version: 3.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Updates the properties in this class.
Notes:

Call it whenever you detect a screen resolution change to update the content of this class.
In general you should not keep DisplayMBS classes around too long because the display described may go away (one a Powerbook the external display).

146.1.19 Properties

146.1.20 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the DisplayMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

146.1.21 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

146.1.22 GammaColor as color

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The color for fading the DisplayMBS.
Notes:

This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

146.1.23 GammaIntensity as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** GammaIntensity is the intensity of the monitor.
Notes:

1000 is normal, if it is 0, the whole DisplayMBS is in the color GammaColor.
This property is read-only. To change it, use the methods of the DisplayMBS class and the Switch method of the ResolutionMBS class.
There is no fading for Windows.
(Read only property)

146.1.24 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the monitor.
Notes: (Read only property)

146.1.25 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that DisplayMBS
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)

msgBox str(d.Hz)
```

Notes:

On Windows:
Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
The value should never be greater as the real frequency, so you can just ignore this.
(Read only property)

146.1.26 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

146.1.27 Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

146.1.28 Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this screen.
Notes: (Read only property)

146.1.29 NativeGamma as memoryblock

MBS Util Plugin, Plugin Version: 3.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The native gamma values.
Example:

```
dim d as DisplayMBS // your display
d.nativegamma=newmemoryblock(3072) // all black
```

Notes:

3072 bytes big is this array a 256 RGB values saved in 3 single properties.

Some notes for SetDeviceGammaRamp, which is the Windows function used by the plugin:

SetDeviceGammaRamp doesn't allow all gamma ramps. It checks the gamma ramp; if it is too complex, such as the red flash when the player is shot in Quake, it rejects it.
SetDeviceGammaRamp will not currently make use of a gamma calibrator. This may change in future versions of Image Color Management (ICM), but for Windows 2000, only the DirectDraw API supports the gamma calibrators.
The existing gamma entry points is already used by GetDeviceGammaRamp and SetDeviceGammaRamp. Therefore, the display driver doesn't need to do anything special to support this new interface, as long as it already supports the Win32 Get/SetDeviceGammaRamp functions.
In addition to getting and setting gamma ramps, the new DirectDraw interface allows the new gamma ramp to be calibrated—if a gamma calibrator is installed. The mechanism that DirectDraw uses to register and communicate with the gamma calibrator is an interim mechanism that will be changed in future releases.
DirectDraw looks for an installed software calibrator and passes the gamma value to the software calibrator; the software calibrator in turn adjusts the gamma ramp according to the measured response of the monitor. The calibrator passes the gamma ramp back to DirectDraw, which passes it to the SetDeviceGammaRamp device driver interface (DDI). The result is that the game looks as intended.
For DirectDraw to use the gamma calibrator, the calibrator must register itself with DirectDraw using a registry key; DirectDraw will call it if the application wants the gamma ramp to be calibrated.
In the future, both the method by which DirectDraw communicates with the gamma calibrator, through the DDI, and the method gamma calibrators use to register themselves in the registry will change. But every part of the DirectDraw API is permanent.
ICM is the color management system in Windows; all system-level color management should be handled by ICM. For this reason, downloadable gamma ramp support will be rolled into ICM in the future, making current solutions for gamma calibrators obsolete. Until such time, we have provided a method by which applications can take advantage of the installed base of software calibrators and graphics adapters that support downloadable gamma ramps.
(Read and Write computed property)

146.2 Globals

146.2.1 DisplayCountMBS as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayCount returns the number of displays connected.
Example:

```
msgbox "You have "+str(DisplayCountMBS)+" screens."
```

146.2.2 GetDisplayMBS(num as Integer) As DisplayMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns an object of class DisplayMBS for the given DisplayMBS.
Example:

```
dim d as DisplayMBS

d=GetDisplayMBS(0)
msgBox str(d.width)+" x "+str(d.height)+" @ "+str(pow(2,d.depth))+" colors"
```

Notes: num must be: 0 <= num <displaycount

146.2.3 ResolutionLibraryPresentMBS as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the DisplayManager library file was found.
Example:

```
if not ResolutionLibraryPresentMBS then
msgbox "I'm missing the shared library 'DisplayManager'."
end if
```

Notes:

This library should be present on all Mac OS Classic versions. (It is in the system suitcase.)
Returns always true on Windows.

146.2.4 UpdateDisplayCountMBS

MBS Util Plugin, Plugin Version: 8.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Rebuilds the display list.
Notes: If new displays are attached or removed, this method needs to be called.

146.3 class ResolutionMBS

146.3.1 class ResolutionMBS

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Defines a class for accessing the resolutions a screen.

146.3.2 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

146.3.3 Methods

146.3.4 Switch As Boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** This function switches the DisplayMBS to the ResolutionMBS and returns true if the attempt was successful.
Notes:

If IsSafe is false, show a dialog after the switch asking the user if that ResolutionMBS is okay. If the user presses escape or clicks cancel, you should immediatly switch back to the old ResolutionMBS. Especially on VGA-Monitors not all listed frequencies work.
On Mac OS X till now no ResolutionMBS can be called safe.

146.3.5 Properties

146.3.6 Depth as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Depth of the ResolutionMBS.
Notes:

Can be 8, 16 or 32. Other screen depths are not well supported.
(Read only property)

146.3.7 displaynum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS
Notes:

The number is always between 0 and DisplayCount-1, where 0 is the main monitor.
(Read only property)

146.3.8 Height as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Height of the ResolutionMBS.
Notes: (Read only property)

146.3.9 hz as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** frequency in Hz of that ResolutionMBS
Notes:

Sometimes Hz is 0, this is when Windows itself does not know the frequency (at least it is so in my emulation, Virtual PC 3.0 with Win95).
(Read only property)

146.3.10 issafe as boolean

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Is it a safe ResolutionMBS?
Notes:

On Mac OS X till now no ResolutionMBS can be called safe.
(Read only property)

146.3.11 Left as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative left offset to that ResolutionMBS.

Notes:

Should be 0 for the main monitor.
(Read only property)

146.3.12 ResolutionNum as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** DisplayNum is the number of the DisplayMBS.
Notes:

ResolutionNum is the number of the DisplayMBS which always is between 0 and GetDisplayMBS(DisplayNum).ResolutionCount(false)-1.

On Windows: dis.GetCurrentResolution.resolutionNum is sometimes also -1.
(Read only property)

146.3.13 Top as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** The relative top offset to the other monitors.
Notes:

Should be 0 for the main monitor.
(Read only property)

146.3.14 Width as Integer

MBS Util Plugin, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Function:** Width of this ResolutionMBS.
Notes: (Read only property)

Chapter 147

RFC

147.1 class RFCClassDescriptionMBS

147.1.1 class RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a class description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.1.2 Methods

147.1.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.1.5 Properties

147.1.6 AttributesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries attribute count for class.
Notes: (Read only property)

147.1.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection owning this object.
Notes: (Read only property)

147.1.8 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.1.9 ImplementedInterfacesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of implemented interfaces.
Notes: (Read only property)

147.1.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the class.
Notes: (Read only property)

147.1.11 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.

Notes: (Read only property)

147.1.12 ParentClassesCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of parent classes.
Notes: (Read only property)

147.2 class RFCConnectionAttributesMBS

147.2.1 class RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for information about the partner system on the other side of this RFC connection.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.2.2 Methods

147.2.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.2.4 Properties

147.2.5 client as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Client ("Mandant")
Notes: (Read only property)

147.2.6 codepage as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Own code page.
Notes: (Read only property)

147.2.7 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection used to get this information.
Notes: (Read only property)

147.2.8 cpicConvId as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CPI-C Conversation ID.
Notes: (Read only property)

147.2.9 dest as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** RFC destination.
Notes: (Read only property)

147.2.10 host as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Own host name.
Notes: (Read only property)

147.2.11 isoLanguage as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** 2-byte ISO-Language
Notes: (Read only property)

147.2.12 kernelRel as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner kernel release.
Notes: (Read only property)

147.2.13 language as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Language.
Notes: (Read only property)

147.2.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object for this object.
Notes: (Read only property)

147.2.15 partnerBytesPerChar as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of bytes per character in the backend's current codepage.
Notes:

Note this is different from the semantics of the PCS parameter.
(Read only property)

147.2.16 partnerCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner code page.
Notes: (Read only property)

147.2.17 partnerHost as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner host name.
Notes: (Read only property)

147.2.18 partnerIP as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner IP.
Notes: (Read only property)

147.2.19 partnerIPv6 as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner IPv6.

Notes: (Read only property)

147.2.20 partnerRel as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner system release.
Notes: (Read only property)

147.2.21 partnerSystemCodepage as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner system code page.
Notes: (Read only property)

147.2.22 partnerType as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Partner type.
Notes:

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

147.2.23 progName as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Name of the calling APAB program (report, module pool)
Notes: (Read only property)

147.2.24 rel as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** My system release.
Notes: (Read only property)

147.2.25 rfcRole as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The RFC role.
Notes:

C/S: RFC Client / RFC Server.
(Read only property)

147.2.26 sysId as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** R/3 system ID.
Notes: (Read only property)

147.2.27 sysNumber as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** R/3 system number.
Notes: (Read only property)

147.2.28 trace as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trace level (0-3)
Notes: (Read only property)

147.2.29 type as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type.
Notes:

2/3/E/R: R/2,R/3,Ext,Reg.Ext
(Read only property)

147.2.30 user as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** User name.
Notes: (Read only property)

147.3 class RFCConnectionMBS

147.3.1 class RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for RFC connection to a SAP system.
Example:

```
// connect code from a sample project:

dim loginParams As New Dictionary
if app.LogOnData.SAProuterString.IsEmpty then // LogOn with server (IP-Address)
loginParams.Value("ashost") = app.LogOnData.Anwendungsserver
else // LogOn with Servername and Router-String
loginParams.Value("ashost") = app.LogOnData.SAProuterString+"/H/"+app.LogOnData.Anwendungsserver
end if
loginParams.Value("sysnr") = app.LogOnData.InstanzNr.ToText
loginParams.Value("client") = app.LogOnData.Mandant
loginParams.Value("user") = app.LogOnData.SAPBenutzer
loginParams.Value("passwd") = app.LogOnData.SAPPasswort
loginParams.Value("lang") = app.LogOnData.Sprache

app.ConnectionToSAP = New RFCConnectionMBS(loginParams)
```

147.3.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2
- Connect Xojo to SAP via RFC

147.3.3 Methods

147.3.4 CachedClassDescription(repositoryID as String, Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks for a cached class description.
Notes:

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a class description has already been cached via ClassDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via RfcAddClassDesc(), which contains classes that do not exist in the

backend's DDIC.

If repositoryID is "", the "default repository" is used.

repositoryID: System ID of R/3 System, for which this class description has been cached, or "" in case you want to look for it in the default repository.
Name: Name of the class.

147.3.5 CachedFunctionDescription(repositoryID as String, Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks for a cached function description.
Notes:

This API should be used with care and is only for special scenarios, for example: 1. You know for sure, that a function description has already been cached via FunctionDescription(), and don't want to open an extra rfcHandle that will never be used. In this case simply use the SAP System ID as the repositoryID. 2. You have created a hard-coded repository via AddFunctionDesc(), which contains function modules that do not exist in the backend's DDIC.

If repositoryID is "", the "default repository" is used.

147.3.6 CachedTypeDescription(repositoryID as String, Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Looks for a cached structure/table description.
Notes:

Similar to TypeDescription(), but it only looks into the cache. Again it should almost never be necessary to get a metadata description of a single structure.

repositoryID: System ID of R/3 System, for which this type description has been cached, or "" in case you want to look for it in the default repository.
Name: Name of the DDIC structure/table.

147.3.7 Cancel

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels the RFC call which is currently being called over the given RFC connection and closes the connection.
Notes: Can be used only on an RFC client connection and needs to be called from a different thread than the one currently executing the RFC call.

147.3.8 ClassDescription(Name as String) as RFCClassDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the class description that is valid for the system to which connection points to.
Notes:

If the class description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release. This is the main API that should be used.

Name: Name of the class to look up.

147.3.9 ClearRepository(repositoryID as String)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes all metadata from the repository cache of the specified R/3 System.
Notes: If repositoryID is "", the "default repository" is cleared.

147.3.10 Constructor(LoginParams as Dictionary)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens an RFC client connection for invoking ABAP function modules in an R/3 backend.
Example:

```
Dim loginParams As New Dictionary
loginParams.Value("ashost") = "hostname"
loginParams.Value("sysnr") = "05"
loginParams.Value("client") = "800"
loginParams.Value("user") = "user"
loginParams.Value("passwd") = "****"
```

```
loginParams.Value("lang") = "EN"

Dim connection As New RFCConnectionMBS(loginParams)
```

Notes:

Opens a client connection to an SAP System. The connectionParams may contain the following name-value pairs:

client, user, passwd, lang, trace and additionally one of

1. Direct application server logon: ashost, sysnr.
2. Logon with load balancing: mshost, msserv, sysid, group.

msserv is needed only, if the service of the message server is not defined as sapms<SYSID>in /etc/services.

When logging on with SNC, user& passwd are to be replaced by

snc_qop, snc_myname, snc_partnername and optionally snc_lib.
(If snc_lib is not specified, the underlying SNC layer uses the "global" GSS library defined via environment variable SNC_LIB or SNC_LIB_64.)

When logging on with SSO Ticket, you can use mysapsso2 instead of user& passwd. The old SSO format (mysapsso) is no longer supported.

Alternatively the connection parameters can be defined in the config file sapnwrfc.ini. In this case you just pass the parameter dest=... and all parameters that are missing in the sapnwrfc.ini entry into RfcOpenConnection().

For a complete list of logon parameters to be used in connectionParams as well as in the sapnwrfc.ini file, see the sample sapnwrfc.ini file in the SDK's demo folder.

If the logon was ok, constructor returns with a new object, otherwise an exception is raised.

147.3.11 CreateFunction(Name as String) as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

147.3.12 CreateTransaction(TransactionID as String, QueueName as String) as RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a container for executing a (multi-step) transactional call.
Notes:

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

147.3.13 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.
Notes: Closes an RFC connection.

147.3.14 FunctionDescription(Name as String) as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the function description that is valid for the system to which connection points to.
Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
```

Notes: If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

147.3.15 isConnected as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if we are connected.
Notes: Same as Ping, but returns boolean and does not raise exception.

147.3.16 Ping

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Ping the remote communication partner through the passed connection handle.
Notes: Sends a ping to the backend in order to check, whether the connection is still alive. Can be used on both, client connections as well as server connections.

147.3.17 ResetServerContext

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the SAP server context ("user context / ABAP session context") associated with the given client connection, but does not close the connection.

147.3.18 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a unique 24-digit transaction ID from the backend.

147.3.19 TypeDescription(Name as String) as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the structure description that is valid for the system to which connection points to.
Notes:

If the structure description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the rfcHandle. The result from the DDIC lookup will then be placed into the cache for later use.

The RFC Runtime maintains a cache for every R/3 System ID, as the meta data could be different from R/3 release to R/3 release.

Note
Normally it should not be necessary to lookup separate structure descriptions. They are already looked up as part of the function module, in which they are used.

Name: Name of a DDIC structure or table.

147.3.20 Properties

147.3.21 ConnectionAttributes as RFCConnectionAttributesMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns details about the current client or server connection.
Notes: (Read only property)

147.3.22 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.4 class RFCContainerMBS

147.4.1 class RFCContainerMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a container in a RFC connection.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.4.2 Methods

147.4.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.4.4 DescribeType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the metadata description of the given structure or table.

147.4.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.4.6 StringLength(Index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries string length for field by index.
See also:

- 147.4.7 StringLength(Name as String) as Integer 20065

147.4.7 StringLength(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries string length for field by name.

See also:

- 147.4.6 StringLength(Index as Integer) as Integer 20065

147.4.8 Value(Index as Integer) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience method to get value as variant.
Notes:

When reading, we lookup data type for the property referred by index and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.
Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 147.4.9 Value(Name as String) as Variant 20066

147.4.9 Value(Name as String) as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience method to get value as variant.
Notes:

When reading, we lookup data type for the property referred by name and return a matching value via variant.

Char, String, Num, Date, Time, BCD, DecF16 and DecF34 are returned as text.
Float is returned as double value.
Long, Second, Minute and Int8 is returned as Int64.
DTDay, DTWeek, DTMonth, TSecond, TMinute, CDeay, Int1, Int2 and Int values are retuned as Integer.
Table is returned as RFCTableMBS object.
Structure is returned as RFCStructureMBS object.
Byte data is returned as MemoryBlock.

For Null, ABAPObject, XMLData, BOX types we return nil.
See also:

- 147.4.8 Value(Index as Integer) as Variant 20066

147.4.10 Properties

147.4.11 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection this object belongs to.
Notes: (Read only property)

147.4.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.4.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object for this container.
Notes: (Read only property)

147.4.14 Values as Dictionary

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience property to see all values in debugger.
Notes: (Read only property)

147.4.15 BytesValue(Index as Integer) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set BYTE value with MemoryBlock by index.
Notes:

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 147.4.16 BytesValue(Name as String) as Memoryblock 20068

147.4.16 BytesValue(Name as String) as Memoryblock

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set BYTE value with MemoryBlock by name.
Notes:

When you get or set, we copy the data.
(Read and Write computed property)
See also:

- 147.4.15 BytesValue(Index as Integer) as Memoryblock 20067

147.4.17 CharsValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set chars value by name.
Notes:

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

- 147.4.18 CharsValue(Name as String, Size as Integer) as String 20068

147.4.18 CharsValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set chars value by index.
Notes:

This is for fixed size char values, so you pass in size.
Please use StringValue() to benefit from plugin querying size for you of existing value.
(Read and Write computed property)
See also:

- 147.4.17 CharsValue(Index as Integer, Size as Integer) as String 20068

147.4.19 DateValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set date value by index.
Notes:

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)

See also:

- 147.4.20 DateValue(Name as String) as String 20069

147.4.20 DateValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set date value by name.
Notes:

Format is always 8 character string with format YYYYMMDD.
(Read and Write computed property)
See also:

- 147.4.19 DateValue(Index as Integer) as String 20068

147.4.21 FloatValue(Index as Integer) as Double

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set float value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.22 FloatValue(Name as String) as Double 20069

147.4.22 FloatValue(Name as String) as Double

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set float value by name.
Notes: (Read and Write computed property)
See also:

- 147.4.21 FloatValue(Index as Integer) as Double 20069

147.4.23 Int16Value(Index as Integer) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt16 value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.24 Int16Value(Name as String) as Int16 20070

147.4.24 Int16Value(Name as String) as Int16

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt16 value by name.
Notes: (Read and Write computed property)
See also:

- 147.4.23 Int16Value(Index as Integer) as Int16 20069

147.4.25 Int32Value(Index as Integer) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt32 value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.26 Int32Value(Name as String) as Int32 20070

147.4.26 Int32Value(Name as String) as Int32

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt32 value by name.
Notes: (Read and Write computed property)
See also:

- 147.4.25 Int32Value(Index as Integer) as Int32 20070

147.4.27 Int64Value(Index as Integer) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set Int64 value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.28 Int64Value(Name as String) as Int64 20070

147.4.28 Int64Value(Name as String) as Int64

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set Int64 value by name.
Notes: (Read and Write computed property)
See also:

- 147.4.27 Int64Value(Index as Integer) as Int64 20070

147.4.29 NumberValue(Index as Integer, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set numeric value by index.
Notes:

The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 147.4.30 NumberValue(Name as String, Size as Integer) as String 20071

147.4.30 NumberValue(Name as String, Size as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set numeric value by name.
Notes:

The value of the specified field as num-char array (digits only).
Please pass length. If you don't know, please try StringValue/StringLength.
(Read and Write computed property)
See also:

- 147.4.29 NumberValue(Index as Integer, Size as Integer) as String 20071

147.4.31 StringValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set string value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.32 StringValue(Name as String) as String 20071

147.4.32 StringValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set string value by name.
Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction
```

```
f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

Notes: (Read and Write computed property)
See also:

- 147.4.31 StringValue(Index as Integer) as String 20071

147.4.33 StructureValue(Index as Integer) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set structure value with RFCStructureMBS object by index.
Notes: (Read and Write computed property)
See also:

- 147.4.34 StructureValue(Name as String) as RFCStructureMBS 20072

147.4.34 StructureValue(Name as String) as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set structure value with RFCStructureMBS object by name.
Notes: (Read and Write computed property)
See also:

- 147.4.33 StructureValue(Index as Integer) as RFCStructureMBS 20072

147.4.35 TableValue(Index as Integer) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set table value with RFCTableMBS object by index.
Notes: (Read and Write computed property)
See also:

- 147.4.36 TableValue(Name as String) as RFCTableMBS 20073

147.4.36 TableValue(Name as String) as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set table value with RFCTableMBS object by name.
Notes: (Read and Write computed property)
See also:

- 147.4.35 TableValue(Index as Integer) as RFCTableMBS 20072

147.4.37 TimeValue(Index as Integer) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set time value by index.
Notes:

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 147.4.38 TimeValue(Name as String) as String 20073

147.4.38 TimeValue(Name as String) as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set time value by name.
Notes:

Format is always 6 character string with format HHMMSS.
(Read and Write computed property)
See also:

- 147.4.37 TimeValue(Index as Integer) as String 20073

147.4.39 UInt8Value(Index as Integer) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt8 value by index.
Notes: (Read and Write computed property)
See also:

- 147.4.40 UInt8Value(Name as String) as UInt8 20074

147.4.40 UInt8Value(Name as String) as UInt8

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get or set UInt8 value by name.
Notes: (Read and Write computed property)
See also:

- 147.4.39 UInt8Value(Index as Integer) as UInt8 20073

147.5 class RFCErrorExceptionMBS

147.5.1 class RFCErrorExceptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception class to report any error.
Notes: Subclass of the RuntimeException class.

147.6 class RFCExceptionDescriptionMBS

147.6.1 class RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an exception description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.6.2 Methods

147.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.6.4 Properties

147.6.5 Key as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Exception key
Notes: (Read only property)

147.6.6 Message as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Error message (exception text as defined in SE37)
Notes: (Read only property)

147.7 class RFCFieldDescriptionMBS

147.7.1 class RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a field description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.7.2 Methods

147.7.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.7.4 Properties

147.7.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection for this field.
Notes: (Read only property)

147.7.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If the field is of type "packed number" (BCD), this member gives the number of decimals.
Notes: (Read only property)

147.7.7 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field name.
Notes: (Read only property)

147.7.8 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field length in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.7.9 nucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field offset in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.7.10 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.
Notes: (Read only property)

147.7.11 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field data type.
Notes: (Read only property)

147.7.12 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the type description for this field.
Notes: (Read only property)

147.7.13 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type as string.
Notes:

Convenience property so you can see type in debugger.
(Read only property)

147.7.14 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field length in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.7.15 ucOffset as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Field offset in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.8 class RFCFunctionDescriptionMBS

147.8.1 class RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a function description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.8.2 Methods

147.8.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.8.4 CreateFunction as RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

147.8.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception description by index.
See also:

- 147.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS 20081

147.8.7 ExceptionDescription(Name as String) as RFCExceptionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception description by name.
See also:

- 147.8.6 ExceptionDescription(Index as Integer) as RFCExceptionDescriptionMBS 20080

147.8.8 ExceptionDescriptions as RFCExceptionDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries all exception descriptions.

147.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries parameter description by index.
See also:

- 147.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS 20081

147.8.10 ParameterDescription(Name as String) as RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries parameter description by name.
See also:

- 147.8.9 ParameterDescription(Index as Integer) as RFCParameterDescriptionMBS 20081

147.8.11 ParameterDescriptions as RFCParameterDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries all parameter description as array.

147.8.12 Properties

147.8.13 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent connection.
Notes: (Read only property)

147.8.14 ExceptionCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of exceptions.
Notes: (Read only property)

147.8.15 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.8.16 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the function.
Notes: (Read only property)

147.8.17 ParameterCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of parameters for this function.
Notes: (Read only property)

147.8.18 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.

Notes: (Read only property)

147.9 class RFCFunctionMBS

147.9.1 class RFCFunctionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a function in a RFC connection.
Notes:

Please use values to set parameters and then call invoke.
Subclass of the RFCContainerMBS class.

147.9.2 Methods

147.9.3 Constructor(typeDescription as RFCFunctionDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a data container that can be used to execute function calls in the backend via Invoke.
Notes: The importing parameters can be set using the Value() properties. After the RfcInvoke call returned successfully, the exporting parameters can be read from this data container via the Value() properties.

147.9.4 DescribeFunction as RFCFunctionDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the function description that is valid for the system to which connection points to.
Notes: If the function description is already in the repository cache for that system ID, it will be returned immediately (from the cache), otherwise it will be looked up in the system's DDIC using the connection. The result from the DDIC lookup will then be placed in the cache. The RFC Runtime maintains a cache for every SAP System ID, as the meta data may be different depending on the SAP release. This is the main API that should be used.

147.9.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.9.6 Invoke

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a function module in the backend system so far.

Example:

```
Dim fd As RFCFunctionDescriptionMBS = connection.FunctionDescription("BAPI_COMPANY_GETDETAIL")
Dim f As RFCFunctionMBS = fd.CreateFunction

f.StringValue("COMPANYID") = "000007"
f.Invoke

Dim s As RFCStructureMBS = f.StructureValue("RETURN")
Dim t As String = s.StringValue("MESSAGE")

MsgBox t
```

147.9.7 Properties

147.9.8 ParameterActive(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether a parameter is active.
Notes:

This is particularly useful for BAPIs which have many large tables, in which you are not interested. Deactivate those and leave only those tables active, in which you are interested. This reduces network traffic and memory consumption in your application considerably.

This functionality can be used for input and output parameters. If the parameter is an input, no data for that parameter will be sent to the backend. If it's an output, the backend will be informed not to return data for that parameter.
(Read and Write computed property)

147.10 module RFCModuleMBS

147.10.1 module RFCModuleMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The module for globals in RFC API.
Notes:

You can use this module and related classes to connect Xojo to SAP applications and databases.
We support MacOS, Windows and Linux.

You need to get a SAP login (maybe become SAP developer) and download SAP NetWeaver RFC SDK 7.50.
You need SAP license for user and maybe a developer license yourself.

Please read SAP documentation for various RFC functions to get more details.
MBS Plugin manages memory for you, does reference counting and makes API easier to use for Xojo developers.

147.10.2 Blog Entries

- Connect Xojo to SAP via RFC

147.10.3 Methods

147.10.4 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the sapnwrfc library.
Example:

```
Const path = "sapnwrfc.dll"
```

Notes:

Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
See also:

- 147.10.5 LoadLibrary(path as string) as boolean

147.10.5 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the sapnwrfc library.
Notes:

Pass path to sapnwrfc.dll on Windows or libsapnwrfc.dylib on MacOS or libsapnwrfc.so on Linux.
If file is installed in system path, you may just pass file name.

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 147.10.4 LoadLibrary(file as folderitem) as boolean 20086

147.10.6 LocalTransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a unique 24-digit transaction ID.
Notes: The API will attempt to generate a TID locally using the operating system's UUID.

147.10.7 ReloadIniFile

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the contents of the sapnwrfc.ini file into memory.
Notes: Searches the directory given by IniPath (or the current working directory) for the file sapnwrfc.ini and loads its contents into memory.

147.10.8 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.
Example:

```
Dim path As FolderItem = GetFolderItem("libsapnwrfc.dylib")
Dim LibPath As String = path.parent.NativePath

Call RFCModuleMBS.SetCurrentWorkingDirectory(libPath)
```

Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 147.10.9 SetCurrentWorkingDirectory(path as String) as boolean 20088

147.10.9 SetCurrentWorkingDirectory(path as String) as boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 147.10.8 SetCurrentWorkingDirectory(path as folderitem) as boolean 20087

147.10.10 Properties

147.10.11 IniPath as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The directory in which to search for the sapnwrfc.ini file.
Notes:

By default the sapnwrfc library searches for the sapnwrfc.ini in the current working directory of the process. If you want to keep it in a different directory, use this function to tell the sapnwrfc library about the new path.

Note
After you have changed the directory, the NW RFC lib automatically loads the contents of the new sapnwrfc.ini file from that directory.

Pass the full (absolute) path of the directory, in which the sapnwrfc library should look for the sapnwrfc.ini file. A path relative to the current working directory of the process also works.
(Read and Write property)

147.10.12 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The load error code.
Notes: (Read only property)

147.10.13 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The load error message.

Notes: (Read only property)

147.10.14 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the library is loaded.
Notes:

Returns true if the library contains the required functions.
(Read only property)

147.10.15 MajorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get information about currently loaded sapnwrfc library.
Notes:

Major version, e.g. 7500.
(Read only property)

147.10.16 MinorVersion as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get information about currently loaded sapnwrfc library.
Notes:

Minor version.
(Read only property)

147.10.17 PatchLevel as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get information about currently loaded sapnwrfc library.
Notes:

Patch level of the version.
(Read only property)

147.10.18 TraceDir as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the directory where the NW RFC lib should write trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_DIR. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The directory of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new directory. Can be an absolute or relative path name. The directory needs to exist prior to calling this API. The NW RFC lib will not attempt to create non-existing directories.
(Read and Write property)

147.10.19 TraceEncoding as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the character encoding to be used in trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_ENCODING. See the documentation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call affects only new trace files that will be opened after the call. The character encoding of already existing trace files is not changed in order to prevent confusion and garbage data...

Pass the new encoding. Possible values are "UTF-16", "UTF-8" and "DEFAULT". On Windows UTF-16 is recommended for faster performance. "DEFAULT" corresponds to the operating system's default character encoding, which is CP1252 or ISO-8859-1 on most Windows systems and UTF-8 on most Linux systems.
(Read and Write property)

147.10.20 TraceType as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes the way the NW RFC lib writes trace files.
Notes:

This function has the same effect as the sapnwrfc.ini parameter RFC_TRACE_TYPE. See the documen-

tation of that parameter in the sample ini file contained in the /demo directory of the NW RFC SDK.

Note
This API call closes currently open trace files and then changes to "one file per process" or one "file per thread". If the NW RFC lib is already using the given trace type, it does nothing.

Must be either "PROCESS" or "THREAD".
(Read and Write property)

147.10.21 Version as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Get information about currently loaded sapnwrfc library.
Notes:

Version as text to show to user.
(Read only property)

147.10.22 Constants

147.10.23 kErrorAbapClassException = 27

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The called function module raised a class based exception

147.10.24 kErrorAbapException = 5

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The called function module raised an Exception (RAISE or MESSAGE ... RAISING)

147.10.25 kErrorAbapMessage = 4

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The called function module raised an E-, A- or X-Message

147.10.26 kErrorAbapRuntimeFailure = 3

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: SAP system runtime error (SYSTEM_FAILURE): Shortdump on the backend side

147.10.27 kErrorAuthorizationFailure = 29

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Authorization check error

147.10.28 kErrorBufferTooSmall = 23

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The given buffer was to small to hold the entire parameter. Data has been truncated.

147.10.29 kErrorCanceled = 7

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: No longer used

147.10.30 kErrorClosed = 6

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Connection closed by the other side

147.10.31 kErrorCodepageConversionFailure = 21

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Codepage conversion error

147.10.32 kErrorCommunicationFailure = 1

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Error in Network & Communication layer

147.10.33 kErrorConversionFailure = 22

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Error while converting a parameter to the correct data type

147.10.34 kErrorExecuted = 16

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Inbound tRFC Call already executed (needs to be returned from RFC_ON_CHECK_TRANSACTION in case the TID is already known and successfully processed before.)

147.10.35 kErrorExternalFailure = 15

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Error in external custom code. (E.g. in the function handlers or tRFC handlers.) Results in SYSTEM_FAILURE

147.10.36 kErrorIllegalState = 19

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The operation is not supported on that handle at the current point of time (e.g. trying a callback on a server handle, while not in a call)

147.10.37 kErrorInvalidHandle = 13

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: An invalid handle was passed to an API call

147.10.38 kErrorInvalidParameter = 20

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: An invalid parameter was passed to an API call, (e.g. invalid name, type or length)

147.10.39 kErrorInvalidProtocol = 11

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The received data has an unsupported format

147.10.40 kErrorLogonFailure = 2

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Unable to logon to SAP system. Invalid password, user locked, etc.

147.10.41 kErrorMemoryInsufficient = 9

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Memory insufficient

147.10.42 kErrorNotFound = 17

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Function or structure definition not found (Metadata API)

147.10.43 kErrorNotSupported = 18

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: The operation is not supported on that handle

147.10.44 kErrorOk = 0

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Everything O.K. Used by every function. (no exception)

147.10.45 kErrorRetry = 14

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: ListenAndDispatch did not receive an RFC request during the timeout period

147.10.46 kErrorSerializationFailure = 12

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: A problem while serializing or deserializing RFM parameters

147.10.47 kErrorStartSapguiFailure = 26

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Failed to start and attach SAPGUI to the RFC connection.

147.10.48 kErrorTableMoveBof = 24

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Trying to move the current position before the first row of the table.

147.10.49 kErrorTableMoveEof = 25

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Trying to move the current position after the last row of the table.

147.10.50 kErrorTimeout = 8

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Time out

147.10.51 kErrorUnknownError = 28

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: ”Something” went wrong, but I don’t know what...

147.10.52 kErrorVersionMismatch = 10

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the error constants.
Notes: Version mismatch

147.11 class RFCParameterDescriptionMBS

147.11.1 class RFCParameterDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a parameter description.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.11.2 Methods

147.11.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor

147.11.4 Properties

147.11.5 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent connection.
Notes: (Read only property)

147.11.6 decimals as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gives the number of decimals in case of a packed number (BCD)
Notes: (Read only property)

147.11.7 defaultValue as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Default value as defined in SE37.
Notes: (Read only property)

147.11.8 Direction as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies whether the parameter is an input, output or bi-directional parameter.
Notes: (Read only property)

147.11.9 isOptional as Boolean

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies whether this parameter is defined as optional in SE37.
Notes:

True is optional, false non-optional.
(Read only property)

147.11.10 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parameter name.
Notes: (Read only property)

147.11.11 nucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parameter length in bytes in a 1-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.11.12 parameterText as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Description text of the parameter as defined in SE37.
Notes: (Read only property)

147.11.13 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.

Notes: (Read only property)

147.11.14 Type as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parameter data type.
Notes: (Read only property)

147.11.15 TypeDescription as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The structure definition in case this parameter is a structure or table.
Notes:

May be nil for other parameter types.
(Read only property)

147.11.16 TypeString as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The type as string.
Notes:

Convenience property so you can see type in debugger.
(Read only property)

147.11.17 ucLength as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parameter length in bytes in a 2-byte-per-SAP_CHAR system.
Notes: (Read only property)

147.11.18 Constants

147.11.19 kDirectionChanging = 3

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the direction mode constants.
Notes: Import and export parameter. This corresponds to ABAP CHANGING parameter.

147.11.20 kDirectionExport = 2

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the direction mode constants. **Notes:** Export parameter. This corresponds to ABAP EXPORTING parameter.

147.11.21 kDirectionImport = 1

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the direction mode constants. **Notes:** Import parameter. This corresponds to ABAP IMPORTING parameter.

147.11.22 kDirectionTable = 7

MBS Tools Plugin, Plugin Version: 20.2. **Function:** One of the direction mode constants. **Notes:** Table parameter. This corresponds to ABAP TABLES parameter.

147.12 class RFCStructureMBS

147.12.1 class RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a structure in a RFC connection.
Notes: Subclass of the RFCContainerMBS class.

147.12.2 Methods

147.12.3 Clone as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the given structure and returns the handle to the new object.

147.12.4 Constructor(typeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an internal structure data object and returns the handle to the structure object.

147.12.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.13 class RFCTableMBS

147.13.1 class RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a table in a RFC connection.
Notes: Subclass of the RFCContainerMBS class.

147.13.2 Methods

147.13.3 AppendNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new row and appends it at the end of the table.

147.13.4 AppendNewRows(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends a set of new empty rows at the end of the table and moves the table cursor to the first new row.

147.13.5 AppendRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends the given structure at the end of the table.

147.13.6 Clone as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the given table and returns the handle to the new table.

147.13.7 Constructor(TypeDescription as RFCTypeDescriptionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a internal table object and returns the handle to the table.

147.13.8 CurrentRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the structure handle to the current row.

147.13.9 DeleteAllRows

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes all rows from the table.

147.13.10 DeleteCurrentRow

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes the current row from the table.

147.13.11 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.13.12 InsertNewRow as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new row and inserts it at the current position of the table cursor.

147.13.13 InsertRow(row as RFCStructureMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts the given structure at the current position of the table cursor.

147.13.14 MoveTo(row as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor from the current position to the position specified by the index.

147.13.15 MoveToFirstRow

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the current position to the first row of the table.

147.13.16 MoveToLastRow

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the current position to the last row of the table.

147.13.17 MoveToNextRow

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor from the current position to the next row.

147.13.18 MoveToPreviousRow

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Moves the cursor from the current position to the previours row.

147.13.19 ReserveCapacity(numRows as Integer)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reserves memory without changing the size of a table so that new rows can be appended without new memory allocation.

147.13.20 Properties

147.13.21 RowCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of the rows contained in the table.
Notes: (Read only property)

147.13.22 RowType as RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the type descriptor of the table rows.
Notes: (Read only property)

147.14 class RFCTransactionMBS

147.14.1 class RFCTransactionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a transaction.

147.14.2 Methods

147.14.3 ConfirmTransaction

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** After SubmitTransaction has finally succeeded, ConfirmTransaction cleans up the transaction handling table in the backend.
Notes:

Caution:
After this call the backend is no longer protected against this TID. So another SubmitTransaction would result in a duplicate.

147.14.4 Constructor(connection as RFCConnectionMBS, TransactionID as String, QueueName as String)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a container for executing a (multi-step) transactional call.
Notes:

TransactionID: trasanction ID used to identify the transaction;
queueName: queue name associated with the transaction. If it is "" or empty, the transaction is for tRfc

147.14.5 Destructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

147.14.6 InvokeInTransaction(funcHandle as RFCFunctionMBS)

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Puts a tRfc or qRfc call into the given transaction.

Notes:

Can be used multiple times within one transaction handle.
funcHandle: function handle that identifies the Rfc function;

147.14.7 SubmitTransaction

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes all function modules in the backend system, that have accumulated in the transaction so far.
Notes: This step can be repeated until it finally succeeds (RFC_OK). The transaction handling in the backend system protects against duplicates.

147.14.8 Properties

147.14.9 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.14.10 TransactionID as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves a unique 24-digit transaction ID from the SAP backend system.
Notes: (Read only property)

147.15 class RFCTypeDescriptionMBS

147.15.1 class RFCTypeDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a type definition.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

147.15.2 Methods

147.15.3 Constructor

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

147.15.4 CreateStructure as RFCStructureMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an internal structure data object and returns the handle to the structure object.

147.15.5 CreateTable as RFCTableMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a internal table object and returns the handle to the table.

147.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the field description of the structure's indexth field.
See also:

- 147.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS 20107

147.15.7 FieldDescription(Name as String) as RFCFieldDescriptionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the field description of a field given by name.

See also:

- 147.15.6 FieldDescription(Index as Integer) as RFCFieldDescriptionMBS 20107

147.15.8 FieldDescriptions as RFCFieldDescriptionMBS()

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads all the field descriptions.

147.15.9 Properties

147.15.10 Connection as RFCConnectionMBS

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection owning this object.
Notes: (Read only property)

147.15.11 FieldCount as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of fields for this type.
Notes: (Read only property)

147.15.12 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

147.15.13 Name as String

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the type.
Notes: (Read only property)

147.15.14 Parent as Variant

MBS Tools Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.
Notes: (Read only property)

Chapter 148

SATSolver

148.1 class LGLMBS

148.1.1 class LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the SAT Solver from lingeling.
Notes:

Based on lingeling project here:
https://github.com/arminbiere/lingeling
and
http://fmv.jku.at/lingeling/

148.1.2 Blog Entries

148.1.4 Methods

148.1.5 Add(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a value.

148.1.6 Assume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assume single units.

148.1.7 CAssume(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assume clause (at most one)

148.1.8 Clone as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clones the object.
Notes: Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

148.1.9 Constructor

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: Creates new empty object.

148.1.10 DefaultOption(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries default value for an option.

148.1.11 Deref(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries value.
Notes:

neg=false, pos=true
Returns -1 if lit is bigger then MaxVar.

148.1.12 Failed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks failed flag for given item.
Notes:

neg=false, pos=true
for assumptions.

148.1.13 Fixate

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Add assumptions as units

148.1.14 Fixed(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks fixed flag.
Notes:

neg=false, pos=true
Toplevel

148.1.15 FlushCache

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flush all learned clauses.

148.1.16 FlushTimers

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Flush timers.

148.1.17 Fork as LGLMBS

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forks the object.
Notes:

'Forking' copies only irredundant clauses and also uses internal variable indices of the parent as external variable indices. Thus 'parent' and the forked off 'child' do neither exactly work the same way, nor do they use from the API point of view the same set of variables. They are satisfiability equivalent. If the child becomes unsatisfiable the parent can be assumed to be unsatisfiable too and thus 'join' would just add the empty clause to the parent. If the child produces a satisfying assignment, this assignment is turned into an assignment of the parent by 'join'. Parents can be forked multiple times. A child has exactly one parent. Parents and children can be released independently. Between 'Fork' and 'Join' no other operations but further 'Fork' are allowed. The effect ot multiple 'Join' with the same parent is unclear at this point. The same memory manager is use for the child and the parent. Options, prefix, output file and the callbacks for 'getime' and 'Abort' are copied too (if set).

Both 'Cloning' and 'Forking' can be used to implement 'Push & Pop', but the asymmetric forking is more similar to the classical way of implementing it, needs less resources since for instance eliminated variables do not occupy any memory in the children, but requires lifting back satisfying assignments explicitly (through the whole parent chain). If these full satisfying assignments are really needed actually cloning could be more space efficient too. Assume you want to split the solver into two instances, one with a literal set to false, the other one to true. Then cloning allows you to produce two independent branches, while for forking you need three, since the root / top solver still has to be kept for lifting back a potential assignment.

148.1.18 Freeze(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Freezes the given item.

148.1.19 Frozen(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries frozen state.

148.1.20 GetOptionMinMax(Name as String, byref min as Integer, byref max as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current value, minimum and maximum values.

148.1.21 HasOption(Name as String) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if the given option is set.

148.1.22 IncVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Increases variables by one.

148.1.23 Join(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Joins back forked child.

148.1.24 LibVersion as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries library version.
Example:

```
Print "LGL "+LGLMBS.LibVersion
```

148.1.25 Lookahead as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a good look ahead literal or zero if all potential literals have been eliminated or have been used as blocking literals in blocked clause elimination.
Notes: Zero is also returned if the formula is already inconsistent. The lookahead literal is made usable again, for instance if it was not frozen during a previous SAT call and thus implicitly became melted. Therefore it can be added in a unit clause.

148.1.26 Melt(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Melts a literal.

148.1.27 MeltAll

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Melt all literals.

148.1.28 ParseFile(File as FolderItem, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 148.1.29 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 20116

148.1.29 ParseFile(File as FolderItem, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file.
Notes: Returns empty text on success or error message from parser.
See also:

- 148.1.28 ParseFile(File as FolderItem, force as boolean = false) as String 20116

148.1.30 ParsePath(Path as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given by path.
Notes:

Returns empty text on success or error message from parser.
On MacOS and Linux, if file has the following extensions, the file will be decompressed with command line tool and then parsed:

.gz	gzip
.xz	xz
.bz2	bzip2
.zip	unzip
.7z	7x

See also:

- 148.1.31 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 20117

148.1.31 ParsePath(Path as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given by path.
Notes: Returns empty text on success or error message from parser.
See also:

- 148.1.30 ParsePath(Path as String, force as boolean = false) as String 20117

148.1.32 ParseString(Data as String, force as boolean = false) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 148.1.33 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String 20118

148.1.33 ParseString(Data as String, force as boolean, byref LineNo as Integer, byref Max as Integer) as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Parses data file given it as text.
Notes:

Returns empty text on success or error message from parser.
Please pass text with data separated with unix line endings (endofline.unix), so you may need to use ReplaceLineEndings function.
See also:

- 148.1.32 ParseString(Data as String, force as boolean = false) as String 20117

148.1.34 Print(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print system to file or stdout.
Notes:

Pass nil to use stdout.
Remaining in DIMACS format

148.1.35 PrintAll(File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints all values.
Notes:

Including units & equivs.
Pass nil to use stdout.

148.1.36 PrintBanner(Name as String, Prefix as String, File as FolderItem = nil)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints banner including version of library.
Notes:

Pass nil to use stdout.

see lglbnr function.

148.1.37 PrintOptions(prefix as string, IgnoreSome as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print all options to stdout.

148.1.38 PrintPCS(mixed as boolean)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints PCS file.

148.1.39 PrintRangeOptions

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print range options to stdout.

148.1.40 PrintSizes

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints data structure sizes.

148.1.41 PrintStats

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prints statistics to stdout.

148.1.42 PrintUsage

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Print usage "-h".

148.1.43 ReadOptionFile(File as FolderItem) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads the option file.

148.1.44 Reconstk(byref Start as Ptr, byref Top as Ptr)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set Start and Top to the 'start' and 'top' of the reconstruction stack, which is used in BCE, BVE and CCE for reconstructing a solution after eliminating variables or clauses.
Notes: These pointers are only valid until the next Sat or Simp call.

148.1.45 ReduceCache

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reset cache size.

148.1.46 Representative(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Return representative from equivalence class if literal is not top-level assigned nor eliminated.

148.1.47 ResetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set default phase of a literal.
Notes: Stop forcing phase in decisions.

148.1.48 Reusable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if item can be reused.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

148.1.49 Reuse(lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reuses an item.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

148.1.50 Sat as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the system.
Notes: May output messages to stdout.

148.1.51 SetAPITraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a text file and let the library output to this file.
Notes: Logs API calls to the library.

148.1.52 SetID(tid as Integer, tids as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set individual ids for logging and statistics.

148.1.53 SetImportant(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prefer decisions on 'important' variables.

148.1.54 SetOutputFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an output file and let the library output to this file.
Notes: Sets output file for report.

148.1.55 SetPhase(lit as integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set default phase of a literal.
Notes: Any decision on this literal will always try this phase. Note, that this function does not have any effect on eliminated variables. Further equivalent variables share the same forced phase and thus if they are set to different default phases, only the last set operation will be kept.

148.1.56 SetPhases

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the phases.
Notes: Assume the solver is in the SATISFIABLE state (after Sat or Simp), then calling SetPhases will copy the current assignment as default phases.

148.1.57 SetTraceFile(File as FolderItem)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a text file and let the library output to this file.
Notes:

Set trace output file.
Logs trace calls to the library.

148.1.58 Simp(iterations as integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates the system.
Notes: Iterations must be >= 0.

148.1.59 TraverseAllClauses

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over all clauses and calls TraverseAllClauses event for each.
Notes: Internally calls TraverseUnits, TraverseEquivalences and TraverseRemainingClauses.
See also:

- 148.1.85 TraverseAllClauses(Lit as Integer) 20127

148.1.60 TraverseEquivalences

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over equivalences and calls TraverseEquivalences event for each.
See also:

- 148.1.86 TraverseEquivalences(Lit as Integer, Representation as Integer) 20127

148.1.61 TraverseRemainingClauses

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over remaining clauses and calls TraverseRemainingClauses event for each.
See also:

- 148.1.87 TraverseRemainingClauses(Lit as Integer) 20127

148.1.62 TraverseUnits

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loops over units and calls TraverseUnits event for each.
See also:

- 148.1.88 TraverseUnits(Unit as Integer) 20127

148.1.63 Unclone(Child as LGLMBS) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unclones the object.

148.1.64 Usable(lit as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether an item is usable.
Notes: If a literal was not frozen at the last call to Sat (or Simp) it becomes 'unusable' after the next call even though it might not have been used as blocking literal etc.

148.1.65 Properties

148.1.66 Aborted as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The aborted status.
Notes:

We set this to true when the processing is aborted due to an error.
See AbortMessage property for the message.
(Read and Write property)
See also:

- 148.1.84 Aborted 20126

148.1.67 AbortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The abort reason message.
Notes: (Read only property)

148.1.68 Bytes as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current size in bytes.
Notes: (Read only property)

148.1.69 Changed as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Model changed.
Notes: (Read only property)

148.1.70 Confs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of conflicts.
Notes: (Read only property)

148.1.71 Decs as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of decisions.
Notes: (Read only property)

148.1.72 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

148.1.73 Inconsistent as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Contains empty clause?
Notes: (Read only property)

148.1.74 MaxMegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Maximum memory usage in megabytes.
Notes: (Read only property)

148.1.75 MaxVar as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum index of variables.
Notes: (Read only property)

148.1.76 MegaBytes as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current size in memory as megabytes.
Notes: (Read only property)

148.1.77 Options as Dictionary

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries all options with values.
Notes: (Read only property)

148.1.78 Prefix as String

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The prefix for messages.
Notes: (Read and Write property)

148.1.79 ProcessTime as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries CPU usage time used.
Notes:

Value is -1 on Windows as we don't have the unix functions there.
(Read only property)

148.1.80 Props as Int64

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of propagations.
Notes: (Read only property)

148.1.81 Seconds as Double

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns time needed.
Notes: (Read only property)

148.1.82 Option(Name as String) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries or sets option value.
Notes: (Read and Write computed property)

148.1.83 Events

148.1.84 Aborted

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when processing is aborted due to an error.
Notes:

Errors are printed to stdout.
See AbortMessage property for the message.

- 148.1.66 Aborted as Boolean 20123

148.1.85 TraverseAllClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseAllClauses method.
See also:

- 148.1.59 TraverseAllClauses 20122

148.1.86 TraverseEquivalences(Lit as Integer, Representation as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseEquivalences method.
See also:

- 148.1.60 TraverseEquivalences 20122

148.1.87 TraverseRemainingClauses(Lit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseRemainingClauses method.
See also:

- 148.1.61 TraverseRemainingClauses 20123

148.1.88 TraverseUnits(Unit as Integer)

MBS Tools Plugin, Plugin Version: 20.0, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called for TraverseUnits method.
See also:

- 148.1.62 TraverseUnits 20123

148.1.89 Constants

148.1.90 LGL_SATISFIABLE = 10

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: The system is satisfiable.

148.1.91 LGL_UNKNOWN = 0

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: It is not known whether it is satisfiable.

148.1.92 LGL_UNSATISFIABLE = 20

MBS Tools Plugin, Plugin Version: 20.0. **Function:** One of the SAT result values.
Notes: The system is not satisfiable.

Chapter 149

SceneKit

149.1 class SCNAccelerationConstraintMBS

149.1.1 class SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNAccelerationConstraint caps the acceleration and velocity of a node.

149.1.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.1.3 Methods

149.1.4 accelerationConstraint as SCNAccelerationConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAccelerationConstraint object.

149.1.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAccelerationConstraint object.

149.1.6 Properties

149.1.7 damping as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the damping factor of the receiver.
Notes:

Optionally reduce the body's linear velocity each frame to simulate fluid/air friction. Value should be zero or greater. Defaults to 0.1. Animatable.
(Read and Write property)

149.1.8 decelerationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the distance at which the node should start decelerating.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

149.1.9 maximumLinearAcceleration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the maximum linear acceleration. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear acceleration is in m.s^-2
(Read and Write property)

149.1.10 maximumLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Controls the maximum linear velocity. Defaults to MAXFLOAT. Animatable.
Notes:

The maximum linear velocity is in m.s
(Read and Write property)

149.2 class SCNActionMBS

149.2.1 class SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A simple, reusable animation that changes attributes of any node you attach it to.
Notes:

You use actions most often to change the structure and content of the SCNNodeMBS object to which they are attached, but you can also use actions make other changes to the scene. In SceneKit, actions provide an easy way to implement animated behaviors that frequently change in response to user input.

see also
https://developer.apple.com/documentation/scenekit/scnaction
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.2.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.2.3 Xojo Developer Magazine

- 18.2, page 39

149.2.4 Methods

149.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.2.6 copy as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the action.

149.2.7 fadeIn(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that changes the opacity of the node to 1.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 1.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOut(Duration)

149.2.8 fadeOpacityBy(factor as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that adjusts the opacity of a node by a relative value.
Notes:

factor: The amount to change the node's opacity by.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeOpacityBy(-factor, duration)

149.2.9 fadeOpacityTo(opacity as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that adjusts the opacity of a node to a new value.
Notes:

opacity: The new opacity value of the node.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates to its new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

149.2.10 fadeOut(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that changes the opacity of the node to 0.0.
Notes:

duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's opacity property animates from its current value to 0.0.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.fadeIn(duration)

149.2.11 group(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that runs a collection of actions in parallel.
Notes:

actions: An array of SCNActionMBS objects.

Returns a new group action object.

When the action executes, the actions that make up the group all start immediately and run in parallel. The duration of the group action is the longest duration among the collection of actions. If an action in the group has a duration less than the group's duration, the action completes and then idles until the group completes the remaining actions. This matters most when creating a repeating action that repeats a group. This action is reversible; it creates a new group action that contains the reverse of each action specified in the group.

149.2.12 hide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that hides a node.
Notes:

When the action executes, the node's hidden property is set to true.
This action is reversible; the reverse is equivalent to the unhide action.

149.2.13 javaScriptActionWithScript(script as string, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that executes a JavaScript script periodically over a specified duration.
Notes:

script: A string containing JavaScript source code.
seconds: The duration of the action, in seconds.

SceneKit exposes its classes, methods, and functions in the JavaScript context that runs the script—see the SCNJavaScript.h header file for details.

When the action executes, SceneKit runs the script repeatedly until the action's duration expires. Each time SceneKit runs the script, it computes the elapsed time since the action began executing (as a fraction of the action's duration between 0.0 and 1.0) and makes it available to the script as a variable named elapsedTime. The script can also reference the SCNNode object running the action as a variable named node.
This action is not reversible; the reverse action executes the same script.

149.2.14 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node relative to its current position.
Notes:

delta: A vector that describes the change to be applied to the node's position.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.

This action is reversible; the reverse is created as if the following code had been executed:

dim reverseDelta as SCNVector3MBS = SCNVector3MBS.Vector(-delta.x, -delta.y, -delta.z)
SCNActionMBS.moveBy(reverseDelta, duration)
See also:

- 149.2.15 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS 20135

149.2.15 moveBy(deltaX as double, deltaY as double, deltaZ as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node relative to its current position.
Notes:

deltaX: The distance to move the node in the X direction of its parent node's local coordinate space.
deltaY: The distance to move the node in the Y direction of its parent node's local coordinate space.
deltaZ: The distance to move the node in the Z direction of its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.moveBy(-deltaX, -deltaY, -deltaZ, duration)
See also:

- 149.2.14 moveBy(delta as SCNVector3MBS, duration as double) as SCNActionMBS 20134

149.2.16 moveTo(location as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that moves a node to a new position.
Notes:

location: The coordinates for the node's new position in its parent node's local coordinate space.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's position property animates from its current position to its new position.
This action is not reversible; the reverse of this action has the same duration but does not move the node.

149.2.17 removeFromParentNode as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that removes the node from its parent.
Notes:

When the action executes, the node is immediately removed from its parent.
This action is not reversible; the reverse of this action is the same action.

149.2.18 repeatAction(action as SCNActionMBS, count as integer) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that repeats another action a specified number of times.
Notes:

action: The action to be executed.
count: The number of times to execute the action.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats, until the count is reached.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it the same number of times.

149.2.19 repeatActionForever(action as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that repeats another action forever.
Notes:

action: The action to execute.

Returns a new action object.

When the action executes, the associated action runs to completion and then repeats.
This action is reversible; it creates a new action that is the reverse of the specified action and then repeats it forever.
Note
The action to be repeated must have a non-instantaneous duration.

149.2.20 reversedAction as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that reverses the behavior of another action.
Notes: This method always returns an action object; however, not all actions are reversible. When reversed, some actions return an object that either does nothing or performs the same action as the original action. For details on how an action is reversed, see the description of the class method used to create that action.

149.2.21 rotateBy(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an action that rotates the node in each of the three principal axes by angles relative to its current orientation.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateBy(-xAngle, -yAngle, -zAngle, duration)

149.2.22 rotateByAngle(angle as double, axis as SCNVector3MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node by an angle around a specified axis.
Notes:

angle: The amount to rotate the node counterclockwise around the specified axis, in radians.
axis: A vector in the node's local coordinate space whose direction specifies the axis of rotation.
duration: The duration, in seconds, of the animation.

Return a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.rotateByAngle(-angle, axis, duration)

149.2.23 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle. Calling this method is equivalent to calling rotateTo() and passing false for the shortestUnitArc parameter.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 149.2.24 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS

149.2.24 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double, shortestUnitArc as boolean) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to absolute angles in each of the three principal axes.
Notes:

xAngle: The amount to rotate the node counterclockwise around the x-axis of its local coordinate space, in radians.
yAngle: The amount to rotate the node counterclockwise around the y-axis of its local coordinate space, in radians.
zAngle: The amount to rotate the node counterclockwise around the z-axis of its local coordinate space, in radians.
duration: The duration, in seconds, of the animation.
shortestUnitArc: If false (the default), the animation interpolates each component of the node's rotation between its current value and the new value. If true, the animation makes the most direct rotation possible from the node's current orientation to the new orientation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.
See also:

- 149.2.23 rotateTo(xAngle as double, yAngle as double, zAngle as double, duration as double) as SCNActionMBS 20138

149.2.25 rotateToAxisAngle(axisAngle as SCNVector4MBS, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that rotates the node to an absolute angle around a specified axis.
Notes:

axisAngle: A four-component vector whose first three components are a vector in the node's local coordinate space specifying an axis and whose fourth component is the amount to rotate the node counterclockwise around that axis, in radians.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's rotation property animates to the new angle.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

149.2.26 runBlock(del as SCNActionRunBlockMBS, tag as variant = nil) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that executes run the given method.
Notes:

When the action executes, SceneKit calls the delegate method. This action takes place instantaneously.
This action is not reversible; the reverse action executes the same delegate method.

149.2.27 scaleBy(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that uniformly changes the scale factor of a node by a relative value.
Notes:

scale: The amount of change to make to all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is reversible; the reverse is created as if the following code had been executed:

SCNActionMBS.scaleBy(-scale, duration)

149.2.28 scaleTo(scale as double, duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that uniformly changes the scale factor of a node to an absolute value.
Notes:

scale: The new value for all three components of the node's scale.
duration: The duration, in seconds, of the animation.

Returns a new action object.

When the action executes, the node's scale property animates to the new value.
This action is not reversible; the reverse of this action has the same duration but does not change anything.

149.2.29 sequence(actions() as SCNActionMBS) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that runs a collection of actions sequentially.
Notes:

actions: An array of SCNActionMBS objects.
Returns a new sequence action object.

When the action executes, the first action in the sequence starts and runs to completion. Subsequent actions in the sequence run in a similar fashion until all of the actions in the sequence have executed. The duration of the sequence action is the sum of the durations of the actions in the sequence.

This action is reversible; it creates a new sequence action that reverses the order of the actions. Each action in the reversed sequence is itself reversed.

149.2.30 unhide as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that ensures a node is not hidden.
Notes:

When the action executes, the node's hidden property is set to false.
This action is reversible; the reverse is equivalent to the hide action.

149.2.31 wait(duration as double) as SCNActionMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an action that idles for a specified period of time.
Notes:

When the action executes, the action waits for the specified amount of time and then ends. This is typically used as part of a sequence of actions to insert a delay between two other actions. You might also use it in conjunction with the runAction method to trigger code that needs to run at a later time.
This action is not reversible; the reverse of this action is the same action.

149.2.32 Properties

149.2.33 duration as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The duration required to complete an action.
Notes:

This is the expected duration of an action's animation. The actual time an action takes to complete is modified by the action's timingMode property.
(Read and Write property)

149.2.34 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object references.
Notes: (Read and Write property)

149.2.35 speed as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A speed factor that modifies how fast an action runs.
Notes:

The speed factor adjusts how fast an action's animation runs. For example, a speed factor of 2.0 means the animation runs twice as fast.
(Read and Write property)

149.2.36 timingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timing mode used to execute an action.
Notes:

For possible values, see TimingMode constants. The default value is TimingModeLinear.
(Read and Write property)

149.2.37 Constants

149.2.38 TimingModeEaseIn = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in pacing. The animation begins slowly, and then speeds up as it progresses.

149.2.39 TimingModeEaseInEaseOut = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-in ease-out pacing. The animation begins slowly, accelerates through the middle of its duration, and then slows again before completing.

149.2.40 TimingModeEaseOut = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Ease-out pacing. The animation begins quickly, and then slows as it completes.

149.2.41 TimingModeLinear = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants affecting the animation curve of an action, used by the timingMode property.
Notes: Linear pacing. The animation progresses evenly throughout its duration.

149.2.42 Delegates

149.2.43 SCNActionRunBlockMBS(node as SCNNodeMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the runBlock method.

149.3 class SCNAvoidOccluderConstraintMBS

149.3.1 class SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNAvoidOccluderConstraint constraints place the receiver at a position that prevent nodes with the specified category to occlude the target.
Notes: The target node and it's children are ignored as potential occluders.

149.3.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.3.3 Methods

149.3.4 avoidOccluderConstraintWithTarget(target as SCNNodeMBS) as SCNAvoidOccluderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAvoidOccluderConstraint object.

149.3.5 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNAvoidOccluderConstraint object.

149.3.6 Properties

149.3.7 bias as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the bias the apply after moving the receiver to avoid occluders.
Notes:

Defaults to 10e-5.
A positive bias will move the receiver closer to the target.
(Read and Write property)

149.3.8 occluderCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the category of node to consider as occluder.
Notes:

Defaults to 1.
(Read and Write property)

149.3.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node.
Notes: (Read and Write property)

149.4 class SCNBillboardConstraintMBS

149.4.1 class SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A constraint that orients a node to always point toward the current camera.
Notes:

An SCNBillboardConstraint object automatically adjusts a node's orientation so that its local z-axis always points toward the pointOfView node currently being used to render the scene. For example, you can use a billboard constraint to efficiently render parts of a scene using two-dimensional sprite images instead of three-dimensional geometry—by mapping sprites onto planes affected by a billboard constraint, the sprites maintain their orientation with respect to the viewer. To attach constraints to an SCNNodeMBS object, use its constraints property.
Subclass of the SCNConstraintMBS class.

149.4.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.4.3 Methods

149.4.4 billboardConstraint as SCNBillboardConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

149.4.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNBillboardConstraint constraint.
Notes: A billboard constraint forces the receiver to look into the direction of the current point of view.

149.4.6 Properties

149.4.7 freeAxes as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the axes on which the billboarding orientation operates. Defaults to SCNBillboardAxisAll.

Notes: (Read and Write property)

149.4.8 Constants

149.4.9 SCNBillboardAxisAll = 7

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes:

Align an affected node such that its orientation always matches that of the view.
This is the default option for newly created billboard constraints.

149.4.10 SCNBillboardAxisX = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its x-axis is always parallel to that of the view, leaving it free to rotate otherwise.

149.4.11 SCNBillboardAxisY = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its y-axis is always parallel to that of the view, leaving it free to rotate otherwise.

149.4.12 SCNBillboardAxisZ = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for locking the orientation of nodes affected by a billboard constraint.
Notes: Align an affected node such that its z-axis is always perpendicular to the viewing plane, leaving it free to rotate otherwise.

149.5 class SCNBoxMBS

149.5.1 class SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNBox represents a box with rectangular sides and optional chamfers.
Notes: Subclass of the SCNGeometryMBS class.

149.5.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

- 18.2, page 22

149.5.4 Methods

149.5.5 box(width as double, height as double, length as double, chamferRadius as double) as SCNBoxMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

149.5.6 Constructor(width as double, height as double, length as double, chamferRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a box with given width, height, length and chamfer radius.
Notes:

width: The width of the box.
height: The height of the box.
length: The length of the box.
chamferRadius: The chamfer radius of the box.

149.5.7 Properties

149.5.8 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

149.5.9 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

149.5.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.5.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.5.12 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The length of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.5.13 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.5.14 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The width of the box. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.5.15 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.6 class SCNCameraControllerMBS

149.6.1 class SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a camera controller.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.6.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

149.6.3 Methods

149.6.4 clearRoll

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Clear the camera roll if any.

149.6.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.6.6 dollyToTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Zoom by moving the camera along the axis from the camera position to the target.

149.6.7 rollAroundTarget(delta as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotate the camera around the axis from the camera position to the target.
Notes: Delta is in degrees.

149.6.8 rotate(deltaX as double, deltaY as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Rotate delta is in degrees.

149.6.9 stopInertia

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stop current inertia.

149.6.10 translateInCameraSpace(x as double, y as double, z as double)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Translate the camera along the local X/Y/Z axis.

149.6.11 Properties

149.6.12 automaticTarget as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Automatically update the target in beginInteraction.
Notes:

Defaults to false.
(Read and Write property)

149.6.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.6.14 inertiaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Set to true to enable inertia on endInteraction.
Notes:

Defaults to false.
(Read and Write property)

149.6.15 inertiaFriction as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The friction coefficient applied to the inertia.
Notes:

Defaults to 0.05.
(Read and Write property)

149.6.16 inertiaRunning as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if inertia is running.
Notes: (Read only property)

149.6.17 maximumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .
Defaults to 0.0.
(Read and Write property)

149.6.18 maximumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.

The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

149.6.19 minimumHorizontalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum horizontal view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both horizontal angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-180, 180] .
Defaults to 0.0.
(Read and Write property)

149.6.20 minimumVerticalAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Minimum and maximum vertical view angles in degrees for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable.
Notes:

The angle constraints is not enforced if both vertical angle properties values are set to 0.
The angle constraints will not be enforced if the initial orientation is outside the given range.
The minimum angle must be inferior to the maximum angle.
Angles are in world space and within the range [-90, 90] .
Defaults to 0.0.
For example: set to minimum to 0 and maximum to 90 to only allow orbit around the top hemisphere.
(Read and Write property)

149.6.21 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node describing the point of view.
Notes: (Read and Write property)

149.6.22 target as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera target in world space for orbit rotation.
Notes: (Read and Write property)

149.6.23 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The up vector in world space used as reference for SCNInteractionModeFly and SCNInteractionModeOrbitTurntable camera modes.
Notes:

Defaults to (0, 1, 0).
(Read and Write property)

149.7 class SCNCameraMBS

149.7.1 class SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A set of camera attributes that can be attached to a node to provide a point of view for displaying the scene.
Notes:

To display a scene, you must designate a node whose camera property contains a camera object as the point of view.

The SCNNode object containing a camera defines a point of view—that is, the position and orientation of the camera. A camera's direction of view is always along the negative z-axis of the node's local coordinate system. To point the camera at different parts of your scene, use the position, rotation, or transform property of the node containing it. (Alternatively, to ensure that a camera always points at a particular element of your scene even when that element moves, attach a SCNLookAtConstraint object to the node containing the camera.)

An SCNCamera object itself defines the shape and, in part, the appearance of the rendered scene as seen from its point of view. By default, a camera defines a perspective projection, whose field of view (FOV) and near and far visibility limits you control using the properties listed in Adjusting Camera Perspective and illustrated below.

149.7.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

149.7.3 Methods

149.7.4 camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new camera object.
Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

149.7.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new camera object.

Notes: To use the camera to display a scene, attach it to the camera property of a node and then select that node using the pointOfView property of the view (or layer or renderer) rendering the scene.

149.7.6 copy as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the camera.

149.7.7 Properties

149.7.8 ApertureBladeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of physical camera aperture blades simulated by SceneKit for depth-of-field effects. **Notes:**

When the wantsDepthOfField setting is enabled, SceneKit renders scenes using the camera with a depth-of-field blur (also called bokeh) effect modeled after those created by a real-world physical camera. One feature of real-world camera bokeh effects is the tendency of distant bright points to blur into larger shapes based on the shape of the aperture between the camera's lens and its imaging plane (film or sensor). Physical cameras control aperture using a mechanism that moves several flat blades in or out to create a smaller or larger opening, so the natural bokeh effect in traditional photography produces polygon-shaped blur effects. This property controls the number of blades in the simulated camera aperture, and thus the polygon shape seen in the resulting bokeh effect. For example, a blade count of 6 (the default) causes distant bright points to blur into hexagon shapes. Increasingly large blade counts result in the bokeh effect appearing more circular, as shown below.
(Read and Write property)

149.7.9 AutomaticallyAdjustsZRange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the camera automatically adjusts its zNear and zFar depth limits.
Notes:

The default value of this property is false, specifying that the camera's zNear and zFar properties control its depth limits. If you change this property's value to true, SceneKit automatically adjusts the depth limits at render time to fit the bounding box of the scene. Changing the values of the zNear and zFar properties automatically resets this property's value to false.
(Read and Write property)

149.7.10 averageGray as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The luminance level to use as the midpoint of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with this property which serves as a constant estimate of scene luminance.
The default value is 0.18. By setting this property to a higher or lower value, you can compensate for scenes with darker or brighter content. Alternatively, by setting the wantsExposureAdaptation property, you can allow SceneKit to automatically adjust exposure as the visible contents of the scene change.
This property has no effect if the wantsHDR value is false. If the exposureAdaptationDarkeningSpeedFactor value is true, SceneKit ignores this property, and instead computes the average luminance currently visible to the camera during rendering.
(Read and Write property)

149.7.11 bloomBlurRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius, in pixels, for the blurring portion of the bloom effect applied to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. The bloom effect combines selective brightening and blurring effects; this property controls the blur portion of the effect. A value of zero effectively disables the bloom effect, and higher values result in a broader, softer glow. The default value is 4.0 pixels.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.12 bloomIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of bloom effect to apply to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the strength of the bloom effect; lower values result in a subtle effect, and higher values create very bright glow. The default value is 0.0, resulting in no bloom effect.

You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.13 bloomThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The brightness threshold at which to apply a bloom effect to highlights in the rendered scene. Animatable.
Notes:

A bloom effect adds a soft glow to highlights (areas of bright color) in the rendered scene, simulating the way bright highlights appear to the human eye or a physical camera in a real-world scene. This property controls the brightness level required to trigger the bloom effect; lower values apply the effect to more of the scene, and higher values apply the effect only to the brightest white areas. The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.14 colorFringeIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The blend factor for fading the color fringing effect applied to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values for this property result in brighter, more vivid color fringing, and lower values create a subtler effect. The default value of 1.0 leaves the color fringing effect at its most vivid.
This property controls a fade between the color fringing effect and the otherwise-normally-rendered image. The colorFringeStrength property controls the breadth of the color fringing effect.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.15 colorFringeStrength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of color fringing effect to apply to the rendered scene.
Notes:

Color fringing applies an effect that separately blurs the color components of each rendered pixel, adding subtle rainbow edge effects to the rendered scene that simulate the effects of chromatic aberration in a physical camera. Higher values create a more pronounced color shift, creating wider rainbow fringes; lower

values spread colors across shorter distances, creating a subtler effect. The default value of 0.0 disables the color fringing effect entirely.
This property controls the breadth of color fringing. The colorFringeIntensity property controls the blend factor between the color-fringed and the otherwise-normally-rendered image.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.16 colorGrading as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A texture for applying color grading effects to the entire rendered scene.
Notes:

The contents value for this material property must be a 3D color lookup table, or a 2D texture image that represents such a table arranged in a horizontal strip.

see also
https://developer.apple.com/documentation/scenekit/scncamera/1644114-colorgrading
(Read only property)

149.7.17 contrast as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An adjustment factor to apply to the overall visual contrast of the rendered scene.
Notes:

A value of 0.0 (the default) leaves the rendered scene unchanged. Positive values increase contrast between bright and dark areas, and negative values reduce contrast, shifting the rendered scene towards a uniform gray.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.18 exposureAdaptationBrighteningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The relative duration of automatically animated exposure transitions from dark to bright areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates

automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.4, resulting in brightening animations that are slightly faster than darkening animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

149.7.19 exposureAdaptationDarkeningSpeedFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The relative duration of automatically animated exposure transitions from bright to dark areas.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. When the wantsExposureAdaptation property is enabled, SceneKit automatically adjusts the tone mapping curve based on the average luminance currently visible to the camera, and creates automatic transitions between exposure levels.
SceneKit automatically determines the overall duration of exposure-level animations based on the values of this property and the exposureAdaptationDarkeningSpeedFactor property. The default value is 0.6, resulting in darkening animations that are slightly faster than brighting animations.
This property has no effect if either of the wantsHDR or wantsExposureAdaptation values is false.
(Read and Write property)

149.7.20 exposureOffset as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A logarithmic bias that adjusts the results of SceneKit's tone mapping operation, brightening or darkening the visible scene.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Use this property to bias the tone mapping curve. The default exposure offset is zero, specifying no bias. Positive values result in a brighter scene, and negative values result in a darker scene.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

149.7.21 FieldOfView as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The vertical or horizontal viewing angle of the camera.
Notes:

The projectionDirection property determines whether this fieldOfView property measures the camera's vertical or horizontal viewing angle, and SceneKit automatically calculates the viewing angle in the other direction to match the aspect ratio of the view displaying the scene. For example, a fieldOfView of 60 and the default SCNCameraProjectionDirectionVertical projection, presented fullscreen on a 16:9 display in portrait orientation, results in a vertical viewing angle of 60° and a horizontal viewing angle of 33.75°.
You can choose to specify viewing angle either directly, using this fieldOfView property, or in terms that model a physical camera, using the sensorHeight and focalLength properties. Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

149.7.22 FocalBlurSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of pixel samples SceneKit uses to create depth-of-field blur effects.
Notes:

When the wantsDepthOfField setting is enabled, SceneKit renders depth-of-field blur (also called bokeh) effects using a blur filter that samples multiple points in the image. Sampling a larger number of points produces a higher quality visual effect at a higher performance cost, and vice versa. The default sample count is 25.
(Read and Write property)

149.7.23 FocalLength as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera's focal length, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

149.7.24 focusDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distance from the camera at which objects appear in sharp focus. Animatable.
Notes:

Objects at this distance from the camera appear perfectly focused. Objects nearer to or farther from the camera than this distance appear increasingly blurred, with the behavior of the blur effect depending on the fStop, apertureBladeCount and focalBlurSampleCount properties. The default focus distance is 2.5.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.7.25 fStop as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physical camera aperture simulated by SceneKit for depth-of-field effects. Animatable.
Notes:

F-stop numbers describe the light-gathering area of a physical camera's imaging system, and are typically expressed as the denominator of a ratio including the camera's focal length f, such as f/2 or f/5.6. A larger denominator indicates a smaller aperture, allowing less light to pass from the camera's lens through to the imaging plane (sensor or film), and a smaller denominator indicates a larger aperture that lets more light through.
SceneKit uses aperture measurements to simulate depth-of-field blur effects (also called bokeh) approximating those produced by a physical camera. A larger fStop number (or aperture denominator) causes most of the scene to appear in focus, with extremely close or far depths showing slight blurring; a smaller number results in only a narrow range of depths appearing in focus, and a more pronounced blur effect for the rest of the scene. The default fStop value is 5.6.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.7.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.7.27 maximumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is 15.0. Decreasing the value causes brighter portions of the scene to become over-exposed (uniformly white, losing definition). Increasing the value adds more dynamic range for brighter portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

149.7.28 minimumExposure as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum exposure value to use in tone mapping.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
Exposure values are exponential: a value of 1.0 doubles brightness, a value of 2.0 quadruples brightness, a value of -1.0 halves brightness, and so on. The default value is -15.0. Increasing the value causes darker portions of the scene to become under-exposed (uniformly black, losing definition). Decreasing the value adds more dynamic range for darker portions of the scene; however, a greater breadth of difference between the minimum and maximum exposures decreases contrast.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

149.7.29 motionBlurIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor that determines the intensity of motion blur effects. Animatable.
Notes:

The default intensity of zero results in no motion blur effect. Higher values (toward a maximum of 1.0) create more pronounced motion blur effects.
Motion blur is not supported when wide-gamut color rendering is enabled. Wide-gamut rendering is enabled by default on supported devices; to opt out, set the SCNDisableWideGamut key in your app's Info.plist file.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.7.30 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the camera object.
Notes:

You can provide a descriptive name for a camera object to make managing your scene graph easier. Cameras loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine cameras in a scene file without loading its scene graph.
(Read and Write property)

149.7.31 orthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the camera's magnification factor when using an orthographic projection.
Notes:

In an orthographic projection, equally sized objects appear equally sized regardless of their distance from the camera. To switch between orthographic and perspective projections, see the usesOrthographicProjection property.
(Read and Write property)

149.7.32 ProjectionDirection as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The axis used to determine field of view or orthographic scale.
Notes:

The fieldOfView property measures view angle in a single primary direction, determined by this projectionDirection property. For the other direction, SceneKit automatically adjusts field of view depending on the aspect ratio of the view presenting the scene.
For example, with the default projection direction of SCNCameraProjectionDirectionVertical, setting fieldOfView to 60 results in a vertical view angle of 60°. If the scene appears on a display with a 4:3 aspect ratio, the horizontal view angle is 80°. However, if the scene appears on a 16:9 display, the horizontal view angle is 106°.
This property has a similar effect on scaling for orthographic projections. The orthographicScale property measures the scale factor in the direction of the projectionDirection property, and SceneKit automatically calculates scale factor in the other direction according to aspect ratio.
(Read and Write property)

149.7.33 projectionTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera's projection transformation.
Notes:

This transformation expresses the combination of all the camera's geometric properties: projection type (perspective or orthographic), field of view, depth limits, and orthographic scale (if applicable). SceneKit uses this transformation to convert points in the camera node's coordinate space to the renderer's 2D space when rendering and processing events.
You can use this transformation directly if your app needs to convert between view and renderer coordinates for other purposes. Alternatively, if you compute your own projection transform matrix, you can set this property to override the transformation synthesized from the camera's geometric properties.
(Read and Write property)

149.7.34 saturation as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An adjustment factor to apply to the overall color saturation of the rendered scene.
Notes:

A value of 1.0 (the default) leaves scene colors unchanged. Greater values result in oversaturated colors, and a value of 0.0 makes the rendered scene entirely grayscale.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.35 screenSpaceAmbientOcclusionBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An offset for modulating ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionBias value is used in an intermediate stage of calculating the SSAO effect, and measures a distance in scene units. Increasing or decreasing this value from its default of 0.03 can help to offset unrealistic effects produced by changing other SSAO settings.
(Read and Write property)

149.7.36 screenSpaceAmbientOcclusionDepthThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum depth difference, in units of scene space, at which to apply ambient occlusion effects.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
This screenSpaceAmbientOcclusionDepthThreshold property controls the effect of relative distance from the camera on SSAO effects. Higher values create more shadowing effects between foreground and background elements of the scene, but this can result in unrealistic dark halos around foreground elements that are far from the background. Lower values avoid dark halo effects, but create less visual separation between scene elements at different distances from the camera. The default value is 0.2 units.
(Read and Write property)

149.7.37 screenSpaceAmbientOcclusionIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The intensity of the screen-space ambient occlusion effect applied in camera rendering.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
The default value of this property is zero, disabling SSAO effects. Increasing the intensity value creates deeper, bolder shadows.
(Read and Write property)

149.7.38 screenSpaceAmbientOcclusionNormalThreshold as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of the blur effect applied to create ambient occlusion shadows.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.

SSAO shadowing includes a blur effect to realistically soften differences in shadow between adjacent pixels, which depends on both the smoothness of scene geometry and this factor. Larger blur factors create a softer, more spread-out blur; smaller factors create coarser shadowing effects.
(Read and Write property)

149.7.39 screenSpaceAmbientOcclusionRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance, in units of scene space, at which ambient occlusion takes effect.
Notes:

Ambient occlusion is an effect that improves material shading by calculating the amounts of ambient light that reach various parts of a surface, creating shadows on parts of a geometry where incoming light is obscured by other parts of the geometry. (You can provide pre-rendered ambient occlusion effects for a material using its ambientOcclusion property.) Screen-space ambient occlusion (SSAO) provides a real-time approximation of this effect for the entire scene viewed through the camera.
SSAO effects work by storing relevant scene geometry information for each pixel, and using that information to produce per-pixel shading effects. This screenSpaceAmbientOcclusionRadius property determines the area in scene space to consider around each pixel for determining the amount of incoming ambient light blocked by surrounding geometry (and thus the amount of shadow effect to apply). The default value is 5; smaller values cause SSAO effects to apply only to finer geometry details, while larger values affect coarser details.
(Read and Write property)

149.7.40 SensorHeight as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The vertical size of the camera's imaging plane, in millimeters.
Notes:

The sensorHeight and focalLength properties determine the camera's horizontal and vertical viewing angles using terms that model physical camera devices. (Alternatively, you can work with viewing angle directly though the fieldOfView property.) For example, with the default sensor height of 24 mm and default focal length of 50 mm, the vertical field of view is 60°.
Setting the fieldOfView property causes SceneKit to automatically recalculate the focalLength value, and setting the sensorHeight or focalLength property recalculates fieldOfView.
(Read and Write property)

149.7.41 UsesOrthographicProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the camera uses an orthographic projection.
Notes:

The default value of this property is false, specifying a perspective projection. In a perspective projection, equally sized objects nearer to the camera appear larger than those farther away.
Set the value of this property to true to specify an orthographic projection. In an orthographic projection, equally sized objects appear equally sized regardless of distance from the camera.
To control the magnification factor of an orthographic camera, use its orthographicScale property.
(Read and Write property)

149.7.42 vignettingIntensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The magnitude of vignette (darkening around edges) effect to apply to the rendered scene.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result in more darkening, and lower values result in a subtler effect. The default value of 0.0 results in no vignetting effect.
This property controls the level of darkening applied; the vignettingPower property controls the area of the rendered image to be darkened.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.43 vignettingPower as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of the rendered scene to darken with a vignette effect.
Notes:

A vignette effect darkens the edges and corners of the rendered scene, simulating the effect of lens and barrel shape on the image produced by a physical camera. Higher values result apply the darkening effect to a broader area around the edges of the rendered image, and lower values apply the effect to a smaller area, leaving more of the rendered image at full brightness. The default value of 0.0 results in no vignetting effect.
This property controls the area of the rendered image to be darkened; the vignettingIntensity property controls the level of darkening applied to those areas.
To enable this behavior, you must first enable the wantsHDR setting.
(Read and Write property)

149.7.44 WantsDepthOfField as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit renders depth-of-field blur effects for the camera.
Notes:

This value is false by default, disabling depth-of-field effects.
Enabling this property causes SceneKit to render blur effects that model those created by a physical camera device (also known as bokeh). That is, objects in the scene appear more or less blurry depending on their distance from the camera and the camera's focusDistance, and the intensity and style of the blur effect depend on the fStop and apertureBladeCount properties.

Note
For best results, also enable the wantsHDR property when using depth-of-field effects. High Dynamic Range rendering provides high contrast for distant bright points in the scene, creating more pronounced bokeh effects.
(Read and Write property)

149.7.45 WantsExposureAdaptation as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit automatically adjusts the exposure level.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. One measure of tone mapping is the exposure value, whose effect on the output is similar to that of the shutter speed (or exposure time) of a real-world camera—lower exposure values result in a darker image, and higher exposures result in a brighter image. You cannot adjust exposure value directly—instead, SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance.

If this property's value is true (the default), SceneKit automatically measures the current luminance visible to the camera during rendering, and adjusts the exposure level accordingly. Additionally, when the scene luminance changes, SceneKit automatically animates a transition to the new exposure level (see the exposureAdaptationBrighteningSpeedFactor and exposureAdaptationDarkeningSpeedFactor properties).

Note
The visual effect of automatic exposure is similar to how human visual perception adjusts to changes in environmental lighting. For example, consider a game scene where the player moves from a darkened area into full daylight. At first, the exposure value is low, allowing for visible detail in the darkened area, but no detail in the white daylight outside. As the player moves into the daylight, the entire view becomes blindingly bright, but over a brief time the player's vision adapts: detail becomes visible in the bright area, and the darkened area loses detail.

If this property's value is false, SceneKit's tone mapping effect is constant. Instead of responding to scene luminance, SceneKit uses the averageGray property to determine the tone mapping curve.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

149.7.46 WantsHDR as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit applies High Dynamic Range (HDR) postprocessing effects to a scene.
Notes:

When this property's value is false (the default), SceneKit performs lighting calculations in a color space whose brightness range is similar to that of the output display. This approach limits the ability to perform realistic rendering of scenes with fine details in brightness levels.
When you enable HDR rendering for a camera, SceneKit calculates lighting in a much deeper color space, preserving fine details in contrast regardless of brightness, then applies a post-processing effect called tone mapping to translate luminance values from that space to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve (including the exposure level) from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties along with a measure of scene luminance. The wantsExposureAdaptation property determines whether tone mapping effects are static or dynamically respond when the luminance visible to the camera changes.
The default value is false.
(Read and Write property)

149.7.47 whitePoint as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The luminance level to use as the upper end of a tone mapping curve.
Notes:

When using a High Dynamic Range (HDR) camera, SceneKit applies a process called tone mapping to translate the wide range of luminance values in the visible scene to the narrower range of brightness values that can be shown on a display. SceneKit determines a tone mapping curve from the minimumExposure, maximumExposure, exposureOffset, and whitePoint properties, along with a measure of scene luminance.
The default value is 1.0. By setting this property to a higher or lower value, you can produce more gradual or more abrupt transitions between shadows and highlights.
This property has no effect if the wantsHDR value is false.
(Read and Write property)

149.7.48 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera's far depth limit. Animatable.
Notes:

The far value determines the maximal distance between the camera and a visible surface. If a surface is

farther from the camera than this distance, the surface is clipped and does not appear. The default far value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.7.49 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The camera's near depth limit. Animatable.
Notes:

The near value determines the minimal distance between the camera and a visible surface. If a surface is closer to the camera than this distance, the surface is clipped and does not appear. The near value must not be zero. The default near value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.7.50 Constants

149.7.51 kProjectionDirectionHorizontal = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured horizontally.

149.7.52 kProjectionDirectionVertical = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the options for the axis used to determine field of view or orthographic projection.
Notes: The camera's field of view or orthographic scale are measured vertically.

149.8 class SCNCapsuleMBS

149.8.1 class SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCapsule represents a capsule with controllable height and cap radius.
Notes: Subclass of the SCNGeometryMBS class.

149.8.2 Blog Entries

- Basic Forms in MBS Xojo SceneKit Plugin
- MBS Xojo Plugins, version 19.1pr1

149.8.3 Xojo Developer Magazine

- 18.2, page 22

149.8.4 Methods

149.8.5 capsule(capRadius as double, height as double) as SCNCapsuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

149.8.6 Constructor(capRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a capsule with given radius and height.
Notes:

capRadius: The radius of the capsule.
height: The height of the capsule.

149.8.7 Properties

149.8.8 capRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The cap radius of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

149.8.9 capSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions in the cap. Animatable.
Notes:

If the value is less than 2, the behavior is undefined. The default value is 24.
(Read and Write property)

149.8.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the capsule. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 2.
(Read and Write property)

149.8.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.8.12 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.9 class SCNConeMBS

149.9.1 class SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCone represents a cone with controllable height, top radius and bottom radius.
Notes: Subclass of the SCNGeometryMBS class.

149.9.2 Blog Entries

149.9.4 Methods

149.9.5 cone(topRadius as double, bottomRadius as double, height as double) as SCNConeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

149.9.6 Constructor(topRadius as double, bottomRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cone with given top radius, bottom radius and height.
Notes:

topRadius: The radius at the top of the cone.
bottomRadius: The radius at the bottom of the cone.
height: The height of the cone.

149.9.7 Properties

149.9.8 bottomRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius at the bottom of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

149.9.9 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the cone. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.9.10 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.9.11 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.9.12 topRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius at the top of the cone. Animatable.
Notes:

If the value is less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

149.10 class SCNConstraintMBS

149.10.1 class SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The abstract superclass for objects that automatically adjust the position, rotation, or scale of a node based on specified rules.
Notes:

To control the transform (position, rotation, and scale) of one or more SCNNodeMBS objects with constraints, create and configure instances of the SCNConstraint subclass that provides the behavior you want, then add those constraint objects to each node's constraints array.

When SceneKit prepares to render a scene, it examines the list of constraints attached to each node to determine the transform for that node, then applies the new transformation before displaying the scene.

149.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.10.3 Methods

149.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.10.5 copy as SCNConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the constraint object.

149.10.6 Properties

149.10.7 Enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines whether the constraint is enabled or not.
Notes:

Defaults to true.
(Read and Write property)

149.10.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.10.9 Incremental as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies whether or not the contraint should applies incrementally and have it's effect being cumulated over the rendered frames.
Notes:

Defaults to true on macOS 10.13, iOS 11, tvOS 11 and watchOS 4. Defaults to false in earlier versions.
(Read and Write property)

149.10.10 influenceFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The influence of the constraint on the node's transformation.
Notes:

Use this property to relax the effect of a constraint on the nodes it applies to. For example, consider a node containing a spotlight, constrained by an SCNLookAtConstraintMBS object to point toward another node containing a moving game character. If the constraint's influence factor is 1.0, SceneKit adjusts the spotlight node to point directly at the game character each time it renders a frame. If you reduce the influence factor to 0.5, each time SceneKit renders a frame it moves the spotlight halfway from its current orientation to the target orientation. As a result, the spotlight continues to follow the moving character, but with a slight lag.

The default influence factor is 1.0, specifying that SceneKit apply the full effect of the constraint every frame. An influence factor of 0.0 means the constraint has no effect.

This property has no effect on SCNTransformConstraintMBS objects.
(Read and Write property)

149.11 control SCNControlMBS

149.11.1 control SCNControlMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Xojo control for a SCNViewMBS.
Notes:

This control embeds a special SCNView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

To learn about rendering events, please check here:
https://developer.apple.com/documentation/scenekit/scnscenerendererdelegate?language=objc

149.11.4 Properties

149.11.5 View as SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

149.11.6 Events

149.11.7 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the bounds, but not the frame, changed.

149.11.8 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event where you can enable menu items.

149.11.9 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the frame changed.

149.11.10 GotFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

149.11.11 LostFocus

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

149.11.12 MenuAction(HitItem as MenuItem) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

149.11.13 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown.
If you return False, the system handles the MouseDown so the above event handlers do not get called.

149.11.14 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

149.11.15 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

149.11.16 rendererDidApplyAnimations(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the control to perform any updates that need to occur after actions and animations are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this method to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

149.11.17 rendererDidApplyConstraints(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Invoked on the control once the scene renderer did apply the constraints.
Notes:

time The time at which the constraints were simulated.

All modifications done within this method don't go through the transaction model, they are directly applied on the presentation tree.

149.11.18 rendererDidRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the control that the renderer has rendered the scene.
Notes:

scene: The scene object that was rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this method to perform custom drawing after SceneKit has rendered a scene—for example, to draw overlay content on top of SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this method—the results of modifying SceneKit objects in this method are undefined.

- To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
- To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this method. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

149.11.19 rendererDidSimulatePhysics(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the control to perform any updates that need to occur after physics simulations are performed.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this event exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

This event is the last opportunity SceneKit provides for you to change the scene graph before rendering.

149.11.20 rendererUpdate(time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the control to perform any updates that need to occur before actions, animations, and physics are evaluated.
Notes:

time: The current system time, in seconds. Use this parameter for any time-based elements of your game logic.

SceneKit calls this method exactly once per frame, so long as the SCNViewMBS object (or other SCNSceneRenderer object) displaying the scene is not paused.

Implement this event to add game logic to the rendering loop. Any changes you make to the scene graph during this method are immediately reflected in the displayed scene. That is, SceneKit immediately updates the hierarchy of presentation nodes it uses to render the scene (instead of using the SCNTransactionMBS class to "batch" your changes).

149.11.21 rendererWillRenderScene(scene as SCNSceneMBS, time as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the control that the renderer has cleared the viewport and is about to render the scene.
Notes:

scene: The SCNSceneMBS object to be rendered.
time: The current system time, in seconds. If your custom rendering involves animation, use this parameter to compute your own animation state.

Implement this event to perform custom drawing before SceneKit renders a scene—for example, to draw backdrop content underneath SceneKit content. You should only execute Metal or OpenGL drawing commands (and any setup required to perform them) in this event—the results of modifying SceneKit objects during this event are undefined.

To render using Metal, use the renderer parameter to retrieve the scene renderer's currentRenderCommandEncoder object and encode your own drawing commands. If you need to reference other Metal state, see the properties listed in SCNSceneRenderer.
To render using OpenGL, simply call the relevant OpenGL drawing commands—SceneKit automatically makes its OpenGL context the current context before calling this event. If you need to reference the OpenGL context being rendered into, examine the context property of the renderer parameter.

You must draw using the appropriate graphics technology for the view currently being rendered. Use the renderingAPI property of the renderer object to determine whether Metal or OpenGL is in use.

149.11.22 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

149.12 class SCNCylinderMBS

149.12.1 class SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNCylinder represents a cylinder with controllable height and radius.
Notes: Subclass of the SCNGeometryMBS class.

149.12.4 Methods

149.12.5 Constructor(radius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cylinder with given radius and height.

149.12.6 cylinder(radius as double, height as double) as SCNCylinderMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a cylinder with given radius and height.

149.12.7 Properties

149.12.8 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The height of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.12.9 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.12.10 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.12.11 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the cylinder. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

149.13 class SCNDistanceConstraintMBS

149.13.1 class SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNDistanceConstraint ensure a minimum/maximum distance with a target node.
Notes: Subclass of the SCNConstraintMBS class.

149.13.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.13.3 Methods

149.13.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNDistanceConstraint constraint.

149.13.5 distanceConstraintWithTarget(target as SCNNodeMBS) as SCNDistanceConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNDistanceConstraint constraint.

149.13.6 Properties

149.13.7 maximumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance.
Notes:

Defaults to MAXFLOAT. Animatable.
(Read and Write property)

149.13.8 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance.
Notes:

Defaults to 0. Animatable.
(Read and Write property)

149.13.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to keep distance with.
Notes: (Read and Write property)

149.14 class SCNFloorMBS

149.14.1 class SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNFloor represents an infinite plane geometry.
Notes: Subclass of the SCNGeometryMBS class.

149.14.2 Blog Entries

149.14.3 Methods

149.14.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a floor.
Notes: A floor is an infinite plane.

149.14.5 floor as SCNFloorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a floor.
Notes: A floor is an infinite plane.

149.14.6 Properties

149.14.7 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The floor extent along the Z axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the Z axis. The default value is 0.
(Read and Write property)

149.14.8 reflectionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the node categories to reflect. Defaults to all bits set.
Notes: (Read and Write property)

149.14.9 reflectionFalloffEnd as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the distance from the floor where the falloff finishes. Animatable.
Notes:

If the value is 0 then there is no falloff. The default value is 0.
(Read and Write property)

149.14.10 reflectionFalloffStart as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the distance from the floor where the falloff begins. Animatable.
Notes:

The default value is 0.
(Read and Write property)

149.14.11 reflectionResolutionScaleFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the resolution scale factor of the buffer used to render the reflection.
Notes:

Defaults to 1.0.
(Read and Write property)

149.14.12 reflectivity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the reflectivity of the floor. Animatable.
Notes:

If the value is greater than zero then the surface will reflect other objects in the scene. The default value is 0.25.

(Read and Write property)

149.14.13 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The floor extent along the X axis. Animatable.
Notes:

If the value is equal to 0, the floor is infinite on the X axis. The default value is 0.
(Read and Write property)

149.15 class SCNGeometryElementMBS

149.15.1 class SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A container for index data describing how vertices connect to define a three-dimensional object, or geometry.
Notes:

You use geometry elements together with SCNGeometrySourceMBS objects to define custom SCNGeometryMBS objects or to inspect the data that composes an existing geometry. You create a custom geometry using a three-step process:

1. Create one or more SCNGeometrySource objects, each of which defines per-vertex information such as position, surface normal, or texture coordinates for all vertices in the geometry.
2. Create at least one SCNGeometryElement object, containing an array of indices identifying vertices in the geometry sources and describing the drawing primitive that SceneKit uses to connect the vertices when rendering the geometry.
3. Create an SCNGeometry instance from the geometry sources and geometry elements.

When SceneKit renders a geometry, each geometry element corresponds to a drawing command sent to the GPU. Because different rendering states require separate drawing commands, you can define a geometry using multiple geometry elements. For example, the teapot geometry shown below has four geometry elements, so you can assign up to four SCNMaterial objects in order to render each element with a different appearance. But because each drawing command incurs a CPU time overhead when rendering, minimizing the number of elements in a custom geometry can improve rendering performance.

149.15.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

149.15.3 Methods

149.15.4 Constructor(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.

primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

149.15.5 geometryElementWithData(data as MemoryBlock, PrimitiveType as Integer, primitiveCount as Integer, bytesPerIndex as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry element from the specified data and options.
Notes:

data: The data describing the element.
primitiveType: The drawing primitive that connects vertices when rendering the geometry element. For possible values, see SCNGeometryPrimitiveType.
primitiveCount: The number of primitives in the element.
bytesPerIndex: The number of bytes that represent a single index value in the data.

Returns a new geometry element object.

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers (whose size is specified by the bytesPerIndex parameter), and then connects the vertices in the order specified by this array, arranged according to the primitiveType parameter. To create a custom SCNGeometryMBS object from the geometry element, use the geometryWithSources() method.

149.15.6 Properties

149.15.7 bytesPerIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of bytes that represent each index value in the element's data.
Notes:

An element's data property holds an array of index values identifying vertices in a geometry source. SceneKit

interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

149.15.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The data describing the geometry element.
Notes:

An element's data is an array of index values identifying vertices in a geometry source. SceneKit interprets the data as an array of unsigned integers, whose size is specified by the bytesPerIndex property.
(Read only property)

149.15.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.15.10 maximumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The largest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

149.15.11 minimumPointScreenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The smallest radius, measured in screen points, at which to render any point in the geometry element.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
For example, to render a point cloud where each point is always one pixel wide (like a field of stars), set both the minimum and maximum sizes to one pixel. To render a group of objects whose screen sizes vary with perspective (like a set of images representing planets), set the minimum size to one pixel and the maximum size to a much larger value.
(Read and Write property)

149.15.12 pointSize as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The width of each point in the geometry element, as measured in the geometry's local 3D coordinate space.
Notes:

Some visual effects call for rendering a geometry as a collection of individual points—that is, a point cloud, not a solid surface or wireframe mesh. When you use this option, SceneKit can render each point as a small 2D surface that always faces the camera. By applying a texture or custom shader to that surface, you can efficiently render many small objects at once.
To render a geometry element as a point cloud, you must set three properties: pointSize, minimumPointScreenSpaceRadius, and maximumPointScreenSpaceRadius. Use pointSize to determine how large each point appears in world space, so that points farther away appear as smaller 2D surfaces. Use the minimum and maximum radius properties to ensure that the on-screen rendering of each point fits within a certain range of pixel sizes.
(Read and Write property)

149.15.13 primitiveCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of primitives in the element.

Notes: (Read only property)

149.15.14 primitiveRange as NSRangeMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The range of primitives from the geometry element to render.
Notes:

The default value for this property is an NSRangeMBS whose location is NSNotFound (-1) and length is zero, indicating that, by default, SceneKit renders the entire set of primitives specified by a geometry element's data buffer.
You can change a geometry without redefining it by choosing to render only a subset of the primitives specified by a geometry element. To do so, set this property to a subrange of primitive indexes.
(Read and Write property)

149.15.15 primitiveType as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The drawing primitive that connects vertices when rendering the geometry element.
Notes: (Read only property)

149.15.16 Constants

149.15.17 PrimitiveTypeLine = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of line segments, with each line segment described by two new vertices.

149.15.18 PrimitiveTypePoint = 3

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of unconnected points.

149.15.19 PrimitiveTypePolygon = 4

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes:

The geometry element's data is a sequence of arbitrary polygons.
see
https://developer.apple.com/documentation/scenekit/scngeometryprimitivetype/scngeometryprimitivetype-polygon?language=objc

149.15.20 PrimitiveTypeTriangles = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by three new vertices.

149.15.21 PrimitiveTypeTriangleStrip = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the primitive types.
Notes: The geometry element's data is a sequence of triangles, with each triangle described by one new vertex and two vertices from the previous triangle.

149.16 class SCNGeometryMBS

149.16.1 class SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A three-dimensional shape (also called a model or mesh) that can be displayed in a scene, with attached materials that define its appearance.
Notes:

In SceneKit, geometries attached to SCNNode objects form the visible elements of a scene, and SCNMaterial objects attached to a geometry determine its appearance.

Working with Geometry Objects

You control a geometry's appearance in a scene with nodes and materials. A geometry object provides only the form of a visible object rendered by SceneKit. You specify color and texture for a geometry's surface, control how it responds to light, and add special effects by attaching materials (for details, see the methods in Managing a Geometry's Materials). You position and orient a geometry in a scene by attaching it to an SCNNode object. Multiple nodes can reference the same geometry object, allowing it to appear at different positions in a scene.

You can easily copy geometries and change their materials. A geometry object manages the association between immutable vertex data and a mutable assignment of materials. To make a geometry appear more than once in the same scene with a different set of materials, use its inherited copy method. The copy shares the underlying vertex data of the original, but can be assigned materials independently. You can thus make many copies of a geometry without incurring a significant cost to rendering performance.

You can animate a geometry object. The vertex data associated with a geometry is immutable, but SceneKit provides several ways to animate geometry. You can use a SCNMorpher or SCNSkinner object to deform a geometry's surface, or run animations created in an external 3D authoring tool and loaded from a scene file. You can also use methods in the SCNShadable protocol to add custom GLSL shader programs that alter SceneKit's rendering of a geometry.

Obtaining a Geometry Object

SceneKit provides several ways to introduce geometry objects to your app:

Action	For further information
Load from a scene file created using external 3D authoring tools	SCNScene, SCNSceneSource
Use and customize SceneKit's built-in primitive shapes	SCNPlane, SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, SCNCapsule, SCNTube, and SCNTorus
Create 3D geometry from 2D text or Bézier curves	SCNText, SCNShape
Create a custom geometry from vertex data	SCNGeometrySource, SCNGeometryElement, geometryWithSources.

149.16.4 Methods

149.16.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom geometry from your own source and element data, use the geometryWithSources method.

149.16.6 copy as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the geometry.

149.16.7 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new geometry object with no content (or default content).
Notes:

This method creates a geometry with no visible content. You can use an empty geometry with another geometry's levelsOfDetail property to make the geometry disappear when it is too far away from the camera to usefully render.
SceneKit's SCNGeometryMBS subclasses use this method to create geometry instances with default contents. For example, if you call this method on the SCNSphereMBS class, it creates a sphere geometry whose radius property has the default value of 0.5.
You cannot add geometry sources or elements to a geometry object after creating it. To create a custom

geometry from your own source and element data, use the geometryWithSources method.

149.16.8 geometryElementAtIndex(index as Integer) as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the geometry element at a specified index.
Notes: Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.

149.16.9 geometryElements as SCNGeometryElementMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of geometry elements that describe the geometry's shape.
Notes:

Each SCNGeometryElementMBS object describes how vertices from the geometry's sources are combined into polygons to create the geometry's shape. Visible geometries contain at least one element.
For geometries with multiple elements, you can use the materials property to attach different materials to each element.

149.16.10 geometrySources as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of geometry sources that provide vertex data for the geometry.
Notes: Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source (for the SCNGeometrySourceSemanticVertex semantic), typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.

149.16.11 geometrySourcesForSemantic(semantic as String) as SCNGeometrySourceMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the geometry sources for a specified semantic.
Notes:

semantic: A constant identifying a semantic for which to return geometry sources. See Geometry Semantic Identifiers for possible values.

Returns an array of SCNGeometrySource objects, or nil if the geometry has no source for the specified semantic.

Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (such as vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. A geometry always has at least one source, for the SCNGeometrySourceSemanticVertex semantic, typically has additional sources for use in lighting and shading, and may have other sources for skeletal animation or surface subdivision information.
The vertex, normal, and color semantics each refer to at most one source. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—in this case, indices in the returned array correspond to values for the mappingChannel property used when attaching textures to materials.

149.16.12 geometryWithSources(sources() as SCNGeometrySourceMBS, elements() as SCNGeometryElementMBS) as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new geometry built from the specified geometry sources and elements.
Notes:

sources: An array of SCNGeometrySourceMBS objects describing vertices in the geometry and their attributes.
elements: An array of SCNGeometryElementMBS objects describing how to connect the geometry's vertices.

A geometry's visible content comes from the combination of geometry sources, which contain data describing its vertices, with geometry elements, which contain data describing how the vertices connect to form a surface.
Each SCNGeometrySourceMBS object describes an attribute of all vertices in the geometry (vertex position, surface normal vector, color, or texture mapping coordinates) identified by the source's semantic property. To create a custom geometry you must provide at least one source, for the SCNGeometrySourceSemanticVertex semantic. Typically, you also provide sources for normals and texture coordinates for use in lighting and shading.
Sources for the vertex, normal, and color semantics must be unique—if multiple objects in the sources array have the same semantic, SceneKit uses only the first. A geometry may have multiple sources for the SCNGeometrySourceSemanticTexcoord semantic—the order of texture coordinate sources in the sources array determines the value to use for the mappingChannel property when attaching materials.
Each SCNGeometryElementMBS object describes how vertices from the geometry sources are combined into polygons to create the geometry's shape. Creating a custom geometry requires at least one element. If the elements array contains multiple objects, their order determines the arrangement of the geometry's materials—for details, see the discussion of the materials property.

149.16.13 insertMaterial(Material as SCNMaterialMBS, Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Insert a material in the materials array at the specified index.
Notes:

material: The material to insert.
index: Index in the materials array to insert the new material.

149.16.14 levelsOfDetail as SCNLevelOfDetailMBS()

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Because rendering a complex geometry incurs a performance cost, you can use level-of-detail objects to substitute simpler geometries in its place as its distance from the point of view camera increases (or its apparent size decreases). For details, see SCNLevelOfDetailMBS.

149.16.15 materials as SCNMaterialMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the receiver's materials array.
Notes: Each geometry element can be rendered using a different material. The index of the material used for a geometry element is equal to the index of that element modulo the number of materials.

149.16.16 materialWithName(name as string) as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Return the first material from the materials array of the receiver with the specified name.
Notes: name: The name of the material to retrieve.

149.16.17 removeMaterial(Index as Integer)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Remove the material at the specified index from the materials array.
Notes: index: The index of the material to remove from the 'materials' array.

149.16.18 replaceMaterial(Index as Integer, Material as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Remove the material at the index 'index' from the materials array of the receiver and insert 'material' in its position.
Notes:

index: The index of the material to replace in the materials array.
material: The new material that will replace the previous one.

149.16.19 setLevelsOfDetail(LevelsOfDetails() as SCNLevelOfDetailMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets an array of SCNLevelOfDetail objects for managing the geometry's appearance when viewed from far away.
Notes: Value can be nil to clear it.

149.16.20 setMaterials(materials() as SCNMaterialMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the materials.

149.16.21 Properties

149.16.22 edgeCreasesElement as SCNGeometryElementMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry element identifying which edges of the geometry's surface should remain sharp after subdivision.
Notes:

This geometry element's primitiveType value must be SCNGeometryPrimitiveTypeLine. The geometry element's data is an array of vertex indices, each pair of which defines a line segment identifying an edge to be treated as a crease during subdivision. Use the edgeCreasesSource property to specify the smoothness or sharpness of each crease.
(Read and Write property)

149.16.23 edgeCreasesSource as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry source specifying the smoothness or sharpness of edges after surface subdivision.
Notes:

This geometry source's semantic value must be SCNGeometrySourceSemanticEdgeCrease. Its data is an array of scalar values (that is, the source's componentsPerVector value is 1). The value at an index in the geometry source determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the edgeCreasesElement geometry element: a value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.
(Read and Write property)

149.16.24 firstMaterial as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines the first material of the geometry. Returns nil if the geometry has no material.
Notes:

This method is here for convenience. It is equivalent to the first object in the "materials" array above.
(Read and Write property)

149.16.25 geometryElementCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of geometry elements owned by the geometry.
Notes: (Read only property)

149.16.26 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.16.27 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A name associated with the geometry object.
Notes:

You can provide a descriptive name for a geometry object to make managing your scene graph easier. Geometries loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine geometries in a scene file without loading its scene graph.

Geometry names are saved when you export a scene to a file using its writeToURL method. They also appear in the Xcode scene editor.
(Read and Write property)

149.16.28 subdivisionLevel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the subdivision level of the receiver.
Notes:

Defaults to 0.
A subdivision level of 0 means no subdivision. When the ‘tessellator‘ property of the receiver is not nil, the refinement is done on the GPU.
(Read and Write property)

149.16.29 tessellator as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies how the geometry should be tessellated at render time on the GPU.
Notes:

Defaults to nil.
(Read and Write property)

149.16.30 wantsAdaptiveSubdivision as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies if the subdivision is adaptive or uniform.
Notes:

Defaults to true.
Adaptive subdivision requires that the ‘tessellator‘ property of the receiver is not nil.
(Read and Write property)

149.17 class SCNGeometrySourceMBS

149.17.1 class SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for vertex data forming part of the definition for a three-dimensional object, or geometry.
Notes:

You use geometry sources together with SCNGeometryElement objects to define custom SCNGeometry objects or to inspect the data that composes an existing geometry.

see
https://developer.apple.com/documentation/scenekit/scngeometrysource

149.17.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr6
- MBS Xojo Plugins, version 19.3pr5

149.17.3 Methods

149.17.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.17.5 geometrySourceWithData(data as MemoryBlock, Semantic as String, vectorCount as Integer, floatComponents as boolean, componentsPerVector as Integer, bytesPerComponent as Integer, dataOffset as Integer, dataStride as Integer) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a geometry source from the specified data and options.
Notes:

data: The data for the geometry source.
semantic: The semantic value (or attribute) that the geometry source describes for each vertex. See Geometry Semantic Identifiers for available values.
vectorCount: The number of geometry source vectors.

floatComponents: A Boolean value that indicates whether vector components are floating-point values. Specify true for floating-point values, or false for integer values.
componentsPerVector: The number of scalar components in each vector.
bytesPerComponent: The size, in bytes, of each vector component.
offset: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
stride: The number of bytes from each vector to the next in the data.

Returns a new geometry source object.

sA geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other parameters determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector. You can use the offset and stride parameters together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

149.17.6 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of normal vectors.
Notes:

normals: An array of three-component vectors, each of which represents a surface normal for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticNormal.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.
See also:

- 149.17.7 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS 20210

149.17.7 geometrySourceWithNormals(texcoord() as CGPointMBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of texture coordinate points.
Notes:

texcoord: An array of points, each of which represents a texture coordinate pair for the geometry source.

A new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticTexcoord.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources:elements: method.
See also:

- 149.17.6 geometrySourceWithNormals(Normals() as SCNVector3MBS) as SCNGeometrySourceMBS 20209

149.17.8 geometrySourceWithVertices(vertices() as SCNVector3MBS) as SCNGeometrySourceMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a geometry source from an array of vertex positions.
Notes:

vertices: An array of three-component vectors, each of which represents a vertex position for the geometry source.

Returns a new geometry source whose SCNGeometrySource property is SCNGeometrySourceSemanticVertex.

SceneKit converts this data to its own format to optimize rendering performance. To read the converted data, examine the properties of the created SCNGeometrySourceMBS object.
To create a custom SCNGeometryMBS object from the geometry source, use the geometryWithSources method.

149.17.9 SCNGeometrySourceSemanticBoneIndices as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for bone index data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine which bone nodes in the skeleton affect the behavior of each vertex.
For a custom shader program, you use this semantic to bind SceneKit's bone index data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

149.17.10 SCNGeometrySourceSemanticBoneWeights as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for bone weight data, used for skeletal animation of skinned surfaces.
Notes:

For a geometry source, this semantic identifies data containing skeletal animation data for each vertex in the geometry. SceneKit uses this information to determine how much a vertex's position is influenced by the positions of bone nodes in the skeleton.
For a custom shader program, you use this semantic to bind SceneKit's bone weight data to an input attribute of the shader.
For details on skeletal animation, see SCNSkinnerMBS.

149.17.11 SCNGeometrySourceSemanticColor as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for per-vertex color data.
Notes:

For a geometry source, this semantic identifies data containing a color for each vertex in the geometry. SceneKit interpolates per-vertex colors across a surface to produce smooth shading. Per-vertex colors modulate those produced by lighting and a geometry's materials, if applicable.
For a custom shader program, you use this semantic to bind SceneKit's vertex color data to an input attribute of the shader.
Vertex color data is typically an array of three- or four-component vectors.

149.17.12 SCNGeometrySourceSemanticEdgeCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for edge crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of edges and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's edge crease data to an input attribute

of the shader.
Edge crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the edge identified by the primitive at the corresponding index in the geometry's SceneKit Constants geometry element: A value of 0.0 specifies a completely smoothed edge, and a value of 10.0 or greater specifies an infinitely sharp edge.

149.17.13 SCNGeometrySourceSemanticNormal as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for surface normal data.
Notes:

For a geometry source, this semantic identifies data containing the surface normal vector at each vertex in the geometry. SceneKit uses this information to compute lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex normal data to an input attribute of the shader.
Vertex normal data is typically an array of three- or four-component vectors.

149.17.14 SCNGeometrySourceSemanticTangent as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for surface tangent vector data.
Notes:

For a geometry source, this semantic identifies data containing the surface tangent vector at each vertex in the geometry. SceneKit uses this information to compute advanced lighting effects on the surface.
For a custom shader program, you use this semantic to bind SceneKit's vertex tangent data to an input attribute of the shader.
Vertex tangent data is typically an array of three- or four-component vectors.

149.17.15 SCNGeometrySourceSemanticTexcoord as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The semantic for texture coordinate data.
Notes:

For a geometry source, this semantic identifies data containing texture mapping coordinates for each vertex in the geometry. Unlike other semantics, a geometry may contain multiple sources for texture coordinates—each corresponds to a separate mappingChannel number that you can use when associating textured materials.
For a custom shader program, you use this semantic to bind SceneKit's texture coordinate data to one or more input attributes of the shader.
Texture coordinate data is typically an array of two-component vectors.

149.17.16 SCNGeometrySourceSemanticVertex as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic for vertex position data.
Notes:

For a geometry source, this semantic identifies data containing the positions of each vertex in the geometry. If you create a custom geometry using the geometryWithSources method, you must provide a geometry source for this semantic.
For a custom shader program, you use this semantic to bind SceneKit's vertex position data to an input attribute of the shader.
Vertex position data is typically an array of three- or four-component vectors.

149.17.17 SCNGeometrySourceSemanticVertexCrease as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic for vertex crease data, used for subdividing surfaces.
Notes:

For a geometry source, this semantic identifies data containing crease data for each vertex in the geometry. SceneKit uses this information to determine the sharpness of corners and smoothness of surfaces when you change a geometry's subdivisionLevel property.
For a custom shader program, you use this semantic to bind SceneKit's vertex crease data to an input attribute of the shader.
Vertex crease data is an array of scalar floating-point values, where each value determines the smoothness or sharpness of the corresponding vertex: A value of 0.0 specifies a completely smoothed corner, and a value of 10.0 or greater specifies an infinitely sharp point.

149.17.18 Properties

149.17.19 bytesPerComponent as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size, in bytes, of each vector component.
Notes: (Read only property)

149.17.20 componentsPerVector as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of scalar components in each vector.
Notes: (Read only property)

149.17.21 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The data for the geometry source.
Notes:

A geometry source's data is an array of vectors, each of which represents a particular attribute (or semantic) of a vertex in the geometry. The other properties of the geometry source determine how SceneKit interprets this data. For example, an array of vertex positions may have three 32-bit floating-point components per vector, but an array of texture coordinates may have two 8-bit integer coponents per vector.
(Read only property)

149.17.22 dataOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The offset, in bytes, from the beginning of the data to the first vector component to be used in the geometry source.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

149.17.23 dataStride as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of bytes from a vector to the next one in the data.
Notes:

You can use the dataOffset and dataStride parameters can be used together to interleave data for multiple geometry sources in the same array, improving rendering performance. See SCNGeometrySourceMBS for details.
(Read only property)

149.17.24 floatComponents as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether vector components are floating-point values.
Notes:

If true, SceneKit interprets the geometry source's data as an array of vectors whose components are floating-point values. The type of floating-point value is determined by the SCNGeometrySourceMBS property: 4

bytes for float values or 8 bytes for double values.
If false, SceneKit interprets the geometry source's data as an array of vectors whose components are integer values. The type of integer value is determined by the SCNGeometrySourceMBS property; for example, 2 bytes for unsigned short values or 4 bytes for unsigned int values.
(Read only property)

149.17.25 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.17.26 semantic as String

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The semantic value (or attribute) the geometry source describes for each vertex.
Notes:

A semantic describes an attribute for each vertex, such as position, color, surface normal vector, or texture coordinates.
See Geometry Semantic Identifiers for available values.
(Read only property)

149.17.27 vectorCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The number of vectors in the data.
Notes: (Read only property)

149.18 class SCNGeometryTessellatorMBS

149.18.1 class SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A geometry tessellator describes how a more detailed surface is calculated from the geometry's initial surface.

149.18.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

149.18.3 Methods

149.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

149.18.5 copy as SCNGeometryTessellatorMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the object.

149.18.6 Properties

149.18.7 Adaptive as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the tessellation should be uniform or adaptive.
Notes:

Defaults to false.
(Read and Write property)

149.18.8 edgeTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the edge tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision.
(Read and Write property)

149.18.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.18.10 insideTessellationFactor as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the inside tessellation factor.
Notes:

Defaults to 1.
This has no effect for adaptive subdivision
(Read and Write property)

149.18.11 maximumEdgeLength as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the maximum edge length.
Notes:

Defaults to 1.
This has no effect for non-adaptive subdivision
(Read and Write property)

149.18.12 ScreenSpace as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the level of tessellation should be adapted in screenSpace.
Notes:

Defaults to false.
(Read and Write property)

149.18.13 smoothingMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The smoothing mode.
Notes:

Defaults to SmoothingModeNone.
(Read and Write property)

149.18.14 tessellationFactorScale as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the scale factor applied to the per-patch tessellation factors.
Notes:

Defaults to 1.
(Read and Write property)

149.18.15 tessellationPartitionMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the tessellation partition mode.
Notes:

Defaults to TessellationPartitionModeInteger.

see also
https://developer.apple.com/documentation/metal/mtltessellationpartitionmode?language=objc
(Read and Write property)

149.18.16 Constants

149.18.17 SmoothingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

149.18.18 SmoothingModePhong = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

149.18.19 SmoothingModePNTriangles = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the smoothing modes.

149.18.20 TessellationPartitionModeFractionalEven = 3

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional even partitioning mode.

149.18.21 TessellationPartitionModeFractionalOdd = 2

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A fractional odd partitioning mode.

149.18.22 TessellationPartitionModeInteger = 1

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: An integer partitioning mode.

149.18.23 TessellationPartitionModePow2 = 0

MBS Mac64bit Plugin, Plugin Version: 19.3. **Function:** One of the partitioning modes used by the tessellator to derive the number and spacing of segments used to subdivide a corresponding edge.
Notes: A power of two partitioning mode.

149.19 class SCNHitTestResultMBS

149.19.1 class SCNHitTestResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Information about the result of a scene-space or view-space search for scene elements.
Notes:

Hit-testing is the process of finding elements of a scene located at a specified point, or along a specified line segment (or ray). An SCNHitTestResult object provides details about one result from a hit-test search. There are three ways to perform a hit-test search. Use the hitTest method of an SCNViewMBS object (or other scene renderer), the hitTestWithSegment method of a node, or the rayTestWithSegment method of your scene's physics world.

When you perform a hit-test search, SceneKit looks for SCNGeometryMBS objects along the ray you specify. For each intersection between the ray and and a geometry, SceneKit creates a hit-test result to provide information about both the SCNNodeMBS object containing the geometry and the location of the intersection on the geometry's surface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.19.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr1

149.19.3 Methods

149.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.19.5 SCNHitTestBackFaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to ignore faces not oriented toward the camera.
Notes: The value for this key is a Boolean value. The default value is true, specifying that back-facing polygons will not be returned as hit-test results.

149.19.6 SCNHitTestBoundingBoxOnlyKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to search for objects by bounding box only.
Notes: The value for this key is a Boolean value. The default value is false, specifying that hit-testing searches should test against node geometry. Specifying true for this option increases search performance at the expense of geometric accuracy.

149.19.7 SCNHitTestClipToZRangeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to search for objects only within the depth range of the current point of view.
Notes:

The value for this key is a Boolean value. The default value is true, specifying that hit-testing searches only objects between the zNear and zFar distances of the pointOfView camera. Specify false to include objects outside this depth range in the search.
This option is valid only when hit-testing in the screen space of an SCNSceneRenderer object with the hitTest method.

149.19.8 SCNHitTestIgnoreChildNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to ignore child nodes when searching.
Notes: The value for this key is a Boolean value. The default value is false, specifying that hit-testing may return objects from any portion of the node hierarchy. Specify true to search only the node specified by the SCNHitTestRootNodeKey key.

149.19.9 SCNHitTestIgnoreHiddenNodesKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to ignore hidden nodes when searching.
Notes: The value for this key is a Boolean value. The default value is true, specifying that hit-testing should not return nodes whose hidden property value is true. Specify false to search nodes regardless of their visibility.

149.19.10 SCNHitTestOptionCategoryBitMask as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option to search only for objects matching a specified bitmask.

Notes: The value for this key is an integer value. If present, the search will return only nodes that both satisfy the hit test and have a categoryBitMask value overlapping this bitmask.

149.19.11 SCNHitTestOptionSearchMode as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for the number and order of hit test results to provide.
Notes: The value for this key is an raw integer value of an SCNHitTestSearchMode constant.

149.19.12 SCNHitTestRootNodeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The root of the node hierarchy to be searched.
Notes: The value for this key is an SCNNodeMBS object. Hit-testing searches only the child node hierarchy under this node. When hit-testing takes place in the screen space of an SCNSceneRenderer object with the hitTest() method, the default value is the presented scene's root node. When hit-testing is in a node using its hitTestWithSegment(), the default value is the node.

149.19.13 Properties

149.19.14 boneNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The hit bone.
Notes:

Only available if the node hit has a SCNSkinnerMBS attached.
(Read only property)

149.19.15 faceIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The index of the primitive in the geometry element intersected by the search ray.
Notes: (Read only property)

149.19.16 geometryIndex as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The index of the geometry element whose surface the search ray intersects.
Notes:

Every SCNGeometryMBS object contains one or more SCNGeometryElementMBS objects that define how its vertices connect to form a surface. This property provides the index of the geometry element intersecting the search ray. For more information about that geometry element, use the geometry's geometryElementAtIndex method.
(Read only property)

149.19.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.19.18 localCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point of intersection between the geometry and the search ray, in the local coordinate system of the node containing the geometry.
Notes: (Read only property)

149.19.19 localNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The surface normal vector at the point of intersection, in the local coordinate system of the node containing the geometry intersected by the search ray.
Notes: (Read only property)

149.19.20 modelTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The world transform matrix of the node containing the intersection.
Notes:

Use this matrix to transform vectors from the local coordinate space of the node whose geometry is intersected by the search ray to the scene's world coordinate system.

(Read only property)

149.19.21 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node whose geometry intersects the search ray.
Notes: (Read only property)

149.19.22 worldCoordinates as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point of intersection between the geometry and the search ray, in the scene's world coordinate system.
Notes: (Read only property)

149.19.23 worldNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The surface normal vector at the point of intersection, in the scene's world coordinate system.
Notes: (Read only property)

149.19.24 Constants

149.19.25 SCNHitTestSearchModeAll = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return all possible results, sorted from nearest to farthest.

149.19.26 SCNHitTestSearchModeAny = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return only the first object found, regardless of distance.

149.19.27 SCNHitTestSearchModeClosest = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the possible values for the SCNHitTestOptionSearchMode option used with hit-testing methods.
Notes: The hit test should return only the closes object found.

149.20 class SCNIKConstraintMBS

149.20.1 class SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constraint that applies inverse kinematics to make a chain of nodes "reach" toward a target point.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnikconstraint
Subclass of the SCNConstraintMBS class.

149.20.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.20.3 Methods

149.20.4 Constructor(chainRootNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

149.20.5 inverseKinematicsConstraintWithChainRootNode(chainRootNode as SCNNodeMBS) as SCNIKConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a SCNIKConstraint object with the specified parameter.
Notes:

chainRootNode The root node of the kinematic chain.
"chainRootNode" must be an ancestor of the node on which the constraint is applied.

149.20.6 Properties

149.20.7 chainRootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the root node of the kinematic chain.
Notes: (Read only property)

149.20.8 targetPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the target position (in world space coordinates) of the end joint (i.e the node that owns the IK constraint).
Notes:

Defaults to (0,0,0). Animatable.
(Read and Write property)

149.21 class SCNLevelOfDetailMBS

149.21.1 class SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An alternate resolution for a geometry that SceneKit automatically substitutes to improve rendering performance.
Notes:

You use level-of-detail objects when you have a detailed geometry that appears at several apparent sizes in a scene. For example, the teapot model on the the left in the figure below has 256 polygons, the model at center has 1024 polygons, and the model on the right has 14,400 polygons. If all three models appear close to the camera, filling most of the rendered view, the difference in detail between them is clearly visible—but if they appear far away, taking up a small area of the view, the difference is much less obvious. Rendering higher-resolution geometries incurs a higher performance cost.

When you associate one or more level-of-detail objects with a SCNGeometryMBS object using its levelsOfDetail property, SceneKit automatically substitutes alternate geometries when appropriate. For example, the two lower-resolution teapot models seen above can be added as levels of detail for the high-resolution model. For each level of detail, you specify either a world-space distance or a screen-space radius. The measure you specify determines the threshold where SceneKit automatically renders that level of detail's alternate geometry instead of the original geometry. If you specify a distance, the alternate geometry appears when the node containing the geometry is moved that distance away from the camera. If you specify a radius, the alternate geometry appears when the pixel area covered by the rendered by the geometry is smaller than a circle of that radius.
The geometries associated with lower levels of detail need not share all attributes of the original geometry. For example, you can use different materials for levels of detail that only appear when far away from the camera, disabling expensive features such as per-pixel lighting, reflection mapping, or custom shader programs.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.21.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr5

149.21.3 Methods

149.21.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.21.5 copy as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the object.

149.21.6 levelOfDetailWithGeometryAndScreenSpaceRadius(geo as SCNGeometryMBS, screenSpaceRadius as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a level of detail with the specified geometry and threshold pixel radius.
Notes:

geometry: The geometry to render for this level of detail.
radius: The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the largest radius parameter smaller than that circle.
If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

149.21.7 levelOfDetailWithGeometryAndWorldSpaceDistance(geo as SCNGeometryMBS, worldSpaceDistance as Double) as SCNLevelOfDetailMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a level of detail with the specified geometry and threshold camera distance.
Notes:

geometry: The geometry to render for this level of detail, or nil if SceneKit should render no geometry at this level of detail.
distance: The minimum distance from the current point of view for this level of detail to appear.

Returns a level-of-detail object. You associate levels of detail with a SCNGeometry object using its levelsOfDetail property.

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetail object with the smallest distance parameter greater than that distance.

If you pass nil for the geometry parameter, SceneKit renders no geometry for the level of detail. Creating a level-of-detail object with no geometry allows you to skip rendering costs entirely for an object when it would appear very far away or very small.

149.21.8 Properties

149.21.9 geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry associated with this level of detail.
Notes:

SceneKit renders this geometry instead of the original geometry when the level of detail is appropriate. Generally, levels of detail with larger worldSpaceDistance values or smaller screenSpaceRadius values should contain less complex geometries.
If the value of this property is nil, SceneKit renders no geometry at this level of detail.
(Read only property)

149.21.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object handle.
Notes: (Read and Write property)

149.21.11 screenSpaceRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum radius (in pixels) of the geometry's bounding sphere for this level of detail to appear.
Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the radius in pixels of the circle covered by a geometry's bounding sphere, then renders the geometry for the SCNLevelOfDetail object with the smallest radius parameter larger than that circle.
(Read only property)

149.21.12 worldSpaceDistance as Double

MBS Mac64bit Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum distance from the current point of view for this level of detail to appear.

Notes:

When rendering a geometry with associated levels of detail, SceneKit calculates the distance from the current point of view to the geometry's parent node, then renders the geometry for the SCNLevelOfDetailMBS object with the largest distance parameter less than that distance.
(Read only property)

149.22 class SCNLightMBS

149.22.1 class SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A light source that can be attached to a node to illuminate the scene.
Notes:

You illuminate your scene by attaching lights to SCNNode objects using their light property.

You set a light's type using its type property. Depending on a light's type, its position and direction may affect its behavior—you control the light's position and direction through the node that the light is attached to. The direction of a light, if applicable to its type, is along the negative z-axis of its node's local coordinate system.

A light's other properties affect how it illuminates a scene. All lights have a color property, which interacts with SCNMaterial objects to produce the pixel colors in a rendered scene. Other properties, such as attenuation, shadowing, and spot angle, can affect the behavior of certain types of lights.

The number and type of lights in a scene is a key factor in SceneKit's rendering performance. For efficient rendering, follow these tips:

- Use SceneKit lights only for dynamic light sources or lights that affect moving objects. For statically lit portions of your scene, create a light map texture in an external 3D authoring tool (also known as baked lighting) and apply it to objects in the scene using the multiply material property.

- Minimize the number of lights on each element of the scene. You can achieve most common lighting effects using no more than three lights, and you only need a single ambient light source. SceneKit only uses up to eight light sources per node when rendering, ignoring any additional lights. If you set the attenuationEndDistance property on a spotlight or omnidirectional light to limit its area of effect, SceneKit ignores the light (and its performance cost) when rendering objects outside that area. You can also use the categoryBitMask property to choose which nodes are illuminated by a light.

Requires MacOS 10.8 or newer.

149.22.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

149.22.3 Methods

149.22.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new light object.

149.22.5 copy as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the light.

149.22.6 light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new light object.

149.22.7 SCNLightTypeAmbient as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light that illuminates all objects in the scene from all directions.
Notes: Because the intensity of light from an ambient source is the same everywhere in the scene, its position and direction have no effect. Attenuation, spotlight angle, and shadow attributes do not apply to ambient lights.

149.22.8 SCNLightTypeDirectional as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source with a uniform direction and constant intensity.
Notes: Because a directional light illuminates all objects in the scene from the same direction and with the same intensity, so the position of the node containing the light has no effect. Attenuation and spotlight angle attributes do not apply to directional lights.

149.22.9 SCNLightTypeIES as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source whose shape, direction, and intensity of illumination is determined by a photometric

profile.
Notes:

The intensity of a photometric light varies in different directions from the light source, much like the illumination from a real-world light source. The position of the containing node determines the location of the light source, and the orientation of the node determines the relative directions specified by the photometric profile. Spotlight angle attributes do not apply to photometric lights.
For more information about photometric lights, see the IESProfileURL property.

149.22.10 SCNLightTypeOmni as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An omnidirectional light, also known as a point light.
Notes: Because an omnidirectional light casts equal illumination in all directions, the orientation of the node containing the light has no effect. Spotlight angle and shadow attributes do not apply to directional lights.

149.22.11 SCNLightTypeProbe as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A sample of the environment around a point in a scene to be used in environment-based lighting.
Notes:

A light probe describes a point in a scene in terms of the variations in color and intensity of the illumination it receives from all directions. This information can then be used in shading of materials based on their location in the scene. For example, a white object placed near blue and red walls will appear bluish on surfaces facing the blue wall and reddish on surfaces facing the red wall.
You can place light probes in a scene and generate their lighting contributions using the Xcode scene editor, or import light probes from scene file formats that support them. Lighting-related properties of the SCNLight class do not apply to light probes; their contribution to scene rendering depends entirely on the light probe content generated in Xcode.

149.22.12 SCNLightTypeSpot as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A light source that illuminates a cone-shaped area.
Notes: The position and orientation of the node containing the light determines the area lit by the spotlight, and all lighting attributes affect its appearance.

149.22.13 Properties

149.22.14 attenuationEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from the light at which its intensity is completely diminished. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.15 attenuationFalloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transition curve for the light's intensity between its attenuation start and end distances. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances in between the start and end distance, the light's intensity transitions from full to no illumination according to the value of this property.
A value of 0.0 specifies no attenuation—the light's intensity is the same at all distances. A value of 1.0 specifies a linear transition, and a value of 2.0 (the default) specifies a quadratic transition curve. Higher values have little visible effect.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.16 attenuationStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from the light at which its intensity begins to diminish. Animatable.
Notes:

You can apply attenuation to omnidirectional lights and spotlights, causing their intensity to diminish over a specified range of distances. At distances less than the start distance, the light's illumination is at full intensity. At distances greater than the end distance, the light provides no illumination. At distances in between the start and end distance, the attenuationFalloffExponent property defines the transition from full illumination to no illumination.
The default value is 0.0, specifying no attenuation (the light's intensity is the same at all distances).

You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.17 automaticallyAdjustsShadowProjection as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies if the shadow map projection should be done automatically or manually by the user.
Notes:

Defaults to true.
(Read and Write property)

149.22.18 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether the light casts shadows.
Notes:

Geometries illuminated by the light cast shadows only if the value of this property is true and the type property of the light is SCNLightTypeSpot or SCNLightTypeDirectional. The default value is false.
(Read and Write property)

149.22.19 Color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The color of the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. The default color is white.
You can animate changes to this property's value.

See Animating SceneKit Content:
https://developer.apple.com/documentation/scenekit/animation/animating_scenekit_content
(Read and Write property)

149.22.20 ForcesBackFaceCasters as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.

Notes: (Read and Write property)

149.22.21 gobo as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An image or other visual content affecting the shape and color of a light's illuminated area.
Notes:

In photographic and stage lighting terminology, a gobo (also known as a flag or cookie) is a stencil, gel, or other object placed just in front of a light source, shaping or coloring the beam of light.
You alter the appearance of a spotlight by changing the contents property of the object permanently assigned to this property. As with other material properties, you can use a color or image, or a Core Animation layer containing animated content, as a lighting gobo.
This property applies only to lights whose type property is spot.
(Read only property)

149.22.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

149.22.23 Intensity as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The luminous flux, in lumens, or total brightness of the light. Animatable.
Notes:

When working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased), you can leave the color property at its default white color and use the intensity and temperature to control the light using realistic parameters. When working with physically-based materials, this value the luminous flux of the light source. The default value is 1000 lumens.
When not using physically-based rendering, this value (divided by 1000) serves as a multiplier for the the color property. The default value of of 1000 leaves the light color unmodulated; you can use higher values, for example, to brighten a light whose color is already the maximum red value.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.24 maximumShadowDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the maximum distance from the viewpoint from which the shadows for the receiver light won't be computed.
Notes:

Defaults to 100.0.
(Read and Write property)

149.22.25 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the light.
Notes:

You can provide a descriptive name for a light to make managing your scene graph easier. Lights loaded from a scene file may have names assigned by an artist using a 3D authoring tool. To examine lights in a scene file without loading its scene graph, use the SCNSceneSourceMBS class.
(Read and Write property)

149.22.26 OrthographicScale as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The orthographic scale SceneKit uses when rendering the shadow map for a directional light.
Notes:

SceneKit draws a shadow map image by rendering the scene from the point of view of the node containing the light. Directional lights ignore the position property of the node containing them because their light has a constant direction. Therefore, rendering a shadow map for a directional light requires an orthographic projection. Like the orthographicScale property of a camera object, this property specifies the extent of the scene "visible to" the light when rendering the shadow map.
This property applies only if the light's type property is SCNLightTypeDirectional.
(Read and Write property)

149.22.27 SampleDistributedShadowMaps as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Use the sample distribution of the main rendering to better fit the shadow frusta.
Notes:

Defaults to false.
(Read and Write property)

149.22.28 ShadowBias as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of correction to apply to the shadow to prevent rendering artifacts.
Notes:

Rendering shadows from a shadow map can result in artifacts where the shadow color does not appear on all pixels in a shadowed surface as intended. (This effect is typically called shadow acne.) This property specifies the error margin SceneKit uses to correct such artifacts.
The default value is 1.0.
(Read and Write property)

149.22.29 ShadowCascadeCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the number of distinct shadow maps that will be computed for the receiver light.
Notes:

Defaults to 1. Maximum is 4.
(Read and Write property)

149.22.30 ShadowCascadeSplittingFactor as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies a factor to interpolate between linear splitting (0) and logarithmic splitting (1).
Notes:

Defaults to 0.15.
(Read and Write property)

149.22.31 shadowColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color of shadows cast by the light. Animatable.
Notes:

The value of this property is an NSColorMBS object. SceneKit blends the light's color with other colors in the rendered image to produce a shadow effect. The color's opacity (alpha value) determines the intensity of the shadows. The default shadow color is black with 50% opacity.
You can animate changes to this property's value. See Animating SceneKit Content.

(Read and Write property)

149.22.32 ShadowMode as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode SceneKit uses to render shadows.
Notes:

The default mode is SCNShadowModeForward in iOS and in macOS 10.10 or later. In OS X v10.9 or earlier, the default mode is SCNShadowModeDeferred.
(Read and Write property)

149.22.33 ShadowRadius as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A number that specifies the amount of blurring around the edges of shadows cast by the light. Animatable.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the radius of shadow map sampling. Lower numbers result in shadows with sharply defined, pixelated edges; higher numbers result in blurry shadows.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.34 ShadowSampleCount as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of samples from the shadow map that SceneKit uses to render each pixel.
Notes:

SceneKit produces soft-edged shadows by rendering the silhouettes of scene geometry into a 2D shadow map and then using several weighted samples from the shadow map to determine the strength of the shadow at each pixel in the rendered scene. This property controls the number of samples from the shadow map used to render each pixel. Higher numbers result in smoother edges; lower numbers increase rendering performance. The default value is 16 in macOS and 1 on iOS.
(Read and Write property)

149.22.35 spotInnerAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The angle, in degrees, of the area fully lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the fully illuminated area.
The default value is 0.0, specifying that only the center of the area illuminated by the spotlight is lit at full intensity.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.36 spotOuterAngle as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The angle, in degrees, of the area partially lit by a spotlight. Animatable.
Notes:

You define the cone-shaped illuminated area of a spotlight with a position and direction (from the node containing the light) and with an angle specifying the cone's width. Additionally, the illuminated area can smoothly transition from full illumination to no illumination. This property determines the width of the transition area.
The default value is 45.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.37 Temperature as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The color temperature, in degrees Kelvin, of the light source. Animatable.
Notes:

SceneKit determines the actual color of the light by multiplying the color value by a color corresponding to the light's temperature. The default value of 6500 K represents a pure white light (leaving the color unmodulated); lower values (down to a minimum of zero) add a "warmer" yellow or orange effect to the light source, and higher values (up to a maximum of 40000) add a "cooler" blue effect.
This property affects all light types, but is especially useful when working with photometric lights (see the IESProfileURL property) or physically-based rendering (see SCNLightingModelPhysicallyBased). You can leave the color property at its default white color and use the intensity and temperature properties to control the light using realistic parameters.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.38 Type as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A constant identifying the general behavior of the light.
Notes:

A light's type determines the shape and directionality of illumination provided by the light, as well as the set of attributes available for modifying the light's behavior. For example, light types include omnidirectional lights and spotlights. See Light Types for the full set of types and their behaviors.

see also
https://developer.apple.com/documentation/scenekit/scnlighttype
(Read and Write property)

149.22.39 zFar as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum distance between the light and a visible surface for casting shadows.
Notes:

A spotlight casts shadows if its castsShadow property is true. If a surface is farther from the light than this distance, shadows are not cast against the surface.
The default value is 100.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.40 zNear as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum distance between the light and a visible surface for casting shadows. Animatable.
Notes:

A spotlight casts shadows if its castsShadow property is true. If a surface is closer to the light than this distance, shadows are not cast against the surface.
The default value is 1.0.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.22.41 Constants

149.22.42 kShadowModeDeferred = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows in a postprocessing pass.
In the mode, SceneKit blends shadows into the final image after the main rendering pass, so shadows can be of any color.

149.22.43 kShadowModeForward = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows during lighting computations.
In this mode, the color components of the light's shadowColor property do not apply. The color's alpha component determines the intensity of shadows.

149.22.44 kShadowModeModulated = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the shadow modes.
Notes:

SceneKit renders shadows by projecting the light's gobo image. The light does not illuminate the scene.

Typically, you use this mode to create a low-accuracy, high-performance shadow under a game character or similar scene element: Use an image of a radial gradient (black to white) for the light's gobo property, and use categoryBitMask properties to prevent the shadow image from appearing on the character.

149.23 class SCNLookAtConstraintMBS

149.23.1 class SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNLookAtConstraint applies on a node's orientation so that it always look at another node.
Notes: Subclass of the SCNConstraintMBS class.

149.23.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.23.3 Methods

149.23.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

149.23.5 lookAtConstraintWithTarget(target as SCNNodeMBS) as SCNLookAtConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNLookAtConstraint object with the specified target.
Notes: target: The target node to look at.

149.23.6 Properties

149.23.7 gimbalLockEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies whether the receiver enables the gimbal lock. Defaults to false.
Notes:

Enabling the gimbal lock prevents the receiver from rotating the constrained node around to roll axis.
(Read and Write property)

149.23.8 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Front direction in the constraint owner local space. Defaults to - [SCNNode localFront] . Animatable
Notes: (Read and Write property)

149.23.9 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to look at.
Notes: (Read and Write property)

149.23.10 targetOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Offset look at position in target space. Defaults to zero. Animatable
Notes: (Read and Write property)

149.23.11 worldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Up reference direction in world space. Defaults to - [SCNNode localUp] . Animatable
Notes: (Read and Write property)

149.24 class SCNMaterialMBS

149.24.1 class SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A set of shading attributes that define the appearance of a geometry's surface when rendered. **Notes:**

When you create a material, you define a collection of visual attributes and their options, which you can then reuse for multiple geometries in a scene.

A material has several visual properties, each of which defines a different part of SceneKit's lighting and shading process. Each visual property is an instance of the SCNMaterialPropertyMBS class that provides a solid color, texture, or other 2D content for that aspect of SceneKit's rendering. The material's lightingModelName property then determines the formula SceneKit uses to combine the visual properties with the lights in the scene to produce the final color for each pixel in the rendered scene. For more details on the rendering process, see SCNLightingModelMBS.

You attach one or more materials to an instance of the SCNGeometryMBS class using its firstMaterial or materials property. Multiple geometries can reference the same material. In this case, changing the attributes of the material changes the appearance of every geometry that uses it.

149.24.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.24.3 Methods

149.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material.

149.24.5 copy as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the material.

149.24.6 material as SCNMaterialMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material object.
Notes: A newly created material contains an SCNMaterialPropertyMBS object for each of its eight visual properties. You change a material's appearance by setting the contents of each visual property. For information on each visual property's default contents and how it affects a material's appearance, see Visual Properties for Special Effects.

149.24.7 SCNLightingModelBlinn as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights are calculated using the Blinn-Phong formula.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnlightingmodelblinn

149.24.8 SCNLightingModelConstant as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Uniform shading that incorporates ambient lighting only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelconstant

149.24.9 SCNLightingModelLambert as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient and diffuse properties only.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodellambert

149.24.10 SCNLightingModelPhong as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Shading that incorporates ambient, diffuse, and specular properties, where specular highlights

are calculated using the Phong formula.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphong

149.24.11 SCNLightingModelPhysicallyBased as string

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Shading based on a realistic abstraction of physical lights and materials.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnlightingmodelphysicallybased

149.24.12 Properties

149.24.13 ambient as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's response to ambient lighting.
Notes:

The ambient property specifies the amount of ambient light to reflect. This property has no visual impact on scenes that have no ambient light. Setting the ambient has no effect if locksAmbientWithDiffuse is set to true.
(Read only property)

149.24.14 ambientOcclusion as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to be multiplied with the ambient light affecting the material.
Notes:

Use this property to assign an ambient occlusion texture map to a surface. This property has no effect if there is no ambient light in the scene. If this property is not nil, SceneKit ignores the ambient property.
When using physically-based shading (see SCNLightingModelPhysicallyBased), ambient occlusion approximates large-scale surface details that obscure global illumination.
(Read only property)

149.24.15 blendMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode that determines how pixel colors rendered using this material blend with other pixel colors in the rendering target.
Notes:

With the default blend mode of SCNBlendModeAlpha, materials blend according to their alpha (opacity) values—a pixel rendered with a higher alpha value appears more opaque than one with a lower alpha value. Change this property to create special effects. For example, the SCNBlendModeAdd mode can make objects appear to glow.
(Read and Write property)

149.24.16 colorBufferWriteMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines whether the receiver writes to the color buffer when rendered.
Notes:

Defaults to SCNColorMaskAll.
(Read and Write property)

149.24.17 cullMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode determining which faces of a surface SceneKit renders. Animatable.
Notes:

The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible. Typically, back-facing surfaces are found only on the interior of a closed geometry, obscured by front-facing surfaces, so rendering these surfaces has a performance cost but no visible effect.
This property's default value is SCNCullBack, specifying that SceneKit should cull, or not render, back-facing surfaces. You can change this property's value to cause SceneKit to render only the back surfaces of a material instead. See SCNCullMode for available values.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

149.24.18 diffuse as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's diffuse response to lighting.

Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462589-diffuse
(Read only property)

149.24.19 displacement as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The displacement property specifies how vertex are translated in tangent space.
Notes:

Pass a grayscale image for a simple 'elevation' or rgb image for a vector displacement.
(Read only property)

149.24.20 DoubleSided as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit should render both front and back faces of a surface. Animatable.
Notes:

When this property's value is false (the default), SceneKit renders a surface using the material from one side. The vertex data and normal vectors in a geometry designate which side of each polygon is to be considered its front face, and the geometry's orientation with respect to the camera determines which front surfaces are currently visible.
If you change this property's value to true, SceneKit renders both the front and back surfaces of every polygon. SceneKit assumes the surface normals a back face to be the negative of the front face's normal vector. You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state
(Read and Write property)

149.24.21 emission as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the color emitted by each point on a surface.
Notes:

The emission property specifies the amount of light the material emits. This emission does not light up other surfaces in the scene.
(Read only property)

149.24.22 fillMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines of to how to rasterize the receiver's primitives.
Notes:

Defaults to SCNFillModeFill.
(Read and Write property)

149.24.23 fresnelExponent as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor affecting the material's reflectivity. Animatable.
Notes:

The Fresnel exponent of a material interacts with its reflective property to determine the intensity of reflections in a surface based on its angle relative to the viewer. A higher Fresnel exponent increases the visibility of reflections when the material is viewed from a shallow angle.
(Read and Write property)

149.24.24 lightingModelName as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The lighting formula that SceneKit uses to render the material.
Notes:

SceneKit provides several different lighting models, each of which combines information from a material's visual properties with the lights and other contents of a scene. For details on how each lighting model affects rendering, see Lighting Models. For details on the contribution from each visual property, see Visual Properties for Special Effects.
(Read and Write property)

149.24.25 LitPerPixel as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit performs lighting calculations per vertex or per pixel. Animatable.
Notes:

When this property's value is true (the default), SceneKit performs lighting calculations independently for each rendered pixel. This approach provides better rendering quality, but can adversely impact rendering performance.
If you change this property's value to false, SceneKit performs lighting calculations for each vertex in a

geometry, and allows the GPU to interpolate lighting results across the pixels in between vertices. Depending on the shape and vertex count of a geometry's surface and the material properties being rendered, this approach may improve rendering performance without much noticeable impact on visual quality.
You can animate changes to this property's value. See Animating SceneKit Content. Animating this property fades between the results of rendering with each state.
(Read and Write property)

149.24.26 locksAmbientWithDiffuse as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the material responds identically to both ambient and diffuse lighting. Animatable.
Notes:

Makes the ambient property automatically match the diffuse property. Defaults to false on 10.9 and before, defaults to true otherwise. Animatable.
(Read and Write property)

149.24.27 metalness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to determine how metallic the material's surface appears.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property generally approximates aspects of a physical surface—such as index of refraction, tendency to produce sharp reflections, and tendency to produce Fresnel reflections at grazing angles—that together produce an overall metallic or nonmetallic (also called dielectric) appearance. Lower values (darker colors) cause the material to appear more like a dielectric surface. Higher values (brighter colors) cause the surface to appear more metallic.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

149.24.28 multiply as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values that are multiplied with pixels in a material after all other shading is complete.
Notes:

The multiply property specifies a color or an image used to multiply the output fragments with. The computed fragments are multiplied with the multiply value to produce the final fragments. This property may

be used for shadow maps, to fade out or tint 3d objects.
(Read only property)

149.24.29 name as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the material.
Notes:

You can provide a descriptive name for a material to make managing your scene graph easier. Materials loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the SCNSceneSourceMBS class to examine materials in a scene file without loading its scene graph.

Material names are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor.
(Read and Write property)

149.24.30 normal as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the nominal orientation of the surface at each point for use in lighting.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterial/1462542-normal
(Read only property)

149.24.31 readsFromDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Determines whether the receiver reads from the depth buffer when rendered.
Notes:

Defaults to true.
(Read and Write property)

149.24.32 reflective as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the reflected color for each point on a surface.

Notes:

The reflective property specifies the reflectivity of the surface. The surface will not actually reflect other objects in the scene. This property may be used as a sphere mapping to reflect a precomputed environment.
(Read only property)

149.24.33 roughness as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values to determine the apparent smoothness of the surface.
Notes:

This property measures only the total intensity of color values; texture contents are best defined in grayscale. This property approximates the level of microscopic detail—for example tiny bumps and cracks—in a surface. By approximating these "microfacets" as a single term, this property helps produce lighting calculations that resemble the energy-conserving laws of real-world physics, resulting in more realistic variation between matte and shiny surfaces. Lower values (darker colors) cause the material to appear shiny, with well-defined specular highlights. Higher values (brighter colors) cause specular highlights to spread out and the diffuse color of the material to become more retroreflective.
This property applies only when the material's lightingModelName value is SCNLightingModelPhysicallyBased.
(Read only property)

149.24.34 selfIllumination as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that provides color values representing the global illumination of the surface.
Notes:

Self-illumination applies to all materials, but is especially useful for those using physically-based shading (see SCNLightingModelPhysicallyBased). Physically-based materials work best with environment-based lighting (see the SCNSceneMBS property lightingEnvironment), but for some materials it can be useful to let a surface itself define part of its lighting—for example, an object whose position obscures it from the "sky" that provides the main lighting environment. When you assign contents to this property, they override the environmental lighting contribution to diffuse shading, but environmental lighting still contributes to specular effects.
(Read only property)

149.24.35 shininess as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The sharpness of specular highlights. Animatable.
Notes:

The shininess of a material interacts with its specular property and the lighting in a scene to produce bright highlights on a surface. A higher value produces more sharply defined highlights, making a surface appear more smooth and glossy.
(Read and Write property)

149.24.36 specular as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that manages the material's specular response to lighting.
Notes:

The specular property specifies the amount of light to reflect in a mirror-like manner. The specular intensity increases when the point of view lines up with the direction of the reflected light.
(Read only property)

149.24.37 transparency as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The uniform transparency of the material. Animatable.
Notes:

SceneKit determines the total opacity of each rendered pixel in a surface by multiplying the color from the material's transparent property by the value of this property. Then, the material's transparencyMode property determines how pixels from the material are blended into the scene.
You can also uniformly adjust the opacity of all content attached to a node using its opacity property.
(Read and Write property)

149.24.38 transparencyMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The mode SceneKit uses to calculate transparency for the material.
Notes:

The default transparency mode is SCNTransparencyModeAOne. See SCNTransparencyMode for available values and their effects.
(Read and Write property)

149.24.39 transparent as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that determines the opacity of each point in a material.

Notes:

The transparent property specifies the transparent areas of the material.
(Read only property)

149.24.40 writesToDepthBuffer as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit produces depth information when rendering the material.
Notes:

Determines whether the receiver writes to the depth buffer when rendered. Defaults to true.
(Read and Write property)

149.24.41 Constants

149.24.42 SCNBlendModeAdd = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by adding the source color to the destination color.
This mode results in a brightening effect that can be useful for making objects appear to glow relative to their surroundings.

149.24.43 SCNBlendModeAlpha = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying source and destination color values by their corresponding alpha values.
This mode is the default value of the blendMode property.

149.24.44 SCNBlendModeMax = 6

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Max

149.24.45 SCNBlendModeMultiply = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the source color with the background color.
This mode results in colors that are at least as dark as either of the two contributing colors.

149.24.46 SCNBlendModeReplace = 5

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes: Blend by replacing the destination color with the source color, ignoring alpha.

149.24.47 SCNBlendModeScreen = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.
Notes:

Blend by multiplying the inverse of the source color with the inverse of the destination color.
This mode results in colors that are at least as light as either of the two contributing colors.

149.24.48 SCNBlendModeSubtract = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes that describe how SceneKit blends source colors rendered using a material with destination colors already in a rendering target, used by the blendMode property.

Notes: Blend by subtracting the source color from the destination color.

149.24.49 SCNCullModeBack = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
Notes: The mode for culling back-facing polygons (and rendering only front-facing polygons).

149.24.50 SCNCullModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to determine which polygons to render in a surface, used by the cullMode property.
Notes: The mode for culling front-facing polygons (and rendering only back-facing polygons).

149.24.51 SCNFillModeFill = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the file mode constants.
Notes: Fill

149.24.52 SCNFillModeLines = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the file mode constants.
Notes: Lines

149.24.53 SCNTransparencyModeAOne = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: SceneKit derives transparency information from the alpha channel of colors. The value 1.0 is opaque.

149.24.54 SCNTransparencyModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Default

149.24.55 SCNTransparencyModeDualLayer = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Dual layer.

149.24.56 SCNTransparencyModeRGBZero = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes:

SceneKit derives transparency information from the luminance of colors. The value 0.0 is opaque.
When using this mode, SceneKit ignores the alpha value of colors in the material's transparent property. SceneKit calculates the luminance of a color from its red, green, and blue channels and uses the resulting value to determine the material's opacity.

149.24.57 SCNTransparencyModeSingleLayer = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the constants for the modes SceneKit uses to calculate the opacity of pixels rendered with a material, used by the transparencyMode property.
Notes: Single layer.

149.25 class SCNMaterialPropertyMBS

149.25.1 class SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for the color or texture of one of a material's visual properties.
Notes:

A material has several visual properties that together determine its appearance under lighting and shading. SceneKit renders each pixel in the scene by combining the information from material properties with the locations, intensities, and colors of lights.
A material property's contents can be either a color, which provides a uniform effect across the surface of a material, or a texture, which SceneKit maps across the surface of a material using texture coordinates provided by the geometry object the material is attached to. A texture, in turn, can come from any of several sources, such as an image object, a URL to an image file, a specially formatted image or set of images for use as a cube map, or even animated content provided by Core Animation, SpriteKit, or AVFoundation—for the full set of options, see the contents property.

https://developer.apple.com/documentation/scenekit/scnmaterialproperty

149.25.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.25.3 Methods

149.25.4 Constructor(content as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property with given content.

149.25.5 materialPropertyWithColor(color as NSColorMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified color.

149.25.6 materialPropertyWithContents(content as Variant) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified contents.
Notes:

contents: The visual contents of the material property—a color, image, or source of animated content. For details, see the discussion of the contents property.

Returns a new material property object.

Newly created SCNMaterialMBS objects contain SCNMaterialPropertyMBS instances for all of their visual properties. To change a material's visual properties, you modify those instances rather than creating new material property objects.
You create new SCNMaterialPropertyMBS instances to provide textures for use with custom GLSL shaders—for details, see SCNShadableMBS.

149.25.7 materialPropertyWithImage(image as NSImageMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified image.

149.25.8 materialPropertyWithLayer(layer as CALayerMBS) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified layer.

149.25.9 materialPropertyWithPicture(picture as Picture) as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new material property object with the specified picture.

149.25.10 Properties

149.25.11 borderColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A color used to fill in areas of a material's surface not covered by the material property's image contents.
Notes:

When the material property's contents are a texture image and its texture wrapping properties are set to SCNWrapModeClampToBorder, the border color appears in areas of a textured geometry not covered by the texture image, as shown in .
(Read and Write property)

149.25.12 contents as Variant

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The visual contents of the material property—a color, image, or source of animated content. Animatable.
Notes:

see also
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395372-contents
(Read and Write property)

149.25.13 contentsTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transformation applied to the material property's visual contents. Animatable.
Notes:

SceneKit applies this transformation to the texture coordinates provided by the geometry object the material is attached to, then uses the resulting coordinates to map the material property's contents across the surface of the material. (This transformation has no effect if the material property's contents object is a constant color.)
(Read and Write property)

149.25.14 intensity as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A number between 0.0 and 1.0 that modulates the effect of the material property. Animatable.
Notes:

The default intensity is 1.0. Reducing the intensity fades out the contents of the material property, causing different effects depending on which visual property of an SCNMaterialMBS object it represents:

- For the normal property, intensity varies the apparent roughness of the normal-mapped surface. Reducing intensity makes the surface appear more smooth.
- For the multiply property, reducing intensity blends the material property's colors with white, effectively reducing the strength of the color multiplication effect.
- For all other properties, reducing intensity dims the material property's contents.

(Read and Write property)

149.25.15 magnificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for rendering the material property's image contents at a size larger than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point near the camera may correspond to a small fraction of a pixel in the texture image. SceneKit uses the magnification filter to determine the color of the sampled texel at that point.
The default magnification filter is SCNFilterModeLinear.
(Read and Write property)

149.25.16 mappingChannel as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The source of texture coordinates for mapping the material property's image contents.
Notes:

A geometry can have multiple independent sources of texture coordinates, each of which defines a unique mapping channel number. You can use these channels to map different visual properties of a material in different ways. For example, a geometry representing a picture frame might use one set of texture coordinates for mapping the materials of the frame itself, and another set of texture coordinates for placing a picture into the frame.
For information about creating geometries with multiple texture mapping channels, see SCNGeometryMBS.
(Read and Write property)

149.25.17 maxAnisotropy as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The amount of anisotropic texture filtering to be used when rendering the material property's image contents.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395402-maxanisotropy
(Read and Write property)

149.25.18 minificationFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for rendering the material property's image contents at a size smaller than that of the original image.
Notes:

Texture filtering determines the appearance of a material property's contents when portions of the material surface appear larger or smaller than the original texture image. For example, the texture coordinates at a point far from the camera may correspond to an area of several pixels in the texture image. SceneKit uses the minification filter to determine the color of the sampled texel at that point.
The default minification filter is SCNFilterModeLinear. See constants for available modes and their effects.
(Read and Write property)

149.25.19 mipFilter as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Texture filtering for using mipmaps to render the material property's image contents at a size smaller than that of the original image.
Notes:

see
https://developer.apple.com/documentation/scenekit/scnmaterialproperty/1395398-mipfilter
(Read and Write property)

149.25.20 wrapS as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The wrapping behavior for the S texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates ex-

tend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The S texture coordinate measures the horizontal axis of a texture image, increasing from 0.0 at the left edge of the image to 1.0 at the right edge.
The default wrap mode is SCNWrapModeClamp. See constants for available modes and their effects.
(Read and Write property)

149.25.21 wrapT as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The wrapping behavior for the T texture coordinate.
Notes:

Wrapping modes determine texture mapping behavior for cases where a material's texture coordinates extend outside the range from 0.0 to 1.0. For example, if you use the contentsTransform property to shrink a texture relative to the surface of a geometry, you use the wrap mode properties to determine whether the texture repeats across the surface.
The T texture coordinate measures the vertical axis of a texture image, increasing from 0.0 at the bottom of the image to 1.0 at the top.
The default wrap mode is SCNWrapModeClamp.
(Read and Write property)

149.25.22 Constants

149.25.23 SCNFilterModeLinear = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering sample texels from the neighborhood of the coordinates being sampled and linearly interpolates their colors.

149.25.24 SCNFilterModeNearest = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes: Texture filtering returns the color from only one texel, whose location is nearest to the coordinates being sampled.

149.25.25 SCNFilterModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Texture filtering modes, used by the minificationFilter, magnificationFilter, and mipFilter properties.
Notes:

No texture filtering is applied.
Only valid for the mipFilter property, specifying that SceneKit should not use mip mapping.

149.25.26 SCNWrapModeClamp = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture coordinates are clamped to the range from 0.0 to 1.0, inclusive.
Texture sampling in areas whose texture coordinates would fall outside this range produces texel colors from the nearest edge of the texture image.

149.25.27 SCNWrapModeClampToBorder = 3

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses texture colors for coordinates in the range from 0.0 to 1.0 (inclusive) and the material property's borderColor value otherwise.

Texture sampling in areas whose texture coordinates would fall outside this range uses the borderColor property instead of texel colors from the texture image.

149.25.28 SCNWrapModeMirror = 4

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling of texture coordinates outside range from 0.0 to 1.0 should behave as if the range reverses before repeating.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling both texture image and its mirror image across the surface using the material.

149.25.29 SCNWrapModeRepeat = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the Modes to apply to texture wrapping, used by the wrapT and wrapS properties.
Notes:

Texture sampling uses only the fractional part of texture coordinates, passing through the range from 0.0 to (but not including) 1.0.

Texture sampling in areas of the material whose texture coordinates would fall outside from 0.0 to 1.0 results in tiling the texture image across the surface using the material.

149.26 class SCNMatrix4MBS

149.26.1 class SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a 4 x 4 matrix.
Notes: SceneKit uses matrices to represent coordinate space transformations, which in turn can represent the combined position, rotation or orientation, and scale of an object in three-dimensional space.

149.26.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.26.3 Methods

149.26.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
Notes: Initializes all values with zero.

149.26.5 copy as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the matrix.

149.26.6 equals(other as SCNMatrix4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the corresponding elements of two matrices are equal.
Notes:

self: The first matrix to be compared.
other: The first matrix to be compared.

Returns true if each element in self is exactly equal to the corresponding element in other.

This function performs a numeric (not bitwise) comparison of each pair of elements.

149.26.7 Identity as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The 4 x 4 identity matrix.
Notes: Elements on the diagonal of this matrix are 1.0; all other elements are 0.0. Multiplying another matrix by the identity matrix or multiplying the identity matrix by another matrix yields the other matrix.

149.26.8 Invert as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the inverse of the specified matrix.
Notes: The inverse matrix of the specified matrix, or the original matrix if it is not invertible.

149.26.9 Multiply(other as SCNMatrix4MBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the product of two matrices.
Notes:

self: The multiplicand, or left operand of matrix multiplication.
other: The multiplier, or right operand of matrix multiplication.

Returns the matrix product of the self and other parameters.

Matrix multiplication is not commutative. As a transformation, the result of multiplying a matrix A by a matrix B is the transformation represented by B followed by the transformation represented by A.

149.26.10 Null as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The null matrix.
Notes: All values are zero.

149.26.11 Rotate(angle as double, sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a rotation transformation.
Notes:

mat: The matrix to be combined with a rotation.
angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
sx: The x-component of the rotation axis.
sy: The y-component of the rotation axis.
sz: The z-component of the rotation axis.

Returns a new matrix.

The resulting transformation consists of the specified rotation followed by the transformation represented by the mat parameter.

149.26.12 Rotation(angle as double, x as double, y as double, z as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a rotation transformation.
Notes:

angle: The amount of rotation, in radians, measured counterclockwise around the rotation axis.
x: The x-component of the rotation axis.
y: The y-component of the rotation axis.
z: The z-component of the rotation axis.

Returns a new rotation matrix.

149.26.13 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a scale transformation.
Notes:

self: The matrix to be combined with a translation.
sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified scale followed by the transformation represented by the mat parameter.
See also:

- 149.26.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 20271

149.26.14 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a scale transformation.
Notes:

sx: The scale factor in the x-axis direction.
sy: The scale factor in the y-axis direction.
sz: The scale factor in the z-axis direction.

Returns a new scale matrix.
See also:

- 149.26.13 Scale(sx as double, sy as double, sz as double) as SCNMatrix4MBS 20270

149.26.15 Translate(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a new matrix created by concatenating the specified matrix with a translation transformation.
Notes:

self: The matrix to be combined with a translation.
tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new matrix.

The resulting transformation consists of the specified translation followed by the transformation represented by the mat parameter.

149.26.16 Translation(tx as double, ty as double, tz as double) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a matrix describing a translation transformation.
Notes:

tx: The translation distance in the x-axis direction.
ty: The translation distance in the y-axis direction.
tz: The translation distance in the z-axis direction.

Returns a new translation matrix.

149.26.17 Properties

149.26.18 IsIdentity as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a Boolean value that indicates whether the specified matrix is equal to the identity matrix.
Notes:

Returns true if the elements on the matrix's diagonal are 1.0 and all other elements are 0.0.
(Read only property)

149.26.19 m11 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/1.
Notes: (Read and Write property)

149.26.20 m12 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/2.
Notes: (Read and Write property)

149.26.21 m13 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/3.
Notes: (Read and Write property)

149.26.22 m14 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 1/4.
Notes: (Read and Write property)

149.26.23 m21 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/1.
Notes: (Read and Write property)

149.26.24 m22 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/2.
Notes: (Read and Write property)

149.26.25 m23 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/3.
Notes: (Read and Write property)

149.26.26 m24 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 2/4.
Notes: (Read and Write property)

149.26.27 m31 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/1.
Notes: (Read and Write property)

149.26.28 m32 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/2.
Notes: (Read and Write property)

149.26.29 m33 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/3.
Notes: (Read and Write property)

149.26.30 m34 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 3/4.
Notes: (Read and Write property)

149.26.31 m41 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/1.
Notes: (Read and Write property)

149.26.32 m42 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/2.
Notes: (Read and Write property)

149.26.33 m43 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/3.
Notes: (Read and Write property)

149.26.34 m44 as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value at 4/4.
Notes: (Read and Write property)

149.27 class SCNNodeMBS

149.27.1 class SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A structural element of a scene graph, representing a position and transform in a 3D coordinate space, to which you can attach geometry, lights, cameras, or other displayable content.
Notes:

149.27.4 Methods

149.27.5 addChildNode(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a node to the node's array of children.
Notes:

child: The node to be added.

Calling this method appends the node to the end of the childNodes array.

149.27.6 childNodes as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of the node's children in the scene graph hierarchy.

149.27.7 childNodeWithName(Name as String, recursively as Boolean = false) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the first node in the node's child node subtree with the specified name.
Notes:

name: The name of the node to search for.
recursively: True to search the entire child node subtree, or false to search only the node's immediate children.

If the recursive parameter is true, SceneKit uses a preorder traversal to search the child node subtree—that is, the block searches a node before it searches each of the node's children, and it searches all children of a node before searching any of that node's sibling nodes. Otherwise, SceneKit searches only those nodes in the node's childNodes array.

149.27.8 clone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the node and its children.
Notes:

This method recursively copies the node and its child nodes. For a nonrecursive copy, use the inherited copy method, which creates a copy of the node without any child nodes.
Cloning or copying a node creates a duplicate of the node object, but not the geometries, lights, cameras, and other SceneKit objects attached to it—instead, each copied node shares references to these objects.

This behavior means that you can use cloning to, for example, place the same geometry at several locations within a scene without maintaining multiple copies of the geometry and its materials. However, it also means that changes to the objects attached to one node will affect other nodes that share the same attachments. For example, to render two copies of a node using different materials, you must copy both the node and its geometry before assigning a new material.

Multiple copies of an SCNGeometryMBS object efficiently share the same vertex data, so you can copy geometries without a significant performance penalty.

149.27.9 constraints as SCNConstraintMBS()

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.

Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

149.27.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new node object.
See also:

- 149.27.11 Constructor(geometry as SCNGeometryMBS) 20278

149.27.11 Constructor(geometry as SCNGeometryMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a node object with the specified geometry attached.
Notes:

geometry: The geometry to be attached.

Returns a new node object with the geometry attached, or nil if initialization is not successful.
See also:

- 149.27.10 Constructor 20278

149.27.12 convertPositionFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a position to the node's local coordinate space from that of another node.
Notes:

position: A position in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a position in the node's local coordinate space.

149.27.13 convertPositionToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a position from the node's local coordinate space to that of another node.
Notes:

position: A position in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a position in the local coordinate space defined by the other node.

149.27.14 convertTransformFromNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a transform to the node's local coordinate space from that of another node.
Notes:

transform: A transform relative to the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a transform relative to the node's coordinate space.

149.27.15 convertTransformToNode(position as SCNMatrix4MBS, node as SCNNodeMBS) as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Converts a transform from the node's local coordinate space to that of another node.
Notes:

transform: A transform relative to the node's coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a transform relative to the local coordinate space defined by the other node.

149.27.16 convertVectorFromNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts a direction vector to the node's local coordinate space from that of another node.
Notes:

vector: A direction vector in the local coordinate space defined by the other node.
node: Another node in the same scene graph as the node, or nil to convert from the scene's world coordinate space.

Returns a direction vector in the node's local coordinate space.

Unlike the convertPositionFromNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

149.27.17 convertVectorToNode(position as SCNVector3MBS, node as SCNNodeMBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Converts a direction vector from the node's local coordinate space to that of another node.
Notes:

vector: A direction vector in the node's local coordinate space.
node: Another node in the same scene graph as the node, or nil to convert to the scene's world coordinate space.

Returns a direction vector in the local coordinate space defined by the other node.

Unlike the convertPositionToNode method, this method ignores the translational aspect of both nodes' transforms. As such, this method is more appropriate for use with vectors that represent only directional information, such as velocity or facing.

149.27.18 copy as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the node.

149.27.19 flattenedClone as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an optimized copy of the node and its children.
Notes:

A new single node containing the combined geometries and materials of the node and its child node subtree.

Rendering complex node hierarchies can incur a performance cost. Each geometry and material requires a separate draw command to be sent to the GPU, and each draw command comes with a performance overhead. If you plan for a portion of your scene's node hierarchy to remain static (with respect to itself, if not the rest of the scene), use this method to create a single node containing all elements of that node hierarchy that SceneKit can render using fewer draw commands.

149.27.20 hitTestWithSegment(PointA as SCNVector3MBS, PointB as SCNVector3MBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches the node's child node subtree for objects intersecting a line segment between two specified points.
Notes:

pointA: An endpoint of the line segment to search along, specified in the node's local coordinate system.
pointB: The other endpoint of the line segment to search along, specified in the node's local coordinate system.
options: A dictionary of options affecting the search. See Key shared methods in SCNHitTestResultMBS class for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

Hit-testing is the process of finding elements of a scene located along a specified line segment in the scene's coordinate space (or that of a particular node in the scene). For example, you can use this method to determine whether a projectile launched by a game character will hit its target.

To search for the scene element corresponding to a two-dimensional point in the rendered image, use the renderer's hitTest method instead.

149.27.21 insertChildNode(newNode as SCNNodeMBS, atIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds a node to the node's array of children at a specified index.

149.27.22 localRotateBy(rotation as SCNVector4MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's orientation relative to its current orientation.
Notes:

rotation: The axis and angle of rotation to apply, in node-local space, expressed as a quaternion.

This method rotates the node according to its pivot transform.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

149.27.23 localTranslateBy(translation as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's position relative to its current position.
Notes:

translation: The distance, in node-local space, by which to move the node.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the move.

Available in macOS 10.13 or later.

149.27.24 lookAt(worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Changes the node's orientation so that its local forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.

Using this method is equivalent to calling the other lookAt method and passing the node's worldUp and localFront vectors for the corresponding parameters.
The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 149.27.25 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS) 20283

149.27.25 lookAt(worldTarget as SCNVector3MBS, worldUp as SCNVector3MBS, localFront as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the node's orientation so that the specified forward vector points toward the specified location.
Notes:

worldTarget: The point, in world space, to face the node toward.
worldUp: The direction vector, in world space, that should appear as "up" from the rotated node's point of view.
localFront: The direction vector, in the node's local space, that should orient toward the target point.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.
See also:

- 149.27.24 lookAt(worldTarget as SCNVector3MBS) 20282

149.27.26 node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a node object.
Notes: Returns a new node object, or nil if initialization is not successful.

149.27.27 nodeWithGeometry(geometry as SCNGeometryMBS) as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a node object with the specified geometry attached.
Notes: Returns a new node object with the geometry attached, or nil if initialization is not successful.

149.27.28 removeAllActions

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Ends and removes all actions from the node.
Notes: When SceneKit removes an action from a node, it skips any remaining animation the action would perform. However, any changes the action has already made to the node's state remain in effect.

149.27.29 removeFromParentNode

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the node from its parent's array of child nodes.
Notes: Removing nodes from the node hierarchy serves two purposes. Nodes own their contents (child nodes or attached lights, geometries, and other objects), so deallocating unneeded nodes can reduce memory usage. Additionally, SceneKit does more work at rendering time with a large, complex node hierarchy, so removing nodes whose contents you don't need to display can improve rendering performance.

149.27.30 replaceChildNode(oldNode as SCNNodeMBS, newNode as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes a child from the node's array of children and inserts another node in its place.
Notes:

oldNode: The existing child node to be replaced.
newNode: The node with which to replace the child node.

If both the oldNode and newNode nodes are children of the node, calling this method swaps their positions in the array. Note that removing a node from the node hierarchy may result in it being deallocated.
Calling this method results in undefined behavior if the child parameter does not refer to a child of this node.

149.27.31 rotateBy(worldRotation as SCNVector4MBS, worldTarget as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Changes the node's position and orientation, relative to its current transform, through a rotation around the specified point in scene space.
Notes:

worldRotation: The axis and angle of rotation to apply, in scene space, expressed as a quaternion.
worldTarget: The center point, in scene space, about which to rotate.

The effects of this method are animatable; that is, calling this method during an implicit-animation transaction animates the rotation effect.

Available in macOS 10.13 or later.

149.27.32 runAction(action as SCNActionMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an action to the list of actions executed by the node.
Notes:

action: The action to be performed.

SceneKit begins running a newly added action when it prepares to render the next frame.
See also:

- 149.27.33 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20285
- 149.27.34 runAction(action as SCNActionMBS, key as string) 20286
- 149.27.35 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20286

149.27.33 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an action to the list of actions executed by the node. SceneKit calls the specified block when the action completes.
Notes:

action: The action to be performed.
del: The method that SceneKit calls when the action completes.
tag: The tag is passed through to delegate method.

The new action is processed the next time SceneKit prepares to render a frame.
SceneKit calls your method after the action's duration is complete. For example, in a game you could use this method to show a Game Over message after performing a fade-out action on a node that displays a player character.
See also:

- 149.27.32 runAction(action as SCNActionMBS) 20285
- 149.27.34 runAction(action as SCNActionMBS, key as string) 20286

- 149.27.35 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20286

149.27.34 runAction(action as SCNActionMBS, key as string)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

action: The action to be performed.
key: A unique key used to identify the action.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
See also:

- 149.27.32 runAction(action as SCNActionMBS) 20285
- 149.27.33 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20285
- 149.27.35 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20286

149.27.35 runAction(action as SCNActionMBS, key as string, del as SCNNodeRunActionCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an identifiable action to the list of actions executed by the node.
Notes:

SceneKit calls the specified block when the action completes.

action: The action to be performed.
key: A unique key used to identify the action.
del: A completion block called when the action completes.
tag: The tag is passed through to delegate method.

This method is identical to runAction, but the action is stored and identified so that you can retrieve or cancel it later. If an action using the same key is already running, SceneKit removes it before adding the new action.
SceneKit calls your method after the action's duration is complete. For example, you can use this method with a wait action to execute some code after a timed delay. If during the delay period you need to prevent the code from running, use the removeActionForKey method to cancel it.
See also:

- 149.27.32 runAction(action as SCNActionMBS) 20285
- 149.27.33 runAction(action as SCNActionMBS, del as SCNNodeRunActionCompletedMBS, tag as variant = nil) 20285
- 149.27.34 runAction(action as SCNActionMBS, key as string) 20286

149.27.36 SCNModelTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from model space to scene (or world) space.

149.27.37 SCNModelViewProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model, View, and Projection transformations.

149.27.38 SCNModelViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix containing the concatenation of the Model and View transformations.

149.27.39 SCNNormalTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming surface normal vectors from model space to view (or eye) space.

149.27.40 SCNProjectionTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from view (or eye) space to clip space.

149.27.41 SCNViewTransform as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys are used for the 'semantic' argument of SCNProgramMBS.setSemantic method.
Notes:

Transforms are SCNMatrix4 wrapped in NSValue objects.
A 4 x 4 matrix for transforming coordinates from scene (or world) space to view (or eye) space.

149.27.42 setConstraints(constraints() as SCNConstraintMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets the list of constraints affecting the node's transformation.
Notes:

An array of constraint objects. Before rendering, SceneKit evaluates all constraints attached to a node hierarchy and adjusts node transformations appropriately.
Use the SCNLookAtConstraintMBS class to make a node always point toward another node even as both are moved, or the SCNTransformConstraintMBS class to apply arbitrary transformations at constraint evaluation time.

149.27.43 Properties

149.27.44 Camera as SCNCameraMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The camera attached to the node.
Notes:

To use a camera for displaying a scene, set the the pointOfView property of the view (or layer or renderer) displaying the scene to the node containing the camera. A camera looks in the direction of the node's negative z-axis, so you aim the camera by changing the position and orientation of the node containing it. You control geometric and optical parameters of the camera—projection, field of view, and depth of field—using the attached SCNCameraMBS object.

(Read and Write property)

149.27.45 CastsShadow as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit renders the node's contents into shadow maps.
Notes:

SceneKit renders shadows by rendering a shadow map image containing silhouettes of the scene's contents, and then projecting that image onto the scene. SceneKit performs this process once for each SCNLight object in the scene whose castsShadow property is true. Because shadow map rendering re-renders portions of the scene, it incurs a performance cost. To minimize this performance cost, exclude nodes from shadow map rendering by setting the node's castsShadow property to false.

For more details on shadow rendering, see SCNLight.
(Read and Write property)

149.27.46 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mask that defines which categories the node belongs to.
Notes:

You can assign each node in a scene to one or more categories, where each category corresponds to a bit in the bit mask. You define the mask values used in your app. When SceneKit renders a scene, it compares the each node's categoryBitMask property with the category bit masks of every other object that participates in the rendering process—lights, cameras, and techniques—using a bitwise AND operation. If the result is a nonzero value, SceneKit includes the node when rendering. The default category bit mask is 1.

Use a node's category bit mask together with:

- An SCNLightMBS object's categoryBitMask property to exclude the node from that light's illumination
- An SCNCameraMBS object's categoryBitMask property to make the node invisible to that camera
- The category bit masks in an SCNTechniqueMBS object's definition dictionary to include or exclude the node from phases of a multipass rendering technique

This property does not affect SceneKit's physics simulation. To include or exclude a node from physics interactions, use the categoryBitMask property of the node's physicsBody and physicsField objects.
(Read and Write property)

149.27.47 EulerAngles as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node's orientation, expressed as pitch, yaw, and roll angles in radians. Animatable.
Notes:

The order of components in this vector matches the axes of rotation:

- Pitch (the x component) is the rotation about the node's x-axis.
- Yaw (the y component) is the rotation about the node's y-axis.
- Roll (the z component) is the rotation about the node's z-axis.

SceneKit applies these rotations relative to the node's pivot property in the reverse order of the components: first roll, then yaw, then pitch. The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value. See Animating SceneKit Content.
(Read and Write property)

149.27.48 focusBehavior as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The focus behavior for a node.
Notes: (Read and Write property)

149.27.49 Geometry as SCNGeometryMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The geometry attached to the node.
Notes:

A node can have only one geometry attached to it. To combine geometries so they can be controlled or animated together, create a node with no geometry and add other nodes to it.
Animating the node's geometric properties can move, rotate, stretch and scale its geometry. For more advanced animations of a node's geometry, use its morpher and skinner objects.
(Read and Write property)

149.27.50 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.

Notes: (Read and Write property)

149.27.51 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines the visibility of the node's contents. Animatable.
Notes:

The default value of this property is false, specifying that SceneKit should render geometries and use lights attached to the node or its children. Change this property's value to true to exclude attached geometries and lights from rendering. (Cameras attached to the node or its children are not affected by this property.) Hiding a node also hides its child nodes recursively.

You can animate changes to this property's value. See Animating SceneKit Content. Hiding or showing a node in an animation results in a fade-in or fade-out effect.
(Read and Write property)

149.27.52 Light as SCNLightMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The light attached to the node..
Notes:

A node can have only one light attached to it. To combine lights so they can be controlled or animated together, create a node with no light and add other nodes to it.
(Read and Write property)

149.27.53 localFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The unit vector SceneKit treats as "forward" in local space for all nodes.
Notes:

The "forward" direction of a node affects cameras and directional lighting attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint. This vector is always (0, 0, -1) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

149.27.54 localRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The direction SceneKit treats as "right" in local space for all nodes.
Notes:

No SceneKit features depend directly on this direction's definition—it's simply a natural consequence of recognizing "forward" and "up" directions for use with cameras, directional lighting, and relative orientation operations.
This vector is always (1, 0, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

149.27.55 localUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The direction SceneKit treats as "up" in local space for all nodes.
Notes:

The "up" direction of a node affects cameras attached to a node, as well as relative orientation and movement effects such as lookAt, SCNLookAtConstraint, and SCNBillboardConstraint.
This vector is always (0, 1, 0) for all nodes, but you can use this class property when it's convenient to refer to directions symbolically.

Available in macOS 10.13 or later.
(Read only property)

149.27.56 movabilityHint as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A value that indicates how SceneKit should handle the node when rendering movement-related effects.
Notes:

This property controls how the node contributes to various motion-related effects during rendering. The default value is SCNMovabilityHintFixed. If the movability hint is SCNMovabilityHintMovable:

- The node's content is not affected by motion blur effects. (See the motionBlurIntensity camera property, which applies motion blur effects for camera movement but not subject movement.)
- The node does not contribute to environmental lighting of other objects. Environmental lighting is an

aspect of physically based rendering (see SCNLightingModelPhysicallyBased), in which surfaces tend to pick up the color of other scene content around them. SceneKit performs environmental lighting by rendering light probes—small, omnidirectional snapshots of the scene's contents, as visible from at various points around the scene. Light probes are static, so nodes that are expected to move should not contribute to the lighting environment for other surfaces.

This value is merely a hint that communicates to SceneKit's rendering system about how you want to move content in your scene; it does not affect your ability to change the node's position or add animations or physics to the node.
(Read and Write property)

149.27.57 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A name associated with the node.
Notes:

You can provide a descriptive name for a node to make managing your scene graph easier. Nodes loaded from a scene file may have names assigned by an artist using a 3D authoring tool. Use the childNodeWithName or childNodesPassingTest method to retrieve a node from a scene graph by its name, or the SCNSceneSource class to examine nodes in a scene file without loading its scene graph.

The names of nodes and their attached objects are saved when you export a scene to a file using its writeToURL method, and appear in the Xcode scene editor. The SceneKit statistics view (see showsStatistics) also shows the names of nodes with attached cameras.
(Read and Write property)

149.27.58 Opacity as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The opacity value of the node. Animatable.
Notes:

Possible values are between 0.0 (fully transparent) and 1.0 (fully opaque). The default is 1.0.
You can animate changes to this property's value.
(Read and Write property)

149.27.59 orientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation, expressed as a quaternion. Animatable.
Notes:

The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
You can animate changes to this property's value.
(Read and Write property)

149.27.60 parentNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's parent in the scene graph hierarchy.
Notes:

For a scene's rootNode object, the value of this property is nil.
(Read only property)

149.27.61 Paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether to run actions and animations attached to the node and its child nodes.
Notes:

The default value of this property is false, specifying that SceneKit should continuously update the node's contents. Pausing a node pauses any running animations or actions. This property applies to the actions and animations attached to the node itself and those attached to any of its child or descendant nodes.
(Read and Write property)

149.27.62 physicsBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The physics body associated with the node.
Notes:

The default value is nil, specifying that the node does not participate in the physics simulation at all. If you provide a physics body, SceneKit updates the node's position and orientation each time it processes a step of its physics simulation. For more information on SceneKit's physics system, see SCNPhysicsWorldMBS.
(Read and Write property)

149.27.63 physicsField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The physics field associated with the node.

Notes:

Physics fields apply forces to other physics bodies in a specified area around their node. For example, a SCNPhysicsDragField field slows all physics bodies that pass through its area. For a full list of field types and their effects, see SCNPhysicsFieldMBS.

A node can contain both a physics body that defines collision behavior and a physics field that defines forces in its area. For example, two nodes containing physics bodies and radial gravity fields will be attracted to one another, but will bounce off each other when they collide.
(Read and Write property)

149.27.64 pivot as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The pivot point for the node's position, rotation, and scale. Animatable.
Notes:

A node's pivot is the transformation between its coordinate space and that used by its position, rotation, and scale properties. The default pivot is SCNMatrix4MBS.Identity, specifying that the node's position locates the origin of its coordinate system, its rotation is about an axis through its center, and its scale is also relative to that center point.
Changing the pivot transform alters these behaviors in many useful ways. You can:

- Offset the node's contents relative to its position. For example, by setting the pivot to a translation transform you can position a node containing a sphere geometry relative to where the sphere would rest on a floor instead of relative to its center.
- Move the node's axis of rotation. For example, with a translation transform you can cause a node to revolve around a faraway point instead of rotating around its center, and with a rotation transform you can tilt the axis of rotation.
- Adjust the center point and direction for scaling the node. For example, with a translation transform you can cause a node to grow or shrink relative to a corner instead of to its center.

You can animate changes to this property's value.
(Read and Write property)

149.27.65 Position as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The translation applied to the node. Animatable.
Notes:

The node's position locates it within the coordinate system of its parent, as modified by the node's pivot property. The default position is the zero vector, indicating that the node is placed at the origin of the parent node's coordinate system.
(Read and Write property)

149.27.66 presentationNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A node object representing the state of the node as it currently appears onscreen.
Notes:

When you use implicit animation (see SCNTransaction) to change a node's properties, those node properties are set immediately to their target values, even though the animated node content appears to transition from the old property values to the new. During the animation SceneKit maintains a copy of the node, called the presentation node, whose properties reflect the transitory values determined by any in-flight animations currently affecting the node. The presentation node's properties provide a close approximation to the version of the node that is currently displayed. SceneKit also uses the presentation node when computing the results of explicit animations, physics, and constraints.

Do not modify the properties of the presentation node. (Attempting to do so results in undefined behavior.) Instead, you use the presentation node to read current animation values—for example, to create a new animation starting at those values.

The presentation node has no parent or child nodes. To access animated properties of related nodes, use the node's own parentNode and childNodes properties and the presentationNode property of each related node.
(Read only property)

149.27.67 RenderingOrder as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The order the node's content is drawn in relative to that of other nodes.
Notes:

Nodes with greater rendering orders are rendered last. Defaults to zero.
(Read and Write property)

149.27.68 Rotation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation, expressed as a rotation angle about an axis. Animatable.
Notes:

The four-component rotation vector specifies the direction of the rotation axis in the first three components and the angle of rotation (in radians) in the fourth. The default rotation is the zero vector, specifying no rotation. Rotation is applied relative to the node's pivot property.
The rotation, eulerAngles, and orientation properties all affect the rotational aspect of the node's transform property. Any change to one of these properties is reflected in the others.
(Read and Write property)

149.27.69 Scale as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The scale factor applied to the node. Animatable.
Notes:

Each component of the scale vector multiplies the corresponding dimension of the node's geometry. The default scale is 1.0 in all three dimensions. For example, applying a scale of (2.0, 0.5, 2.0) to a node containing a cube geometry reduces its height and increases its width and depth. Scaling is applied relative to the node's pivot property.
(Read and Write property)

149.27.70 transform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transform applied to the node relative to its parent. Animatable.
Notes:

The transformation is the combination of the node's rotation, position, and scale properties. The default transformation is SCNMatrix4MBS.Identity.

When you set the value of this property, the node's rotation, orientation, eulerAngles, position, and scale properties automatically change to match the new transform, and vice versa. SceneKit can perform this conversion only if the transform you provide is a combination of rotation, translation, and scale operations. If you set the value of this property to a skew transformation or to a nonaffine transformation, the values of these properties become undefined. Setting a new value for any of these properties causes SceneKit to compute a new transformation, discarding any skew or nonaffine operations in the original transformation.

You can animate changes to this property's value.
(Read and Write property)

149.27.71 WorldFront as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "forward" (-Z) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localFront class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

149.27.72 worldOrientation as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's orientation relative to the scene's world coordinate space.
Notes:

This quaternion isolates the rotational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the difference in axis and angle of rotation between the node and the scene's rootNode.
(Read and Write property)

149.27.73 WorldPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node's position relative to the scene's world coordinate space.
Notes:

his vector isolates the translational aspect of the node's worldTransform matrix, which in turn is the conversion of the node's transform from local space to the scene's world coordinate space. That is, it expresses the x, y, and z offsets of the node's position from that of the scene's rootNode, and is equivalent to reading the node's position vector and converting it to world space with the convertPositionFromNode or convertPositionToNode method.
(Read and Write property)

149.27.74 WorldRight as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "right" (+X) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localRight class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

149.27.75 worldTransform as SCNMatrix4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The world transform applied to the node.
Notes:

A world transform is the node's coordinate space transform relative to the scene's coordinate space. This transform is the concatenation of the node's transform property with that of its parent node, the parent's parent, and so on up to the rootNode object of the scene.
(Read and Write property)

149.27.76 WorldUp as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The "up" (+Y) direction vector relative to the node, expressed in world space.
Notes:

Reading this property is equivalent to reading the localUp class property and using the convertVectorToNode or convertVectorFromNode method to convert that vector from the node's local coordinate space to the scene's world coordinate space.

Available in macOS 10.13 or later.
(Read only property)

149.27.77 Constants

149.27.78 SCNMovabilityHintFixed = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is not expected to move over time.

149.27.79 SCNMovabilityHintMovable = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the values that inform SceneKit's rendering for movement-related effects, used by the movabilityHint property.
Notes: The node is expected to move over time.

149.27.80 SCNNodeFocusBehaviorFocusable = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is focusable and prevents nodes that it visually obscures from becoming focusable.

149.27.81 SCNNodeFocusBehaviorNone = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable.

149.27.82 SCNNodeFocusBehaviorOccluding = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the options for the focusable states of a SceneKit node.
Notes: Node is not focusable and prevents nodes that it visually obscures from becoming focusable.

149.27.83 Delegates

149.27.84 SCNNodeRunActionCompletedMBS(node as SCNNodeMBS, action as SCNActionMBS, key as string, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the runAction method.

149.28 class SCNPhysicsBallSocketJointMBS

149.28.1 class SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A physics behavior that connects two physics bodies and allows them to pivot around each other in any direction.
Notes:

A ball and socket joint has three rotational degrees of freedom and zero translational degrees of freedom. You can also use a ball and socket joint to pin a body to a specific location in the coordinate space of the node containing it while allowing it to rotate freely.

Available in MacOS 10.10.
Subclass of the SCNPhysicsBehaviorMBS class.

149.28.2 Methods

149.28.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
Notes:

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.28.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) 20301

149.28.4 Constructor(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a ball and socket joint connecting two physics bodies.

Notes:

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.28.3 Constructor(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) 20301

149.28.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a ball and socket joint that anchors a single physics body in space and allows it to rotate freely around an anchor point.
Notes:

body: The physics body to be controlled by the joint.
anchor: The point the body pivots around, relative to the node containing it.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.28.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 20302

149.28.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, anchorB as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a ball and socket joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new ball-and-socket-joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.

- 149.28.5 jointWithBody(body as SCNPhysicsBodyMBS, anchor as SCNVector3MBS) as SCNPhysicsBallSocketJointMBS 20302

149.28.7 Properties

149.28.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the joint connects, relative to the node containing the first body.
Notes: (Read and Write property)

149.28.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the joint connects, relative to the node containing the second body.
Notes: (Read and Write property)

149.28.10 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first physics body connected by the joint.
Notes: (Read only property)

149.28.11 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second physics body connected by the joint.

Notes:

This property's value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

149.29 class SCNPhysicsBehaviorMBS

149.29.1 class SCNPhysicsBehaviorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The abstract superclass for joints, vehicle simulations, and other high-level behaviors that incorporate multiple physics bodies.
Notes:

An SCNPhysicsBehavior object defines a high-level behavior for one or more physics bodies, modifying the results of the physics simulation. Behaviors include joints that connect multiple bodies so they move together and vehicle definitions that cause a body to roll like a car. You never use this class directly; instead, you instantiate one of the subclasses that defines the kind of behavior you want to add to your physics world.Table 1 describes the kinds of behaviors you can create in SceneKit.

Behavior classes implemented by SceneKit

Class Name	Description
SCNPhysicsHingeJointMBS	Connects two bodies and allows them to pivot around each other on a single axis.
SCNPhysicsBallSocketJointMBS	Connects two bodies and allows them to pivot around each other in any direction.
SCNPhysicsSliderJointMBS	Connects two bodies and allows them to slide or rotate relative to one another. Slider joints can also work as motors, applying a force or torque between the two bodies.
SCNPhysicsVehicleMBS	Simulates a physics body as the chassis of a car or other wheeled vehicle. You control a vehicle in terms of steering, braking, and acceleration, and use SCNPhysicsVehicleWheelMBS objects to define the appearance and physical properties of each of its wheels.

To use a physics behavior, you follow these steps:
1. Create SCNPhysicsBodyMBS objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object using one of the subclasses listed in above.
3. Add the behavior to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.29.2 Methods

149.29.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.29.4 Properties

149.29.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.30 class SCNPhysicsBodyMBS

149.30.1 class SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The physics simulation attributes attached to a scene graph node.
Notes:

Overview
When SceneKit prepares to render a new frame, it performs physics calculations on physics bodies attached to nodes in the scene. These calculations include gravity, friction, and collisions with other bodies. You can also apply your own forces and impulses to a body. After SceneKit completes these calculations, it updates the positions and orientations of the node objects before rendering the frame.

To add physics to a node, create and configure an SCNPhysicsBody object and then assign it to the physicsBody property of the SCNNode object. A physics body must be associated with a node object before you apply forces or impulses to it.

A Body's Physical Characteristics
The SCNPhysicsBody class defines the physical characteristics for the body when it is simulated by the scene. Three properties are most important for physics simulation:

- The type property, which determines how the body interacts with forces and other bodies in the simulation. Static bodies are unaffected by forces and collisions and cannot move. Dynamic bodies are affected by forces and collisions with other body types. Kinematic bodies are not affected by forces or collisions, but by moving them directly you can cause collisions that affect dynamic bodies.
- The physicsShape property, which defines the three-dimensional form of the body for collision detection purposes. Physics simulations run faster when using simple shapes instead of the fine detail of a node's visible geometry. Typically, you set a body's physics shape to a bounding box, sphere, or primitive shape that roughly matches its node's visible content. For details on creating physics shapes, see SCNPhysicsShape.
- The kinematicBody property. Applying a force or torque to a dynamic body results in an acceleration (or angular acceleration) proportional to its mass.

All values in SceneKit's physics simulation use the International System of Units (SI): The unit of mass is the kilogram; the units of force, impulse, and torque are the newton, newton-second, and newton-meter; and the unit of distance for node positions and sizes is the meter. Note that you need not attempt to provide realistic values for physical quantities—use whatever values produce the behavior or gameplay you're looking for.
For a dynamic body, you can control how the body is affected by forces or collisions. See Defining How Forces Affect a Physics Body.

Defining a Body's Category and Collisions
When you design a game that uses physics, you define the different categories of physics objects that appear

in the scene. You define different categories of physics bodies for the behaviors your want for your app. A body can be assigned to as many of these categories as you want. In addition to declaring its own categories, a physics body also declares which categories of bodies it interacts with.
Use the categoryBitMask and collisionBitMask properties to define an object's collision behavior. The constants listed in SCNPhysicsCollisionCategory provide default values for these properties. In addition, with the contactTestBitMask property you can define interactions where a pair of bodies generates contact messages (see the SCNPhysicsContactDelegate protocol) without the bodies being affected by the collision.

Related Physics Classes
Physics fields create forces that affect all bodies in an area, such as vortices and gravitational attraction. For details and a list of available field types, see SCNPhysicsField.
You can add higher-level behaviors that control interactions between multiple bodies, such as joints and wheeled vehicles. For details and a list of available behaviors, see SCNPhysicsBehavior.
A scene's physicsWorld property holds an SCNPhysicsWorld object that manages physics characteristics that affect the entire scene.

Physics and the Rendering Loop
SceneKit evaluates its physics simulation as part of the rendering loop described in SCNSceneRendererDelegate. On each pass through this loop, SceneKit determines the state of all nodes with attached physics bodies, and simulates the effects of physics on those bodies for one time step—for example, by updating the position or rotation of a body based on its velocity and angular velocity. After simulating physics, SceneKit applies the results of the physics simulation to the scene for display.

Because you can animate SceneKit content not only through physics, but also through actions and implicitly and explicitly defined animations, SceneKit applies the results of physics simulation not to the SCNNode objects in your scene, but to each node's presentationNode object that represents its currently displayed state. As such, changing properties of a node that are affected by physics requires special consideration.

If you change the transform value—or any of the other properties that are components of the transform, such as position and rotation—of a node affected by physics, SceneKit resets the physics simulation for that node. If you want to change only one component of the transform, while leaving the others at their physics-simulated values, copy the presentation node's transform before making changes.

- Physics example for SceneKit in Xojo

149.30.3 Methods

149.30.4 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies a force or impulse to the body at a specific point.
Notes:

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
position: The point on the body where the force or impulse should be applied, in the local coordinate system of the SCNNodeMBS object containing the physics body.
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body at a position other than its center of mass may impart both linear and angular acceleration, depending on how the body is situated in the physics world and the other forces acting upon it.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.

- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
See also:

- 149.30.5 applyForce(direction as SCNVector3MBS, impulse as Boolean) 20310

149.30.5 applyForce(direction as SCNVector3MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies a force or impulse to the body at its center of mass.
Notes:

direction: The direction and magnitude of the force (in newtons) or of the impulse (in newton-seconds).
impulse: True to apply an instantaneous change in momentum; false to apply a force that affects the body at the end of the simulation step.

Applying a force or impulse to a body imparts a linear acceleration proportional to its mass.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an impulse, measured in newton-seconds, and accelerates the physics body immediately. Use this option to simulate instantaneous effects such as launching a projectile.
- If you specify false, SceneKit treats the direction parameter as a force, measured in newtons. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces applied to the physics body during that step and accelerates the body according to the net effect of those forces. Use this option when you want to simulate continuous forces on the body by calling applyForce:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
See also:

- 149.30.4 applyForce(direction as SCNVector3MBS, atPosition as SCNVector3MBS, impulse as Boolean) 20309

149.30.6 applyTorque(torque as SCNVector4MBS, impulse as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies a net torque or a change in angular momentum to the body.
Notes:

torque: The direction and magnitude of the torque (in newton-meters) or of the change of angular momentum (in newton-meter-seconds), relative to the world coordinate space of the scene.

impulse: True to apply an instantaneous change in angular momentum; false to apply a torque that affects the body at the end of the simulation step.

Applying a torque to a body changes its angular velocity by an amount related to its mass and shape, rotating it without affecting its linear acceleration. Each component of the torque vector relates to rotation about the corresponding axis in the local coordinate system of the SCNNode object containing the physics body. For example, applying a torque of { 0.0, 0.0, 1.0 } causes a node to spin counterclockwise around the world-space z-axis.
The impulse parameter determines how this method contributes to the physics simulation:

- If you specify true, SceneKit treats the direction parameter as an instantaneous change in angular momentum, measured in newton-meter-seconds.
- If you specify false, SceneKit treats the direction parameter as a torque, measured in newton-meters. At the end of each simulation step (by default, a step occurs once for each frame in the rendering loop), SceneKit sums all forces and torques applied to the physics body during that step and accelerates the body according to the net effect of those forces and torques. Use this option when you want to simulate gradual acceleration by calling applyTorque:impulse: on each simulation step.

Note
The impulse parameter effectively changes the unit of magnitude. A value that results in a certain acceleration when applied continuously on each frame of the simulation results in much less acceleration if applied only during a single frame.

As with all physical quantities in SceneKit, you need not use realistic force and torque measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

149.30.7 body(type as Integer, shape as SCNPhysicsShapeMBS) as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics body with the specified type and shape.
Notes:

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.

If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

149.30.8 clearAllForces

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Cancels all continuous forces and torques acting on the physics body during the current simulation step.
Notes:

When you pass false for the impulse parameter in the applyForce, applyForce:atPosition, or applyTorque method, SceneKit waits until the end of the current simulation step before applying its effect. At that time, SceneKit sums all forces and torques applied during that simulation step and changes the velocity or angular velocity of the body according to the net effect of those forces and torques.
Call clearAllForces to cancel any forces and torques previously applied during the current simulation step.

149.30.9 Constructor(type as Integer, shape as SCNPhysicsShapeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics body with the specified type and shape.
Notes:

type: A constant that determines how a body responds to forces and collisions. See SCNPhysicsBodyType.
shape: A physics shape defining the volume of the body for collision detection purposes.

Returns a new physics body object.

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
If you pass nil for the shape parameter, SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

149.30.10 copy as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the body.

149.30.11 dynamicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a physics body that can be affected by forces and collisions.
Notes:

Use dynamic bodies for the elements of your scene that are moved by the physics simulation.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

149.30.12 kinematicBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
Notes:

Return a new physics body object.

Use kinematic bodies for scene elements that you want to control directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using an SCNPhysicsShape class method.
Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

149.30.13 resetTransform

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Updates the position and orientation of a body in the physics simulation to match that of the node to which the body is attached.
Notes:

If you change the position or orientation of a node with an attached static or dynamic physics body, call this method afterward to ensure that the physics simulation incorporates the change. You need not call this method for kinematic bodies.
Note that dynamic and physics bodies are designed to be moved only by the physics simulation or not at all. You may use this method to move them regardless of this restriction, but at a cost to performance.

149.30.14 staticBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics body that is unaffected by forces or collisions and that cannot move.
Notes:

Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.
For the body to participate in collision detection or respond to forces, you must attach it to the physicsBody property of an SCNNode object in a scene.
SceneKit automatically creates a physics shape for the body when you attach it to a node, based on that node's geometry property. To create a physics shape that's based on the geometries of a node and its hierarchy of children, or to control the level of detail in a physics shape, create the physics shape manually using

an SCNPhysicsShape class method.

Note
For nodes containing custom geometry, the physics shape SceneKit automatically creates is a rough approximation of the geometry. This approximation, or convex hull, provides a compromise between accuracy and performance in collision detection. For the best collision detection performance, create an SCNPhysicsShape instance based on a basic geometry class (SCNBox, SCNSphere, SCNPyramid, SCNCone, SCNCylinder, or SCNCapsule).

149.30.15 Properties

149.30.16 AffectedByGravity as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the constant gravity of a scene accelerates the body.
Notes:

If this property is true (the default), and the type of the body is SCNPhysicsBodyTypeDynamic, the gravity property of the scene's physicsWorld object causes the body to accelerate.
If this property is false, the body is not affected by scene gravity. This option can be useful when making physics bodies whose behavior should be governed by SCNPhysicsFieldMBS objects instead of a constant global acceleration.
(Read and Write property)

149.30.17 allowsResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that specifies whether SceneKit can automatically mark the physics body at rest.
Notes:

If true (the default), SceneKit keeps track of whether the body is moving or affected by forces, automatically setting its Resting property to true when it is "at rest." The physics simulation runs faster when simulating fewer bodies, so treating a body as resting temporarily removes it from the simulation to improve performance.

SceneKit automatically returns a resting body to the simulation if another body collides with it, if you change its position or velocity, or if you apply a force to it. However, SceneKit uses a faster, less accurate simulation when deciding whether to change a body's isResting property back to false. If testing your app reveals unexpected physics behaviors involving resting bodies, changing those bodies' allowsResting property to false may improve simulation accuracy.
(Read and Write property)

149.30.18 angularDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor that reduces the body's angular velocity.
Notes:

This property simulates the effect of rotational friction on a body. A damping factor of 0.0 specifies no loss in angular velocity, and a damping factor of 1.0 prevents the body from rotating. The default damping factor is 0.1.
(Read and Write property)

149.30.19 angularVelocity as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A vector describing both the current rotation axis and rotational speed (in radians per second) of the physics body.
Notes:

A positive rotational speed indicates counterclockwise rotation (when viewed from the direction the rotation axis points in).
SceneKit's physics simulation determines the angular velocity (and corresponding change in rotation) of each dynamic physics body in the scene. You can also set a body's velocity directly to set the physics simulation in motion or influence its behavior.

The effect of reading or setting this property's value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.
- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

149.30.20 angularVelocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A multiplier affecting how SceneKit applies rotations computed by the physics simulation to the node containing the physics body.
Notes:

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to rotate in only one axis by setting its angular velocity factor to

{ 0.0, 1.0, 0.0 } .
(Read and Write property)

149.30.21 categoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mask that defines which categories this physics body belongs to.
Notes:

Every physics body in a scene can be assigned to one or more categories, each corresponding to a bit in the bit mask. You define the mask values used in your game. Use this property together with the physicsShape and contactTestBitMask properties to define which physics bodies interact with each other and when your game is notified of interactions.
The default value is SCNPhysicsCollisionCategoryStatic for static bodies and SCNPhysicsCollisionCategoryDefault for dynamic and kinematic bodies.
(Read and Write property)

149.30.22 charge as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The electric charge of the body, in coulombs.
Notes:

A body's charge determines its behavior when affected by an electric or magnetic field. Use the SCNPhysicsFieldMBS class to add these fields to your scene. Bodies with positive or negative charges behave differently when affected by electric or magnetic fields. The default electric charge on a physics body is 0.0, causing it to be unaffected by electric and magnetic fields.

Note that you need not use realistic measurements for the bodies in your app—the effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.
(Read and Write property)

149.30.23 collisionBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mask that defines which categories of physics bodies can collide with this physics body.
Notes:

When two physics bodies contact each other, a collision may occur. SceneKit compares the body's collision mask to the other body's category mask by performing a bitwise AND operation. If the result is a nonzero value, then the body is affected by the collision. Each body independently chooses whether it wants to be

affected by the other body. For example, you might choose to avoid collision calculations that would make negligible changes to a body's velocity.

The default value is SCNPhysicsCollisionCategoryAll (a bit mask whose every bit is enabled), specifying that the body will collide with bodies of all other categories.
(Read and Write property)

149.30.24 contactTestBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mask that defines which categories of bodies cause intersection notifications with this physics body.
Notes:

When two physics bodies overlap, a contact may occur. SceneKit compares the body's contact mask to the other body's category mask by performing a bitwise AND operation. If the result is a nonzero value, SceneKit creates an SCNPhysicsContactMBS object describing the contact and sends messages to the contactDelegate object of the scene's physics world. For best performance, only set bits in the contact mask for interactions you are interested in.

For applications running in OS X v10.10 or iOS 8, this property's value matches that of the collisionBitMask property—that is, SceneKit sends contact messages if and only if a collision occurs. For applications running in OS X v10.11 or iOS 9 or later, this property's value defaults to zero and need not match the collision mask—that is, a pair of bodies generates contact messages whenever the bodies intersect, regardless of whether they collide or pass through one another.
(Read and Write property)

149.30.25 damping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor that reduces the body's linear velocity.
Notes:

This property simulates the effect of fluid friction or air resistance on a body. A damping factor of 0.0 specifies no loss in velocity, and a damping factor of 1.0 prevents the body from moving. The default damping factor is 0.1.
(Read and Write property)

149.30.26 friction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The body's resistance to sliding motion.
Notes:

This property simulates the roughness of the body's surface. When two bodies are in contact and a force is applied that would cause them to slide against one another, the friction values for both bodies determine their resistance to motion. If both bodies' friction value is 0.0, they slide freely against each other. If both bodies' friction value is 1.0, they do not slide at all. The default friction is 0.5.
(Read and Write property)

149.30.27 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.30.28 isResting as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the physics body is at rest.
Notes:

This property's default value is false, but SceneKit's physics simulation may automatically set it to true if the body is not moving and not affected by any forces. A resting body does not participate in the simulation until another body collides with it or you change its position or velocity or apply a force to it.
(Read only property)

149.30.29 mass as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The mass of the body, in kilograms.
Notes:

The mass of a body affects its momentum and how it responds to forces. The default mass for dynamic bodies is 1.0. The default mass for static and kinematic bodies is 0.0, but these bodies are unaffected by mass.

Note that you need not use realistic measurements for the bodies in your app—the effects of the physics simulation depend on the relative masses of different bodies, not the absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

(Read and Write property)

149.30.30 momentOfInertia as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The body's moment of inertia, expressed in the local coordinate system of the node that contains the body.
Notes:

A body's moment of inertia determines how it responds to torques (that is, forces with a rotational component). Each component of this vector is the moment of inertia for the corresponding principal axis (in the coordinate system containing the physics body). For example, if the x-component value of the moment vector is less than the y-component value, the body rotates more freely about its x-axis than its y-axis.

By default, SceneKit automatically determines the body's moment of inertia based on its shape and mass. Use this property to define a custom moment of inertia (for example, to model an object of non-uniform density). Using a custom moment of inertia requires setting the usesDefaultMomentOfInertia property to false.
(Read and Write property)

149.30.31 physicsShape as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that defines the solid volume of the physics body for use in collision detection.
Notes:

The physics simulation does not use a node's visible geometry for collision detection—the simulation can run faster when using simple shapes, and it can also be useful to design your app or game using invisible collision shapes for some elements. Typically, you set a body's physics shape to a bounding box or primitive shape that roughly matches its node's visible content, but you can use a more detailed shape for more precise collision detection at a cost to performance.
For details on creating physics shapes, see SCNPhysicsShapeMBS.
(Read and Write property)

149.30.32 restitution as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A factor that determines how much kinetic energy the body loses or gains in collisions.
Notes:

This property simulates the "bounciness" of a body. A restitution of 1.0 means that the body loses no energy in a collision—for example, a ball dropped onto a flat surface will bounce back to the height it fell from. A

restitution of 0.0 means the body does not bounce after a collision. A restitution of greater than 1.0 causes the body to gain energy in collisions. The default restitution is 0.5.
(Read and Write property)

149.30.33 rollingFriction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The body's resistance to rolling motion.
Notes:

This property simulates the traction between a rounded body and bodies it might roll against. A rolling friction of 0.0 (the default) means that a body induced to roll (for example, by being placed on an inclined surface) will continue to roll without slowing down unless otherwise acted upon, and a rolling friction of 1.0 prevents the body from rolling.
(Read and Write property)

149.30.34 type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A constant that determines how the physics body responds to forces and collisions.
Notes: (Read and Write property)

149.30.35 usesDefaultMomentOfInertia as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit automatically calculates the body's moment of inertia or allows setting a custom value.
Notes:

A body's moment of inertia determines how it responds to torques (that is, forces with a rotational component).
If this property is true (the default), SceneKit automatically determines the body's moment of inertia based on its shape and mass. Set this property to false and use the momentOfInertia property to define a custom moment of inertia (for example, to model an object of non-uniform density).
(Read and Write property)

149.30.36 velocity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A vector describing both the current speed (in meters per second) and direction of motion of the

physics body.
Notes:

SceneKit's physics simulation determines the velocity (and corresponding change in position) of each dynamic physics body in the scene. You can also set a body's velocity directly to set the physics simulation in motion or influence its behavior.
The effect of reading or setting this property's value changes based on the current context:

- When invoked within a rendering loop method (any of the events), or from any other code invoked from within such a method, reading the property returns the current result of the physics simulation, and setting the property immediately applies the change.
- When invoked at any other time, reading the property returns the last value set for the property, and setting the property does not take effect until the next pass through the rendering loop.

(Read and Write property)

149.30.37 velocityFactor as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A multiplier affecting how SceneKit applies translations computed by the physics simulation to the node containing the physics body.
Notes:

Use this property to constrain or restrict the effect of physics simulation on the node containing the physics body. For example, you can force a body to move in only two dimensions by setting its velocity factor to { 1.0, 1.0, 0.0 } .
(Read and Write property)

149.30.38 Constants

149.30.39 kPhysicsCollisionCategoryAll = -1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the collision category constants.
Notes:

This is the default value for a physics body's collisionBitMask property.
With this collision mask, a physics body can collide with all other physics bodies.

149.30.40 kPhysicsCollisionCategoryDefault = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the collision category constants.
Notes: The default categoryBitMask value for dynamic and kinematic bodies.

149.30.41 kPhysicsCollisionCategoryStatic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the collision category constants.
Notes: The default categoryBitMask value for static bodies.

149.30.42 kTypeDynamic = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the body type constants.
Notes:

A physics body that can be affected by forces and collisions.
Use dynamic bodies for the elements of your scene that are moved by the physics simulation.

149.30.43 kTypeKinematic = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the body type constants.
Notes:

A physics body that is unaffected by forces or collisions but that can cause collisions affecting other bodies when moved.
Use kinematic bodies for scene elements that you want to control directly directly but whose movement manipulates other elements. For example, to allow the user to push objects around with a finger, you might create a kinematic body and attach it to an invisible node that you move to follow touch events. (In macOS, use the same technique to allow the user to move objects with the mouse pointer.)

149.30.44 kTypeStatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the body type constants.
Notes:

A physics body that is unaffected by forces or collisions and cannot move.
Use static bodies to construct fixtures in your scene that other bodies need to collide with but that do not themselves move, such as floors, walls, and terrain.

149.31 class SCNPhysicsConeTwistJointMBS

149.31.1 class SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for a cone twist join.
Notes: Subclass of the SCNPhysicsBehaviorMBS class.

149.31.2 Methods

149.31.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes and returns a physics cone-twist joint.
Notes: The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 149.31.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) 20324

149.31.4 Constructor(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes and returns a physics cone-twist joint.
Notes: The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 149.31.3 Constructor(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) 20324

149.31.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes and returns a physics cone-twist joint.
Notes: The joint attaches "body" to the 3d location specified by "frame" and relative to the node that owns the body.
See also:

- 149.31.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 20325

149.31.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, frameA as SCNMatrix4MBS, bodyB as SCNPhysicsBodyMBS, frameB as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes and returns a physics cone-twist joint.
Notes: The joint attaches bodyA and bodyB on frameA and frameB respectively.
See also:

- 149.31.5 jointWithBody(body as SCNPhysicsBodyMBS, frame as SCNMatrix4MBS) as SCNPhysicsConeTwistJointMBS 20324

149.31.7 Properties

149.31.8 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first body attached to the slider joint.
Notes: (Read only property)

149.31.9 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second body attached to the slider joint.
Notes: (Read only property)

149.31.10 frameA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Frame for bodyA.
Notes: (Read and Write property)

149.31.11 frameB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Frame for bodyB.
Notes: (Read and Write property)

149.31.12 maximumAngularLimit1 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum angular limits in radians in each cone tangent directions
Notes: (Read and Write property)

149.31.13 maximumAngularLimit2 as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum angular limits in radians in each cone tangent directions
Notes: (Read and Write property)

149.31.14 maximumTwistAngle as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Maximum twist angle alon the cone axis.
Notes: (Read and Write property)

149.32 class SCNPhysicsContactMBS

149.32.1 class SCNPhysicsContactMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Detailed information about a contact between two physics bodies in a scene's physics simulation. **Notes:**

You don't create SCNPhysicsContact instances directly; SceneKit automatically creates these objects whenever contacts occur.
To receive contact messages, implement events in your of your scene's SCNPhysicsWorld object. Next, for each physics body in your scene, set the categoryBitMask and collisionBitMask properties to define which interactions should generate contact messages.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.32.2 Methods

149.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.32.4 Properties

149.32.5 collisionImpulse as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The force over time of the collision, in newton-seconds.
Notes:

This property's value tells you how hard the bodies struck each other in a collision. For example, in a game you might allow a character to proceed unhindered after a minor collision, but take damage when struck with sufficient force.
(Read only property)

149.32.6 contactNormal as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The normal vector at the contact point between the two physics bodies, in scene coordinates.
Notes:

This vector tells you which direction the bodies were moving relative to one another at the time of the collision. For example, in a game you can examine this vector to have enemy characters take damage when struck from above by the player character but damage the player character instead when they collide side-to-side.
(Read only property)

149.32.7 contactPoint as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The contact point between the two physics bodies, in scene coordinates.
Notes: (Read only property)

149.32.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.32.9 nodeA as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node containing the first body in the contact.
Notes:

Use the node's physicsBody property to examine physics characteristics of the node.
(Read only property)

149.32.10 nodeB as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The node containing the second body in the contact.
Notes:

Use the node's physicsBody property to examine physics characteristics of the node.
(Read only property)

149.32.11 penetrationDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The distance of overlap, in units of scene coordinate space, between the two physics bodies.

Notes: (Read only property)

149.32.12 sweepTestFraction as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Value between 0 and 1 giving the relative position of the physic shape when performing a convex sweep test.
Notes: (Read only property)

149.33 class SCNPhysicsFieldMBS

149.33.1 class SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that applies forces, such as gravitation, electromagnetism, and turbulence, to physics bodies within a certain area of effect.
Notes:

You can create many types of field effects, such as gravitation, electromagnetism, and turbulence. To add a field effect to a scene, you create a physics field of the type you want to use and then attach it to the physicsField property of a node in the scene.
Physics fields can affect both SCNPhysicsBodyMBS objects and the particles spawned by SCNParticleSystemMBS objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.33.2 Methods

149.33.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

149.33.4 copy as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the field.

149.33.5 customField(FieldForceEvaluator as SCNFieldForceEvaluatorMBS, tag as variant = nil) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a field that runs the specified block to determine the force a field applies to each object in its area of effect.
Notes:

delegate: A method that SceneKit runs for each object in the field's area of effect.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNodeMBS object.

For custom physics fields, SceneKit ignores the direction, strength, falloffExponent, and minimumDistance properties. Instead, SceneKit calls your block to determine the direction and magnitude of force to apply to each physics body or particle in the field's area of effect.

Due to the dispatching of the delegate to main thread, this is not very efficient.

149.33.6 dragField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that slows any object in its area of effect with a force proportional to the object's velocity.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like the damping and angularDamping properties of a physics body, drag fields can simulate effects such as fluid friction or air resistance. Unlike those properties, drag fields can simulate different intensities of fluid friction in different areas of your scene. For example, you can use a drag field to represent underwater areas. The default falloffExponent value for a drag field is 0.0, indicating that the field's effect is constant throughout its area of effect.

149.33.7 electricField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that attracts or repels objects based on their electrical charge and on their distance from the field's center.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass-based behavior. An electric field behaves according to the first part of the Lorentz force equation modeling real-world electromagnetic forces—the field applies a force whose magnitude is proportional to electric charge and distance.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle system to add charge-based behavior.
When the field's strength value is positive (the default), it attracts bodies whose charge is negative and repels bodies whose charge is positive. To reverse this behavior, set the field's strength property to a negative value.
The default falloffExponent value for an electric field is 2.0, indicating that the field's effect diminishes with

the square of its distance from its center.

149.33.8 linearGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that accelerates objects in a specific direction.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object's mass, this force accelerates all objects in the field's area of affect by the same amount. The field's strength property measures this acceleration in meters per second per second.
By default, a linear gravity field accelerates objects in along its direction vector. To make it accelerate objects in the opposite direction, set the field's strength property to a negative value.
The default falloffExponent value for a linear gravity field is 0.0, indicating that the field's effect is constant throughout its area of effect.

149.33.9 magneticField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that attracts or repels objects based on their electrical charge, velocity, and distance from the field's axis.
Notes:

A physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to make objects behave differently from one another when they enter a region, or to make an object's behavior different from its mass based behavior. A magnetic field behaves according to the second part of the Lorentz force equation modeling real-world electromagnetic forces—the field applies a force determined by the cross product of an object's velocity vector and the magnetic field vector at the object's location, with magnitude proportional to the object's electric charge.
By default, physics bodies and particle systems have no electric charge, so they are unaffected by electric and magnetic fields. Use the charge property of a physics body or the particleCharge property of a particle system to add charge-based behavior.
When the field's strength value is positive (the default), the magnetic field vectors circulate counterclockwise relative to the field's direction vector. (That is, the magnetic field models a real-world magnetic field created by current in a wire oriented in the field's direction.) To make field vectors circulate clockwise, set the field's strength property to a negative value.

This SCNPhysicsField option models the real-world physics effect of magnetic fields on moving, electrically charged bodies, not the behavior of permanent magnets or electromagnets. To make objects in your scene

simply attract or repel one another, use a different field type. For example, a field created by the radialGravityField method attracts or repels all dynamic bodies near it according to its strength property, and a field created by the electricField method selectively attracts or repels bodies according to their electric charge.
The default falloffExponent value for a magnetic field is 2.0, indicating that the field's effect diminishes with the square of distance from its center.

149.33.10 noiseField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that applies random forces to objects in its area of effect.
Notes:

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field's variation over time. Specify 0.0 for a static field.

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Use this field type to simulate effects involving random motion, such as fireflies or gently falling snow.
In calculating the direction and strength of the field's effect on an object, SceneKit uses a Perlin simplex noise function. This function produces a velocity field that varies over time.
The default falloffExponent value for a noise field is 0.0, indicating that the field's effect is constant throughout its area of effect. This field type ignores the field's direction property.

149.33.11 radialGravityField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that accelerates objects toward its center.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Because the force of gravity on an object is proportional to the object's mass, this force accelerates all objects at the same distance from the field's center by the same amount. The field's strength property measures this acceleration in meters per second per second.
By default, a radial gravity field attracts objects toward its center. To make it repel objects instead, set the field's strength property to a negative value.
The default falloffExponent value for a radial gravity field is 2.0, indicating that the field's effect diminishes with the square of distance from its center.

149.33.12 springField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that pulls objects toward its center with a spring-like force.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force a spring field applies to objects in its area of effect is linearly proportional to the distance from the object to the center of the field. (That is, the field behaves according to Hooke's Law of real-world spring forces.) An object placed at the center of the field and moved away will oscillate around the center, with a period of oscillation that is proportional to the object's mass. The field's strength property scales the magnitude of the spring effect—a larger strength simulates a stiffer spring.

The default falloffExponent value for a spring field is 1.0, indicating that the field's effect diminishes linearly with distance from its center.

149.33.13 turbulenceField(smoothness as double, animationSpeed as double) as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field that applies random forces to objects in its area of effect, with magnitudes proportional to those objects' velocities.
Notes:

smoothness: The amount of randomness in the field. A value of 0.0 specifies maximum noise, and a value of 1.0 specifies no noise at all.
speed: The field's variation over time. Specify 0.0 for a static field.

Return a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

Like a noise field, a turbulence field applies forces in random directions to the objects that it affects. Unlike a noise field, a turbulence field applies a force whose magnitude is proportional to the speed of each affected object. For example, an object passing through a noise field shakes as it travels through the field, but an object passing through a turbulence field shakes more violently the faster it travels. The field's strength property scales the magnitude of the turbulence effect.

The default falloffExponent value for a turbulence field is 0.0, indicating that the field's effect is constant throughout its area of effect.

149.33.14 vortexField as SCNPhysicsFieldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a field whose forces circulate around an axis.
Notes:

Returns a physics field object. To use the field in a scene, attach it to the physicsField property of an SCNNode object.

The force on an object in a vortex field is tangential to the line from the object's position to the field's axis and proportional to the object's mass. (The field's axis is a line that is parallel to its direction vector and that passes through its center. For details, see the offset property.) For example, when a vortex field's area of effect contains many objects, the resulting scene resembles a tornado: The objects simultaneously revolve around and fly away from the field's center.
By default, a vortex circulates counterclockwise relative to its direction vector. To make it circulate clockwise, set the field's strength property to a negative value.
The default falloffExponent value for a vortex field is 0.0, indicating that the field's effect is constant throughout its area of effect.

149.33.15 Properties

149.33.16 Active as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the field's effect is enabled.
Notes:

If this value is fasle, the field does not apply forces to physics bodies in its area of effect. The default value is true.
Use this property, for example, to switch fields on and off as a gameplay mechanic.
(Read and Write property)

149.33.17 CategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A mask that defines which categories this physics field belongs to.
Notes:

To determine whether a field affects a physics body, SceneKit performs a bitwise AND operation on the field's category bit mask and the body's categoryBitMask property. If the result is a nonzero value, SceneKit computes and applies the force of the field on the body. To determine whether a field affects the particles spawned by an SCNParticleSystemMBS object, SceneKit performs the same check using the categoryBitMask property of the node containing the particle system.
Use this property to create fields which affect only certain bodies in your scene. Reducing the number of

bodies affected by fields can also improve simulation performance.
(Read and Write property)

149.33.18 direction as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The field's directional axis.
Notes:

Some types of fields apply forces whose direction or magnitude is relative to an axis. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the direction changes the effects of these field types.

The default direction is the vector { 0, -1, 0 } . With this direction, for example, linear gravity fields whose strength is positive cause objects to fall in the "down" direction of scene space.
(Read and Write property)

149.33.19 Exclusive as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the field overrides other fields whose areas of effect it overlaps.
Notes:

If this value is true and a physics body is within this field's region, SceneKit ignores the effects of all other fields that might otherwise affect the body. The default value is false.
If you set this property to true on multiple fields in a scene, their regions should not overlap. If they do, the results are undefined.
(Read and Write property)

149.33.20 falloffExponent as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An exponent that determines how the field's strength diminishes with distance.
Notes:

When SceneKit calculates the force to be applied by a field, it attenuates the field's effect by multiplying with the expression pow(distance - minRadius, -falloff). If the falloff exponent is greater than zero, the field's effect is stronger on nearby bodies than on bodies farther away from its location.
The default falloff exponent varies by field type. For details, see the methods listed in Creating Physics Fields.
(Read and Write property)

149.33.21 halfExtent as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A location marking the end of the field's area of effect.
Notes:

To define a field's area of effect, use the position property of the node that contains the field and the field's halfExtent property. The center of the area of effect is the node's position. The half-extent, a position vector in the local coordinate space of the node containing the field, marks one corner of a box, and the negative of the half-extent vector marks the opposite corner of the box. For example, if a node's position is the vector { 2.0, 2.0, 2.0 } and it contains a physics field whose half-extent is the vector { 0.5, 0.5, 0.5 } , the field's area of effect is the box extending from 1.5 to 2.5 along each axis of the scene's coordinate system.
By default, a field's area of effect is the interior of this box shape. Use the usesEllipsoidalExtent property to instead make the area of effect an ellipsoid bounded by this box. Use the scope property to choose whether the area of effect is the interior or exterior of the box (or ellipsoid).
The default half-extent is the vector { INFINITY, INFINITY, INFINITY } , specifying that the field affects bodies located anywhere in the scene.
(Read and Write property)

149.33.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.33.23 minimumDistance as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum value for distance-based effects.
Notes:

This property determines the beginning of the field's falloff area. At distances less than the minimum, the field's effect is at full strength. At greater distances, the field's effect diminishes based on the value of the falloffExponent property. The default minimum distance is a very small (but nonzero) value.
(Read and Write property)

149.33.24 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The offset of the field's center within its area of effect.

Notes:

Some types of fields apply forces whose magnitude is relative to the distance between an object and the field's center. (For details on each type of field, see the methods listed in Creating Physics Fields.) Changing the offset changes the effects of these field types.

With the default offset vector { 0, 0, 0 } , the center of a field is the center of its area of effect.
(Read and Write property)

149.33.25 Scope as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The area affected by the field, either inside or outside its region.
Notes:

First, define a field's region using its halfExtent property and the position property of the node containing the field. Then, use the scope property to choose whether the field's area of effect is the interior of the region (the default) or all space outside the region.
(Read and Write property)

149.33.26 strength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A multiplier for the force that the field applies to objects in its area of effect.
Notes:

Each type of physics field defines its own behavior for strength values. For details, see the methods listed in Creating Physics Fields.
(Read and Write property)

149.33.27 usesEllipsoidalExtent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the field's area of effect is shaped like a box or ellipsoid.
Notes:

If this value is false (the default), the field's area of effect is the box-shaped region of space defined by its halfExtent property and the position property of the node containing the field.

If this value is true, the field's area of effect is the ellipsoid bounded by this box-shaped region. That is, if all components of the half-extent vector are equal, the field has a spherical area of effect.

(Read and Write property)

149.33.28 Constants

149.33.29 kScopeInsideExtent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for defining the region of space affected by a physics field, used by the scope property.
Notes: The field's effect applies only to objects within the region of space defined by its position and extent.

149.33.30 kScopeOutsideExtent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for defining the region of space affected by a physics field, used by the scope property.
Notes: The field's effect applies only to objects outside the region of space defined by its position and extent.

149.33.31 Delegates

149.33.32 SCNFieldForceEvaluatorMBS(position as SCNVector3MBS, velocity as SCNVector3MBS, mass as single, charge as single, time as double, Tag as Variant) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The signature for a delegate that SceneKit calls to determine the effect of a custom field on an object.
Notes:

You use this type of delegate to create a custom physics field with the customFieldWithEvaluationBlock: method. SceneKit calls your delegate once for each object in the field's area of effect, on each step of the physics simulation.

Note
By default, one simulation step occurs for each frame rendered. For example, if your view renders at 60 frames per second and three bodies are in the field's area of effect, SceneKit runs your delegate 180 times per second. To avoid reduced rendering performance, take care not to perform extensive computation in this delegate.
The delegate takes the following parameters:

position: The position of the object affected by the field, in the local coordinate space of the node containing the field.
velocity: The velocity of the object affected by the field, relative to the local coordinate space of the node

containing the field.
mass: The mass of the object affected by the field. (See the mass property for physics bodies and the particleMass property for particle systems.)
charge: The electrical charge of the object affected by the field. (See the charge property for physics bodies and the particleCharge property for particle systems.)
time: The elapsed time, in seconds, since the last simulation step.

Your delegate uses these parameters to compute and return an SCNVector3 force vector, which SceneKit then applies to the object affected by the field.

149.34 class SCNPhysicsHingeJointMBS

149.34.1 class SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A physics behavior that connects two bodies and allows them to pivot around each other on a single axis.
Notes:

A hinge has a single degree of freedom (rotation). You can also use a hinge joint to pin a body so that it can only move by rotating around a specific axis in the coordinate space of the node containing it.

Available in MacOS 10.10 or newer.
Subclass of the SCNPhysicsBehaviorMBS class.

149.34.2 Methods

149.34.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
Notes:

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.34.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) 20342

149.34.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a hinge joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.34.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 20341

149.34.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a hinge joint that anchors a single physics body in space and lets it rotate around a specific axis.
Notes:

body: The physics body to be controlled by the hinge joint.
axis: The direction of the axis that the body pivots around, relative to the node containing the body.
anchor: The location of the axis in the node containing the body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.34.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SC-

NVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS 20343

149.34.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsHingeJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a hinge joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis that the hinge pivots around, relative to the node containing the first body.
anchorA: The point at which the hinge connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis that the hinge pivots around, relative to the node containing the second body.
anchorB: The point at which the hinge connects, relative to the node containing the second body.

Returns a new hinge joint behavior.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.34.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsHingeJointMBS 20342

149.34.7 Properties

149.34.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the hinge connects, relative to the node containing the first body.
Notes: (Read and Write property)

149.34.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the hinge connects, relative to the node containing the second body.

Notes: (Read and Write property)

149.34.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The axis that the hinge pivots around, relative to the node containing the first body.
Notes: (Read and Write property)

149.34.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The axis that the hinge pivots around, relative to the node containing the second body.
Notes: (Read and Write property)

149.34.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first physics body connected by the joint.
Notes: (Read only property)

149.34.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second physics body connected by the joint.
Notes:

This property's value is nil if the joint was created using the Constructor without bodyB parameter.
(Read only property)

149.35 class SCNPhysicsShapeMBS

149.35.1 class SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An abstraction of a physics body's solid volume for tuning collision detection.
Notes:

When SceneKit performs contact detection and other simulations for the SCNPhysicsBodyMBS objects in your scene, it uses physics shapes instead of the rendered geometry of visible objects. This approach both improves simulation performance and allows you to more easily design your gameplay around scene elements the player can interact with.

Simple Versus Complex Shapes
When you allow SceneKit to automatically create a physics shape, it uses the simplest possible shape roughly matching the geometry of the node the physics body is attached to. This approach maximizes simulation performance but can lead to unrealistic physics behavior for some objects.

You can make the simulation behave more realistically by defining physics shapes that more closely follow the visible geometry in your scene. This approach comes at a cost to performance, so you want to limit the amount of detail in your physics shapes. Use the highest levels of detail only on bodies for which precise collision detection is important for your app.
If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

Changing a Physics Body's Shape
Physics shapes are immutable, but you can change the shape associated with a physics body by creating a new SCNPhysicsShape instance and assigning it to the body's physicsShape property.

149.35.2 Blog Entries

- Physics example for SceneKit in Xojo

149.35.3 Methods

149.35.4 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics shape based on a geometry object.
Notes:

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.
See also:

- 149.35.5 Constructor(node as SCNNodeMBS, Options as Dictionary = nil) 20346

149.35.5 Constructor(node as SCNNodeMBS, Options as Dictionary = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics shape from a node or hierarchy of nodes.
Notes:

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to—or even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.
See also:

- 149.35.4 Constructor(geometry as SCNGeometryMBS, Options as Dictionary = nil) 20346

149.35.6 copy as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the shape.

149.35.7 SCNPhysicsShapeKeepAsCompoundKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for selecting whether to create a group of independent shapes or combine them into a single shape.
Notes: The value for this key is a boolean value. The default value is true, specifying that SceneKit convert separate geometries into separate shapes and join the resulting shapes. If false, SceneKit creates a single shape approximating the combined form of the geometries.

149.35.8 SCNPhysicsShapeOptionCollisionMargin as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Collision margin of the physics shape (as a number)

149.35.9 SCNPhysicsShapeScaleKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for selecting the scale factor of the shape relative to the local coordinate space of the node containing it.
Notes:

The value for this key is a SCNVector3MBS object , whose components describe the scale factor in each of the x-, y- and z-axis directions. The default value is the vector { 1.0, 1.0, 1.0 } , specifying no change of scale.
SceneKit's physics simulation ignores the scale property of nodes containing physics bodies when simulating collisions. Instead, use this option to provide a scale factor when creating custom physics shapes. (If you create a physics body for a node without specifying a custom shape, SceneKit uses the node's scale property to infer this scale factor at creation time.)

149.35.10 SCNPhysicsShapeTypeBoundingBox as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physics shape is the smallest box containing the geometry.
Notes: This option provides the lowest level of detail and the fastest simulation performance. Use it for generally box-shaped physics bodies or when constructing a compound physics shape.

149.35.11 SCNPhysicsShapeTypeConcavePolyhedron as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physics shape is a concave polyhedron closely following the surface of the geometry.
Notes:

This option provides the highest level of detail, at a high cost to simulation performance. Use it only for irregularly shaped bodies where precise collision behavior is crucial to your app's design.
This shape type may only be used for static physics bodies (that is, those whose type property is SCNPhysicsBodyTypeStatic).

149.35.12 SCNPhysicsShapeTypeConvexHull as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physics shape is a convex polyhedron roughly enclosing the geometry.
Notes: This option provides a moderate level of detail and simulation performance. Use it for rounded or irregularly shaped physics bodies.

149.35.13 SCNPhysicsShapeTypeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An option for selecting the level of detail at which to create shapes from geometry.
Notes: The value for this key is one of the constants listed in Shape Types. The default type is SCNPhysicsShapeTypeConvexHull.

149.35.14 shapeWithGeometry(geometry as SCNGeometryMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics shape based on a geometry object.
Notes:

geometry: A geometry object.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

If you create a physics shape using one of the basic geometry classes (SCNBoxMBS, SCNSphereMBS, SCNPyramidMBS, SCNConeMBS, SCNCylinderMBS, or SCNCapsuleMBS), SceneKit uses an idealized form of that geometry for the physics shape instead of using the geometry's vertex data to simulate collisions. For example, if you create a physics shape from an SCNSphere object, SceneKit simulates collisions for any object that passes within the sphere's radius.

Because the idealized forms of simple geometries are computationally much simpler than the vertex data needed for displaying them, using basic geometries for physics shapes (or compound shapes created from basic geometries with the shapeWithShapes method) often provides the best balance between simulation accuracy and performance.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

149.35.15 shapeWithNode(node as SCNNodeMBS, Options as Dictionary = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a physics shape from a node or hierarchy of nodes.
Notes:

node: A node object. The node must contain an SCNGeometryMBS object in its geometry property or have one or more child (or descendant) nodes that contain geometry.
options: A dictionary of options affecting the level of detail of the physics shape, or nil to use default options. For applicable keys and their possible values, see Shape Creation Options Keys.

Returns a new physics shape object.

To use the newly created physics shape, create a physics body with the the bodyWithType method, or assign the shape to the physicsShape property of an existing body.

The node used to create the physics shape need not be the same as the node whose physics body you attach the shape to—or even be in the scene whose physics world you use the shape in. For example, you can create a physics body for a complex object by building a hierarchy of nodes containing simple geometries (using the SCNBoxMBS and SCNSphereMBS classes), and then creating a physics shape from those nodes. The resulting physics shape, a compound of bounding boxes or convex hulls, provides a rough approximation of the complex object without a high cost to simulation performance.

149.35.16 shapeWithShapes(shapes() as SCNPhysicsShapeMBS, transforms() as SCNMatrix4MBS = nil) as SCNPhysicsShapeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new physics shape by combining others.
Notes:

shapes: An array of SCNPhysicsShapeMBS objects.
transforms: An array SCNMatrix4MBS values, each of which is a transform for the physics shape at the corresponding index in the shapes parameter.

Returns a new physics shape object.

An individual physics shape is defined in its own local coordinate space. Therefore, to describe the positions and orientations of multiple shapes relative to one another, you must use coordinate transformations.

149.35.17 sourceObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The object that was used to create the shape.
Notes:

This property, along with the transforms and options properties, provides the information that was used to create the shape. You can use this information, for example, to draw editing or debugging UI in your scene.

- If the shape was created with the shapeWithGeometry method, the source object is an SCNGeometryMBS object, and the options property contains the options affecting the shape's construction from that geometry.
- If the shape was created with the shapeWithNode method, the source object is an SCNNodeMBS object, and the options property contains the options affecting the shape's construction from that node.

- If the shape was created with the shapeWithShapes method, the source object is an array of SCNPhysicsShapeMBS objects and the transforms property describes how those shapes combine to form a compound shape.

149.35.18 transforms as SCNMatrix4MBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The array of transforms that was used to create a compound shape.
Notes:

You provide this array of SCNMatrix4MBS values, in the shapeWithShapes method to create a compound shape. Use this array along with the sourceObject property to recover the information that was used to create the shape.

If the shape was created with the shapeWithGeometry or shapeWithNode method, this property's value is nil.

149.35.19 Properties

149.35.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.35.21 options as Dictionary

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The options dictionary that was used to create the shape.
Notes:

You provide this dictionary in the shapeWithGeometry or shapeWithNode method. Use this dictionary along with the sourceObject property to recover the information that was used to create the shape.
If the shape was created with the shapeWithShapes method, this property's value is nil.
(Read only property)

149.36 class SCNPhysicsSliderJointMBS

149.36.1 class SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A physics behavior that connects two bodies and allows them to slide against each other and rotate around their connecting points.
Notes:

A slider joint can have zero, one, or two degrees of freedom depending on whether you allow it to slide or rotate. You can also use a slider joint to pin a body so that it can move only by sliding a specific axis in the coordinate space of the node containing it. You can also use a slider joint as a motor, applying a force or torque to the bodies it connects.
Subclass of the SCNPhysicsBehaviorMBS class.

149.36.2 Methods

149.36.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
Notes:

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.36.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

149.36.4 Constructor(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a slider joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.36.3 Constructor(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) 20352

149.36.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a slider joint that anchors a single physics body in space and allows it to slide along a specific axis.
Notes:

body: The physics body to be controlled by the joint.
axis: The axis along which the first body can slide, relative to the node containing it.
anchor: The point at which the body is pinned, in the local coordinate system of the node containing it.

Returns a new slider joint behavior.

This method defines the location where the body is anchored in the coordinate system of the node containing it. To define its sliding or rotation motion relative to that point, use the properties listed in Limiting the

Motion of a Slider Joint.
For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.36.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS 20354

149.36.6 jointWithBody(bodyA as SCNPhysicsBodyMBS, axisA as SCNVector3MBS, anchorA as SCNVector3MBS, bodyB as SCNPhysicsBodyMBS, axisB as SCNVector3MBS, anchorB as SCNVector3MBS) as SCNPhysicsSliderJointMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a slider joint connecting two physics bodies.
Notes:

bodyA: The first physics body to be connected by the joint.
axisA: The axis along which the first body can slide, relative to the node containing it.
anchorA: The point at which the joint connects, relative to the node containing the first body.
bodyB: The second physics body to be connected by the joint.
axisB: The axis along which the second body can slide, relative to the node containing it.
anchorB: The point at which the joint connects, relative to the node containing the second body.

Returns a new slider joint behavior.

This method defines the location where the bodies are pinned together. To define their sliding or rotation motion relative to that point, use the properties listed in Limiting the Motion of a Slider Joint.

For a behavior to take effect, add it to the physics simulation by calling the addBehavior method on your scene's SCNPhysicsWorldMBS object. The physics bodies constrained by the joint must be attached to nodes in the scene.
See also:

- 149.36.5 jointWithBody(body as SCNPhysicsBodyMBS, axis as SCNVector3MBS, anchor as SCNVector3MBS) as SCNPhysicsSliderJointMBS 20353

149.36.7 Properties

149.36.8 anchorA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the joint connects, relative to the node containing the first body.
Notes: (Read and Write property)

149.36.9 anchorB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The point at which the joint connects, relative to the node containing the second body.
Notes: (Read and Write property)

149.36.10 axisA as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The axis along which the first body can slide, relative to the node containing it.
Notes: (Read and Write property)

149.36.11 axisB as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The axis along which the second body can slide, relative to the node containing it.
Notes: (Read and Write property)

149.36.12 bodyA as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first physics body connected by the joint.
Notes: (Read only property)

149.36.13 bodyB as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second physics body connected by the joint.
Notes:

This property's value is nil if the joint was created using the jointWithBody method.
(Read only property)

149.36.14 maximumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum rotation angle between the two bodies, measured in radians relative to their initial orientations.
Notes:

The default (and maximum) value of this property is M_PI. With this value, the joint can spin counterclockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

149.36.15 maximumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum distance between the anchor points of the two bodies, relative to their initial positions.
Notes:

The default value of this property is INFINITY. With this value, the joint can slide forever in the direction of the slider axis.
Set both this property and the minimumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

149.36.16 minimumAngularLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum rotation angle between the two bodies, measured in radians relative to their initial orientations.
Notes:

The default (and minimum) value of this property is -M_PI. With this value, the joint can spin clockwise (relative to the first body) with no limit.
Set both this property and the maximumAngularLimit property to the same value to prevent the bodies

from rotating around their anchor points. (Set both properties to 0.0 to fix the bodies in their initial orientations.) Bodies whose orientation is fixed by a sliding joint may still slide, depending on the values of the minimumLinearLimit and maximumLinearLimit properties.
(Read and Write property)

149.36.17 minimumLinearLimit as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The minimum distance between the anchor points of the two bodies, relative to their initial positions.
Notes:

The default value of this property is -INFINITY. With this value, the joint can slide forever in the direction opposite the slider axis.
Set both this property and the maximumLinearLimit property to the same value to pin the bodies together at their anchor points. (Set both properties to 0.0 to pin the bodies together at their initial positions.) Bodies pinned together by a sliding joint may still rotate, depending on the values of the minimumAngularLimit and maximumAngularLimit properties.
(Read and Write property)

149.36.18 motorMaximumForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum linear force that the joint can apply to its connected bodies, in newtons.
Notes:

When you change the value of the motorTargetLinearVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are moving at the target velocity. The default value is 1.0.
(Read and Write property)

149.36.19 motorMaximumTorque as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum torque that the joint can apply to its connected bodies, in newton-meters.
Notes:

When you change the value of the motorTargetAngularVelocity property, the joint continuously applies a force of no greater than this magnitude until the bodies are rotating around the joint at the target angular velocity. The default value is 1.0.
(Read and Write property)

149.36.20 motorTargetAngularVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The angular velocity at which the joint's connected bodies should rotate around it.
Notes:

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a rotary motor, continuously applying a torque (specified by the motorMaximumTorque property) until its connected bodies are rotating around the joint at the new angular velocity.
(Read and Write property)

149.36.21 motorTargetLinearVelocity as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The velocity at which the joint's connected bodies should slide.
Notes:

At the default value of 0.0, the joint moves only when an external force acts on one of its connected bodies. Changing this value causes the joint to act as a linear motor, continuously applying a force (specified by the motorMaximumForce property) until its connected bodies are moving along the sliding axis of the joint at the new velocity.
(Read and Write property)

149.37 class SCNPhysicsVehicleMBS

149.37.1 class SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A physics behavior that modifies a physics body to behave like a car, motorcycle, or other wheeled vehicle.
Notes:

To build a vehicle, designate an SCNPhysicsBodyMBS object as its chassis and an array of SCNPhysicsVehicleWheelMBS objects as its wheels. For each wheel, you define physical characteristics such as suspension and traction, and associate a node in your scene to provide the wheel's size and visual representation. After you construct a vehicle, you can control it in terms of acceleration, braking, and steering.

Although it's also possible to use a set of physics bodies and joints to collectively simulate a wheeled vehicle, the SCNPhysicsVehicleMBS class implements a higher-level simulation that provides realistic vehicle behavior with more efficient simulation performance.
Subclass of the SCNPhysicsBehaviorMBS class.

149.37.2 Methods

149.37.3 applyBrakingForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies a force between the specified wheel and the ground under the vehicle.
Notes:

value: The magnitude of the torque, in newton-meters.
index: The index of the wheel applying the force.

Applying a braking force causes the wheel to slow down regardless of the direction it's currently spinning in.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

Calling this method applies a braking force for one step (or frame) of the physics simulation. To continuously decelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate's renderer method) until the vehicle stops or reaches your desired speed.

149.37.4 applyEngineForce(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Applies a force between the specified wheel and the ground under the vehicle.
Notes:

value: The magnitude of the force, in newtons.
index: The index of the wheel applying the force.

Applying a positive force turns the wheel in a direction that would move the vehicle forward; applying a negative force moves the vehicle in reverse.

As with all physical quantities in SceneKit, you need not use realistic force measurements in your app—the effects of the physics simulation depend on the relative differences between forces, not on their absolute values. You may use whatever values produce the behavior or gameplay you're looking for as long as you use them consistently.

Calling this method applies a force for one step (or frame) of the physics simulation. To continuously accelerate a vehicle, call this method again on subequent simulation steps (for example, from your scene renderer delegate's renderer method) until the vehicle reaches your desired speed.

149.37.5 Constructor(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a vehicle behavior.
Notes:

chassisBody: A physics body to serve as the vehicle's chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle's wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel's physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle's chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object.

149.37.6 setSteeringAngle(value as double, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Pivots the specified wheel around its steering axis.
Notes:

value: The angle to set the wheel at relative to its steering axis, in radians.
index: The index, in the vehicle's wheels array, of the wheel to be pivoted.

Steering angles are relative to the wheel's steeringAxis vector. With the default steering axis of { 0.0, -1.0, 0.0 } , a steering angle of 0.0 represents neutral steering, positive values steer the vehicle to the right, and negative values steer to the left.

149.37.7 vehicleWithChassisBody(chassisBody as SCNPhysicsBodyMBS, wheels() as SCNPhysicsVehicleWheelMBS) as SCNPhysicsVehicleMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a vehicle behavior.
Notes:

chassisBody: A physics body to serve as the vehicle's chassis.
wheels: An array of SCNPhysicsVehicleWheel objects representing the vehicle's wheels. A vehicle must have at least one wheel.

Returns a new vehicle behavior.

Each object in the wheels array associates a node with the wheel to serve as its visual representation and defines properties for the wheel's physical characteristics. Each wheel object must reference a unique node, which should be a child of the node containing the physics body used for the vehicle's chassis. Typically, you load a node hierarchy representing the vehicle and all of its wheels from a scene file and then designate which nodes serve as the body and wheels.

For a behavior to take effect, you must add it to the physics simulation by calling the addBehavior: method on your scene's SCNPhysicsWorldMBS object.

149.37.8 wheels as SCNPhysicsVehicleWheelMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of SCNPhysicsVehicleWheelMBS objects representing the vehicle's wheels.
Notes: You can dynamically change the suspension and traction properties of a wheel connected to the vehicle by using the corresponding SCNPhysicsVehicleWheelMBS object.

149.37.9 Properties

149.37.10 chassisBody as SCNPhysicsBodyMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The physics body representing the vehicle's chassis.
Notes:

The vehicle's chassis must be a dynamic body.
(Read only property)

149.37.11 speedInKilometersPerHour as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The vehicle's ground speed, in kilometers per hour.
Notes: (Read only property)

149.38 class SCNPhysicsVehicleWheelMBS

149.38.1 class SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The appearance and physical characteristics of an individual wheel associated with an physics vehicle behavior.
Notes:

To use wheels in a vehicle simulation, include them when creating an SCNPhysicsVehicle object with the vehicleWithChassisBody / Constructro initializer, then add the vehicle object to your scene's physics world using the physics world's addBehavior method.

Creating a Wheel
You create a wheel with an SCNNodeMBS object whose contents provide the wheel's visual representation—a geometry that rotates when the simulated vehicle rolls along a surface. The node representing a wheel must be a child of the node containing the physics body that serves as the vehicle's chassis, and each wheel in a vehicle must reference a unique node. Typically, you load a scene file that contains a node hierarchy representing the vehicle and all of its wheels. Next, you designate which nodes serve as the body and wheels.
Because the SCNPhysicsVehicleMBS behavior that a wheel is attached to manages its participation in the physics simulation, you don't need to attach a physics body to the SCNNodeMBS object representing a wheel.

Changing a Wheel's Physical Properties
The properties of a wheel define the geometry of its connection to the vehicle and simulate its size, traction, and suspension. You can change these properties after the wheel and the vehicle containing it have been added to the physics world. In this way, you can simulate effects such as variable suspension and flat tires.

Note
Vehicles and their wheels have several properties measured in real-world units (meters, centimeters, and newtons) with default values that produce realistic behavior for vehicles of size similar to an average automobile. If you design your scene on a different scale, proportionally change the values of these properties to fit the desired behavior of your app or game.

149.38.2 Methods

149.38.3 Constructor(node as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a wheel object.
Notes:

node: The node whose contents provide the wheel's visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node's bounding box to determine the wheel's initial size, and it uses the node's position to determine the where the wheel connects to the vehicle's chassis. You can change attributes using the radius and connectionPosition properties.

149.38.4 copy as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the wheel.

149.38.5 wheelWithNode(node as SCNNodeMBS) as SCNPhysicsVehicleWheelMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a wheel object.
Notes:

node: The node whose contents provide the wheel's visual representation.

Returns a new wheel object.

The node representing a wheel must be a child of the node whose physics body serves as the chassis of the SCNPhysicsVehicleMBS behavior the wheel is attached to. Each wheel object must reference a unique node. To use the wheel, add it to the vehicle behavior using the addWheel method.
SceneKit uses the node's bounding box to determine the wheel's initial size, and it uses the node's position to determine the where the wheel connects to the vehicle's chassis. You can change attributes using the radius and connectionPosition properties.

149.38.6 Properties

149.38.7 Axle as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The direction of the axis that the wheel spins around to move the vehicle.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. The default axle direction is { -1.0, 0.0, 0.0 } .

(Read and Write property)

149.38.8 ConnectionPosition as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The position of the wheel's connection to the vehicle's chassis.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. When you create a wheel from a node, SceneKit uses the node's position property as the wheel's connection point.
(Read and Write property)

149.38.9 FrictionSlip as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The traction between the wheel and any surface in contact with it.
Notes:

The default value of this property is 1.0. Lower values result in better traction, and higher values make the wheel more likely to slip (causing it to spin freely instead of moving the vehicle).
(Read and Write property)

149.38.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.38.11 MaximumSuspensionForce as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum force of the suspension between the vehicle and the wheel, in newtons.
Notes:

The physics simulation applies a force of no greater than this magnitude when contact with the ground causes the wheel to move relative to the vehicle. The default maximum suspension force is 6000.0.
(Read and Write property)

149.38.12 MaximumSuspensionTravel as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The maximum distance that the wheel is allowed to move up or down relative to its connection point, in centimeters.
Notes:

Travel is the total distance a wheel is allowed to move (in both directions), in the coordinate system of the node containing the vehicle's chassis. The default suspension travel is 500.0.
(Read and Write property)

149.38.13 Node as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node providing the wheel's visual representation.
Notes:

SceneKit automatically rotates and repositions this node in response to the physics simulation.
(Read only property)

149.38.14 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the wheel.
Notes:

When you create a wheel from a node, its default radius is half of the largest dimension of the node's bounding box. (A wheel is always circular, even if the content of the node representing it is not.)
(Read and Write property)

149.38.15 SteeringAxis as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The direction of the axis that the wheel pivots around to steer the vehicle.
Notes:

This vector is expressed in the coordinate space of the node containing the vehicle's chassis. The default steering axis is { 0.0, -1.0, 0.0 } .
When you steer a wheel using the vehicle's setSteeringAngle() method, the wheel pivots relative to this axis. For example, you can implement a vehicle whose rear wheels steer opposite its front wheels by reversing this vector's direction for the rear wheels and then applying the same steering angle to all wheels.
(Read and Write property)

149.38.16 SuspensionCompression as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The coefficient that limits the speed of the suspension returning to its rest length when compressed.
Notes:

The default suspension coefficient is 4.4. Lower values cause the wheel to return to its natural position more quickly.
(Read and Write property)

149.38.17 SuspensionDamping as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The damping ratio that limits oscillation in the vehicle's suspension.
Notes:

Damping ratio measures the tendency of the suspension to oscillate after a shock—in other words, for the vehicle to bounce up and down after running over a bump. The default damping ratio of 2.3 causes the wheel to return to its neutral position quickly after a shock. Values lower than 1.0 result in more oscillation.
(Read and Write property)

149.38.18 SuspensionRestLength as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The resting length of the suspension, in meters.
Notes:

This property measures the length of the simulated spring between the vehicle and its wheel when the spring is not stressed by the weight of either body. When the wheel receives a shock (for example, when the vehicle runs over a bump), SceneKit adds the difference between the wheel's current position and its connection position to this rest length and then applies a force between the wheel and vehicle proportional to the total.
(Read and Write property)

149.38.19 SuspensionStiffness as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The spring coefficient of the suspension between the vehicle and the wheel.
Notes:

The spring coefficient determines both how quickly the wheel returns to its natural position after a shock (for example, when the vehicle runs over a bump) and how much force from the shock it transmits to the vehicle. The default spring coefficient is 2.0.

(Read and Write property)

149.39 class SCNPhysicsWorldMBS

149.39.1 class SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The global simulation of collisions, gravity, joints, and other physics effects in a scene.
Notes:

You do not create SCNPhysicsWorldMBS objects directly; instead, read the physicsWorld property of an SCNSceneMBS object. Use physics world object to perform the following tasks:

- Manage global properties of the simulation, such as its speed and constant gravity. (For more precise control of gravity and similar effects, see the SCNPhysicsFieldMBS class.)
- Register behaviors that modify interactions between the scene's physics bodies, such as joints and vehicles. For more details, see SCNPhysicsBehaviorMBS.
- Specify a delegate object to receive messages when two physics bodies contact each other
- Perform specific contact tests, and search for physics bodies in the scene using ray and sweep tests.

149.39.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

149.39.3 Methods

149.39.4 addBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds a behavior to the physics world.
Notes:

behavior: The behavior to be added.

Physics behaviors constrain or modify the effects of the physics simulation on sets of physics bodies. For example, the SCNPhysicsHingeJointMBS behavior causes two bodies to move as if connected by a hinge that pivots around a specific axis, and the SCNPhysicsVehicleMBS behavior causes a body to roll like a car or other wheeled vehicle.

To use a behavior in your scene, follow these steps:
1. Create SCNPhysicsBody objects and attach them to each node that participates in the behavior.
2. Create and configure a behavior object joining the physics bodies. See SCNPhysicsBehaviorMBS for a list of behavior classes.

3. Call addBehavior on your scene's physics world object to add the behavior to the physics simulation.

149.39.5 allBehaviors as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The list of behaviors affecting bodies in the physics world.

149.39.6 Constructor(fireContactEvents as Boolean = false)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.
Notes:

If fireContactEvents is true or you call EnableContactsEvents, we enable the contact events.

A contact is created when two physics bodies overlap and one of the physics bodies has a collisionBitMask property that overlaps with the other body's categoryBitMask property.

149.39.7 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks for contacts between one physics body and any other bodies in the physics world.
Notes:

body: The body to test for contact.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the specified body and any others, or nil if the body is not in contact with any other bodies.

SceneKit sends messages to the physics world's contactdelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for all contacts between one body and any other bodies at a time of your choosing. For example, to implement a game with a "wall jump" effect, you could call this method when the player presses the jump button to see if the player character is in contact with any walls.
See also:

- 149.39.8 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 20371

149.39.8 contactTest(bodyA as SCNPhysicsBodyMBS, bodyB as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Checks for contacts between two physics bodies.
Notes:

bodyA: The first body (to test for contact with the second).
bodyB: The second body (to test for contact with the first).
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing contacts between the two bodies, or nil if the bodies are not in contact.

SceneKit sends messages to the physics world's contactDelegate object only when collisions occur between bodies whose collisionBitMask and categoryBitMask properties overlap, and only for collisions between certain types of bodies. (For details, see SCNPhysicsBodyType.) Use this method to directly test for contacts between any two bodies at a time of your choosing. For example, to implement a game where the player character can pick up an item, you might call this method when the player presses the "pick up" button to see if the player character is in contact with the item to be picked up.
See also:

- 149.39.7 contactTest(body as SCNPhysicsBodyMBS, options as Dictionary = nil) as SCNPhysicsContactMBS() 20370

149.39.9 convexSweepTest(shape as SCNPhysicsShapeMBS, fromTransform as SCNMatrix4MBS, toTransform as SCNMatrix4MBS, options as Dictionary = nil) as SCNPhysicsContactMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Searches for physics bodies in the space formed by moving a convex shape through the physics world.
Notes:

shape: A physics shape. This shape must enclose a convex volume. For details on creating shapes that satisfy this requirement, see SCNPhysicsShapeMBS.
from: A transform matrix representing the initial position and orientation of the shape.
to: A transform matrix representing the final position and orientation of the shape.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNPhysicsContactMBS objects describing any contacts that would occur when moving the physics shape through the physics world.

Use this method when it's important to plan for (or avoid) collisions ahead of the physics simulation. For example, in a game you might plan maneuvers for a flying character to fit through the gaps between static bodies in the physics world

149.39.10 EnableContactsEvents

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Enables contact events.
Notes: If you connect the contact events via AddHandler, please call this method once to connect the events internally.

149.39.11 rayTestWithSegment(origin as SCNVector3MBS, dest as SCNVector3MBS, options as Dictionary = nil) as SCNPhysicsBehaviorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches for physics bodies along a line segment between two points in the physics world.
Notes:

origin: An endpoint of the line segment to search, specified in the scene's world coordinate system.
dest: The other endpoint of the line segment to search, specified in the scene's world coordinate system.
options: A dictionary of options affecting the test, or nil to use default options. For applicable keys and the possible values, see Physics Test Options Keys.

Returns an array of SCNHitTestResultMBS objects describing search results.

Use this method to implement concepts such as line of sight in your app. For example, in a game you might implement behavior for an enemy character by searching for physics bodies along a line between the enemy character's position and the player character's position

149.39.12 removeAllBehaviors

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes all behaviors affecting bodies in the physics world.

149.39.13 removeBehavior(behavior as SCNPhysicsBehaviorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes a behavior from the physics world.

149.39.14 SCNPhysicsTestBackfaceCullingKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for choosing whether to ignore back-facing polygons in physics shapes when searching for contacts.
Notes:

The value for this key is a Boolean value. The default value is true, specifying that the search should only return contacts with the exterior surfaces of any physics shapes. Change the value to false to consider contacts with both interior and exterior surfaces.

This key applies only to ray and convex sweep tests, and only to physics shapes created using the SCNPhysicsShapeTypeConcavePolyhedron option.

149.39.15 SCNPhysicsTestCollisionBitMaskKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for selecting which categories of physics bodies that SceneKit should test for contacts.
Notes: The value for this key is an unsigned Integer value. SceneKit tests for contacts only with physics bodies whose categoryBitMask property overlaps with this bit mask. The default value is SCNPhysicsCollisionCategoryAll, specifying that searches should test all physics bodies regardless of their category.

149.39.16 SCNPhysicsTestSearchModeAll as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return all contacts matching the search parameters.

149.39.17 SCNPhysicsTestSearchModeAny as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return only the first contact found regardless of its position relative to the search

parameters.

149.39.18 SCNPhysicsTestSearchModeClosest as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the option values for SCNPhysicsTestSearchModeKey key.
Notes: Searches should return only the closest contact to the beginning of the search.

149.39.19 SCNPhysicsTestSearchModeKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key for selecting the number and order of contacts to be tested.
Notes:

See Physics Test Search Modes for possible values. The default value is SCNPhysicsTestSearchModeAny.
This key applies only to ray and convex sweep tests.

149.39.20 updateCollisionPairs

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Forces the physics engine to reevaluate possible collisions between physics bodies.
Notes: By default, SceneKit checks for collisions between physics bodies only once per simulation step. If you directly change the positions of any physics bodies outside of a event, call the updateCollisionPairs method before using any of the methods listed in Searching for Physics Bodies Detecting Contacts Between Physics Bodies.

149.39.21 Properties

149.39.22 gravity as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A vector that specifies the gravitational acceleration applied to physics bodies in the physics world.
Notes:

The components of this vector are measured in meters per second per second. The default value is (0.0,-9.8,0.0).
This property applies a constant acceleration to all physics bodies in the world, simulating the effect of gravity near the surface of the Earth. For more sophisticated gravity effects, including limited areas of effect and strength proportional to distance, use the SCNPhysicsFieldMBS class. When using fields, you may want

to set this property to the zero vector so that fields provide all gravity effects in the physics world.
(Read and Write property)

149.39.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

149.39.24 speed as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The rate at which the simulation executes.
Notes:

The default value is 1.0, which means that the simulation runs at normal speed. A value other than the default changes the rate at which time passes in the physics simulation. For example, a speed value of 2.0 indicates that time in the physics simulation passes twice as fast as the scene's simulation time. A value of 0.0 pauses the physics simulation.

Note:
Increasing the speed of the physics simulation reduces its accuracy.
(Read and Write property)

149.39.25 timeStep as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The time interval between updates to the physics simulation.
Notes:

SceneKit processes the physics simulation and updates the state of all physics bodies once per the time interval specified by this property. The default value is 1/60 second (a rate of 60 Hz).
A faster simulation rate provides more accuracy in simulation results—such as collisions between fast-moving objects—but at a higher cost in CPU time (which may in turn slow down your app's rendering frame rate). Typically, you should set this property to match your target rendering frame rate (as defined by the preferredFramesPerSecond property of the SCNViewMBS object rendering your scene).
(Read and Write property)

149.39.26 Events

149.39.27 didBeginContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the class that two bodies have come into contact.
Notes: contact: An object that describes the contact.

149.39.28 didEndContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the class that a contact has ended.
Notes: contact: An object that describes the contact.

149.39.29 didUpdateContact(contact as SCNPhysicsContactMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the class that new information is available about an ongoing contact.
Notes:

contact: An object that describes the contact.

SceneKit calls this method on each step of the physics simulation (see the timeStep property) if information about the contact changes—for example, if two bodies are sliding against one another.

149.40 class SCNPlaneMBS

149.40.1 class SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNPlaneMBS represents a rectangle with controllable width and height. The plane has one visible side.
Notes: Subclass of the SCNGeometryMBS class.

149.40.4 Methods

149.40.5 Constructor(Width as Double, Height as Double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a plane with given width and height.

149.40.6 plane(Width as Double, Height as Double) as SCNPlaneMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a plane with given width and height.

149.40.7 Properties

149.40.8 cornerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The corner radius. Animatable.
Notes:

If the value is strictly less than 0, the geometry is empty. The default value is 0.
(Read and Write property)

149.40.9 cornerSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions for the rounded corners. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.
(Read and Write property)

149.40.10 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The plane extent along the Y axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.40.11 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. The default value is 1. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.40.12 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The plane extent along the X axis. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.40.13 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.41 class SCNPyramidMBS

149.41.1 class SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNPyramid represents a right pyramid with a rectangular base.
Notes: Subclass of the SCNGeometryMBS class.

149.41.4 Methods

149.41.5 Constructor(width as double, height as double, length as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

149.41.6 pyramid(width as double, height as double, length as double) as SCNPyramidMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a pyramid with given width, height, and length.
Notes:

width: The width of the pyramid.
height: The height of the pyramid.
length: The length of the pyramid.

149.41.7 Properties

149.41.8 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the pyramid. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.41.9 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.41.10 length as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The length of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.41.11 lengthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Z axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.41.12 width as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The width of the pyramid base. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.41.13 widthSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the X axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.42 class SCNReplicatorConstraintMBS

149.42.1 class SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNReplicatorConstraint replicates the position/orientation/scale of a target node
Notes: Subclass of the SCNConstraintMBS class.

149.42.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.42.3 Methods

149.42.4 Constructor(target as SCNNodeMBS)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNReplicatorConstraint constraint.

149.42.5 replicatorConstraintWithTarget(target as SCNNodeMBS) as SCNReplicatorConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNReplicatorConstraint constraint.

149.42.6 Properties

149.42.7 orientationOffset as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

149.42.8 positionOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines an addition orientation offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

149.42.9 replicatesOrientation as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target orientation.
Notes:

Defaults to true.
(Read and Write property)

149.42.10 replicatesPosition as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target position.
Notes:

Defaults to true.
(Read and Write property)

149.42.11 replicatesScale as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines whether or not the constraint should replicate the target scale.
Notes:

Defaults to true.
(Read and Write property)

149.42.12 scaleOffset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Defines an addition scale offset.
Notes:

Defaults to no offset. Animatable.
(Read and Write property)

149.42.13 target as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the target node to replicate.
Notes: (Read and Write property)

149.43 class SCNSceneMBS

149.43.1 class SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A container for the node hierarchy and global properties that together form a displayable 3D scene.
Notes:

To display 3D content with SceneKit, you create a scene containing a hierarchy of the nodes and attributes that together represent your visual elements. Typically, you build your assets in a 3D visual editor, then assemble them into a scene using Xcode's SceneKit Scene Editor, ready for SceneKit to render.

The simplest way to create a scene is through Xcode's SceneKit Scene Editor. Start by importing one or more assets from a 3D editor, such as Blender. Then you adjust the positions and attributes of the assets, and set global scene properties, such as lighting environment, to compose your scene. The scene editor creates a .scn file, which you save to a .scnassets folder in the app bundle. When you build your project, Xcode optimizes the scene file for your target platform.

149.43.2 Blog Entries

- 18.1, page 26: On the Scene, Getting Started with SceneKit by Stefanie Juchmes

149.43.4 Methods

149.43.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an empty scene.

149.43.6 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an empty scene.
Notes: An empty scene contains only a root SCNNode object with no contents. To populate the scene, add children to the root node.

149.43.7 sceneNamed(name as string) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from a file with the specified name in the app's main bundle.
Notes:

name: The name of a scene file in the app bundle's resources directory.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method, specifying no options and no error handling.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

- 149.43.8 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS 20387

149.43.8 sceneNamed(name as string, folder as folderItem, options as Dictionary = nil) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from a file with the specified name in a specific subdirectory of the app's main bundle.
Notes:

name: The name of a scene file in the app bundle.
directory: The path to the subdirectory of the bundle's resources directory containing the scene file.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file in the app's main bundle. Calling this method is equivalent to using the NSBundle class to locate the scene file and passing the resulting URL to the sceneWithURL method.

For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.
See also:

- 149.43.7 sceneNamed(name as string) as SCNSceneMBS 20387

149.43.9 sceneWithFile(file as folderItem, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from the specified file.
Notes:

file: The scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

149.43.10 sceneWithURL(FileURL as string, options as Dictionary = nil, byref Error as NSErrorMBS) as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Loads a scene from the specified URL.
Notes:

url: The URL to the scene file to load.
options: A dictionary of options affecting scene loading, or nil for default options. For available keys, see Scene Loading Options.
error: If an error occurs, this pointer is set to an NSError object describing the error. If you do not want error information, pass in nil.

Returns a new scene object, or nil if no scene could be loaded.

This method provides a convenient way to load a complete scene from a file at an arbitrary URL. For more detailed options or to load only part of a file's scene graph, use the SCNSceneSource class.

When creating a scene using Xcode's Scene Editor or an external tool, you should copy your scene file into a directory with the .scnassets extension inside your app bundle. You should also place any image files referenced as textures from that scene in an Asset Catalog. Xcode will optimize the scene and texture resources for best performance on each target device, and prepare your texture resources for delivery features such as App Thinning and On-Demand Resources.

149.43.11 SCNSceneEndTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes: A floating-point value for the end time of the scene.

149.43.12 SCNSceneExportDestinationURL as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The final destination URL (an NSURLMBS object) for the exported scene file.
Notes: Use this option if you export a scene to a temporary directory and then move it to a final location. You must specify a final destination URL if your scene references external resources, such as image files for textures. SceneKit uses this URL to construct appropriate paths for external resources when writing the scene file.

149.43.13 SCNSceneFrameRateAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes:

A floating-point value (in an NSNumber object) for the frame rate of the scene.
This value may be present in scenes loaded from scene files produced using external tools, but has no effect

on SceneKit's rendering of the scene.

149.43.14 SCNSceneStartTimeAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes: A floating-point value for the start time of the scene.

149.43.15 SCNSceneUpAxisAttributeKey as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constant name for the attributes.
Notes:

An SCNVector3MBS object (in an NSValueMBS object) specifying the orientation of the scene.

This value may be present in scenes loaded from scene files produced using external tools, but has no effect on SceneKit's processing of the scene. Use this vector when combining elements from different scenes so that they appear in their expected orientation.

149.43.16 Properties

149.43.17 background as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A background to be rendered before the rest of the scene.
Notes:

If the material property's contents object is nil, SceneKit does not draw any background before drawing the rest of the scene. (If the scene is presented in an SCNView instance, the view's background color is visible behind the contents of the scene.)
If you specify a cube map texture for the material property (see the discussion of the contents property), SceneKit renders the background as a skybox.
(Read only property)

149.43.18 fogColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The color of the fog effect to be rendered with the scene. Animatable.
Notes:

The default fog color is white.
You can animate changes to this property's value.
(Read and Write property)

149.43.19 fogDensityExponent as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transition curve for the fog's intensity between its start and end distances. Animatable.
Notes:

A fog effect fades out the contents of the scene with increasing distance from the pointOfView location, replacing them with increasing intensities of the fogColor color. The fogDensityExponent property determines the smoothness or abruptness of this transition.

A value of 0.0 (the default) specifies no attenuation—the fog's intensity is the same at all distances . A value of 1.0 specifies a linear transition, and a value of 2.0 specifies a quadratic transition curve. Higher values have little visible effect.

You can animate changes to this property's value.
(Read and Write property)

149.43.20 fogEndDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from a point of view at which the scene's contents are completely obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default end distance of 0.0 disables the fog effect. Change this property's value to enable fog.

You can animate changes to this property's value.
(Read and Write property)

149.43.21 fogStartDistance as Double

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The distance from a point of view at which the scene's contents begin to be obscured by fog. Animatable.
Notes:

A fog effect causes scene contents to become less visible the farther they are from the pointOfView node currently used for rendering. At distances less than the value of the fogStartDistance property, scene contents are fully visible. At greater distances, SceneKit blends the rendered scene contents with a constant color (specified by the fogColor property). At distances greater than the fogEndDistance property, the scene contents fade away completely and only the fog color is visible. Use fog to add atmospheric effects to your app or game, or to improve rendering performance by hiding parts of the scene that are far away from the current point of view.

The default start distance is 0.0.

You can animate changes to this property's value.
(Read and Write property)

149.43.22 lightingEnvironment as SCNMaterialPropertyMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A cube map texture that depicts the environment surrounding the scene's contents, used for advanced lighting effects.
Notes:

When rendering materials with the physicallyBased lighting model, SceneKit illuminates surfaces differently according to the environment that surrounds them. For example, with physically based shading, even a diffuse surface takes on some color from the sky above it and the ground below it.

Tip: For realistic results, reuse the same contents for both the lighting environment and the background property.

For information about defining cube maps, see the discussion of the contents property.
(Read only property)

149.43.23 paused as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether to run actions, animations, particle systems, and physics simulations in the scene graph.

Notes:

If false (the default), SceneKit continuously updates and renders the contents of the scene. Pausing a scene pauses any running animations or actions attached to the scene graph, and suspends updates of the scene's physics simulation and any particle systems in the scene.
(Read and Write property)

149.43.24 physicsWorld as SCNPhysicsWorldMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The physics simulation associated with the scene.
Notes:

Every scene automatically creates a physics world object to simulate physics on nodes in the scene. You use this property to access the scene's global physics properties, such as gravity, and to manage physics interactions between nodes. To make a node in the scene participate in the physics simulation, use either or both of its physicsBodyMBS and physicsFieldMBS properties.
(Read only property)

149.43.25 rootNode as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The root node of the scene graph.
Notes:

All scene content—nodes, geometries and their materials, lights, cameras, and related objects—is organized in a node hierarchy with a single common root node.

Some scene files created using external tools may describe node hierarchies containing multiple root nodes. When SceneKit imports such files, their separate root nodes will be made children of a new, unique root node.

Each child node's coordinate system is defined relative to the transformation of its parent node. You should not modify the transform property of the root node.
(Read only property)

149.43.26 attributeForKey(key as String) as Variant

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns or sets the scene attribute for the specified key.
Notes:

key: One of the constants described in Scene Attributes that identifies the attribute to be written.

(Read and Write computed property)

149.44 class SCNShapeMBS

149.44.1 class SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNShape represents a 2D shape (cubic Bezier spline) than can be extruded.
Notes: Subclass of the SCNGeometryMBS class.

149.44.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.44.3 Methods

149.44.4 Constructor(path as NSBezierPathMBS, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

149.44.5 shape(path as NSBezierPathMBS, extrusionDepth as double) as SCNShapeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of the given shape with the given extrusion depth.
Notes:

path: The cubic Bezier spline to extrude.
extrusionDepth: The extrusion depth.

149.44.6 Properties

149.44.7 chamferMode as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sides of the text that are chamfered.
Notes:

The default value is ChamferModeBoth.
(Read and Write property)

149.44.8 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

149.44.9 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The default value is 0.
(Read and Write property)

149.44.10 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the shape.
(Read and Write property)

149.44.11 path as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The path defining the shape to be rendered.
Notes:

The path defines the outline of the shape. The path is filled using the even-odd rule. If the path is self-intersecting, the behavior is undefined.

(Read and Write property)

149.44.12 Constants

149.44.13 ChamferModeBack = 2

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants.
Notes: Apply a chamfer to only the back edge of the extruded shape.

149.44.14 ChamferModeBoth = 0

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants.
Notes: Apply a chamfer to both front and back edges of the extruded shape.

149.44.15 ChamferModeFront = 1

MBS Mac64bit Plugin, Plugin Version: 19.1. **Function:** One of the chamfer mode constants.
Notes: Apply a chamfer to only the front edge of the extruded shape.

149.45 class SCNSliderConstraintMBS

149.45.1 class SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNSliderConstraint constraint makes a node to collide and slide against a category of nodes
Notes: Subclass of the SCNConstraintMBS class.

149.45.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.45.3 Methods

149.45.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNSliderConstraint object.

149.45.5 sliderConstraint as SCNSliderConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a SCNSliderConstraint object.

149.45.6 Properties

149.45.7 collisionCategoryBitMask as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the category of node to collide against. Defaults to 0.
Notes: (Read and Write property)

149.45.8 offset as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the offset of the slider.
Notes:

Defaults to (0,0,0).
(Read and Write property)

149.45.9 Radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Defines the radius of the slider. Defaults to 1.
Notes: (Read and Write property)

149.46 class SCNSphereMBS

149.46.1 class SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNSphere represents a sphere with controllable radius.
Notes: Subclass of the SCNGeometryMBS class.

149.46.4 Methods

149.46.5 Constructor(radius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

149.46.6 sphere(radius as double) as SCNSphereMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a sphere with given radius.
Notes: radius: The radius of the sphere.

149.46.7 Properties

149.46.8 geodesic as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicate if the geometry is a geosphere.

Notes:

The default value is false.
(Read and Write property)

149.46.9 radius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The sphere radius. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

149.46.10 segmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of segments along both spherical coordinates. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.47 class SCNTextMBS

149.47.1 class SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNText represents a block of text that has been extruded
Notes: Subclass of the SCNGeometryMBS class.

149.47.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr1

149.47.3 Methods

149.47.4 Constructor(text as string, extrusionDepth as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of given text with given extrusion depth.
Notes:

string: The text to be represented.
extrusionDepth: The extrusion depth.

149.47.5 text(text as string, extrusionDepth as double) as SCNTextMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a 3D representation of given text with given extrusion depth.
Notes:

string: The text to be represented.
extrusionDepth: The extrusion depth.
See also:

- 149.47.16 text as String 20405

149.47.6 Properties

149.47.7 alignmentMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines how individual lines of text are horizontally aligned within the bounds.
Notes:

For the text to be aligned you first need to set its bounds, otherwise the text is not aligned. The default value is kCAAlignmentNatural.
(Read and Write property)

149.47.8 attributedString as NSAttributedStringMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)

149.47.9 chamferProfile as NSBezierPathMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Describes the profile used to when "chamferRadius" is not nil.
Notes:

When "chamferProfile" is nil we fallback on a path representing a quadrant.
The profile should be a 2D curve beginning at (0,1) and ending at (1,0). The "flatness" property is also used to flatten this path. The default value is nil.
(Read and Write property)

149.47.10 chamferRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The chamfer radius. Animatable.
Notes:

Values are clamped to the range [0, extrusionDepth / 2] . The actual chamfer radius might be different to the one here specified: large values are clipped to a per-glyph max value. The default value is 0.
(Read and Write property)

149.47.11 chamferSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of chamfer subdivisions. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 10.

(Read and Write property)

149.47.12 containerFrame as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A container within which the text may be wrapped or truncated.
Notes:

The text will start at the top-left corner of the rect. You need to set this property for text truncation or alignment to work. Getting this property when it has never been set returns CGRectMBS with all values zero.
(Read and Write property)

149.47.13 extrusionDepth as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The extrusion depth. Animatable.
Notes:

If the value is 0, we get a mono-sided, 2D version of the text.
(Read and Write property)

149.47.14 flatness as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the accuracy (or smoothness) with which fonts are rendered.
Notes:

Smaller numbers give smoother curves at the expense of more computation and heavier geometries in terms of vertices. The default value is 0.6, which yields smooth curves.
(Read and Write property)

149.47.15 font as NSFontMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The font used to represent the text.
Notes:

The font property is only used when the string property is not an NSAttributedString. Defaults to the system font (12 point).

(Read and Write property)

149.47.16 text as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The text to be represented.
Notes:

The text can be string or NSAttributedStringMBS.
(Read and Write property)
See also:

- 149.47.5 text(text as string, extrusionDepth as double) as SCNTextMBS 20402

149.47.17 textSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the bounding box size the receiver occupies.
Notes: (Read only property)

149.47.18 truncationMode as String

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Describes how the text is truncated to fit within the bounds.
Notes:

For the text to be truncated you first need to set its bounds, otherwise the text is not truncated. The default value is kCATruncationNone.
(Read and Write property)

149.47.19 Wrapped as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Determines whether the text is wrapped to fit within the bounds.
Notes:

For the text to be wrapped you first need to set its bounds, otherwise the text is not wrapped. The default value is false.
(Read and Write property)

149.48 class SCNTorusMBS

149.48.1 class SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** SCNTorus represents a torus with controllable ring radius and pipe radius.
Notes: Subclass of the SCNGeometryMBS class.

149.48.4 Methods

149.48.5 Constructor(ringRadius as double, pipeRadius as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

149.48.6 torus(ringRadius as double, pipeRadius as double) as SCNTorusMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a torus with given ring radius and pipe radius.
Notes:

ringRadius: The radius of the ring.
pipeRadius: The radius of the pipe.

149.48.7 Properties

149.48.8 pipeRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the torus pipe. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.25.
(Read and Write property)

149.48.9 pipeSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions of the pipe. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 24.
(Read and Write property)

149.48.10 ringRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The radius of the torus ring. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 0.5.
(Read and Write property)

149.48.11 ringSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions of the ring. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.49 class SCNTransformConstraintMBS

149.49.1 class SCNTransformConstraintMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SCNTransformConstraint applies on the transform of a node via a custom block.
Notes:

Subclass of the SCNConstraintMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

149.50.4 Methods

149.50.5 Constructor(InnerRadius as double, outerRadius as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

149.50.6 tube(InnerRadius as double, outerRadius as double, height as double) as SCNTubeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a tube with given inner radius, outer radius and height.
Notes:

innerRadius: The inner radius of the tube.
outerRadius: The outer radius of the tube.
height: The height of the tube.

149.50.7 Properties

149.50.8 height as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The height of the tube. Animatable.
Notes:

If the value is less than or equal to 0, the geometry is empty. The default value is 1.
(Read and Write property)

149.50.9 heightSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the Y axis. Animatable.
Notes:

If the value is less than 1, the behavior is undefined. The default value is 1.
(Read and Write property)

149.50.10 innerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The inner radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is greater than or equal to the outer radius, then the geometry is empty. The default value is 0.25.
(Read and Write property)

149.50.11 outerRadius as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The outer radius of the tube. Animatable.
Notes:

If the value is less than or equal to 0, or if it is less than or equal to the inner radius, then the geometry is empty. The default value is 0.5.
(Read and Write property)

149.50.12 radialSegmentCount as Integer

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of subdivisions along the radial coordinate. Animatable.
Notes:

If the value is less than 3, the behavior is undefined. The default value is 48.
(Read and Write property)

149.51 class SCNVector3MBS

149.51.1 class SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a three-component vector.
Notes: SceneKit uses three-component vectors for a variety of purposes, such as describing node or vertex positions, surface normals, and scale or translation transforms. The different vector components should be interpreted based on the context in which the vector is being used.

149.51.4 Methods

149.51.5 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

149.51.6 copy as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the vector.

149.51.7 equals(other as SCNVector3MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Compares two vectors.
Notes: Returns true if both are equal.

149.51.8 Null as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns vector with all values zero.

149.51.9 Vector(x as double, y as double, z as double) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new vector.

149.51.10 Properties

149.51.11 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first component in the vector.
Notes: (Read and Write property)

149.51.12 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second component in the vector.
Notes: (Read and Write property)

149.51.13 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The third component in the vector.
Notes: (Read and Write property)

149.52 class SCNVector4MBS

149.52.1 class SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a four-component vector.
Notes:

SceneKit uses four-component vectors to represent multiple kinds of data:

- Axis-angle rotation or torque. The x, y, and z fields contain the normalized x-, y-, and z-components of the rotation axis, and the w field contains the rotation angle, in radians, or torque magnitude, in newton-meters.
- Color value (or range). The x, y, z, and w fields contain the red, green, blue, and alpha components of the color, or the width of the color variation range in each component.

149.52.3 Methods

149.52.4 Constructor(x as double = 0.0, y as double = 0.0, z as double = 0.0, w as double = 0.0)

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

149.52.5 copy as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the vector.

149.52.6 equals(other as SCNVector4MBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Compares two vectors.
Notes: Returns true if equal.

149.52.7 Null as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns vector with all values zero.

149.52.8 Vector(x as double, y as double, z as double, w as double) as SCNVector4MBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the vector with given values.

149.52.9 Properties

149.52.10 w as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The fourth component in the vector.
Notes: (Read and Write property)

149.52.11 x as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The first component in the vector.
Notes: (Read and Write property)

149.52.12 y as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The second component in the vector.
Notes: (Read and Write property)

149.52.13 z as Double

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The third component in the vector.
Notes: (Read and Write property)

149.53 class SCNViewMBS

149.53.1 class SCNViewMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A view for displaying 3D SceneKit content.
Notes:

In macOS, SCNView is a subclass of NSView. As part of the operating system's view hierarchy, an SCNView object provides a place for SceneKit content in your app's user interface. You can create a SceneKit view by using its Constructor method. To provide content for a SceneKit view, assign an SCNSceneMBS object to its scene property.

For additional important methods and properties for working with SceneKit views, see the SCNSceneRenderer protocol. (You can also render SceneKit content into an arbitrary Metal command queue or OpenGL context using the SCNRenderer class, or into a Core Animation layer on macOS using the SCNLayer class. The SCNSceneRenderer protocol defines functionality common to all three SceneKit rendering classes.)

see
https://developer.apple.com/documentation/scenekit/scnview

Requires 64bit app on macOS 10.8 or newer
Subclass of the NSViewMBS class.

149.53.4 Methods

149.53.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new SCNViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 149.53.6 Constructor(Handle as Integer) 20417
- 149.53.7 Constructor(left as double, top as double, width as double, height as double) 20417

149.53.6 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new SCNViewMBS(0, 0, 100, 100)
dim v as new SCNViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a SCNView and the plugin retains this handle.
See also:

- 149.53.5 Constructor 20416
- 149.53.7 Constructor(left as double, top as double, width as double, height as double) 20417

149.53.7 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new SCNViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 149.53.5 Constructor 20416

• 149.53.6 Constructor(Handle as Integer) 20417

149.53.8 hitTest(Point as CGPointMBS, Options as Dictionary = nil) as SCNHitTestResultMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Searches the renderer's scene for objects corresponding to a point in the rendered image.
Notes:

Point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.
options: A dictionary of options affecting the search. See Hit Testing Options Keys for acceptable values.

Returns an array of SCNHitTestResultMBS objects representing search results.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. Hit-testing is the process of finding elements of a scene located along this line segment. For example, you can use this method to find the geometry corresponding to a click event in a SceneKit view.

149.53.9 isNodeInsideFrustum(node as SCNNodeMBS, pointOfView as SCNNodeMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a Boolean value indicating whether a node might be visible from a specified point of view.
Notes:

node: The node whose visibility is to be tested.
pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns true if the bounding box of the tested node intersects the view frustum defined by the pointOfView node; otherwise, false.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum—a portion of the scene's coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.

Use this method to test whether a node lies within the viewing frustum defined by another node (which may or may not be the scene renderer's current pointOfView node). For example, in a game scene containing multiple camera nodes, you could use this method to determine which camera is currently best for viewing a moving player character.

Note that this method does not perform occlusion testing. That is, it returns true if the tested node lies

within the specified viewing frustum regardless of whether that node's contents are obscured by other geometry.

149.53.10 nodesInsideFrustumWithPointOfView(pointOfView as SCNNodeMBS) as SCNNodeMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns all nodes that might be visible from a specified point of view.
Notes:

pointOfView: A node defining a point of view, as used by the pointOfView property.

Returns an array of nodes whose bounding boxes intersect the view frustum defined by the pointOfView node. If the array is empty, no nodes lie within the specified frustum.

Any node containing a camera or spotlight may serve as a point of view (see the pointOfView property for details). Such a node defines a viewing frustum—a portion of the scene's coordinate space, shaped like a truncated pyramid, that encloses all points visible from that point of view.
Use this method find all nodes whose content lies within the viewing frustum defined by another node (which may or may not be the scene renderer's current pointOfView node).
Note that this method does not perform occlusion testing. That is, the returned array includes any node that lies within the specified viewing frustum regardless of whether that node's contents are obscured by other geometry.

149.53.11 pause

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Pauses playback of the view's scene.
Notes: This method has no effect if the scene is already paused.

149.53.12 play

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resumes playback of the view's scene.
Notes: This method has no effect if the scene is not paused.

149.53.13 projectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Projects a point from the 3D world coordinate system of the scene to the 2D pixel coordinate system of the renderer.
Notes:

point: A point in the world coordinate system of the renderer's scene.

Returns the corresponding point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

The z-coordinate of the returned point describes the depth of the projected point relative to the near and far clipping planes of the renderer's viewing frustum (defined by its pointOfView node). Projecting a point on the near clipping plane returns a point whose z-coordinate is 0.0; projecting a point on the far clipping plane returns a point whose z-coordinate is 1.0.

149.53.14 snapshot as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Renders the view's scene into a new image object.

149.53.15 stop

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops playback of the view's scene and resets the scene time to its start time.

149.53.16 unprojectPoint(Point as SCNVector3MBS) as SCNVector3MBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Unprojects a point from the 2D pixel coordinate system of the renderer to the 3D world coordinate system of the scene.
Notes:

point: A point in the screen-space (view, layer, or GPU viewport) coordinate system of the scene renderer.

Returns the corresponding point in the world coordinate system of the renderer's scene.

The z-coordinate of the point parameter describes the depth at which to unproject the point relative to the near and far clipping planes of the renderer's viewing frustum (defined by its pointOfView node). Unpro-

jecting a point whose z-coordinate is 0.0 returns a point on the near clipping plane; unprojecting a point whose z-coordinate is 1.0 returns a point on the far clipping plane.

A 2D point in the rendered screen coordinate space can refer to any point along a line segment in the 3D scene coordinate space. To test for scene contents along this line—for example, to find the geometry corresponding to the location of a click event in a view—use the hitTest method.

149.53.17 Properties

149.53.18 allowsCameraControl as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the user can manipulate the current point of view that is used to render the scene.
Notes:

If you set this property to true, SceneKit creates a camera node and handles mouse or touch events to allow the user to pan, zoom, and rotate their view of the scene. (Enabling user camera control does not modify camera objects already existing in the scene graph or the nodes containing them.)

When you enable user camera control, the defaultCameraController object handles input events and drives camera behavior. You can use that object's methods and properties to change the style of user camera interaction, and use the cameraControlConfiguration property to adjust control sensitivity.

In the default configuration, SceneKit provides the following controls:

- Pan with one finger to rotate the camera around the scene
- Pan with two fingers to translate the camera on its local xy-plane
- Pan with three fingers vertically to move the the camera forward backward
- Double-tap to switch to the next camera in the scene
- Rotate with two fingers to roll the camera (rotate on the camera node's z-axis)

Pinch to zoom in or zoom out (change the camera's fieldOfView)
The default value of this property is false. Use this option if you intend to control the camera programmatically.
(Read and Write property)

149.53.19 audioListener as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node representing the listener's position in the scene for use with positional audio effects.
Notes:

When you use the SCNAudioPlayerMBS class to play sound, the resulting effect depends on the position of each audio source in the scene relative to the listener. For example, changes in relative position can cause a sound to be localized to the left or right channel for stereo headphone output.

This property determines the listener's position. If the value is nil (the default), the listener position is always the same as that of the pointOfView node. By providing a different node for this property, you can separate the listener position from the point of view—this produces an effect similar to that of a boom microphone in video production. For example, in a third-person game where the camera floats high in the sky above the player character, you might use the player character as the listener node so that sounds from positions nearest the player are loudest.
To place an audio source in the scene, use the addAudioPlayer method on an SCNNode object.
(Read and Write property)

149.53.20 autoenablesDefaultLighting as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit automatically adds lights to a scene.
Notes:

If this property's value is false (the default), the only light sources SceneKit uses for rendering a scene are those contained in the scene graph. If you change the value to true, SceneKit automatically adds and places an omnidirectional light source when rendering scenes that contain no lights or only contain ambient lights.
(Read and Write property)

149.53.21 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The background color of the view.
Notes:

SceneKit displays this color behind the contents of the rendered scene. If the scene contents fill the view or if the scene provides its own background using the background property, the view's background color may not be visible.
This property's value must be a color that can be represented using RGBA components.
(Read and Write property)

149.53.22 debugOptions as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Options for drawing overlay content in a scene that can aid debugging.
Notes:

Use these options to display overlays that show otherwise-invisible scene content—such as node bounding boxes and the extents of physics fields—for use in debugging and profiling your app. For example:

- To visualize how well each object's physics representation corresponds to its visible geometry, show the shape of each SCNPhysicsBodyMBS object in the scene with the SCNDebugOptionShowPhysicsShapes option.
- To improve rendering performance in a scene with multiple SCNLightMBS objects, show each light's area of effect with the SCNDebugOptionShowLightExtents option and ensure that each object in the scene is affected by no more than three lights.

Debug options are bit mask patterns. To display multiple debugging overlays, combine options using the bitwise OR operator.
(Read and Write property)

149.53.23 defaultCameraController as SCNCameraControllerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The default camera controller for this view.
Notes: (Read only property)

149.53.24 jitteringEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit applies jittering to reduce aliasing artifacts.
Notes:

Jittering is a process that SceneKit uses to improve the visual quality of a rendered scene. While the scene's content is still, SceneKit moves the pointOfView location very slightly (by less than a pixel in projected screen space). It then composites images rendered after several such moves to create the final rendered scene, creating an antialiasing effect that smooths the edges of rendered geometry.

By default, the value of this property is false, specifying that SceneKit should not perform jittering. Change the value to true to enable jittering.

Because the SCNViewMBS and SCNLayerMBS classes perform jittering automatically and asynchronously, enabling jittering for these classes has minimal impact on rendering performance. The SCNRenderer class

performs jittering synchronously, incurring a high performance cost. With this class, jittering is suitable for rendering single frames on demand, but not for real-time rendering.
(Read and Write property)

149.53.25 loops as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether SceneKit restarts the scene time after all animations in the scene have played.
Notes:

If the value of this property is true (the default), SceneKit returns the scene time to zero after all animations associated with the scene have played, causing those animations to repeat. Otherwise, SceneKit stops playing the scene when all animations have completed.
(Read and Write property)

149.53.26 Playing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the scene is playing.
Notes:

If the value of this property is false (the default), SceneKit does not increment the scene time, so animations associated with the scene do not play. Change this property's value to true to start animating the scene.
(Read and Write property)

149.53.27 pointOfView as SCNNodeMBS

MBS Mac64bit Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The node from which the scene's contents are viewed for rendering.
Notes:

Use a node with an SCNCameraMBS instance assigned to its camera property to view a scene. The node provides the position and direction of a virtual camera, and the camera object provides rendering parameters such as field of view and focus.
For debugging lights and shadows, you can also designate a spotlight (an SCNLightMBS object whose type property is spot) as a point of view. In this case, the light's spotInnerAngle property determines the field of view, and its zNear and zFar properties determine the near and far extents of the region that is visible onscreen (also known as the viewing frustum).
In either case, the direction of view is along the negative z-axis of the node's local coordinate space.
(Read and Write property)

149.53.28 preferredFramesPerSecond as Integer

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The animation frame rate that the view uses to render its scene.
Notes:

SceneKit chooses an actual frame rate that is as close as possible to your preferred frame rate based on the capabilities of the screen the view is displayed on. The actual frame rate is usually a factor of the maximum refresh rate of the screen to provide a consistent frame rate. For example, if the maximum refresh rate of the screen is 60 frames per second, that is also the highest frame rate the view sets as the actual frame rate. However, if you ask for a lower frame rate, SceneKit might choose 30, 20, 15 or some other factor to be the actual frame rate. For this reason, you want to choose a frame rate that your app can consistently maintain. The default value is 60 frames per second.
(Read and Write property)

149.53.29 renderingAPI as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The graphics technology SceneKit uses to render the scene.
Notes:

You choose a graphics technology when initializing a scene renderer:

- When initializing a SCNViewMBS object, use the Constructor initializer and the SCNPreferredRenderingAPIKey key. Alternatively, create a view in Interface Builder and use the Rendering API control in the inspector. During initialization, the view will attempt to use the preferred API, but will fall back to a different API if the preferred one is not supported on the current hardware.
- To create a SCNRendererMBS object that renders into your own OpenGL contect, use the rendererWithContext initializer. To create a renderer for use in your own Metal workflow, use the rendererWithDevice initializer.
- The rendering technology used by a SCNLayer object is determined by Core Animation.

After initializing a renderer, this property reflects the rendering technology in use.
(Read only property)

149.53.30 rendersContinuously as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether the view always renders at its preferred frame rate or only when its visible content changes.
Notes:

When this value is false (the default), the view redraws its contents only when something in its scene graph change or animates. Use this option to maximize energy efficiency.

If you change this value to true, the view redraws itself continually, at the rate specified by the preferredFramesPerSecond property, regardless of whether content is changing or animating.
(Read and Write property)

149.53.31 scene as SCNSceneMBS

MBS Mac64bit Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The scene to be displayed in the view.
Notes: (Read and Write property)

149.53.32 sceneTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current scene time.
Notes:

This timestamp determines how running animations behave, which is similar to how the playhead time in a video player application determines which frame of a movie to display. Scene time applies only to animations whose usesSceneTimeBase property is true, including those loaded from a scene source using the SCNSceneSourceAnimationImportPolicyPlayUsingSceneTimeBase option.

Use this property, together with the above animation options, when you want to directly control (or allow the user to directly control) the playback of animations. For example, if you're building an authoring tool for 3D assets, you might bind this property's value to a slider control for scrubbing through playback of animations in a scene file.
(Read and Write property)

149.53.33 showsStatistics as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that determines whether SceneKit displays rendering performance statistics in an accessory view.
Notes:

The SceneKit statistics view displays various information about scene rendering performance and GPU resource usage, including a frames-per-second (fps) counter. In macOS, click the gear button in the statistics view to show a panel with additional controls for adjusting SceneKit's rendering of the scene.
(Read and Write property)

149.53.34 Constants

149.53.35 kAntialiasingModeMultisampling16X = 4

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the antialiasing modes for scene renderers. **Notes:** Multisampling 16x

149.53.36 kAntialiasingModeMultisampling2X = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the antialiasing modes for scene renderers. **Notes:** Multisampling 2x

149.53.37 kAntialiasingModeMultisampling4X = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the antialiasing modes for scene renderers. **Notes:** Multisampling 4x

149.53.38 kAntialiasingModeMultisampling8X = 3

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the antialiasing modes for scene renderers. **Notes:** Multisampling 8x

149.53.39 kAntialiasingModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the antialiasing modes for scene renderers. **Notes:** No antialiasing.

149.53.40 kDebugOptionNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants. **Notes:** Disable all debugging overlays.

149.53.41 kDebugOptionRenderAsWireframe = 64

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes:

Display only wireframe placeholders for geometries in the scene.
Unlike the SCNDebugOptionShowWireframe option, this option disables normal surface rendering, displaying only the wireframe for each geometry.

149.53.42 kDebugOptionShowBoundingBoxes = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display the bounding boxes for any nodes with content.

149.53.43 kDebugOptionShowCameras = 1024

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display visualizations for nodes in the scene with attached cameras and their fields of view.

149.53.44 kDebugOptionShowConstraints = 512

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display visualizations of the constraint objects acting on nodes in the scene.

149.53.45 kDebugOptionShowCreases = 256

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display nonsmoothed crease regions for geometries affected by surface subdivision.

149.53.46 kDebugOptionShowLightExtents = 8

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes:

Display the regions affected by each SCNLightMBS object in the scene.

Only lights whose type is SCNLightTypeOmni or SCNLightTypeSpot have an area of effect; directional and ambient lights affect the entire scene.

149.53.47 kDebugOptionShowLightInfluences = 4

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display the locations of each SCNLightMBS object in the scene.

149.53.48 kDebugOptionShowPhysicsFields = 16

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display the regions affected by each SCNPhysicsFieldMBS object in the scene.

149.53.49 kDebugOptionShowPhysicsShapes = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display the physics shapes for any nodes with attached SCNPhysicsBodyMBS objects.

149.53.50 kDebugOptionShowSkeletons = 128

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes: Display visualizations of the skeletal animation parameters for relevant geometries.

149.53.51 kDebugOptionShowWireframe = 32

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the debug flag constants.
Notes:

Display geometries in the scene with wireframe rendering.
When this option is enabled, SceneKit still renders scene geometry with all associated materials, then overlays a wireframe rendering of the same geometry. You can use this option, for example, to debug material rendering issues.

149.53.52 kRenderingAPIMetal = 0

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the Metal framework for SceneKit rendering.
Metal provides improved graphics performance on supported devices, allows you to integrate GPU-compute tasks into a rendering workflow, and provides the same API in both iOS and macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

149.53.53 kRenderingAPIOpenGLCore32 = 2

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the OpenGL 3.2 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

149.53.54 kRenderingAPIOpenGLCore41 = 3

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the OpenGL 4.1 Core Profile API for SceneKit rendering in macOS.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

149.53.55 kRenderingAPIOpenGLLegacy = 1

MBS Mac64bit Plugin, Plugin Version: 20.2. **Function:** One of the options for choosing the graphics technology for an SCNViewMBS object (or other SceneKit renderer) to use for drawing its contents.
Notes:

Use the Legacy OpenGL API for SceneKit rendering in macOS.
This option is available on all macOS systems supporting SceneKit. If you request the Metal rendering API for an SCNViewMBS object on a system that does not support Metal, SceneKit falls back to the Legacy OpenGL API.
Used by the renderingAPI property and the SCNPreferredRenderingAPIKey option when initializing an SCNViewMBS object.

Chapter 150

Screenshot

150.1 Globals

150.1.1 ScreenshotDisplayMBS(index as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the Screenshot from the display with the given index.
Example:

```
Backdrop = ScreenshotDisplayMBS(0)
```

Notes:

Index starts at 0 for the main display.
Works on Linux only for first screen.

Plugin version 10.4 added support for multiple displays on Windows.

150.1.2 ScreenshotFromStringMBS(Width as Integer, Height as Integer, RowBytes as Integer, data as string) as picture

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates the picture from a string returnd by ScreenshotStringMBS.
Example:

```
dim p as Picture
dim s as string
```

```
dim w,h,r as Integer

s=ScreenshotStringMBS(w,h,r)

p=ScreenshotFromStringMBS(w,h,r,s)

Backdrop=p
```

Notes:

Returns nil on any error.
(for example if width, height and rowwidth doesn't fit together.)

150.1.3 ScreenshotMBS as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim p as picture
p=screenshotMBS
```

Notes:

For a rectangle only you can use ScreenShotRectMBS.

Plugin Version 7.2 adds Windows Vista Support.

150.1.4 ScreenshotRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS Picture Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen rectangle in screen resolution.
Example:

```
dim p as picture
p=ScreenshotRectMBS(100,100,200,200)
```

Notes:

Improved in Version 3.2 to support multiple displays on Mac OS.

Plugin Version 10.4 adds Windows support.
Coordinates given in pixel on screen, so for High DPI, you need to multiply them before passing parameters.

150.1.5 ScreenshotStringDisplayMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer, index as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
dim index as Integer=0

s=ScreenshotStringDisplayMBS(w,h,r, index)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

150.1.6 ScreenshotStringMBS(byref Width as Integer, byref Height as Integer, byref RowBytes as Integer) as string

MBS Picture Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture of the screen content in screen resolution.
Example:

```
dim s as string
dim w,h,r as Integer
s=ScreenshotStringMBS(w,h,r)
```

Notes:

Returns nil on any error.
Use ScreenshotFromStringMBS to get the picture from the string.

Chapter 151

SFPassword

151.1 class SFPasswordAssistantMBS

151.1.1 class SFPasswordAssistantMBS

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The class to help the user to create a new password.
Notes:

This is an Apple internal class with no public interface. It works for Mac OS X 10.4 and should work on 10.3 and 10.5.

You need to keep the reference to the SFPasswordAssistantMBS object in a global property. If the object in Xojo is destroyed while the panel is still visible, it will crash.

Do not call Close or PerformClose methods to close this window, use BaseWindowWillClose.
Not supported for 64 bit target.
Subclass of the NSPanelMBS class.

151.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4

- MBS Xojo Plugins, version 17.4pr5

151.1.3 Methods

151.1.4 BaseWindowWillClose

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the panel that the base window will close.
Notes: If your window which uses the panel will close, you should call that method from the CancelClose method of your window.

151.1.5 Constructor

MBS MacExtras Plugin, Plugin Version: 8.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new password assistant panel.

151.1.6 ShowPanel

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Shows the panel.
Notes:

This method does a bit more than just show.
It will create the panel, create a new password and run the password quality check.

151.1.7 Properties

151.1.8 Password as string

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current password.
Notes:

If you set the value, the new password is checked for quality and the TextChanged event may be fired.
(Read and Write computed property)

151.1.9 Events

151.1.10 TextChanged(text as string)

MBS MacExtras Plugin, Plugin Version: 7.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The text was changed.

Notes:

This event fires often.
It fires if the text changed (e.g. a letter was added) or sometimes it fires if the text was not changed.

So best if you need to update GUI, to check the text parameter and use timer. Restart the timer every time you get an event with a period of maybe 500 ms. So in case you don't get new events and the timer fires, you can update your GUI.

Chapter 152

Shell

152.1 Globals

152.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Executes a new application.
Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 152.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer 20440

152.1.2 ConsoleExecuteMBS(path as string, arguments() as string, environment() as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Executes a new application.
Example:

```
// launch an app using open

const sShellPath="/usr/bin/open"

dim a(1) as string
dim e(-1) as string

a(0)="open" // must be the application name
a(1)="/Applications/TextEdit.app" // first parameter

print str(ConsoleExecuteMBS(sShellPath,a,e))

// Launch app binary directly:

dim aa(1) as string
dim ee(-1) as string

dim f as FolderItem

f=GetFolderItem("test.app").Child("Contents").Child("MacOS").Child("test")

aa(0)=f.ShellPath

print str(ConsoleExecuteMBS(f.ShellPath,aa,ee))
```

Notes:

Use WindowsShellExecuteMBS on Windows.

Launch GUI tools on Mac OS X using /bin/open.
Returned value is the PID of the new process.
If the execution fails you still get a PID, but this process is terminated in a few milliseconds.

arguments must have at least one member.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), NSTask (Mac only) and ShellMBS (cross platform).
See also:

- 152.1.1 ConsoleExecuteMBS(path as folderitem, arguments() as string, environment() as string) as Integer 20439

152.2 class ShellMBS

152.2.1 class ShellMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class in MBS Plugins to run executables.
Example:

```
Dim s As New ShellMBS

s.Execute "/usr/bin/whoami"
s.Wait 5

Dim output As String = s.ReadOutput
Dim errors As String = s.ReadError

Break // see in debugger

MsgBox "whoami: "+output
```

Notes:

Via input stream, we can send data to the process.
And via output and error streams, we can read data coming back.

While this class does the same as Shell class in Xojo, we have the possibility to add more in the future.
For now you can benefit from an alternative implementation with stderr and stdout as two streams. Also we feature terminate methods to kill the child process.

See also WindowsProcessMBS and WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and NSTaskMBS (Mac only).

152.2.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr1
- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo Plugins in version 19.2
- MBS Xojo Plugins, version 19.2pr6

152.2.3 Methods

152.2.4 Arguments as String()

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries arguments array.
Notes: You can add arguments to this array.

152.2.5 CloseInput

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes stdin to the process.
Notes: Sometimes this is needed as some processes wait till stdin is closed.

152.2.6 CloseStreams

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the streams.
Notes: Automatically done in destructor.

152.2.7 Constructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

152.2.8 Destructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

152.2.9 Execute(Executable as String)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the executable.
Notes:

Pass path to executable to run.
Opens the streams stdin, stdout and stderr.

152.2.10 ExitCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the exit code of the terminated process.

152.2.11 Poll

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Polls for events.
Notes:

This will check for pending event and fire events if needed.
Internally we call this with a timer for the shell object, but you can call this in a tight loop.

152.2.12 ReadError as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads data from stderr.
Notes: Queries available bytes to return all the data in the buffer.

152.2.13 ReadOutput as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads data from stdout.
Notes: Queries available bytes to return all the data in the buffer.

152.2.14 SetArguments(arguments() as String)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assigns a new array of arguments.
Example:

```
Dim sh as new ShellMBS
Dim args() As String
```

```
args.Append "-c"
args.Append "5"
args.Append "monkeybreadsoftware.com"

sh.SetArguments args
```

152.2.15 Terminate(WinExitCode as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates the app with the given exit code.
Notes:

ExitCode is only used on Windows.
Returns true on success.

152.2.16 Wait(TimeOut as double = 30.0)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Waits for process to quit.
Notes: Yields time and waits until time passed or process terminates.

152.2.17 WriteInput(data as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.

152.2.18 Properties

152.2.19 ApplicationName as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The path to the application.
Notes:

Can be empty when application is part of command line.
Only for Windows.
(Read and Write property)

152.2.20 AvailableBytesError as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of available bytes on stderr.
Notes: (Read only property)

152.2.21 AvailableBytesOutput as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of available bytes on stdout.
Notes: (Read only property)

152.2.22 CurrentDirectory as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current directory for the process.
Notes:

You can set this before calling Execute to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

152.2.23 Domain as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The domain name.
Notes:

Only used on Windows.
You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

152.2.24 Environment as Dictionary

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The environment variables to use.
Notes: (Read and Write property)

152.2.25 ErrorCode as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Last native error code.
Notes:

Zero is success.
(Read only property)

152.2.26 Executable as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The command line to run.
Notes:

On Mac and Linux just the path to executable.
If applicationName is set for Windows, this should only provide parameters.
(Read only property)

152.2.27 IsRunning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

152.2.28 Password as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

152.2.29 PID as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The process ID of the child process.
Notes: (Read only property)

152.2.30 ProcessHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the process handle.
Notes: (Read only property)

152.2.31 ThreadHandle as Integer

MBS Util Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the thread handle for the child process.
Notes: (Read only property)

152.2.32 Username as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
Only for Windows.
(Read and Write property)

152.2.33 Events

152.2.34 Completed

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called when process terminated.

152.2.35 DataAvailable(AvailableBytesError as Integer, AvailableBytesOutput as Integer)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called when new data is available on stderr or stdout.
Notes: You need to use read commands to query data.

152.3 class WindowsProcessMBS

152.3.1 class WindowsProcessMBS

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to run processes on Windows.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c dir"
w.CurrentDirectory = "C:"

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend

// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes:

Can be used like shell, but with more windows specific options.
For interactive shell, you need to run cmd.exe yourself.
This shell is asynchronously. For synchrones mode, please write yourself a loop waiting for process to finish.

Please read Microsoft documentation for more details:
https://msdn.microsoft.com/en-us/library/windows/desktop/ms682425(v=vs.85).aspx

See also NSTask (Mac only), WindowsShellExecuteMBS (Windows only), ConsoleExecuteMBS and ShellMBS (cross platform).

152.3.4 Methods

152.3.5 Close

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes the process.
Notes: Same as destructor.

152.3.6 PeekError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Peeks in stderr.

152.3.7 PeekOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Peeks in stdout.

152.3.8 ReadError(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data from stderr.
Notes: Please pass maximum number of bytes to read.

152.3.9 ReadOutput(Length as Integer = 0) as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data from stdout.
Notes: Please pass maximum number of bytes to read.

152.3.10 Run as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Starts the process.
Notes: Returns true on success or false on failure.

152.3.11 SetKillProcessWhenParentDies as boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets process to be killed automatically.
Notes:

When Xojo application ends, the process you started is killed automatically.
Returns true if option is set or false on failure.

152.3.12 Terminate(ExitCode as Integer) as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Terminates the app with the given exit code.
Notes: Returns true on success.

152.3.13 Write(Data as MemoryBlock) as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 152.3.14 Write(Data as String) as Integer 20452

152.3.14 Write(Data as String) as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sends data to stdin of the running process.
Notes: Returns number of bytes written.
See also:

- 152.3.13 Write(Data as MemoryBlock) as Integer 20451

152.3.15 Properties

152.3.16 ApplicationName as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The path to the application.
Notes:

Can be empty when application is part of command line.
(Read and Write property)

152.3.17 AvailableBytesError as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of available bytes on stderr.
Notes: (Read only property)

152.3.18 AvailableBytesOutput as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of available bytes on stdout.
Notes: (Read only property)

152.3.19 CommandLine as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The command line to run.
Notes:

If applicationName is set, this should only provide parameters.
(Read and Write property)

152.3.20 CurrentDirectory as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current directory for the process.
Notes:

You can set this before calling Run to specify the start directory.
If this parameter is "", the new process will have the same current drive and directory as the calling process.
(Read and Write property)

152.3.21 Domain as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The domain name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

152.3.22 Environment as Dictionary

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The environment variables to use.
Example:

```
// run command
dim w as new WindowsProcessMBS

w.CommandLine = "cmd /c echo % TEST% "

// set environment
dim env as new Dictionary
env.Value("TEST") = "Hello World"
w.Environment = env

if not w.run then
MsgBox w.LastErrorMessage
Return
end if

// wait
while w.Running
app.YieldToNextThread
wend
```

```
// show result
dim a as Integer = w.AvailableBytesOutput
dim r as string = w.ReadOutput(a)
MsgBox r
```

Notes: (Read and Write property)

152.3.23 ExitCode as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the exit code of the terminated process.
Notes: (Read only property)

152.3.24 LastError as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Last windows error code.
Notes: (Read only property)

152.3.25 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The message text for the last error.
Notes: (Read only property)

152.3.26 Password as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The password.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

152.3.27 ProcessHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the process handle.
Notes: (Read only property)

152.3.28 ProcessID as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The process ID of the process.
Notes: (Read only property)

152.3.29 Running as Boolean

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks whether process is running.
Notes:

Returns true if running or false if not.

The process may not terminate if there is still output data in the pipes. So please read error/stdout regularly.
(Read only property)

152.3.30 ThreadHandle as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** For Windows the thread handle for the child process.
Notes: (Read only property)

152.3.31 ThreadID as Integer

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The thread ID of the main thread for the process.
Notes: (Read only property)

152.3.32 UserName as String

MBS Win Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The user name.
Notes:

You can set username and password to run app with different user. Domain is optional to specify network domain.
(Read and Write property)

152.3.33 Events

152.3.34 DataAvailable(AvailableBytesOutput as Integer, AvailableBytesError as Integer)

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when data is available for stdout or stderr.

152.3.35 Terminated(ExitCode as Integer)

MBS Win Plugin, Plugin Version: 17.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when process terminated.

Chapter 153

SmartCard

153.1 class SmartCardContextMBS

153.1.1 class SmartCardContextMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a SmartCard context.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

153.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

153.1.3 Methods

153.1.4 Cancel

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates all outstanding actions within a specific resource manager context.
Notes:

The only requests that you can cancel are those that require waiting for external action by the smart card or user. Any such outstanding action requests will terminate with a status indication that the action was

canceled. This is especially useful to force outstanding GetStatusChange calls to terminate.

Lasterror is set.

153.1.5 Connect(reader as string, ShareMode as UInt32, PreferredProtocols as UInt32) as SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to a smartcard.
Example:

```
dim c as new SmartCardContextMBS

dim s as SmartCardMBS
s = c.Connect("MyReader", SmartCardMBS.kShareShared, SmartCardMBS.kProtocolAny)
if s <>nil then
MsgBox "Connected"
else
MsgBox "Error: "+str(c.Lasterror)
end if
```

Notes:

Establishes a connection (using a specific resource manager context) between the calling application and a smart card contained by a specific reader. If no card exists in the specified reader, an error is returned.

Reader: The name of the reader that contains the target card.
ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.
Returns on success a smartcard object, else returns nil.

153.1.6 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a smartcard context.

153.1.7 IsValid as boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Determines whether a smart card context handle is valid.
Notes: Returns true if valid or false if not valid.

153.1.8 ReaderGroups as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of reader groups that have previously been introduced to the system.
Notes:

The groups may be SCard$ AllReaders, SCard$ DefaultReaders, SCard$ LocalReaders and SCard$ SystemReaders.
Lasterror is set.

153.1.9 Readers as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
Example:

```
dim c as new SmartCardContextMBS
dim list() as string = c.Readers
MsgBox Join(list, EndOfLine)
```

Notes: Lasterror is set.
See also:

- 153.1.10 Readers(ReaderGroups() as string) as string() 20459

153.1.10 Readers(ReaderGroups() as string) as string()

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the list of readers within a set of named reader groups, eliminating duplicates.
Notes:

The caller supplies a list of reader groups, and receives the list of readers within the named groups. Unrecognized group names are ignored. This function only returns readers within the named groups that are currently attached to the system and available for use.

ReaderGroups: The reader groups you like to query.
Lasterror is set.
See also:

- 153.1.9 Readers as string() 20459

153.1.11 Properties

153.1.12 Available as Boolean

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the smartcard API is available.
Notes:

This should be available on Mac and Windows.

Loads on Mac the PCSC.framework.
For Linux you need pcsclite library installed. We try to load libpcsclite.so or /usr/lib/libpcsclite.so.
On Windows we use winscard.dll built into Windows.
(Read only property)

153.1.13 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Internal object reference.
Notes: (Read and Write property)

153.1.14 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

153.1.15 Constants

153.1.16 kErrorBadSeek = & H80100029

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An error occurred in setting the smart card file object pointer.

153.1.17 kErrorCancelled = & H80100002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by an Cancel request.

153.1.18 kErrorCancelledByUser = & H8010006E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by the user.

153.1.19 kErrorCantDispose = & H8010000E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The system could not dispose of the media in the requested manner.

153.1.20 kErrorCardNotAuthenticated = & H8010006F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No PIN was presented to the smart card.

153.1.21 kErrorCardUnsupported = & H8010001C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card does not meet minimal requirements for support.

153.1.22 kErrorCertificateUnavailable = & H8010002D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested certificate could not be obtained.

153.1.23 kErrorChvBlocked = & H8010006C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The card cannot be accessed because the maximum number of PIN entry attempts has been reached.

153.1.24 kErrorCommDataLost = & H8010002F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: A communications error with the smart card has been detected.

153.1.25 kErrorCommError = & H80100013

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal communications error has been detected.

153.1.26 kErrorDirNotFound = & H80100023

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified directory does not exist in the smart card.

153.1.27 kErrorDuplicateReader = & H8010001B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader driver did not produce a unique reader name.

153.1.28 kErrorEof = & H8010006D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The end of the smart card file has been reached.

153.1.29 kErrorFileNotFound = & H80100024

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified file does not exist in the smart card.

153.1.30 kErrorIccCreateorder = & H80100021

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested order of object creation is not supported.

153.1.31 kErrorIccInstallation = & H80100020

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No primary provider can be found for the smart card.

153.1.32 kErrorInsufficientBuffer = & H80100008

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The data buffer for returned data is too small for the returned data.

153.1.33 kErrorInternalError = & H80100001

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal consistency check failed.

153.1.34 kErrorInvalidAtr = & H80100015

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An ATR string obtained from the registry is not a valid ATR string.

153.1.35 kErrorInvalidChv = & H8010002A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied PIN is incorrect.

153.1.36 kErrorInvalidHandle = & H80100003

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied handle was not valid.

153.1.37 kErrorInvalidParameter = & H80100004

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: One or more of the supplied parameters could not be properly interpreted.

153.1.38 kErrorInvalidTarget = & H80100005

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Registry startup information is missing or not valid.

153.1.39 kErrorInvalidValue = & H80100011

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: One or more of the supplied parameter values could not be properly interpreted.

153.1.40 kErrorNoAccess = & H80100027

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Access is denied to the file.

153.1.41 kErrorNoDir = & H80100025

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied path does not represent a smart card directory.

153.1.42 kErrorNoFile = & H80100026

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The supplied path does not represent a smart card file.

153.1.43 kErrorNoKeyContainer = & H80100030

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested key container does not exist on the smart card.

153.1.44 kErrorNoMemory = & H80100006

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Not enough memory available to complete this command.

153.1.45 kErrorNoReadersAvailable = & H8010002E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No smart card reader is available.

153.1.46 kErrorNoService = & H8010001D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager is not running.

153.1.47 kErrorNoSmartcard = & H8010000C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The operation requires a smart card, but no smart card is currently in the device.

153.1.48 kErrorNoSuchCertificate = & H8010002C

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested certificate does not exist.

153.1.49 kErrorNotReady = & H80100010

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader or card is not ready to accept commands.

153.1.50 kErrorNotTransacted = & H80100016

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An attempt was made to end a nonexistent transaction.

153.1.51 kErrorPciTooSmall = & H80100019

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The PCI receive buffer was too small.

153.1.52 kErrorProtoMismatch = & H8010000F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The requested protocols are incompatible with the protocol currently in use with the card.

153.1.53 kErrorReaderUnavailable = & H80100017

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified reader is not currently available for use.

153.1.54 kErrorReaderUnsupported = & H8010001A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader driver does not meet minimal requirements for support.

153.1.55 kErrorRemovedCard = & H80100069

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card has been removed, so further communication is not possible.

153.1.56 kErrorResetCard = & H80100068

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card was reset.

153.1.57 kErrorSecurityViolation = & H8010006A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Access was denied because of a security violation.

153.1.58 kErrorServerTooBusy = & H80100031

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager is too busy to complete this operation.

153.1.59 kErrorServiceStopped = & H8010001E

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card resource manager has shut down.

153.1.60 kErrorSharingViolation = & H8010000B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card cannot be accessed because of other outstanding connections.

153.1.61 kErrorShutdown = & H80100018

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The operation has been aborted to allow the server application to exit.

153.1.62 kErrorSuccess = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: No error.

153.1.63 kErrorSystemCancelled = & H80100012

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The action was canceled by the system, presumably to log off or shut down.

153.1.64 kErrorTimeout = & H8010000A

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The user-specified time-out value has expired.

153.1.65 kErrorUnexpected = & H8010001F

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An unexpected card error has occurred.

153.1.66 kErrorUnknownCard = & H8010000D

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified smart card name is not recognized.

153.1.67 kErrorUnknownError = & H80100014

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal error has been detected, but the source is unknown.

153.1.68 kErrorUnknownReader = & H80100009

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The specified reader name is not recognized.

153.1.69 kErrorUnknownResMng = & H8010002B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An unrecognized error code was returned.

153.1.70 kErrorUnpoweredCard = & H80100067

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: Power has been removed from the smart card, so that further communication is not possible.

153.1.71 kErrorUnresponsiveCard = & H80100066

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The smart card is not responding to a reset.

153.1.72 kErrorUnsupportedCard = & H80100065

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The reader cannot communicate with the card, due to ATR string configuration conflicts.

153.1.73 kErrorUnsupportedFeature = & H80100022

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: This smart card does not support the requested feature.

153.1.74 kErrorWaitedTooLong = & H80100007

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An internal consistency timer has expired.

153.1.75 kErrorWriteTooMany = & H80100028

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: An attempt was made to write more data than would fit in the target object.

153.1.76 kErrorWrongChv = & H8010006B

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the error codes.
Notes: The card cannot be accessed because the wrong PIN was presented.

153.2 class SmartCardMBS

153.2.1 class SmartCardMBS

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a smartcard.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.2.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

- New functions for smart card reading

153.2.3 Methods

153.2.4 BeginTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts a transaction.
Notes:

The function waits for the completion of all other transactions before it begins. After the transaction starts, all other applications are blocked from accessing the smart card while the transaction is in progress.

If a transaction is held on the card for more than five seconds with no operations happening on that card, then the card is reset. Calling any of the Smart Card and Reader Access Functions or Direct Card Access Functions on the card that is transacted results in the timer being reset to continue allowing the transaction to be used.
The BeginTransaction function is a smart card and reader access function. For more information about other access functions, see Smart Card and Reader Access Functions.

Lasterror is set.

153.2.5 CancelTransaction

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels current transaction.
Notes: Lasterror is set.

153.2.6 Constructor

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

153.2.7 Control(ControlCode as Integer, input as ptr, inputLength as UInt32, output as ptr, byref outputLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Direct control of the reader.
Notes:

You can call it any time after a successful call to SmartCard.Connect and before a successful call to SmartCard.Disconnect. The effect on the state of the reader depends on the control code.

ControlCode: Control code for the operation. This value identifies the specific operation to be performed.

Input: Pointer to a buffer that contains the data required to perform the operation. This parameter can be nil if the ControlCode parameter specifies an operation that does not require input data.
inputLength: Size, in bytes, of the buffer pointed to by Input.
output: Pointer to a buffer that receives the operation's output data. This parameter can be nil if the ControlCode parameter specifies an operation that does not produce output data.
outputLength: On input the size, in bytes, of the buffer pointed to by output. On output the receives the size, in bytes, of the data stored into the buffer pointed to by output.

Lasterror is set.

153.2.8 Disconnect(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Terminates a connection previously opened between the calling application and a smart card in the target reader.
Notes:

Disposition: Action to take on the card in the connected reader on close.
can be:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.
kEjectCard	Eject card.

Lasterror is set.

153.2.9 EndTransaction(Disposition as Integer = 0)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Ends transaction.
Notes:

Completes a previously declared transaction, allowing other applications to resume interactions with the card.

Disposition: Action to take on the card in the connected reader on close. Can be Eject, Leave, Reset or Unpower. See constants.

Lasterror is set.

153.2.10 GetAttrib(AttrId as UInt32) as Memoryblock

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the current reader attributes for the given handle.
Notes:

It does not affect the state of the reader, driver, or card.
The plugin first queries for size of attribute and on success queries again to get the data and return it as a memoryblock.

AttrId: The attribute ID. See kAttribute* constants.

Lasterror is set.

153.2.11 ReadFile(FileID as MemoryBlock) as MemoryBlock

MBS Tools Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Read file from smart card with APDU protocol.
Notes:

Returns data as MemoryBlock or error message.
The first two bytes are status code.

153.2.12 Reconnect(ShareMode as UInt32, PreferredProtocols as UInt32, Initialization as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Reconnect function reestablishes an existing connection between the calling application and a smart card.
Notes:

This function moves a card handle from direct access to general access, or acknowledges and clears an error condition that is preventing further access to the card.

Initialization can be one of the following:

kUnpowerCard	Power down the card and reset it (Cold Reset).
kResetCard	Reset the card (Warm Reset).
kLeaveCard	Do not do anything special on reconnect.

ShareMode: A flag that indicates whether other applications may form connections to the card. Use one of SmartCardMBS.kShare* constants. e.g. kShareExclusive
PreferredProtocols: A bitmask of acceptable protocols for the connection. Possible values may be combined with the OR operation. Use SmartCardMBS.kProtocol* constants. e.g. kProtocolT1

Lasterror and ActiveProtocol are set.

153.2.13 SetAttrib(AttrId as UInt32, mem as Memoryblock)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the given reader attribute.
Notes:

It does not affect the state of the reader, reader driver, or smart card. Not all attributes are supported by all readers (nor can they be set at all times) as many of the attributes are under direct control of the transport

protocol.

AttrId: The attribute ID. See kAttribute* constants.
Mem: The data to store.

Lasterror is set.

153.2.14 SplitValues(Data as MemoryBlock) as Dictionary

MBS Tools Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Split values read from smart card.
Notes:

Files on smartcard can contain key/value data.
Returns Dictionary with numbers (key) and values as strings.

153.2.15 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the current status of a smart card in a reader.
Notes:

You can call it any time after a successful call to SCardConnect and before a successful call to SCardDisconnect. It does not affect the state of the reader or reader driver.

Provides reader name, state of card (see kState constants), Protocol (see kProtocol constants) and CardID.

State: Current state of the smart card in the reader. Upon success, it receives one of the following state indicators.
Protocol: Current protocol, if any. The returned value is meaningful only if the returned value of pdwState is kCardStateSpecific.
CardID: 32-byte buffer that receives the ATR string from the currently inserted card, if available.

Lasterror is set.
See also:

- 153.2.16 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

153.2.16 Status(byref State as Integer, byref Protocol as Integer, byref CardID as string)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides the current status of a smart card in a reader.
Notes:

Same as other Status function, but without querying the name.
Lasterror is set.
See also:

- 153.2.15 Status(byref Reader as string, byref State as Integer, byref Protocol as Integer, byref CardID as string) 20474

153.2.17 Transmit(ioSendPci as Ptr, SendBuffer as ptr, SendLength as UInt32, ioRecvPci as ptr, RecvBuffer as Ptr, byref RecvLength as UInt32)

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends a service request to the smart card and expects to receive data back from the card.
Example:

```
dim card as SmartCardMBS // your card

dim header as new memoryBlock(8)

header.Int32Value(0) = 2 // T1
header.Int32Value(4) = 8 // size of this block

dim command as new MemoryBlock(5)
command.Int8Value(0) = 0
command.Int8Value(1) = & hCA
command.Int8Value(2) = 1
command.Int8Value(3) = & h82
command.Int8Value(4) = 2

dim buffer as new MemoryBlock(512)
dim ReceiveHeader as new MemoryBlock(8)

dim RecvLength as UInt32
card.Transmit(header, command, command.Size, ReceiveHeader, buffer, RecvLength)

MsgBox "Received "+str(RecvLength)+" bytes"
```

Notes:

ioSendPci:

A pointer to the protocol header structure for the instruction. This buffer is in the format of an SCARD_IO_REQUEST structure, followed by the specific protocol control information (PCI).
For the T=0, T=1, and Raw protocols, the PCI structure is constant. The smart card subsystem supplies a global T=0, T=1, or Raw PCI structure, which you can reference by using the symbols SCARD_PCI_T0, SCARD_PCI_T1, and SCARD_PCI_RAW respectively.

SendBuffer:
A pointer to the actual data to be written to the card.
For T=0, the data parameters are placed into the address pointed to by pbSendBuffer according to the following structure:

Type	name	Description
Byte	Cla	The instruction class
Byte	Ins	The instruction code
Byte	P1	Parameter to the instruction
Byte	P2	Parameter to the instruction
Byte	P3	Size of I/O transfer

The data sent to the card should immediately follow the send buffer. In the special case where no data is sent to the card and no data is expected in return, P3 is not sent.

SendLength:
The length, in bytes, of the SendBuffer parameter.
For T=0, in the special case where no data is sent to the card and no data expected in return, this length must reflect that the P3 member is not being sent; the length should be 4.

ioRecvPci:
Pointer to the protocol header structure for the instruction, followed by a buffer in which to receive any returned protocol control information (PCI) specific to the protocol in use. This parameter can be nil if no PCI is returned.

RecvBuffer:
Pointer to any data returned from the card.
For T=0, the data is immediately followed by the SW1 and SW2 status bytes. If no data is returned from the card, then this buffer will only contain the SW1 and SW2 status bytes.

RecvLength:
Supplies the length, in bytes, of the RecvBuffer parameter and receives the actual number of bytes received from the smart card. This value cannot be SCARD_AUTOALLOCATE because Transmit does not support SCARD_AUTOALLOCATE.
For T=0, the receive buffer must be at least two bytes long to receive the SW1 and SW2 status bytes.

Lasterror is set.

153.2.18 Properties

153.2.19 ActiveProtocol as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The active protocol.
Notes: (Read and Write property)

153.2.20 Handle as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

153.2.21 Lasterror as Integer

MBS Tools Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

153.2.22 Constants

153.2.23 kAttributeAtrString = 590595

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Answer to reset (ATR) string.

153.2.24 kAttributeChannelId = 131344

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

DWORD encoded as & hDDDDCCCC, where DDDD = data channel type and CCCC = channel number.

The following encodings are defined for DDDD:
& h01 serial I/O; CCCC is a port number.
& h02 parallel I/O; CCCC is a port number.
& h04 PS/2 keyboard port; CCCC is zero.
& h08 SCSI; CCCC is SCSI ID number.
& h10 IDE; CCCC is device number.
& h20 USB; CCCC is device number.
& hFy vendor-defined interface with y in the range zero through 15; CCCC is vendor defined.

153.2.25 kAttributeCharacteristics = 393552

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Integer indicating which mechanical characteristics are supported. If zero, no special characteristics are supported.
Note that multiple bits can be set:
& h00000001 Card swallowing mechanism
& h00000002 Card ejection mechanism
& h00000004 Card capture mechanism
All other values are reserved for future use (RFU).

153.2.26 kAttributeCurrentBwt = 524809

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current block waiting time.

153.2.27 kAttributeCurrentClk = 524802

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current clock rate, in kHz.

153.2.28 kAttributeCurrentCwt = 524810

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current character waiting time.

153.2.29 kAttributeCurrentD = 524804

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Bit rate conversion factor.

153.2.30 kAttributeCurrentEbcEncoding = 524811

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Current error block control encoding.
0 = longitudinal redundancy check (LRC)
1 = cyclical redundancy check (CRC)

153.2.31 kAttributeCurrentF = 524803

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Clock conversion factor.

153.2.32 kAttributeCurrentIfsc = 524807

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current byte size for information field size card.

153.2.33 kAttributeCurrentIfsd = 524808

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current byte size for information field size device.

153.2.34 kAttributeCurrentIoState = 590594

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current IO state

153.2.35 kAttributeCurrentN = 524805

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current guard time.

153.2.36 kAttributeCurrentProtocolType = 524801

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000. pppp encodes the current protocol type. Whichever bit has been set indicates which ISO protocol is currently in use. (For example, if bit zero is set, T=0 protocol is in effect.)

153.2.37 kAttributeCurrentW = 524806

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Current work waiting time.

153.2.38 kAttributeDefaultClk = 196897

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Default clock rate, in kHz.

153.2.39 kAttributeDefaultDataRate = 196899

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Default data rate, in bps.

153.2.40 kAttributeDeviceFriendlyNameA = 2147418115

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's display name. Windows ANSI encoding.

153.2.41 kAttributeDeviceFriendlyNameW = 2147418117

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's display name. Unicode encoding.

153.2.42 kAttributeDeviceInUse = 2147418114

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reserved for future use.

153.2.43 kAttributeDeviceSystemNameA = 2147418116

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's system name. Windows ANSI encoding.

153.2.44 kAttributeDeviceSystemNameW = 2147418118

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Reader's system name. Unicode encoding.

153.2.45 kAttributeDeviceUnit = 2147418113

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Instance of this vendor's reader attached to the computer. The first instance will be device unit 0, the next will be unit 1 (if it is the same brand of reader) and so on. Two different brands of readers will both have zero for this value.

153.2.46 kAttributeEscAuthrequest = 499717

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc authentication request

153.2.47 kAttributeEscCancel = 499715

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc cancel

153.2.48 kAttributeEscReset = 499712

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Esc reset

153.2.49 kAttributeExtendedBwt = 524812

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Extended block wait time.

153.2.50 kAttributeIccInterfaceStatus = 590593

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Single byte. Zero if smart card electrical contact is not active; nonzero if contact is active.

153.2.51 kAttributeIccPresence = 590592

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Single byte indicating smart card presence:
0 = not present
1 = card present but not swallowed (applies only if reader supports smart card swallowing)
2 = card present (and swallowed if reader supports smart card swallowing)
4 = card confiscated.

153.2.52 kAttributeIccTypePerAtr = 590596

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Single byte indicating smart card type.
0 = unknown type
1 = 7816 Asynchronous
2 = 7816 Synchronous
Other values RFU.

153.2.53 kAttributeMaxClk = 196898

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum clock rate, in kHz.

153.2.54 kAttributeMaxDataRate = 196900

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum data rate, in bps.

153.2.55 kAttributeMaxIfsd = 196901

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum bytes for information file size device.

153.2.56 kAttributeMaxinput = 499719

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Maximum input

153.2.57 kAttributePowerMgmtSupport = 262449

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Zero if device does not support power down while smart card is inserted. Nonzero otherwise.

153.2.58 kAttributeProtocolTypes = 196896

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes:

Integer encoded as 0x0rrrpppp where rrr is RFU and should be 0x000.
pppp encodes the supported protocol types. A '1' in a given bit position indicates support for the associated ISO protocol, so if bits zero and one are set, both T=0 and T=1 protocols are supported.

153.2.59 kAttributeSupressT1IfsRequest = 2147418119

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Supress T1 information file size request.

153.2.60 kAttributeUserAuthInputDevice = 328002

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: User authentication input device.

153.2.61 kAttributeUserToCardAuthDevice = 328000

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: User to card authentication device

153.2.62 kAttributeVendorIfdSerialNo = 65795

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device serial number.

153.2.63 kAttributeVendorIfdType = 65793

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device type (model designation of reader).

153.2.64 kAttributeVendorIfdVersion = 65794

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor-supplied interface device version (DWORD in the form 0xMMmmbbbb where MM = major version, mm = minor version, and bbbb = build number).

153.2.65 kAttributeVendorName = 65792

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the attribute ID constants.
Notes: Vendor name.

153.2.66 kCardStateAbsent = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is no card in the reader.

153.2.67 kCardStateNegotiable = 32

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: The card has been reset and is awaiting PTS negotiation.

153.2.68 kCardStatePowered = 16

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: Power is being provided to the card, but the reader driver is unaware of the mode of the card.

153.2.69 kCardStatePresent = 4

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is a card in the reader, but it has not been moved into position for use.

153.2.70 kCardStateSpecific = 64

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: The card has been reset and specific communication protocols have been established.

153.2.71 kCardStateSwallowed = 8

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: There is a card in the reader in position for use. The card is not powered.

153.2.72 kCardStateUnknown = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card state constants.
Notes: Unknown state.

153.2.73 kEjectCard = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Eject card.

153.2.74 kLeaveCard = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Do not do anything special on reconnect.

153.2.75 kProtocolAny = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Any protocol is welcome

153.2.76 kProtocolRAW = 4

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Raw protocol

153.2.77 kProtocolT0 = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=0 is the active protocol.

153.2.78 kProtocolT1 = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=1 is the active protocol.

153.2.79 kProtocolT15 = 8

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: T=15 protocol (not on Windows)

153.2.80 kProtocolUndefined = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: kShareDirect has been specified, so that no protocol negotiation has occurred. It is possible that there is no card in the reader.

153.2.81 kProtocolUnset = 0

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the protocol constants.
Notes: Unset

153.2.82 kResetCard = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Reset the card (Warm Reset).

153.2.83 kShareDirect = 3

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is allocating the reader for its private use, and will be controlling it directly. No other applications are allowed access to it.

153.2.84 kShareExclusive = 1

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is not willing to share the card with other applications.

153.2.85 kShareShared = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the flags that indicates whether other applications may form connections to the card.
Notes: This application is willing to share the card with other applications.

153.2.86 kUnpowerCard = 2

MBS Tools Plugin, Plugin Version: 16.3. **Function:** One of the card initialization modes.
Notes: Power down the card and reset it (Cold Reset).

153.3 class TKBERTLVRecordMBS

153.3.1 class TKBERTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object that parses BER-encoded data and produces DER-encoded data for TLV records.
Notes:

Available in macOS 10.12 or newer.
Subclass of the TKTLVRecordMBS class.

153.3.2 Methods

153.3.3 Constructor(tag as UInt64, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a BER-TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.
See also:

- 153.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS) 20489

153.3.4 Constructor(tag as UInt64, records() as TKTLVRecordMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a BER-TLV record with the specified tag and an array of TLV subrecords.
Notes:

tag: The tag field of the record.
records: The TLV subrecords of the record.

Returns a new TLV record containing the specified tag field and subrecords.
See also:

- 153.3.3 Constructor(tag as UInt64, data as MemoryBlock) 20489

153.3.5 dataForTag(tag as UInt64) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Encodes a specified tag using BER-TLV tag encoding rules.
Notes:

tag: The tag value to encode.

Returns a data object that encodes a tag value using BER-TLV encoding.

153.4 class TKCompactTLVRecordMBS

153.4.1 class TKCompactTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that implements encoding using Compact-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

153.4.2 Methods

153.4.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returns a new TLV record containing the specified tag and value fields.

153.5 class TKSimpleTLVRecordMBS

153.5.1 class TKSimpleTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that implements encoding using Simple-TLV encoding according to ISO 7816-4.
Notes: Subclass of the TKTLVRecordMBS class.

153.5.2 Methods

153.5.3 Constructor(tag as integer, data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TLV record with the specified tag and value.
Notes:

tag: The tag field of the record.
value: The value field of the record.

Returnes a new TLV record containing the specified tag and value fields.

153.6 class TKSmartCardATRInterfaceGroupMBS

153.6.1 class TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A single interface-bytes group for a Smart Card ATR (Answer to Reset).
Notes:

You access instances of this class by calling the interfaceGroupAtIndex and interfaceGroupForProtocol methods on an TKSmartCardATRMBS object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.6.2 Methods

153.6.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

153.6.4 Properties

153.6.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.6.6 HasProtocol as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether protocol is defined.
Notes: (Read only property)

153.6.7 HasTA as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TA value defined.
Notes: (Read only property)

153.6.8 HasTB as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TB value defined.
Notes: (Read only property)

153.6.9 HasTC as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether we have a TC value defined.
Notes: (Read only property)

153.6.10 Protocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The protocol for this group.
Notes:

This property returns the protocol number. See kProtocol* constants.
This property is zero for the first interface group (global), as it has no assigned protocol.
(Read only property)

153.6.11 TA as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TA interface byte of ATR group.
Notes: (Read only property)

153.6.12 TB as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TB interface byte of ATR group.
Notes: (Read only property)

153.6.13 TC as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The TC interface byte of ATR group.

Notes: (Read only property)

153.7 class TKSmartCardATRMBS

153.7.1 class TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A parsed ATR (Answer To Reset) message from a Smart Card.
Notes:

This class declares a programmatic interface to parsing an ATR from data or a byte stream, and accessing the individual parts.

The TKSmartCardATR class parses ATR messages according to the ISO/IEC 7816-3 specification.

153.7.2 Methods

153.7.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on MacOS 10.10 or newer.

153.7.4 Constructor(data as MemoryBlock)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a TKSmartCardATR object from a provided data object.
Notes:

bytes: The ATR data to be parsed.

Returns a TKSmartCardATR object initialized with the parsed data. If bytes does not contain a valid ATR, raises UnsupportedOperationException.

153.7.5 historicalRecords as TKCompactTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of compact TLV records parsed from historical bytes.

153.7.6 interfaceGroupAtIndex(index as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the interface group at the specified index.
Notes:

index: The index of the desired interface group.

Interface group indexes start at 1, as specified by ISO 7816-3.

Returns the interface group at the specified index, or nil if not present.

153.7.7 interfaceGroupForProtocol(protocol as Integer) as TKSmartCardATRInterfaceGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the interface group with the specified protocol.
Notes:

protocol: The protocol used by the desired interface group.

Returns the interface group with the specified protocol, or nil if none exists.

153.7.8 protocols as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of protocols indicated in the ATR.
Notes:

Each element in the returned array is an integer value corresponding to a member of the kProtocol* constants.
The returned protocols are ordered such that the default protocol is at index 0, and any duplicate values are removed.

153.7.9 Properties

153.7.10 bytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR message data.
Notes: (Read only property)

153.7.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.7.12 historicalBytes as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR historical bytes, not including interface bytes or the TCK (check byte).
Notes: (Read only property)

153.7.13 Constants

153.7.14 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: Any available transmission protocols.

153.7.15 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: No transmission protocols.

153.7.16 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=0 transmission protocol.

153.7.17 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=1 transmission protocol.

153.7.18 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=15 transmission protocol.

153.8 class TKSmartCardMBS

153.8.1 class TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A representation of a smart card.
Notes:

This class provides an interface for managing sessions with a smart card, transmitting requests, and facilitating user interaction.
You can create a TKSmartCardMBS object when a smart card is inserted into a slot, by calling the makeSmartCard method on the corresponding TKSmartCardSlotMBS object. To start communicating with the smart card, call the beginSession method on the TKSmartCardMBS object. Once an exclusive session has been established, you transmit data using the transmitRequest:reply: method. After you've finished communicating with a smart card, you call the endSession method.
If the smart card is physically removed from its slot, the session object becomes invalid, and any further calls to transmitRequest will return an error.

153.8.2 Methods

153.8.3 beginSession(tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Begins a session with the Smart Card.
Notes:

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

Calls beginSessionCompleted event later.

153.8.4 beginSessionSync(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Begins a session with the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.
Returns true on success and false on failure.

This method will fail if there is already an existing session for the Smart Card.
Calls to this method must be balanced with calls to endSession.

153.8.5 beginSessionWithDelegate(handler as beginSessionCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
beginSessionCompletedDelegate(success as Boolean, error as NSErrorMBS, tag as Variant)

153.8.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.8.7 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.8.8 endSession

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Completes any pending transmissions and ends the session to the Smart Card.
Notes: Calls to this method should balance calls to beginSession.

153.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Synchronously begins a session, executes the given block, and ends the session.
Notes:

error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns true if the session was successfully created and the inSession event returns true; otherwise, false.
See also:

- 153.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean 20508

153.8.10 readFileWithDelegate(FileName as MemoryBlock, handler as readFileCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Reads file with given filename.
Notes:

This is for Belgian ID card to read a file.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

153.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Synchronously transmits an APDU command to the card and returns the response.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.
sw: On return, contains the result code as represented by the first two bytes (SW1SW2) of the returned data.
error: On return, if an error occurred when attempting to create a session or execute the block, contains details about the error.

Returns the returned data without the first two bytes (SW1SW2), or nil if an error occurred.
See also:

- 153.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil) 20503

153.8.12 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asynchronously transmits an APDU command to the card, returning the response in a completion handler.
Notes:

ins: The instruction code.
p1: The first parameter.
p2: The second parameter.
requestData: The data field of the APDU, or nil if no input data field should be present—for example, a case1 or case2 APDU.
The length of the data serves as Lc field of the APDU.
le: The expected number of bytes to be returned, or zero if no output data are expected—for example, a case1 or case3 APDU. Pass 0 to accept as many bytes as the card provides.

Calls sendInsCompleted event later.
See also:

- 153.8.11 sendIns(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as Integer = 0, byref sw as Uint16, byref error as NSErrorMBS) as Memoryblock 20502

153.8.13 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call validChanged event.
Notes: Called for you by constructor.

153.8.14 transmitRequest(request as MemoryBlock, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Calls transmitRequestCompleted method later.

153.8.15 transmitRequestSync(request as MemoryBlock, byref response as MemoryBlock, byref error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

This is the synchronous version, which waits for callback from operation system.

request: The APDU request data.
response: The response.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

153.8.16 transmitRequestWithDelegate(request as MemoryBlock, handler as transmitRequestCompletedDelegateMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Transmits data in Application Protocol Data Unit (APDU) format to the Smart Card.
Notes:

request: The APDU request data.

You should only call this method after a session to the Smart Card has been established using the beginSessionWithReply: method, and before the session is terminated using the endSession method.

Invokes handler later, which has this declaration:
transmitRequestCompletedDelegate(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

153.8.17 userInteractionForSecurePINChange(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, currentPINByteOffset as Integer, newPINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a new user interaction object for secure PIN change using the smart card reader facilities (typically a HW keypad).
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
currentPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.
newPINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the new PIN.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

153.8.18 userInteractionForSecurePINVerification(PINFormat as TKSmartCardPINFormatMBS, APDU as MemoryBlock, PINByteOffset as Integer) as TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a new user interaction object for secure PIN verification using the Smart Card reader facilities.
Notes:

PINFormat: The PIN format descriptor.
APDU: The Application Protocol Data Unit (APDU) used by the Smart Card to fill in PIN data.
PINByteOffset: The offset, in bytes, within the Application Protocol Data Unit (APDU) field to mark a location of a PIN block for filling in the entered PIN.

This parameter is not currently used. Pass 0.

Returns a new user interaction object for secure PIN verification, or nil if this feature is not supported by the Smart Card reader.

You should only call this method after a session to the Smart Card has been established using the beginSession method, and before the session is terminated using the endSession method.
Once the interaction has been successfully completed, the results are available via the resultData and resultSW properties of the returned TKSmartCardUserInteractionForSecurePINVerificationMBS object.

153.8.19 Properties

153.8.20 AllowedProtocols as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The protocols allowed for communication with the Smart Card.
Notes:

kProtocolAny by default.
This property is consulted only when beginning a session to a Smart Card. Any changes to this property will not be reflected by the current session, if one is already established.
(Read and Write property)

153.8.21 cla as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The CLA byte used for APDU transmission.
Notes:

0 by default.
(Read and Write property)

153.8.22 Context as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: User-specified information.
Notes:

This property is automatically set to nil if the Smart Card is removed or another TKSmartCardMBS object begins a session.
(Read and Write property)

153.8.23 CurrentProtocol as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The protocol used for communication with the Smart Card.
Notes:

Returns kProtocolNone if no session is currently established.
(Read only property)

153.8.24 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.8.25 Sensitive as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether sessions established for the Smart Card should be considered sensitive.
Notes:

False by default.
When this property is set to true, any sessions established for the receiver will begin and end by sending a reset command to the Smart Card. This is recommended anytime potentially sensitive information is transferred.
(Read and Write property)

153.8.26 Slot as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The slot in which the Smart Card is inserted.
Notes: (Read only property)

153.8.27 UseCommandChaining as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to use command chaining of APDU with a data field longer than 255 bytes.
Notes:

By default, this property is set to true when the Smart Card ATR announces that command chaining is supported.

(Read and Write property)

153.8.28 UseExtendedLength as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether to use extended length APDU.
Notes:

By default, this property is set to true when the Smart Card slot supports transmitting extended length commands, and the ATR announces that extended length APDU is supported.
(Read and Write property)

153.8.29 Valid as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the Smart Card is valid and accessible from its slot.
Notes: (Read only property)

153.8.30 Events

153.8.31 beginSessionCompleted(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when session begun.
Notes:

success: Whether the session could be established successfully.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

153.8.32 inSession(byref error as NSErrorMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called in session.
Notes:

The event to be called in the context of the created session. This event returns a Boolean value indicating whether communication was successful.

error: To indicate that an error occurred during the session, populate this with an NSError object containing details and return false.
See also:

- 153.8.9 inSession(byref error as NSErrorMBS, tag as variant = nil) as boolean 20501

153.8.33 sendInsCompleted(ins as UInt8, p1 as UInt8, p2 as UInt8, requestData as MemoryBlock, le as integer, replyData as MemoryBlock, sw as UInt16, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when sendIns completed.
Notes:

replyData: The returned data without the first two bytes (SW1SW2), or nil if an error occurred.
sw: The result code as represented by the first two bytes (SW1SW2) of the returned data.
error: If a communication error occurred or the sw result code is anything other than & h9000, contains details about the error.

153.8.34 transmitRequestCompleted(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when transmit is done.
Notes:

response: The APDU response data, or nil if communication with the Smart Card failed.
error: Contains information about the the error preventing the transaction from being established.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

153.8.35 ValidChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when valid property changed.

153.8.36 Constants

153.8.37 kProtocolAny = 65535

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: Any available transmission protocols.

153.8.38 kProtocolNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: No transmission protocols.

153.8.39 kProtocolT0 = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=0 transmission protocol.

153.8.40 kProtocolT1 = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=1 transmission protocol.

153.8.41 kProtocolT15 = 32768

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the protocol constants.
Notes: T=15 transmission protocol.

153.8.42 TKErrorCodeAuthenticationFailed = -5

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants.
Notes: Authentication failed.

153.8.43 TKErrorCodeAuthenticationNeeded = -9

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants.
Notes: Authentication is needed.

153.8.44 TKErrorCodeBadParameter = -8

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** An invalid parameter was provided.

153.8.45 TKErrorCodeCanceledByUser = -4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The operation was canceled by the user.

153.8.46 TKErrorCodeCommunicationError = -2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** A communication error occurred.

153.8.47 TKErrorCodeCorruptedData = -3

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The data was corrupted.

153.8.48 TKErrorCodeNotImplemented = -1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The functionality is not implemented.

153.8.49 TKErrorCodeObjectNotFound = -6

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The object was not found.

153.8.50 TKErrorCodeTokenNotFound = -7

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the error constants. **Notes:** The token was not found.

153.8.51 Delegates

153.8.52 beginSessionCompletedDelegateMBS(success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the beginSessionWithDelegate method.

153.8.53 readFileCompletedDelegateMBS(FileName as MemoryBlock, Content as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the readFileWithDelegate method.

153.8.54 transmitRequestCompletedDelegateMBS(request as MemoryBlock, response as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate for the transmitRequestWithDelegate method.

153.9 class TKSmartCardPINFormatMBS

153.9.1 class TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The formatting properties for a PIN, such as character encoding and length constraints.
Notes:

You typically interact with TKSmartCardPINFormatMBS objects when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an instance of TKSmartCardMBS.

Available in macOS 10.11 or newer.

153.9.2 Methods

153.9.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.9.4 Properties

153.9.5 Charset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The format of PIN characters.
Notes:

kCharsetNumeric by default.
(Read and Write property)

153.9.6 Encoding as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The encoding of PIN characters.
Notes:

kEncodingASCII by default.
(Read and Write property)

153.9.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.9.8 MaxPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of characters to form a valid PIN.
Notes:

8 by default.
(Read and Write property)

153.9.9 MinPINLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum number of characters to form a valid PIN.
Notes:

4 by default.
(Read and Write property)

153.9.10 PINBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The offset, in bits, within the PIN block to mark a location for filling in the formatted PIN, which is justified with respect to the PINJustification property value.
Notes:

0 by default.

The value of PINBitOffset indirectly controls the internal system units indicator. If PINBitOffset is byte aligned (that is, PINBitOffset % 8 == 0), the internal representation of PINBitOffset gets converted from bits to bytes.
(Read and Write property)

153.9.11 PINBlockByteLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The total length of the PIN block in bytes.
Notes:

8 by default.
(Read and Write property)

153.9.12 PINJustification as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The justification within the PIN block.
Notes:

kJustificationLeft by default.
(Read and Write property)

153.9.13 PINLengthBitOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The offset, in bits, within the PIN block to mark a location for filling in the PIN length, which is always left justified.
Notes:

0 by default.

The value of PINLengthBitOffset indirectly controls the internal system units indicator. If PINLengthBitOffset is byte aligned (that is, PINLengthBitOffset % 8 == 0), the internal representation of PINLengthBitOffset gets converted from bits to bytes.
(Read and Write property)

153.9.14 PINLengthBitSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The size, in bits, of the PIN length field. If set to 0, PIN length is not written.
Notes:

0 by default.
(Read and Write property)

153.9.15 Constants

153.9.16 kCharsetAlphanumeric = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN can be composed of digits and letters.

153.9.17 kCharsetNumeric = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN is only composed of digits.

153.9.18 kCharsetUpperAlphanumeric = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN character set constants.
Notes: PIN can be composed of digits and uppercase letters.

153.9.19 kEncodingASCII = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters are encoded in ASCII format (for example, 1234 is encoded as 31h 32h 33h 34h).

153.9.20 kEncodingBCD = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters (only digits) are encoded in BCD format (for example, 1234 is encoded as 12h 34h).

153.9.21 kEncodingBinary = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the encoding constants.
Notes: Characters are encoded in Binary format (for example, 1234 is encoded as 01h 02h 03h 04h).

153.9.22 kJustificationLeft = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN justification constants. **Notes:** Justify to the left.

153.9.23 kJustificationRight = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the possible PIN justification constants. **Notes:** Justify to the right.

153.10 class TKSmartCardSlotManagerMBS

153.10.1 class TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An interface to all available smart card reader slots.
Notes:

Get a list of all known smart card reader slots in the system using the slotNames property, and access individual slots by name using the getSlotWithName method.

The com.apple.security.smartcard entitlement is required in order to use TKSmartCardSlotManager.

153.10.2 Methods

153.10.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on MacOS 10.11 or newer.

153.10.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.10.5 defaultManager as TKSmartCardSlotManagerMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The shared singleton Smart Card reader slot manager.
Notes: This method returns nil unless the com.apple.security.smartcard entitlement is enabled.

153.10.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.10.7 getSlotWithName(name as string, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Asynchronously calls a block with a Smart Card reader slot for a specified name.
Notes:

name: The name of the Smart Card reader slot.

Calls gotSlotWithName later.

153.10.8 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call slowNamesChanged event.
Notes: Called for you by constructor.

153.10.9 slotNamed(name as string) as TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the Smart Card slot with a given name.
Notes: Returns the slot with the specified name, or nil if no slot with that name exists.

153.10.10 slotNames as string()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of identifiers for all the Smart Card reader slots available to the system.

153.10.11 Properties

153.10.12 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.10.13 Events

153.10.14 gotSlotWithName(name as string, slot as TKSmartCardSlotMBS, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the slow with the name is found.

153.10.15 slotNamesChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when slot name list changed.

153.11 class TKSmartCardSlotMBS

153.11.1 class TKSmartCardSlotMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A single smart card reader slot in the system.
Notes: Use the TKSmartCardSlotManagerMBS class to manage all the smart card reader slots available to the system. You can retrieve the names of available smart card reader slots for a system using the slotNames property of a manager object, and access instances of TKSmartCardSlotMBS using the getSlotWithName method.

153.11.2 Methods

153.11.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.11.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.11.5 makeSmartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new TKSmartCardMBS object representing the currently inserted Smart Card.
Notes:

A new TKSmartCardMBS object, or nil if no Smart Card is currently inserted.

You can create multiple instances of TKSmartCardMBS that represent the same Smart Card. Exclusivity of data transfer is handled by sessions on the individual TKSmartCardMBS objects.

153.11.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call stateChanged event.

Notes: Called for you by constructor.

153.11.7 Properties

153.11.8 ATR as TKSmartCardATRMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ATR (Answer to Reset) of the inserted Smart Card, or nil if no Smart Card is inserted or the inserted Smart Card is mute.
Notes: (Read only property)

153.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.11.10 maxInputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum length of input APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer to the Smart Card.
Notes: (Read only property)

153.11.11 maxOutputLength as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum length of output APDU (Application Protocol Data Unit) that the Smart Card reader slot is able to transfer from the Smart Card.
Notes: (Read only property)

153.11.12 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the Smart Card reader slot.
Notes: (Read only property)

153.11.13 State as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current state of the Smart Card reader slot.
Notes: (Read only property)

153.11.14 Events

153.11.15 StateChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when state changed.

153.11.16 Constants

153.11.17 kStateEmpty = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: The Smart Card reader slot is empty; no card is inserted.

153.11.18 kStateMissing = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes:

The Smart Card reader slot is no longer known to the system.

This is the terminal state of a TKSmartCardSlotThis instance; once it has reached this state, the Smart Card reader slot cannot be reinitialized.

153.11.19 kStateMuteCard = 3

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card is inserted, but is mute, or does not provide responses to commands.

153.11.20 kStateProbing = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card was inserted into the slot and an initial probe is in underway.

153.11.21 kStateValidCard = 4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the states constants.
Notes: A Smart Card is inserted and properly answered to a reset command.

153.12 class TKSmartCardTokenDriverMBS

153.12.1 class TKSmartCardTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The driver that acts as an entry point for smart card app extensions.
Notes: Subclass of the TKTokenDriverMBS class.

153.12.2 Methods

153.12.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.13 class TKSmartCardTokenMBS

153.13.1 class TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a smart card based cryptographic token.#
Notes: Subclass of the TKTokenMBS class.

153.13.2 Methods

153.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a smart card token with the specified smart card, application identifier, and token driver.
Notes:

smartCard: The smart card on which the created token should operate.
AID: The ISO 7816-4 application identifier for the smart card.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.
tokenDriver: The driver associated with the created token.
See also:

- 153.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 20526

153.13.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
See also:

- 153.13.3 Constructor(smartCard as TKSmartCardMBS, AID as MemoryBlock, instanceID as String, tokenDriver as TKSmartCardTokenDriverMBS) 20526

153.13.5 Properties

153.13.6 AID as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ISO 7816-4 application identifiers of the Smart Card.
Notes:

This value is specified in the Smart Card token extension's NSExtensionAttributes property list by the com.apple.ctk.aid attribute. If this attribute specifies multiple AIDs, this parameter represents the application identifier found on the card that is already preselected. If the com.apple.ctk.aid attribute is not present, no application is automatically preselected and the value of this property is nil.
(Read only property)

153.14 class TKSmartCardTokenSessionMBS

153.14.1 class TKSmartCardTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A token session that is based on a smart card token.
Notes:

You can use the smartCard property to access and send APDUs to the underlying smart card.

Available on MacOS 10.12 or newer.
Subclass of the TKTokenSessionMBS class.

153.14.2 Methods

153.14.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
See also:

- 153.14.4 Constructor(token as TKTokenMBS) 20528

153.14.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a token session with the specified token.
Notes:

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 153.14.3 Constructor 20528

153.14.5 Properties

153.14.6 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The smart card for the active exclusive session and selected application.

Notes:

This property can only be accessed in the implementation of a TKTokenSessionDelegate protocol delegate method. If the associated token has a value set for the AID property, this property opens an exclusive session to the card, with the application already selected.

You should not call beginSession or endSession on the returned value. Instead, the system will take care of beginning the exclusive session and terminating it when the current token request servicing is finished.
You can store any kind of information representing state of the card using the context property. This property will be automatically set to nil if the card is reset or accessed by different TKSmartCard instance, such as by another process. You can check the context property for any previously stored values as a way to avoid costly state restoration before performing an operation.
(Read only property)

153.15 class TKSmartCardUserInteractionForPINOperationMBS

153.15.1 class TKSmartCardUserInteractionForPINOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of user interaction for secure PIN operations on a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationMBS when calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCard object.
The result of a user interaction is available once the interaction has completed.

Available in macOS 10.11 or newer.
Subclass of the TKSmartCardUserInteractionMBS class.

153.15.2 Methods

153.15.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.15.4 PINMessageIndices as Integer()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A list of message indices referring to a predefined message table, used to specify the type and number of messages displayed during the PIN operation. nil by default.
Notes: If nil, the reader does not display any message (reader specific). Typically, PIN verification takes 1 message; PIN modification takes 1 – 3 messages.

153.15.5 Properties

153.15.6 locale as NSLocaleMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale for the displayed messages.
Notes:

If nil, the user's current locale is used. By default, this value is the current locale of the system.
(Read and Write property)

153.15.7 PINCompletion as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The conditions under which PIN entry should be considered complete.
Notes: (Read and Write property)

153.15.8 resultData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The returned data without SW1-SW2 bytes, if any.
Notes: (Read and Write property)

153.15.9 resultSW as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The SW1-SW2 status bytes.
Notes: (Read and Write property)

153.15.10 Constants

153.15.11 kPINCompletionKey = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: Key

153.15.12 kPINCompletionMaxLength = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: MaxLength

153.15.13 kPINCompletionTimeout = 4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN completion constants.
Notes: Timeout

153.16 class TKSmartCardUserInteractionForSecurePINChangeMBS

153.16.1 class TKSmartCardUserInteractionForSecurePINChangeMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the user interaction for secure PIN change operations on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Available in macOS 10.11+.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

153.16.2 Methods

153.16.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.16.4 Properties

153.16.5 PINConfirmation as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The way PIN confirmation is requested.
Notes:

kPINConfirmationNone by default.
(Read and Write property)

153.16.6 Constants

153.16.7 kPINConfirmationCurrent = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: Current PIN confirmation.

153.16.8 kPINConfirmationNew = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: New PIN confirmation.

153.16.9 kPINConfirmationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the PIN confirmation constants.
Notes: No PIN confirmation.

153.17 class TKSmartCardUserInteractionForSecurePINVerificationMBS

153.17.1 class TKSmartCardUserInteractionForSecurePINVerificationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the user interaction for secure PIN change verification on a Smart Card reader.
Notes:

The result of a user interaction is available once the interaction has completed.
Subclass of the TKSmartCardUserInteractionForPINOperationMBS class.

153.17.2 Methods

153.17.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.18 class TKSmartCardUserInteractionMBS

153.18.1 class TKSmartCardUserInteractionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The base class for encapsulating user interaction with a Smart Card reader.
Notes:

There are two types of user interactions: those for secure PIN change and those for secure PIN validation. These interactions are instances of the TKSmartCardUserInteractionForSecurePINChangeMBS, or TKSmartCardUserInteractionForSecurePINVerificationMBS subclasses of TKSmartCardUserInteractionForPINOperationMBS, respectively. TKSmartCardUserInteractionForPINOperationMBS is a subclass of TKSmartCardUserInteractionMBS.

You interact with instances of one of the subclasses of TKSmartCardUserInteractionForPINOperationwhenMBS calling the userInteractionForSecurePINChange and userInteractionForSecurePINVerification methods on an TKSmartCardMBS object.

Available in macOS 10.11+.

153.18.2 Methods

153.18.3 Cancel as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Attempts to cancel an interaction started by calling run.
Notes:

Returns false if the operation is not running, or if cancelation is not supported.
For certain interactions, cancellation may not be available.

153.18.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.18.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.18.6 Run

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Runs the user interaction and asynchronously receives a reply.
Notes: Calls RunCompleted event later.

153.18.7 Properties

153.18.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.18.9 initialTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timeout, in seconds, for initial interaction.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

153.18.10 interactionTimeout as Double

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The timeout, in seconds, after the first key stroke.
Notes:

If set to 0, the reader-defined default timeout is used. 0 by default.
(Read and Write property)

153.18.11 Events

153.18.12 characterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a valid character has been entered.

153.18.13 correctionKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a correction key has been pressed.

153.18.14 invalidCharacterEnteredInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that an invalid character has been entered.

153.18.15 newPINConfirmationRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the new PIN needs to be re-entered for confirmation.

153.18.16 newPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the new PIN needs to be entered.

153.18.17 oldPINRequestedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the old PIN needs to be entered.

153.18.18 runCompleted(success as boolean, error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when run method is done.
Notes:

success: Whether the user interaction was successful.
error: Contains information about the the error that occurred during the user interaction.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

153.18.19 validationKeyPressedInUserInteraction

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that the validation key has been pressed, indicating the end of PIN entry.

153.19 class TKTLVRecordMBS

153.19.1 class TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The base class encapsulating a Tag-Length-Value record.
Notes:

The CryptoTokenKit framework provides the following concrete subclasses for various TLV record encodings:

- TKBERTLVRecordMBS for BER-TLV encoding rules
- TKSimpleTLVRecordMBS for Simple-TLV encoding according to ISO 7816-4
- TKCompactTLVRecordMBS for Compact-TLV encoding according to ISO 7816-4

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.19.2 Methods

153.19.3 available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on macOS 10.12 or newer.

153.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

153.19.5 recordFromData(data as MemoryBlock) as TKTLVRecordMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a TLV record from by parsing the specified data.
Notes:

data: A data object containing the serialized representation of a TLV record.

Returns a TLV record, or nil if data does not specify a valid record.

153.19.6 sequenceOfRecordsFromData(data as MemoryBlock) as TKTLVRecordMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns an array of TLV records from the specified data.
Notes:

data: A data object containing the serialized representation of zero or more TLV records.

Returns a sequence of TLV records, or nil if data does not specify a sequence of valid records.

153.19.7 Properties

153.19.8 Data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The record data, including the tag, length, and value fields.
Notes: (Read only property)

153.19.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.19.10 Tag as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The tag field of the record.
Notes: (Read only property)

153.19.11 Value as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The value field of the record.

Notes: (Read only property)

153.20 class TKTokenAuthOperationMBS

153.20.1 class TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An authentication operation for a cryptographic token.
Notes: The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.

153.20.2 Methods

153.20.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.20.4 finishWithError(byref error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Finishes the authentication operation.
Notes:

error: On return, if an error occurred, contains an object with details of the error.
The NSError object is created in the TKErrorDomain domain with a code in the TKErrorCode enumeration.

Return true if the authentication operation finished successfully; otherwise false.

153.20.5 Properties

153.20.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.21 class TKTokenDriverMBS

153.21.1 class TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The abstract base class for building token drivers.
Notes: When working with Smart Card tokens, use or inherit from the TKSmartCardTokenDriverMBS subclass instead.

153.21.2 Methods

153.21.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.21.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.21.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets delegate, so events fire.
Notes: Called by constructor for you.

153.21.6 Properties

153.21.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.21.8 Events

153.21.9 createTokenForSmartCard(smartCard as TKSmartCardMBS, AID as MemoryBlock, byref error as NSErrorMBS) as TKSmartCardTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that a new Smart Card is detected.
Notes:

self: The Smart Card token driver.
smartCard: The detected Smart Card.
AID: The ISO 7816-4 application identifier that is selected on the Smart Card. If the com.apple.ctk.aid attributes is not present in the Smart Card token extension property list, no application is selected.
error: If an error occured, this parameter should be populated with an NSError object containing details about the error.

Return the token created for the Smart Card, or nil if an error occurs or the delegate decides not to provide a token.

This event is only for TKSmartCardTokenDriverMBS class.

153.21.10 terminateToken(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to terminate the specified token.

153.22 class TKTokenKeyAlgorithmMBS

153.22.1 class TKTokenKeyAlgorithmMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cryptographic algorithms used by token keys.
Notes:

Typically, the supported algorithm for a token key can be represented by a value of the SecKeyAlgorithm enumeration. However, tokens such as Smart Cards require that input data for operations take the format of a more specific algorithm. For example, a token may accept raw data to generate a cryptographic signature, but require that raw data to be formatted according to PKCS1 padding rules. To express such a requirement, a TKTokenKeyAlgorithm object defines a target algorithm and a set of other algorithms that were used. In the previous example, the target algorithm is kSecKeyAlgorithmRSASignatureRaw and the kSecKeyAlgorithmRSASignatureDigestPKCS1v15SHA1 algorithm is also reported as being used.

Requires macOS 10.12+ or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.22.2 Methods

153.22.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

153.22.4 isAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the specified algorithm is the target operation algorithm.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm; otherwise, false.

153.22.5 supportsAlgorithm(algorithm as string) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the specified algorithm is the target operation algorithm, or one of the other algorithms

used.
Notes:

algorithm: The algorithm to be checked.

Returns true if algorithm is the target operation algorithm or one of the other algorithms used; otherwise, false.

153.22.6 Properties

153.22.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.23 class TKTokenKeychainCertificateMBS

153.23.1 class TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A token's certificate as stored in the keychain.
Notes: Subclass of the TKTokenKeychainItemMBS class.

153.23.2 Methods

153.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token keychain certificate with data from the specified certificate reference and a given object ID.
Notes:

CertificateData: The certificate as data block.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 153.23.4 Constructor(TKTokenObjectID as Variant) 20548

153.23.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
See also:

- 153.23.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 20548

153.23.5 Properties

153.23.6 data as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a DER-encoded representation of an X.509 certificate.
Notes: (Read only property)

153.24 class TKTokenKeychainContentsMBS

153.24.1 class TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of the state of the keychain for a particular token.
Notes:

Available on macOS 10.12+.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

153.24.2 Methods

153.24.3 certificateForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainCertificateMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such certificate exists, contains information about the error.

Returns the certificate, or nil if no certificate exists.

153.24.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

153.24.5 fillWithItems(items() as TKTokenKeychainItemMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fills the keychain with the specified items.
Notes:

items: The items to be added to the keychain.

All existing items for the token are first removed from the keychain before filling the keychain with items.

153.24.6 items as TKTokenKeychainItemMBS()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns all items for token in the keychain.

153.24.7 keyForObjectID(TKTokenObjectID as Variant, byref error as NSErrorMBS) as TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the key for a specified object identifier.
Notes:

objectID: The object identifier for the keychain item.
error: On return, if no such key exists, contains information about the error.

Returns the key, or nil if no key exists.

153.24.8 Properties

153.24.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.25 class TKTokenKeychainItemMBS

153.25.1 class TKTokenKeychainItemMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An abstract base class for managing a token's contents as keychain items.
Notes:

Don't use this base class directly. Instead, use one of its subclasses, such as TKTokenKeychainCertificateMBS for managing certificates or TKTokenKeychainKeyMBS for managing cryptographic keys.
Available on macOS 10.12+.

153.25.2 Methods

153.25.3 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token keychain item with the specified object ID.

153.25.4 Properties

153.25.5 constraints as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Access constraints for the keychain item, keyed by TKTokenOperation values wrapped in integers.
Notes: (Read and Write property)

153.25.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.25.7 Label as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The user-visible label for the keychain item.
Notes:

This property is equivalent to the kSecAttrLabel attribute type.
(Read and Write property)

153.25.8 objectID as Variant

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the object ID used for keychain item identification.
Notes: (Read only property)

153.26 class TKTokenKeychainKeyMBS

153.26.1 class TKTokenKeychainKeyMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A token's key as stored in the keychain.
Notes:

Available on macOS 10.12+.
Subclass of the TKTokenKeychainItemMBS class.

153.26.2 Methods

153.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a token keychain key with data from the specified certificate and a given object ID.
Notes:

certificateData: The certificate data.
objectID: The object ID.

Returns a new token keychain certificate.
See also:

- 153.26.4 Constructor(TKTokenObjectID as Variant) 20553

153.26.4 Constructor(TKTokenObjectID as Variant)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
See also:

- 153.26.3 Constructor(CertificateData as MemoryBlock, TKTokenObjectID as Variant) 20553

153.26.5 Properties

153.26.6 applicationTag as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private tag data.
Notes:

This property is equivalent to the kSecAttrApplicationTag type attribute.
(Read and Write property)

153.26.7 canDecrypt as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the key can be used to decrypt data.
Notes:

This property is equivalent to the kSecAttrCanDecrypt type attribute.
(Read and Write property)

153.26.8 canPerformKeyExchange as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the key can be used to perform Diffie-Hellman style cryptographic key exchange.
Notes: (Read and Write property)

153.26.9 canSign as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the key can be used to sign data.
Notes: (Read and Write property)

153.26.10 keySizeInBits as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The key size in bits.
Notes: (Read and Write property)

153.26.11 keyType as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of the key.
Notes:

Currently, only kSecAttrKeyTypeRSA and kSecAttrKeyTypeECSECPrimeRandom are supported values.
(Read and Write property)

153.26.12 publicKeyData as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The public key data.
Notes: (Read and Write property)

153.26.13 publicKeyHash as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The SHA1 hash of the raw public key.
Notes:

This property is equivalent to the kSecAttrApplicationLabel type attribute.
(Read and Write property)

153.26.14 SuitableForLogin as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the key can be used for system login.
Notes: (Read and Write property)

153.27 class TKTokenKeyExchangeParametersMBS

153.27.1 class TKTokenKeyExchangeParametersMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Parameters used to perform specific key exchange operations.
Notes: Available on macOS 10.12+.

153.27.2 Methods

153.27.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

153.27.4 Properties

153.27.5 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.27.6 requestedSize as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the requested output size, in bytes, of key exchange result.
Notes:

This property should be ignored if the output size is not configurable for the specified key exchange algorithm.
(Read only property)

153.27.7 sharedInfo as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns shared information typically used during the key derivation (KDF) step of a key exchange algorithm.
Notes:

This property should be ignored if shared information isn't used by the specified key exchange algorithm. (Read only property)

153.28 class TKTokenMBS

153.28.1 class TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A representation of a hardware-based cryptographic token.
Notes:

When working with Smart Card tokens, use or inherit from the TKSmartCardToken subclass instead.
Available in macOS 10.12+.

153.28.2 Methods

153.28.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.
See also:

- 153.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String) 20558

153.28.4 Constructor(tokenDriver as TKTokenDriverMBS, instanceID as String)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token using the specified driver.
Notes:

tokenDriver: The driver of the token.
instanceID: A unique, persistent identifier for this token. This value is typically generated from the serial number of the target hardware.

Returns a new token object.
See also:

- 153.28.3 Constructor 20558

153.28.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.28.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the delegate, so you receive events.
Notes: Called by Constructor for you.

153.28.7 Properties

153.28.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.28.9 keychainContents as TKTokenKeychainContentsMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The contents of the keychain for this token.
Notes: (Read only property)

153.28.10 tokenDriver as TKTokenDriverMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The token driver.
Notes: (Read only property)

153.28.11 Events

153.28.12 createSession(byref error as NSErrorMBS) as TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to create a session for the specified token.
Notes:

token: The token.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return a new token session, or nil if an error occurred.

All operations for a token are performed within a session representing an authentication context. This delegate method is called whenever new authentication context is needed. For example, a client may want to perform a token operation using a keychain object that has an associated LAContext.

153.28.13 terminateSession(session as TKTokenSessionMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to terminate the specified token session.

153.29 class TKTokenPasswordAuthOperationMBS

153.29.1 class TKTokenPasswordAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An authentication operation for a cryptographic token.
Notes:

The CryptoTokenKit framework provides the following concrete subclasses: TKTokenPasswordAuthOperationMBS, for password-based authentication, and TKTokenSmartCardPINAuthOperationMBS for Smart Card PIN-based authentication.
Subclass of the TKTokenAuthOperationMBS class.

153.29.2 Methods

153.29.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.29.4 Properties

153.29.5 password as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The password to be filled in when the finishWithError method is called.
Notes: (Read and Write property)

153.30 class TKTokenSessionMBS

153.30.1 class TKTokenSessionMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A token session that manages the authentication state of a token.
Notes:

A token session communicates with its delegate to perform operations with its token that are bound to the authentication state.

A session is always instantiated by a TKTokenMBS instance through the token's delegate when the framework detects access to the token from a new authentication session.

Never share the authentication status of a token, such as the PIN entered to unlock a smart card, with other token sessions.

153.30.2 Methods

153.30.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.
See also:

- 153.30.4 Constructor(token as TKTokenMBS) 20562

153.30.4 Constructor(token as TKTokenMBS)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a token session with the specified token.
Notes:

token: The token to which the initialized session is bound.

Returns a new token session created with the specified token.
See also:

- 153.30.3 Constructor 20562

153.30.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.30.6 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the delegat, so events fire.
Notes: Called for you by constructor.

153.30.7 Properties

153.30.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.30.9 token as TKTokenMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The token to which the session is bound.
Notes: (Read only property)

153.30.10 Events

153.30.11 beginAuthForOperation(operation as Integer, constraint as Variant, byref error as NSErrorMBS) as TKTokenAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate that authentication has begun for the specified operation and constraint.
Notes:

self: The token session.
operation: The kind of operation.
constraint: The constraint to be satisfied.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code

equal to a value defined by the TKErrorCode enumeration.

Return the resulting context of the operation, or nil if an error occurred.

If you return an instance of a subclass of TKTokenAuthOperation that is provided by the CryptoTokenKit framework, the system will first fill in the context-specific properties, such as the password, before calling the finishWithError: method on the context.

153.30.12 decryptData(ciphertext as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to decrypt a data object using the specified key and algorithm.
Notes:

self: The token session.
ciphertext: The data to decrypt.
keyObjectID: The identifier of the public key object.
algorithm: The algorithm to be used for decryption.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Returns the decrypted data, or nil if an error occurred.

153.30.13 performKeyExchangeWithPublicKey(otherPartyPublicKeyData as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, parameters as TKTokenKeyExchangeParametersMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to perform a key exchange using the specified key and algorithm.
Notes:

self: The token session.
otherPartyPublicKeyData: The public key of the other party.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for key exchange.
parameters: Additional parameters used by algorithm to perform the key exchange.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code

equal to a value defined by the TKErrorCode enumeration.

Returns the result of the key exchange, or nil if an error occurred.

153.30.14 signData(dataToSign as MemoryBlock, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS, byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells the delegate to sign a data object using the specified key and algorithm.
Notes:

self: The token session.
data: The data to sign.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used for signing.
error: If an error occurred, this method should return nil and populate this parameter with an object containing details of the error. The error object should have a domain equal to TKErrorDomain and a code equal to a value defined by the TKErrorCode enumeration.

Return the signed data, or nil if an error occurred.

153.30.15 supportsOperation(operation as Integer, keyObjectID as Variant, algorithm as TKTokenKeyAlgorithmMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Asks the delegate whether the token session supports a given operation using the specified key and algorithm.
Notes:

self: The token session.
operation: The operation to perform. For possible values, see kTokenOperation* constants.
keyObjectID: The identifier of the private key object.
algorithm: The algorithm to be used by the operation.

Returns true if the operation is supported; otherwise, false.

153.30.16 Constants

153.30.17 kTokenOperationDecryptData = 3

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the token operation constants.
Notes: Decrypt data using a private key.

153.30.18 kTokenOperationNone = 0

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the token operation constants.
Notes: No operation.

153.30.19 kTokenOperationPerformKeyExchange = 4

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the token operation constants.
Notes: Perform a Diffie-Hellman style cryptographic key exchange using a private key.

153.30.20 kTokenOperationReadData = 1

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the token operation constants.
Notes: Read raw data of a certificate.

153.30.21 kTokenOperationSignData = 2

MBS Mac64bit Plugin, Plugin Version: 18.5. **Function:** One of the token operation constants.
Notes: Create a cryptographic signature using a private key.

153.31 class TKTokenSmartCardPINAuthOperationMBS

153.31.1 class TKTokenSmartCardPINAuthOperationMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Smart Card PIN authentication operation.
Notes: Subclass of the TKTokenAuthOperationMBS class.

153.31.2 Methods

153.31.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

153.31.4 Properties

153.31.5 APDUTemplate as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The template into which the PIN is filled in. nil by default.
Notes:

If nil, the system will not attempt to authenticate by sending the formatted APDU to the Smart Card. Instead, the token itself is expected to perform the authentication. You are encouraged to provide an APDU template, if possible, as it allows the use of a hardware interface for secure PIN entry, provided one exists.
(Read and Write property)

153.31.6 PIN as String

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The PIN value resulting from performing the operation.
Notes:

This property is set to the result of the operation after finishWithError: is called.

If the APDUTemplate property has a set value, this property is not set, as the PIN is automatically sent to the Smart Card using the specified template.
(Read and Write property)

153.31.7 PINByteOffset as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The offset, in bytes, within the APDU template to mark the location for filling in the PIN.
Notes: (Read and Write property)

153.31.8 PINFormat as TKSmartCardPINFormatMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The PIN format.
Notes:

By default, this property is set to a TKSmartCardPINFormatMBS object initialized without any further configuration.
(Read and Write property)

153.31.9 smartCard as TKSmartCardMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Smart Card to which the formatted APDU is sent in order to authenticate.
Notes:

This property is only used if the APDUTemplate property has a set value.
(Read and Write property)

153.32 class TKTokenWatcherMBS

153.32.1 class TKTokenWatcherMBS

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An object that tracks the tokens available in the system.
Notes: Create a token watcher and register an insertion handler to be notified when tokens are added to the system. You can also add removal handlers for specific tokens to be notified when those tokens are removed from the system.

153.32.2 Methods

153.32.3 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a token watcher.

153.32.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

153.32.5 SetDelegate

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the observer to call tokenIDsChanged event.
Notes: Called for you by constructor.

153.32.6 tokenIDs as String()

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The token IDs currently available in the system.
Notes: Each string in tokenIDs corresponds to the name of the token instance.

153.32.7 Properties

153.32.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

153.32.9 Events

153.32.10 Inserted(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the given token is inserted.

153.32.11 Removed(tokenID as string)

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the given token is removed.

153.32.12 tokenIDsChanged

MBS Mac64bit Plugin, Plugin Version: 18.5, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when tokenID list changed.

Chapter 154

Social

154.1 class ACAccountCredentialMBS

154.1.1 class ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An ACAccountCredential object encapsulates the information needed to authenticate a user.
Notes: To create an account credential that uses the OAuth open authentication standard, use the Constructor.

154.1.2 Methods

154.1.3 Constructor(token as string, refreshToken as string, expiryDate as date)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an account credential using OAuth 2.
Notes:

token: The client application's token.
refreshToken: The client application's refresh token.
expiryDate: The date the token expires.

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/
See also:

- 154.1.4 Constructor(token as string, tokenSecret as string) 20572

154.1.4 Constructor(token as string, tokenSecret as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes an account credential using OAuth.
Notes:

Accounts can optionally use the OAuth open authentication standard to authenticate your client application. Instead of the user giving their username and password to log in, the server authenticates the user, and your client application receives a token that grants it access to specific resources for a defined duration. The authentication mechanism uses a key and secret scheme similar to the public and private keys used by ssh. A token is a unique, random string of letters and numbers that is paired with a secret to protect the token from being abused. You initialize account credentials using this token and secret token.

To learn more about OAuth, go to Hueniverse OAuth.
http://hueniverse.com/oauth/
See also:

- 154.1.3 Constructor(token as string, refreshToken as string, expiryDate as date) 20571

154.1.5 Properties

154.1.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

154.1.7 oauthToken as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The token used for the credential.
Notes: (Read and Write property)

154.2 class ACAccountMBS

154.2.1 class ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The account class.
Notes:

An ACAccount object encapsulates information about a user account stored in the Accounts database. You can create and retrieve accounts using an ACAccountStore object. The ACAccountStore object provides an interface to the persistent Accounts database. For each user, all account objects belong to a single ACAccountStore object.

Available in OS X v10.8 and later in 64-bit applications.

154.2.2 Methods

154.2.3 Constructor(type as ACAccountTypeMBS)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a new account of the specified type.
Notes: Available in OS X v10.8 and later.

154.2.4 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

154.2.5 Properties

154.2.6 accountDescription as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A human-readable description of the account.
Notes:

This property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

154.2.7 accountType as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of service account.
Notes:

This property is required. You specify the account type using the Constructor. You can use the accountsWithAccountType method to retrieve all accounts of a particular type.
(Read and Write property)

154.2.8 credential as ACAccountCredentialMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The credential used to authenticate the user of this account.
Notes:

This property is required and must be set before the account is saved. For privacy reasons, this property is inaccessible after the account is saved.
(Read and Write property)

154.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

154.2.10 identifier as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A unique identifier for this account.
Notes:

Use the accountWithIdentifier method to get an account with the specified identifier.
(Read only property)

154.2.11 Parent as ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The account store for this account.
Notes: (Read only property)

154.2.12 username as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The username for this account.
Notes:

This property must be set before the account is saved. After the account is saved, this property is available if the user grants the application access to this account; otherwise it is "".
(Read and Write property)

154.3 class ACAccountStoreMBS

154.3.1 class ACAccountStoreMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The ACAccountStore class provides an interface for accessing, manipulating, and storing accounts.
Notes:

To create and retrieve accounts from the Accounts database, you must create an ACAccountStore object. Each ACAccount object belongs to a single ACAccountStore object.

Available on Mac OS X 10.8 and later in 64-bit applications.

154.3.2 Methods

154.3.3 ACAccountStoreDidChangeNotification as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification names.
Notes:

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

The plugin automatically registeres this for the Changed event.

154.3.4 accounts as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The accounts managed by this account store.

154.3.5 accountsWithAccountType(type as ACAccountTypeMBS) as ACAccountMBS()

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns all accounts of the specified type.

154.3.6 accountTypeWithAccountTypeIdentifier(identifier as string) as ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an account type that matches the specified identifier.
Notes: typeIdentifier: The account type identifier.

154.3.7 accountWithIdentifier(identifier as string) as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the account with the specified identifier.

154.3.8 ACErrorDomain as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The error domain for account framework.

154.3.9 available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether class is available.
Notes: Returns true on Mac OS X 10.8 in a 64-bit application.

154.3.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor.

154.3.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

154.3.12 removeAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Removes an account from the account store.
Notes:

account: The account to remove.

This call will fail if you don't have sufficient rights to remove the account.

154.3.13 renewCredentialsForAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Renews account credentials when the credentials are no longer valid.
Notes:

account: The account to renew credentials.

For Twitter and Sina Weibo accounts, this method will prompt the user to go to Settings to re-enter their password.
For Facebook accounts, if the access token has become invalid due to a regular expiration, this method will obtain a new one.
If the user has deauthorized your app, this renewal request will return ACAccountCredentialRenewResultRejected.

154.3.14 requestAccessToAccountsWithType(accountType as ACAccountTypeMBS, dic as dictionary, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Obtains permission to access protected user properties.
Notes:

accountType: The account type.
options: The account options.

Certain account types (such as Facebook) require an options dictionary. This method will throw an NSInvalidArgumentException if the options dictionary is not provided for such account types. Conversely, if the account type does not require an options dictionary, the options parameter must be nil.

154.3.15 saveAccount(account as ACAccountMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Saves an account to the Accounts database.
Notes:

account: The account to save.

If the account type supports authentication and the account is not authenticated, the account server uses the account's credentials to authenticate it. If the authentication is successful, the account is saved; otherwise it is not saved.

154.3.16 Properties

154.3.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

154.3.18 Events

154.3.19 Changed

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when database changed.
Notes:

Posted when the accounts managed by this account store changed in the database. There is no userInfo dictionary associated with this notification.

This notification is sent if an account is saved or removed locally or externally. If you receive this notification, you should refetch all account objects.

154.3.20 removeAccountCompleted(account as ACAccountMBS, success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when account removing completed.

154.3.21 renewCredentialsForAccountCompleted(account as ACAccountMBS, renewResult as Integer, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Event called when renew credentials completed.

154.3.22 requestAccessCompleted(granted as boolean, error as NSErrorMBS, accountType as ACAccountTypeMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when requestAccessToAccountsWithType completed.

154.3.23 saveAccountCompleted(success as boolean, error as NSErrorMBS, account as ACAccountMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The account save completed.

154.3.24 Constants

154.3.25 ACAccountCredentialRenewResultFailed = 2

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.
Notes: A non-user-initiated cancel of the prompt. Try again.

154.3.26 ACAccountCredentialRenewResultRejected = 1

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.
Notes: Renewal failed because the user revoked your access to their account.

154.3.27 ACAccountCredentialRenewResultRenewed = 0

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the status codes of credential renewal requests.

Notes: The account's credentials have been renewed and are now associated with the account.

154.3.28 ACErrorAccessDeniedByProtectionPolicy = 10

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Due to the current protection policy in effect, we couldn't fetch a credential

154.3.29 ACErrorAccessInfoInvalid = 8

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: The client's access info dictionary has incorrect or missing values.

154.3.30 ACErrorAccountAlreadyExists = 5

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account wasn't added because it already exists.

154.3.31 ACErrorAccountAuthenticationFailed = 3

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account wasn't saved because authentication of the supplied credential failed.

154.3.32 ACErrorAccountMissingRequiredProperty = 2

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account wasn't saved because it is missing a required property.

154.3.33 ACErrorAccountNotFound = 6

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account wasn't deleted because it could not be found.

154.3.34 ACErrorAccountTypeInvalid = 4

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account wasn't saved because the account type is invalid.

154.3.35 ACErrorClientPermissionDenied = 9

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Your client does not have access to the requested data.

154.3.36 ACErrorCredentialNotFound = 11

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Yo, I tried to find your credential, but it must have run off!

154.3.37 ACErrorFetchCredentialFailed = 12

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Something bad happened on the way to the keychain

154.3.38 ACErrorInvalidClientBundleID = 16

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: The client making the request does not have a valid bundle ID.

154.3.39 ACErrorPermissionDenied = 7

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: The operation didn't complete because the user denied permission.

154.3.40 ACErrorRemoveCredentialFailed = 14

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Unable to remove credential

154.3.41 ACErrorStoreCredentialFailed = 13

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Unable to store credential

154.3.42 ACErrorUnknown = 1

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Unknown error

154.3.43 ACErrorUpdatingNonexistentAccount = 15

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the error constants.
Notes: Account save failed because the account being updated has been removed.

154.4 class ACAccountTypeMBS

154.4.1 class ACAccountTypeMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An ACAccountType object encapsulates information about all accounts of a particular type.
Notes:

You do not create account type objects directly. To obtain an account type, use the Constructor or the accountType property of an account object. Account Type Identifiers describes the identifiers for currently supported account types. You can also use the accountsWithAccountType method to obtain all accounts of a particular type.

Available in OS X v10.8 and later in 64-bit applications.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

154.4.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr3

154.4.3 Methods

154.4.4 ACAccountTypeIdentifierFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifier for the Facebook account type.

154.4.5 ACAccountTypeIdentifierLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifier for the LinkedIn account type.
Notes: Available in OS X v10.9 and later.

154.4.6 ACAccountTypeIdentifierSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifier for the Sina Weibo account type.

154.4.7 ACAccountTypeIdentifierTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifier for the Tencent Weibo account type.
Notes: Available in OS X v10.9 and later.

154.4.8 ACAccountTypeIdentifierTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Identifier for the Twitter account type.

154.4.9 accessGranted as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value indicating whether the user granted the application access to accounts of this type.
Notes: True if the application has access to accounts of this type; otherwise false.

154.4.10 accountTypeDescription as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A human-readable description of the account type.

154.4.11 ACFacebookAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Your Facebook App ID, as it appears on the Facebook website.

154.4.12 ACFacebookAudienceEveryone as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Posts from your app are visible to everyone.

154.4.13 ACFacebookAudienceFriends as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Posts are visible only to friends.

154.4.14 ACFacebookAudienceKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Only required when posting permissions are requested.

154.4.15 ACFacebookAudienceOnlyMe as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Posts are visible to the user only.

154.4.16 ACFacebookPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of of the permissions you're requesting.

154.4.17 ACLinkedInAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Your LinkedIn App ID (or API Key), as it appears on the LinkedIn website.

154.4.18 ACLinkedInPermissionsKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An array of of the LinkedIn permissions you're requesting.

154.4.19 ACTencentWeiboAppIdKey as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tencent App ID

154.4.20 Constructor

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

154.4.21 identifier as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The unique identifier for the account type.

154.4.22 Properties

154.4.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

154.5 class CustomNSSharingServiceMBS

154.5.1 class CustomNSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The class for a custom sharing service.
Notes:

You only use it to get your own service inside your app into sharing picker.

Please call Close method when you want to stop the service.
Subclass of the NSSharingServiceMBS class.

154.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr9
- MBS Real Studio Plugins, version 13.1pr1
- MBS Real Studio Plugins, version 12.3pr15

154.5.3 Methods

154.5.4 Constructor(title as string, image as NSImageMBS, alternateImage as NSImageMBS = nil, DelegateHandler as NSSharingServiceDelegateMBS = nil, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a custom sharing service object.
Notes:

title: The custom sharing service name.
image: The image that represents the sharing service
alternateImage: The alternate image that represents the sharing service
Delegate: The delegate where events are called for this service.

Custom sharing services can be added to the NSSharingServicePicker with the sharingServicesForItems event.
Available in OS X v10.8 and later.

Please call Close method when you want to stop the service.

154.5.5 Events

154.5.6 performCustomService(tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Called when user selected this service and you need to perform your work.

154.6 class NSSharingServiceDelegateMBS

154.6.1 class NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The NSSharingServiceDelegate protocol allows customization of the position and animation of the share sheet as well as be notified of the success or failure of the item being shared.
Notes: Available in OS X v10.8 and later.

154.6.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr1

154.6.3 Methods

154.6.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.

154.6.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

154.6.6 Properties

154.6.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

154.6.8 Events

154.6.9 didFailToShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the sharing service encountered an error when sharing items.
Notes:

sharingService: The sharing service.
items: The items being shared.
error: The error that was encountered when trying to share the item. If the error is NSUserCancelledError, the user simply cancelled the error.

Available in OS X v10.8 and later.

154.6.10 didShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the sharing service has finished sharing the items.
Notes:

sharingService: The sharing service.
items: The items being shared.

Available in OS X v10.8 and later.

154.6.11 sourceFrameOnScreenForShareItem(service as NSSharingServiceMBS, item as Variant) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the sharing service is performed and the sharing window is displayed, to present a transition between the original items and the sharing window.
Notes:

sharingService: The sharing service.
item: The item being shared.

Return the rectangle, in screen coordinates, to display the transition.

154.6.12 sourceWindowForShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS, scope as Integer) as NSWindowMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns the window that contained the share items.
Notes:

sharingService: The sharing service.
items: The items being shared.
sharingContentScope: The sharing content scope. The sharing scope can be modified from the default value of NSSharingContentScopeItem by setting a different value in the out parameter sharingContentScope.

Return the window of the shared items.

154.6.13 transitionImageForShareItem(service as NSSharingServiceMBS, item as Variant, contentRect as NSRectMBS) as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked to allow returning a custom transition image when sharing an item.
Notes:

sharingService: The sharing service.
item: The shared item.
contentRect: The content rectangle is the frame of the actual content inside the transition image, excluding all decorations. For example, if the transition image is a QuickLook thumbnail, the value would be QLThumbnailGetContentRect.

Return the image to display for the sharing transition. Its size should exactly match that of the original image.

154.6.14 willShareItems(service as NSSharingServiceMBS, items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the sharing service will share the specified items.
Notes:

sharingService: The sharing service.
items: The items being shared.
Available in OS X v10.8 and later.

154.6.15 Constants

154.6.16 NSSharingContentScopeFull = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing the whole content of the current document, for example, the URL of the webpage.
Available in OS X v10.8 and later.

154.6.17 NSSharingContentScopeItem = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing a clearly identified item, for example, a file represented by its icon.
Available in OS X v10.8 and later.

154.6.18 NSSharingContentScopePartial = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the sharing scope constants to specify the nature of the things you are sharing.
Notes:

Used when sharing a portion of a more global content, for example, part of a webpage.
Available in OS X v10.8 and later.

154.7 class NSSharingServiceItemsMBS

154.7.1 class NSSharingServiceItemsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A collection class for files, images, texts and URLs.
Example:

```
dim p as Picture = LogoMBS(500)
dim t as new NSSharingServiceItemsMBS
dim image as new NSImageMBS(p)
t.AddImage image
t.AddText "Hello World. This is a great app!"
```

Notes: Create an object from this class, add some items and pass to the share methods.

154.7.2 Methods

154.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds one attributed string to the collection.
See also:

- 154.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS) 20594

154.7.4 AddAttributedString(AttributedStrings() as NSAttributedStringMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds attributed strings to the collection.
See also:

- 154.7.3 AddAttributedString(AttributedString as NSAttributedStringMBS) 20594

154.7.5 AddFile(file as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds one file to the collection.

154.7.6 AddFiles(files() as folderitem)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an array of files to the collection.

154.7.7 AddImage(image as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds one image to the collection.

154.7.8 AddImages(images() as NSImageMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an array of images to the collection.

154.7.9 AddText(text as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds one text to the collection.
See also:

- 154.7.10 AddText(texts() as string) 20595

154.7.10 AddText(texts() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an array of texts to the collection.
See also:

- 154.7.9 AddText(text as string) 20595

154.7.11 AddURL(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Add one URL to the collection.
See also:

- 154.7.12 AddURL(URLs() as string) 20596

154.7.12 AddURL(URLs() as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Adds an array of URLs to the collection.
See also:

- 154.7.11 AddURL(URL as string) 20595

154.7.13 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.

154.7.14 count as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the number of items in this collection.

154.7.15 Images as NSImageMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns all images in the collection.

154.7.16 objectAtIndex(index as Integer) as Variant

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns object at the given index.
Notes:

Index is from 0 to count-1.
Returns URLs and files as string with URL.

154.7.17 Texts as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns array with all texts in this collection.

154.7.18 URLs as string()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns array with all URLs.
Notes: As files are also handled as URLs, the array contains also files in the collections as URLs.

154.7.19 Properties

154.7.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

154.8 class NSSharingServiceMBS

154.8.1 class NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The NSSharingService class is used to provide a consistent user experience when sharing items on OS X.
Notes:

For example, items can be: NSURL objects, NSString objects, NSImage objects, video (through file URLs), or any object which implements the NSPasteboardWriting protocol.

For any item or group of items, the NSSharingServiceMBS will display a sharing sheet to allow the user to pre-visualize what will be shared to the service. A sharing service can: create a post on a social network like Twitter or Facebook, send a message by email or iMessage, upload videos to viewing services, or send a file by AirDrop.

154.8.2 Methods

154.8.3 alternateImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The alternate image representing the sharing service. (read-only)
Notes: Available in OS X v10.8 and later.

154.8.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

154.8.5 canPerformWithItems(items as NSSharingServiceItemsMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns whether the service can share all the specified items.
Notes:

items: The items to share.

Return true if the service can share all the items; false otherwise. If items is nil, the method will return true

when the service is configured.

This method can be used to validate a custom user interface such as a dedicated Twitter button. Therefore you could call it once at launch time with nil items to check whether to display the button or not, and then with real items to enable and disable the button depending on the context or selection.

Available in OS X v10.8 and later.

154.8.6 Close

MBS MacFrameworks Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Closes the sharing services.
Notes: Same as destructor, but closes now, not later.

154.8.7 Constructor(name as string)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Create a sharing service instance representing the specified service name.
Notes: name: The service name. See NSSharingServiceName* methods.

154.8.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

154.8.9 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The primary image representing the sharing service. (read-only)

154.8.10 NSSharingServiceNameAddToAperture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Adds the content to Aperture.
Available in OS X v10.8 and later.

154.8.11 NSSharingServiceNameAddToIPhoto as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Adds the content to iPhoto.
Available in OS X v10.8 and later.

154.8.12 NSSharingServiceNameAddToSafariReadingList as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Add the content to the Safari Reading List.
Available in OS X v10.8 and later.

154.8.13 NSSharingServiceNameComposeEmail as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Creates an email messages with the content.
Available in OS X v10.8 and later.

154.8.14 NSSharingServiceNameComposeMessage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Creates a Messages methods with the content.
Available in OS X v10.8 and later.

154.8.15 NSSharingServiceNamePostImageOnFlickr as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Posts the image on Flickr.
Available in OS X v10.8 and later.

154.8.16 NSSharingServiceNamePostOnFacebook as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Post the content to Facebook.
Available in OS X v10.8 and later.

154.8.17 NSSharingServiceNamePostOnSinaWeibo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Posts the content on a Sina Weibo, Chinese microblogging (weibo) website. Akin to a hybrid of Twitter and Facebook.
Available in OS X v10.8 and later.

154.8.18 NSSharingServiceNamePostOnTwitter as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Posts the content on Twitter.
Available in OS X v10.8 and later.

154.8.19 NSSharingServiceNamePostVideoOnTudou as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.

Notes:

Posts the video on the video sharing service Tudou, based in the People's Republic of China.
Available in OS X v10.8 and later.

154.8.20 NSSharingServiceNamePostVideoOnVimeo as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Posts the video on the video sharing service Vimeo.
Available in OS X v10.8 and later.

154.8.21 NSSharingServiceNamePostVideoOnYouku as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Posts the video on the video sharing service Youku, based in the People's Republic of China.
Available in OS X v10.8 and later.

154.8.22 NSSharingServiceNameSendViaAirDrop as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Sends the file via Air Drop.
Available in OS X v10.8 and later.

154.8.23 NSSharingServiceNameUseAsDesktopPicture as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Replaces the user's desktop image with the content.
Available in OS X v10.8 and later.

154.8.24 NSSharingServiceNameUseAsTwitterProfileImage as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: One of the sharing service names.
Notes:

Replaces the Twitter profile image with the content.
Available in OS X v10.8 and later.

154.8.25 performWithItems(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Manually performs the service on the provided items.
Notes:

items: The items to share.

In most cases this will display a sharing window.
Available in OS X v10.8 and later.

154.8.26 SetDelegate(DelegateHandler as NSSharingServiceDelegateMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies the delegate of the sharing service.

154.8.27 sharingServiceNamed(name as string) as NSSharingServiceMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Returns a sharing service instance representing the specified service name.
Notes:

serviceName: The service name. See NSSharingServiceName* methods.

Returns an instance of NSSharingService for the specified service name.
Available in OS X v10.8 and later.

154.8.28 sharingServicesForItems(items as NSSharingServiceItemsMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a list of sharing services which could share all the provided items together.
Example:

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi

// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

Notes:

items: The items to share.

Returns an array of sharing services to allow for items.
This method can be used to build a custom user interface or to populate a contextual menu.
Available in OS X v10.8 and later.

154.8.29 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The title of the sharing service. (read-only)
Example:

```
// get an image
dim logo as Picture = LogoMBS(500)
Dim nsi as new NSImageMBS( logo )

// make items object
Dim nshi as new NSSharingServiceItemsMBS
nshi.AddImage nsi
```

```
// query services which are supported
Dim ssl(-1) as NSSharingServiceMBS = NSSharingServiceMBS.sharingServicesForItems( nshi )

// show services
for each s as NSSharingServiceMBS in ssl
msgBox s.title
next
```

154.8.30 Properties

154.8.31 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

154.9 class NSSharingServicePickerMBS

154.9.1 class NSSharingServicePickerMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The NSSharingServicePicker class presents a list of sharing services, so that the user can choose a service to share an item.
Notes:

When a service is chosen, the picker automatically executes it, which presents the sharing window.

The events in this class allows customizing the picker's available services, where it appears, and allows assigning the delegate object for the NSSharingService delegate.

Available in OS X v10.8 and later.

154.9.2 Methods

154.9.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether sharing services are available.
Notes: Returns true on Mac OS X 10.8.

154.9.4 Constructor(items as NSSharingServiceItemsMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Initializes a new sharing service picker for the selected items.
Notes: Available in OS X v10.8 and later.

154.9.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

154.9.6 showRelativeToRect(r as NSRectMBS, view as NSViewMBS, preferredEdge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Shows the picker, populated with sharing services related to the instance items.
Notes:

rect: The rectangle the picker should be shown relative to. The coordinates are in the view coordinate system. Passing NSRectMBS.Zero causes the view bounds to be used.
view: The view.
preferredEdge: The preferred edge of the view to display the picker. See edge constants for the possible values.

When the user selects one of the sharing services, the sharing service will be performed. This method must be called on mouseDown.

Available in OS X v10.8 and later.

154.9.7 Properties

154.9.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The internal object reference.
Notes: (Read and Write property)

154.9.9 Events

154.9.10 delegateForSharingService(service as NSSharingServiceMBS) as NSSharingServiceDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked to provide the delegate to the sharing service when the user has selected a service.
Notes:

sharingServicePicker: The sharing service picker.
sharingService: The selected sharing service.

Return a NSSharingServiceDelegateMBS object the sharing service should use for this item's transfer.
Available in OS X v10.8 and later.

154.9.11 didChooseSharingService(service as NSSharingServiceMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked when the user has selected a service and before it is executed.
Notes:

sharingServicePicker: The sharing service picker.
service: The sharing service the user selected. Invoked to give the delegate to the sharing service that is about to be executed.

Available in OS X v10.8 and later.

154.9.12 sharingServicesForItems(items as NSSharingServiceItemsMBS, proposedServices() as NSSharingServiceMBS) as NSSharingServiceMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Invoked to allow the delegate to customize exactly what appears in the sharing service picker before it is presented.
Notes:

sharingServicePicker: The sharing service picker.
items: The items to share.
proposedServices: The proposed services to share the content.

Return the sharing services to use.
If you have no code in the event, the proposedServices are returned automatically.

The delegate can reorder, remove default services or add custom services before the picker is presented. It's possible to add custom services by mutating the proposedSharingServices array and adding new NSSharingService instances.

Available in OS X v10.8 and later.

154.9.13 Constants

154.9.14 NSMaxXEdge = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.
Notes: the maximum X edge. Typically right side.

154.9.15 NSMaxYEdge = 3

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.
Notes: The maximum Y edge. Topically the top edge of a window.

154.9.16 NSMinXEdge = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.
Notes: the minimum X edge. Typically left side.

154.9.17 NSMinYEdge = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3. **Function:** One of the Cocoa edge constants.
Notes: Minimum Y. As coordinates are upside down in the Cocoa world, this is the bottom edge of a window.

154.10 class SLRequestMBS

154.10.1 class SLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The SLRequest object encapsulates the properties of an HTTP request, providing a convenient template for you to make requests.
Notes:

You send a request to a social networking service to perform some operation on behalf of the user or to retrieve user information.

HTTP requests have these common components: an HTTP request method (GET, POST, PUT, or DELETE), a URL identifying the operation to perform, a set of query parameters, and an optional multipart POST body containing additional data. The values for these properties depend on the request you are sending and the target service provider. Refer to each supported social networking site's documentation for possible values. Links to documentation are provided in Table 1.

Use the requestForServiceType:requestMethod:URL:parameters: method to initialize a newly created SLRequest object passing the required property values. Use the addMultipartData:withName:type: to optionally specify a multipart POST body. After you create your request, use the performRequestWithHandler: method to send the request, specifying the handler to call when the request is done.

If you already have a sending mechanism, you can use the preparedURLRequest method to create the request that you send using an NSURLConnection object. If the request requires user authorization, set the account property to an ACAccount object.

Available in OS X v10.8 and later. 64bit only.

154.10.2 Methods

154.10.3 addMultipartData(data as memoryblock, name as string, type as string, filename as string)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Specifies a named multipart POST body for this request.
Notes:

data: The data for the multipart POST body, such as an image or text.
name: The name of the multipart POST body. This is the name that a specific social service expects.
type: The type of the multipart POST body. This is the MIME content type of the multipart data.
filename: The filename of the attachment that you want to POST. Many social services require a filename in order to accept certain POST requests, such as uploading an image or video. If your multipart data does

not require a filename, pass in nil.

Possible parameter values are dependent on the target service. This information, as well as guidance on when to use a multipart POST body, is documented by the service provider.

154.10.4 Available as boolean

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this class is available.
Notes: Returns true on OS X 10.8 and newer in a 64-bit app.

154.10.5 Constructor(serviceType as string, requestMethod as Integer, URL as string, parameters as dictionary)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes a newly created request object with the specified properties.
Notes:

serviceType: The social networking service type. e.g. SLServiceTypeTwitter
requestMethod: The method to use for this HTTP request. e.g. SLRequestMethodPOST
url: The destination URL for this HTTP request. The values and formatting for the URL are dependent on the target service and are documented by the service provider.
parameters: The parameters for this HTTP request. The values and formatting are dependent on the target service and are documented by the service provider.

The newly initialized request object.
Use this method to initialize an SLRequest. The value and formatting of each parameter is dependent on the target service.

154.10.6 performRequest(tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Performs an asynchronous request and calls the RequestHandler event when done.

154.10.7 preparedURLRequest as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an authorized URL request that can be sent using an NSURLConnectionMBS object.
Notes:

An OAuth-compatible NSURLRequest object that allows an app to act on behalf of the user while keeping the user's password private. The NSURLRequest is signed as OAuth1 by default, or OAuth2 by adding the appropriate token based on the user's account.

Use this method to modify your request before sending. By setting the account correctly, this method will automatically add any necessary tokens.

154.10.8 SLServiceTypeFacebook as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string constant that identifies the social networking site, Facebook.

154.10.9 SLServiceTypeLinkedIn as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string constant that identifies the social networking site, LinkedIn.

154.10.10 SLServiceTypeSinaWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string constant that identifies the social networking site, Sina Weibo.

154.10.11 SLServiceTypeTencentWeibo as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string constant that identifies the social networking site, Tencent Weibo.

154.10.12 SLServiceTypeTwitter as string

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A string constant that identifies the social networking site, Twitter.

154.10.13 Properties

154.10.14 account as ACAccountMBS

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Account information used to authenticate the request.
Notes:

The account is used to sign a request with OAuth1 services or to add an access token for OAuth2 services. By associating the account with the request, the necessary tokens are added automatically. The default value is nil.
(Read and Write property)

154.10.15 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

154.10.16 parameters as Dictionary

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The parameters for this request.
Notes:

Use this property to look up the query parameters of the HTTP request that was set in Constructor. Possible values are dependent on the target service and are documented by the service provider.
(Read only property)

154.10.17 requestMethod as Integer

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The method to use for this request.
Notes:

Use this property to look up the method of the HTTP request that was set in requestForServiceType.
(Read only property)

154.10.18 URL as String

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destination URL for this request.
Notes: (Read only property)

154.10.19 Events

154.10.20 performRequestCompleted(responseData as memoryblock, urlResponse as NSURLResponseMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 15.3, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The callback handler for a request..
Notes:

responseData: The data returned by the request. The format of this data is dependent on the target service.
urlResponse: The URL response returned by the request that includes the HTTP response codes.
error: An error identifier.
Possible values are dependent on the target service and are documented by the service provider.

154.10.21 Constants

154.10.22 SLRequestMethodDELETE = 2

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the request types.
Notes:

Deletes the specified resource.

Available in OS X v10.8 and later.

154.10.23 SLRequestMethodGET = 0

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the request types.
Notes:

Requests information from the specified resource. Use a GET request to fetch information from the specified server such as character limits or a user's timeline.

Available in OS X v10.8 and later.

154.10.24 SLRequestMethodPOST = 1

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the request types.
Notes:

Submits data to be processed. Use a POST request to submit information to the specified server such as a status update or an image.

Available in OS X v10.8 and later.

154.10.25 SLRequestMethodPUT = 3

MBS Mac64bit Plugin, Plugin Version: 15.3. **Function:** One of the request types.
Notes:

Uses a PUT request to submit the data.

Available in OS X v10.9 and later.

Chapter 155

Spamsum

155.1 class SpamSumMBS

155.1.1 class SpamSumMBS

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for the spamsum tool.
Notes:

Overview
———

spamsum is a tool for generating and testing signatures on files. The signature is designed to be particularly suitable for producing a result that can be used to compare two emails and see if they are 'similar'. This can provide the core of a SPAM detection system.

The algorithms in spamsum are in two parts. The first part generates a signature which is encoded as a string of ascii characters less than 72 characters long. The second part takes a new signature and a database of existing signatures (actually just a text file with one signature per line) and finds the existing signature that best matches the new signature. A match result in the range of 0 to 100 is generated, where 100 is a perfect match and 0 is a complete mismatch.

Signature Algorithm
————————-

The signature algorithm in spamsum has a number of interesting properties that make is especially suitable for SPAM detection.

- non-propogation

In most hash algorithms a change in any part of a plaintext will either change the resulting hash completely or will change all parts of the hash after the part corresponding with the changed plaintext. In the spamsum algorithm only the part of the spamsum signature that corresponds linearly with the changed part of the plaintext will be changed. This means that small changes in any part of the plaintext will leave most of the signature the same. This is essential for SPAM detection as it is common for varients of the same SPAM to have small changes in their body and we need to ensure that the matching algorithm can cope with these changes.

- alignment robustness

Most hash algorithms are very alignment sensitive. If you shift the plaintext by a byte (say by inserting a character at the start) then a completely different hash is generated. The spamsum algorithm is robust to alignment changes, and will automatically re-align the resulting signature after insertions or deletions. This works in combination with the non-propogation property to make spamsum suitable for telling if two emails are 'similar'.

The core of the spamsum algorithm is a rolling hash similar to the rolling hash used in 'rsync'. The rolling hash is used to produce a series of 'reset points' in the plaintext that depend only on the immediate context (with a default context width of seven characters) and not on the earlier or later parts of the plaintext. A stronger hash based on the FNV algorithm is then used to produce hash values of the areas between two reset points. The resulting signature comes from the concatenation of a single character from the FNV hash per reset point.

The frequency of the reset points determines how many characters in the plaintext will be used for each character of output in the signature. At startup spamsum scans the plaintext to determine how many valid input characters are in the plaintext (whitespace is ignored). The algorithm then estimates the reset frequency needed to produce a signature of length 64 and starts producing the
signature. If after the signature is produced the result is less than a third of the desired length then the reset frequency is adjusted and the signature re-generated.

Similarity Testing

Once a set of signatures has been generated you need to be able to take a new plaintext and see if it matches one of the signatures. The way this is done is to generate a spamsum signature of the new plaintext then compute a distance measure between each of the existing signatures and the new signature.

The distance measure that spamsum uses is based on the 'string edit distance'. The string edit distance is a measure of how many edit operations are required to take one of the signatures and turn it into the other. In spamsum the 'insert' and 'delete' edit operations are given a weight of 1 while substitution is given a weight of 3 and transposition is given a weight of 5.

The resulting string edit distance is then scaled to produce a 'score' in the range 0-100. A score of 100 indicates a perfect match and a score of 0 indicates a complete mismatch. If the two signatures used a different 'reset frequency' (also known as block_size) then the score is automatically set as 0.

The score is weighted so that a value of 50 is a reasonable threshold to use for a 'good match'.

Dual hashes

A significant problem with the above algorithm is the sensitivity to the chosen hash strength of the rolling hash. The initial implementation used a single hash strength chosen based on the file size and rounded to a power of 2. This works, but it means that if the two files being compared cross over a boundary then they will not be able to be compared. To reduce this problem the current implementation chooses two different hash strengths and generates two hashes for each file. This means that the two files will have to have very different lengths for their respected spamsum signatures not to share a common hash strength.

Infrastructure

spamsum is useless without a good quality database of signatures for known spam. I am hoping that the spamsum algorithm will be incorportated into a online system for capturing known SPAM (such as razor).

Author

spamsum was written by Andrew Tridgell tridge @ samba.org

155.1.2 Methods

155.1.3 Match(sum1 as string, sum2 as string) as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a percent value representing
Example:

```
dim s as SpamSumMBS
dim t1,t2 as string

s=new SpamSumMBS

t1=S.Spamsum("Hello Welt, wie geht es? Mir geht es manchmal gut.",0,0)
t2=S.Spamsum("Hallo Welt, wie geht es? Mir geht es manchmal gut.",0,0)
```

```
MsgBox t1+" "+t2+" "+str(s.Match(t1,t2))
// 17 percent here. This needs longer texts...
```

Notes: Returns a value from 0 (not equal) to 100 (equal).

155.1.4 Spamsum(text as string, flags as Integer, blocksize as Integer) as string

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Calculates a checksum for a given text.
Notes:

You can specify for flags a combination of FlagsIgnoreWhitespace=1 and FlagsIgnoreHeaders=2.
Blocksize is linked to the length of the checksum. You can try values like 0, 3 or 90 and check what is best for you.
The text strings must be longer than just a few words as they are designed to take whole emails.

155.1.5 Properties

155.1.6 FlagsIgnoreHeaders as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value used for the Spamsum call as flags.
Notes:

Value is 2.
(Read only property)

155.1.7 FlagsIgnoreWhitespace as Integer

MBS Util Plugin, Plugin Version: 4.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value used for the Spamsum call as flags.
Notes:

Value is 1.
(Read only property)

Chapter 156

Sparkle

156.1 class SUAppcastItemMBS

156.1.1 class SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for items in the appcast file.

156.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr7

156.1.3 Methods

156.1.4 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new appcast item object.
See also:

- 156.1.5 Constructor(dict as dictionary) 20621
- 156.1.6 Constructor(dict as dictionary, byref error as string) 20622

156.1.5 Constructor(dict as dictionary)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes with data from a dictionary provided by the RSS class.

See also:

- 156.1.4 Constructor 20621
- 156.1.6 Constructor(dict as dictionary, byref error as string) 20622

156.1.6 Constructor(dict as dictionary, byref error as string)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes with data from a dictionary provided by the RSS class.
See also:

- 156.1.4 Constructor 20621
- 156.1.5 Constructor(dict as dictionary) 20621

156.1.7 Properties

156.1.8 CriticalUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this is a critical update.
Notes: (Read only property)

156.1.9 date as date

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The release date for this app cast item.
Notes: (Read only property)

156.1.10 DeltaUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this is a delta update.
Notes: (Read only property)

156.1.11 DeltaUpdates as Dictionary

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dictionary with properties about delta updates.

Notes: (Read only property)

156.1.12 displayVersionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display version number for this app cast item.
Notes:

Maybe "1.1de"
(Read only property)

156.1.13 DSASignature as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file signature for this app cast item.
Notes: (Read only property)

156.1.14 fileURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file URL for this app cast item.
Notes: (Read only property)

156.1.15 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle used for this object.
Notes: (Read and Write property)

156.1.16 InformationOnlyUpdate as Boolean

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether this is only an information only update.
Notes:

Only available in newer Sparkle in 64-bit.
For older version this is always false.
(Read only property)

156.1.17 InfoURL as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The info URL.
Notes: (Read only property)

156.1.18 itemDescription as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The description for this app cast item.
Notes: (Read only property)

156.1.19 MaximumSystemVersion as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum system version for this app cast item.
Notes:

The update will not be offered to users with newer system versions.
(Read only property)

156.1.20 minimumSystemVersion as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The minimum system version for this app cast item.
Notes:

The update will not be offered to users with older system versions.
(Read only property)

156.1.21 propertiesDictionary as dictionary

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A dictionary with all the properties for this item.
Notes: (Read only property)

156.1.22 releaseNotesURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The release notes URL for this app cast item.
Notes: (Read only property)

156.1.23 title as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The title for this app cast item.
Example:

```
dim a as SUAppcastItemMBS

// get item somehow
MsgBox a.title
```

Notes: (Read only property)

156.1.24 versionString as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The version string for this app cast item.
Notes: (Read only property)

156.2 class SUAppcastMBS

156.2.1 class SUAppcastMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for an appcast.

156.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr7

156.2.3 Methods

156.2.4 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor to create a new appcast object.

156.2.5 fetchAppcastFromURL(url as string)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Fetches the appcast from the given URL.
Example:

```
dim a as SUAppcastMBS

a.fetchAppcastFromURL "http://www.monkeybreadsoftware.de/SparkleTest/appcast.xml"
```

156.2.6 incrementalData as Memoryblock

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The data loaded from the appcast.
Notes:

This is the XML data with the appcast.xml file content.
Only available on 32 bit target.

156.2.7 items as SUAppcastItemMBS()

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The items in this appcast.

156.2.8 Properties

156.2.9 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for the appcast.
Notes: (Read and Write property)

156.2.10 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The HTTP headers.
Notes:

You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

156.2.11 UserAgentString as string

MBS MacExtras Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Which user agent string to use for the http download.
Notes: (Read and Write property)

156.3 class SUUpdaterMBS

156.3.1 class SUUpdaterMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for Sparkle.
Notes: This class is for use with the Sparkle 1.5b6 framework and implements the Cocoa classes inside this framework.

156.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.1pr5
- MBS Real Studio Plugins, version 11.3pr2

156.3.3 Methods

156.3.4 checkForUpdateInformation

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks for new update information.
Notes: This begins a "probing" check for updates which will not actually offer to update to that version. The events, though, (up to didFindValidUpdate and updaterDidNotFindUpdate), are called, so you can use that information in your UI.

156.3.5 checkForUpdates

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Performs a check for updates.
Notes: Call this method from a menu item where the user can check for updates manually. Sparkle will check for updates and report back its findings verbosely.

156.3.6 checkForUpdatesInBackground

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This kicks off an update meant to be programmatically initiated.
Notes: That is, it will display no UI unless it actually finds an update, in which case it proceeds as usual. If the fully automated updating is turned on, however, this will invoke that behavior, and if an update is found, it will be downloaded and prepped for installation.

156.3.7 Constructor

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor for the updater.
Notes: Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 156.3.8 Constructor(Bundle as folderitem) 20629

156.3.8 Constructor(Bundle as folderitem)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The constructor for the updater.
Notes:

Targets for the update the bundle you specify. This can be used to update a preference panel for example.

Please create only one instance of the SUUpdaterMBS class in your application using this constructor.
See also:

- 156.3.7 Constructor 20629

156.3.9 installUpdatesIfAvailable

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks for updates and, if available, immediately downloads and installs them.
Notes:

A progress dialog is shown but the user will never be prompted to read the release notes.

You may want to respond to the userDidCancelDownload event in case the user clicks the "Cancel" button while the update is downloading.

Only available in newer Sparkle version for 64-bit.

156.3.10 InvokeImmediateInstallation

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** If installation was moved to quit of app, you can call this method to update now.
Notes: New in version 1.6 of Sparkle.

156.3.11 InvokeUpdate

MBS MacExtras Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Invokes a postponed updated.
Notes: Call this after you returned true in shouldPostponeRelaunchForUpdate event and have time to restart.

156.3.12 IsFrameworkLoaded as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the framework has been loaded.
Notes: Returns true if the Sparkle framework has been loaded.

156.3.13 LoadFramework(path as folderitem) as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the Sparkle framework from the given folderitem.
Notes:

Returns false on Windows and Linux or on Mac OS X if the framework failed to load.
Return true if the framework was loaded already or was loaded successfully.

Be aware that the Sparkle Framework needs correct file permissions:

$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Sparkle"
$ { APPFILENAME } /Contents/Frameworks/Sparkle.framework/Versions/A/Resources/relaunch"

If the permissions are set wrong the relaunch does not work.

You can run app from Terminal to see any error message while loading framework. You may need to code sign both the Sparkle framework and the app with your code signing certificate. Finally make sure platform (32 or 64bit) match between app and framework.

156.3.14 resetUpdateCycle

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Resets the update cycle.
Notes: Call this to appropriately schedule or cancel the update checking timer according to the preferences for time interval and automatic checks. This call does not change the date of the next check, but only the

internal timer.

156.3.15 Properties

156.3.16 automaticallyChecksForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether update checks are performed automatically.
Notes: (Read and Write property)

156.3.17 automaticallyDownloadsUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether downloads should be downloaded automatically.
Notes: (Read and Write property)

156.3.18 feedURL as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The URL of the appcast feed.
Notes: (Read and Write property)

156.3.19 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle to the object used.
Notes: (Read and Write property)

156.3.20 hostBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The target application to update.
Notes:

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

156.3.21 httpHeaders as Dictionary

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The HTTP headers to include with fetchAppcastFromURL call.
Notes:

You can check this dictionary for HTTP headers.
Or make a new dictionary and assign it to this property to set http headers to include in transfer.
(Read and Write property)

156.3.22 lastUpdateCheckDate as date

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date of the last update check.
Notes:

Returns nil if no check has been performed.
(Read only property)

156.3.23 sendsSystemProfile as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the system profile is sent to the server.
Notes: (Read and Write property)

156.3.24 sparkleBundle as Variant

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The sparkle bundle.
Notes:

Value is a NSBundleMBS object.
You can query BundleFolder on the NSBundle object to know where your app is.
(Read only property)

156.3.25 updateCheckInterval as Double

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** After which time the next update check is performed.
Notes: (Read and Write property)

156.3.26 updateInProgress as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether an update is in progress.
Notes: (Read only property)

156.3.27 userAgentString as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Which user agent string to use for the http download.
Notes: (Read and Write property)

156.3.28 Events

156.3.29 bestValidUpdateInAppcast(appcast as SUAppcastMBS) as SUAppcastItemMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called to decide which appcast item is the best to use.
Notes:

If you're using special logic or extensions in your appcast, implement this to use your own logic for finding a valid update, if any, in the given appcast.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

156.3.30 didAbortWithError(error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after an update is aborted due to an error.
Notes:

error: The error that caused the abort

This is a newer event which is only called in 64-bit version.

156.3.31 didCancelInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update is scheduled to be silently installed on quit and cancelled.
Notes: New in version 1.6 of Sparkle.

156.3.32 didFindValidUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called when a valid update is found by the update driver.
Notes:

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

156.3.33 didFinishLoadingAppcast(update as SUAppcastMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the appcast has been loaded.
Notes:

Implement this if you want to do some special handling with the appcast once it finishes loading.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

156.3.34 failedToDownloadUpdate(item as SUAppcastItemMBS, error as NSErrorMBS)

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after the specified update failed to download.
Notes:

item: The appcast item corresponding to the update that failed to download.
error: The error generated by the failed download.

This is a newer event which is only called in 64-bit version.

156.3.35 feedParametersForUpdater(sendingProfile as boolean) as dictionary()

MBS MacExtras Plugin, Plugin Version: 14.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Provide additional parameters for updater.
Notes: This method allows you to add extra parameters to the appcast URL, potentially based on whether or not Sparkle will also be sending along the system profile. This method should return an array of dictionaries with keys: "key", "value", "displayKey", "displayValue", the latter two being specifically for display to the user.

156.3.36 feedURLStringForUpdater as String

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Override this to dynamically specify the entire feed URL.
Notes: New in version 1.6 of Sparkle.

156.3.37 pathToRelaunchForUpdater as string

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called so you can customize the installation destination of the update.
Notes:

This event returns the path which is used to relaunch the client after the update is installed. By default, the path of the host bundle.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

156.3.38 shouldPostponeRelaunchForUpdate(sendingProfile as SUAppcastItemMBS) as boolean

MBS MacExtras Plugin, Plugin Version: 14.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Return true to delay the relaunch until you do some processing.
Notes:

Invoke the update later by calling InvokeUpdate method.
This is not called if the user didn't relaunch on the previous update, in that case it will immediately restart.

156.3.39 updaterDidNotFindUpdate

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when a valid update is not found.
Notes: Plugin version 8.7 makes sure this method is executed on the main thread.

156.3.40 updaterDidShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called after an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

156.3.41 updaterMayCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Use this to keep Sparkle from popping up e.g. while your setup assistant is showing.
Notes: New in version 1.6 of Sparkle.

156.3.42 updaterShouldPromptForPermissionToCheckForUpdates as boolean

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event to decide whether the updater should prompt for permission to check for updates.
Notes:

Use this to override the default behavior for Sparkle prompting the user about automatic update checks.

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

156.3.43 updaterShouldRelaunchApplication as boolean

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Whether app should be relaunched.
Notes:

Some apps *can not* be relaunched in certain circumstances. They can use this method to prevent a relaunch "hard".
New in version 1.6 of Sparkle.

156.3.44 updaterWillRelaunchApplication

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called immediately before relaunching.
Notes:

Plugin version 8.7 makes sure this method is executed on the main thread.

The current Sparkle (1.5b6) implementation seems to force quit the application so this method is the last chance for your application to clean up.

156.3.45 updaterWillShowModalAlert

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called before an updater shows a modal alert window, to give the host the opportunity to hide attached windows etc. that may get in the way.
Notes: New in version 1.6 of Sparkle.

156.3.46 userDidCancelDownload

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when the user clicks the cancel button while and update is being downloaded.
Notes: This is a newer event which is only called in 64-bit version.

156.3.47 versionComparatorForUpdater as SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event allows you to provide a custom version comparator.
Notes:

If you don't implement this event or return nil, the standard version comparator will be used.

Please makes ure that the SUVersionComparisonMBS object lives longer, so it can be used later. e.g. keep a reference in an app property.

156.3.48 willDownloadUpdate(item as SUAppcastItemMBS, request as Variant)

MBS MacExtras Plugin, Plugin Version: 16.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called immediately before downloading the specified update.
Notes:

item: The appcast item corresponding to the update that is proposed to be downloaded.
request: The mutable URL request that will be used to download the update. (NSMutableURLRequestMBS object)

This is a newer event which is only called in 64-bit version.

156.3.49 willInstallUpdate(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** This event is called immediately before installing the specified update.
Notes:

If you leave this event empty the default handler will be called. If you add code here, the default handle will not be called!

Plugin version 8.7 makes sure this method is executed on the main thread.

156.3.50 willInstallUpdateOnQuit(update as SUAppcastItemMBS)

MBS MacExtras Plugin, Plugin Version: 14.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update is scheduled to be silently installed on quit.
Notes:

New in version 1.6 of Sparkle.
If you like to install now instead, you can call InvokeImmediateInstallation method.

156.3.51 Constants

156.3.52 SUAppcastError = 1002

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: An error occurred in retrieving update information.

156.3.53 SUAppcastParseError = 1000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes:

An error occurred while parsing the update feed.
The appcast must be valid xml.

156.3.54 SUAuthenticationFailure = 4001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: Unable to grant authorization to perform action because it is explicitly turned off.

156.3.55 SUDowngradeError = 4006

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: The update contains an older version.

156.3.56 SUFileCopyFailure = 4000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: File copy failed.

156.3.57 SUInstallationError = 4005

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: An error occurred while installing the update.

156.3.58 SUMissingInstallerToolError = 4003

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: The installer tool is missing.

156.3.59 SUMissingUpdateError = 4002

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes:

Couldn't find an appropriate update in the downloaded package.
App name or bundle ID must match to current app.

156.3.60 SUNoUpdateError = 1001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: You already have the newest version.

156.3.61 SURelaunchError = 4004

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: Failed to relaunch.

156.3.62 SURunningFromDiskImageError = 1003

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: The app runs from disk image and can't update.

156.3.63 SUSignatureError = 3001

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: The signture doesn't match.

156.3.64 SUSparkleErrorDomain = "SUSparkleErrorDomain"

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** The error domain for all Sparkle errors.

156.3.65 SUSystemPowerOffError = 5000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: The update will not be installed because the user requested for the system to power off.

156.3.66 SUTemporaryDirectoryError = 2000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: Failed to get temp file.

156.3.67 SUUnarchivingError = 3000

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** One of the Sparkle error codes.
Notes: Failed to unarchive the update.

156.3.68 SUUpdaterAppcastItemNotificationKey = "SUUpdaterAppcastItemNotificationKey"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the keys for user info dictionary.
Notes: Key for the SUAppcastItem object in the SUUpdaterDidFindValidUpdateNotification & SUUpdaterWillInstallUpdateNotification userInfo dictionaries.

156.3.69 SUUpdaterAppcastNotificationKey = "SUUpdaterAppcastNotificationKey"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** Key for the SUAppcast object in the SUUpdaterDidFinishLoadingAppCastNotification userInfo.

156.3.70 SUUpdaterDidFindValidUpdateNotification = "SUUpdaterDidFindValidUpdateNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

156.3.71 SUUpdaterDidFinishLoadingAppCastNotification = "SUUpdaterDidFinishLoadingAppCastNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

156.3.72 SUUpdaterDidNotFindUpdateNotification = "SUUpdaterDidNotFindUpdateNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

156.3.73 SUUpdaterWillInstallUpdateNotification = "SUUpdaterWillInstallUpdateNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

156.3.74 SUUpdaterWillRelaunchApplicationNotification = "SUUpdaterWillRelaunchApplicationNotification"

MBS MacExtras Plugin, Plugin Version: 14.4. **Function:** One of the notification constants for use with NSNotificationObserverMBS class.
Notes: Object for this notification is the updater.

156.3.75 SUUpdaterWillRestartNotification = "SUUpdaterWillRestartNotificationName"

MBS MacExtras Plugin, Plugin Version: 16.1. **Function:** The notification sent when updater will restart app.

156.4 class SUVersionComparisonMBS

156.4.1 class SUVersionComparisonMBS

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Implement this class to provide version comparison facilities for Sparkle.
Notes: Or use the default implementation by not implementing the versionComparatorForUpdater event.

156.4.2 Methods

156.4.3 Constructor

MBS MacExtras Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.

156.4.4 Destructor

MBS MacExtras Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

156.4.5 Properties

156.4.6 Handle as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal handle for this object.
Notes: (Read and Write property)

156.4.7 Events

156.4.8 compareVersion(VersionA as string, VersionB as string) as Integer

MBS MacExtras Plugin, Plugin Version: 8.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The method to compare two version strings.
Notes:

Should return NSOrderedAscending if b >a, NSOrderedDescending if b <a, and NSOrderedSame if they are equivalent.

This function may be called on the main thread or some other thread, so disable stack checking in your event.

156.4.9 Constants

156.4.10 NSOrderedAscending = -1

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.

156.4.11 NSOrderedDescending = 1

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.

156.4.12 NSOrderedSame = 0

MBS MacExtras Plugin, Plugin Version: 8.6. **Function:** One of the order constants.

156.5 class WinSparkleMBS

156.5.1 class WinSparkleMBS

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for WinSparkle library.
Notes:

Please first use LoadLibrary, than set properties and finally call Initialize.
Optionally you can later call Check methods.

156.5.2 Methods

156.5.3 CheckUpdateWithoutUI

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if an update is available.
Example:

WinSparkleMBS.CheckUpdateWithoutUI

Notes:

No progress UI is shown to the user when checking. If an update is available, the usual "update available" window is shown; this function is *not* completely UI-less.
Use with caution, it usually makes more sense to use the automatic update checks on interval option or manual check with visible UI.
This function returns immediately.
This function respects "Skip this version" choice by the user.

156.5.4 CheckUpdateWithUI

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if an update is available, showing progress UI to the user.
Example:

WinSparkleMBS.CheckUpdateWithUI

Notes:

Normally, WinSparkle checks for updates on startup and only shows its UI when it finds an update. If the application disables this behavior, it can hook this function to "Check for updates..." menu item.

When called, background thread is started to check for updates. A small window is shown to let the user know the progress. If no update is found, the user is told so. If there is an update, the usual "update available" window is shown.
This function returns immediately.

Because this function is intended for manual, user-initiated checks for updates, it ignores "Skip this version" even if the user checked it previously.

156.5.5 CheckUpdateWithUIAndInstall

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks if an update is available, showing progress UI to the user and immediately installing the update if one is available.
Example:

WinSparkleMBS.CheckUpdateWithUIAndInstall

Notes:

This is useful for the case when users should almost always use the newest version of your software. When called, WinSparkle will check for updates showing a progress UI to the user. If an update is found the update prompt will be skipped and the update will be installed immediately.
If your application expects to do something after checking for updates you may wish to use DidNotFindUpdate and UpdateCancelled events.

156.5.6 Cleanup

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Cleans up after WinSparkle.
Example:

WinSparkleMBS.Cleanup

Notes: Should be called by the app when it's shutting down. Cancels any pending Sparkle operations and shuts down its helper threads.

156.5.7 Initialize

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Starts WinSparkle.
Example:

```
WinSparkleMBS.Initialize
```

Notes:

If WinSparkle is configured to check for updates on startup, proceeds to perform the check. You should only call this function when your app is initialized and shows its main window.

This call doesn't block and returns almost immediately. If an update is available, the respective UI is shown later from a separate thread.

156.5.8 LoadLibrary(File as folderitem) as boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the WinSparkle DLL.
Example:

```
dim f as FolderItem = GetFolderItem("WinSparkle.dll")

if WinSparkleMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 156.5.9 LoadLibrary(Path as string) as boolean 20647

156.5.9 LoadLibrary(Path as string) as boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Loads the WinSparkle DLL.
Example:

```
if WinSparkleMBS.LoadLibrary("Libs\WinSparkle.dll") then
MsgBox "OK"
```

```
else
MsgBox "Failed to load DLL."
end if
```

Notes: Returns true on success.
See also:

- 156.5.8 LoadLibrary(File as folderitem) as boolean 20647

156.5.10 Properties

156.5.11 AppCastURL as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets URL for the app's appcast.
Example:

```
WinSparkleMBS.AppCastURL = "https://www.monkeybreadsoftware.test/test/test.xml"
```

Notes:

Only http and https schemes are supported.

If this function isn't called by the app, the URL is obtained from Windows resource named "FeedURL" of type "APPCAST".

Always use HTTPS feeds, do not use unencrypted HTTP! This is necessary to prevent both leaking user information and preventing various MITM attacks.

See https://github.com/vslavik/winsparkle/wiki/Appcast-Feeds for more information about appcast feeds.
(Read and Write property)

156.5.12 AppName as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Application name.
Example:

```
WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"
```

Notes:

This is both shown to the user and used in HTTP User-Agent header.

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

156.5.13 AppVersion as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Version of the app, as string (e.g. "1.2" or "1.2rc1").
Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

156.5.14 AutomaticCheckForUpdates as Boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether updates are checked automatically or only through a manual call.
Example:

WinSparkleMBS.AutomaticCheckForUpdates = true

Notes:

If disabled, CheckUpdateWithUI must be used explicitly.

True to have updates checked automatically, false otherwise.

Defaults to false when not yet configured (as happens on first start).
(Read and Write property)

156.5.15 BuildVersion as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets application build version number.
Example:

WinSparkleMBS.BuildVersion = "123"

Notes:

This is the internal version number that is not normally shown to the user. It can be used for finer granularity that official release versions, e.g. for interim builds.

If this function is called, then the provided *build* number is used for comparing versions; it is compared to the "version" attribute in the appcast and corresponds to OS X Sparkle's CFBundleVersion handling. If used, then the appcast must also contain the "shortVersionString" attribute with human-readable display version string. The version passed to AppVersion property corresponds to this and is used for display.
(Read and Write property)

156.5.16 CanShutdown as Boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether your app can shutdown now.
Example:

WinSparkleMBS.CanShutdown = false

Notes:

By default true.
Set to false when you have something like an open edited document.
(Read and Write property)

156.5.17 CompanyName as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the vendor.

Example:

WinSparkleMBS.CompanyName = "Monkeybread Software"
WinSparkleMBS.AppName = "Test App"
WinSparkleMBS.AppVersion = "1.2.3"

Notes:

CompanyName and AppName are used to determine the location of WinSparkle settings in registry. (HKCU\Software\<CompanyName>\<AppName>\WinSparkle is used.)

If not set, this value is read from VERSIONINFO/StringFileInfo resources.
(Read and Write property)

156.5.18 DSAPubPEM as String

MBS Win Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The public key in PEM format.
Notes:

If not set, the framework will look into the app resources.
(Read and Write property)

156.5.19 Language as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets UI language from its ISO code.
Example:

WinSparkleMBS.Language = "en-US"

Notes:

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.

ISO 639 language code with an optional ISO 3116 country code, e.g. "fr", "pt-PT", "pt-BR" or "pt_BR",
(Read and Write property)

156.5.20 LanguageID as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets UI language from its Win32 LANGID code.
Notes:

Language and LanguageID properties set user interface language. One must be set before
Initialize to have any effect. If none of them is called, WinSparkle detects the UI language automatically.
(Read and Write property)

156.5.21 LastCheckTime as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the time for the last update check.
Notes:

Default value is -1, indicating that the update check has never run.
(Read only property)

156.5.22 RegistryPath as String

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The registry path where settings will be stored.
Example:

WinSparkleMBS.RegistryPath = "Software\My App\Updates"

Notes:

Normally, these are stored in "HKCU\Software\<company_name>\<app_name>\WinSparkle" but if your application needs to store the data elsewhere for some reason, using this function is an alternative.
Note that path is relative to HKCU/HKLM root and the root is not part of it. For example:
(Read and Write property)

156.5.23 UpdateCheckInterval as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The automatic update interval.
Example:

WinSparkleMBS.UpdateCheckInterval = 7200

Notes:

The interval in seconds between checks for updates. The minimum update interval is 3600 seconds (1 hour). (Read and Write property)

156.5.24 Events

156.5.25 DidFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update was found.

156.5.26 DidNotFindUpdate

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update was not found.

156.5.27 Error

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when an update failed due to an error.

156.5.28 ShutdownRequest

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event to ask the host to shut down immediately after launching the installer.
Notes: Its implementation should gracefully terminate the application.

156.5.29 UpdateCancelled

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The update was cancelled.

Chapter 157

Special Folders

157.1 Globals

157.1.1 ALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMLocationsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMLocationsFolder function.

157.1.2 ALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMModulesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateALMModulesFolder function.

157.1.3 ALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ALMPreferencesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateALMPreferencesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.4 AppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppearanceFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppearanceFolder function.

157.1.5 AppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleExtrasFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleExtrasFolder function.

157.1.6 AppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleMenuFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAppleMenuFolder function.

157.1.7 AppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleShareAuthenticationFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareAuthenticationFolder function.

157.1.8 AppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleshareAutomountServerAliasesFolderMBS function.

157.1.9 AppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AppleShareSupportFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAppleShareSupportFolder function.

157.1.10 ApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ApplicationsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationsFolder function.
On Windows, only the System Domain is supported.

157.1.11 ApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
```

```
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateApplicationSupportFolder function.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

```
-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"
```

At last it is your decision to use the correct one!

157.1.12 AssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AssistantsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAssistantsFolder function.

157.1.13 AudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioAlertSoundsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioAlertSoundsFolder function.

157.1.14 AudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioComponentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioComponentsFolder function.

157.1.15 AudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioDigidesignFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioDigidesignFolderMBS function.

157.1.16 AudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioPlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioPlugInsFolder function.

157.1.17 AudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioPresetsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioPresetsFolderMBS function.

157.1.18 AudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioSoundBanksFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioSoundBanksFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.19 AudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioSoundsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSoundsFolder function.

157.1.20 AudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioSupportFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAudioSupportFolder function.

157.1.21 AudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AudioVSTFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateAudioVSTFolderMBS function.

157.1.22 AutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = AutomatorWorkflowsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAutomatorWorkflowsFolderMBS function.

157.1.23 AutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = AutosaveInformationFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateAutosaveInformationFolderMBS function.

157.1.24 BootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = BootTimeStartupItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateBootTimeStartupItemsFolderMBS function.

157.1.25 CachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CachedDataFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCachedDataFolder function.

157.1.26 CarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CarbonLibraryFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateCarbonLibraryFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.27 ChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ChewableItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateChewableItemsFolder function.

157.1.28 classicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ClassicDesktopFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateClassicDesktopFolder function.

157.1.29 ClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ClassicPreferencesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateClassicPreferencesFolderMBS function.

157.1.30 ColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = ColorPickersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorPickersFolderMBS function.

157.1.31 ColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncCMMFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncCMMFolder function.

157.1.32 ColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncFolder function.

157.1.33 ColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncProfilesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateColorSyncProfilesFolder function.

157.1.34 ColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ColorSyncScriptingFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateColorSyncScriptingFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.35 ComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ComponentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateComponentsFolder function.

157.1.36 CompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CompositionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCompositionsFolderMBS function.

157.1.37 ContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ContextualMenuItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateContextualMenuItemsFolder function.

157.1.38 ControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = ControlPanelDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelDisabledFolder function.

157.1.39 ControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ControlPanelFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlPanelFolder function.

157.1.40 ControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ControlStripModulesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateControlStripModulesFolder function.

157.1.41 CoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CoreServicesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCoreServicesFolder function.

157.1.42 CreateALMLocationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateALMLocationsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ALMLocationsFolder function.

157.1.43 CreateALMModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateALMModulesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ALMModulesFolder function.

157.1.44 CreateALMPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateALMPreferencesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ALMPreferencesFolder function.

157.1.45 CreateAppearanceFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppearanceFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppearanceFolder function.

157.1.46 CreateAppleExtrasFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleExtrasFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleExtrasFolder function.

157.1.47 CreateAppleMenuFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleMenuFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleMenuFolder function.

157.1.48 CreateAppleShareAuthenticationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareAuthenticationFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareAuthenticationFolder function.

157.1.49 CreateAppleshareAutomountServerAliasesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleshareAutomountServerAliasesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleshareAutomountServerAliasesFolderMBS function.

157.1.50 CreateAppleShareSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAppleShareSupportFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AppleShareSupportFolder function.

157.1.51 CreateApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateApplicationsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationsFolder function.
On Windows, only the System Domain is supported.

157.1.52 CreateApplicationSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateApplicationSupportFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ApplicationSupportFolder function.

Xojo ApplicationSupport function points to "/Library/Application Support" while ApplicationSupportFolderMBS points to different locations on my test system depending on the domain code:

-32768 ->"/Library/Application Support"
-32767 ->"/Library/Application Support"
-32766 ->nil
-32765 ->"/Library/Application Support"
-32764 ->nil
-32763 ->"/Users/cs/Library/Application Support"
-32762 ->"/Volumes/Mac OS 9/Systemordner/Application Support"
0 ->"/Library/Application Support"

At last it is your decision to use the correct one!

157.1.53 CreateAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAssistantsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AssistantsFolder function.

157.1.54 CreateAudioAlertSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioAlertSoundsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioAlertSoundsFolder function.

157.1.55 CreateAudioComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioComponentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioComponentsFolder function.

157.1.56 CreateAudioDigidesignFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioDigidesignFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioDigidesignFolderMBS function.

157.1.57 CreateAudioPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPlugInsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioPlugInsFolder function.

157.1.58 CreateAudioPresetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioPresetsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioPresetsFolderMBS function.

157.1.59 CreateAudioSoundBanksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundBanksFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundBanksFolder function.

157.1.60 CreateAudioSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSoundsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSoundsFolder function.

157.1.61 CreateAudioSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioSupportFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioSupportFolder function.

157.1.62 CreateAudioVSTFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAudioVSTFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AudioVSTFolderMBS function.

157.1.63 CreateAutomatorWorkflowsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAutomatorWorkflowsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutomatorWorkflowsFolderMBS function.

157.1.64 CreateAutosaveInformationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateAutosaveInformationFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the AutosaveInformationFolderMBS function.

157.1.65 CreateBootTimeStartupItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateBootTimeStartupItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the BootTimeStartupItemsFolderMBS function.

157.1.66 CreateCachedDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCachedDataFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CachedDataFolder function.

157.1.67 CreateCarbonLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCarbonLibraryFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CarbonLibraryFolder function.

157.1.68 CreateChewableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateChewableItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ChewableItemsFolder function.

157.1.69 CreateClassicDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicDesktopFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ClassicDesktopFolder function.

157.1.70 CreateClassicPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateClassicPreferencesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ClassicPreferencesFolderMBS function.

157.1.71 CreateColorPickersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorPickersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorPickersFolderMBS function.

157.1.72 CreateColorSyncCMMFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncCMMFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncCMMFolder function.

157.1.73 CreateColorSyncFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncFolder function.

157.1.74 CreateColorSyncProfilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncProfilesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncProfilesFolder function.

157.1.75 CreateColorSyncScriptingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateColorSyncScriptingFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ColorSyncScriptingFolder function.

157.1.76 CreateComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateComponentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ComponentsFolder function.

157.1.77 CreateCompositionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCompositionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CompositionsFolderMBS function.

157.1.78 CreateContextualMenuItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateContextualMenuItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ContextualMenuItemsFolder function.

157.1.79 CreateControlPanelDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelDisabledFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelDisabledFolder function.

157.1.80 CreateControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlPanelFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlPanelFolder function.

157.1.81 CreateControlStripModulesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateControlStripModulesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ControlStripModulesFolder function.

157.1.82 CreateCoreServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCoreServicesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CoreServicesFolder function.

157.1.83 CreateCurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserFolder function.

157.1.84 CreateCurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

157.1.85 CreateCurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateCurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CurrentUserRemoteFolder function.

157.1.86 CreateDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpecialFolder.Desktop function.

157.1.87 CreateDesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDesktopPicturesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DesktopPicturesFolder function.

157.1.88 CreateDeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The developer application folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperApplicationsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperApplicationsFolderMBS function.

157.1.89 CreateDeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperDocsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperDocsFolder function.

157.1.90 CreateDeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperFolder function.

157.1.91 CreateDeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDeveloperHelpFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DeveloperHelpFolder function.

157.1.92 CreateDictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDictionariesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DictionariesFolderMBS function.

157.1.93 CreateDirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesFolder function.

157.1.94 CreateDirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DirectoryServicesPlugInsFolder function.

157.1.95 CreateDisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDisplayExtensionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DisplayExtensionsFolder function.

157.1.96 CreateDocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentationFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DocumentationFolder function.

157.1.97 CreateDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDocumentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DocumentsFolder function.
On Windows only the user and the system domain are supported.

157.1.98 CreateDomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainLibraryFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DomainLibraryFolder function.

157.1.99 CreateDomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDomainTopLevelFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DomainTopLevelFolder function.

157.1.100 CreateDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateDownloadsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the DownloadsFolderMBS function.

157.1.101 CreateEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateEditorsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the EditorsFolder function.

157.1.102 CreateExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionDisabledFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionDisabledFolder function.

157.1.103 CreateExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateExtensionFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ExtensionFolder function.

157.1.104 CreateFavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFavoritesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FavoritesFolder function.

157.1.105 CreateFileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFileSystemSupportFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FileSystemSupportFolder function.

157.1.106 CreateFindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentFolder function.

157.1.107 CreateFindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentIndexesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentIndexesFolderMBS function.

157.1.108 CreateFindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindByContentPluginsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindByContentPluginsFolder function.

157.1.109 CreateFindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFindSupportFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FindSupportFolder function.

157.1.110 CreateFolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFolderActionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FolderActionsFolder function.

157.1.111 CreateFontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFontCollectionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontCollectionsFolderMBS function.

157.1.112 CreateFontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFontsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FontsFolder function.

157.1.113 CreateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateFrameworksFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the FrameworksFolder function.

157.1.114 CreateGenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateGenEditorsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the GenEditorsFolder function.

157.1.115 CreateHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateHelpFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the HelpFolder function.

157.1.116 CreateiMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateiMovieFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the iMovieFolderMBS function.

157.1.117 CreateiMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateiMoviePlugInsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the iMoviePlugInsFolderMBS function.

157.1.118 CreateiMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

157.1.119 CreateIndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.

157.1.120 CreateInputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInputManagersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InputManagersFolderMBS function.

157.1.121 CreateInputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputMethodsFolderMBS function.

157.1.122 CreateInstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerLogsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InstallerLogsFolder function.

157.1.123 CreateInstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInstallerReceiptsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InstallerReceiptsFolder function.

157.1.124 CreateInternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetFolder function.

157.1.125 CreateInternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetPlugInFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetPlugInFolder function.

157.1.126 CreateInternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSearchSitesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetSearchSitesFolder function.

157.1.127 CreateInternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateInternetSitesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the InternetSitesFolder function.

157.1.128 CreateISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateISSDownloadsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ISSDownloadsFolder function.

157.1.129 CreateKernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateKernelExtensionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the KernelExtensionsFolder function.

157.1.130 CreateKeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

157.1.131 CreateKeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateKeychainFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the KeychainFolder function.

157.1.132 CreateLauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateLauncherItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LauncherItemsFolder function.

157.1.133 CreateLibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

157.1.134 CreateLocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateLocalesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LocalesFolder function.

157.1.135 CreateLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The log files folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateLogsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the LogsFolderMBS function.

157.1.136 CreateMacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMacOSReadMesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MacOSReadMesFolder function.

157.1.137 CreateMagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

157.1.138 CreateManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateManagedItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ManagedItemsFolderMBS function.

157.1.139 CreateMIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMIDIDriversFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MIDIDriversFolder function.

157.1.140 CreateModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateModemScriptsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ModemScriptsFolder function.

157.1.141 CreateMovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMovieDocumentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MovieDocumentsFolder function.

157.1.142 CreateMultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMultiprocessingFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MultiprocessingFolder function.

157.1.143 CreateMusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateMusicDocumentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the MusicDocumentsFolder function.

157.1.144 CreateOpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocEditorsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocEditorsFolder function.

157.1.145 CreateOpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocFolder function.

157.1.146 CreateOpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocLibrariesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocLibrariesFolder function.

157.1.147 CreateOpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateOpenDocShellPlugInsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the OpenDocShellPlugInsFolder function.

157.1.148 CreatePictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePictureDocumentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

157.1.149 CreatePreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The preferences panes folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencePanesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PreferencePanesFolderMBS function.

157.1.150 CreatePreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePreferencesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PreferencesFolder function.

157.1.151 CreatePrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDescriptionFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrinterDescriptionFolder function.

157.1.152 CreatePrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrinterDriverFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrinterDriverFolder function.

157.1.153 CreatePrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintersFolder function.

157.1.154 CreatePrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintingPlugInsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintingPlugInsFolder function.

157.1.155 CreatePrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrintMonitorDocsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrintMonitorDocsFolder function.

157.1.156 CreatePrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePrivateFrameworksFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PrivateFrameworksFolder function.

157.1.157 CreatePublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreatePublicFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the PublicFolder function.

157.1.158 CreateQuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickLookFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickLookFolderMBS function.

157.1.159 CreateQuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeComponentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeComponentsFolder function.

157.1.160 CreateQuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateQuickTimeExtensionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the QuickTimeExtensionsFolder function.

157.1.161 CreateRecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentApplicationsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentApplicationsFolder function.

157.1.162 CreateRecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentDocumentsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentDocumentsFolder function.

157.1.163 CreateRecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateRecentServersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the RecentServersFolder function.

157.1.164 CreateScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptingAdditionsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ScriptingAdditionsFolder function.

157.1.165 CreateScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateScriptsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ScriptsFolder function.

157.1.166 CreateSharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedLibrariesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedLibrariesFolder function.

157.1.167 CreateSharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSharedUserDataFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SharedUserDataFolder function.

157.1.168 CreateShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownFolder function.

157.1.169 CreateShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateShutdownItemsDisabledFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ShutdownItemsDisabledFolder function.

157.1.170 CreateSoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSoundSetsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SoundSetsFolder function.

157.1.171 CreateSpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeakableItemsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpeakableItemsFolder function.

157.1.172 CreateSpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSpeechFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpeechFolder function.

157.1.173 CreateSpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightImportersFolderMBS function.

157.1.174 CreateSpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

157.1.175 CreateSpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSpotlightSavedSearchesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SpotlightSavedSearchesFolderMBS function.

157.1.176 CreateStartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupFolder function.

157.1.177 CreateStartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStartupItemsDisabledFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StartupItemsDisabledFolder function.

157.1.178 CreateStationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateStationeryFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the StationeryFolder function.

157.1.179 CreateSystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemControlPanelFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemControlPanelFolder function.

157.1.180 CreateSystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemDesktopFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemDesktopFolder function.

157.1.181 CreateSystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemExtensionDisabledFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemExtensionDisabledFolder function.

157.1.182 CreateSystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemFolder function.

157.1.183 CreateSystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemPreferencesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemPreferencesFolder function.

157.1.184 CreateSystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemSoundsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemSoundsFolder function.

157.1.185 CreateSystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateSystemTrashFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the SystemTrashFolder function.

157.1.186 CreateTemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryFolder function.

157.1.187 CreateTemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInCacheDataFolderMBS function.

157.1.188 CreateTemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TemporaryItemsInUserDomainFolderMBS function.

157.1.189 CreateTextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTextEncodingsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TextEncodingsFolder function.

157.1.190 CreateThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateThemesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the ThemesFolder function.

157.1.191 CreateTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateTrashFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the TrashFolder function.

157.1.192 CreateUsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUsersFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UsersFolder function.

157.1.193 CreateUserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUserSpecificTmpFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UserSpecificTmpFolder function.

157.1.194 CreateUtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateUtilitiesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the UtilitiesFolder function.

157.1.195 CreateVoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVoicesFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VoicesFolder function.

157.1.196 CreateVolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeRootFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeRootFolder function.

157.1.197 CreateVolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateVolumeSettingsFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the VolumeSettingsFolder function.

157.1.198 CreateWhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CreateWhereToEmptyTrashFolderMBS(kUserDomain)
```

Notes:

If this folder is supported by the operation system version, the folder is created and returned. If the folder could not be created or is not supported, nil is returned. If the folder allready exists, it is just returned.
Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the WhereToEmptyTrashFolder function.

157.1.199 CurrentUserFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserFolder function.

157.1.200 CurrentUserRemoteFolderLocationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

157.1.201 CurrentUserRemoteFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = CurrentUserRemoteFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateCurrentUserRemoteFolder function.

157.1.202 DesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DesktopFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDesktopFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.203 DesktopPicturesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DesktopPicturesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDesktopPicturesFolder function.

157.1.204 DeveloperApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The developer application folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperApplicationsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperApplicationsFolderMBS function.

157.1.205 DeveloperDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperDocsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDeveloperDocsFolder function.

157.1.206 DeveloperFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperFolder function.

157.1.207 DeveloperHelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DeveloperHelpFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDeveloperHelpFolder function.

157.1.208 DictionariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The folder for the dictionaries.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DictionariesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDictionariesFolderMBSfunction.

157.1.209 DirectoryServicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDirectoryServicesFolder function.

157.1.210 DirectoryServicesPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DirectoryServicesPlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDirectoryServicesPlugInsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.211 DisplayExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DisplayExtensionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDisplayExtensionsFolder function.

157.1.212 DocumentationFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DocumentationFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDocumentationFolder function.
On Windows only the user and the system domain are supported.

157.1.213 DocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDocumentsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.214 DomainLibraryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DomainLibraryFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainLibraryFolder function.

157.1.215 DomainTopLevelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DomainTopLevelFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateDomainTopLevelFolder function.

157.1.216 DownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = DownloadsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateDownloadsFolderMBS function.

157.1.217 EditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = EditorsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateEditorsFolder function.

157.1.218 ExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ExtensionDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateExtensionDisabledFolder function.

157.1.219 ExtensionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ExtensionFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateExtensionFolder function.

157.1.220 FavoritesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FavoritesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFavoritesFolder function.

157.1.221 FileSystemSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FileSystemSupportFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFileSystemSupportFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.222 FindByContentFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FindByContentFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindByContentFolder function.

157.1.223 FindByContentIndexesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FindByContentIndexesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindByContentIndexesFolderMBS function.

157.1.224 FindByContentPluginsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FindByContentPluginsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFindByContentPluginsFolder function.

157.1.225 FindSupportFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = FindSupportFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFindSupportFolder function.

157.1.226 FolderActionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FolderActionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFolderActionsFolder function.

157.1.227 FontCollectionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FontCollectionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFontCollectionsFolderMBS function.

157.1.228 FontsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FontsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateFontsFolder function.

157.1.229 FrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = FrameworksFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateFrameworksFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.230 GenEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = GenEditorsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateGenEditorsFolder function.

157.1.231 HelpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = HelpFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateHelpFolder function.

157.1.232 iMovieFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = iMovieFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateiMovieFolderMBS function.

157.1.233 iMoviePlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = iMoviePlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMoviePlugInsFolderMBS function.

157.1.234 iMovieSoundEffectsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = iMovieSoundEffectsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateiMovieSoundEffectsFolderMBS function.

157.1.235 IndexFilesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = IndexFilesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateIndexFilesFolderMBS function.

157.1.236 InputManagersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InputManagersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInputManagersFolderMBS function.

157.1.237 InputMethodsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InputMethodsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateInputMethodsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.238 InstallerLogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InstallerLogsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInstallerLogsFolder function.

157.1.239 InstallerReceiptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InstallerReceiptsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInstallerReceiptsFolder function.

157.1.240 InternetFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateInternetFolder function.

157.1.241 InternetPlugInFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetPlugInFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetPlugInFolder function.

157.1.242 InternetSearchSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetSearchSitesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSearchSitesFolder function.

157.1.243 InternetSitesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = InternetSitesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateInternetSitesFolder function.

157.1.244 ISSDownloadsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ISSDownloadsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateISSDownloadsFolder function.

157.1.245 KernelExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KernelExtensionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateKernelExtensionsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.246 KeyboardLayoutsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeyboardLayoutsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeyboardLayoutsFolderMBS function.

157.1.247 KeychainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = KeychainFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateKeychainFolder function.

157.1.248 LauncherItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LauncherItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateLauncherItemsFolder function.

157.1.249 LibraryAssistantsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = LibraryAssistantsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLibraryAssistantsFolderMBS function.

157.1.250 LocalesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LocalesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLocalesFolder function.

157.1.251 LogsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The log files folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = LogsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateLogsFolderMBS function.

157.1.252 MacOSReadMesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MacOSReadMesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMacOSReadMesFolder function.

157.1.253 MagicTemporaryItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MagicTemporaryItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateMagicTemporaryItemsFolderMBS function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.254 ManagedItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ManagedItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateManagedItemsFolderMBS function.

157.1.255 MIDIDriversFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MIDIDriversFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMIDIDriversFolder function.

157.1.256 ModemScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ModemScriptsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateModemScriptsFolder function.

157.1.257 MovieDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = MovieDocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMovieDocumentsFolder function.

157.1.258 MultiprocessingFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MultiprocessingFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMultiprocessingFolder function.

157.1.259 MusicDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = MusicDocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateMusicDocumentsFolder function.

157.1.260 OpenDocEditorsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = OpenDocEditorsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocEditorsFolder function.

157.1.261 OpenDocFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = OpenDocFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateOpenDocFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.262 OpenDocLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = OpenDocLibrariesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocLibrariesFolder function.

157.1.263 OpenDocShellPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = OpenDocShellPlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateOpenDocShellPlugInsFolder function.

157.1.264 PictureDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PictureDocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePictureDocumentsFolder function.
As there is no such folder on Mac OS Classic, you always get nil there.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.265 PreferencePanesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The preferences panes folder.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PreferencePanesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencePanesFolderMBS function.

157.1.266 PreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem

f=preferencesFolderMBS(-32763)
if f=nil then // On Windows always nil
f=applicationsupportFolderMBS(-32763)
end if

msgBox f.NativePath

// example output:
// "Mac OS X:Users:cs:Library:Preferences:" on Mac OS X
// "Mac OS 9:Systemordner:Preferences" on a german Mac OS 9
// "C:\Dokumente und Einstellungen\Christian\Anwendungsdaten\" on a german Windows XP.
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePreferencesFolder function.

157.1.267 PrinterDescriptionFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrinterDescriptionFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!

The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDescriptionFolder function.

157.1.268 PrinterDriverFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrinterDriverFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrinterDriverFolder function.

157.1.269 PrintersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintersFolder function.

157.1.270 PrintingPlugInsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintingPlugInsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePrintingPlugInsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.271 PrintMonitorDocsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrintMonitorDocsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrintMonitorDocsFolder function.

157.1.272 PrivateFrameworksFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PrivateFrameworksFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreatePrivateFrameworksFolder function.

157.1.273 PublicFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = PublicFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreatePublicFolder function.

157.1.274 QuickLookFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = QuickLookFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickLookFolderMBS function.

157.1.275 QuickTimeComponentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = QuickTimeComponentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickTimeComponentsFolder function.

157.1.276 QuickTimeExtensionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = QuickTimeExtensionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateQuickTimeExtensionsFolder function.

157.1.277 RecentApplicationsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = RecentApplicationsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateRecentApplicationsFolder function.

157.1.278 RecentDocumentsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = RecentDocumentsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateRecentDocumentsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.279 RecentServersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = RecentServersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateRecentServersFolder function.

157.1.280 ScriptingAdditionsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ScriptingAdditionsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateScriptingAdditionsFolder function.

157.1.281 ScriptsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ScriptsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateScriptsFolder function.

157.1.282 SharedLibrariesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SharedLibrariesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedLibrariesFolder function.

157.1.283 SharedUserDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SharedUserDataFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSharedUserDataFolder function.

157.1.284 ShutdownFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ShutdownFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownFolder function.

157.1.285 ShutdownItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = ShutdownItemsDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateShutdownItemsDisabledFolder function.

157.1.286 SoundSetsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SoundSetsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSoundSetsFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.287 SpeakableItemsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpeakableItemsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeakableItemsFolder function.

157.1.288 SpeechFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpeechFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpeechFolder function.

157.1.289 SpotlightImportersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightImportersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSpotlightImportersFolderMBS function.

157.1.290 SpotlightMetadataCacheFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightMetadataCacheFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightMetadataCacheFolderMBS function.

157.1.291 SpotlightSavedSearchesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SpotlightSavedSearchesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSpotlightSavedSearchesFolderMBS function.

157.1.292 StartupFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = StartupFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateStartupFolder function.

157.1.293 StartupItemsDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = StartupItemsDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateStartupItemsDisabledFolder function.

157.1.294 StationeryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = StationeryFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateStationeryFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.295 SystemControlPanelFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemControlPanelFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemControlPanelFolder function.

157.1.296 SystemDesktopFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemDesktopFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemDesktopFolder function.

157.1.297 SystemExtensionDisabledFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemExtensionDisabledFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateSystemExtensionDisabledFolder function.

157.1.298 SystemFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemFolder function.

157.1.299 SystemPreferencesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemPreferencesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemPreferencesFolder function.

157.1.300 SystemSoundsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemSoundsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemSoundsFolder function.

157.1.301 SystemTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = SystemTrashFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateSystemTrashFolder function.

157.1.302 TemporaryFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTemporaryFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.303 TemporaryItemsInCacheDataFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInCacheDataFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryItemsInCacheDataFolderMBS function.

157.1.304 TemporaryItemsInUserDomainFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TemporaryItemsInUserDomainFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTemporaryItemsInUserDomainFolderMBS function.

157.1.305 TextEncodingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TextEncodingsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateTextEncodingsFolder function.

157.1.306 ThemesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = ThemesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateThemesFolder function.

157.1.307 TrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = TrashFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateTrashFolder function.

157.1.308 UsersFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = UsersFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUsersFolder function.

157.1.309 UserSpecificTmpFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = UserSpecificTmpFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateUserSpecificTmpFolder function.

157.1.310 UtilitiesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = UtilitiesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateUtilitiesFolder function.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

157.1.311 VoicesFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = VoicesFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVoicesFolder function.

157.1.312 VolumeRootFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = VolumeRootFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateVolumeRootFolder function.

157.1.313 VolumeSettingsFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
const kUserDomain = -32763
dim f as folderitem = VolumeSettingsFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

Also take a look on the CreateVolumeSettingsFolder function.

157.1.314 WhereToEmptyTrashFolderMBS(domain as Integer) as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Example:

```
const kUserDomain = -32763
dim f as folderitem = WhereToEmptyTrashFolderMBS(kUserDomain)
```

Notes:

Note that not every folder exists on every Mac OS Version!
The codes for domain are (The Demo includes a module for these):

-32768	On System Disk
-32767	On Appropriate Disk
-32766	System Domain, on Mac OS X mostly inside the folder /System.
-32765	Local Domain (on Netbooting for example)
-32764	Network Domain (on Netbooting for example)
-32763	User Domain, on Mac OS X mostly inside the users folder.
-32762	Classic Domain, the current used Classic System folder.

Also take a look on the CreateWhereToEmptyTrashFolder function.

157.1.315 WindowsBurnAreaFolderMBS as folderitem

MBS Util Plugin, Plugin Version: 8.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the folder which Windows uses to store temporary data for burning a CD/DVD.
Notes: Returns nil on any error.

157.1.316 WindowsFolderMBS as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem
f=WindowsFolderMBS
```

157.1.317 WindowsSystemFolderMBS as folderitem

MBS Util Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns a folderitem to this folder if it exists on that system.
Example:

```
dim f as folderitem
f=WindowsSystemFolderMBS
```

Chapter 158

Speech

158.1 class NSSpeechRecognizerMBS

158.1.1 class NSSpeechRecognizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to handle the cocoa speech recognition.
Notes: Available in Mac OS X v10.3 and later.

158.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

158.1.3 Methods

158.1.4 commands as string()

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current list of commands.

158.1.5 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

158.1.6 SetCommands(commands() as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the list of commands for which the receiver should listen to commands.
Notes: If the receiver is already listening, the current command list is updated and listening continues. commands should be an array of strings. The commands must be in U.S. English.

158.1.7 StartListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the speech recognition engine to begin listening for commands.
Notes: When a command is recognized the message didRecognizeCommand is called.

158.1.8 StopListening

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the speech recognition engine to suspend listening for commands.

158.1.9 Properties

158.1.10 BlocksOtherRecognizers as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the receiver should block all other recognizers (that is, other applications attempting to understand spoken commands) when listening.
Notes: (Read and Write property)

158.1.11 DisplayedCommandsTitle as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the title of the commands section or "" if there is no title.
Notes:

Commands are displayed in the Speech Commands window indented under a section with this title.
(Read and Write property)

158.1.12 ListensInForegroundOnly as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the receiver should only enable its commands when the receiver's application is the frontmost one.
Notes: (Read and Write property)

158.1.13 Events

158.1.14 DidRecognizeCommand(command as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Invoked when the recognition engine has recognized the application command command.
Notes: command is one of the strings from the array passed to setCommands. The delegate typically evaluates which command was recognized and performs the related action.

158.2 class NSSpeechSynthesizerMBS

158.2.1 class NSSpeechSynthesizerMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class to handle the cocoa speech synthesizing.
Notes:

Available in Mac OS X v10.3 and later.

More details on Apple's website:
https://developer.apple.com/library/mac/documentation/Cocoa/Reference/ApplicationKit/Classes/NSSpeechSynthesizer_Class/

158.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9
- MBS Xojo / Real Studio Plugins, version 13.2pr7
- MBS Real Studio Plugins, version 13.1pr11

158.2.3 Methods

158.2.4 addSpeechDictionary(speechDictionary as dictionary)

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Registers the given speech dictionary with the receiver.
Notes:

speechDictionary: Speech dictionary to add to the receiver's dictionaries.

See the discussion of UseSpeechDictionary in Speech Synthesis Manager Reference for more information.
Available in OS X v10.5 and later.

158.2.5 attributesForVoice(voice as String) as NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns information about a voice or nil.

158.2.6 availableVoice(index as Integer) as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns name of a voice.
Notes:

The available voices can be listed using this function.
Index is from 0 to count-1.

158.2.7 availableVoices as String()

MBS MacCocoa Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the array with the identifiers for the available voices.
Example:

MsgBox Join(NSSpeechSynthesizerMBS.availableVoices)

Notes: Same as availableVoice() and availableVoicesCount, but this function returns an array which is very useful for for-each-loops.

158.2.8 availableVoicesCount as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Number of voices available.

158.2.9 Constructor

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the class with the default voice.
Notes:

This constructor is needed for the events to fire.
The given voice must be valid!
See also:

- 158.2.10 Constructor(voice as string) 20866

158.2.10 Constructor(voice as string)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initializes the class with a voice.
Notes: This constructor is needed for the events to fire.
See also:

- 158.2.9 Constructor 20865

158.2.11 continueSpeaking

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Continues speaking after it has been paused.
Notes: Mac OS X 10.5 only.

158.2.12 defaultVoice as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides the identifier of the default voice.
Example:

```
dim s as NSSpeechSynthesizerMBS

s=new NSSpeechSynthesizerMBS

MsgBox s.defaultVoice
```

158.2.13 Destructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.

158.2.14 isAnyApplicationSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether any other application is currently speaking through the sound output device.

158.2.15 NSSpeechCharacterModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechCharacterModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechCharacterModeProperty, e)
```

Notes:

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.
When the character-processing mode is NSSpeechModeNormal, input characters are spoken as you would expect to hear them. When the mode is NSSpeechModeLiteral, each character is spoken literally, so that the word "cat" is spoken "C–A–T".
Available in OS X v10.5 and later.

158.2.16 NSSpeechCommandDelimiterProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the embedded speech command delimiter characters to be used for the synthesizer. A dictionary that contains the delimiter information. See "Command Delimiter Keys" for the keys you can use to specify values in this dictionary.
By default, the opening delimiter is " [[" and the closing delimiter is "]] ". Your application might need to change these delimiters temporarily if those character sequences occur naturally in a text buffer that is to be spoken. Your application can also disable embedded command processing by passing empty delimiters (as empty strings). See "Speech Command Delimiter" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

158.2.17 NSSpeechCommandPrefix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiterProperty.
Notes:

The command delimiter string that prefixes a command, by default, this is [[.
Available in OS X v10.5 and later.

158.2.18 NSSpeechCommandSuffix as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants speech-command delimiters keys used in NSSpeechCommandDelimiterProperty.
Notes:

The command delimiter string that suffixes a command,by default, this is]] .
Available in OS X v10.5 and later.

158.2.19 NSSpeechCurrentVoiceProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the current voice on the synthesizer to the specified voice. A dictionary that contains the phoneme symbols and example words defined for the current synthesizer.
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for the keys you can use to specify values in this dictionary.
Available in OS X v10.5 and later.

158.2.20 NSSpeechDictionaryAbbreviations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.
Available in OS X v10.5 and later.

158.2.21 NSSpeechDictionaryEntryPhonemes as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The phonemic representation of an entry. A string.
Available in OS X v10.5 and later.

158.2.22 NSSpeechDictionaryEntrySpelling as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The spelling of an entry. A string.
Available in OS X v10.5 and later.

158.2.23 NSSpeechDictionaryLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

The canonical locale identifier string describing the dictionary's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about NSLocale or Locales Programming Guide for more information
Available in OS X v10.5 and later.

158.2.24 NSSpeechDictionaryModificationDate as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes:

A string representation of the dictionary's last modification date in the international format (YYYY-MM-DD HH:MM:SS ±HHMM). If the same word appears across multiple dictionaries, the one from the dictionary with the most recent date will be used.

Available in OS X v10.5 and later.

158.2.25 NSSpeechDictionaryPronunciations as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify key-value pairs used to add vocabulary to the dictionary using addSpeechDictionary.
Notes: An array of dictionary objects containing the keys NSSpeechDictionaryEntrySpelling and NSSpeechDictionaryEntryPhonemes.

158.2.26 NSSpeechErrorCount as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The number of errors that have occurred in processing the current text string, since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Using the NSSpeechErrorOldestCode keys and the NSSpeechErrorNewestCode keys, you can get information about the oldest and most recent errors that occurred since the last call to objectForProperty, but you cannot get information about any intervening errors.
Available in OS X v10.5 and later.

158.2.27 NSSpeechErrorNewestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The position in the text string of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number.
Available in OS X v10.5 and later.

158.2.28 NSSpeechErrorNewestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The error code of the most recent error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

158.2.29 NSSpeechErrorOldestCharacterOffset as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The position in the text string of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A number
Available in OS X v10.5 and later.

158.2.30 NSSpeechErrorOldestCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the key constants identify errors that may occur during speech synthesis. They are used with NSSpeechErrorsProperty.
Notes:

The error code of the first error that occurred since the last call to objectForProperty with the NSSpeechErrorsProperty property. A Number
Available in OS X v10.5 and later.

158.2.31 NSSpeechErrorsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get speech-error information for the synthesizer. An Dictionary object that contains speech-error information. See "NSSpeechErrorProperty Dictionary Keys" for a description of the keys present in the dictionary. This property lets you get information about various run-time errors that occur during speaking, such as the detection of badly formed embedded commands. Errors returned directly by the Speech Synthesis Manager are not reported here.
If your application implements the didEncounterErrorAtIndex event, the event can use this property to get error information.
Available in OS X v10.5 and later.

158.2.32 NSSpeechInputModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get or set the synthesizer's current text-processing mode. A string that specifies whether the channel is currently in text input mode or phoneme input mode.The supported values are listed in "Speaking Modes for NSSpeechInputModeProperty."
When in phoneme-processing mode, a text string is interpreted to be a series of characters representing various phonemes and prosodic controls. Some synthesizers might support additional input-processing modes and define constants for these modes.
Available in OS X v10.5 and later.

158.2.33 NSSpeechModeLiteral as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes:

Indicates that each digit or character is spoken literally (so that 12 is spoken as "one, two", or the word "cat" is spoken as "C A T").
Available in OS X v10.5 and later.

158.2.34 NSSpeechModeNormal as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants defining the available text-processing and number-processing modes for a synthesizer. This key is used with NSSpeechInputModeProperty and NSSpeechNumberModeProperty)
Notes:

Indicates that the synthesizer assembles digits into numbers (so that 12 is spoken as "twelve") and text into words.
Available in OS X v10.5 and later.

158.2.35 NSSpeechModePhoneme as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

158.2.36 NSSpeechModeText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify input modes are used with NSSpeechInputModeProperty.
Notes:

Indicates that the synthesizer is in text-processing mode.
Available in OS X v10.5 and later.

158.2.37 NSSpeechNumberModeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.setObjectForProperty(s.NSSpeechModeLiteral, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)

call s.setObjectForProperty(s.NSSpeechModeNormal, s.NSSpeechNumberModeProperty, e)
msgBox s.objectForProperty(s.NSSpeechNumberModeProperty, e)
```

Notes:

Get or set the synthesizer's current number-processing mode. A string that specifies whether the synthesizer is currently in normal or literal number-processing mode. The constants NSSpeechModeNormal and NSSpeechModeLiteral are the possible values of this string.
When the number-processing mode is NSSpeechModeNormal, the synthesizer assembles digits into numbers (so that "12" is spoken as "twelve"). When the mode is NSSpeechModeLiteral, each digit is spoken literally (so that "12" is spoken as "one, two").
Available in OS X v10.5 and later.

158.2.38 NSSpeechOutputToFileURLProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set the speech output destination to a file or to the computer's speakers. A NSURL object. To write the speech output to a file, use the file's NSURL; to generate the sound through the computer's speakers, use nil.
Available in OS X v10.5 and later.

158.2.39 NSSpeechPhonemeInfoExample as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

An example word that illustrates the use of the phoneme.
Available in OS X v10.5 and later.

158.2.40 NSSpeechPhonemeInfoHiliteEnd as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The character offset into the example word that identifies the location of the end of the phoneme.
Available in OS X v10.5 and later.

158.2.41 NSSpeechPhonemeInfoHiliteStart as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The character offset into the example word that identifies the location of the beginning of the phoneme.
Available in OS X v10.5 and later.

158.2.42 NSSpeechPhonemeInfoOpcode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The opcode as Number.
Available in OS X v10.5 and later.

158.2.43 NSSpeechPhonemeInfoSymbol as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the keys used in the NSSpeechPhonemeSymbolsProperty dictionary.
Notes:

The symbol used to represent the phoneme.
The symbol does not necessarily have a phonetic connection to the phoneme, but might simply be an abstract textual representation of it.
Available in OS X v10.5 and later.

158.2.44 NSSpeechPhonemeSymbolsProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get a list of phoneme symbols and example words defined for the synthesizer. A Dictionary object that contains the phoneme symbols and example words defined for the current synthesizer
Your application might use this information to show the user what symbols to use when entering phonemic text directly. See "NSSpeechPhonemeSymbolsProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

158.2.45 NSSpeechPitchBaseProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
```

```
dim n as Integer = s.objectForProperty(s.NSSpeechPitchBaseProperty, e)
msgBox str(n)
```

Notes:

Get or set a synthesizer's baseline speech pitch. An number that specifies the baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Note: The change in speech pitch may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

158.2.46 NSSpeechPitchModProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

dim n as Double = s.objectForProperty(s.NSSpeechPitchModProperty, e)
msgBox str(n)
```

Notes:

Get or set a synthesizer's pitch modulation. A number object that specifies the synthesizer's pitch modulation.
Pitch modulation is also expressed as a floating-point value in the range of 0.000 to 127.000. These values correspond to MIDI note values, where 60.000 is equal to middle C on a piano scale. The most useful speech pitches fall in the range of 40.000 to 55.000. A pitch modulation value of 0.000 corresponds to a monotone in which all speech is generated at the frequency corresponding to the speech pitch. Given a speech pitch value of 46.000, a pitch modulation of 2.000 would mean that the widest possible range of pitches corresponding to the actual frequency of generated text would be 44.000 to 48.000.

Note: The change in pitch modulation may not be noticeable until the next sentence or paragraph is spoken.
Available in OS X v10.5 and later.

158.2.47 NSSpeechRateProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechRateProperty, e)
MsgBox str(value)
```

Notes:

Get or set the synthesizer's baseline speech pitch. A number that specifies the synthesizer's baseline speech pitch.
Typical voice frequencies range from around 90 hertz for a low-pitched male voice to perhaps 300 hertz for a high-pitched child's voice. These frequencies correspond to approximate pitch values in the ranges of 30.000 to 40.000 and 55.000 to 65.000, respectively.
Available in OS X v10.5 and later.

158.2.48 NSSpeechRecentSyncProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Notes:

Get the message code for the most recently encountered synchronization command. A number that specifies the most recently encountered synchronization command.

Available in OS X v10.5 and later.

158.2.49 NSSpeechResetProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty to get or set the characteristics of a synthesizer.
Notes:

Set a synthesizer back to its default state. There is no value associated with this property; to reset the channel to its default state, set the key to nil.
You can use this function to, for example, set speech pitch and speech rate to default values.

Available in OS X v10.5 and later.

158.2.50 NSSpeechStatusNumberOfCharactersLeft as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

The number of characters left in the input string of text.
When the value of this key is zero, you can destroy the input string.
Available in OS X v10.5 and later.

158.2.51 NSSpeechStatusOutputBusy as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates whether the synthesizer is currently producing speech.
A synthesizer is considered to be producing speech even at some times when no audio data is being produced through the computer's speaker. This occurs, for example, when the synthesizer is processing input, but has not yet initiated speech or when speech output is paused.
Available in OS X v10.5 and later.

158.2.52 NSSpeechStatusOutputPaused as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates whether speech output in the synthesizer has been paused by sending the message pauseSpeakingAt-Boundary.
Available in OS X v10.5 and later.

158.2.53 NSSpeechStatusPhonemeCode as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants identify speech status keys used with NSSpeechStatusProperty.
Notes:

Indicates that the synthesizer is in phoneme-processing mode. When in phoneme-processing mode, a text

buffer is interpreted to be a series of characters representing various phonemes and prosodic controls.
Available in OS X v10.5 and later.

158.2.54 NSSpeechStatusProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS

call s.startSpeakingString "Hello"

dim status as Dictionary = s.objectForProperty(s.NSSpeechStatusProperty, e)
dim CharactersLeft as Integer = status.Value(s.NSSpeechStatusNumberOfCharactersLeft)

MsgBox str(CharactersLeft)+" Characters left"
```

Notes:

Get speech-status information for the synthesizer. A dictionary that contains speech-status information for the synthesizer. See "NSSpeechStatusProperty Dictionary Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

158.2.55 NSSpeechSynthesizerInfoIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes:

The identifier of the speech synthesizer.
Available in OS X v10.5 and later.

158.2.56 NSSpeechSynthesizerInfoProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.

Notes:

Get information about the speech synthesizer being used on the specified synthesizer. A dictionary object that contains information about the speech synthesizer being used on the specified synthesizer. See "Speech Synthesizer Property Keys" for a description of the keys present in the dictionary.
Available in OS X v10.5 and later.

158.2.57 NSSpeechSynthesizerInfoVersion as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants are keys used in the NSSpeechSynthesizerInfoProperty dictionary.
Notes:

The version of the speech synthesizer.
Available in OS X v10.5 and later.

158.2.58 NSSpeechVolumeProperty as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the constants used with setObjectForProperty and objectForProperty to get or set the characteristics of a synthesizer.
Example:

```
dim s as new NSSpeechSynthesizerMBS
dim e as NSErrorMBS
dim value as Double = s.objectForProperty(s.NSSpeechVolumeProperty, e)
MsgBox str(value)
```

Notes:

Get or set the speech volume for a synthesizer. A Number that specifies the synthesizer's speech volume. Volumes are expressed in floating-point values ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.
Available in OS X v10.5 and later.

You may prefer to simply use the volume property.

158.2.59 objectForProperty(PropertyName as string, byref error as NSErrorMBS) as Variant

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides the value of a receiver's property.
Notes:

PropertyName: Property to get.
error: On output, error that occurred while obtaining the value of speechProperty.

Returns the value of speechProperty.
Available in OS X v10.5 and later.

158.2.60 pauseSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Pauses the speaking on the given boundary.
Example:

```
dim s as NSSpeechSynthesizerMBS // your synthesizer
s.pauseSpeakingAtBoundary s.NSSpeechSentenceBoundary // pause on end of sentence.
```

Notes:

Mac OS X 10.5 only.
boundary can be NSSpeechImmediateBoundary, NSSpeechSentenceBoundary or NSSpeechWordBoundary.

158.2.61 phonemesFromText(text as string) as string

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the phonems from a given text.
Example:

```
dim s as new NSSpeechSynthesizerMBS

MsgBox s.phonemesFromText("Hello")

// shows "_hEHl1OW."
```

Notes: Mac OS X 10.5 only.

158.2.62 setObjectForProperty(value as Variant, PropertyName as string, byref error as NSErrorMBS) as boolean

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies the value of a receiver's property.
Notes:

PropertyName: Property to set.
Error: On output, error that occurred while setting speechProperty.

Returns true when the speechProperty was set. False when there was an error, specified in error.
Available in OS X v10.5 and later.

158.2.63 SetVoice(voice as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the receiver's current voice.
Notes: Returns true on success.

158.2.64 StartSpeakingString(text as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Begins speaking synthesized text through the system's default sound output device.
Example:

```
dim s as new NSSpeechSynthesizerMBS

s.rate=300 // not slow
s.volume=0.5 // not loud
call s.startSpeakingString "Hello World"
```

Notes:

Returns true when synthesis starts successfully, false otherwise.

If the receiver is currently speaking synthesized speech when startSpeakingString is called, that process is stopped before text is spoken.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(true) is called.
See also:

- 158.2.65 StartSpeakingString(text as string, file as folderitem) as boolean 20883
- 158.2.66 startSpeakingString(Text as String, URL as string) as boolean 20883

158.2.65 StartSpeakingString(text as string, file as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Begins synthesizing text into a sound (AIFF) file.
Notes:

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 158.2.64 StartSpeakingString(text as string) as boolean 20882
- 158.2.66 startSpeakingString(Text as String, URL as string) as boolean 20883

158.2.66 startSpeakingString(Text as String, URL as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Begins synthesizing text into a sound (AIFF) file.
Notes:

Returns true when synthesis starts successfully, false otherwise.

When synthesis of text finishes normally or is stopped, the message didFinishSpeaking(True) is called.

One example of how you might use this method is in an email program that automatically converts new messages into sound files that can be stored on an iPod for later listening.
See also:

- 158.2.64 StartSpeakingString(text as string) as boolean 20882
- 158.2.65 StartSpeakingString(text as string, file as folderitem) as boolean 20883

158.2.67 StopSpeaking

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops synthesis in progress.

Notes: If the receiver is currently generating speech, synthesis is halted, and the message didFinishSpeaking(false) is called.

158.2.68 stopSpeakingAtBoundary(boundary as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops speech on the next w
Notes: Mac OS X 10.5 only.

158.2.69 Properties

158.2.70 IsSpeaking as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the receiver is currently generating synthesized speech.
Notes:

true when the receiver is generating synthesized speech, false otherwise.
(Read only property)

158.2.71 rate as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current rate of the speech.
Example:

```
dim s as NSSpeechSynthesizerMBS
s=new NSSpeechSynthesizerMBS
MsgBox str(s.rate)
// shows e.g. "160"
```

Notes:

Mac OS X 10.5 only.
The range of supported rates is not predefined by the Speech Synthesis framework; but the synthesizer may only respond to a limited range of speech rates. Average human speech occurs at a rate of 180 to 220 words per minute.
(Read and Write property)

158.2.72 UsesFeedbackWindow as boolean

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Indicates whether the receiver uses the speech feedback window.
Notes: (Read and Write property)

158.2.73 Voice as string

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current voice.
Example:

```
dim s as new NSSpeechSynthesizerMBS
MsgBox s.voice
// shows e.g. "com.apple.speech.synthesis.voice.Zarvox"
```

Notes: (Read and Write property)

158.2.74 volume as Double

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The volume of the speech.
Example:

```
dim s as new NSSpeechSynthesizerMBS
MsgBox str(s.volume)
// shows e.g. 1
```

Notes:

No sound is zero, full sound one.
Mac OS X 10.5 only.

Volumes are expressed in floating-point units ranging from 0.0 through 1.0. A value of 0.0 corresponds to silence, and a value of 1.0 corresponds to the maximum possible volume. Volume units lie on a scale that is linear with amplitude or voltage. A doubling of perceived loudness corresponds to a doubling of the volume.

Setting a value outside this range is undefined.
(Read and Write property)

158.2.75 Events

158.2.76 didEncounterErrorAtIndex(characterIndex as Integer, text as string, message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event called when an error has been found in the text while speaking.
Notes: Mac OS X 10.5 only.

158.2.77 didEncounterSyncMessage(message as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A sync message was found in the text.
Notes:

See Apple Speech documentation about the special tags you need to place in the text to get this event.
Mac OS X 10.5 only.

158.2.78 didFinishSpeaking(finishedSpeaking as boolean)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called when speaking through the sound output device is done.
Notes: finishedSpeaking is true when finished normally and false when StopSpeaking was called.

158.2.79 willSpeakPhoneme(phonemeOpcode as Integer)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sent just before a synthesized phoneme is spoken through the sound output device.
Notes:

phonemeOpcode: Phoneme that sender is about to speak into the sound output device.

One use of this method might be to animate a mouth on screen to match the generated speech.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

158.2.80 willSpeakWord(Position as Integer, Length as Integer, Text as String)

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sent just before a synthesized word is spoken through the sound output device.
Notes:

Position and Length: Word that sender is about to speak into the sound output device.
text: Text that is being synthesized by sender.

One use of this method might be to visually highlight the word being spoken.

Important: The delegate is not sent this message when the SpeechSynthesizer object is synthesizing speech to a file (startSpeakingString).

158.2.81 Constants

158.2.82 NSSpeechImmediateBoundary=0

MBS MacCocoa Plugin, Plugin Version: 7.7. **Function:** One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

158.2.83 NSSpeechSentenceBoundary=2

MBS MacCocoa Plugin, Plugin Version: 7.7. **Function:** One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

158.2.84 NSSpeechWordBoundary=1

MBS MacCocoa Plugin, Plugin Version: 7.7. **Function:** One of the constants for the pauseSpeakingAtBoundary method.
Notes: Mac OS X 10.5 only.

158.3 class NSVoiceMBS

158.3.1 class NSVoiceMBS

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A voice on Mac OS X with its attributes.
Notes:

Available in Mac OS X v10.3 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

158.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr7

158.3.3 Methods

158.3.4 Age as Integer

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The perceived age (in years) of the voice.

158.3.5 Constructor

MBS MacCocoa Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

158.3.6 Demotext as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A demonstration string to speak.

158.3.7 Gender as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The perceived gender of the voice.
Notes: May be either GenderNeuter ("VoiceGenderNeuter), GenderFemale ("VoiceGenderFemale"), or GenderMale ("VoiceGenderMale").

158.3.8 GenderFemale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

158.3.9 GenderMale as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

158.3.10 GenderNeuter as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the possible values for the gender property.

158.3.11 Identifier as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A unique string identifying the voice. The identifiers of the system voices are listed below.
Notes:

Identifiers of the Mac OS X system voices
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical
com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki

com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

158.3.12 Language as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The language of the voice (currently US English only).
Notes: Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

158.3.13 LocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The locale identifier.
Example:

```
dim v as NSVoiceMBS
dim s as NSSpeechSynthesizerMBS
dim n as string

s=new NSSpeechSynthesizerMBS

n=s.voice
v=s.attributesForVoice(n)

MsgBox n+EndOfLine+v.LocaleIdentifier
// shows for example "en_US"
```

Notes:

Mac OS X 10.5 only.

Language has been replaced by LocaleIdentifier in Mac OS X 10.5.

158.3.14 Name as String

MBS MacCocoa Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The name of the voice suitable for display.

158.3.15 NSVoiceAge as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes: The perceived age (in years) of the voice. A string.

158.3.16 NSVoiceDemoText as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes: A demonstration string to speak. A String.

158.3.17 NSVoiceGender as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes: The perceived gender of the voice.

158.3.18 NSVoiceIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes:

A unique string identifying the voice.

Identifiers of the OS X system voices:
com.apple.speech.synthesis.voice.Agnes
com.apple.speech.synthesis.voice.Albert
com.apple.speech.synthesis.voice.Alex
com.apple.speech.synthesis.voice.BadNews
com.apple.speech.synthesis.voice.Bahh
com.apple.speech.synthesis.voice.Bells
com.apple.speech.synthesis.voice.Boing
com.apple.speech.synthesis.voice.Bruce
com.apple.speech.synthesis.voice.Bubbles
com.apple.speech.synthesis.voice.Cellos
com.apple.speech.synthesis.voice.Deranged
com.apple.speech.synthesis.voice.Fred
com.apple.speech.synthesis.voice.GoodNews
com.apple.speech.synthesis.voice.Hysterical

com.apple.speech.synthesis.voice.Junior
com.apple.speech.synthesis.voice.Kathy
com.apple.speech.synthesis.voice.Organ
com.apple.speech.synthesis.voice.Princess
com.apple.speech.synthesis.voice.Ralph
com.apple.speech.synthesis.voice.Trinoids
com.apple.speech.synthesis.voice.Vicki
com.apple.speech.synthesis.voice.Victoria
com.apple.speech.synthesis.voice.Whisper
com.apple.speech.synthesis.voice.Zarvox

158.3.19 NSVoiceIndividuallySpokenCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the properties names.
Notes:

A list of unicode character id ranges that define the unicode characters that can be spoken in character-by-character mode by this voice. ach list entry is a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range.
These ranges can be used by your application to determine if the voice can speak the name of an individual character when spoken in character-by-character mode.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

158.3.20 NSVoiceLanguage as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the properties names.
Notes:

The language of the voice (currently US English only). A string
Deprecated: Use NSVoiceLocaleIdentifier instead.
Deprecated in OS X v10.5.

158.3.21 NSVoiceLocaleIdentifier as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the properties names.
Notes:

The language of the voice. A string

The canonical locale identifier string describing the voice's locale. A locale is generally composed of three pieces of ordered information: a language code, a region code, and a variant code. Refer to documentation about the NSLocale class or Locales Programming Guide for more information.
Available in OS X v10.5 and later.

158.3.22 NSVoiceName as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes: The name of the voice suitable for display. A String.

158.3.23 NSVoiceSupportedCharacters as String

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the properties names.
Notes:

A list of unicode character id ranges that define the unicode characters supported by this voice. a dictionary containing two keys: "UnicodeCharBegin", an integer value containing the beginning unicode id of this range; and "UnicodeCharBegin", an integer value containing the ending unicode id of this range. The synthesizer will convert or ignore any characters not contained in the range of supported characters.
Some voices may not provide this attribute.
Available in OS X v10.5 and later.

158.3.24 Properties as Dictionary

MBS MacCocoa Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns dictionary with all the properties for this voice.
Notes: This dictionary may contain additional information if Apple adds more features in newer Mac OS X versions.

158.4 class SpeechChannelMBS

158.4.1 class SpeechChannelMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A SpeechMBS channel.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead.

158.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

158.4.3 Methods

158.4.4 close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

158.4.5 ContinueSpeech as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Continue speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.ContinueSpeech)
```

Notes: Renamed from Continue to ContinueSpeech in v5.3 to fix a problem with Xojo 2005r3.

158.4.6 PauseEndOfSentence as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking at the end of the current sentence.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfSentence)
```

158.4.7 PauseEndOfWord as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking at the end of the current word.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseEndOfWord)
```

158.4.8 PauseImmediate as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Pauses speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PauseImmediate)
```

158.4.9 Reset

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Resets the SpeechMBS channel to some default values.
Example:

```
dim c as SpeechChannelMBS // your channel

c.reset
```

Notes: Resets e.g. pitchbase, pitchmodulation, volume, rate.

158.4.10 SetOutputFile(file as folderitem) as boolean

MBS MacClassic Plugin, Plugin Version: 4.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Sets the destination file.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel
dim f as FolderItem = SpecialFolder.Desktop.Child("test.aiff")

call c.SetOutputFile(f)
call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes:

Returns true on success and false on any error.
Requires Mac OS X 10.3.

158.4.11 Speak(s as string) as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Speak the given text.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

Notes: v5.1: Now encoding safe and stores result in lasterror property.

158.4.12 SpeechBusy as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use of you application.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusy)
```

158.4.13 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeechBusySystemWide)
```

158.4.14 Stop as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Stop)
```

158.4.15 StopEndOfSentence as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking at the end of the current sentence.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfSentence)
```

158.4.16 StopEndOfWord as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking at the end of the current word.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopEndOfWord)
```

158.4.17 StopImmediate as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Stops speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.StopImmediate)
```

158.4.18 Properties

158.4.19 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Lasterror)
```

Notes:

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

158.4.20 Paused as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Are we paused?
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Paused)
```

Notes: (Read only property)

158.4.21 PitchBase as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The pich base used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchBase)
```

Notes: (Read and Write property)

158.4.22 PitchModulation as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The pich modulation used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.PitchModulation)
```

Notes: (Read and Write property)

158.4.23 Playing as boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Are we playing?
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Playing)
```

Notes: (Read only property)

158.4.24 Rate as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The rate used for speaking.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(C.Rate)
```

Notes:

Normally around 175 words/minute.
(Read and Write property)

158.4.25 SpeakCharactersLiteral as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to speak characters literal.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakCharactersLiteral)
```

Notes:

Speaks Hello like "H-E-L-L-O"
(Read and Write property)

158.4.26 SpeakNumbersLiteral as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** whether to speak numbers literal.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.SpeakNumbersLiteral)
```

Notes:

Speaks 11 not like "elven", but like "one, one".
(Read and Write property)

158.4.27 TextBytesToSpeak as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** How much text is left in the text buffer?
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

call c.Speak("Hello")

MsgBox str(c.TextBytesToSpeak)
```

Notes: (Read only property)

158.4.28 Voice as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The VoiceMBS used for that SpeechChannelMBS.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox c.Voice.Name
```

Notes: (Read and Write property)

158.4.29 Volume as Double

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The current volume.
Example:

```
dim c as SpeechChannelMBS // your channel

MsgBox str(c.Volume)
```

Notes:

From 0 to 65535.
(Read and Write property)

158.5 class SpeechMBS

158.5.1 class SpeechMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The class for the Mac OS speech synthesizer.
Deprecated: This item is deprecated and should no longer be used. You can use NSSpeechSynthesizerMBS instead. **Notes:**

For Mac OS X you can also use the NSSpeechSynthesizerMBS class and for recognition the NSSpeechRecognizerMBS class.

You can try Speech with some declares, but your app won't start if the Speech extension is not installed. This plugin won't stop, but simply will just tell you that the Speech is not available, so you can react in your application.

158.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

158.5.3 Methods

158.5.4 close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

158.5.5 DefaultVoice as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the default VoiceMBS.
Example:

```
dim s as new SpeechMBS
dim v as VoiceMBS = s.DefaultVoice

MsgBox v.Name
```

158.5.6 Speak(s as string) as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Speaks a text using the default settings.
Example:

```
dim s as new SpeechMBS

call s.Speak("Hello")

MsgBox "you hear me?"
```

Notes:

Returns directly to caller.
Returns true if speaking is working.

v5.1: Now encoding safe and stores result in lasterror property.

158.5.7 SpeechBusy as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use of you application.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusy)
```

158.5.8 SpeechBusySystemWide as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns how much SpeechChannels are currently in use on this Mac.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.SpeechBusySystemWide)
```

158.5.9 Voice(index as Integer) as VoiceMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Returns the VoiceMBS with this number.
Example:

```
dim s as new SpeechMBS

MsgBox s.Voice(1).Name
```

Notes: Index is from 1 to VoiceCount.

158.5.10 Properties

158.5.11 Available as Boolean

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Is SpeechMBS available?
Notes: (Read only property)

158.5.12 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 5.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The last error code.
Notes:

A Mac OS error code.
from the plugin -1 is bad parameter and 0 is success.
(Read only property)

158.5.13 VersionMajor as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The major Version number.
Example:

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

158.5.14 versionMinor as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The minor Version number.
Example:

```
dim s as SpeechMBS
s=new SpeechMBS
msgbox hex(s.VersionMajor)+"."+hex(s.versionMinor\16)+"."+hex(s.versionMinor mod 16)
```

Notes: (Read only property)

158.5.15 VersionRev as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The revision Version number.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VersionRev)
```

Notes: (Read only property)

158.5.16 VersionStage as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The Stage Version number.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VersionStage)
```

Notes:

Some constants:

developStage	& h20
alphaStage	& h40
betaStage	& h60
finalStage	& h80

(Read only property)

158.5.17 VoiceCount as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** How much voices are present?
Example:

```
dim s as new SpeechMBS

MsgBox str(s.VoiceCount)
```

Notes:

If you add or remove VoiceMBS files, please call this function as SpeechMBS can then recognice those changes.
(Read only property)

158.6 class VoiceMBS

158.6.1 class VoiceMBS

MBS MacClassic Plugin, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This class represents a voice.
Example:

```
dim s as new SpeechMBS

MsgBox s.Voice(2).name
```

Deprecated: This item is deprecated and should no longer be used. You can use NSVoiceMBS instead.

158.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.0pr9

158.6.3 Methods

158.6.4 close

MBS MacClassic Plugin, Plugin Version: 3.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

158.6.5 NewChannel as SpeechChannelMBS

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new SpeechChannel using the given voice.
Example:

```
dim s as new SpeechMBS
dim c as SpeechChannelMBS = s.Voice(1).NewChannel

MsgBox str(c.Speak("Hello"))
```

Notes: Returns nil on any error.

158.6.6 Properties

158.6.7 age as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The approximate age in years of the individual represented by the VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).age)
```

Notes: (Read only property)

158.6.8 comment as string

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Additional text information about the VoiceMBS. The information might indicate how much memory the VoiceMBS requires. Some synthesizers use this field to store a phrase that can be spoken.
Example:

```
dim s as new SpeechMBS
MsgBox s.Voice(1).comment
```

Notes: (Read only property)

158.6.9 file as folderitem

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The file of this VoiceMBS.
Notes:

May be nil.
(Read only property)

158.6.10 gender as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The gender of this VoiceMBS.

Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).gender)
```

Notes:

Some constants for this property:

kNeuter	0
kMale	1
kFemale	2

(Read only property)

158.6.11 language as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A code that indicates the language of VoiceMBS output.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).language)
```

Notes:

Language constants:

(Read only property)

158.6.12 name as string

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The name of this VoiceMBS.
Example:

```
dim s as new SpeechMBS
MsgBox s.Voice(1).name
```

Notes: (Read only property)

158.6.13 region as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** A code that indicates the region represented by the VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).region)
```

Notes:

Some region constants:

(Read only property)

158.6.14 ResID as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** There can be several voices in one file, but this VoiceMBS has this ResID.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).ResID)
```

Notes: (Read only property)

158.6.15 script as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The script code of text that the VoiceMBS can process.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).script)
```

Notes:

Script constants:

(Read only property)

158.6.16 version as Integer

MBS MacClassic Plugin, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The version of this VoiceMBS.
Example:

```
dim s as new SpeechMBS

MsgBox str(s.Voice(1).Version)
```

Notes: (Read only property)

158.7 class WinSpeechMBS

158.7.1 class WinSpeechMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for speech on Windows.
Notes:

You need to install the "Microsoft Reader" to get this working.

see also:
http://msdn.microsoft.com/en-us/library/ms719576(v=vs.85).aspx

158.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr6
- MBS Real Studio Plugins, version 12.3pr2

158.7.3 Methods

158.7.4 close

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

158.7.5 DisplayUI(type as string, title as string, parent as window)

MBS Win Plugin, Plugin Version: 8.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays the UI from the underlying text-to-speech engine's object token.
Notes:

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 158.7.6 DisplayUI(type as string, title as string="")

158.7.6 DisplayUI(type as string, title as string="")

MBS Win Plugin, Plugin Version: 8.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Displays the UI from the underlying text-to-speech engine's object token.
Notes:

Type specifies which UI you want.
Title is optional the title of the window.
You can optionally specify a parent window.
Lasterror is set.
See also:

- 158.7.5 DisplayUI(type as string, title as string, parent as window) 20916

158.7.7 IsUISupported(type as string) as boolean

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Checks if the underlying text-to-speech engine's object token supports the requested UI.
Notes:

Returns whether the specified UI is supported. True indicates the UI is supported, and false indicates the UI is not supported.
Lasterror is set.

158.7.8 ListVoices as boolean

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Makes a list of voices which is later returned using the NextVoice function.

158.7.9 NextVoice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the next voice in the list.
Notes: Returns nil on the end of the list.

158.7.10 Pause

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses speech.

158.7.11 Resume

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resumes speech.

158.7.12 Skip(sentenceCount as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Causes the voice to skip forward or backward the specified number of items within the text of the current speak call.
Notes:

sentenceCount is the number of sentences to skip. If negative, you skip backward.
Returns the actual number of items skipped.
Lasterror is set.

158.7.13 Speak(text as string, Purge as Boolean = false, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Speaks a string.
Notes:

The string must be a 16bit unicode string.

Version 7.8 of the plugins convert to unicode automatically.

If Purge is true an existing speech will be stopped.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

158.7.14 SpeakFile(file as folderitem, unicodestring as string, AudioFormat as Integer = 0, ContainsXML as boolean = false)

MBS Win Plugin, Plugin Version: 4.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Speaks a string to a file.
Notes:

The string must be a 16bit unicode string.
File is a valid folderitem where the WAV file is stored.

The function will not return before the speaking is complete.
Lasterror is set.

Version 7.8 of the plugins convert to unicode automatically.

For AudioFormat, please use kAudioFormat* constants. Default is 22Khz Mono which is default format for speech API.

If ContainsXML is true, you can include xml commands in the text. See MSDN page:
http://msdn.microsoft.com/en-us/library/ms717077% 28v=vs.85% 29.aspx

158.7.15 WaitUntilDone(msTimeout as Integer)

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Blocks the caller until either the voice has completed speaking or the specified time interval has elapsed.
Notes:

msTimeout: Timeout period in milliseconds. INFINITE may be used to prevent this method from timing out.

INFINITE is -1.

Lasterror is set.

158.7.16 Properties

158.7.17 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the speech object.
Notes:

If handle is 0 there is no Speech software installed.
(Read only property)

158.7.18 IsDone as Boolean

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the voice has finished speaking.
Notes:

Lasterror is set.
(Read only property)

158.7.19 IsSpeaking as Boolean

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the voice is speaking.
Notes:

Lasterror is set.
(Read only property)

158.7.20 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported.
Notes:

You may get the Speech SDK from Microsoft for more details.
(Read only property)

158.7.21 Priority as Integer

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current voice priority level.
Notes:

The default priority is SPVPRI_NORMAL.
Lasterror is set.

Assuming an output object which implements ISpAudio, speak requests of similar priority voices are queued, and are spoken one at a time in the order they are issued. That is, speak requests from normal priority voices are put in one queue, while speak requests from alert priority voices (with priority SPVPRI_ALERT) are put in another queue.

Alert priority voices take priority over normal voices. If one or more speak requests from alert priority voices are pending, a normal voice that is speaking will be interrupted on the next alert boundary (see ISpVoice::SetAlertBoundary). When all the queued alert priority voice speak requests have been processed, the normal voice will continue.

Voices with the SPVPRI_OVER priority speak over (mix with) all other audio in the system with no syn-

chronization. SPVPRI_OVER priority voices only mix on Windows 2000.

If the output object does not implement ISpAudio, no serialization will occur, and all voices will be treated as if their priority is SPVPRI_OVER.
(Read and Write property)

158.7.22 Rate as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current text rendering rate adjustment.
Notes:

Ranges from kMinRate to kMaxRate.
(Read and Write property)

158.7.23 SyncSpeakTimeout as Integer

MBS Win Plugin, Plugin Version: 8.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The timeout interval in milliseconds after which, synchronous Speak calls to this instance of the voice will timeout.
Notes:

Timeouts occur when waiting for access to the output object. This means that for a normal priority voice (see Priority for more information on priorities) and an output device which implements ISpAudio, a timeout may occur while waiting to reacquire the output object after an interruption by an alert priority voice. For voices of both normal and alert priorities, a timeout may also occur while waiting to reacquire the output object after the voice has been paused and resumed (see Pause and Resume).

Wait times are not accumulated - that is, if a voice waits for n milliseconds to initially acquire the output object, and is then paused and resumed, it will again wait for up to msTimeout milliseconds to reacquire the output object, not msTimeout - n milliseconds.
(Read and Write property)

158.7.24 Voice as WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current used voice.
Notes:

Set to nil to use the default voice.
(Read and Write property)

158.7.25 Volume as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The volume for the voice.
Notes:

Ranges from kMinVolume to kMaxVolume.
(Read and Write property)

158.7.26 Constants

158.7.27 kAudioFormat_11kHz16BitMono = 10

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 11 kHz, 16 Bit, Mono

158.7.28 kAudioFormat_11kHz16BitStereo = 11

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 11 kHz, 16 Bit, Stereo

158.7.29 kAudioFormat_11kHz8BitMono = 8

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 11 kHz, 8 Bit, Mono

158.7.30 kAudioFormat_11kHz8BitStereo = 9

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 11 kHz, 8 Bit, Stereo

158.7.31 kAudioFormat_12kHz16BitMono = 14

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 12 kHz, 16 Bit, Mono

158.7.32 kAudioFormat_12kHz16BitStereo = 15

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 12 kHz, 16 Bit, Stereo

158.7.33 kAudioFormat_12kHz8BitMono = 12

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 12 kHz, 8 Bit, Mono

158.7.34 kAudioFormat_12kHz8BitStereo = 13

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 12 kHz, 8 Bit, Stereo

158.7.35 kAudioFormat_16kHz16BitMono = 18

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 16 kHz, 16 Bit, Mono

158.7.36 kAudioFormat_16kHz16BitStereo = 19

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 16 kHz, 16 Bit, Stereo

158.7.37 kAudioFormat_16kHz8BitMono = 16

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 16 kHz, 8 Bit, Mono

158.7.38 kAudioFormat_16kHz8BitStereo = 17

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 16 kHz, 8 Bit, Stereo

158.7.39 kAudioFormat_22kHz16BitMono = 22

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 22 kHz, 16 Bit, Mono

158.7.40 kAudioFormat_22kHz16BitStereo = 23

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 22 kHz, 16 Bit, Stereo

158.7.41 kAudioFormat_22kHz8BitMono = 20

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 22 kHz, 8 Bit, Mono

158.7.42 kAudioFormat_22kHz8BitStereo = 21

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 22 kHz, 8 Bit, Stereo

158.7.43 kAudioFormat_24kHz16BitMono = 26

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 24 kHz, 16 Bit, Mono

158.7.44 kAudioFormat_24kHz16BitStereo = 27

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 24 kHz, 16 Bit, Stereo

158.7.45 kAudioFormat_24kHz8BitMono = 24

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 24 kHz, 8 Bit, Mono

158.7.46 kAudioFormat_24kHz8BitStereo = 25

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 24 kHz, 8 Bit, Stereo

158.7.47 kAudioFormat_32kHz16BitMono = 30

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 32 kHz, 16 Bit, Mono

158.7.48 kAudioFormat_32kHz16BitStereo = 31

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 32 kHz, 16 Bit, Stereo

158.7.49 kAudioFormat_32kHz8BitMono = 28

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 32 kHz, 8 Bit, Mono

158.7.50 kAudioFormat_32kHz8BitStereo = 29

MBS Win Plugin, Plugin Version: 14.3. **Function:** One of the audio format constants.
Notes: 32 kHz, 8 Bit, Stereo

158.7.51 kAudioFormat_44kHz16BitMono = 34

158.7.97 PriorityNormal = 0

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the priority constants.

158.7.98 PriorityOver = 2

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the priority constants.

158.7.99 SPDUI_AddRemoveWord = "AddRemoveWord"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.100 SPDUI_AudioProperties = "AudioProperties"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.101 SPDUI_AudioVolume = "AudioVolume"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.102 SPDUI_EngineProperties = "EngineProperties"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.103 SPDUI_MicTraining = "MicTraining"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.104 SPDUI_RecoProfileProperties = "RecoProfileProperties"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.7.105 SPDUI_UserTraining = "UserTraining"

MBS Win Plugin, Plugin Version: 8.1. **Function:** One of the constants for the User Interfaces used with IsUISupported and DisplayUI.

158.8 class WinVoiceMBS

158.8.1 class WinVoiceMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for a voice.

158.8.2 Methods

158.8.3 Description as string

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the voice.
Notes: Returns a 16bit unicode string.

158.8.4 Properties

158.8.5 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the voice.
Notes: (Read only property)

158.8.6 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported.
Notes: (Read only property)

Chapter 159

SpeechRecognition

159.1 class SFAcousticFeatureMBS

159.1.1 class SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The value of a voice analysis metric.
Notes:

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.1.2 Blog Entries

- Playing with SpeechRecognition

159.1.3 Methods

159.1.4 acousticFeatureValuePerFrame as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of feature values, one value per audio frame, corresponding to a transcript segment of recorded audio.

159.1.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.1.6 copy as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the object.

159.1.7 Properties

159.1.8 frameDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The duration of the audio frame.
Notes:

In seconds.
(Read only property)

159.1.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.2 class SFSpeechAudioBufferRecognitionRequestMBS

159.2.1 class SFSpeechAudioBufferRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A request to recognize speech from captured audio content, such as audio from the device's microphone.
Notes:

Use an SFSpeechAudioBufferRecognitionRequestMBS object to perform speech recognition on live audio, or on a set of existing audio buffers. For example, use this request object to route audio from a device's microphone to the speech recognizer.

The request object contains no audio initially. As you capture audio, call appendAudioPCMBuffer or appendAudioSampleBuffer to add audio samples to the request object. The speech recognizer continuously analyzes the audio you appended, stopping only when you call the endAudio method. (You must call endAudio explicitly to stop the speech recognition process.)

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

159.2.2 Blog Entries

- Playing with SpeechRecognition

159.2.3 Methods

159.2.4 appendAudioPCMBuffer(audioPCMBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Appends audio in the PCM format to the end of the recognition request.
Notes:

audioPCMBuffer: An audio buffer (AVAudioPCMBufferMBS class) that contains audio in the PCM format.

The audio must be in a native format and uncompressed.

159.2.5 appendAudioSampleBuffer(sampleBuffer as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Appends audio to the end of the recognition request.

Notes:

sampleBuffer: A buffer of audio. Must be CMSampleBufferMBS class.

The audio must be in a native format.

159.2.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The constructor.

159.2.7 endAudio

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Marks the end of audio input for the recognition request.
Notes: Call this method explicitly to let the speech recognizer know that no more audio input is coming.

159.2.8 Properties

159.2.9 nativeAudioFormat as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The preferred audio format for optimal speech recognition.
Notes:

Use the audio format in this property as a hint for optimal recording, but don't depend on the value remaining unchanged.
Value is an AVAudioFormatMBS object.
(Read only property)

159.3 class SFSpeechRecognitionRequestMBS

159.3.1 class SFSpeechRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An abstract class representing a request to recognize speech from an audio source.
Notes:

Do not create SFSpeechRecognitionRequestMBS objects directly. Create an SFSpeechURLRecognitionRequestMBS or SFSpeechAudioBufferRecognitionRequestMBS object instead. Use the properties of this class to configure various aspects of your request object before you start the speech recognition process. For example, use the shouldReportPartialResults property to specify whether you want partial results or only the final result of speech recognition.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.3.2 Blog Entries

- Playing with SpeechRecognition

159.3.3 Methods

159.3.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.3.5 contextualStrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes:

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

159.3.6 setContextualStrings(contextualStrings() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Sets array of phrases that should be recognized, even if they are not in the system vocabulary.
Notes:

Use this property to specify short custom phrases that are unique to your app. You might include phrases with the names of characters, products, or places that are specific to your app. You might also include domain-specific terminology or unusual or made-up words. Assigning custom phrases to this property improves the likelihood of those phrases being recognized.
Keep phrases relatively brief, limiting them to one or two words whenever possible. Lengthy phrases are less likely to be recognized. In addition, try to limit each phrase to something the user can say without pausing. Limit the total number of phrases to no more than 100.

159.3.7 Properties

159.3.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.3.9 interactionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An identifier string that you use to describe the type of interaction associated with the speech recognition request.
Notes:

If different parts of your app have different speech recognition needs, you can use this property to identify the part of your app that is making each request. For example, if one part of your app lets users speak phone numbers and another part lets users speak street addresses, consistently identifying the part of the app that makes a recognition request may help improve the accuracy of the results.
(Read and Write property)

159.3.10 requiresOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that determines whether a request must keep its audio data on the device.
Notes:

Set this property to true to prevent an SFSpeechRecognitionRequestMBS from sending audio over the network. However, on-device requests won't be as accurate.

The request only honors this setting if the supportsOnDeviceRecognition (SFSpeechRecognizerMBS) property is also YES.
(Read and Write property)

159.3.11 shouldReportPartialResults as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether you want intermediate results returned for each utterance.
Notes:

The default value of this property is true. If you want only final results (and you don't care about intermediate results), set this property to false to prevent the system from doing extra work.
(Read and Write property)

159.3.12 taskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A value that indicates the type of speech recognition being performed.
Notes:

The default value of this property is kTaskHintUnspecified. See SFSpeechRecognitionResultMBS for constants.
(Read and Write property)

159.4 class SFSpeechRecognitionResultMBS

159.4.1 class SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object containing the partial or final results of a speech recognition request.
Notes:

Use an SFSpeechRecognitionResultMBS object to retrieve the results of a speech recognition request. You do not create these objects directly. Instead, the Speech framework creates them and passes them to the handler block or delegate object you specified when starting your speech recognition task.
A speech recognition result object contains one or more transcriptions of the current utterance. Each transcription has a confidence rating indicating how likely it is to be correct. (You can also get the transcription with the highest rating directly from the bestTranscription property.)
If you requested partial results from the speech recognizer, the transcriptions may represent only part of the total audio content. Use the final property to determine if the request contains partial or final results.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.4.2 Blog Entries

- Playing with SpeechRecognition

159.4.3 Methods

159.4.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.4.5 copy as SFSpeechRecognitionResultMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the object.

159.4.6 transcriptions as SFTranscriptionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of potential transcriptions, sorted in descending order of confidence.

Notes: All transcriptions correspond to the same utterance, which can be a partial or final result of the overall request. The first transcription in the array has the highest confidence rating, followed by transcriptions with decreasing confidence ratings.

159.4.7 Properties

159.4.8 bestTranscription as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The transcription with the highest confidence level.
Notes: (Read only property)

159.4.9 final as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether speech recognition is complete and whether the transcriptions are final.
Notes:

When a speech recognition request is final, its transcriptions do not change.
(Read only property)

159.4.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.4.11 Constants

159.4.12 kTaskHintConfirmation = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the task hints.
Notes:

A task that uses captured speech for short, confirmation-style requests.
Use this hint type when you are using speech recognition to handle confirmation commands, such as ”yes,” ”no,” or ”maybe.”

159.4.13 kTaskHintDictation = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the task hints.
Notes:

A task that uses captured speech for text entry.
Use this hint type when you are using speech recognition for a task that's similar to the keyboard's built-in dictation function.

159.4.14 kTaskHintSearch = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the task hints.
Notes:

A task that uses captured speech to specify seach terms.
Use this hint type when you are using speech recognition to identify search terms.

159.4.15 kTaskHintUnspecified = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the task hints.
Notes:

An unspecified type of task.
Use this hint type when the intended use for captured speech does not match the other task types.

159.5 class SFSpeechRecognitionTaskMBS

159.5.1 class SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A task object that you use to monitor the speech recognition progress.
Notes:

Use an SFSpeechRecognitionTaskMBS object to determine the state of a speech recognition task, to cancel an ongoing task, or to signal the end of the task.
You do not create speech recognition task objects directly. Instead, you receive one of these objects after calling recognitionTaskWithRequest.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.5.2 Blog Entries

- Playing with SpeechRecognition

159.5.3 Methods

159.5.4 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Cancels the current speech recognition task.
Notes:

You can cancel recognition tasks for both prerecorded and live audio input. For example, you might cancel a task in response to a user action or because the recording was interrupted.
When canceling a task, be sure to release any resources associated with the task, such as the audio input resources you are using to capture audio samples.

159.5.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.5.6 Finish

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Stops accepting new audio and finishes processing on the audio input that has already been accepted.
Notes: For audio buffer–based recognition, recognition does not finish until this method is called, so be sure to call it when the audio source is exhausted.

159.5.7 Properties

159.5.8 Cancelled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether the speech recognition task was canceled.
Notes:

By default, the value of this property is false.
(Read only property)

159.5.9 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An error object that specifies the error that occurred during a speech recognition task.
Notes: (Read only property)

159.5.10 Finishing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether audio input has stopped.
Notes:

By default, the value of this property is false.
(Read only property)

159.5.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.5.12 State as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The current state of the speech recognition task.
Notes:

Check the value of this property to get the state of the in-progress speech recognition session. For valid values, see constants.
(Read only property)

159.5.13 Constants

159.5.14 kStateCanceling = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for the state of the task associated with the recognition request.
Notes: Delivery of recognition results has finished, but audio recording may be ongoing.

159.5.15 kStateCompleted = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for the state of the task associated with the recognition request.
Notes: Delivery of recognition requests has finished and audio recording has stopped.

159.5.16 kStateFinishing = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for the state of the task associated with the recognition request.
Notes: Audio recording has stopped, but delivery of recognition results may continue.

159.5.17 kStateRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for the state of the task associated with the recognition request.
Notes: Speech recognition (potentially including audio recording) is in progress.

159.5.18 kStateStarting = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for the state of the task associated with the recognition request.
Notes: Speech recognition (potentially including audio recording) has not yet started.

159.6 class SFSpeechRecognizerMBS

159.6.1 class SFSpeechRecognizerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An object you use to check for the availability of the speech recognition service, and to initiate the speech recognition process.
Notes:

An SFSpeechRecognizerMBS object is the central object for managing the speech recognizer process. Use this object to:

- Request authorization to use speech recognition services.
- Specify the language to use during the recognition process.
- Initiate new speech recognition tasks.

Set Up Speech Recognition
Each speech recognizer supports only one language, which you specify at creation time. The successful creation of a speech recognizer does not guarantee that speech recognition services are available. For some languages, the recognizer might require an Internet connection. Use the available property to find out if speech recognition services are available for the current language.

To initiate the speech recognition process, do the following:

- Request authorization to use speech recognition.
- Create an SFSpeechRecognizerMBS object.
- Verify the availability of services using the available property of your speech recognizer object.
- Prepare your audio content.
- Create a recognition request object—an object that descends from SFSpeechRecognitionRequest.
- Call the recognitionTaskWithRequest method to begin the recognition process.

The type of recognition request object you create depends on whether you are processing an existing audio file or an incoming stream of audio. For existing audio files, create a SFSpeechURLRecognitionRequestMBS object. For audio streams, create a SFSpeechAudioBufferRecognitionRequestMBS object.

Create a Great User Experience for Speech Recognition
Here are some tips to consider when adding speech recognition support to your app.

- Be prepared to handle failures caused by speech recognition limits. Because speech recognition is a network-based service, limits are enforced so that the service can remain freely available to all apps. Individual devices may be limited in the number of recognitions that can be performed per day, and each app may be throttled globally based on the number of requests it makes per day. If a recognition request fails quickly (within a second or two of starting), check to see if the recognition service became unavailable. If it is, you may want to ask users to try again later.

- Plan for a one-minute limit on audio duration. Speech recognition places a relatively high burden on battery life and network usage. To minimize this burden, the framework stops speech recognition tasks that last longer than one minute. This limit is similar to the one for keyboard-related dictation.

- Remind the user when your app is recording. For example, display a visual indicator and play sounds at the beginning and end of speech recognition to help users understand that they're being actively recorded. You can also display speech as it is being recognized so that users understand what your app is doing and see any mistakes made during the recognition process.

- Do not perform speech recognition on private or sensitive information. Some speech is not appropriate for recognition. Don't send passwords, health or financial data, and other sensitive speech for recognition.

Requires MacOS 10.15 or later.

159.6.2 Blog Entries

- Playing with SpeechRecognition

159.6.3 Methods

159.6.4 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns your app's current authorization to perform speech recognition.
Notes: The user can reject your app's request to perform speech recognition, but your request can also be denied if speech recognition is not supported on the device. The app can also change your app's authorization status at any time from the Settings app.

159.6.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Whether the Speech Framework was loaded.
Notes: Returns true on MacOS 10.15 or newer.

159.6.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a speech recognizer associated with the user's default language settings.
Notes:

Returns an initialized speech recognizer object, or nil if there was a problem creating the object.

If the user's default language is not supported for speech recognition, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 159.6.7 Constructor(locale as NSLocaleMBS) 20951

159.6.7 Constructor(locale as NSLocaleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a speech recognizer associated with the specified locale.
Notes:

locale: The locale object representing the language you want to use for speech recognition. For a list of languages supported by the speech recognizer, see supportedLocales.

Returns an initialized speech recognizer object, or nil if the specified language was not supported.

If you specify a language that is not supported by the speech recognizer, this method attempts to fall back to the language used by the keyboard for dictation. If that fails, this method returns nil.
Even if this method returns a valid speech recognizer object, the speech recognition services may be temporarily unavailable. To determine whether speech recognition services are available, check the available property.
See also:

- 159.6.6 Constructor 20951

159.6.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The destructor.

159.6.9 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Recognizes speech from the audio source associated with the specified request, using the specified events to manage the results.
Notes:

request: A request (encapsulated in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the methods of the provided delegate object.
Note that the SFSpeechRecognitionTaskMBS object returned by this method does not retain your delegate object. You must maintain a strong reference to your delegate while speech recognition is in progress.
See also:

- 159.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS 20952

159.6.10 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS, delegateHandler as recognitionTaskWithRequestCompletedMBS, tag as Variant = nil) as SFSpeechRecognitionTaskMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Executes the speech recognition request and delivers the results to the specified handler delegate.
Notes:

request: A request (in an SFSpeechRecognitionRequestMBS object) to recognize speech from an audio source.
delegateHandler: The method to call when partial or final results are available, or when an error occurs. If the shouldReportPartialResults property is true, this event may be called multiple times to deliver the partial and final results.

The delegare has no return value and takes the following parameters:
result: A SFSpeechRecognitionResultMBS containing the partial or final transcriptions of the audio content.
error: An error object if a problem occurred. This parameter is nil if speech recognition was successful.

Request and Tag parameters are passed through to delegate.

Returns the task object you can use to manage an in-progress recognition request.

Use this method to initiate the speech recognition process on the audio contained in the request object. This method executes asynchronously and returns a SFSpeechRecognitionTaskMBS object that you can use to cancel or finalize the recognition process later. As results become available, the method calls the delegate in the delegateHandler parameter.
See also:

- 159.6.9 recognitionTaskWithRequest(request as SFSpeechRecognitionRequestMBS) as SFSpeechRecognitionTaskMBS 20952

159.6.11 requestAuthorization(delegateHandler as requestAuthorizationCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Asks the user to allow your app to perform speech recognition.
Notes:

delegateHandler: The delegate to execute when your app's authorization status is known. The status parameter of the delegate contains your app's authorization status.

Call this method before performing any other tasks associated with speech recognition. This method executes asynchronously, returning shortly after you call it. At some point later, the system calls the provided handler block with the results.
When your app's authorization status is SFSpeechRecognizerAuthorizationStatusNotDetermined, this method causes the system to prompt the user to grant or deny permission for your app to use speech recognition. The prompt includes the custom message you specify in the NSSpeechRecognitionUsageDescription key of your app's Info.plist file. The user's response is saved so that future calls to this method do not prompt the user again.

Your app's Info.plist file must contain the NSSpeechRecognitionUsageDescription key with a valid usage description. If this key is not present, your app will crash when you call this method.
For more information about requesting authorization, see Asking Permission to Use Speech Recognition.

159.6.12 supportedLocales as NSLocaleMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns the set of locales that are supported by the speech recognizer.
Notes:

This method returns the locales for which speech recognition is supported. Support for a locale does not guarantee that speech recognition is currently possible for that locale. For some locales, the speech recognizer requires an active Internet connection to communicate with Apple's servers. If the speech recognizer is currently unable to process requests, available returns NO.

Speech recognition supports the same locales that are supported by the keyboard's dictation feature. For a list of these locales, see QuickType Keyboard: Dictation.

159.6.13 Properties

159.6.14 defaultTaskHint as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A hint that indicates the type of speech recognition being requested.
Notes:

By default, the value of this property overrides the SFSpeechRecognitionTaskHintUnspecified value for requests.
(Read and Write property)

159.6.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.6.16 isAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A Boolean value that indicates whether the speech recognizer is currently available.
Notes:

When the value of this property is true, you may create new speech recognition tasks. When value of this property is false, speech recognition services are not available.
(Read only property)

159.6.17 locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The locale of the speech recognizer.
Notes:

The locale of the speech recognizer is an NSLocaleMBS object. The default value of this property is the system locale (that is, systemLocale).
(Read only property)

159.6.18 supportsOnDeviceRecognition as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A Boolean value that indicates whether the speech recognizer can operate without network access.
Notes:

An SFSpeechRecognitionRequestMBS can only honor its requiresOnDeviceRecognition property if supportsOnDeviceRecognition is true. If supportsOnDeviceRecognition is false, the SFSpeechRecognizer requires a network in order to recognize speech.
(Read only property)

159.6.19 Events

159.6.20 availabilityDidChange(available as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells you that the availability of its associated speech recognizer changed.
Notes: available: A Boolean value that indicates the new availability of the speech recognizer.

159.6.21 didDetectSpeech(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells you when the task first detects speech in the source audio.
Notes: task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

159.6.22 TaskDidFinishRecognition(task as SFSpeechRecognitionTaskMBS, recognitionResult as SFSpeechRecognitionResultMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Tells you when the final utterance is recognized.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
recognitionResult: A recognized utterance that contains one or more transcription hypotheses in an SFSpeechRecognitionResultMBS object.

When this method is called, the delegate should expect no further information about the utterance to be reported.

159.6.23 TaskDidFinishSuccessfully(task as SFSpeechRecognitionTaskMBS, successfully as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells you when the recognition of all requested utterances is finished.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
successfully: A Boolean value that indicates whether the task was successful. When this parameter is false, use the error property of the task to get information about why the task was unsuccessful.

159.6.24 TaskDidHypothesizeTranscription(task as SFSpeechRecognitionTaskMBS, transcription as SFTranscriptionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells you that a hypothesized transcription is available.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.
transcription: The hypothesized transcription in an SFTranscriptionMBS object.

This method is called for all recognitions, including partial recognitions.

159.6.25 TaskFinishedReadingAudio(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells you when the task is no longer accepting new audio input, even if final processing is in progress.
Notes: task: The speech recognition task (an SFSpeechRecognitionTask object) that represents the request.

159.6.26 TaskWasCancelled(task as SFSpeechRecognitionTaskMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: Tells you that the task has been canceled.
Notes:

task: The speech recognition task (an SFSpeechRecognitionTaskMBS object) that represents the request.

A speech recognition task can be canceled by the user, by your app, or by the system.

159.6.27 Constants

159.6.28 kAuthorizationStatusAuthorized = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for app's authorization to perform speech recognition.
Notes: The user granted your app's request to perform speech recognition.

159.6.29 kAuthorizationStatusDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for app's authorization to perform speech recognition.
Notes: The user denied your app's request to perform speech recognition.

159.6.30 kAuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for app's authorization to perform speech recognition.
Notes: The app's authorization status has not yet been determined.

159.6.31 kAuthorizationStatusRestricted = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4. **Function:** One of the constants for app's authorization to perform speech recognition.
Notes: The device prevents your app from performing speech recognition.

159.6.32 Delegates

159.6.33 recognitionTaskWithRequestCompletedMBS(request as SFSpeechRecognitionRequestMBS, result as SFSpeechRecognitionResultMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No.
Function: The delegate for the callback when recognition is done.

159.6.34 requestAuthorizationCompletedMBS(status as integer, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 19.4, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The delegate to call when authorization request finished.

159.7 class SFSpeechURLRecognitionRequestMBS

159.7.1 class SFSpeechURLRecognitionRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A request to recognize speech in a recorded audio file.
Notes:

Use an SFSpeechURLRecognitionRequest object to perform speech recognition on the contents of an existing audio file.

Requires MacOS 10.15 or later.
Subclass of the SFSpeechRecognitionRequestMBS class.

- Playing with SpeechRecognition

159.7.3 Methods

159.7.4 Constructor(File as FolderItem)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a speech recognition request, initialized with the specified folderitem.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 159.7.5 Constructor(URL as String) 20959

159.7.5 Constructor(URL as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a speech recognition request, initialized with the specified URL.
Notes: Use this method to create a request to recognize speech in a recorded audio file that resides at the specified URL. Pass the request to the recognizer's recognitionTaskWithRequest method to start recognition.
See also:

- 159.7.4 Constructor(File as FolderItem) 20959

159.7.6 Properties

159.7.7 File as FolderItem

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The folderitem of the audio file.
Notes: (Read only property)

159.7.8 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The URL of the audio file.
Notes: (Read only property)

159.8 class SFTranscriptionMBS

159.8.1 class SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A textual representation of the given speech it its entirety, as recognized by the speech recognizer.
Notes:

Use SFTranscriptionMBS to obtain all the recognized utterances from your audio content. An utterance is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).
Use the formattedString property to retrieve the entire transcription of utterances, or use the segments property to retrieve an individual utterance (SFTranscriptionSegmentMBS).
You don't create an SFTranscriptionMBS directly. Instead, you retrieve it from an SFSpeechRecognitionResultMBS instance. The speech recognizer sends a speech recognition result to your app in one of two ways, depending on how your app started a speech recognition task.
You can start a speech recognition task by using the speech recognizer's recognitionTaskWithRequest method. When the task is complete, the speech recognizer sends an SFSpeechRecognitionResult instance to your resultHandler closure. Alternatively, you can use the speech recognizer's recognitionTaskWithRequest method to start a speech recognition task. When the task is complete, the speech recognizer uses events to send a SFSpeechRecognitionResultMBS by using the TaskDidFinishRecognition event.
An SFTranscriptionMBS represents only a potential version of the speech. It might not be an accurate representation of the utterances.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.8.2 Blog Entries

- Playing with SpeechRecognition

159.8.3 Methods

159.8.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.8.5 copy as SFTranscriptionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the object.

159.8.6 segments as SFTranscriptionSegmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of transcription segments that represent the parts of the transcription, as identified by the speech recognizer.
Notes: The order of the segments in the array matches the order in which the corresponding utterances occur in the spoken content.

159.8.7 Properties

159.8.8 averagePauseDuration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The average pause duration between words, measured in seconds.
Notes: (Read only property)

159.8.9 formattedString as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The entire transcription of utterances, formatted into a single, user-displayable string.
Notes: (Read only property)

159.8.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.8.11 speakingRate as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of words spoken per minute.
Notes: (Read only property)

159.9 class SFTranscriptionSegmentMBS

159.9.1 class SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A discrete part of an entire transcription, as identified by the speech recognizer.
Notes:

Use SFTranscriptionSegmentMBS to get details about a part of an overall SFTranscriptionMBS. An SFTranscriptionSegmentMBS represents an utterance, which is a vocalized word or group of words that represent a single meaning to the speech recognizer (SFSpeechRecognizerMBS).

You don't create transcription object segments directly. Instead, you access them from a transcription's segments property.
A transcription segment includes the following information:

- The text of the utterance, plus any alternative interpretations of the spoken word.
- The character range of the segment within the formattedString of its parent SFTranscriptionMBS.
- A confidence value, indicating how likely it is that the specified string matches the audible speech.
- A timestamp and duration value, indicating the position of the segment within the provided audio stream.
- A voiceAnalytics metric, indicating the likelihood of a voice in a segment, and that voice's pitch, jitter, and shimmer properties.

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.9.2 Blog Entries

- Playing with SpeechRecognition

159.9.3 Methods

159.9.4 alternativeSubstrings as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An array of alternate interpretations of the utterance in the transcription segment.

159.9.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.9.6 copy as SFTranscriptionSegmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the object.

159.9.7 Properties

159.9.8 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The level of confidence the speech recognizer has in its recognition of the speech transcribed for the segment.
Notes:

This property reflects the overall confidence in the recognition of the entire phrase. The value is 0 if there was no recognition, and it is closer to 1 when there is a high certainty that a transcription matches the user's speech exactly. For example, a confidence value of 0.94 represents a very high confidence level, and is more likely to be correct than a transcription with a confidence value of 0.72.
(Read only property)

159.9.9 duration as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The number of seconds it took for the user to speak the utterance represented by the segment.
Notes: (Read only property)

159.9.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.9.11 substring as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The string representation of the utterance in the transcription segment.
Notes: (Read only property)

159.9.12 substringRange as NSRangeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The range information for the transcription segment's substring, relative to the overall transcription.
Notes:

Use the range information to find the position of the segment within the formattedString property of the SFTranscription object containing this segment.
(Read only property)

159.9.13 timestamp as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The start time of the segment in the processed audio stream.
Notes:

The timestamp is the number of seconds between the beginning of the audio content and when the user spoke the word represented by the segment. For example, if the user said the word "time" one second into the transcription "What time is it", the timestamp would be equal to 1.0.
(Read only property)

159.9.14 voiceAnalytics as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: An analysis of the transcription segment's vocal properties.
Notes: (Read only property)

159.10 class SFVoiceAnalyticsMBS

159.10.1 class SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: A collection of vocal analysis metrics.
Notes:

Requires MacOS 10.15 or later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

159.10.2 Blog Entries

159.10.3 Methods

159.10.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The private constructor.

159.10.5 copy as SFVoiceAnalyticsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates a copy of the object.

159.10.6 Properties

159.10.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Internal object reference.
Notes: (Read and Write property)

159.10.8 jitter as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The variation in pitch in each frame of a transcription segment, expressed as a percentage of the frame's fundamental frequency.
Notes: (Read only property)

159.10.9 pitch as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The highness or lowness of the tone (fundamental frequency) in each frame of a transcription segment, expressed as a logarithm.
Notes:

The value is a logarithm (base e) of the normalized pitch estimate for each frame.
(Read only property)

159.10.10 shimmer as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The variation in vocal volume stability (amplitude) in each frame of a transcription segment, expressed in decibels.
Notes: (Read only property)

159.10.11 voicing as SFAcousticFeatureMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The likelihood of a voice in each frame of a transcription segment, expressed as a probability in the range [0.0, 1.0] .
Notes: (Read only property)

Chapter 160

Spell Checking

160.1 class NSSpellCheckerMBS

160.1.1 class NSSpellCheckerMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The spell checker class.
Notes:

The NSSpellChecker object is used by a client (e.g. a document in an application) to spell-check a given String.
There is only one NSSpellChecker instance per application (since spell-checking is interactive and you only have one mouse and one keyboard).

The string being spell-checked need only be valid for the duration of the call to checkSpellingOfString or countWordsInString.

Requires Mac OS X 10.2.

160.1.4 Methods

160.1.5 availableLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list of the available languages.
Notes: Requires Mac OS X 10.5.

160.1.6 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a grammatical analysis of a given string.
Notes:

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.
See also:

- 160.1.7 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

160.1.7 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean, Details() as dictionary) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a grammatical analysis of a given string.
Notes:

text: String to analyze.
start: Location within string at which to start the analysis.
language: Language use in string. When nil, the language selected in the Spelling panel is used.
wrap: true to specify that the analysis continue to the beginning of string when the end is reached. false to have the analysis stop at the end of string.
outDetails: Optional. On output, dictionaries describing grammar-analysis details within the flagged grammatical unit. See the NSSpellServer class for information about these dictionaries.

Returns Location of the first flagged grammatical unit.

Available in Mac OS X v10.5 and later.

- 160.1.6 checkGrammarOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 20970

160.1.8 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 160.1.9 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 20971
- 160.1.10 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 20972

160.1.9 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word.
See also:

- 160.1.8 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 20971

- 160.1.10 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS 20972

160.1.10 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean, byref WordCount as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Initiates a spell-check of a string.
Notes: Returns the range of the first misspelled word (and optionally the wordCount by reference).
See also:

- 160.1.8 checkSpellingOfString(text as string, start as Integer) as NSRangeMBS 20971

- 160.1.9 checkSpellingOfString(text as string, start as Integer, language as string, wrap as boolean) as NSRangeMBS 20971

160.1.11 checkString(text as string, range as NSRangeMBS = nil, checkingTypes as Int64 = -1, options as Dictionary = nil, byref orthography as NSOrthographyMBS, byref wordCount as Integer) as NSTextCheckingResultMBS()

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Requests unified text checking for the given range of the given string.
Notes:

text: The string to check.
range: The range of the string to check.
checkingTypes: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.

orthography: Returns by-reference, the orthography of the range of the string. See NSOrthographyMBS for more information.
wordCount: Returns by-reference, the word count for the range of the string.

Returns an array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type.

160.1.12 completionsForPartialWordRange(start as Integer, length as Integer, text as string, language as string="") as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Searches possible completions for the given word.
Notes:

Returns an array of strings, in the order in which they should be presented, representing complete words that the user might be trying to type when starting by typing the partial word at the given range in the given string.

Within the text, length characters are picked starting at at position (0 based) and matched agains the dictionary defined by language.
Up to around 100 words are returned.

Requires Mac OS X 10.3.
Returns an empty string on any error.

160.1.13 correctionForWordRange(range as NSRangeMBS, text as string, language as string) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a single proposed correction if a word is mis-spelled.
Notes:

range: The range of the word to be corrected.
text: The string containing the proposed correction.
language: The language.

Returns the proposed correct string.

160.1.14 countWordsInString(word as string, language as string="") as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Just counts the words without checking spelling.
Example:

```
dim text as string = "Hello World"
dim spell as NSSpellCheckerMBS // your spellchecker

msgBox str(spell.countWordsInString(text,"en"))
```

Notes:

Returns the number of words in text. The language argument specifies the language used in the string. If language is the empty string, the current selection in the Spelling panel's pop-up menu is used.

Returns -1 if text is nil or this spellchecker function is not available.

Returns -1 if counting words isn't supported by the spell server selected.

160.1.15 deletesAutospaceBetweenString(precedingString as string, followingString as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Deletes auto space between strings.
Notes: In some cases the space automatically inserted after an accepted candidate should be deleted when the next text is typed (e.g. if it is a period or comma). This method allows clients to recognize these cases in a standardized way.

160.1.16 dismissCorrectionIndicatorForView(view as NSViewMBS)

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Dismisses the correction indicator for the specified view.

160.1.17 forgetWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Removes the given word from the user dictionary.

160.1.18 guessesForWord(range as NSRangeMBS, word as string, language as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array of possible substitutions for the specified string.
Notes:

range: The range of the string to check.
word: The string to guess
language: The language of the string

Returns an array of strings containing possible replacement words.
Available in Mac OS X v10.6 and later.
See also:

- 160.1.19 guessesForWord(word as string) as string() 20975

160.1.19 guessesForWord(word as string) as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array with words matching the given word.
Example:

```
dim a() as string
dim s as new NSSpellCheckerMBS
a=s.guessesForWord("Hell")

msgbox str(ubound(a)+1)+" suggestions."
```

Notes:

Returns nil on any error.

Returns an array of suggested spellings for the misspelled word word. If word contains all capital letters, or its first letter is capitalized, the suggested words are capitalized in the same way.
See also:

- 160.1.18 guessesForWord(range as NSRangeMBS, word as string, language as string) as string() 20974

160.1.20 hasLearnedWord(word as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Checks whether a word has been learned.
Notes:

Returns true if the word is known.
Requires Mac OS X 10.5.

160.1.21 ignoredWords as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The list of ignored words.
Example:

```
dim spell as new NSSpellCheckerMBS
dim f as FolderItem
dim i,c as Integer
dim t as TextOutputStream
dim n(-1) as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.CreateTextFile
if t<>nil and spell<>nil then
n=spell.ignoredWords
MsgBox Join(n,EndOfLine)
end if
```

Notes: Returns nil on any error.

160.1.22 ignoreWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Adds the word to the ignore list so it will be ignored for spell checking in this NSSpellCheckerMBS object.
Notes: Requires Mac OS X 10.2.

160.1.23 isAutomaticCapitalizationEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic capitalization is enabled by the user.

160.1.24 isAutomaticDashSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic dash substitution is enabled by the user.

160.1.25 isAutomaticPeriodSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic period substitution is enabled by the user.

160.1.26 isAutomaticQuoteSubstitutionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic quote substitution is enabled by the user.

160.1.27 isAutomaticSpellingCorrectionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic spelling correction is enabled.
Notes: Available in Mac OS X v10.6 and later.

160.1.28 isAutomaticTextCompletionEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic text completion is enabled by the user.

160.1.29 isAutomaticTextReplacementEnabled as boolean

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether automatic spelling replacement is enabled.
Notes: Available in Mac OS X v10.6 and later.

160.1.30 languageForWordRange(range as NSRangeMBS, text as string, orthography as NSOrthographyMBS = nil) as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Clients who have an NSOrthography from NSTextCheckingTypeOrthography checking and wish to determine a specific language from it for a particular word.

160.1.31 languageMenuEntries as string()

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The entries from the language menu of the panel.
Notes:

Copies the list of menu entries from the panel.

Currently you can use this names to show to the user and see what languages are available. It uses a private property which works for Mac OS X 10.4 and 10.5.
For the language function you need the short names:

Australian English	en_AU
British English	en_GB
Canadian English	en_CA
Deutsch	de
English	en
Español	es
Français	fr
Italiano	it
Multilingual	Multilingual
Nederlands	nl
Português	pt
Protuguês do Brasil	pt_BR
Svenska	sv

160.1.32 learnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Learns the given word.
Notes: Requires Mac OS X 10.5.

160.1.33 menuForResult(TextCheckingResult as NSTextCheckingResultMBS, checkedString as string, options as Dictionary = nil, atLocation as NSPointMBS, view as NSViewMBS) as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides a menu containing contextual menu items suitable for certain kinds of detected results.
Notes:

TextCheckingResult: The NSTextCheckingResult instance for the checked string.
checkedString: The string that has been checked.
options: The options dictionary allows clients to pass in information associated with the document. See Spell Checking Option Dictionary Keys for possible key-value pairs.
location: The location, in the view's coordinate system, to display the menu.
view: The view object over which to display the contextual menu.

Returns a menu suitable for displaying as a contextual menu, or adding to another contextual menu as a submenu.

160.1.34 NSSpellCheckerDidChangeAutomaticCapitalizationNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification named used when automatic capitalization setting changed.

160.1.35 NSSpellCheckerDidChangeAutomaticDashSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification named used when automatic dash substitution setting changed.

160.1.36 NSSpellCheckerDidChangeAutomaticPeriodSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification named used when automatic period substitution setting changed.

160.1.37 NSSpellCheckerDidChangeAutomaticQuoteSubstitutionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification named used when automatic quote substitution setting changed.

160.1.38 NSSpellCheckerDidChangeAutomaticSpellingCorrectionNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: One of the notification names.
Notes:

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker did change text using automatic spell checking correction.
The are posted to the application's default notification center.
Available in Mac OS X v10.7 and later.

160.1.39 NSSpellCheckerDidChangeAutomaticTextCompletionNotification as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The notification named used when automatic text completion setting changed.

160.1.40 NSSpellCheckerDidChangeAutomaticTextReplacementNotification as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the notification names.
Notes:

Use with NSNotificationObserverMBS class.
This notification is posted when the spell checker changed text using automatic text replacement. The are posted application's to the default notification center.
Available in Mac OS X v10.7 and later.

160.1.41 NSTextCheckingDocumentAuthorKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An string containing the name of an author to be associated with the document

Available in Mac OS X v10.6 and later.

160.1.42 NSTextCheckingDocumentTitleKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

A string containing the title to be associated with the document.

Available in Mac OS X v10.6 and later.

160.1.43 NSTextCheckingDocumentURLKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An NSURL to be associated with the document.

Available in Mac OS X v10.6 and later.

160.1.44 NSTextCheckingOrthographyKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An NSOrthography instance indicating an orthography to be used as a starting point for orthography checking, or as the orthography if orthography checking is not enabled.

Available in Mac OS X v10.6 and later.

160.1.45 NSTextCheckingQuotesKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An NSArray containing four strings to be used with NSTextCheckingTypeQuote (opening double quote, closing double quote, opening single quote, and closing single quote in that order); if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

160.1.46 NSTextCheckingReferenceDateKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An NSDate to be associated with the document, used as a referent for relative dates; if not specified, the current date will be used.

Available in Mac OS X v10.6 and later.

160.1.47 NSTextCheckingReferenceTimeZoneKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

An NSTimeZone to be associated with the document, used as a reference for dates without time zones; if not specified, the current time zone will be used.

Available in Mac OS X v10.6 and later.

160.1.48 NSTextCheckingRegularExpressionsKey as string

MBS MacCocoa Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

Available in Mac OS X 10.7 or newer.
Currently not directly supported with our plugins.

160.1.49 NSTextCheckingReplacementsKey as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes:

A dictionary containing replacements to be used with NSTextCheckingTypeReplacement; if not specified, values will be taken from user's preferences.

Available in Mac OS X v10.6 and later.

160.1.50 NSTextCheckingSelectedRangeKey as string

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants for the options dictionary.
Notes: NSValueMBS containing NSRangeMBS, should be the portion of the selected range intersecting the

string being checked, or a zero-length range if there is an insertion point in or adjacent to the string being checked, or New NSRangeMBS(NSNotFound, 0) if the selection is entirely outside of the string being checked.

160.1.51 preventsAutocorrectionBeforeString(text as string, language as String = "") as Boolean

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** In some cases the next typing should prevent a pending correction (if it is an @, for example).
Notes: This method allows clients to recognize these cases in a standardized way.

160.1.52 recordResponse(response as Integer, correction as string, word as string, language as String = "")

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Records the user response to the correction indicator being displayed.
Notes:

response: The user's response. The possible values are shown in NSCorrectionResponse.
correction: The corrected word. This should match the original correction.
word: The original word. This should match the original correction.
language: The language being edited. This should match the original correction.

When a correction is automatically proposed, the user may respond in one of several ways. Clients may report this to the spell checker so that it can learn from the user's response and adjust future correction behavior accordingly.

Use of this method implies that the client stored the original word and original correction at least from the point at which the user accepts it until the user edits or reverts it.

160.1.53 requestCandidatesForSelectedRange(selectedRange as NSRangeMBS, stringToCheck as string, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Requests candidates in background.

160.1.54 requestCheckingOfString(stringToCheck as string, range as NSRangeMBS, types as Int64 = -1, options as Dictionary = nil, tag as Variant = nil) as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Requests that the string be checked in the background.
Notes:

stringToCheck: The string to check.
range: The range of the string to check.
types: The type of checking to be performed. The possible constants are listed in NSTextCheckingType and can be combined using the C bit-wise OR operator to perform multiple checks at the same time.
options: The options dictionary specifying the types of checking to perform. See Spell Checking Option Dictionary Keys for the possible keys and expected values.
tag: An identifier unique within the application used to inform the spell checker which document that text is associated, potentially for many purposes, not necessarily just for ignored words. A value of 0 can be passed in for text not associated with a particular document.

The return value is a monotonically increasing sequence number that can be used to keep track of requests in flight.

Calls requestCheckingOfStringCompleted event later on main thread.

160.1.55 setIgnoredWords(words() as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the ignored word list.
Example:

```
dim spell as NSSpellCheckerMBS // your spellchecker

dim f as FolderItem
dim t as TextInputStream
dim words(-1),line as string

f=SpecialFolder.Preferences.Child("SpellCheck RB.pref")
t=f.OpenAsTextFile
if t<>nil and spell<>nil then

while not t.eof
line=t.ReadLine(encodings.UTF8)
if line<>"" then
words.Append line
end if
wend
```

spell.setIgnoredWords words

end if

160.1.56 setLanguage(language as string) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Allows programmatic setting of the language to spell-check in.
Notes:

Normally chosen by a pop-up-list in the spelling panel and defaulted to the user's preferred language, so call this with care.
Set to "" to use the language from the panel popup menu.

160.1.57 sharedSpellCheckerExists as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns whether the application's NSSpellChecker has already been created.
Notes: Returns true if the shared spell checker already exists, otherwise false.

160.1.58 spellingPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The spelling panel used for spell checking.

160.1.59 unlearnWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Tells the spell checker to unlearn a given word.
Notes:

Available in Mac OS X v10.5 and later.
Same as the older forgetWord.

160.1.60 updatePanels

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the available panels to account for user changes.
Notes:

This method should be called when a client changes some relevant setting, such as what kind of spelling, grammar checking, or substitutions it uses.

Available in Mac OS X v10.6 and later.

160.1.61 updateSpellingPanelWithGrammarString(lang as string, detail as dictionary)

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Specifies a grammar-analysis detail to highlight in the Spelling panel.
Notes:

problemString: Problematic grammatical unit identified by checkGrammarOfString.
detail: One of the grammar-analysis details provided by checkGrammarOfString.

Available in Mac OS X v10.5 and later.

160.1.62 updateSpellingPanelWithMisspelledWord(word as string)

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Updates the panel with the word.
Notes: The checkSpellingOfString methods return the range of the misspelled word found. It is up to the client to select that word in their document and to cause the spelling panel to update itself to reflect the found misspelling. Clients can call updateSpellPanelWithMisspelledWord to insure that the spell panel is up to date.

160.1.63 userPreferredLanguages as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Provides a subset of the available languages to be used for spell checking.
Notes:

Returns an array containing the user's preferred languages for spell checking. The order is set in the system preferences.

If automaticallyIdentifiesLanguages is true, then text checking will automatically use this method as appropriate; otherwise, it will use the language set by Language property.

The older checkSpellingOfString and checkGrammarOfString methods will use the language set by Language property, if they are called with an empty language argument.

Available in Mac OS X v10.6 and later.

160.1.64 userQuotesArrayForLanguage(lang as string) as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the default values for quote replacement.
Example:

```
dim n as new NSSpellCheckerMBS

dim en(-1) as string = n.userQuotesArrayForLanguage("en")

MsgBox Join(en," ")
```

Notes:

An array of quote replacements used by the NSTextCheckingQuotesKey key-value pair.

Available in Mac OS X v10.6 and later.

160.1.65 userReplacementsDictionary as dictionary

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the dictionary used when replacing words.
Notes:

The key-value pairs in this dictionary are used by the NSTextCheckingQuotesKey when replacing characters and words.

Available in Mac OS X v10.6 and later.

160.1.66 Properties

160.1.67 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The Spelling panel's accessory view.
Notes:

The accessory view can be any custom view you want to display with the spelling panel. The accessory view is displayed below the spelling checker and the panel automatically resizes to accommodate the accessory view.

This method posts a notification named NSWindowDidResizeNotification with the Spelling panel object to the default notification center.

The accessory view or nil if there is none.
(Read and Write property)

160.1.68 automaticallyIdentifiesLanguages as boolean

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the spell checker will automatically identify languages.
Notes:

Available in Mac OS X v10.6 and later.
(Read and Write property)

160.1.69 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The handle to the used NSSpellChecker reference.
Notes: (Read and Write property)

160.1.70 language as string

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The current language used.
Example:

```
dim c as NSSpellCheckerMBS
```

c=new NSSpellCheckerMBS

c.Language="en"

MsgBox c.Language // shows en

c.Language="Dutch"

MsgBox c.Language // shows nl

c.Language="Multilingual"

MsgBox c.Language // shows Multilingual

Notes: (Read and Write property)

160.1.71 Length as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last length of the position where an error was found.
Notes:

Length is 0 if no location was found.
(Read and Write property)

160.1.72 Location as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The last location where an error was found.
Notes: (Read and Write property)

160.1.73 substitutionsPanel as NSPanelMBS

MBS MacCocoa Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The substitutions panel.
Notes: (Read only property)

160.1.74 substitutionsPanelAccessoryViewController as NSViewControllerMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the substitutions panel's accessory view.
Notes:

accessoryController: The accessory view controller or nil if there is none.

The accessory view controller can accommodate any custom view you want to display with the substitutions panel. The accessory view controller's view is displayed below the substitutions list and the panel automatically resizes to accommodate the accessory view.
This method posts a notification named NSWindowDidResizeNotification with the substitutions panel object to the default notification center.
(Read only property)

160.1.75 Tag as Integer

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The document tag for the current document.
Notes:

Every NSSpellCheckerMBS gets a new tag. The tag identifies which ignore list is used. This value is set automatically.
(Read and Write property)

160.1.76 WordFieldValue as string

MBS MacCocoa Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The word textfield content string.
Notes: (Read and Write computed property)

160.1.77 Events

160.1.78 Correct

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event sent whenever the Correct button is pressed.

160.1.79 FindNext

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event sent whenever the Find Next button is pressed.

160.1.80 Ignore

MBS MacCocoa Plugin, Plugin Version: 7.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** An event sent whenever the Ignore button is pressed.

160.1.81 requestCandidatesForSelectedRangeCompleted(sequenceNumber as Integer, candidates() as NSTextCheckingResultMBS, stringToCheck as String, selectedRange as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called later by requestCandidatesForSelectedRange method.

160.1.82 requestCheckingOfStringCompleted(sequenceNumber as Integer, results() as NSTextCheckingResultMBS, orthography as NSOrthographyMBS, wordCount as Integer, stringToCheck as String, Range as NSRangeMBS, checkingTypes as Int64, options as Dictionary, tag as Variant)

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** Called later by requestCheckingOfString method.
Notes:

sequenceNumber: A monotonically increasing sequence number.
results: An array of NSTextCheckingResultMBS objects describing particular items found during checking and their individual ranges, sorted by range origin, then range end, then result type..
orthography: The orthography of the string.
wordCount: The number of words in the range of the string.

160.1.83 Constants

160.1.84 NSCorrectionIndicatorTypeDefault = 0

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the correction indicator type constants.
Notes:

The default indicator that shows a proposed correction.
Available in Mac OS X v10.7 and later.

160.1.85 NSCorrectionIndicatorTypeGuesses = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the correction indicator type constants.
Notes:

Shows multiple alternatives from which the user may choose the appropriate spelling.
Available in Mac OS X v10.7 and later.

160.1.86 NSCorrectionIndicatorTypeReversion = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the correction indicator type constants.
Notes:

Provides the option to revert to the original form after a correction has been made.
Available in Mac OS X v10.7 and later.

160.1.87 NSCorrectionResponseAccepted = 1

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

The user accepted the correction.
Available in Mac OS X v10.7 and later.

160.1.88 NSCorrectionResponseEdited = 4

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

After the correction was accepted, the user edited the corrected word (to something other than its original form.
Available in Mac OS X v10.7 and later.

160.1.89 NSCorrectionResponseIgnored = 3

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

The user continued in such a way as to ignore the correction.
Available in Mac OS X v10.7 and later.

160.1.90 NSCorrectionResponseNone = 0

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

No response was received from the user.
Available in Mac OS X v10.7 and later.

160.1.91 NSCorrectionResponseRejected = 2

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

The user rejected the correction by dismissing the correction indicator.
Available in Mac OS X v10.7 and later.

160.1.92 NSCorrectionResponseReverted = 5

MBS MacCocoa Plugin, Plugin Version: 11.3. **Function:** One of the constants passed to recordresponse method.
Notes:

After the correction was accepted, the user reverted the correction back to the original word.
Available in Mac OS X v10.7 and later.

160.1.93 NSGrammarCorrections = "NSGrammarCorrections"

MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.

160.1.94 NSGrammarRange = "NSGrammarRange"

MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.

160.1.95 NSGrammarUserDescription = "NSGrammarUserDescription"

MBS MacCocoa Plugin, Plugin Version: 9.6. **Function:** One of the key constants for the dictionaries in the details array.

160.2 class NSTextCheckingResultMBS

160.2.1 class NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** An occurrence of textual content found during the analysis of a block of text, such as when matching a regular expression.
Notes:

On both iOS and macOS, instances of NSTextCheckingResultMBS are returned by the NSRegularExpression class and the NSDataDetectorMBS class to indicate the discovery of content. In those cases, what is found may be a match for a regular expression or a date, address, phone number, and so on. In macOS, instances of NSTextCheckingResultMBS are returned by the NSSpellCheckerMBS object to describe the results of spelling, grammar, or text-substitution actions.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

160.2.4 Methods

160.2.5 addressCheckingResult(Range as NSRangeMBS, components as Dictionary) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified address components.
Notes: components: A dictionary containing the address components. The dictionary keys are described in Keys for Address Components.

160.2.6 alternativeStrings as String()

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns alternative strings.

160.2.7 Constructor

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The private constructor.

160.2.8 copy as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a copy of the result.

160.2.9 correctionCheckingResult(Range as NSRangeMBS, replacementString as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result after detecting a possible correction.
Notes:

range: The range of the detected result.
replacementString: The suggested replacement string.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeSpelling.
See also:

- 160.2.10 correctionCheckingResult(Range as NSRangeMBS, replacementString as String, alternativeStrings() as String) as NSTextCheckingResultMBS 20996

160.2.10 correctionCheckingResult(Range as NSRangeMBS, replacementString as String, alternativeStrings() as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result after detecting a possible correction.
Notes:

range: The range of the detected result.
replacementString: The suggested replacement string.

Returns an NSTextCheckingResultMBS with the specified range and a resultType of NSTextCheckingTypeSpelling.
See also:

- 160.2.9 correctionCheckingResult(Range as NSRangeMBS, replacementString as String) as NSTextCheckingResultMBS 20996

160.2.11 dashCheckingResult(Range as NSRangeMBS, replacementString as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a text checking result with the specified dash corrected replacement string.
Notes:

range: The range of the detected result.
replacementString: The replacement string.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeDash.

160.2.12 dateCheckingResult(Range as NSRangeMBS, date as Date) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a text checking result with the specified date.
See also:

- 160.2.13 dateCheckingResult(Range as NSRangeMBS, date as Date, timeZone as NSTimeZoneMBS, duration as double) as NSTextCheckingResultMBS 20997

160.2.13 dateCheckingResult(Range as NSRangeMBS, date as Date, timeZone as NSTimeZoneMBS, duration as double) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a text checking result with the specified date, time zone, and duration.
Notes:

range: The range of the detected result.
date: The detected date.
timeZone: The detected time zone.
duration: The detected duration.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeDate.
See also:

- 160.2.12 dateCheckingResult(Range as NSRangeMBS, date as Date) as NSTextCheckingResultMBS 20997

160.2.14 grammarCheckingResult(Range as NSRangeMBS, details() as Dictionary) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified array of grammatical errors.
Notes:

range: The range of the detected result.
details: An array of details regarding the grammatical errors. This array of strings is suitable for presenting to the user.

Returns an NSTextCheckingResultMBS with the specified range and a resultType of NSTextCheckingTypeGrammar.

160.2.15 grammarDetails as Dictionary()

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The details of a located grammatical type checking result.
Notes: This array of strings is suitable for presenting to the user.

160.2.16 linkCheckingResult(Range as NSRangeMBS, URL as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified URL.

160.2.17 NSTextCheckingAirlineKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the components dictionary.
Notes: A key that corresponds to the airline of a transit result.

160.2.18 NSTextCheckingCityKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the city component of the address.

160.2.19 NSTextCheckingCountryKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the country component of the address.

160.2.20 NSTextCheckingFlightKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the components dictionary.
Notes: A key that corresponds to the flight component of a transit result.

160.2.21 NSTextCheckingJobTitleKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the job component of the address.

160.2.22 NSTextCheckingNameKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the name component of the address.

160.2.23 NSTextCheckingOrganizationKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the organization component of the address.

160.2.24 NSTextCheckingPhoneKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the phone number component of the address.

160.2.25 NSTextCheckingStateKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the state or province component of the address.

160.2.26 NSTextCheckingStreetKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the street address component of the address.

160.2.27 NSTextCheckingZIPKey as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the constants to identify the possible keys returned in the addressComponents dictionary.
Notes: A key that corresponds to the zip code or postal code component of the address.

160.2.28 orthographyCheckingResult(Range as NSRangeMBS, orthography as NSOrthographyMBS) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified orthography.
Notes:

range: The range of the detected result.
orthography: An orthography object that describes the script.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeOrthography.

160.2.29 phoneNumberCheckingResult(Range as NSRangeMBS, phoneNumber as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified phone number.

160.2.30 quoteCheckingResult(Range as NSRangeMBS, replacementString as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified quote-balanced replacement string. **Notes:**

range: The range of the detected result.
replacementString: The replacement string.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeQuote.

160.2.31 rangeAtIndex(index as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the result type that the range represents.
Notes:

index: The index of the result.

Returns the range of the result.

A result must have at least one range, but may optionally have more (for example, to represent regular expression capture groups).
Passing rangeAtIndex the value 0 always returns the value of the the range property. Additional ranges, if any, will have indexes from 1 to numberOfRanges-1.

160.2.32 rangeWithName(name as string) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns range with name.

160.2.33 replacementCheckingResult(Range as NSRangeMBS, replacementString as String) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified replacement string.

160.2.34 resultByAdjustingRangesWithOffset(offset as Integer) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Returns a new text checking result after adjusting the ranges as specified by the offset.
Notes:

offset: The amount the ranges are adjusted.

Returns a new NSTextCheckingResultMBS instance with the adjusted range or ranges.

160.2.35 spellCheckingResult(Range as NSRangeMBS) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: Creates and returns a text checking result with the range of a misspelled word.
Notes:

range: The range of the detected result.

Returns an NSTextCheckingResult with the specified range and a resultType of NSTextCheckingTypeSpelling.

160.2.36 transitInformationCheckingResult(Range as NSRangeMBS, components as Dictionary) as NSTextCheckingResultMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates and returns a text checking result with the specified transit information.
Notes: components: A dictionary containing the transit components. The currently supported keys are NSTextCheckingAirlineKey and NSTextCheckingFlightKey.

160.2.37 Properties

160.2.38 addressComponents as Dictionary

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No.
Function: The address dictionary of a type checking result.
Notes:

The dictionary keys are described in Keys for Address Components.
(Read only property)

160.2.39 components as Dictionary

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A dictionary containing the components of a type checking result.
Notes:

Currently used by the transit checking result. The supported keys are located in Keys for Transit Components.
(Read only property)

160.2.40 date as Date

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The date component of a type checking result.
Notes: (Read only property)

160.2.41 duration as Double

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The duration component of a type checking result.
Notes: (Read only property)

160.2.42 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

160.2.43 numberOfRanges as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of ranges.
Notes:

A result must have at least one range, but may optionally have more (for example, to represent regular expression capture groups).
Passing rangeAtIndex the value 0 always returns the value of the the range property. Additional ranges, if

any, will have indexes from 1 to numberOfRanges-1.
(Read only property)

160.2.44 orthography as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The detected orthography of a type checking result.
Notes: (Read only property)

160.2.45 phoneNumber as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The phone number of a type checking result.
Notes: (Read only property)

160.2.46 range as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the range of the result that the receiver represents.
Notes:

This property will be present for all returned NSTextCheckingResultMBS instances.
(Read only property)

160.2.47 replacementString as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** A replacement string from one of a number of replacement checking results.
Notes: (Read only property)

160.2.48 resultType as Integer

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the text checking result type that the receiver represents.
Notes:

The possible result types for the built in checking capabilities are described in NSTextCheckingType.
This property will be present for all returned NSTextCheckingResultMBS instances.

(Read only property)

160.2.49 timeZone as NSTimeZoneMBS

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The time zone component of a type checking result.
Notes: (Read only property)

160.2.50 URL as String

MBS MacCocoa Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The URL of a type checking result.
Notes: (Read only property)

160.2.51 Constants

160.2.52 NSTextCheckingAllCustomTypes = & hffffffff00000000

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking type constant mask.
Notes: Checking types that can be used by clients.

160.2.53 NSTextCheckingAllSystemTypes = & hffffffff

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking type constant mask.
Notes: Checking types supported by the system. The first 32 types are reserved.

160.2.54 NSTextCheckingAllTypes = & hffffffffffffffff

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking type constant mask.
Notes: All possible checking types, both system- and user-supported.

160.2.55 NSTextCheckingTypeAddress = 16

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants.
Notes: Attempts to locate addresses.

160.2.56 NSTextCheckingTypeCorrection = 512

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Performs autocorrection on misspelled words.

160.2.57 NSTextCheckingTypeDash = 128

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Replaces dashes with em-dashes.

160.2.58 NSTextCheckingTypeDate = 8

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Attempts to locate dates.

160.2.59 NSTextCheckingTypeGrammar = 4

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Checks grammar.

160.2.60 NSTextCheckingTypeLink = 32

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Attempts to locate URL links.

160.2.61 NSTextCheckingTypeOrthography = 1

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Attempts to identify the language

160.2.62 NSTextCheckingTypePhoneNumber = 2048

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Matches a phone number.

160.2.63 NSTextCheckingTypeQuote = 64

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Replaces quotes with smart quotes.

160.2.64 NSTextCheckingTypeRegularExpression = 1024

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Matches a regular expression.

160.2.65 NSTextCheckingTypeReplacement = 256

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Replaces characters such as (c) with the appropriate symbol (in this case ©).

160.2.66 NSTextCheckingTypeSpelling = 2

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Checks spelling.

160.2.67 NSTextCheckingTypeTransitInformation = 4096

MBS MacCocoa Plugin, Plugin Version: 19.1. **Function:** One of the checking types constants. **Notes:** Matches a transit information, for example, flight information.

Chapter 161

Spotlight

161.1 class MDItemMBS

161.1.1 class MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This is the class that represents a file and the metadata associated with the file.
Notes: Available in Mac OS X version 10.4 and later.

161.1.2 Blog Entries

- Query URL from downloaded file
- MBS Xojo / Real Studio Plugins, version 15.1pr8
- MBS Real Studio Plugins, version 12.3pr3
- MBS Real Studio Plugins, version 11.1pr7

161.1.3 Methods

161.1.4 AllAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns a list with all possible attribute names in the system.
Notes:

dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AllAttributes, EndOfLine)

161.1.5 AttributeBoolean(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value for this attribute.

161.1.6 AttributeDouble(name as string) as Double

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value for this attribute.

161.1.7 AttributeMultiValued(name as string) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Whether the given attribute is an array of multiple values.

161.1.8 AttributeNames as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns an array containing the attribute names existing in the metadata item.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox join(item.AttributeNames, EndOfLine)
```

Notes: Available in Mac OS X version 10.4 and later.

161.1.9 AttributeString(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value for this attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)
```

MsgBox item.AttributeString(item.kMDItemFSName)

161.1.10 AttributeStringArray(name as string) as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value for this attribute.

161.1.11 AttributeType(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The type of the attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.AttributeType(item.kMDItemFSName) // "String"
```

Notes: Returns "Boolean", "Number", "Date" or "String".

161.1.12 Constructor(path as folderitem)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates an MDItem object for a file at the specified path.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim m as new MDItemMBS(f)

MsgBox m.DisplayName
```

Notes:

path: A path to the file from which to create the MDItem.

Available in Mac OS X version 10.4 and later.

161.1.13 DisplayDescriptionForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display description for the attribute.
Notes:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayDescriptionForAttribute(item.kMDItemDisplayName)
// shows "Lokalisiert angezeigter Name der Datei" in German
```

161.1.14 DisplayNameForAttribute(name as string) as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The display name for this attribute.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayNameForAttribute(item.kMDItemDisplayName)
// shows "Anzeigename" in German
```

161.1.15 GetAttribute(name as string) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value of the given attribute for the item.
Notes:

name: The name of the desired attribute.

A variant, or nil on failure, or if the attribute does not exist, of if the attribute is not readable.

161.1.16 GetAttributes as dictionary

MBS MacOSX Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries all attributes with all names and values.
See also:

- 161.1.17 GetAttributes(names() as string) as dictionary

161.1.17 GetAttributes(names() as string) as dictionary

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the values of the given attributes for the item.
Notes:

names: An array of the names of the desired attributes.
A dictionary where the keys are the attribute names, and the values are the attribute values, or nil on failure.
If an attribute does not exist, or is unreadable, there will be no key-value pair for it in the dictionary.
See also:

- 161.1.16 GetAttributes as dictionary 21012

161.1.18 kMDItemAcquisitionMake as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The manufacturer of the device used to aquire the document contents. A string.

161.1.19 kMDItemAcquisitionModel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The model of the device used to aquire the document contents. For example, 100, 200, 400, etc. A string.

161.1.20 kMDItemAlbum as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The title for a collection of media. This is analagous to a record album, or photo album. A string.

161.1.21 kMDItemAltitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The altitude of the item in meters above sea level, expressed using the WGS84 datum. Negative values lie below sea level. A number.

161.1.22 kMDItemAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The aperture setting used to acquire the document contents. This unit is the APEX value. A number.

161.1.23 kMDItemAppleLoopDescriptors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Specifies multiple pieces of descriptive information about a loop. An array of strings.

Besides genre and instrument, files can contain descriptive information that help users in refining searches.

161.1.24 kMDItemAppleLoopsKeyFilterType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Specifies key filtering information about a loop. Loops are matched against projects that often in a major or minor key. A string.

To assist users in identifying loops that will "fit" with their compositions, loops can be tagged with one of the following key filters: "AnyKey" "Minor" "Major" "NeitherKey" "BothKeys". "AnyKey" means that it fits with anything (whether in a major key, minor key or neither). "Minor" fits with compositions in a minor key. "NeitherKey" doesn't work well with compositions that are in major or minor key. "BothKeys" means it fits with major or minor key.

161.1.25 kMDItemAppleLoopsLoopMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Specifies how a file should be played. A string.

Tagged files can either be loops or non-loops (e.g., a cymbal crash). "Looping" indicates if the file should be

treated as a loop. "Non-looping" indicates the file should not be treated as a loop.

161.1.26 kMDItemAppleLoopsRootKey as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Specifies the loop's original key. The key is the root note or tonic for the loop, and does not include the scale type. A string.

161.1.27 kMDItemApplicationCategories as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.28 kMDItemAttributeChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The date and time of the last change made to a metadata attribute. A date.

161.1.29 kMDItemAudiences as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The audience for which the file is intended. The audience may be determined by the creator or the publisher or by a third party. An array of strings.

161.1.30 kMDItemAudioBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The audio bit rate. A number.

161.1.31 kMDItemAudioChannelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Number of channels in the audio data contained in the file. A number.

This integer value only represents the number of discreet channels of audio data found in the file. It does not indicate any configuration of the data in regards to a user's speaker setup.

161.1.32 kMDItemAudioEncodingApplication as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The name of the application that encoded the data contained in the audio file. A string.

161.1.33 kMDItemAudioSampleRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Sample rate of the audio data contained in the file. The sample rate is a float value representing hz (audio_frames/second). For example: 44100.0, 22254.54. A number.

161.1.34 kMDItemAudioTrackNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The track number of a song or composition when it is part of an album. A number (integer).

161.1.35 kMDItemAuthorAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

This attribute indicates the author addresses of the document.
An array of string. Requires Mac OS X 10.6.

161.1.36 kMDItemAuthorEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: This attribute indicates the author of the emails message addresses. (This is always the email address, and not the human readable version). An array of string. Requires Mac OS X 10.5.

161.1.37 kMDItemAuthors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The author, or authors, of the contents of the file. An array of strings.
The order of the authors is preserved, but does not represent the main author or relative importance of the authors.

161.1.38 kMDItemBitsPerSample as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The number of bits per sample. For example, the bit depth of an image (8-bit, 16-bit etc...) or the bit depth per audio sample of uncompressed audio data (8, 16, 24, 32, 64, etc..). A number.

161.1.39 kMDItemCameraOwner as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.40 kMDItemCFBundleIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: If this item is a bundle, then this is the CFBundleIdentifier. A string

161.1.41 kMDItemCity as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Identifies city of origin according to guidelines established by the provider. A string.

For example, "New York", "Cupertino", or "Toronto".

161.1.42 kMDItemCodecs as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The codecs used to encode/decode the media. An array of strings.

161.1.43 kMDItemColorSpace as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The color space model used by the document contents. For example, "RGB", "CMYK", "YUV", or "YCbCr". A string.

161.1.44 kMDItemComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A comment related to the file. This differs from the Finder comment, kMDItemFinderComment. A string.

161.1.45 kMDItemComposer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The composer of the music contained in the audio file. A string.

161.1.46 kMDItemContactKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A list of contacts that are associated with this document, not including the authors. An array of strings.

161.1.47 kMDItemContentCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The date that the contents of the file were created. A date.

This is different than the file creation date. Its can be used to store when the file contents were first created, or first modified.

161.1.48 kMDItemContentModificationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The date and time that the contents of the file were last modified. A date.

This is not necessarily the file modification date.

161.1.49 kMDItemContentType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: For example, a jpeg image file will have a value of public.jpeg/public.image/public.data. The value of this attribute is set by the MDImporter. Changes to this value are lost when the file attributes are next imported.

161.1.50 kMDItemContentTypeTree as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Array of string

161.1.51 kMDItemContributors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The entities responsible for making contributions to the content of the resource. An array of strings.

Examples of a contributor include a person, an organization or a service.

161.1.52 kMDItemCopyright as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The copyright owner of the file contents. A string.

161.1.53 kMDItemCountry as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The full, publishable name of the country or primary location where the intellectual property of the item was created, according to guidelines of the provider. A string.

161.1.54 kMDItemCoverage as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The extent or scope of the content of the resource. A string.

Coverage will typically include spatial location (a place name or geographic co-ordinates), temporal period (a period label, date, or date range) or jurisdiction (such as a named administrative entity).

Recommended best practice is to select a value from a controlled vocabulary, and that, where appropriate, named places or time periods be used in preference to numeric identifiers such as sets of co-ordinates or date ranges.

161.1.55 kMDItemCreator as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Application used to create the document content (e.g. "Word", "AppleWorks", etc.). A string.

161.1.56 kMDItemDateAdded as string

MBS MacOSX Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

This is the date that the file was moved into the current location.
Not all files will have this attribute.
Not all file systems support this attribute.

161.1.57 kMDItemDeliveryType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The delivery type. Values are "Fast start" or "RTSP". A string.

161.1.58 kMDItemDescription as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A description of the content of the resource. The description may include an abstract, table of contents, reference to a graphical representation of content or a free-text account of the content. A string.

161.1.59 kMDItemDirector as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

Notes: Director of the movie. A string. Requires Mac OS X 10.5.

161.1.60 kMDItemDisplayName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The localized version of the file name. A string.

161.1.61 kMDItemDownloadedDate as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.62 kMDItemDueDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Date this item is due. A date.

161.1.63 kMDItemDurationSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The duration, in seconds, of the content of file. A value of 10.5 represents media that is 10 and 1/2 seconds long. A number.

161.1.64 kMDItemEditors as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The list of editor/editors that has worked on this file. There could be 0 or more editors of a particular file. The order of the editors in the array is preserved, but is not intended to represent the main editor or relative importance of the editors. Type is An array of strings.

161.1.65 kMDItemEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Email addresses related to this item. An array of strings.

161.1.66 kMDItemEncodingApplications as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Application used to convert the original content into it's current form. For example, a PDF file might have an encoding application set to "Distiller". An array of strings.

161.1.67 kMDItemExecutableArchitectures as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.68 kMDItemEXIFGPSVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The version of GPSInfoIFD header that was used to generate the metadata. A string. Requires Mac OS X 10.5.

161.1.69 kMDItemEXIFVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The version of the EXIF header used to generate the metadata. A string.

161.1.70 kMDItemExposureMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The exposure mode used to acquire the document contents. A number.

Possible values are 0 (auto exposure), 1 (manual exposure) and 2 (auto bracket).

161.1.71 kMDItemExposureProgram as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The class of the exposure program used by the camera to set exposure when the image is taken. Possible values include: Manual, Normal, and Aperture priority. A string.

161.1.72 kMDItemExposureTimeSeconds as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The exposure time, in seconds, used to acquire the document contents. A number.

161.1.73 kMDItemExposureTimeString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The time of the exposure. A string.

161.1.74 kMDItemFinderComment as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Finder comments for this file. A string.

161.1.75 kMDItemFlashOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates if a camera flash was used. A number.

161.1.76 kMDItemFNumber as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The diameter of the diaphragm aperture in terms of the effective focal length of the lens.

161.1.77 kMDItemFocalLength as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The actual focal length of the lens, in millimeters. A number.

161.1.78 kMDItemFocalLength35mm as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.79 kMDItemFonts as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Fonts used in this item. You should store the font's full name, the postscript name, or the font family name, based on the available information. An array of strings.

161.1.80 kMDItemFSContentChangeDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The date the file contents last changed. A date.

161.1.81 kMDItemFSCreationDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The date and time that the file was created. A date.

161.1.82 kMDItemFSExists as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

161.1.83 kMDItemFSHasCustomIcon as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Boolean indicating if this file has a custom icon. Type is a boolean.

161.1.84 kMDItemFSInvisible as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates whether the file is invisible. A boolean.

161.1.85 kMDItemFSIsExtensionHidden as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates whether the file extension of the file is hidden. A boolean.

161.1.86 kMDItemFSIsReadable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

161.1.87 kMDItemFSIsStationery as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Boolean indicating if this file is stationery. Type is a boolean.

161.1.88 kMDItemFSIsWriteable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: This attribute is deprecated and was never implemented.

161.1.89 kMDItemFSLabel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Index of the Finder label of the file. Possible values are 0 through 7. A number.

161.1.90 kMDItemFSName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The file name of the item. A string.

161.1.91 kMDItemFSNodeCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Number of files in a directory. A number.

161.1.92 kMDItemFSOwnerGroupID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The group ID of the owner of the file. A number.

161.1.93 kMDItemFSOwnerUserID as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The user ID of the owner of the file. A number.

161.1.94 kMDItemFSSize as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The size, in bytes, of the file on disk. A number.

161.1.95 kMDItemGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Genre of the movie. A string.
Requires Mac OS X 10.5.

161.1.96 kMDItemGPSAreaInformation as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.97 kMDItemGPSDateStamp as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.98 kMDItemGPSDestBearing as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.99 kMDItemGPSDestDistance as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

Notes: Available in Mac OS X 10.7 and later.

161.1.100 kMDItemGPSDestLatitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.101 kMDItemGPSDestLongitude as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.102 kMDItemGPSDifferental as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.103 kMDItemGPSDOP as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.104 kMDItemGPSMapDatum as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.105 kMDItemGPSMeasureMode as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.106 kMDItemGPSProcessingMethod as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.107 kMDItemGPSStatus as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.108 kMDItemGPSTrack as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The direction of travel of the item, in degrees from true north. A number.
Requires Mac OS X 10.5.

161.1.109 kMDItemHasAlphaChannel as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

Notes: Indicates if this image file has an alpha channel. A boolean.

161.1.110 kMDItemHeadline as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A publishable entry providing a synopsis of the contents of the file. For example, "Apple Introduces the iPod Photo". A string.

161.1.111 kMDItemIdentifier as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A formal identifier used to reference the resource within a given context. A string.

161.1.112 kMDItemImageDirection as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The direction of the item's image, in degrees from true north. A number.
Requires Mac OS X 10.5.

161.1.113 kMDItemInformation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Information about the item. A string.
Requires Mac OS X 10.5.

161.1.114 kMDItemInstantMessageAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Instant message addresses related to this item. An array of strings.

161.1.115 kMDItemInstructions as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Editorial instructions concerning the use of the item, such as embargoes and warnings. For example, "Second of four stories". A string.

161.1.116 kMDItemIsApplicationManaged as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.117 kMDItemIsGeneralMIDISequence as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates whether the MIDI sequence contained in the file is setup for use with a General MIDI device. A boolean.

161.1.118 kMDItemIsLikelyJunk as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.119 kMDItemISOSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The ISO speed used to acquire the document contents. A number.

161.1.120 kMDItemKeySignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The key of the music contained in the audio file. For example: C, Dm, F# m, Bb. A string.

161.1.121 kMDItemKeywords as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Keywords associated with this file. For example, "Birthday", "Important", etc. An array of strings.

161.1.122 kMDItemKind as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A description of the kind of item this file represents. A string.

161.1.123 kMDItemLabelIcon as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.124 kMDItemLabelID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.125 kMDItemLabelKind as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.126 kMDItemLabelUUID as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.127 kMDItemLanguages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates the languages of the intellectual content of the resource. Recommended best practice for the values of the Language element is defined by RFC 3066. An array of strings.

161.1.128 kMDItemLastUsedDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The date and time that the file was last used. This value is updated automatically by LaunchServices everytime a file is opened by double clicking, or by asking LaunchServices to open a file. A date.

161.1.129 kMDItemLatitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The latitude of the item in degrees north of the equator, expressed using the WGS84 datum. Negative values lie south of the equator. A number.
Requires Mac OS X 10.5.

161.1.130 kMDItemLayerNames as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The names of the layers in the file. An array of strings.

161.1.131 kMDItemLensModel as string

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Available in Mac OS X 10.7 and later.

161.1.132 kMDItemLongitude as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The longitude of the item in degrees east of the prime meridian, expressed using the WGS84 datum. Negative values lie west of the prime meridian. A number.
Requires Mac OS X 10.5.

161.1.133 kMDItemLyricist as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The lyricist, or text writer, of the music contained in the audio file. A string.

161.1.134 kMDItemMaxAperture as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The smallest f-number of the lens. Ordinarily it is given in the range of 00.00 to 99.99. A number.

161.1.135 kMDItemMediaTypes as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The media types present in the content. An array of strings.

161.1.136 kMDItemMeteringMode as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The metering mode used to take the image. A string.

Possible values are: Unknown, Average, CenterWeightedAverage, Spot, MultiSpot, Pattern, and Partial.

161.1.137 kMDItemMusicalGenre as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The musical genre of the song or composition contained in the audio file. For example: Jazz, Pop, Rock, Classical. A string.

161.1.138 kMDItemMusicalInstrumentCategory as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Specifies the category of an instrument. A string.

Files should have an instrument associated with them ("Other Instrument" is provided as a catch-all). For some categories, such as "Keyboards", there are instrument names which provide a more detailed instrument definition, for example "Piano" or "Organ".

161.1.139 kMDItemMusicalInstrumentName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Specifies the name of instrument relative to the instrument category. A string.

Files can have an instrument name associated with them if they have certain instrument categories. For example, the "Percussion" category has multiple instruments, including "Conga" and "Bongo".

161.1.140 kMDItemNamedLocation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The name of the location or point of interest associated with the item. The name may be user provided. A string

161.1.141 kMDItemNumberOfPages as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Number of pages in the document. A number.

161.1.142 kMDItemOrganizations as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The company or organization that created the document. An array of strings.

161.1.143 kMDItemOrientation as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The orientation of the document contents. Possible values are 0 (landscape) and 1 (portrait). A number.

161.1.144 kMDItemOriginalFormat as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Original format of the movie.
A string.
Requires Mac OS X 10.5

161.1.145 kMDItemOriginalSource as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Original source of the movie. A string.
Requires Mac OS X 10.5.

161.1.146 kMDItemPageHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Height of the document page, in points (72 points per inch). For PDF files this indicates the height of the first page only. A number.

161.1.147 kMDItemPageWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Width of the document page, in points (72 points per inch). For PDF files this indicates the width of the first page only. A number.

161.1.148 kMDItemParticipants as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The list of people who are visible in an image or movie or written about in a document. Type is array of strings.
Requires Mac OS X 10.6.

161.1.149 kMDItemPath as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The complete path to the file. A string.

161.1.150 kMDItemPerformers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Performers in the movie. An array of string.
Requires Mac OS X 10.5.

161.1.151 kMDItemPhoneNumbers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Phone numbers related to this item. An array of strings.

161.1.152 kMDItemPixelCount as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The total number of pixels in the contents. Same as kMDItemPixelWidth x kMDItemPixelHeight. A number.

161.1.153 kMDItemPixelHeight as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The height, in pixels, of the contents. For example, the image height or the video frame height. A number.

161.1.154 kMDItemPixelWidth as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The width, in pixels, of the contents. For example, the image width or the video frame width. A number.

161.1.155 kMDItemProducer as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Producer of the content. A string. Requires Mac OS X 10.5.

161.1.156 kMDItemProfileName as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

Notes: The name of the color profile used by the document contents. A string.

161.1.157 kMDItemProjects as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The list of projects that this file is part of. For example, if you were working on a movie all of the files could be marked as belonging to the project "My Movie". An array of strings.

161.1.158 kMDItemPublishers as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The entity responsible for making the resource available. For example, a person, an organization, or a service. Typically, the name of a publisher should be used to indicate the entity. An array of strings.

161.1.159 kMDItemRecipientAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: This attribute indicates the recipient addresses of the document. array of string. Requires Mac OS X 10.6.

161.1.160 kMDItemRecipientEmailAddresses as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

This attribute indicates the reciepients email addresses. (This is always the email address, and not the human readable version). An array of string.
Requires Mac OS X 10.5.

161.1.161 kMDItemRecipients as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.

Notes: Recipients of this item. An array of strings.

161.1.162 kMDItemRecordingDate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The recording date of the song or composition. A date.

This is in contrast to kMDItemContentCreationDate which, could indicate the creation date of an edited or 'mastered' version of the original art.

161.1.163 kMDItemRecordingYear as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Indicates the year the item was recorded. For example, 1964, 2003, etc. A number.

161.1.164 kMDItemRedEyeOnOff as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Indicates if red-eye reduction was used to take the picture. A boolean.

Possible values are 0 (no red-eye reduction mode or unknown) and 1 (red-eye reduction used).

161.1.165 kMDItemResolutionHeightDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Resolution height of this image in DPI. A number.

161.1.166 kMDItemResolutionWidthDPI as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Resolution width, in DPI, of this image. A number.

161.1.167 kMDItemRights as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Provides a link to information about rights held in and over the resource. A string.

Contains a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses Intellectual Property Rights (IPR), Copyright, and various Property Rights.

If this attribute is absent, no assumptions can be made about the status of these and other rights with respect to the resource.

161.1.168 kMDItemSecurityMethod as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The security or encryption method used for the file. A number.

161.1.169 kMDItemSpeed as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The speed of the item, in kilometers per hour. A number.

Requires Mac OS X 10.5

161.1.170 kMDItemStarRating as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: User rating of this item. For example, the stars rating of an iTunes track. A number.

161.1.171 kMDItemStateOrProvince as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Identifies the province or state of origin according to guidelines established by the provider. For example, "CA", "Ontario", or "Sussex". A string.

161.1.172 kMDItemStreamable as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Whether the content is prepared for streaming. A boolean.

161.1.173 kMDItemSubject as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Subject of the this item. Type is a string.

161.1.174 kMDItemSupportFileType as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: array of strings

161.1.175 kMDItemTempo as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: A float value that specifies the beats per minute of the music contained in the audio file. A number.

161.1.176 kMDItemTextContent as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

Contains a text representation of the content of the document. Data in multiple fields should be combined using a whitespace character as a separator. A string.

An application's Spotlight importer provides the content of this attribute. Applications can search for values in this attribute, but are not able to read the content of this attribute directly.

161.1.177 kMDItemTheme as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: Theme of the this item. Type is a string.

161.1.178 kMDItemTimeSignature as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The time signature of the musical composition contained in the audio/MIDI file. For example: "4/4", "7/8". A string.

161.1.179 kMDItemTimestamp as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

The timestamp on the item. This generally is used to indicate the time at which the event captured by the item took place.

Mac OS X 10.5

161.1.180 kMDItemTitle as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The title of the file. For example, this could be the title of a document, the name of an song, or the subject of an email message. A string.

161.1.181 kMDItemTotalBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The total bit rate, audio and video combined, of the media. A number.

161.1.182 kMDItemURL as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes:

URL of the item.

Mac OS X 10.5

161.1.183 kMDItemVersion as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The version number of this file. A string

161.1.184 kMDItemVideoBitRate as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The video bit rate. A number.

161.1.185 kMDItemWhereFroms as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Example:

```
dim file as FolderItem = DownloadsFolderMBS(0).Child("test.html")
dim item as new MDItemMBS(file)
dim value as Variant = item.GetAttribute(MDItemMBS.kMDItemWhereFroms)

if value <>nil then
dim values() as Variant = value
dim Link as String = values(0)
MsgBox link
end if
```

Notes:

Describes where the file was obtained from. An array of strings.

For example, a downloaded file may refer to the URL, files received by email may indicate the sender's email address, message subject, etc.

161.1.186 kMDItemWhiteBalance as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** One of the item attribute constants.
Notes: The white balance setting used to acquire the document contents. Possible values are 0 (auto white balance) and 1 (manual). A number.

161.1.187 Properties

161.1.188 DisplayName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The localized version of the file name.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.DisplayName // shows "Schreibtisch"
```

Notes:

This is a shortcut for AttributeString(kMDItemDisplayName).
(Read only property)

161.1.189 FSName as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The file name of the item.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.FSName // shows "Desktop"
```

Notes:

This is a shortcut for AttributeString(kMDItemFSName).
(Read only property)

161.1.190 FSSize as Int64

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The size, in bytes, of the file on disk.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox str(item.FSSize) // shows 0
```

Notes:

This is a shortcut for AttributeString(kMDItemFSSize).
(Read only property)

161.1.191 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference to the item.

Notes: (Read and Write property)

161.1.192 Path as String

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The complete path to the file.
Example:

```
dim item as new MDItemMBS(SpecialFolder.Desktop)

MsgBox item.path // shows "/Users/cs/Desktop"
```

Notes:

This is a shortcut for AttributeString(kMDItemPath).
(Read only property)

161.1.193 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

161.2 class MDQueryBatchingParamsMBS

161.2.1 class MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** This class containing the progress notification batching parameters of an MDQuery.
Notes: The first notification can be triggered by the either firstmaxnum or firstmaxms limit being exceeded. Subsequent notifications are triggered by either the progressmaxnum or progressmaxms limit. The default batching parameters are undefined and subject to change.

161.2.2 Properties

161.2.3 firstMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for the first progress notification.
(Read and Write property)

161.2.4 firstMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for the first notification.
Notes: (Read and Write property)

161.2.5 progressMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for progress notifications after the first, during the initial gathering phase of the query.
(Read and Write property)

161.2.6 progressMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before a progress notification is sent out by the MDQuery, for notifications after the first, during the initial gathering phase of the query.
Notes: (Read and Write property)

161.2.7 updateMaxMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of milliseconds that can pass before a progress notification is sent out.
Notes:

This value is advisory, in that the notification will be triggered "at some point after firstmaxms milliseconds have passed since the query began accumulating results", but generally not very long after, for update notifications after the gathering phase of the query has finished.
(Read and Write property)

161.2.8 updateMaxNum as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The maximum number of results that can accumulate before an update notification is sent out by the MDQuery, for update notifications after the gathering phase of the query has finished.
Notes: (Read and Write property)

161.3 class MDQueryMBS

161.3.1 class MDQueryMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** MDQuery encapsulates all queries against the MetaData database.
Example:

```
dim m as new MDQueryMBS("* == ""Hello""wcd | | kMDItemTextContent = ""Hello""c")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount) // shows a lot of results
```

Notes:

Depending on what and how you want to search, you can decide whether MDQueryMBS or CatSearchMBS is the better choice.

Available in Mac OS X version 10.4 and later.

Queries gather results or process updates only while the current thread's run loop is running. Queries normally operate asynchronously, and only send out progress notificiations as the list is being collected. The query list is kept up to date with respect to value lists and sorting as the progress notifications are sent out, so the query is in a good state during those events.

An MDQuery presents its results as if it were a simple array object. The results are MDItem.

Query Sorting Sorting the results from a query can be performed in one of two ways. First is to let the library sort the results for you by passing an array of attributes to sort on to constructor. The default sort provided by the constructor is a assending sort strings are compared using CFStringCompare() with the options kCFCompareNonliteral | kCFCompareLocalized | kCFCompareNumerically.

If used in a thread, please use a loop with calling NSRunLoopMBS.currentRunLoop.runUntilDate(nil) to give time for update events to fire.

161.3.3 Methods

161.3.4 AttributeValueOfResultAtIndex(name as string, index as UInt32) as Variant

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the value of the named attribute for the result at the given index.
Notes:

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs or sortingAttrs parameters to one of the query creation functions, the result will be nil.
index: The index into the query's result list. If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.
Returns he value of the attribute, or nil if the attribute doesn't exist in the query on that result.

161.3.5 Constructor(query as MDQueryMBS, queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

161.3.6 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

161.3.7 Constructor(query as MDQueryMBS, queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query, which is a subset of the given query.
Notes:

Only results matched by the given query can be matched by the query expression of this query.

query: The parent query of the new query.
queryString: The query expression string for this query. This expression in effect may further restrict the matches found by the parent query. If the string is empty the behavior is undefined.
valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are strings.
sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

161.3.8 Constructor(queryString as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

161.3.9 Constructor(queryString as string, valueListAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the

secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

161.3.10 Constructor(queryString as string, valueListAttributes() as string, sortingAttributes() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Creates a new query with the given query expression.
Notes:

queryString: The query expression string for this query. The syntax for query expressions is explained above in the header overview documentation.

valueListAttributes: An optional array of attribute names. The query will collect the values of these attributes into uniqued lists, which can be used or displayed to summarize the results of the query, or allow a user to further qualify the items for which they are searching. This parameter may be empty if no value lists are desired. Value list collection increases CPU usage and significantly increases the memory usage of an MDQuery. The attribute names are string.

sortingAttributes: An optional array of attribute names. The query will results of the query based on the values of these attributes. The first name in the array is used as the primary sort key, the second as the secondary key, and so on. The comparison of like-typed values is a simple, literal comparison. This parameter may be empty if no sorting is desired. Sorting increases memory usage and significantly increases the CPU usage of an MDQuery. However, when possible, it is almost always cheaper to have the MDQuery do the sorting, rather than you fetching all the results and attributes from each of them and doing the sorting yourself. The attribute names are strings.

The handle value is zero on failure.

- 161.3.9 Constructor(queryString as string, valueListAttributes() as string) 21055

161.3.11 CountOfResultsWithAttributeValue(name as string, Value as Variant) as UInt32

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of results which have the given attribute and attribute value. Note that this count may change over time, as the query's result list is updated.
Notes:

name: The attribute name for which to return the number of results with the given value. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

value: The attribute value for which to return the number of results with that value. This parameter may be nil, in which case the number of results that do not contain the named attribute is returned.

Returns the number of results with that attribute and value.

161.3.12 DisableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Disables updates to the query result list.
Notes: This should be called before iterating through the list of results to prevent the result list from changing during the iteration. The disabled state is a counter, and disabling can be done recursively and from different threads.

161.3.13 EnableUpdates

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Re-enables updates to the query result list.

Notes: This should be called when finished iterating through the list of results, to allow changes to the result list to occur. Changes will be allowed when all the disables have been matched by a corresponding enable.

161.3.14 Execute(flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Run the query, and populate the query with the results.
Example:

```
dim q as new MDQueryMBS("kMDItemContentModificationDate>=$ time.now")
// you will want to use a MDQueryMBS subclass here to catch the events

if not q.Execute(q.kMDQueryWantsUpdates) then
MsgBox "Failed to query"
end if
```

Notes:

Queries only gather results or process updates while the current thread's run loop is running. Queries normally operate asynchronously, and send out progress and update notifications to report changes to the list of results that has been collected. Queries have two phases: the initial gathering of all currently matching results, and a second live-update phase where queries monitor the state of the system and update themselves to external changes in files or the operating environment (for example, as time advances, files which did not match the query when it was started may later match the query). Query notifications are posted within the context of the same thread which executes the query. [

here are three operational modes: (1) synchronous static queries, which collect the list of current results and then do not watch for updates to the results, (2) asynchronous static queries, which collect the results asychronously after this function returns, and then do not watch for updates to the results, and (3) asynchronous live queries which collect the initial results asychronously after this function returns, and then do watch for updates to the results, until the query is destroyed. There is little reason not to allow the fourth case, synchronous collection of initial results, followed by asynchronous monitoring for updates, so this may change in the future.

Flags: Options for the query.

Returns true if the query was started (executed in the case of a synchronous query), false otherwise. Queries cannot be executed more than once.

161.3.15 GetSortOptionFlagsForAttribute(fieldName as string) as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Gets the sort option flags for a sorting attribute.
Notes:

fieldName: The attribute name for which sort option flags are to be fetched.
Returns an integer with flags. Currently can be 0 or 1.

Available on Mac OS X 10.7 or later.

161.3.16 IndexOfResult(it as MDItemMBS) as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current index of the given result.
Notes:

Note that the index of a result will change over time, as the query's result list is updated.

Returns the index of the given result, or -1 if the value is not one of the query's existing results.

161.3.17 IsGatheringComplete as boolean

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns true if the first phase of a query, the initial result gathering, has finished.
Notes: A boolean indicating whether or not the first phase of a query has completed.

161.3.18 QueryString as string

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the query string of the query.

161.3.19 ResultAtIndex(index as Integer) as MDItemMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the current result at the given index.
Notes:

This function causes the result object to be created if it hasn't been created already. For performance reasons, it is not advisable to ask for results that you don't need, to avoid the cost of creating them. If possible,

call this function to fetch only the results you need to display or otherwise process. Note that the index of a particular result will change over time, as the query's result list is updated.

index: The index into the query's result list.

If the index is negative, or is equal to or larger than the current number of results in the query, the behavior is undefined.

Returns the MDItem currently at the given index, or if a result-create function has been set, returns the result returned by that function.

161.3.20 ResultCount as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the number of results currently collected by the query.
Example:

```
dim m as new MDQueryMBS("kMDItemContentModificationDate>=$ time.today")

call m.Execute(m.kMDQuerySynchronous)

MsgBox str(m.ResultCount)+" files modified today"
```

Notes: Note that the number of results in a query will change over time as the query's result list is updated.

161.3.21 Results(limit as Integer = -1) as MDItemMBS()

MBS MacOSX Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Queries result items.
Notes:

Internally does what ResultAtIndex does for up to limit entries.
Limit with -1 will cause no limit.
If possible, call this function to fetch only the results you need to display or otherwise process.

161.3.22 SetMaxCount(size as Integer)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Use SetMaxCount to limit the number of results returned by the query engine.

Notes:

This must be called before the query is executed.
size: The maximum number of results desired.

161.3.23 SetSearchScope(paths() as folderitem, options() as string)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Use SetSearchScope to limit the results returned by the query engine to those MDItem that appear within the specified directories.
Example:

```
dim q as MDQueryMBS // your query

q.SetSearchScope nil, array(q.kMDQueryScopeComputer)
```

Notes:

This may be used to limit searching to particular volumes. Tilde paths, or environment variables are not expanded. Calling this multiple times will replace the previous options. This must be called before the query is executed.

paths: An array of directories where you want to search. This array can be empty.
options: An array of scope options. Pass the kMDQueryScope* constants. This array can be empty.

161.3.24 SetSortOptionFlagsForAttribute(fieldName as string, flags as UInt32) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort flags for a query.
Notes:

fieldName: The attribute name for which sort option flags are to be set.

The attribute name must have been part of the sortingFlags when the query was created.

flags: An integer containing MDQuerySortOptionFlags to be applied to the attibute

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

161.3.25 SetSortOrder(sortingAttrs() as string) as Boolean

MBS MacOSX Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Sets the sort order for a query.
Notes:

sortingAttrs An array of attribute names, as in MDQueryCreate.
The query's result set will be sorted according to the order of these attributes. All names in the array have to have been passed as sortingAttrs when the query was created. The attribute names are strings.

Returns a boolean, true on success, false on failure.

Available on Mac OS X 10.7 or later.

161.3.26 SortingAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of attribute names the query is using to sort the results.

161.3.27 Stop

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Stops the query from ever generating more results.
Notes: Queries may be executed only once, so a stopped query cannot be restarted. The query will also not generate any result updates. The query is static after this function returns. The query will do final processing of results that have come in but not yet been processed (because, say, the batching parameters hasn't triggered that yet). That may trigger a progress notification, so be aware of that if you are stopping a query from within your progress note handler; that is, during this function, a recursive progress and/or finished notification might occur, which might recursively call your notification handler. It is safe to call this function recursively. You would call this function to stop a query that is generating way too many results to be useful, but still want to access the results that have come in so far. If a query is stopped before the gathering phase finishes, it will not report itself as finished, nor will it send out a finished notification.

161.3.28 ValueListAttributes as string()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of attribute names for which the query is collecting the lists of values.

161.3.29 ValuesOfAttribute(name as string) as Variant()

MBS MacOSX Plugin, Plugin Version: 9.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Returns the list of values, from the results of the query, of the named attribute.
Notes:

The list is not ordered in any way. The list contains only one occurrence of each value. Note that this list may change over time, as the query's result list is updated.

name: The attribute name for which to return the values. If the attribute is not one of those requested in the valueListAttrs parameter to one of the query creation functions, the behavior is undefined.

Returns an array holding the value objects for that attribute.

161.3.30 Properties

161.3.31 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The internal reference for the MDQuery.
Notes: (Read and Write property)

161.3.32 Tag as Variant

MBS MacOSX Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

161.3.33 BatchingParameters as MDQueryBatchingParamsMBS

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** The query whose batching parameters are to be set.
Notes: (Read and Write computed property)

161.3.34 Events

161.3.35 Finish()

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event called when the query has finished.
Notes: Called when the query has finished with the initial result-gathering phase, and may now proceed into the live-update phase (if that option was chosen when the query was executed). This event often shortly follows after the last progress notification. It is usually not necessary to update any displayed UI in response to this event, since it doesn't indicate any change in the result list of a query.

161.3.36 Progress(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event sent to indicate changes to the query's results list during the initial gathering phase of a query's execution.
Notes:

Mostly adds will occur during this phase, but removals and changes can also occur, as in any update.
For performance reasons the arrays are empty in newer Mac OS X SDK versions.
In that case please use the result functions.

161.3.37 Update(AddedItems() as MDItemMBS, ChangedItems() as MDItemMBS, RemovedItems() as MDItemMBS)

MBS MacOSX Plugin, Plugin Version: 9.6, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Function:** The event is sent to indicate changes to the query's results list during the second, live-update, phase of a query's execution.

161.3.38 Constants

161.3.39 kMDQueryReverseSortOrderFlag=1

MBS MacOSX Plugin, Plugin Version: 11.2. **Function:** A flag constant for calling SetSortOptionFlagsForAttribute.
Notes:

Sort the attribute in reverse order.
Available on Mac OS X 10.7 or later.

161.3.40 kMDQueryScopeAllIndexed="kMDQueryScopeAllIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes and indexed user mounted remote volumes, plus the user's home directory.

161.3.41 kMDQueryScopeComputer="kMDQueryScopeComputer"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to all locally mounted volumes, plus the user's home directory (which may be on a remote volume).

161.3.42 kMDQueryScopeComputerIndexed="kMDQueryScopeComputerIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to indexed, locally mounted volumes, plus the user's home directory (which may be on a remote volume).

161.3.43 kMDQueryScopeHome="kMDQueryScopeHome"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should be restricted to the volume and directory that contains the current user's home directory

161.3.44 kMDQueryScopeNetwork="kMDQueryScopeNetwork"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include all user mounted remote volumes.

161.3.45 kMDQueryScopeNetworkIndexed="kMDQueryScopeNetworkIndexed"

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the option constants for the search scope. **Notes:** A constant, which can be passed in the scopeDirectories array, to specify that the search should include indexed user mounted remote volumes.

161.3.46 kMDQuerySynchronous=1

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the constants for executing a query.
Notes: Block during the gathering phase. If this parameter is true, the function will not return until the query has finished gathering the initial results. The run loop will run in the default mode, which will allow anything registered in that mode with this run loop to execute as well. If this parameter is false, the function returns immediately after starting the query asychronously.

161.3.47 kMDQueryWantsUpdates=4

MBS MacOSX Plugin, Plugin Version: 9.6. **Function:** One of the constants for executing a query.
Notes:

When set, after gathering the initial results the query will watch for changes in the system which should update the list of results. This can be changes which cause new files to now match the query, or changes which cause files in the result list to continue to match, or no longer match, the query. Files which begin to match the query are added to the result list, and files which no longer match the query expression are removed from the result list.
Currently, this parameter is ignored if the synchronous parameter is true. This is subject to change, and you should always pass in the value you want here.

161.4 Globals

161.4.1 ShotlightMBS(searchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 7.7, Console & Web: Yes, Mac: Yes, Win: No, Linux: No. **Function:** Displays a Spotlight search window.
Example:

call ShotlightMBS("Hello")

Notes:

searchString: An initial query string. Pass "" to open the search window with no initial query string.

Returns a Mac OS error code and -1 if the function is not available and 0 on success.
Requires Mac OS X 10.4.

Chapter 162

SQL

162.1 class Database

162.1.1 class Database

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Xojo Database class is the base class for the database subclasses that communicate with a variety of databases.
Notes: Use one of the subclasses to connect to your database.

162.1.2 Methods

162.1.3 Close

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes or disconnects the database.
Notes:

Calling Close does not issue a Commit, but some databases will automatically Commit changes in a transaction when you Close the connection and some database will automatically Rollback changes in a transaction when the connection is closed. Refer to the documentation for your database to check what its behavior is.

For desktop applications, you will often Connect to the database when the app starts and Close it when the app quits.

For web applications, you usually Connect to the database when the Session starts and Close it when the Session quits.

162.1.4 Commit

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Commits an open transaction. This permanently saves changes to the database.
Notes:

You have to have an open transaction to be able to use Commit. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

162.1.5 Connect as boolean

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to the database so that you can begin using it.
Notes:

Before proceeding with database operations, test to be sure that Connect returns True.
If Connect returns False, you should also check the ErrorCode and ErrorMessage.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.

162.1.6 InsertRecord(TableName as String, Data as DatabaseRecord)

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts Data (a populated DatabaseRecord) as a new row in TableName.
Notes: Always check the Error property to verity that the data was added.

162.1.7 Prepare(statement as String) as PreparedSQLStatement

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a PreparedSQLStatement using the SQL statement for use with the various database prepared statement classes.
Notes: A prepared statement is an SQL statement with parameters that has been pre-processed by the

database so that it can be executed more quickly if it is re-used with different parameters. Prepared statements also mitigate the risk of SQL injection in web apps.

162.1.8 Rollback

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels an open transaction restoring the database to the state it was in before the transaction began.
Notes:

You will generally want to rollback database changes if a database error occurs within the transaction.
You have to have an open transaction to be able to use Rollback. On SQLite (and other databases), you can start a transaction with this command:

BEGIN TRANSACTION

It can be sent using SQLExecute:

DB.SQLExecute("BEGIN TRANSACTION")

162.1.9 SQLExecute(ExecuteString as string)

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Used to execute an SQL command. Use this for commands that do not return any data, such as CREATE TABLE or INSERT. ExecuteString contains the SQL statement.
Notes: To avoid SQL Injection, be sure to use Prepared SQL Statements.

162.1.10 SQLSelect(SelectString as string) as RecordSet

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is an SQL statement that returns a RecordSet.
Notes:

SelectString contains the SQL statement.

Typically only SQL SELECT statements return a RecordSet, but some databases return a RecordSet for SQL commands such as INSERT, UPDATE or stored procedures.

If the SQL does not return data then Nil is returned. Nil is also usually returned if there is an error in the SQL statement, but you should instead check Database.Error to check if an error occurred.

To avoid SQL Injection, be sure to use Prepared SQL Statements.

162.1.11 Properties

162.1.12 DatabaseName as String

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the database to open.
Example:

```
dim db as new SQLDatabaseMBS
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connection_timeout=10 sslmode=require"
```

Notes:

The DatabaseName is typically used with server databases (such as MySQL or PostgreSQL) to identify the specific database to use on the server.

Please set the DatabaseName, UserName and Password properties when using SQLDatabaseMBS class. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.
(Read and Write property)

162.1.13 Error as Boolean

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if an error is returned from the database engine.
Notes:

See the values of the ErrorCode and ErrorMessage properties to learn the specifics of the error.

You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

162.1.14 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error code returned from the database.
Notes:

Error codes and error messages are different for each database.
(Read and Write property)

162.1.15 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text of the error message returned from the database.
Notes:

Error codes and error messages are different for each database.
You should check the Error property after each database operation to see if there was an error. If there is an error, you can display or log the ErrorCode and ErrorMessage.
(Read and Write property)

162.1.16 Host as String

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The database host name or IP address of the database server.
Notes: (Read and Write property)

162.1.17 Password as String

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password that is required for access to the database.
Notes:

Typically used in conjunction with UserName.
(Read and Write property)

162.1.18 UserName as String

MBS SQL Plugin, Plugin Version: 1.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The username that is required for access to the database.
Notes: (Read and Write property)

162.2 class DB2MBS

162.2.1 class DB2MBS

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for some DB2 related API commands.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI

// now use an API function
MsgBox str(api.SQLRowCount(cmd))
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

More commands are added as requested.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more DB2 specific functions.
Subclass of the SQLAPIMBS class.

162.2.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.2
- MBS Xojo / Real Studio Plugins, version 13.2pr11

162.2.3 Methods

162.2.4 SQLExecDirect(cmd as SQLCommandMBS, text as string)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection
dim api as DB2MBS = con.NativeAPI
```

```
// now use an API function
const sql = "some sql command"
api.SQLExecDirect cmd, sql
```

Notes: Lasterror is set.

162.2.5 SQLRowCount(cmd as SQLCommandMBS) as Int64

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

162.2.6 Properties

162.2.7 Lasterror as Integer

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes: (Read and Write property)

162.3 class InformixMBS

162.3.1 class InformixMBS

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for Informix specific functions.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more Informix specific functions.
Subclass of the SQLAPIMBS class.

162.3.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.1
- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 13.0
- MBS Real Studio Plugins, version 13.0fc1

162.3.3 Methods

162.3.4 Error(cmd as SQLCommandMBS, byref SQLState as string, byref NativeError as Integer, byref ErrorMsg as string) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the error status.

162.3.5 GetCursorName(cmd as SQLCommandMBS) as string

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries cursor name for given recordset.

162.3.6 HDBC as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns Database Connection handle.

162.3.7 HENV as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The environment handle.

162.3.8 HSTMT(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the statement handle for the command object.
Notes: Returns 0 on any error.

162.3.9 SetCursorName(cmd as SQLCommandMBS, name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets cursor name for given recordset.
Notes: Returns true on success.

162.4 module InternalCubeSQLLibraryMBS

162.4.1 module InternalCubeSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The module for our internal CubeSQL client connector.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if

Dim db As SQLDatabaseMBS // or SQLConnectionMBS

db.Option("ConnectionTimeout") = "30" // 30 seconds timeout
db.Option("ConnectionEncryption") = "AES256"

// connect...
```

Notes:

This is a CubeSQL client library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of CubeSQL shared library.

Version 19.4 or newer have CubeSQL with SSL included.
You can use Option("ConnectionEncryption") with SSL, SSL+AES128, SSL+AES192 and SSL+AES256 as values.

If ConnectionEncryption is SSL, we can pass path from Option("SSLCertificatePath") with the certificate file.

162.4.2 Blog Entries

- CubeSQL Library for Mac
- MBS Xojo Plugins, version 18.3pr1
- CubeSQL support for MBS Xojo SQL Plugin

162.4.3 Methods

162.4.4 SSLVersion as String

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries SSL version of library.

162.4.5 Use as boolean

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the built in CubeSQL client library for use.
Example:

```
if InternalCubeSQLLibraryMBS.Use then
MsgBox "Using internal CubeSQL library."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load CubeSQL shared library from file, we use the one built into this plugin.

162.4.6 Version as String

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries version of library.

162.5 module InternalPostgreSQLLibraryMBS

162.5.1 module InternalPostgreSQLLibraryMBS

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** The module for our internal PostgreSQL engine.
Example:

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: This is a PostgreSQL library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of PostgreSQL shared library.

162.5.2 Blog Entries

- CubeSQL support for MBS Xojo SQL Plugin
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- MBS Xojo / Real Studio Plugins, version 16.2pr2

162.5.3 Methods

162.5.4 OpenSSLVersion as String

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Returns the version of the OpenSSL library.
Example:

```
MsgBox InternalPostgreSQLLibraryMBS.OpenSSLVersion
```

162.5.5 Use as boolean

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Registers the built in PostgreSQL client library for use.
Example:

```
if InternalPostgreSQLLibraryMBS.Use then
MsgBox "Using internal PostgreSQL."
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load libpg shared library from file, we use the one built into this plugin.

162.5.6 Version as Integer

MBS SQL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: No, Linux: Yes. **Function:** Returns version of PostgreSQL version.
Example:

```
MsgBox str(InternalPostgreSQLLibraryMBS.Version)
// e.g. 90501 for 9.5.1
```

162.6 module InternalSQLiteLibraryMBS

162.6.1 module InternalSQLiteLibraryMBS

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The module for our internal SQLite3 engine.
Example:

```
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if
```

Notes: This is a SQLite3 library built into a plugin, so you can decide with use of MBS SQL Plugin to use this plugin instead of providing your own external copy of SQLite shared library.

162.6.4 Methods

162.6.5 CompileOption(index as Integer) as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries name of a compile option.
Example:

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
t = ": no"
end if
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: Index index starting with zero until you get back an empty name.

162.6.6 CompileOptionUsed(optionName as String) as Boolean

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries if a given compile option was set on or off.
Example:

```
dim list() as string

for i as Integer = 0 to 100
dim s as string = InternalSQLiteLibraryMBS.CompileOption(i)
if s = "" then exit
dim b as Boolean = InternalSQLiteLibraryMBS.CompileOptionUsed(s)
dim t as string
if b then
t = ": yes"
else
t = ": no"
end if
```

```
list.Append s + t
next

MsgBox Join(list, EndOfLine)
```

Notes: If you need a specific option set, please contact MBS support.

162.6.7 isKeyword(name as string) as boolean

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if an identifier is a keyword.
Example:

```
if InternalSQLiteLibraryMBS.isKeyword("TABLE") then
MsgBox "Table is a keyword"
else
MsgBox "Table is not a keyword!"
end if
```

162.6.8 Keywords as String()

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of keywords.
Example:

```
MsgBox Join(InternalSQLiteLibraryMBS.Keywords,EndOfLine)
```

162.6.9 Shell(arguments() as string) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs a SQLite shell command.
Example:

```
dim arguments() as string

dim f as FolderItem = SpecialFolder.Desktop.Child("test.sqlite")
dim o as FolderItem = SpecialFolder.Desktop.Child("out.csv")

arguments.Append "sqlite3" // path to app
```

```
arguments.Append f.NativePath
arguments.Append "-csv"
arguments.Append "-header"
arguments.Append "-cmd"
arguments.Append ".output"
arguments.Append ".output """+o.NativePath+""""
arguments.Append "-cmd"
arguments.Append "select * from Documentation;"

dim n as Integer = InternalSQLiteLibraryMBS.Shell(arguments)
Break
```

Deprecated: This item is deprecated and should no longer be used. You can use Sqlite command line tool instead. **Notes:**

Using the SQLite library inside the plugin.
For this the plugin includes the code from the SQLite command line tool.
The tool may print to stdout/stderr and could possibly read from stdin.

Deprecated for MBS Plugin 19.2.

162.6.10 SourceID as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The source code ID.
Example:

```
MsgBox InternalSQLiteLibraryMBS.SourceID
```

162.6.11 Use as boolean

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registers the built in SQLite library for use.
Example:

```
if InternalSQLiteLibraryMBS.Use then
MsgBox "Using internal SQLite"
else
MsgBox "Failed, so please use library file."
end if
```

Notes: So instead of having SQL Plugin load sqlite3 shared library from file, we use the one built into this plugin.

162.6.12 Version as String

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the version number.
Example:

MsgBox InternalSQLiteLibraryMBS.Version

162.6.13 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the sqlite version number.
Example:

MsgBox str(InternalSQLiteLibraryMBS.VersionNumber)

162.6.14 Properties

162.6.15 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries high water memory usage mark.
Example:

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

162.6.16 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries current memory usage.
Example:

```
MsgBox "SQLite uses "+_
str(InternalSQLiteLibraryMBS.MemoryUsed)+_
" bytes and has a high mark of "+_
str(InternalSQLiteLibraryMBS.MemoryHighwater)+" bytes."
```

Notes: (Read only property)

162.7 class MySQLMBS

162.7.1 class MySQLMBS

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for MySQL specific functionality.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more MySQL or MariaDB specific functions.
Subclass of the SQLAPIMBS class.

162.7.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.5
- MBS Real Studio Plugins, version 12.5pr7
- MBS Real Studio Plugins, version 12.5pr4

162.7.3 Methods

162.7.4 AffectedRows as UInt64

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the number of affected rows in the last statement.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-affected-rows.html

162.7.5 Error as string

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the last error text.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-error.html

162.7.6 ErrorNumber as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the last error code.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-errno.html

162.7.7 FieldCount as UInt32

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of columns for the most recent query on the connection.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-field-count.html

162.7.8 Info as string

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves an info string providing information about the most recently executed statement.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-info.html

162.7.9 InsertID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the last auto increment value from last insert command.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

162.7.10 NumberOfRows(cmd as SQLCommandMBS) as UInt64

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of records in a command.

162.7.11 SetSSL(keyPath as string, CertificatePath as string, AuthorityPath as string, authorityFolderPath as string, Cipher as string)

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets SSL connection parameters.
Notes:

Calls mysql_ssl_set internally.
Used for establishing secure connections using SSL. It must be called before Connect(). It does nothing unless SSL support is enabled in the client library.

keyPath is the path name to the key file.
CertificatePath is the path name to the certificate file.
AuthorityPath is the path name to the certificate authority file.
authorityFolderPath is the path name to a directory that contains trusted SSL CA certificates in PEM format.
Cipher is a list of permissible ciphers to use for SSL encryption.

Any unused SSL parameters may be given as empty string.
For paths, please use folderitem.UnixPathMBS and not folderitem.ShellPath.

Please switch to using the following options on the connection:

MYSQL_SSL_KEY
MYSQL_SSL_CERT
MYSQL_SSL_CA
MYSQL_SSL_CAPATH
MYSQL_SSL_CIPHER

They should be specified before the connection is made.
e.g.

db.Option("MYSQL_SSL_CIPHER") = "DHE-RSA-AES256-SHA"

Allows to specify MySQL SSL parameters that will be used with mysql_ssl_set. MySQL API method called only when at least one parameter specified. See MySQL documentation for more information about these options.

162.8 class PostgreSQLAPIMBS

162.8.1 class PostgreSQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for Postgre SQL specific functions.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The Listen method and Notification event are in the SQLDatabaseMBS/SQLConnectionMBS classes directly.

Deprecated in favor of direct methods on SQLCommandMBS. Please let us know if you need more postgreSQL specific functions.
Subclass of the SQLAPIMBS class.

162.8.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1
- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Postgre SQL Database Extension

162.8.3 Methods

162.8.4 DB as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The database name used to create the connection.

162.8.5 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message.

162.8.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by index for the row with the RecordIndex.
See also:

- 162.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string 21092

162.8.7 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by name for the row with the RecordIndex.
See also:

- 162.8.6 Field(cmd as SQLCommandMBS, RecordIndex as Integer, FieldIndex as Integer) as string 21091

162.8.8 FieldCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of fields in the result.

162.8.9 Host as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The host used to create the connection.

162.8.10 Options as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The options used to create the connection.

162.8.11 Password as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The password used to create the connection.

162.8.12 Port as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The port used to create the connection.

162.8.13 RecordCount(cmd as SQLCommandMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of records in the result.

162.8.14 TTY as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tty used to create the connection.

162.8.15 User as string

MBS SQL Plugin, Plugin Version: 9.8, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The user name used to create the connection.

162.9 Globals

162.9.1 BuildRecordSetMBS(fieldNames() as string, values() as string) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Builds a recordset from strings.
Example:

```
dim names() as string = array("Firstname", "Lastname")
dim values() as string

values.append "Stefan"
values.append "Miller"
values.append "Patrick"
values.append "Maier"

dim r as RecordSet = BuildRecordSetMBS(names, values)
```

Notes:

First array has field names. Second array has all values.
As plugin can't access multi dimensional arrays, we have to flatten it into one dimension and concat all rows.
Returns nil on low memory.
Array sizes should be like: Ubound(values)+1 = (ubound(fieldNames)+1) * RecordCount

162.9.2 CloneRecordSetMBS(rec as RecordSet) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an in memory copy of the RecordSet.
Notes: This copied record set can be used instead of the original one and even after the original database connection is closed.

162.10 class RecordSet

162.10.1 class RecordSet

Plugin Version: 12.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The built in recordset class in Xojo.

162.10.2 Methods

162.10.3 CloneMBS as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an in memory copy of the RecordSet.
Notes: This copied record set can be used instead of the original one and even after the original database connection is closed.

162.11 class SQLAPIMBS

162.11.1 class SQLAPIMBS

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is a class for the native APIs.
Deprecated: This item is deprecated and should no longer be used. **Notes:** The plugin does not implem

162.11.2 Blog Entries

162.11.3 Properties

162.11.4 ClassName as String

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class name of the underlying C++ class.
Notes:

Sometimes useful to see a which API currently is used.
(Read only property)

162.11.5 Connection as Variant

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The database connection this API is used with.
Notes: (Read only property)

162.12 class SQLBLobMBS

162.12.1 class SQLBLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a blob.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

- MBS Real Studio Plugins, version 12.4pr1

162.12.3 Methods

162.12.4 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.
See also:

- 162.12.5 Constructor(Data as MemoryBlock) 21097
- 162.12.6 Constructor(data as SQLStringMBS) 21098
- 162.12.7 Constructor(Data as string, isText as Boolean = True) 21098
- 162.12.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21098

162.12.5 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data, e.g. for blob.
See also:

- 162.12.4 Constructor 21097
- 162.12.6 Constructor(data as SQLStringMBS) 21098
- 162.12.7 Constructor(Data as string, isText as Boolean = True) 21098
- 162.12.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21098

162.12.6 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new blob object from a string object.
See also:

- 162.12.4 Constructor 21097
- 162.12.5 Constructor(Data as MemoryBlock) 21097
- 162.12.7 Constructor(Data as string, isText as Boolean = True) 21098
- 162.12.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21098

162.12.7 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 162.12.4 Constructor 21097
- 162.12.5 Constructor(Data as MemoryBlock) 21097
- 162.12.6 Constructor(data as SQLStringMBS) 21098
- 162.12.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21098

162.12.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new blob object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.
See also:

- 162.12.4 Constructor 21097

- 162.14.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21102

162.14.6 Constructor(Data as string, isText as boolean=true)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 162.14.4 Constructor 21101
- 162.14.5 Constructor(data as SQLStringMBS) 21101
- 162.14.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 21102

162.14.7 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new clob object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new clob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.
See also:

- 162.14.4 Constructor 21101
- 162.14.5 Constructor(data as SQLStringMBS) 21101
- 162.14.6 Constructor(Data as string, isText as boolean=true) 21102

162.15 class SQLCommandMBS

162.15.1 class SQLCommandMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is the central class for the using the SQL database access.
Example:

```
dim con as SQLConnectionMBS
dim cmd as SQLCommandMBS

try

con = new SQLConnectionMBS // connection object
cmd = new SQLCommandMBS // create command object

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database (mySQL in our example)
// server: 192.168.1.80
// port: 3306
// database: test
// name: root
// no password
con.Connect("192.168.1.80,3306@test","root","",SQLConnectionMBS.kMySQLClient)
// associate a command with connection
// connection can also be specified in SACommand constructor
cmd.Connection=con

// create table
cmd.setCommandText("Create table test_tbl(fid integer, fvarchar20 varchar(20), fblob blob)")
cmd.Execute

// insert value
cmd.setCommandText("Insert into test_tbl(fid, fvarchar20) values (1, 'Some string (1)')")
cmd.Execute

// commit changes on success
con.Commit

MsgBox("Table created, row inserted!")

catch r as SQLErrorExceptionMBS
// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
// we will be ready
```

```
try

// on error rollback changes
if con<>nil then
con.rollback
end if
catch x as SQLErrorExceptionMBS
// ignore
end try

// show error message
MsgBox r.message
end try
```

Notes:

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

162.15.3 Xojo Developer Magazine

- 14.1, page 24: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz
- 12.2, page 10: News

162.15.4 Methods

162.15.5 AsRecordSet as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a recordset using the command to query fields.
Notes:

You can use normal RecordSet functions to walk through fields and they simply control the command object. This is for convenience like passing RecordSet to report functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

162.15.6 AsRowSet as RowSet

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a RowSet using the command to query fields.
Notes:

You can use normal RowSet functions to walk through fields and they simply control the command object. This is for convenience like passing RowSet to other functions in Xojo.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RowSet functionality.

The RowSet may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

Requires Xojo 2019r2 or newer.

162.15.7 Cache

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Caches values.
Notes:

The plugin will load the whole recordset and store it in memory.
Now you can move forward/backward as needed to read data.

If you set Option("AutoCache") = "true", the plugin will call Cache automatically for all result sets.
We can only cache first result set.

162.15.8 Cancel

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Attempts to cancel the pending result set, or current statement execution.
Notes:

Only if isExecuting is true, doing cancel makes sense.

Cancel can cancel the following types of processing on a statement:

A function running asynchronously on the statement.
A function running on the statement on another thread.
After an application calls a function asynchronously, it checks repeatedly to determine whether it has finished processing. While the function is processing, an application can call Cancel to cancel the function.

In a multithread application, the application can cancel a function that is running synchronously on a statement.

see also
http://www.sqlapi.com/OnLineDoc/Command_Cancel.html

162.15.9 Close

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Closes the specified command object.
Notes:

Use the Close method to close the command explicitly.

A command will be implicitly closed in destructor, so you don't have to call Close method explicitly.

162.15.10 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new command object with no connection and no command text.
See also:

- 162.15.11 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0) 21107

162.15.11 Constructor(connection as SQLConnectionMBS, SQLCommand as String, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This constructor initializes a new SQLCommandMBS object.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Connection: the connection to associated with the command.
SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name). If it is an empty string, no command text is associated with the command, and you have to call setCommandText method later.
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

See also:

- 162.15.10 Constructor 21107

162.15.12 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates parameter associated with the specified command.
Notes:

Parameters

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 162.15.13 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS 21108

162.15.13 CreateParam(name as string, ParamType as Integer, NativeType as Integer, ParamSize as Integer, ParamPrecision as Integer, ParamScale as Integer, DirType as Integer=0) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates parameter associated with the specified command.
Notes:

Parameters

name:	A string representing the name of parameter.
ParamType:	Type of the parameter's value. Use the kDataType constants.
ParamSize:	An integer value represents parameter's value size.
ParamPrecision:	An integer value represents parameter's value precision.
ParamScale:	An integer value represents parameter's value scale.
DirType:	Type of the parameter. Use the kParamDirType* constants.

Returns a new SQLParamMBS object on success or nil on any error.

Normally you should not create parameters by yourself. The Library automatically detects whether the command has parameters in terms of the command text and implicitly creates a set of SAParam objects.

Nevertheless, if you call CreateParam explicitly you have to delete all SAParam objects created automatically by the Library before. Use DestroyParams method before the first call of CreateParam method.
See also:

- 162.15.12 CreateParam(name as string, ParamType as Integer, DirType as Integer=0) as SQLParamMBS 21108

162.15.14 DB2SQLExecDirect(sql as string)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes an SQL command directly without any preprocessing in the plugin.
Example:

```
dim cmd as new SQLCommandMBS // your command
dim con as new SQLConnectionMBS // your connection

// now use an API function
const sql = "some sql command"
cmd.DB2SQLExecDirect sql
```

Notes: Lasterror is set.

162.15.15 DB2SQLRowCount as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the affected number of rows for the last operation.
Notes: Lasterror is set.

162.15.16 DestroyParams

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Destroys all parameters associated with the specified command.
Notes:

DestroyParams method destroys all parameters either created automatically by the Library or by user.

Normally you should not create and delete parameters by yourself. The Library automatically detects whether the command has parameters, implicitly creates a set of SAParam objects and then deletes them in SACommanddestructor. But if you have some reason to create parameters explicitly use CreateParam method and then call DestroyParams method to delete all parameters after your work with parameters is over.

162.15.17 Execute

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the current command.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

162.15.18 ExecuteCommand(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given command.
Notes:

This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

162.15.19 ExecuteCommandMT(SQLCommand as string, CommandType as Integer=0)

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the given command.
Notes:

This is a convenience function.
Internally it calls setCommandText with the given command and calls Execute.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

162.15.20 ExecuteMT

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes the current command.
Notes:

Use the Execute method to execute the query or stored procedure specified in the command text. Execute method calls Prepare method implicitly if needed. If the command has input parameters, they should be bound before calling Execute method. Input parameters represented by SAParam object. To bind input variables assign a value to SAParam object returning by Param or ParamByIndex methods.

A command (an SQL statement or procedure) can have a result set after executing. To check whether a result set exists use isResultSet method. If result set exists, a set of SAField objects is created after command execution. Rows from the result set can be fetched one by one using FetchNext method. To get field description or value use Field method.

Output parameters represented by SAParam objects. They are available after command execution. To get parameter description or value use Param or ParamByIndex methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.15.21 FetchFirst as boolean

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches first row from a result set.
Notes:

Same as FetchNext, but jumps to the first row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

162.15.22 FetchLast as boolean

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches last row from a result set.
Notes:

Same as FetchNext, but jumps to the last row.
Returns true if the row was fetched; otherwise false.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

162.15.23 FetchNext as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches next row from a result set.
Notes:

Returns true if the next row was fetched; otherwise false .

Use FetchNext method to fetch row by row from the result set.

Each column of fetched row is represented by SAField object. If a result set exists after the last command execution, a set of SAField objects is created implicitly. To check whether a result set exists use isResultSet method. FetchNext method updates value parts of SAField objects.

To get field description or value use Field method.

When you cache the result set, you can always move within the result set.

162.15.24 FetchPos(offset as Integer, relative as boolean = false) as boolean

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches a row by index.
Notes:

Returns true if the row was fetched; otherwise false.
You may need to request recordset to be scrollable to have this work.
For that, please set Option("Scrollable") = "true" before doing the query.

When you cache the result set, you can always move within the result set.

162.15.25 FetchPrior as boolean

MBS SQL Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fetches previous row from a result set.
Notes:

Returns true if the row was fetched; otherwise false.
Same as FetchNext, just going back inside the result set.

Not supported for Interbase and SQLite.

When you cache the result set, you can always move within the result set.

162.15.26 Field(index as Integer) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the column specified by its position in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

Notes:

index: A one-based field number in a result set.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 162.15.27 Field(name as string) as SQLFieldMBS 21114

162.15.27 Field(name as string) as SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the column specified by its name in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLFieldMBS = c.Field("FirstName")

// get field by Index
dim f2 as SQLFieldMBS = c.Field(1)
```

Notes:

name: A string that represents a name of the requested field.

Returns a reference to a SAField object.

Use Field method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 162.15.26 Field(index as Integer) as SQLFieldMBS 21114

162.15.28 FieldNames as String()

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns an array with all the field names for quick inspection.

162.15.29 Open

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the specified command object.
Notes:

Use the Open method to open the command explicitly.

A command will be implicitly opened by any method that needs an open command, therefore you don't have to call it explicitly.

To test whether a command is opened use isOpened method.

162.15.30 Param(ID as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the command parameter specified by its position.
Notes:

ID: A position of parameter specified in the command text. Normally position is a number stated in the command text after a colon (for example, 1 for :1, 5 for :5).

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 162.15.31 Param(name as string) as SQLParamMBS 21116

162.15.31 Param(name as string) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the command parameter specified by its name.
Example:

```
// your connection
dim con as SQLConnectionMBS
dim SQL as string = "Insert into test_tbl(fid, fvarchar20) values(:id, :name)"

// create command object
dim cmd as new SQLCommandMBS(con, sql)

// assign values by name of parameter:
cmd.Param("id").setAsLong(2)
```

```
cmd.Param("name").setAsString(new SQLStringMBS("Some string (2)"))

// Insert first row
cmd.Execute
```

Notes:

Name: A string that represents a name of the requested parameter. Normally name is a string stated in the command text after a colon (for example, 'city' for :city, 'my city' for :"my city") or a parameter name in a stored procedure or function.

Returns a reference to a SAParam object which is only valid as long as the param object is not deleted by the library.

Use Param method to access a parameter by its name or position (in SQL statement). If, for example, you want to walk through all the parameters use ParamByIndex method.

If parameters were not created before calling Param method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a value of name or position which does not specified in the command text will throw an exception.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.
See also:

- 162.15.30 Param(ID as Integer) as SQLParamMBS 21116

162.15.32 ParamByIndex(index as Integer) as SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the command parameter specified by index.
Notes:

Index: A zero-based index of the requested parameter in the array of SAParam objects. It must be greater than or equal to 0 and 1 less than the value returned by ParamCount method.

Returns a reference to a SAParam object.

Normally you should use Param method to access a parameter by its name or position (in SQL statement). ParamByIndex method can be used if, for example, you want to walk through all the parameters.

If parameters were not created before calling ParamByIndex method the Library creates them implicitly (can query native API if needed and therefore can throw exception on error) and then returns the specified parameter.

Passing a negative value of index or a value greater or equal than the value returned by ParamCount method will result in a failed assertion.

SAParam object contains full information about a parameter: name, type, size, etc. Values for the input parameters can be assigned to SAParam object.

162.15.33 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by index for the row with the RecordIndex.
See also:

- 162.15.34 PostgreSQLField(RecordIndex as integer, FieldName as string) as string 21118

162.15.34 PostgreSQLField(RecordIndex as integer, FieldName as string) as string

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a field by name for the row with the RecordIndex.
See also:

- 162.15.33 PostgreSQLField(RecordIndex as integer, FieldIndex as integer) as string 21118

162.15.35 PostgreSQLFieldCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of fields in the result.

162.15.36 PostgreSQLRowCount as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of records in the result.

162.15.37 Prepare

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prepares command before execution.
Notes:

Prepare method compiles the command, but does not execute it. The method detects syntax errors in command text and verifies the existence of database objects.

Execute method calls Prepare method implicitly if needed, therefore you don't have to call it explicitly.

162.15.38 setCommandText(SQLCommand as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the command text.
Example:

```
dim s as new SQLCommandMBS

s.setCommandText "select * from test"

MsgBox s.CommandText
```

Notes:

SQLCommand: A string which represents command text string (an SQL statement or a stored procedure name).
CommandType: The type of command like kCommandTypeUnknown, kCommandTypeSQLStatement, kCommandTypeSQLStatementRaw or kCommandTypeStoredProcedure.

It's not necessary to set a command type explicitly, because it is defined automatically in terms of command text string. But if you still have any reason to do it, use one of the kCommandType* constants. To get command type use CommandType method.

162.15.39 SetParameters(Params as dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the parameters based on the keys and values in the dictionary.
Example:

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// parse a SQL command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

dim d as new Dictionary
// set by param index
d.Value(0) = "test.jpg"
// set by param name
d.Value("image") = jpegData

// set all parameters together
cmd.SetParameters d
cmd.Execute
```

Notes:

Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

162.15.40 Value(index as Integer) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value specified by its position in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get field by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get field by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

Notes:

You can use Value() to get values for normal or cached result sets.

index: A one-based field number in a result set.

Use Value method to access a field by its name or position in the result set.
For Cached result sets, please use Value() function to get values.

Using an index smaller than 1 and greater then the value returned by FieldCount method will result in a failed assertion.

A set of SAField objects creates implicitly after the command execution if the result set exists. SAField object contains full information about a column: name, type, size, value.
See also:

- 162.15.41 Value(name as string) as SQLValueReadMBS 21121

162.15.41 Value(name as string) as SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value specified by its name in the result set.
Example:

```
dim c as SQLCommandMBS // your command object

// get value by name
dim f1 as SQLValueReadMBS = c.Value("FirstName")

// get value by Index
dim f2 as SQLValueReadMBS = c.Value(1)
```

Notes:

You can use Value() to get values for normal or cached result sets.

name: A string that represents a name of the requested field.

Returns a reference to a SAValueRead object.

Use Value method to access a field by its name or position in the result set.
Using a non-existent field name will throw an exception.

A set of SAField objects creates implicitly after the command execution if the result set exists.SAField object contains full information about a column: name, type, size, value.
See also:

- 162.15.40 Value(index as Integer) as SQLValueReadMBS 21120

162.15.42 Properties

162.15.43 CommandCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of current command objects.
Notes:

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLCommandMBS and RecordSet objects.
(Read only property)

162.15.44 CommandText as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the command text associated with the SACommand object.
Example:

```
dim s as new SQLCommandMBS(nil, "select * from test")

MsgBox s.CommandText
```

Notes:

Use the CommandText method to return the command text declared in SACommand constructor or setCommandText method.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.
(Read and Write property)

162.15.45 CommandType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the command type currently associated with the SACommand object.
Notes:

One of the following values from SACommandType_t enum:

- kCommandTypeUnknown Command type is not defined. Library will detect command type automatically when needed.
- kCommandTypeSQLStmt Command is an SQL statement.
- kCommandTypeSQLStmtRaw Command is an SQL statement that mustn't be interpreted by SQLAPI++.
- kCommandTypeStoredProc Command is a stored procedure or a function.

Remarks

The command type can be explicitly set in SACommand constructor and setCommandText method, but it's not necessary to do it.

The CommandTypemethod returns the command type value that was specified in SACommand constructor or setCommandText method. If you declared the command type value as kCommandTypeUnknown (the default value) then command type is detected by the Library and the CommandType method returns this detected value.
(Read only property)

162.15.46 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection for the command.
Notes:

When you set the connection on a command object that already has associated connection, the previous association will be correctly discarded (with closing opened command if needed) and new connection will be set.

If you attempt to call any method on a SACommand object that requires database access with no valid connection, an error occurs.
(Read and Write property)

162.15.47 FieldCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of fields (columns) in a result set.
Notes:

FieldCount method returns the number of fields created implicitly after the command execution if a result set exists.

A field is represented by SAField object. You can get field value and description using Field method.
(Read only property)

162.15.48 Fields as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides dictionary with all fields.
Notes:

This dictionary should help for debugging to inspect all fields and their text value.
(Read only property)

162.15.49 hasCache as Boolean

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether cache is active.
Notes: (Read only property)

162.15.50 isExecuted as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this command was already executed.
Notes: (Read only property)

162.15.51 isExecuting as Boolean

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this command is executing.
Notes:

You only see this true if you use threaded queries and look on the property from another thread.

(Read only property)

162.15.52 isOpened as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the SACommand object is opened; otherwise false.
Notes: (Read only property)

162.15.53 isResultSet as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether a result set exists after the command execution.
Notes:

Returns true if the result set exists; otherwise false.
(Read only property)

162.15.54 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

162.15.55 ParamCount as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of parameters associated with the SACommand object.
Notes:

ParamCount method returns the number of parameters created explicitly by using CreateParam method or (if parameters were not created before) creates them implicitly (can query native API if needed and therefore can throw exception on error) and returns the number of created parameters.

Command parameter is represented by SAParam object. You can look SAParam objects through and assign their values with Param and ParamByIndex methods.
(Read only property)

162.15.56 Parameters as Dictionary

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Provides dictionary with all parameters.
Notes:

This dictionary should help for debugging to inspect all parameters and their text value.
(Read only property)

162.15.57 RowsAffected as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of rows affected by the last insert/update/delete command execution.
Example:

```
dim con as SQLConnectionMBS // your connection

dim sql as string = "UPDATE Test SET MyField=1"
dim c as new SQLCommandMBS(con, sql)

c.Execute

MsgBox str(c.RowsAffected)
```

Notes: (Read only property)

162.15.58 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag property.
Example:

```
dim c as SQLCommandMBS // your command object

// store reference to window/control, so we have it available in events
c.Tag = self
```

Notes:

You can store here whatever you like.
(Read and Write property)

162.15.59 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string value of a specific command option.
Example:

```
dim cmd as SQLCommandMBS // your command

// turn on auto cache
cmd.Option("AutoCache") = "true"
```

Notes:

see also:
http://www.sqlapi.com/OnLineDoc/Command_Option.html
(Read and Write computed property)

162.15.60 Events

162.15.61 Trace(traceInfo as Integer, SQL as string)

MBS SQL Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to trace SQL commands.

162.15.62 Working

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called while the ExecuteMT and ExecuteCommandMT methods are running.

162.15.63 Constants

162.15.64 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
Notes: Command is an SQL statement.

162.15.65 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
Notes: Command is an SQL statement that mustn't be interpreted by SQLAPI.

162.15.66 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
Notes: Command is a stored procedure or a function.

162.15.67 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the command type.
Notes: Used by default. Library detects command type automatically.

162.15.68 kOptionPreFetchRows = "PreFetchRows"

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the option constants.
Example:

```
dim cmd as new SQLCommandMBS
// do something

dim nBulkSize as Integer = 1000
cmd.Option(SQLCommandMBS.kOptionPreFetchRows) = str(nBulkSize)
```

162.15.69 kParamDirTypeInput = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.
Notes: Input parameter.

162.15.70 kParamDirTypeInputOutput = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants.
Notes: Input/output parameter.

162.15.71 kParamDirTypeOutput = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Output parameter.

162.15.72 kParamDirTypeReturn = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Returning parameter.

162.16 class SQLConnectionMBS

162.16.1 class SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a SQL Plugin Database connection.
Example:

```
dim con as new SQLConnectionMBS

try

// where is the library?
con.SetFileOption con.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is Oracle,
// but can also be Sybase, Informix, DB2
// SQLServer, InterBase, SQLBase and ODBC

dim server as string = "192.168.1.80,3306@test"

con.Connect(server,"root","",SQLConnectionMBS.kMySQLClient)

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
con.Disconnect

msgbox "We are disconnected!"

catch r as RuntimeException
MsgBox r.message

// SAConnection::Rollback()
// can also throw an exception
// (if a network error for example),
// we will be ready
try

// on error rollback changes
con.Rollback

catch rr as runtimeexception
MsgBox rr.message
end try
end try
```

Notes:

Supported databases: CubeSQL, Centura SQLBase, DB2, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_connection.html

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.

162.16.4 Methods

162.16.5 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

162.16.6 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of all command objects related to the connection.

162.16.7 Commit

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves any changes and ends the current transaction.
Notes:

Use Commit method to write transaction changes permanently to a database. It commits the work of all commands that associated with that connection.

All changes to the database since the last commit are made permanent and cannot be undone. Before a commit, all changes made since the start of the transaction can be rolled back using Rollback method.

162.16.8 Connect(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the connection to a data source.
Example:

```
dim con as SQLConnectionMBS// your connection

// some calls for MS SQL Server:
con.Connect("srv2@pubs","", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQL2005EX_EN@pubs", "", "", SQLConnectionMBS.kSQLServerClient)
con.Connect("BEDLAM\SQLEXPRESS@master", "", "", SQLConnectionMBS.kSQLServerClient)

// for MySQL:

con.Connect("192.168.1.80,3306@test","root","password", SQLConnectionMBS.kMySQLClient)

// for Postgre SQL:

con.Connect("somedb", "name", "password",SQLConnectionMBS.kPostgreSQLClient)
// with options
con.Connect("PostgreSQL:127.0.0.1,5432@dbname=postgres connection_timeout=10 sslmode=require", "name",
"password",SQLConnectionMBS.kPostgreSQLClient)

// for SQLite:

con.Connect("/test.db", "", "",SQLConnectionMBS.kSQLiteClient)
```

Notes:

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and

process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is brocken or not use isAlive method.

see also for server specific notes:
http://www.sqlapi.com/OnLineDoc/Connection_Connect.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

See Option() for various options you can set before connecting.
e.g. c.Option("SQLiteVFSFlags") = "1" for SQLite for read only access.

162.16.9 ConnectMT(DBString as string, UserID as string, Password as string, client as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens the connection to a data source.
Notes:

DBString:	Name of database this connection will connect to (see Server specific notes).
UserID:	A string containing a user name to use when establishing the connection (see Server specific notes).
Password:	A string containing a password to use when establishing the connection.
client:	Optional. One of the following values from k*Client constants.

Using the Connect method on a SAConnection object establishes the physical connection to a data source. After this method successfully completes, the connection is live and you can issue commands against it and process the results.

If you use the default value of Client parameter, you should set Client before using Connect.

To check whether a connection established use isConnected method. To check whether a connection is brocken or not use isAlive method.

see also for server specific notes:
http://www.sqlapi.com/OnLineDoc/Connection_Connect.html

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

The MT method will not trigger WillConnect and DidConnect events.

162.16.10 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receives a data chunk for file download.
Notes:

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

162.16.11 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data chunk for file upload.
See also:

- 162.16.12 CubeSQLSendData(data as String) 21135

162.16.12 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data chunk for file upload.
See also:

- 162.16.11 CubeSQLSendData(data as MemoryBlock) 21135

162.16.13 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends end data packet.

162.16.14 Disconnect

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Disconnects the connection from the database.
Notes: Closes all commands objects and RecordSets.

162.16.15 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to insert a record.
Example:

```
dim con as SQLConnectionMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

con.InsertRecord("test_tbl", d)
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

162.16.16 Listen

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Start listening for notifications.
Notes:

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

162.16.17 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the last auto increment value from last insert command.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

162.16.18 Rollback

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancels any changes made during the current transaction and ends the transaction.
Notes:

Rollback method rolls back the database to the state it was in at the completion of the last commit operation. All uncommitted work is undone.

Rollback method rolls back the work of all commands that associated with that connection.

To commit all changes made since the start of the transaction use Commit method.

162.16.19 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option with passing a file path.
Example:

```
dim db as new SQLConnectionMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

162.16.20 SQLExecute(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and ignores result.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

162.16.21 SQLExecuteMT(command as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and ignores result.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.16.22 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the

return value of BackupFinish.

162.16.23 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

162.16.24 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.16.25 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified

during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.16.26 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

162.16.27 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables/disables extension loading for the given connection.

162.16.28 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

162.16.29 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the version string of the SQLite library.

162.16.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 162.16.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21143

162.16.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 162.16.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21143

162.16.32 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

162.16.33 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

162.16.34 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

162.16.35 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

162.16.36 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

162.16.37 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

162.16.38 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"

not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

162.16.39 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

162.16.40 SQLSelect(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the first field's string value.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

162.16.41 SQLSelectAsRecordSet(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the result as RecordSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

162.16.42 SQLSelectAsRecordSetMT(command as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the result as RecordSet object.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.16.43 SQLSelectMT(command as string, CommandType as Integer = 0) as string

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Executes a SQL command and returns the first field's string value.
Notes:

This is a convenience function.
Internally it creates a SQLCommandMBS with the given command and calls Execute.
If the result is a record set, the first field from the first row is returned.
This is basicly useful for commands like "select sqlite_version()".

All text strings sent to the plugin must have a defined encoding. Else the internal text encoding conversions will fail.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.16.44 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to update a record.
Example:

```
dim con as SQLConnectionMBS // your database connection
```

```
dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

con.UpdateRecord("test_tbl", d, new dictionary("ID":2))
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

162.16.45 Properties

162.16.46 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether autocommit is enabled or disabled for the current connection.
Example:

```
Dim con as SQLConnectionMBS // your database connection
con.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

Notes:

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

162.16.47 Client as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current DBMS client assigned for the connection.
Notes: (Read and Write property)

162.16.48 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the DBMS client API version number.
Notes:

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

162.16.49 ConnectionCount as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of current connection objects.
Notes:

This method should help you find leaked objects by keeping track of current count from the plugin perspective.
This includes SQLConnectionMBS and SQLDatabaseMBS objects.
(Read only property)

162.16.50 Error as Boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether an error occurred.
Notes:

This is set always when an error occurs and cleared if no error happened.
Be aware that the next call to a plugin function may reset error status.
If you look on this property in debugger, it's probably already cleared by the debugger querying a property.
(Read only property)

162.16.51 ErrorCode as Integer

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error code.
Notes:

This is set always when an error occurs and cleared if no error happened.
(Read only property)

162.16.52 ErrorMessage as string

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message.
Notes:

This is set always when an error occurs and cleared if no error happened.
(Read only property)

162.16.53 isAlive as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the database server connection status for a particular connection object.
Notes:

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

162.16.54 isConnected as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the connection state for a particular connection object.
Notes:

Returns true if connected; otherwise false.
(Read only property)

162.16.55 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transaction isolation level.
Notes:

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

162.16.56 LastStatement as String

MBS SQL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last executed SQL Statement.
Notes: (Read only property)

162.16.57 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a set of functions of native DBMS client API.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

162.16.58 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

162.16.59 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to raise exceptions.
Notes:

Default is true which means we set error, ErrorCode and ErrorMessage properties and than raise SQLErrorExceptionMBS exception.
If you set to false, we don't raise the exception and you have similar behavior as with database class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

162.16.60 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to make internally created SQLCommand objects scrollable.

Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

162.16.61 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently connected DBMS server version number.
Notes:

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

162.16.62 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently connected DBMS server version string.
Notes:

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

162.16.63 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The encryption key to use.
Example:

```
dim db as new SQLConnectionMBS
db.SQLiteEncryptionKey = "Hello"
```

Notes:

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are

used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

162.16.64 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag property.
Notes:

You can store here whatever you like.
(Read and Write property)

162.16.65 VariantsKeepSQLObjects as Boolean

MBS SQL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether variants should use SQL types.
Notes:

If set to true, we return datetime and numeric as SQLDateTimeMBS and SQLNumericMBS objects.
If false, we return them as date and double.
(Read and Write property)

162.16.66 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A string value of a specific connection or command option.
Example:

```
dim c as SQLConnectionMBS // your connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// set 10 seconds timeout for MySQL
c.Option("MYSQL_OPT_CONNECT_TIMEOUT") = "10"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes:

see also:
http://www.sqlapi.com/OnLineDoc/Connection_Option.html
(Read and Write computed property)

162.16.67 Events

162.16.68 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

162.16.69 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

162.16.70 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to trace SQL commands.

162.16.71 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called before connection is established.
Notes: Last chance to set connection options.

162.16.72 Working

MBS SQL Plugin, Plugin Version: 10.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called while the SQLExecuteMT and SQLSelectMT methods are running.

162.16.73 Constants

162.16.74 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 0

162.16.75 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 1

162.16.76 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 2

162.16.77 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 3

162.16.78 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property.
Example:

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOff
```

Notes: Autocommit is off.

162.16.79 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property.
Example:

```
dim db as SQLConnectionMBS // your database connection

db.AutoCommit = SQLConnectionMBS.kAutoCommitOn
```

Notes: Autocommit is on.

162.16.80 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the constants for the autocommit property.
Notes: Autocommit unknown

162.16.81 kClientNotSpecified = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: Client is not specified.

162.16.82 kCubeSQLClient = 13

MBS SQL Plugin, Plugin Version: 18.0. **Function:** One of the database client constants.
Notes: CubeSQL client. (coming soon)

162.16.83 kDB2Client = 6

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: DB2 client.

162.16.84 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Bind variable not found.

162.16.85 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Initialization failed for client.

162.16.86 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Client not set.

162.16.87 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unsupported client type for this platform.

162.16.88 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Library file is too old.

162.16.89 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Field not found.

162.16.90 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to query library version.

162.16.91 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to load a library. For example path could be wrong or 32/64bit mismatch.

162.16.92 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Out of memory.

162.16.93 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown column type.

162.16.94 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown data type.

162.16.95 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown parameter type.

162.16.96 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

162.16.97 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Can't convert text to date.

162.16.98 kFirebirdClient = 4

MBS SQL Plugin, Plugin Version: 10.4. **Function:** One of the database client constants.
Notes: InterBase/Firebird client.

162.16.99 kInformixClient = 7

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: Informix client.

162.16.100 kInterBaseClient = 4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: InterBase/Firebird client.

162.16.101 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.
Notes: Unknown

162.16.102 kMySQLClient = 9

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: MySQL client.

162.16.103 kODBCClient = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: ODBC client.

162.16.104 kOptionAPPNAME = "APPNAME"

MBS SQL Plugin, Plugin Version: 9.3. **Function:** A constant for the options.

162.16.105 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

Notes: for CubeSQL.

162.16.106 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("db2cli.dll")
con.SetFileOption con.kOptionLibraryDB2, f
```

Notes: for DB2.

162.16.107 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("fbclient.dll")
con.SetFileOption con.kOptionLibraryFirebird, f
```

Notes: for Firebird.

162.16.108 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ICLIT09B.dll")
con.SetFileOption con.kOptionLibraryInformix, f
```

Notes: for Informix.

162.16.109 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("ibclient64.dll")
con.SetFileOption con.kOptionLibraryInterbase, f
```

Notes: for Interbase.

162.16.110 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libmysqlclient.18.dylib")
con.SetFileOption con.kOptionLibraryMySQL, f
```

Notes: for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

162.16.111 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

con.Option( con.kOptionLibraryODBC) = "/usr/lib/libiodbc.dylib"
```

Notes: for ODBC.

162.16.112 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("oci.dll")
con.SetFileOption con.kOptionLibraryOracle, f
```

Notes: for Oracle.

162.16.113 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libpq.dll")
con.SetFileOption con.kOptionLibraryPostgreSQL, f
```

Notes: for Postgre SQL.

162.16.114 kOptionLibrarySeparator = ":"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the platform specific path separator.
Notes:

Use with SetFileOption to specify multiple file paths for a library.
Has a different value on the different platforms.

162.16.115 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("dbcapi.dll")
con.SetFileOption con.kOptionLibrarySQLanywhere, f
```

Notes: for SQL Anywhere.

162.16.116 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlwntm.dll")
con.SetFileOption con.kOptionLibrarySQLBase, f
```

Notes: for SQLbase.

162.16.117 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("sqlite.dylib")
con.SetFileOption con.kOptionLibrarySQLite, f
```

Notes: for SQLite. Can also be the spatialite library.

162.16.118 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** OOne of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.16.119 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybcs.dll")
con.SetFileOption con.kOptionLibrarySybaseCS, f
```

Notes: for Sybase.

162.16.120 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("libsybct.dll")
con.SetFileOption con.kOptionLibrarySybaseCT, f
```

Notes: for Sybase.

162.16.121 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.16.122 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 10.5. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.16.123 kOptionWSID = "WSID"

MBS SQL Plugin, Plugin Version: 9.3. **Function:** A constant for the options.

162.16.124 kOracleClient = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes:

Oracle client.

For Windows the file is "oci.dll", for Linux libclntsh.so and for Mac OS X libclntsh.dylib.

162.16.125 kPostgreSQLClient = 10

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: PostgreSQL client.

162.16.126 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.
Notes: Read committed.

162.16.127 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.
Notes: Read uncommitted.

162.16.128 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.
Notes: Repeatable read.

162.16.129 kSerializable = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the isolation level constants.
Notes: Serializable.

162.16.130 kSQLAnywhereClient = 12

MBS SQL Plugin, Plugin Version: 18.0. **Function:** One of the database client constants.
Notes: SQL Anywhere client.

162.16.131 kSQLBaseClient = 5

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: SQLbase client.

162.16.132 kSQLiteClient = 11

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: SQLite client. Or spatialite.

162.16.133 kSQLServerClient = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes:

Mircosoft SQL Server client.

You may need to download the client packages for accessing SQL Server. Files like the SQLNCLI dll may be missing. You can download for example the Feature Pack for Microsoft SQL Server 2005 from the microsoft download page.

162.16.134 kSybaseClient = 8

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the database client constants.
Notes: Sybase client.

162.16.135 SQLiteInMemory = ":memory:"

MBS SQL Plugin, Plugin Version: 19.2. **Function:** Connection string for SQLite for a new in-memory database.

162.17 class SQLDatabaseMBS

162.17.1 class SQLDatabaseMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The database class for the SQL plugin
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibrarySQLite, getfolderitem("/usr/lib/libsqlite3.0.dylib", folderitem.PathTy
Shell)

// connect to database
// in this example it is SQLite,
// but can also be Sybase, Oracle, Informix, DB2, SQLServer, InterBase, MySQL, SQLBase and ODBC

dim path as string

if TargetMacOS then
path = "/tmp/test.db" // put the database in the temporary folder
else
path = "test.db" // for Windows and Linux in the current folder the application is inside.
end if

db.DatabaseName = "sqlite:"+path

if db.Connect then

MsgBox "We are connected!"

// Disconnect is optional
// autodisconnect will ocur in destructor if needed
db.close

msgbox "We are disconnected!"
end if
```

Notes:

You can use the SQL plugin without using Xojo built in database classes if you use the SQLConnectionMBS and SQLCommandMBS classes.

Or you use the SQLDatabaseMBS class which is a subclass of the database class and can be used with Xojo's RecordSet class. The current implementation is not complete. You can connect with passing the database

URL in the DatabaseName property of the SQLDatabaseMBS class. You prefix this URL with the database type you are using.

You can use Execute and Select to run SQL statements. Errors can be queries with the lasterror properties. For the RecordSet, you can get the column count, the column names and values and move to the next row. All the other methods like deleting a record or updating a value are not implemented and you need to use SQL commands to do this.

Supported databases: CubeSQL, Centura SQLBase, DB2, Firebird, Informix, InterBase, MariaDB, Microsoft Access, Microsoft SQL Server, MySQL, ODBC, Oracle Database Server, PostgreSQL, SQL Anywhere, SQLite, SQLCipher and Sybase.
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

As field and table schema functions are not implemented, you can't use this database with the database browser features in the Xojo IDE.
The plugin does not provide RecordCount on RecordSet class. For that you need to make a extra SELECT count(*) query.

With Xojo 2013r1, you only need a database server license from Xojo, Inc. if you use the SQLDatabaseMBS class. The SQLConnectionMBS class does not require this license. But some features like getting a recordset do need the license as they refer to the SQLDatabaseMBS class.

Please free all RecordSets and SQLCommand objects before you close the SQLConnection or the SQLDatabase. The plugin keeps references from RecordSets and SQLCommand to prevent automatic destruction of the database connection. If you close a database connection while you have RecordSets and SQLCommand in use, things may go wrong.

The plugin can cache the recordset locally. To enable you can call SQLCommandMBS.Cache or use the Option("AutoCache") = "true" on either command or connection or database objects. The plugin will than fetch all records and store them in memory. After this you can walk over the recordset and use FetchPos, FetchFirst, FetchLast, FetchPrev and FetchNext to locate the rows you need. When you call Field() you always get last row, but to read from cached result set, please use Value() function. When using RecordSet, the values are read via Value() functions automatically.

You can use InternalPostgreSQLLibraryMBS or InternalSQLiteLibraryMBS if you like to use our built in SQLite or PostgreSQL database libraries.

The class pings the database every minute by checking whether it's alive and to avoid server dropping connection. This can be disabled by setting Option("Ping") = "false". Ping is not used for SQLite.
Subclass of the Database class.

162.17.4 Methods

162.17.5 CancelAllCommands

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Cancel all commands for the connection.
Notes: This loops over the list of commands associated with this connection and calls Cancel on them.

162.17.6 Commands as SQLCommandMBS()

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries list of all command objects related to the connection.

162.17.7 Connect as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to the database.
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")

// connect to database
// in this example it is MySQL,
// but can also be Sybase, Informix, Oracle, DB2
// SQLServer, InterBase, SQLBase and ODBC

db.DatabaseName="mysql:192.168.1.80,3306@test"

db.UserName="root"
db.Password=""

// or postgreSQL with timeout and ssl mode
db.DatabaseName="PostgreSQL:127.0.0.1,5432@dbname=postgres connection_timeout=10 sslmode=require"

if db.Connect then

MsgBox "We are connected!"

MsgBox "Server Version: "+db.Connection.ServerVersionString

// Disconnect is optional
// autodisconnect will ocur in destructor if needed

else
MsgBox db.ErrorMessage
end if
```

Notes:

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "PostgreSQL:" or "SQLite:".
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

For Firebird, if you connect to a database and you have 32/64bit mismatch, you get error number 3.

162.17.8 ConnectMT as Boolean

MBS SQL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Connects to the database.
Notes:

Returns true on success and false on failure.

Please set the DatabaseName, UserName and Password properties. The Host property is ignored.
The database name must contain the complete information and a prefix for the kind of database.

Use this prefixes: "CubeSQL:", "SQLAnywhere:", "ODBC:", "Oracle:", "SQLServer:", "Firebird:", "InterBase:", "SQLBase:", "DB2:", "Informix:", "Sybase:", "MySQL:", "PostgreSQL:" or "SQLite:".
Connect to Microsoft Access, FileMaker Server (or Pro), Microsoft Visual FoxPro and others via ODBC.

For IPv6 we changed plugin to use , instead of : for the port separator. So please use , to separate port from IP or host.

Same as Connect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The MT method will not trigger WillConnect and DidConnect events.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.17.9 Constructor(globals as SQLGlobalsMBS = nil)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: Please don't call this directly as it's called automatically with using new command.

162.17.10 CubeSQLReceiveData(byref data as String, byref IsEndChunk as Boolean) as Boolean

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Receives a data chunk for file download.
Notes:

Returns true on success.
Data is set with data and IsEndChunk is set to true for last chunk.

162.17.11 CubeSQLSendData(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data chunk for file upload.
See also:

- 162.17.12 CubeSQLSendData(data as String) 21176

162.17.12 CubeSQLSendData(data as String)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends data chunk for file upload.
See also:

- 162.17.11 CubeSQLSendData(data as MemoryBlock) 21176

162.17.13 CubeSQLSendEndData

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sends end data packet.

162.17.14 InsertRecord(TableName as String, Record as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to insert a record.
Example:

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("ID")=2
d.Value("text")="test insert"
d.Value("other")="Just a test"

db.InsertRecord("test_tbl", d)

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the insert command with values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

162.17.15 Listen

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Start listening for notifications.
Notes:

Works only for PostgresSQL Client.
Please set client or connect before calling this method.

162.17.16 MySQLInsertID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the last auto increment value from last insert command.
Notes:

see also
http://dev.mysql.com/doc/refman/5.1/en/mysql-insert-id.html

162.17.17 Prepare(statement as string) as SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Prepares a statement.
Notes:

Returns prepared statement or nil in case of error.
Please check ErrorMessage property for errors.

162.17.18 SetFileOption(name as string, file as folderitem)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option with passing a file path.
Example:

```
dim db as new SQLDatabaseMBS

// where is the library?
db.SetFileOption SQLConnectionMBS.kOptionLibraryMySQL, SpecialFolder.UserHome.Child("libmysqlclient.dylib")
```

Notes: Makes sure the path is correct and you have a 32 or 64-bit library matching the architecture of your application.

162.17.19 SQLExecute(ExecuteString as string, CommandType as Integer)

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLExecute threaded.
Notes: Same as SQLExecute, but with additional CommandType parameter.

162.17.20 SQLExecuteMT(ExecuteString as string, CommandType as Integer = 0)

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLExecute threaded.
Notes:

Same as SQLExecute, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will

block, but keep other background threads running.

162.17.21 SQLiteBackupFinish(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

162.17.22 SQLiteBackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally

- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

162.17.23 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to

be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.17.24 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.17.25 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.

The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

162.17.26 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables/disables extension loading for the given connection.

162.17.27 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled

back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

162.17.28 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the version string of the SQLite library.

162.17.29 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 162.17.30 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21183

162.17.30 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error

will be returned.
See also:

- 162.17.29 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21183

162.17.31 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

162.17.32 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

162.17.33 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

162.17.34 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

162.17.35 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

162.17.36 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

162.17.37 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm

used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

162.17.38 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more

than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

162.17.39 SQLSelect(SelectString as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

162.17.40 SQLSelectMT(SelectString as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

162.17.41 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convenience function to update a record.
Example:

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

db.UpdateRecord("test_tbl", d, new dictionary("ID":2))

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.

Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

162.17.42 Properties

162.17.43 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether autocommit is enabled or disabled for the current connection.
Example:

```
Dim db as SQLDatabaseMBS // your database connection
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes:

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.
(Read and Write property)

162.17.44 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The current DBMS client assigned for the connection.
Notes: (Read and Write property)

162.17.45 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the DBMS client API version number.
Notes:

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

162.17.46 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The connection for this database used in the background.
Notes:

Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

162.17.47 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the database server connection status for a particular connection object.
Notes:

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

162.17.48 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the connection state for a particular connection object.
Notes:

Returns true if connected; otherwise false.
(Read only property)

162.17.49 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The transaction isolation level.
Notes:

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

162.17.50 LastStatement as String

MBS SQL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last executed SQL Statement.
Notes: (Read only property)

162.17.51 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a set of functions of native DBMS client API.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.
(Read only property)

162.17.52 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

162.17.53 RaiseExceptions as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to raise exceptions.
Notes:

Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

162.17.54 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to make internally created SQLCommand objects scrollable.

Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

162.17.55 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently connected DBMS server version number.
Notes:

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

162.17.56 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the currently connected DBMS server version string.
Notes:

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

162.17.57 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The encryption key to use.
Example:

```
dim db as new SQLDatabaseMBS
db.SQLiteEncryptionKey = "Hello"
```

Notes:

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are

used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128. To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

162.17.58 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tag property.
Notes:

You can store here whatever you like.
(Read and Write property)

162.17.59 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an option for the connection.
Example:

```
dim c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"
```

```
// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes: (Read and Write computed property)

162.17.60 Events

162.17.61 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

162.17.62 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

162.17.63 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to trace SQL commands.

162.17.64 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Event called before connection is established.
Notes: Last chance to set connection options.

162.17.65 Constants

162.17.66 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 0

162.17.67 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 1

162.17.68 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 2

162.17.69 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the ANSI level constants.
Notes: ANSI Level 3

162.17.70 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is off.

162.17.71 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is on.

162.17.72 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the constants for the autocommit property.
Notes: Autocommit unknown

162.17.73 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.
Notes: Command is an SQL statement.

162.17.74 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.
Notes: Command is an SQL statement that mustn't be interpreted by SQLAPI.

162.17.75 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.
Notes: Command is a stored procedure or a function.

162.17.76 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 14.1. **Function:** One of the constants for the command type.
Notes: Used by default. Library detects command type automatically.

162.17.77 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Bind variable not found.

162.17.78 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Initialization failed for client.

162.17.79 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Client not set.

162.17.80 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unsupported client type for this platform.

162.17.81 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Library file is too old.

162.17.82 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Field not found.

162.17.83 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to query library version.

162.17.84 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to load a library. For example path could be wrong or 32/64bit mismatch.

162.17.85 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Out of memory.

162.17.86 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown column type.

162.17.87 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown data type.

162.17.88 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Unknown parameter type.

162.17.89 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

162.17.90 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0. **Function:** One of the SQL Plugin error codes.
Notes: Can't convert text to date.

162.17.91 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.
Notes: Unknown

162.17.92 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection

dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

Notes: for CubeSQL.

162.17.93 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for DB2.

162.17.94 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Firebird.

162.17.95 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Informix.

162.17.96 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Interbase.

162.17.97 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

162.17.98 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for ODBC.

162.17.99 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Oracle.

162.17.100 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Postgre SQL.

162.17.101 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for SQL Anywhere.

162.17.102 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for SQLbase.

162.17.103 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for SQLite. Can also be the spatialite or SQLcipher library.

162.17.104 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** OOne of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.17.105 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.17.106 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.17.107 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.17.108 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

162.17.109 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.
Notes: Read committed.

162.17.110 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.
Notes: Read uncommitted.

162.17.111 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.
Notes: Repeatable read.

162.17.112 kSerializable = 3

MBS SQL Plugin, Plugin Version: 12.3. **Function:** One of the isolation level constants.
Notes: Serializable.

162.17.113 SQLiteInMemory = "Sqlite::memory:"

MBS SQL Plugin, Plugin Version: 19.2. **Function:** Connection string for SQLite for a new in-memory database.
Notes: Prefixed with SQLite to use directly.

162.18 class SQLDataConsumerMBS

162.18.1 class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a data consumer.
Notes: If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a callback for data and write it to a file in small chunks.

162.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

162.18.3 Xojo Developer Magazine

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

162.18.4 Events

162.18.5 Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called to process data.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

162.18.6 Constants

162.18.7 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

162.18.8 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

162.18.9 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

162.18.10 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

162.19 class SQLDataProviderMBS

162.19.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a data provider.
Notes: Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

162.19.2 Blog Entries

162.19.4 Events

162.19.5 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event called whenever new data is needed.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
If your stream is on the end, you set this to kLastPiece.
Return the raw data in a string.
Length is the number of bytes.

162.19.6 Constants

162.19.7 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

162.19.8 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

162.19.9 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

162.19.10 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

162.20 class SQLDateTimeMBS

162.20.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL date/time value class.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

Notes:

162.20.3 Methods

162.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.
See also:

- 162.20.5 Constructor(other as SQLDateTimeMBS) 21209
- 162.20.6 Constructor(value as Date) 21209
- 162.20.7 Constructor(value as Double) 21210
- 162.20.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21210
- 162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21211

162.20.5 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the SQL Date Time.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d)

MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 162.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21208
- 162.20.6 Constructor(value as Date) 21209
- 162.20.7 Constructor(value as Double) 21210
- 162.20.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21210
- 162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21211

162.20.6 Constructor(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes the datetime value with the given date.
See also:

- 162.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21208
- 162.20.5 Constructor(other as SQLDateTimeMBS) 21209
- 162.20.7 Constructor(value as Double) 21210
- 162.20.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21210
- 162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21211

162.20.7 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL date time value based on the double value.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more

MsgBox e.StringValue // shows "2008-03-05T23:10:20"
```

See also:

- 162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21211

162.20.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 162.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21208
- 162.20.5 Constructor(other as SQLDateTimeMBS) 21209
- 162.20.6 Constructor(value as Date) 21209

- 162.20.7 Constructor(value as Double) 21210
- 162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 21211

162.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new SQL Datetime with the given values.
See also:

- 162.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 21208
- 162.20.5 Constructor(other as SQLDateTimeMBS) 21209
- 162.20.6 Constructor(value as Date) 21209
- 162.20.7 Constructor(value as Double) 21210
- 162.20.8 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 21210

162.20.10 Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Assigns the datetime value with the given date.

162.20.11 Properties

162.20.12 DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries the value of this datetime object as a date object.
Notes: (Read only property)

162.20.13 Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day this SADateTime object represents (1 – 31).
Notes: (Read only property)

162.20.14 DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day of the week this SADateTime object represents (Sunday = 1).
Notes: (Read only property)

162.20.15 DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the day of the year this SADateTime object represents (Jan 1 = 1).
Notes: (Read only property)

162.20.16 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The double value of this date/time.
Notes:

Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

Date and time	Representation
30 December 1899, midnight	0.00
1 January 1900, midnight	2.00
4 January 1900, midnight	5.00
4 January 1900, 6 A.M.	5.25
4 January 1900, noon	5.50
4 January 1900, 9 P.M.	5.875

(Read only property)

162.20.17 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.
Notes:

The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000,

and for a billionth of a second (one nanosecond) is 1.
(Read only property)

162.20.18 hasDate as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this date & time object contains a date.
Notes: (Read only property)

162.20.19 hasTime as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this date & time object contains a time.
Notes: (Read only property)

162.20.20 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the hour this SADateTime object represents (0 – 23).
Notes: (Read only property)

162.20.21 Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the minute this SADateTime object represents (0 – 59).
Notes: (Read only property)

162.20.22 Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the month this SADateTime object represents (1 – 12).
Notes: (Read only property)

162.20.23 Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the second this SADateTime object represents (0 – 59).
Notes: (Read only property)

162.20.24 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value for this date/time.
Notes: (Read only property)

162.20.25 TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time zone.
Notes:

Should be in format "00:00" and should be supported for Oracle and Postgres.
(Read and Write property)

162.20.26 Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the year this SADateTime object represents.
Notes: (Read only property)

162.21 class SQLErrorExceptionMBS

162.21.1 class SQLErrorExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error exception class to report SQL errors.
Notes:

The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

162.21.4 Properties

162.21.5 ErrorClass as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a class of error.
Notes:

Returns one of the following values:

SA_No_Error	0	No error occurred.
SA_UserGenerated_Error	1	User-generated error.
SA_Library_Error	2	The Library error occurred.
SA_DBMS_API_Error	3	DBMS API error occurred.

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors
- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.

The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.
(Read and Write property)

162.21.6 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets an error text.
Notes:

A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read and Write property)

162.21.7 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets an error position in SQL statement.
Notes:

Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about

returned value.

If a command object's associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

DBMS server	ErrorPosition method returned value
Oracle	ErrorPosition returns parse error offset.
SQL Server	ErrorPosition returns the number of line within SQL statement where error occurred.
Sybase	ErrorPosition returns the number of line within SQL statement where error occurred.
DB2	ErrorPosition returns -1. DB2 does not support this function.
Informix	ErrorPosition returns -1. Informix does not support this function.
InterBase	ErrorPosition returns -1. InterBase does not support this function.
SQLBase	ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0.
MySQL	ErrorPosition returns -1. MySQL does not support this function.
PostgreSQL	ErrorPosition returns -1. PostgreSQL does not support this function.
ODBC	ErrorPosition returns -1. ODBC does not support this function.

(Read and Write property)

162.21.8 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets a native code associated with current error.
Notes:

Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.
(same as ErrorNumber property)

(Read and Write property)

162.21.9 SQL as String

MBS SQL Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL string set when this error occurred.
Notes: (Read and Write property)

162.22 class SQLFieldMBS

162.22.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This is the class for a SQL field in a record.
Notes:

Be aware that field objects exists only as long as their SQLCommand exists.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
Subclass of the SQLValueReadMBS class.

162.22.3 Methods

162.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value using the given data consumer.
Notes:

BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.
After command execution use ReadLongOrLob method for each output parameter defined to be read manually.

Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.
See also:

- 162.22.5 ReadLongOrLob(toFile as FolderItem) 21220
- 162.22.6 ReadLongOrLob(toStream as Writeable) 21220

162.22.5 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 162.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21219
- 162.22.6 ReadLongOrLob(toStream as Writeable) 21220

162.22.6 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 162.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21219
- 162.22.5 ReadLongOrLob(toFile as FolderItem) 21220

162.22.7 Properties

162.22.8 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns native type code of the field.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use NativeType property instead.
(Read only property)

162.22.9 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns precision of the field value (the total number of allowable digits).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Precision property instead.
(Read only property)

162.22.10 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Scale property instead.
(Read and Write property)

162.22.11 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns field data size.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Size property instead.
(Read only property)

162.22.12 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns field data type.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)

162.22.13 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Shows if it is possible for the field value to be null.
Notes:

Returns true if the field value can be null; false otherwise.
(Read only property)

162.22.14 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns name of the field.
Notes: (Read only property)

162.22.15 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns native type code of the field.
Notes: (Read only property)

162.22.16 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

162.22.17 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a one-based position of the field in a result set.
Notes: (Read only property)

162.22.18 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns precision of the field value (the total number of allowable digits).
Notes: (Read only property)

162.22.19 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns scale of the field value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

162.22.20 Size as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns field data size.
Notes: (Read only property)

162.22.21 Type as Integer

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns field data type.
Example:

```
dim db as SQLConnectionMBS
dim cmd as new SQLCommandMBS(db, "select * from test")

cmd.Execute

dim f as SQLFieldMBS = cmd.Field("test")

if f.Type = f.kDataTypeLong then
MsgBox "type is long"
end if
```

Notes:

Value is one of the kDataType* constants.
(Read and Write property)

162.22.22 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value of a specific field option.
Notes:

See for more details:
http://www.sqlapi.com/OnLineDoc/Field_setOption.html
(Read and Write computed property)

162.23 class SQLGlobalsMBS

162.23.1 class SQLGlobalsMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the global methods of the SQL plugin.

162.23.2 Blog Entries

- Register MBS Xojo Plugins
- MBS Xojo / Real Studio Plugins, version 13.5pr3
- MBS Real Studio Plugins, version 13.0pr7
- SQL Plugin and Textencoding

162.23.3 Methods

162.23.4 GetEnv(name as string) as string

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries environment variable.
Notes: Returns empty string if variable is undefined.

162.23.5 GetVersion as String

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version string of the SQLAPI library.

162.23.6 GetVersionBuild as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The build number of the SQLAPI library.

162.23.7 GetVersionMajor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The major version number of the SQLAPI library.

162.23.8 GetVersionMinor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minor version number of the SQLAPI library.

162.23.9 PutEnv(line as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets environment variable.
Notes: Line format should be "key=value" and returns true on success and false on failure.

162.23.10 RaiseException(message as string)

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Raises an exception to test exception handling in SQL Plugin.
Notes: Raises directly a SQLErrorExceptionMBS with the given message.

162.23.11 RaiseSQLErrorException(UserCode as Integer, message as string)

MBS SQL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Raises an exception to test exception handling in SQL Plugin.
Notes: Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Xojo.

162.23.12 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 162.23.13 SetCurrentWorkingDirectory(path as String) as boolean 21226

162.23.13 SetCurrentWorkingDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

• 162.23.12 SetCurrentWorkingDirectory(path as folderitem) as boolean 21226

162.23.14 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an environment variable.
Notes:

Existing variable with same name will be overwritten.
Returns true on success and false on failure.

162.23.15 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Registeres the SQL plugin and library.
Notes: Once you ordered a license, you receive details on how to call this method.

162.23.16 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the locale to use.
Notes:

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

162.23.17 UnSetEnv(name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes environment variable.
Notes: Returns true on success and false on failure.

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

162.23.18 Events

162.23.19 Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The event to trace SQL commands.

162.23.20 Constants

162.23.21 LocaleAll=0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set the entire locale generically.

162.23.22 LocaleCollate=1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

162.23.23 LocaleCType=2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** et a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower

case, alphabetic or non-alphabetic characters, and so on.

162.23.24 LocaleMessages=6

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set a locale for message catalogs, see catopen(3) function.

162.23.25 LocaleMonetary=3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set a locale for formatting monetary values; this affects the localeconv() function.

162.23.26 LocaleNumeric=4

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

162.23.27 LocaleTime=5

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the locale category constants for SetLocale. **Notes:** Set a locale for formatting dates and times using the strftime() function.

162.24 class SQLIntervalMBS

162.24.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class in the SQL Plugin for an interval.

162.24.2 Methods

162.24.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new zero interval.
See also:

- 162.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 21230
- 162.24.5 Constructor(value as Double) 21230

162.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new interval with the given values.
See also:

- 162.24.3 Constructor 21230
- 162.24.5 Constructor(value as Double) 21230

162.24.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new interval with the given time delta.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

See also:

- 162.24.3 Constructor 21230
- 162.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 21230

162.24.6 Dec(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decrements the interval.

162.24.7 Inc(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Increments the interval.

162.24.8 SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the interval values.

162.24.9 Properties

162.24.10 Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The days in this interval.
Notes: (Read only property)

162.24.11 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of this interval.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.DoubleValue) // shows "1.085463" for 1 day, 2 hours, 3 minutes and 4 seconds
```

Notes: (Read only property)

162.24.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fraction of a second in nano seconds.
Notes:

Range 0..999999999.
(Read only property)

162.24.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hours value.
Notes: (Read only property)

162.24.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minutes value.
Notes: (Read only property)

162.24.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The seconds value.
Notes: (Read only property)

162.24.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The interval as a string.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

Notes: (Read only property)

162.24.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total days value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays) // shows "1"
```

Notes: (Read only property)

162.24.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total hours value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours) // shows "26"
```

Notes: (Read only property)

162.24.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total minutes value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)
```

MsgBox str(n.TotalMinutes) // shows "1563"

Notes: (Read only property)

162.24.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The total seconds value.
Notes:

dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784"
(Read only property)

162.25 class SQLite3BackupMBS

162.25.1 class SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The object for a running backup.
Notes:

The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

162.25.4 Methods

162.25.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

162.25.6 Properties

162.25.7 Handle as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read only property)

162.26 class SQLite3MBS

162.26.1 class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the native SQLite API.
Example:

```
dim con as new SQLConnectionMBS
dim path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

dim api as SQLAPIMBS = con.NativeAPI
if api isa SQLite3MBS then
dim s as SQLite3MBS = SQLite3MBS(api)
MsgBox s.Version
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more SQLite specific functions.
Subclass of the SQLAPIMBS class.

162.26.3 Methods

162.26.4 BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

162.26.5 BackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

162.26.6 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.

The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.26.7 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

162.26.8 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns

kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

162.26.9 EnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Enables/disables extension loading for the given connection.

162.26.10 ErrCode as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The ErrCode function returns the numeric result code or extended result code for the most recent failed sqlite3 API call associated with a database connection.
Notes: If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

162.26.11 ErrMessage as string

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the most recent error message in english for the given connection.

162.26.12 LastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection,

zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

162.26.13 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 162.26.14 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer 21242

162.26.14 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 162.26.13 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 21241

162.26.15 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.
See also:

- 162.26.23 MemoryHighwater as Int64 21246

162.26.16 ReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

162.26.17 SetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

162.26.18 SetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

162.26.19 SetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

162.26.20 TableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm

used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

162.26.21 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more

than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

162.26.22 Properties

162.26.23 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries maximum memory usage so far.
Notes:

Can be reset with reset parameter.
(Read only property)
See also:

- 162.26.15 MemoryHighwater(reset as boolean) as Int64 21242

162.26.24 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.
(Read only property)

162.26.25 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version string of the SQLite library.
Notes: (Read only property)

162.26.26 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The version number of the SQLite library.
Notes: (Read only property)

162.26.27 Constants

162.26.28 kErrorAbort = 4

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Callback routine requested an abort.

162.26.29 kErrorAuth = 23

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Authorization denied

162.26.30 kErrorBusy = 5

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: The database file is locked.

162.26.31 kErrorCantopen = 14

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Unable to open the database file.

162.26.32 kErrorConstraint = 19

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Abort due to constraint violation.

162.26.33 kErrorCorrupt = 11

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: The database disk image is malformed.

162.26.34 kErrorDone = 101

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: sqlite3_step() has finished executing.

162.26.35 kErrorEmpty = 16

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Database is empty

162.26.36 kErrorError = 1

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: SQL error or missing database.

162.26.37 kErrorFormat = 24

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Auxiliary database format error.

162.26.38 kErrorFull = 13

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Insertion failed because database is full.

162.26.39 kErrorInternal = 2

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Internal logic error in SQLite

162.26.40 kErrorInterrupt = 9

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Operation terminated by sqlite3_interrupt().

162.26.41 kErrorIoerr = 10

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Some kind of disk I/O error occurred.

162.26.42 kErrorLocked = 6

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: A table in the database is locked.

162.26.43 kErrorMismatch = 20

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Data type mismatch.

162.26.44 kErrorMisuse = 21

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Library used incorrectly.

162.26.45 kErrorNolfs = 22

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Uses OS features not supported on host.

162.26.46 kErrorNoMem = 7

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Out of memory.

162.26.47 kErrorNotaDB = 26

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: File opened that is not a database file.

162.26.48 kErrorNotFound = 12

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: NOT USED. Table or record not found.

162.26.49 kErrorOk = 0

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Successful result

162.26.50 kErrorPerm = 3

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Access permission denied.

162.26.51 kErrorProtocol = 15

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: NOT USED. Database lock protocol error.

162.26.52 kErrorRange = 25

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: 2nd parameter to sqlite3_bind out of range.

162.26.53 kErrorReadonly = 8

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: Attempt to write a readonly database.

162.26.54 kErrorRow = 100

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: sqlite3_step() has another row ready.

162.26.55 kErrorSchema = 17

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: The database schema changed.

162.26.56 kErrorToobig = 18

MBS SQL Plugin, Plugin Version: 12.4. **Function:** One of the error codes.
Notes: String or BLOB exceeds size limit.

162.27 class SQLLongBinaryMBS

162.27.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A class for a long binary object.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

162.32.8 NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new numeric value object with given currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
```

```
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

162.32.9 NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number with the given double value.

162.32.10 NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number with the given Int64 value.

162.32.11 NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number with the given string value.
Notes: If string is empty, we return a number with zero as value.

162.32.12 NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new number with the given unsigned integer value.

162.32.13 Properties

162.32.14 CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
```

```
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

Notes: (Read and Write property)

162.32.15 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The double value for this number.
Notes: (Read and Write property)

162.32.16 Int64Value as Int64

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number value as an int64.
Notes: (Read and Write property)

162.32.17 precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The maximum number of digits in base 10.
Notes: (Read only property)

162.32.18 scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number of digits to the right of the decimal point.
Notes: (Read only property)

162.32.19 sign as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The sign: 1 for positive numbers, 0 for negative numbers.
Notes: (Read only property)

162.32.20 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value of this number.
Notes: (Read and Write property)

162.32.21 UInt64Value as UInt64

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number value as an uint64.
Notes: (Read and Write property)

162.33 class SQLParamMBS

162.33.1 class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL class for parameters.
Notes:

see also
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
Subclass of the SQLValueMBS class.

162.33.3 Methods

162.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The Long or Lob data reading mode.
Notes:

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.
kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the

data consumer Write event.
See also:

- 162.33.5 ReadLongOrLob(toFile as FolderItem) 21266
- 162.33.6 ReadLongOrLob(toStream as Writeable) 21266

162.33.5 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim Param as SQLParamMBS = cmd.Param("image")
// read blob content to binarystream
Param.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 162.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21265
- 162.33.6 ReadLongOrLob(toStream as Writeable) 21266

162.33.6 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim param as SQLParamMBS = cmd.param("image")
// read blob content to binarystream
param.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.

- 162.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 21265

• 162.33.5 ReadLongOrLob(toFile as FolderItem) 21266

162.33.7 Properties

162.33.8 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The direction type of parameter (input, output, etc.).
Notes:

Use the kParamDirType* constants.

Usually the Library automatically detects parameter's direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter's direction type explicitly. See Server specific notes for details.

http://www.sqlapi.com/OnLineDoc/Param_ParamDirType.html
(Read and Write property)

162.33.9 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the parameter.
Notes: (Read only property)

162.33.10 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The native type code of the parameter.
Notes: (Read and Write property)

162.33.11 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

162.33.12 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The precision of the parameter value (the total number of allowable digits).
Notes: (Read and Write property)

162.33.13 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The scale of the parameter value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

162.33.14 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parameter's data size.
Notes: (Read and Write property)

162.33.15 Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parameter's data type.
Notes:

See the kDataType constants.
(Read and Write property)

162.33.16 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The string value of a specific parameter option.
Notes:

see also:
http://www.sqlapi.com/OnLineDoc/Param_Option.html
(Read and Write computed property)

162.33.17 Constants

162.33.18 kParamDirTypeInput=0

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Input parameter.

162.33.19 kParamDirTypeInputOutput=1

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Input/output parameter.

162.33.20 kParamDirTypeOutput=2

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Output parameter.

162.33.21 kParamDirTypeReturn=3

MBS SQL Plugin, Plugin Version: 9.3. **Function:** One of the parameter direction type constants. **Notes:** Returning parameter.

162.34 class SQLPositionMBS

162.34.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a position value.

162.34.2 Methods

162.34.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Position value with an ID.
See also:

- 162.34.4 Constructor(withName as string) 21270

162.34.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new Position value with a name.
See also:

- 162.34.3 Constructor(withID as Integer) 21270

162.35 class SQLPreparedStatementMBS

162.35.1 class SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for prepared statements if you work with SQLDatabaseMBS class.
Notes:

If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: PreparedSQLStatement

162.35.4 Methods

162.35.5 Bind(name As String, value as Variant)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the value for one parameter.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.
See also:

- 162.35.6 Bind(name As String, value as Variant, type as Integer) 21273
- 162.35.7 Bind(Values as Dictionary) 21273

- 162.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 21275
- 162.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21276

162.35.6 Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines one paramater with value and type.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 162.35.5 Bind(name As String, value as Variant) 21272
- 162.35.7 Bind(Values as Dictionary) 21273
- 162.35.8 Bind(values() as Variant) 21274
- 162.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 21275
- 162.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21276

162.35.7 Bind(Values as Dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the parameters based on the keys and values in the dictionary.

Example:

```
dim db as SQLDatabaseMBS // your database
dim pic as Picture // some picture
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get an insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim p as SQLPreparedStatementMBS = db.Prepare(sql)

// put parameter values in a dictionary
dim d as new Dictionary

// by param index
d.Value(0) = "logo.jpg"
// by param name
d.Value("image") = jpegData

// bind values and run it
p.Bind(d)
p.SQLExecute
```

Notes:

The dictionary is saved to fill parameters later.
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.
See also:

- 162.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 21275
- 162.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 21276

162.35.8 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the value list with the given values.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

162.35.11 BindType(name As String, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Defines the type of one value.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes: With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

162.35.14 Clear

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears all parameters for reusing the SQL Prepared statement.

162.35.15 Constructor

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.
Notes:

This constructor makes sure you don't create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

162.35.16 ExecuteSQL(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

If bindItems is not nil, we bind parameters using it.

This version of the function raises always exceptions, while SQLExecute only if you set RaiseException property to true.

162.35.17 ExecuteSQLMT(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If bindItems is not nil, we bind parameters using it.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

This version of the function raises always exceptions, while SQLExecuteMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.35.18 SelectSQL(ParamArray bindItems As Variant) As RowSet

MBS SQL Plugin, Plugin Version: 19.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the query with the given parameters.
Notes:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods

unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelect only if you set RaiseException property to true.

162.35.19 SelectSQLMT(ParamArray bindItems As Variant) As Rowset

MBS SQL Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelectMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.35.20 SQLExecute(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

162.35.21 SQLExecuteMT(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

162.35.22 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

162.35.23 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

162.35.24 Properties

162.35.25 BoundTypes as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The binded types to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind types.

Renamed to BoundTypes in version 19.4. Was BindedTypes, but that was not proper english.
(Read only property)

162.35.26 BoundValues as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The binded values to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind values.

Renamed to BoundValues in version 19.4. Was BindedValues, but that was not proper english.
(Read only property)

162.35.27 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the plugin will ask for a scrollable recordset when doing SQLSelect.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

162.35.28 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL command for this prepared statement.
Notes: (Read and Write property)

162.35.29 Constants

162.35.30 kTypeBlob = 16

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Binary large Object. Pass a string or memoryblock.

162.35.31 kTypeBool = 1

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Boolean

162.35.32 kTypeBytes = 13

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes:

a binary string.
(which is a string without text encoding)

162.35.33 kTypeClob = 17

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Character Large Object

162.35.34 kTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Date and/or Time.

162.35.35 kTypeDouble = 8

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: double float value.

162.35.36 kTypeInt32 = 4

MBS SQL Plugin, Plugin Version: 20.2. **Function:** One of the data type constants.
Notes: signed 32 bit integer

162.35.37 kTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5. **Function:** One of the data type constants.
Notes: Signed 64-bit integer.

162.35.38 kTypeInterval = 11

MBS SQL Plugin, Plugin Version: 13.5. **Function:** One of the data type constants.
Notes:

An interval.
Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

162.35.39 kTypeLong = 4

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: signed 32 bit integer

162.35.40 kTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Long binary.

162.35.41 kTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: Long string.

162.35.42 kTypeNull = 99

MBS SQL Plugin, Plugin Version: 14.3. **Function:** One of the data type constants.
Notes: NULL value

162.35.43 kTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 13.5. **Function:** One of the data type constants.
Notes:

A number (Int64 or double).
This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

162.35.44 kTypeShort = 2

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: signed 16 bit integer

162.35.45 kTypeString = 12

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: String

162.35.46 kTypeUInt32 = 5

MBS SQL Plugin, Plugin Version: 20.2. **Function:** One of the data type constants.
Notes: unsigned 32 bit integer

162.35.47 kTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5. **Function:** One of the data type constants.
Notes: Unsigned 64-bit integer.

162.35.48 kTypeULong = 5

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: unsigned 32 bit integer

162.35.49 kTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: unknown type

162.35.50 kTypeUShort = 3

MBS SQL Plugin, Plugin Version: 11.2. **Function:** One of the data type constants.
Notes: unsigned 16 bit integer

162.36 class SQLStringMBS

162.36.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for strings in this plugin.
Example:

```
dim s as new SQLStringMBS("Hello äöü")

MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

dim a as string= s.CopyBinaryData
dim b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

Notes:

A string can be text (with text encoding) or bytes (raw binary data).

https://www.sqlapi.com/ApiDoc/class_s_a_string.html

162.36.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

162.36.3 Methods

162.36.4 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 162.36.5 Compare(text as string) as Integer 21289

162.36.5 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 162.36.4 Compare(text as SQLStringMBS) as Integer 21288

162.36.6 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 162.36.7 CompareNoCase(text as string) as Integer 21289

162.36.7 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 162.36.6 CompareNoCase(text as SQLStringMBS) as Integer 21289

162.36.8 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new empty string object.
See also:

- 162.36.9 Constructor(Data as MemoryBlock) 21290
- 162.36.10 Constructor(Data as string, isText as Boolean = True) 21290
- 162.36.11 Constructor(other as SQLStringMBS) 21290

162.36.9 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data, e.g. for blob.
See also:

- 162.36.8 Constructor 21290
- 162.36.10 Constructor(Data as string, isText as Boolean = True) 21290
- 162.36.11 Constructor(other as SQLStringMBS) 21290

162.36.10 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 162.36.8 Constructor 21290
- 162.36.9 Constructor(Data as MemoryBlock) 21290
- 162.36.11 Constructor(other as SQLStringMBS) 21290

162.36.11 Constructor(other as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new string object with data copied from the other string object.
See also:

- 162.36.8 Constructor 21290
- 162.36.9 Constructor(Data as MemoryBlock) 21290
- 162.36.10 Constructor(Data as string, isText as Boolean = True) 21290

162.36.12 CopyBinaryData as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the bytes from the internal buffer ignoring any text encoding.

162.36.13 CopyText as string

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the characters of this string as text.
Notes: Text encoding conversion may happen.

162.36.14 Empty

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forces a string to have 0 length.

162.36.15 GetBinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a count of the bytes in the binary data buffer.
Deprecated: This item is deprecated and should no longer be used. You can use BinaryLength instead.
Notes: Deprecated. Please use BinaryLength property.

162.36.16 GetLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of characters in a SAString object.
Deprecated: This item is deprecated and should no longer be used. You can use Length instead. **Notes:**

Deprecated. Please use Length property.
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

162.36.17 Left(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the left part of a string.

162.36.18 MakeLower

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes all characters in the string to lower case.

162.36.19 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Changes all characters in the string to upper case.

162.36.20 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the middle part of a string.
Notes: first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 162.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS 21292

162.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the middle part of a string.
Notes:

first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then the remainder of the string is extracted.
See also:

- 162.36.20 Mid(first as Integer) as SQLStringMBS 21292

162.36.22 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert operation for assignment to string.
See also:

- 162.36.23 Operator_Convert(text as string) 21293

162.36.23 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert operation for assigning text string.
See also:

- 162.36.22 Operator_Convert as string 21292

162.36.24 Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the right part of a string.

162.36.25 TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trim leading whitespace characters from the string.

162.36.26 TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Trim trailing whitespace characters from the string.

162.36.27 Properties

162.36.28 BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a count of the bytes in the binary data buffer.
Notes: (Read only property)

162.36.29 DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Text content for debugging.
Notes:

We show up to 1000 characters here for debugger.
(Read only property)

162.36.30 IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Tests whether a String object contains no characters.
Notes:

Returns true if length is zero.
(Read only property)

162.36.31 Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of characters in a SAString object.
Notes:

For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.
(Read only property)

162.37 class SQLUnsupportedExceptionMBS

162.37.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an exception to report that the function is not supported on this platform.
Notes:

This one raises only if the plugin is compiled for Mac OS Classic.
Subclass of the RuntimeException class.

162.38 class SQLValueMBS

162.38.1 class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The SQL class for mutable values.
Notes: Subclass of the SQLValueReadMBS class.

162.38.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1

- MBS Real Studio Plugins, version 11.2pr3

162.38.3 Methods

162.38.4 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new empty value object with the given data type.

162.38.5 setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as BLob data using a memoryblock.
See also:

- 162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 21297
- 162.38.7 setAsBlob(data as SQLStringMBS) 21297
- 162.38.8 setAsBlob(data as string) 21297
- 162.38.9 setAsBlob(file as folderItem) 21298
- 162.38.10 setAsBlob(stream as Readable) 21299

162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as BLob data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 162.38.5 setAsBlob(data as MemoryBlock) 21296
- 162.38.7 setAsBlob(data as SQLStringMBS) 21297
- 162.38.8 setAsBlob(data as string) 21297
- 162.38.9 setAsBlob(file as folderItem) 21298
- 162.38.10 setAsBlob(stream as Readable) 21299

162.38.7 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as BLob data (SQLString)
See also:

- 162.38.5 setAsBlob(data as MemoryBlock) 21296
- 162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 21297
- 162.38.8 setAsBlob(data as string) 21297
- 162.38.9 setAsBlob(file as folderItem) 21298
- 162.38.10 setAsBlob(stream as Readable) 21299

162.38.8 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as BLob data (SQLString)
Example:

```
dim c as SQLCommandMBS // your command object
dim JPEGData as string // some data
```

```
c.Param("imageData").setAsBlob JPEGData
```

See also:

- 162.38.5 setAsBlob(data as MemoryBlock) 21296
- 162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 21297
- 162.38.7 setAsBlob(data as SQLStringMBS) 21297
- 162.38.9 setAsBlob(file as folderItem) 21298
- 162.38.10 setAsBlob(stream as Readable) 21299

162.38.9 setAsBlob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of file.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass folderitem to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
cmd.Param("image").setAsBlob(f)
```

Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.5 setAsBlob(data as MemoryBlock) 21296
- 162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 21297
- 162.38.7 setAsBlob(data as SQLStringMBS) 21297
- 162.38.8 setAsBlob(data as string) 21297
- 162.38.10 setAsBlob(stream as Readable) 21299

162.38.10 setAsBlob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of stream.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass BinaryStream to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.open(f)
cmd.Param("image").setAsBlob(b)
```

Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.5 setAsBlob(data as MemoryBlock) 21296
- 162.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 21297
- 162.38.7 setAsBlob(data as SQLStringMBS) 21297
- 162.38.8 setAsBlob(data as string) 21297
- 162.38.9 setAsBlob(file as folderItem) 21298

162.38.11 setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as bool data.

162.38.12 setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as binary data from memoryblock.
See also:

- 162.38.13 setAsBytes(data as string) 21300
- 162.38.14 setAsBytes(value as SQLBytesMBS) 21300
- 162.38.15 setAsBytes(value as SQLStringMBS) 21300

162.38.13 setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the value to be bytes with content of given string.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 162.38.12 setAsBytes(data as MemoryBlock) 21299
- 162.38.14 setAsBytes(value as SQLBytesMBS) 21300
- 162.38.15 setAsBytes(value as SQLStringMBS) 21300

162.38.14 setAsBytes(value as SQLBytesMBS)

MBS SQL Plugin, Plugin Version: 16.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the value to be bytes with content of given Bytes object.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 162.38.12 setAsBytes(data as MemoryBlock) 21299
- 162.38.13 setAsBytes(data as string) 21300
- 162.38.15 setAsBytes(value as SQLStringMBS) 21300

162.38.15 setAsBytes(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as binary string data (SQLString).
See also:

- 162.38.12 setAsBytes(data as MemoryBlock) 21299
- 162.38.13 setAsBytes(data as string) 21300
- 162.38.14 setAsBytes(value as SQLBytesMBS) 21300

162.38.16 setAsClob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Private method.

Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 21301
- 162.38.18 setAsClob(file as folderItem) 21301
- 162.38.19 setAsClob(stream as Readable) 21302
- 162.38.20 setAsClob(text as SQLStringMBS) 21302
- 162.38.21 setAsClob(text as string) 21302

162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as CLob data (SQLString)
Notes:

nWhen you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 162.38.16 setAsClob(data as MemoryBlock) 21300
- 162.38.18 setAsClob(file as folderItem) 21301

- 162.38.20 setAsClob(text as SQLStringMBS) 21302
- 162.38.21 setAsClob(text as string) 21302

162.38.18 setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.16 setAsClob(data as MemoryBlock) 21300

- 162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 21301
- 162.38.19 setAsClob(stream as Readable) 21302
- 162.38.20 setAsClob(text as SQLStringMBS) 21302
- 162.38.21 setAsClob(text as string) 21302

162.38.19 setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.16 setAsClob(data as MemoryBlock) 21300
- 162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 21301
- 162.38.18 setAsClob(file as folderItem) 21301
- 162.38.20 setAsClob(text as SQLStringMBS) 21302
- 162.38.21 setAsClob(text as string) 21302

162.38.20 setAsClob(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as CLob data (SQLString)
See also:

- 162.38.16 setAsClob(data as MemoryBlock) 21300
- 162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 21301
- 162.38.18 setAsClob(file as folderItem) 21301
- 162.38.19 setAsClob(stream as Readable) 21302
- 162.38.21 setAsClob(text as string) 21302

162.38.21 setAsClob(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as CLob data (SQLString)
See also:

- 162.38.16 setAsClob(data as MemoryBlock) 21300
- 162.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 21301
- 162.38.18 setAsClob(file as folderItem) 21301
- 162.38.19 setAsClob(stream as Readable) 21302
- 162.38.20 setAsClob(text as SQLStringMBS) 21302

162.38.22 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value with a date.
Example:

```
dim cmd as SQLCommandMBS // your command object
dim d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

Notes: Same as setAsDateTime, but here we take a date object to make it more convenient.

162.38.23 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as SQLDateTime data.

162.38.24 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Forces to use the default parameter's value.
Notes:

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.

162.38.25 setAsDouble(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as Double data.

162.38.26 setAsInt32(value as Int32)

MBS SQL Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as Int32 data.

162.38.27 setAsInt64(value as Int64)

MBS SQL Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as Int64 data.

162.38.28 setAsInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as Integer data.
Notes: Int32 or Int64 depending whether app is 32 or 64 bit.

162.38.29 setAsInterval(value as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets an interval value.

162.38.30 setAsLong(value as Int32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as Int32 data.

162.38.31 setAsLongBinary(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as long binary data from memoryblock.
See also:

- 162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 21305
- 162.38.33 setAsLongBinary(data as SQLStringMBS) 21305
- 162.38.34 setAsLongBinary(data as string) 21306
- 162.38.35 setAsLongBinary(file as folderItem) 21306
- 162.38.36 setAsLongBinary(stream as Readable) 21307

162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as long binary data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 162.38.35 setAsLongBinary(file as folderItem) 21306
- 162.38.36 setAsLongBinary(stream as Readable) 21307

162.38.33 setAsLongBinary(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as long binary data (SQLString)
See also:

- 162.38.31 setAsLongBinary(data as MemoryBlock) 21305
- 162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 21305
- 162.38.34 setAsLongBinary(data as string) 21306
- 162.38.35 setAsLongBinary(file as folderItem) 21306
- 162.38.36 setAsLongBinary(stream as Readable) 21307

162.38.34 setAsLongBinary(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as long binary data (SQLString)
See also:

- 162.38.31 setAsLongBinary(data as MemoryBlock) 21305
- 162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 21305
- 162.38.33 setAsLongBinary(data as SQLStringMBS) 21305
- 162.38.35 setAsLongBinary(file as folderItem) 21306
- 162.38.36 setAsLongBinary(stream as Readable) 21307

162.38.35 setAsLongBinary(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.31 setAsLongBinary(data as MemoryBlock) 21305
- 162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 21305
- 162.38.33 setAsLongBinary(data as SQLStringMBS) 21305
- 162.38.34 setAsLongBinary(data as string) 21306
- 162.38.36 setAsLongBinary(stream as Readable) 21307

162.38.36 setAsLongBinary(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 162.38.31 setAsLongBinary(data as MemoryBlock) 21305
- 162.38.32 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 21305

- 162.38.40 setAsLongChar(stream as Readable) 21308
- 162.38.41 setAsLongChar(text as SQLStringMBS) 21309

162.38.43 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets value to null.

162.38.44 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as SQLNumeric data.

162.38.45 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as short data.

162.38.46 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 162.38.47 setAsString(value as SQLStringMBS) 21310
- 162.38.48 setAsString(value as string) 21310

162.38.47 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as character string data (SQLString)
See also:

- 162.38.46 setAsString(data as MemoryBlock) 21310
- 162.38.48 setAsString(value as string) 21310

162.38.48 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as character string data.
Notes: Same as setAsString, but for your convenience with a Xojo string instead of a SQLStringMBS object.
See also:

- 162.38.46 setAsString(data as MemoryBlock) 21310
- 162.38.47 setAsString(value as SQLStringMBS) 21310

162.38.49 setAsUInt32(value as UInt32)

MBS SQL Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as UInt32 data.

162.38.50 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as unsigned long data.

162.38.51 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's type as unknown.

162.38.52 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value as unsigned short data.
Notes: Sets value as unsigned short data.

162.38.53 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets parameter's value from SQLParam or SQLField objects.
Notes: This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.

162.38.54 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the value based on a variant.
Example:

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get a command for an Insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

// set values by variant
```

```
cmd.Param("name").setVariant "logo.jpg"
cmd.Param("image").setVariant jpegData

// do the insert
cmd.Execute
```

Notes:

MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

162.38.55 Properties

162.38.56 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if the plugin has been forced to use parameter's default value by calling setAsDefault method; false otherwise.
