MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The bottom value of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.12 DeviceName as String

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that specifies the device name of the monitor being used.
Notes: (Read and Write property)

183.23.13 Height as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.14 HMonitor as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal window handle for this monitor.
Notes: (Read and Write property)

183.23.15 IsPrimary as Boolean

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this is the primary display monitor.
Notes: (Read and Write property)

183.23.16 Left as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The left position of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.17 Right as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The right value of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.18 Top as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The top position of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.19 Width as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.20 WorkBottom as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The bottom value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.21 WorkHeight as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.22 WorkLeft as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The left value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.23 WorkRight as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The right value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.24 WorkTop as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The top value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.25 WorkWidth as Integer

MBS Win Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

183.23.26 Constants

183.23.27 kDefaultToNearest = 2

MBS Win Plugin, Plugin Version: 11.3. **Function:** One of the flag constants.
Notes: Return the display monitor that is nearest to the window, point or rectangle.

183.23.28 kDefaultToNull = 0

MBS Win Plugin, Plugin Version: 11.3. **Function:** One of the flag constants.
Notes: Returns nil if no monitor matches is located at point, window or rectangle.

183.23.29 kDefaultToPrimary = 1

MBS Win Plugin, Plugin Version: 11.3. **Function:** One of the flag constants.
Notes: Returns the primary display monitor if point, rect or window does not point to a monitor.

183.24 class WindowsPipeMBS

183.24.1 class WindowsPipeMBS

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a Windos Pipe.
Notes:

A replacement for IPCSocket on Windows.
Can be used in two applications to exchange data.

183.24.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.5
- MBS Xojo Plugins, version 19.5pr1
- New Windows Pipe class for Xojo

183.24.3 Xojo Developer Magazine

- 18.3, page 51

183.24.4 Methods

183.24.5 Close

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Closes the pipe.
Notes: Called by destructor automatically.

183.24.6 Constructor

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

183.24.7 CreatePipe(Name as string, MessageMode as Boolean = false, BufferSize as Integer = & h100000, AllowAllUsers as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a named pipe.
Notes:

Buffersize defines the size for input/output buffers.
Returns true on success or false on failure.
Lasterror is set.

Normally the pipe allows only same user.
But if AllowAllUsers is true, you can talk to other users or from service to user.

If name does not start with \then we prefix it with "\\.\Pipe\".

183.24.8 OpenPipe(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Opens an existing named pipe from client side.
Notes:

Returns true on success or false on failure.
Lasterror is set.

If name does not start with \then we prefix it with "\\.\Pipe\".

183.24.9 Peek(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data without removing it from the buffer.
Notes:

Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

183.24.10 PeekAll as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads all data without removing it from the buffer.
Notes:

Reads whole message or in byte mode
BytesRead property is set and data is returned.
LastError property is set.

183.24.11 Read(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads data.
Notes:

Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

183.24.12 ReadAll as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads all data.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Dim r As String = pipe.ReadAll
Dim d As String = DefineEncoding(r, Encodings.UTF8)

List.AddRow d
```

Notes:

Reads whole message or in byte mode what is available.
BytesRead property is set and data is returned.
LastError property is set.

183.24.13 Write(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes data.
Notes:

Lasterror is set.
BytesWritten is set to number of bytes sent.
See also:

- 183.24.14 Write(data as string) 22897

183.24.14 Write(data as string)

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes data.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Dim d As String = ConvertEncoding(MessageField.Text, encodings.UTF8)
If d.Len >0 Then
pipe.Write d
MessageField.Text = ""
End If
```

Notes:

Lasterror is set.
BytesWritten is set to number of bytes sent.
See also:

- 183.24.13 Write(data as MemoryBlock) 22897

183.24.15 Properties

183.24.16 BytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of bytes available in buffer.
Notes: (Read only property)

183.24.17 BytesRead as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of bytes read.
Notes: (Read and Write property)

183.24.18 BytesWritten as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Number of bytes written.
Notes: (Read and Write property)

183.24.19 Handle as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle for the pipe.
Notes: (Read only property)

183.24.20 InputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The input buffer size.
Notes: (Read only property)

183.24.21 IsClient as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this is client or server side.
Notes:

True if this is client side.
(Read only property)

183.24.22 IsMessageMode as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this pipe is in message mode.

Notes: (Read only property)

183.24.23 IsOpen as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether pipe is open.
Notes: (Read only property)

183.24.24 IsServer as Boolean

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this is client or server side.
Notes:

True if this is server side.
(Read only property)

183.24.25 LastError as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

A Windows error code.
(Read and Write property)

183.24.26 MessageBytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of bytes available for current message.
Notes: (Read only property)

183.24.27 Name as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the pipe.
Notes:

This is name as used in CreatePipe or OpenPipe method.
(Read and Write property)

183.24.28 NamedPipeClientComputerName as String

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the client computer name for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientComputerName: "+pipe.NamedPipeClientComputerName
```

Notes: (Read only property)

183.24.29 NamedPipeClientProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the client process identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientProcessId: "+str(pipe.NamedPipeClientProcessId)
```

Notes: (Read only property)

183.24.30 NamedPipeClientSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the client session identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientSessionId: "+str(pipe.NamedPipeClientSessionId)
```

Notes: (Read only property)

183.24.31 NamedPipeServerProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the server process identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeServerProcessId: "+str(pipe.NamedPipeServerProcessId)
```

Notes: (Read only property)

183.24.32 NamedPipeServerSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the server session identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeServerSessionId: "+str(pipe.NamedPipeServerSessionId)
```

Notes: (Read only property)

183.24.33 OutputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The output buffer size.
Notes: (Read only property)

183.24.34 Events

183.24.35 Connected

MBS Win Plugin, Plugin Version: 19.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The connected event.

Notes: Called when pipe is connected on either client or server side.

183.24.36 DataAvailable(BytesAvailable as Integer, MessageBytesAvailable as Integer)

MBS Win Plugin, Plugin Version: 19.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when new data is available.

183.24.37 PipeBroken

MBS Win Plugin, Plugin Version: 19.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when pipe breaks.
Notes:

The plugin will stop calling DataAvailable handler.
You can call Close and CreatePipe method to open pipe again.

183.25 class WindowsPreviewHandlerMBS

183.25.1 class WindowsPreviewHandlerMBS

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for showing previews on windows.
Notes: This is linke a control which you can put into a window to show a preview for a file.

183.25.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.3
- MBS Real Studio Plugins, version 12.3pr11
- File Previews on Windows

183.25.3 Xojo Developer Magazine

- 10.6, page 10: News

183.25.4 Methods

183.25.5 Constructor(ClassID as string)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initializes the object with loading the class with the given classid.
Notes: You find those ClassIDs in the registry (See example project).

183.25.6 DoPreview

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Directs the preview handler to load data from the source specified in an earlier Initialize method call, and to begin rendering to the previewer window.
Notes:

Lasterror is set.

If the previewer window has not yet been created, then it must be created after this method has been called. The preview handler is responsible for painting the area specified in SetWindow or SetRect. If these methods are called while the preview handler is rendering, the window must be reparented/resized without stopping or restarting the rendering of the item.
This method should be called only after SetWindow has been called.

Aditionally, this method should be called only after Constructor has been called.

183.25.7 InitWithData(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Loads the given data.
Notes: Lasterror is set.
See also:

- 183.25.8 InitWithData(data as string) 22904

183.25.8 InitWithData(data as string)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Loads the given data.
Notes: Lasterror is set.
See also:

- 183.25.7 InitWithData(data as MemoryBlock) 22904

183.25.9 InitWithFile(file as folderitem)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Loads the given file.
Notes:

Lasterror is set.
If the preview handler does not support reading file, the plugin reads the file and passes as data.

183.25.10 SetBackgroundColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the background color of the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

183.25.11 SetFocus

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Directs the preview handler to set focus to itself.
Notes: Lasterror is set.

183.25.12 SetFont(size as Integer, font as string)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the font attributes to be used for text within the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

183.25.13 SetRect(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Directs the preview handler to change the area within the parent hwnd that it draws into.
Notes:

Lasterror is set.

If called before the preview handler window has been created, the new rectangle replaces the rectangle previously received in the SetWindow call.
If called after the preview handler window has been created, the preview handler window must be resized.
If the preview handler is already rendering, then the preview must be resized without interrupting the render process.

183.25.14 SetTextColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the color of the text within the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

183.25.15 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sets the parent window of the previewer window, as well as the area within the parent to be used for the previewer window.
Notes:

Pass the window and the area for the previewer.
Lasterror is set.

The preview handler is responsible for painting the entire area. If the previewer window has been created, the preview handler must associate the previewer window to the new parent hwnd and resize the previewer window to the area defined by the rectangle. If the previewer window has not yet been created, the preview handler must remember this information for when the previewer window is created in DoPreview.
It is preferred that this information be stored prior to calling DoPreview. Doing so increases performance at setup time for any cases where the preview does not start.

183.25.16 Unload

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Directs the preview handler to cease rendering a preview and to release all resources that have been allocated based on the item passed in during the initialization.
Notes:

Lasterror is set.
When called, the preview window will be destroyed.

This method should be called only after Constructor has been called. All resources associated with this initialization will be released. Prior to calling DoPreview, this preview handler will be re-initialized with a call to one of the initialization interfaces and a call to SetWindow.

183.25.17 Properties

183.25.18 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

183.25.19 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

183.25.20 LasterrorString as String

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The error message for the error number in the lasterror property.
Notes: (Read only property)

183.25.21 SupportsDataLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the preview handler supports loading data from a string or memoryblock.
Notes: (Read only property)

183.25.22 SupportsFileLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the preview handler supports loading files.
Notes:

As the plugin can also load file and pass as data if needed, this function also returns true if SupportsDataLoading is also true.
(Read only property)

183.25.23 Window as Window

MBS Win Plugin, Plugin Version: 12.3, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The parent window.
Notes: (Read only property)

183.26 class WindowsPropertiesMBS

183.26.1 class WindowsPropertiesMBS

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The class for window properties.
Example:

```
dim w as new WindowsPropertiesMBS(self)

dim key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true

dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

183.26.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.5
- MBS Xojo Plugins, version 17.5pr7
- MBS Xojo Plugins, version 17.5pr6
- Disable edge touch gestures in full screen windows

183.26.3 Methods

183.26.4 Close

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Closes properties.
Notes: Same as destructor.

183.26.5 Commit

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Commits values.
Notes:

Optional as window properties are set directly.
LastError and LastErrorMessage are set.

183.26.6 Constructor(Win as Window)

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves an object that represents a specific window's collection of properties, which allows those properties to be queried or set.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.

An application can use this function to obtain access to a window's property store so that it can set an explicit Application User Model ID (AppUserModelID) in the System.AppUserModel.ID property.

Raises FunctionNotFoundException if function is not available, PlatformNotSupportedException if not running on Windows, NilObjectException if window is nil or invalid and UnsupportedOperationException if Window properties can't be queried.

183.26.7 Count as Integer

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries number of values.
Example:

```
dim w as new WindowsPropertiesMBS(self)

// show all keys with values
dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

Notes: LastError and LastErrorMessage are set.

183.26.8 EdgeGestureDisableTouchWhenFullscreen as String

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The property name used to disable touch gesture with full screen window.

Example:

```
dim w as new WindowsPropertiesMBS(self)
dim key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true
```

183.26.9 Key(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The key with given index.
Notes:

Index from 0 to Count-1.
Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.

183.26.10 Values as Dictionary

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Queries all values as dictionary.
Notes: The dictionary is a copy, so changes to the dictionary are not going back to the window.

183.26.11 Properties

183.26.12 Handle as Integer

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read and Write property)

183.26.13 LastError as Integer

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes: (Read and Write property)

183.26.14 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The last error message.
Notes: (Read and Write property)

183.26.15 Value(Key as String) as Variant

MBS Win Plugin, Plugin Version: 17.5, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Set or query property value.
Example:

```
dim w as new WindowsPropertiesMBS(self)

// show all keys with values
dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

Notes:

Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.
(Read and Write computed property)

183.27 class WindowsScriptErrorExceptionMBS

183.27.1 class WindowsScriptErrorExceptionMBS

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The exception class raised when an error happens while executing a script.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

Notes: Subclass of the RuntimeException class.

183.27.2 Blog Entries

- Windows Scripts in REALbasic

183.28 class WindowsScriptErrorMBS

183.28.1 class WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for error details.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "JScript"

try
w.AddCode "function Test(a,b) { 1 return a+b; } " // 1 is there to make error

dim p(-1) as string = array("Hello ", "World from JavaScript")
dim x as string = w.Run("Test", p)
catch e as WindowsScriptErrorExceptionMBS
dim error as WindowsScriptErrorMBS = w.Error
MsgBox error.Description+EndOfLine+"in "+str(error.Line)+":"+str(error.Column)
end try
```

183.28.2 Properties

183.28.3 Column as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Source code column position where the error occurred.
Notes: (Read and Write property)

183.28.4 Description as String

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Friendly description of error.
Notes: (Read and Write property)

183.28.5 Line as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Source code line number where the error occurred.

Notes: (Read and Write property)

183.28.6 Number as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Error number.
Notes: (Read and Write property)

183.28.7 Source as String

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Source of the error.
Notes: (Read and Write property)

183.28.8 Text as String

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Line of source code on which the error occurred.
Notes: (Read and Write property)

183.29 class WindowsScriptMBS

183.29.1 class WindowsScriptMBS

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to run Windows Scripts.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "JScript"
w.AddCode "function Test(a,b) { return a+b; } "

dim p(-1) as string = array("Hello ", "World from JavaScript")
dim x as string = w.Run("Test", p)

MsgBox x
```

183.29.3 Methods

183.29.4 AddCode(code as string)

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Add code to the global module.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1" // define some global variables
w.AddCode "b = 2"
```

Notes: If you use VBScript, you don't need "dim" keyword for defining variables.

183.29.5 ClearError

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Clears the current error.

183.29.6 Eval(code as string) as string

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Evaluate an expression within the context of the global module.

183.29.7 ExecuteStatement(statement as string)

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Execute a statement within the context of the global module.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

183.29.8 Reset

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reset the scripting engine to a newly created state.

183.29.9 Run(functionName as string, parameters() as string) as string

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Call a procedure defined in the global module.
Example:

```
dim w as new WindowsScriptMBS

// First try VBScript
w.Language = "VBScript"

dim lines(-1) as string

lines.append "Function Test(a,b)"
lines.append "Test = a+b"
lines.append "End Function"

w.AddCode Join(lines, EndOfLine.Windows)

dim p(-1) as string = array("Hello ", "World from VBScript")
dim x as string = w.Run("Test", p)

'MsgBox x

// Second try JScript
w.Language = "JScript"

redim lines(-1)
lines.append "function Test(a,b)"
lines.Append " { "
lines.append "return a+b;"
lines.append " } "

w.AddCode Join(lines, EndOfLine.Windows)

p = array("Hello ", "World from JavaScript")
x = w.Run("Test", p)
```

```
MsgBox x

Exception e as WindowsScriptErrorExceptionMBS
MsgBox "Exception: "+e.message
```

183.29.10 Properties

183.29.11 AllowUI as Boolean

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Enable or disable display of the UI.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

Notes: (Read and Write property)

183.29.12 Error as WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current error status.
Notes: (Read only property)

183.29.13 Language as String

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Language engine to use.
Example:

```
dim w as new WindowsScriptMBS

w.Language = w.kLanguageJScript

MsgBox w.Language // shows "JScript"

w.Language = w.kLanguageVBScript

MsgBox w.Language // shows "VBScript"
```

Notes:

Use kLanguageVBScript or kLanguageJScript constants.
Setting this property calls reset internally.
(Read and Write property)

183.29.14 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code.
Notes:

0 is no error. -1 is a parameter error on the plugin side. All other codes are from Windows.
(Read and Write property)

183.29.15 SitehWnd as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The window handle for the window being parent to any window the scripts create.
Example:

```
dim w as new WindowsScriptMBS
w.SitehWnd = window1.handle
```

Notes:

The window is used as the parent window for message boxes, alerts, etc.
(Read and Write property)

183.29.16 Timeout as Integer

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Length of time in milliseconds that a script can execute before being considered hung.
Notes: (Read and Write property)

183.29.17 UseSafeSubset as Boolean

MBS Win Plugin, Plugin Version: 10.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Force script to execute in safe mode and disallow potentially harmful actions.
Notes: (Read and Write property)

183.29.18 Constants

183.29.19 kLanguageJScript = "JScript"

MBS Win Plugin, Plugin Version: 10.0. **Function:** One of the language constants.
Notes: Using this constant you can switch to JavaScript.

183.29.20 kLanguageVBScript = "VBScript"

MBS Win Plugin, Plugin Version: 10.0. **Function:** One of the language constants.
Notes: Using this constant you can switch to VBScript.

183.30 class WindowsSerialPortsMBS

183.30.1 class WindowsSerialPortsMBS

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This is a class to query the serial ports on a Windows system.
Notes: This class was created in response to feedback report 8212: Serial Port Hangup on Windows.

183.30.2 Blog Entries

- MBS Xojo Plugins, version 19.0pr7
- MBS Xojo / Real Studio Plugins, version 14.0pr5
- Plugins 10.1

183.30.3 Methods

183.30.4 Constructor(OnlyPresent as boolean = true)

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor which builds the list of devices.

183.30.5 Description(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The description of this serial port.

183.30.6 DevicePath(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The device path of this serial port.

183.30.7 FriendlyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The display name of this serial port.

183.30.8 Location(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The location of this serial port.

183.30.9 QueryComDevices as String()

MBS Win Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries list of DOS COM Port names.
Notes:

While Constructor builds a list based on registry information (setup database), this function will use QueryDosDevice to ask Windows about device names for DOS starting with COM in their name and return the list.

Returns nil in case of failure.

183.30.10 Properties

183.30.11 Count as Integer

MBS Win Plugin, Plugin Version: 10.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The number of serial ports found.
Notes: (Read and Write property)

183.31 class WindowsTaskbarListMBS

183.31.1 class WindowsTaskbarListMBS

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for windows with methods that control the taskbar.
Notes: It allows you to dynamically add, remove, and activate items on the taskbar.

183.31.2 Blog Entries

- Show progress in task bar on Windows
- SetProgressState on Windows
- MBS REALbasic plug-ins version 10.2

183.31.3 Methods

183.31.4 ActivateTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Activates an item on the taskbar.
Notes:

The window is not actually activated; the window's item on the taskbar is merely displayed as active.
Lasterror is set.

183.31.5 AddTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds an item to the taskbar.
Notes:

Any type of window can be added to the taskbar, but it is recommended that the window at least have the WS_CAPTION style.

Any window added with this method must be removed with the DeleteTab method when the added window is destroyed.

Lasterror is set.

183.31.6 DeleteTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes an item from the taskbar.

183.31.7 MarkFullscreenWindow(WindowHandle as Integer, Fullscreen as Boolean)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Marks a window as full-screen.
Notes:

Fullscreen: A Boolean value marking the desired full-screen status of the window.

Setting the value of fFullscreen to TRUE, the Shell treats this window as a full-screen window, and the taskbar is moved to the bottom of the z-order when this window is active. Setting the value of fFullscreen to FALSE removes the full-screen marking, but does not cause the Shell to treat the window as though it were definitely not full-screen. With a FALSEfFullscreen value, the Shell depends on its automatic detection facility to specify how the window should be treated, possibly still flagging the window as full-screen.

Requires Windows XP or Windows Server 2003 or newer.
Lasterror is set.

183.31.8 RegisterTab(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Informs the taskbar that a new tab or document thumbnail has been provided for display in an application's taskbar group flyout.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
By itself, registering a tab thumbnail alone will not result in its being displayed. You must also call SetTabOrder to instruct the group where to display it.

183.31.9 SetActiveAlt(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Marks a taskbar item as active but does not visually activate it.
Notes: SetActiveAlt marks the item associated with hwnd as the currently active item for the window's process without changing the pressed state of any item. Any user action that would activate a different tab

in that process will activate the tab associated with hwnd instead. The active state of the window's item is not guaranteed to be preserved when the process associated with this window is not active. To ensure that a given tab is always active, call SetActiveAlt whenever any of your windows are activated. Calling SetActiveAlt with a nil window handle clears this state.

183.31.10 SetOverlayIcon(TabWindowHandle as Integer, IconHandle as Integer, Description as string)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Applies an overlay to a taskbar button to indicate application status or a notification to the user.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle:
The handle of the window whose associated taskbar button receives the overlay. This handle must belong to a calling process associated with the button's application and must be a valid HWND or the call is ignored.

IconHandle:
The handle of an icon to use as the overlay. This should be a small icon, measuring 16x16 pixels at 96 dpi. If an overlay icon is already applied to the taskbar button, that existing overlay is replaced.

This value can be 0. How a 0 value is handled depends on whether the taskbar button represents a single window or a group of windows.

- If the taskbar button represents a single window, the overlay icon is removed from the display.
- If the taskbar button represents a group of windows and a previous overlay is still available (received earlier than the current overlay, but not yet freed by a 0 value), then that previous overlay is displayed in place of the current overlay.

It is the responsibility of the calling application to free hIcon when it is no longer needed. This can generally be done after you've called SetOverlayIcon because the taskbar makes and uses its own copy of the icon.

Description:
A string that provides an alt text version of the information conveyed by the overlay, for accessibility purposes.

In versions of Windows earlier than Windows 7, applications often used icons in the notification area of the taskbar to display application status and notifications to the user. The Windows 7 taskbar allows an application to provide that same sort of user feedback through its taskbar button, centralizing more of the application information in one place. These overlays are similar to existing overlays used for shortcut icons

or security notifications, displayed at the lower-right corner of the button.

The following illustration shows an overlay (the small, green square that indicates the user status as "Available") applied to the far-right taskbar button.

Windows Messenger taskbar button with an overlay to indicate an Available status.

Icon overlays serve as a contextual notification of status, and are intended to negate the need for a separate notification area status icon to communicate that information to the user. The application designer must decide during the development cycle which method—icon overlay or notification area status icon—best serves that application. Overlay icons are intended to supply important, long-standing status or notifications such as network status, messenger status, or new mail. They should not be frequently changed, nor should they be animated.

To display an overlay icon, the taskbar must be in the default large icon mode. If the taskbar is configured through Taskbar and Start Menu Properties to show small icons, overlays cannot be applied and calls to this method are ignored.

Because a single overlay is applied to the taskbar button instead of to the individual window thumbnails, this is a per-group feature rather than per-window. Requests for overlay icons can be received from individual windows in a taskbar group, but they do not queue. The last overlay received is the overlay shown. If the last overlay received is removed, the overlay that it replaced is restored so long as it is still active. As an example, windows 1, 2, and 3 set, in order, overlays A, B, and C. Because overlay C was received last, it is shown on the taskbar button. Window 2 calls SetOverlayIcon with a 0 value to remove overlay B. Window 3 then does the same to remove overlay C. Because window 1's overlay A is still active, that overlay is then displayed on the taskbar button.

If Windows Explorer shuts down unexpectedly, overlays are not restored when Windows Explorer is restored. The application should wait to receive the TaskbarButtonCreated message that indicates that Windows Explorer has restarted and the taskbar button has been re-created, and then call SetOverlayIcon again to reapply the overlay.

183.31.11 SetProgressState(WindowHandle as Integer, Flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the type and state of the progress indicator displayed on a taskbar button.
Notes:

Use the ProgressStateFlag* constants. Flags that control the current state of the progress button. Specify only one of the following flags; all states are mutually exclusive of all others.

Requires Windows 7 or Windows Server 2008 R2 or newer.

Lasterror is set.

Progress bar information is not shown in high contrast color schemes to guarantee that no accessibility needs are compromised.

Developers accustomed to the existing progress bar control should find the taskbar button progress indicator to be a similar experience both in concept and visuals. Here, the taskbar button itself becomes a progress bar. A taskbar button's progress indicator should be a reflection of a more detailed progress bar in the associated window. This allows the user to see specifics, such as the percentage number and the amount of time remaining, that cannot be shown in a taskbar button. Also, because a taskbar button can show the progress of only a single window in a group, it allows the user to check the progress of individual windows. It also provides progress information to the user when the taskbar button cannot, such as in a high-contrast color scheme.

Note that a taskbar button progress bar is not intended for use with normally peripheral actions such as the loading of a Web page or the printing of a document. That type of progress should continue to be shown in a window's status bar.

The progress indicator is displayed between the taskbar button's icon or text and the background. If progress is shown for both the active taskbar button and an inactive button, shading in the respective progress bars is such that the active button is still obvious to the user. Also, button functionality such as the display of thumbnails continues to work normally when the button is being used to display progress.

When exiting an error or paused state, call this method again with the ProgressStateFlagNormal or ProgressStateFlagIndeterminate flag to continue in the original state or TBPF_NOPROGRESS if the operation is cancelled.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. This includes the situation where the taskbar button represents a group and more than one window in that group is broadcasting progress information. In that case, the taskbar button chooses its progress display based on state priority. State priority is shown in the following table with priority 1 being the highest.

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

Changing a window's state changes its priority in relation to other windows in the group which in turn might

change which window in a group is used for the progress indicator in the taskbar button.

In the case of a priority collision between two windows that are broadcasting determinate progress, the window with the least progress is used.

Based on this priority, the indeterminate progress indicator can be displayed in the taskbar button only in these cases:

- The taskbar button does not represent a group and the single window that it represents has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, and all of those windows have set ProgressStateFlagIndeterminate.

A determinate progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting determinate progress information, and no window has set ProgressStateFlagError or ProgressStateFlagPaused.

Note that a call to SetProgressValue will switch a progress indicator currently in an indeterminate mode (ProgressStateFlagIndeterminate) to a normal (determinate) display and clear the ProgressStateFlagIndeterminate flag.

183.31.12 SetProgressValue(WindowHandle as Integer, Completed as UInt64, Total as UInt64)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Displays or updates a progress bar hosted in a taskbar button to show the specific percentage completed of the full operation.
Notes:

Completed: An application-defined value that indicates the proportion of the operation that has been completed at the time the method is called.

Total: An application-defined value that specifies the value ullCompleted will have when the operation is complete.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

Determinate Progress Bar Lifecycle

An application first calls SetProgressValue to begin the display of a determinate progress bar, and then calls it again as needed to update the bar as the progress changes. When progress is complete, the application must call SetProgressState with the TBPF_NOPROGRESS flag to dismiss the progress bar.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. When the taskbar button represents a group and more than one of the windows in that group are broadcasting progress information, the taskbar button chooses its progress display based on the following state priority.

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

Unless SetProgressState has set a blocking state (ProgressStateFlagError or ProgressStateFlagPaused) for the window, a call to SetProgressValue assumes the ProgressStateFlagNormal state even if it is not explicitly set. A call to SetProgressValue overrides and clears the ProgressStateFlagIndeterminate state.

In the case of a priority collision where two windows are broadcasting determinate progress, the window with the least progress is used.

Based on that priority, this determinate (specific percentage) progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information through this method.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information through this method.

- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting progress information through this method, and none of those windows has set the ProgressStateFlagError or ProgressStateFlagPaused state.

If a window in the group has set ProgressStateFlagError or ProgressStateFlagPaused, that state will be used for the button display. However, you can still make calls to SetProgressValue on other, unblocked windows in the group to update their progress in the background.

183.31.13 SetTabActive(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Informs the taskbar that a tab or document window has been made the active window.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: Handle of the active tab window. This handle must already be registered through RegisterTab. This value can be 0 if no tab is active.

MDIWindowHandle: Handle of the application's main window. This value tells the taskbar which group the thumbnail is a member of. This value is required and cannot be 0.

183.31.14 SetTabOrder(TabWindowHandle as Integer, InsertBeforeWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Inserts a new thumbnail into a tabbed-document interface (TDI) or multiple-document interface (MDI) application's group flyout or moves an existing thumbnail to a new position in the application's group.
Notes:

TabWindowHandle: The handle of the tab window whose thumbnail is being placed. This value is required, must already be registered through RegisterTab, and cannot be 0.
InsertBeforeWindowHandle: The handle of the tab window whose thumbnail that hwndTab is inserted to the left of. This handle must already be registered through RegisterTab. If this value is 0, the new thumbnail is added to the end of the list.

183.31.15 SetTabProperties(TabWindowHandle as Integer, flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Allows a tab to specify whether the main application frame window or the tab window should be used as a thumbnail or in the peek feature under certain circumstances.
Notes:

An application might want to use the thumbnail or peek representation of its associated parent window if the application cannot generate its own thumbnail for a tab or for its active tab content (such as an animation) to appear live.

flags: One of the TabPropertyFlag* constants.
Available on Windows 7 or Windows Server 2008 R2 or newer.

183.31.16 SetThumbnailClip(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes:

This variant of the method clears the clip that is already in place and return to the default display of the thumbnail.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 183.31.17 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h as Integer) 22931

183.31.17 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 183.31.16 SetThumbnailClip(TabWindowHandle as Integer) 22931

183.31.18 SetThumbnailTooltip(TabWindowHandle as Integer, tip as string)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies or updates the text of the tooltip that is displayed when the mouse pointer rests on an individual preview thumbnail in a taskbar button flyout.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: The handle to the window whose thumbnail displays the tooltip. This handle must belong to the calling process.

tip: The text to be displayed in the tooltip. This value can be empty, in which case the title of the window specified by WindowHandle is used as the tooltip.

183.31.19 UnregisterTab(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes a thumbnail from an application's preview group when that tab or document is closed in the application.
Notes:

It is the responsibility of the calling application to free hwndTab through DestroyWindow. UnregisterTab must be called before the handle is freed.
Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

183.31.20 Properties

183.31.21 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference for the ITaskbarList interface.
Notes:

The ITaskbarList interface is available on Windows 2000 Professional, Windows XP or Windows 2000 Server or newer.
(Read and Write property)

183.31.22 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference for the ITaskbarList2 interface.
Notes:

The ITaskbarList4 interface is available on Windows XP or Windows Server 2003 or newer.
(Read and Write property)

183.31.23 Handle3 as Integer

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference for the ITaskbarList3 interface.
Notes:

The ITaskbarList3 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
none
(Read and Write property)

183.31.24 Handle4 as Integer

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference for the ITaskbarList4 interface.
Notes:

The ITaskbarList4 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
(Read and Write property)

183.31.25 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code from one of the methods.
Notes: (Read and Write property)

183.31.26 Constants

183.31.27 ProgressStateFlagError = 4

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the progress state flag constants.
Notes: The progress indicator turns red to show that an error has occurred in one of the windows that is

broadcasting progress. This is a determinate state. If the progress indicator is in the indeterminate state, it switches to a red determinate display of a generic percentage not indicative of actual progress.

183.31.28 ProgressStateFlagIndeterminate = 1

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the progress state flag constants.
Notes: The progress indicator does not grow in size, but cycles repeatedly along the length of the taskbar button. This indicates activity without specifying what proportion of the progress is complete. Progress is taking place, but there is no prediction as to how long the operation will take.

183.31.29 ProgressStateFlagNoProgress = 0

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the progress state flag constants.
Notes: Stops displaying progress and returns the button to its normal state. Call this method with this flag to dismiss the progress bar when the operation is complete or cancelled.

183.31.30 ProgressStateFlagNormal = 2

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the progress state flag constants.
Notes: The progress indicator grows in size from left to right in proportion to the estimated amount of the operation completed. This is a determinate progress indicator; a prediction is being made as to the duration of the operation.

183.31.31 ProgressStateFlagPaused = 8

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the progress state flag constants.
Notes: he progress indicator turns yellow to show that progress is currently stopped in one of the windows but can be resumed by the user. No error condition exists and nothing is preventing the progress from continuing. This is a determinate state. If the progress indicator is in the indeterminate state, it switches to a yellow determinate display of a generic percentage not indicative of actual progress.

183.31.32 TabPropertyFlagNone = 0

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the flag values you can use with SetTabProperties.
Notes: No specific property values are specified. The default behavior is used: the tab window provides a thumbnail and peek image, either live or static as appropriate.

183.31.33 TabPropertyFlagUseAppPeekAlways = 4

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the flag values you can use with SetTabProperties.
Notes: Always use the peek image provided by the main application frame window rather than a peek image provided by the individual tab window. Do not combine this value with TabPropertyFlagUseAppPeekWhenActive; doing so will result in an error.

183.31.34 TabPropertyFlagUseAppPeekWhenActive = 8

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the flag values you can use with SetTabProperties.
Notes: When the application tab is active and a live representation of its window is available, show the main application frame in the peek feature. At other times, use the tab window. Do not combine this value with TabPropertyFlagUseAppPeekAlways; doing so will result in an error.

183.31.35 TabPropertyFlagUseAppThumbnailAlways = 1

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the flag values you can use with SetTabProperties.
Notes: Always use the thumbnail provided by the main application frame window rather than a thumbnail provided by the individual tab window. Do not combine this value with TabPropertyFlagUseAppThumbnailWhenActive; doing so will result in an error.

183.31.36 TabPropertyFlagUseAppThumbnailWhenActive = 2

MBS Win Plugin, Plugin Version: 10.2. **Function:** One of the flag values you can use with SetTabProperties.
Notes: When the application tab is active and a live representation of its window is available, use the main application frame window thumbnail. At other times, use the tab window thumbnail. Do not combine this value with TabPropertyFlagUseAppThumbnailAlways; doing so will result in an error.

183.32 class WindowsVerticalBlankMBS

183.32.1 class WindowsVerticalBlankMBS

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: A class for checking on Windows with the retrace of the display.
Notes: Sometimes you may want to draw only if the device is currently not touching the video memory.

183.32.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr10

183.32.3 Methods

183.32.4 Constructor

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Initializes the class.

183.32.5 GetMonitorFrequency as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Retrieves the frequency of the monitor that the DirectDraw object controls.
Notes:

Returns the monitor frequency, in Hz.
Lasterror is set.

183.32.6 GetScanLine as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: This method retrieves the scan line that is currently being drawn on the monitor.
Notes:

To synchronize with the vertical blank, use the WaitForVerticalBlank method.
Lasterror is set.

Scan lines are reported as zero-based integers.
The returned scan line value is between 0 and n, where scan line 0 is the first visible scan line on the screen and n is the last visible scan line, plus scan lines that occur during the vertical blank period.

So, in a case where an application is running at 640x480, and there are 12 scan lines during the vertical blank period, the values returned by this method will range from 0 to 491.

183.32.7 GetVerticalBlankStatus as boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Retrieves the status of the vertical blank.
Notes:

Returns the status of the vertical blank. True if a vertical blank is occurring, and false otherwise.
Lasterror is set.

183.32.8 WaitForVerticalBlankBegin

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Helps the application synchronize itself with the vertical-blank interval.
Notes:

WaitForVerticalBlank returns when the vertical-blank interval begins.
Lasterror is set.

183.32.9 WaitForVerticalBlankEnd

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Helps the application synchronize itself with the vertical-blank interval.
Notes:

WaitForVerticalBlank returns when the vertical-blank interval ends and the display begins.
Lasterror is set.

183.32.10 Properties

183.32.11 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: Whether this class will work.
Notes: (Read and Write property)

183.32.12 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: The last windows error string.
Notes: (Read and Write property)

183.32.13 LasterrorString as String

MBS ComputerControl Plugin, Plugin Version: 12.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No.
Function: The last windows error string.
Notes: (Read only property)

183.33 class WindowsWMIMBS

183.33.1 class WindowsWMIMBS

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to run queries in the Windows Management Interface.
Example:

```
dim w as WindowsWMIMBS

w=new WindowsWMIMBS

if w.ConnectServer("root\cimv2") then
MsgBox "ConnectServer: ok"

if w.query("WQL","SELECT * FROM Win32_Processor") then
MsgBox "query: ok"

if w.NextItem then
MsgBox "NextItem: ok"

MsgBox w.GetPropertyString("Name") // string
MsgBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
MsgBox str(w.GetPropertyInteger("ProcessorType")) // uint16

else
MsgBox "NextItem: fail"
end if
else
MsgBox "query: fail"
end if

else
MsgBox "ConnectServer: fail"
end if
```

Notes:

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.
Subclass of the WMIObjectMBS class.

183.33.2 Blog Entries

- Windows Task Monitor written in Xojo

- MBS Real Studio Plugins, version 12.2pr6
- Detecting drive letter for an USB Stick
- MBS Releases the MBS Real Studio plug-ins in version 12.0
- MBS Real Studio Plugins, version 11.4pr1
- MBS REALbasic Plugins, version 10.4pr13

183.33.3 Methods

183.33.4 CancelAsyncCall as boolean

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Stops events being delivered to this WindowsWMIMBS object.
Notes: Lasterror is set.

183.33.5 ConnectServer(NetworkResource as string, Username as string="", Password as string="", Locale as string="", Authority as string="") as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Connect to WMI server.
Example:

```
dim w as WindowsWMIMBS // your WMI object
call w.ConnectServer("root\cimv2")
```

Notes:

Returns true on success and false on failure.
Authority parameter added in plugin version 12.2.

183.33.6 Constructor

MBS Win Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.

183.33.7 ExecNotificationQueryAsync(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ExecNotificationQueryAsync method executes a query to receive events.
Notes:

The plugin receives events and enqueues them in a queue. You read objects from this queue in a timer and process them.
NextItem returns nil if the queue is empty.

Returns true on success and false on failure.
Lasterror is set. e.g. & h80041018 if you have syntax error in the query or & h80041058 if the query can't be parsed.

183.33.8 InitAuthentication(User as string, Domain as string, Password as string) as boolean

MBS Win Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initializes authentication data.
Notes:

Call before ConnectServer.
This settings are passed to objects for authentication.

183.33.9 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Registers security and sets the default security values for the process.
Notes:

You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

AuthnLevel:
The default authentication level for the process. Both servers and clients use this parameter when they call CoInitializeSecurity. COM will fail calls that arrive with a lower authentication level. By default, all proxies will use at least this authentication level. This value should contain one of the authentication level constants. By default, all calls to IUnknown are made at this level.

ImpLevel:
The default impersonation level for proxies. The value of this parameter is used only when the process is a client. It should be a value from the impersonation level constants, except for kImpersonationLevelDefault,

which is not for use with CoInitializeSecurity.
Outgoing calls from the client always use the impersonation level as specified. (It is not negotiated.) Incoming calls to the client can be at any impersonation level. By default, all IUnknown calls are made with this impersonation level, so even security-aware applications should set this level carefully. To determine which impersonation levels each authentication service supports, see the description of the authentication services in COM and Security Packages. For more information about impersonation levels, see Impersonation.
See also:

- 183.33.10 InitSecurity(remote as boolean) as boolean 22942

183.33.10 InitSecurity(remote as boolean) as boolean

MBS Win Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Initializes security.
Notes:

You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

Calling InitSecurity with remote=true will initialize security with kImpersonationLevelImpersonate. If remote=false, we use kImpersonationLevelIdentity which is the default.
See also:

- 183.33.9 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean 22941

183.33.11 NextItem as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Moves to next item in the list.
Notes:

You need to call this at least once to move to the first item.
Returns false if no more items are there.

183.33.12 Query(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Runs a query.
Example:

```
dim w as WindowsWMIMBS
call w.query("WQL","SELECT * FROM Win32_Processor")
```

Notes: Returns true on success and false on failure.

183.33.13 Properties

183.33.14 EnumeratorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the used IEnumWbemClassObject object.
Notes: (Read only property)

183.33.15 LocatorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the used IWbemLocator object.
Notes: (Read only property)

183.33.16 ServiceHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle to the used IWbemServices object.
Notes: (Read only property)

183.33.17 Constants

183.33.18 kAuthenticationLevelCall = 3

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Authenticates only at the beginning of each remote procedure call when the server receives the request. Datagram transports use kAuthenticationLevelPaket instead.

183.33.19 kAuthenticationLevelConnect = 2

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Authenticates the credentials of the client only when the client establishes a relationship with the server. Datagram transports always use kAuthenticationLevelPacket instead.

183.33.20 kAuthenticationLevelDefault = 0

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Tells DCOM to choose the authentication level using its normal security blanket negotiation algorithm. For more information, see Security Blanket Negotiation.

183.33.21 kAuthenticationLevelNone = 1

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Performs no authentication.

183.33.22 kAuthenticationLevelPacket = 4

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Authenticates that all data received is from the expected client.

183.33.23 kAuthenticationLevelPacketIntegrity = 5

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Authenticates and verifies that none of the data transferred between client and server has been modified.

183.33.24 kAuthenticationLevelPacketPrivacy = 6

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the authentication level constants.
Notes: Authenticates all previous levels and encrypts the argument value of each remote procedure call.

183.33.25 kImpersonationLevelAnonymous = 1

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the impersonation level constants.
Notes: The client is anonymous to the server. The server process can impersonate the client, but the impersonation token will not contain any information and cannot be used.

183.33.26 kImpersonationLevelDefault = 0

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the impersonation level constants.
Notes: DCOM can choose the impersonation level using its normal security blanket negotiation algorithm. For more information, see Security Blanket Negotiation.

183.33.27 kImpersonationLevelDelegate = 4

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the impersonation level constants.
Notes: The server process can impersonate the client's security context while acting on behalf of the client. The server process can also make outgoing calls to other servers while acting on behalf of the client, using cloaking. The server may use the client's security context on other machines to access local and remote resources as the client. When impersonating at this level, the impersonation token can be passed across any number of computer boundaries.

183.33.28 kImpersonationLevelIdentity = 2

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the impersonation level constants.
Notes: The server can obtain the client's identity. The server can impersonate the client for ACL checking, but it cannot access system objects as the client.

183.33.29 kImpersonationLevelImpersonate = 3

MBS Win Plugin, Plugin Version: 13.1. **Function:** One of the impersonation level constants.
Notes: The server process can impersonate the client's security context while acting on behalf of the client. This level of impersonation can be used to access local resources such as files. When impersonating at this level, the impersonation token can only be passed across one machine boundary. The Schannel authentication service only supports this level of impersonation.

183.34 class WinExceptionMBS

183.34.1 class WinExceptionMBS

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to catch windows system exceptions.
Notes:

This class was made to intercept crashes in a Xojo application.
Whenever the application crashes, this class will fire its event so you have a chance to report that crash to your user and maybe save a crash report.

Do not try to save data as this could overwrite good data with bad data. Remember your application already crashed. Maybe because of data corruption!

Only one instance can exist in your application.

183.34.2 Methods

183.34.3 Close

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes the exception handler from the system.

183.34.4 Properties

183.34.5 ExceptionAddress as Integer

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The address in memory where the exception was raised.
Notes: (Read only property)

183.34.6 ExceptionCode as Integer

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The code of this exception.
Notes:

Normally one of the kException* constants.
(Read only property)

183.34.7 ExceptionFlags as Integer

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The exception flags.
Notes: (Read only property)

183.34.8 ExceptionIsNonContinuable as Boolean

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether this exception allows to continue in code.
Notes:

For example a division by zero can be continued.
(Read only property)

183.34.9 ExceptionName as String

MBS Win Plugin, Plugin Version: 8.7, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name of the exception.
Notes:

If ExceptionCode=kExceptionAccessViolation then returns "ExceptionAccessViolation".

This is a convenience function which you can use to show the exception to the user.
(Read only property)

183.34.10 Events

183.34.11 GotException() as Integer

MBS Win Plugin, Plugin Version: 8.7, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The event called when an exception was received.
Notes:

Your application has crashed on this point, but instead of seeing the Microsoft dialog to tell you that the application crashed, your application has the chance to report that problem.

Return one of the following constants: kExecuteHandler, kContinueCode, kNextHandler, kExecuteHandlerNoDialog.

The plugin already removed the crash callback from the system so if the code in this event crashes again, the system dialog shows.

183.34.12 Constants

183.34.13 kContinueCode = 2

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants you can use for the GotException event return value.
Notes: This one is not recommented as it can raise the same exception again or crash your application.

183.34.14 kExceptionAccessViolation = & hC0000005

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to read from or write to a virtual address for which it does not have access.

183.34.15 kExceptionArrayBoundsExceeded = & hC000008C

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to access an array element that is out of bounds, and the underlying hardware supports bounds checking.

183.34.16 kExceptionBreakPoint = & h80000003

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: A breakpoint is encountered.

183.34.17 kExceptionDataTypeMisalignment = & h80000002

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to read or write data that is misaligned on hardware that does not provide alignment. For example, 16-bit values must be aligned on 2-byte boundaries, 32-bit values on 4-byte boundaries, and so on.

183.34.18 kExceptionFloatDenormalOperand = & hC000008D

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: One of the operands in a floating point operation is denormal. A denormal value is one that is too small to represent as a standard floating point value.

183.34.19 kExceptionFloatDivideByZero = & hC000008E

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to divide a floating point value by a floating point divisor of 0 (zero).

183.34.20 kExceptionFloatInexactResult = & hC000008F

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The result of a floating point operation cannot be represented exactly as a decimal fraction.

183.34.21 kExceptionFloatInvalidOperation = & hC0000090

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: A floating point exception that is not included in this list.

183.34.22 kExceptionFloatOverflow = & hC0000091

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The exponent of a floating point operation is greater than the magnitude allowed by the corresponding type.

183.34.23 kExceptionFloatStackCheck = & hC0000092

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The stack has overflowed or underflowed, because of a floating point operation.

183.34.24 kExceptionFloatUnderflow = & hC0000093

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The exponent of a floating point operation is less than the magnitude allowed by the corresponding

type.

183.34.25 kExceptionIllegalInstruction = & hC000001D

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread tries to execute an invalid instruction.

183.34.26 kExceptionInPageError = & hC0000006

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread tries to access a page that is not present, and the system is unable to load the page. For example, this exception might occur if a network connection is lost while running a program over a network.

183.34.27 kExceptionIntegerDivideByZero = & hC0000094

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to divide an integer value by an integer divisor of 0 (zero).

183.34.28 kExceptionIntegerOverflow = & hC0000095

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The result of an integer operation causes a carry out of the most significant bit of the result.

183.34.29 kExceptionInvalidDisposition = & hC0000026

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: An exception handler returns an invalid disposition to the exception dispatcher. Programmers using a high-level language such as C should never encounter this exception.

183.34.30 kExceptionNonContinueableException = & hC0000025

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to continue execution after a non-continuable exception occurs.

183.34.31 kExceptionPrivilegedInstruction = & hC0000096

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread attempts to execute an instruction with an operation that is not allowed in the current computer mode.

183.34.32 kExceptionSingleStep = & h80000004

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: A trace trap or other single instruction mechanism signals that one instruction is executed.

183.34.33 kExceptionStackOverflow = & hC00000FD

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants for exception codes.
Notes: The thread uses up its stack.

183.34.34 kExecuteHandler = 1

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants you can use for the GotException event return value.
Notes:

Windows will execute the default handler for this exception.
This can show a Windows error dialog.

183.34.35 kExecuteHandlerNoDialog = 4

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants you can use for the GotException event return value.
Notes: Windows will execute the default handler for this exception, but not show a dialog.

183.34.36 kNextHandler = 3

MBS Win Plugin, Plugin Version: 8.7. **Function:** One of the constants you can use for the GotException event return value.
Notes: Windows will call the next exception handler.

183.35 class WinGestureConfigMBS

183.35.1 class WinGestureConfigMBS

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** ets and sets the configuration for enabling gesture messages and the type of this configuration.
Example:

```
// make a config for accepting pan/rotate gestures
dim c1 as new WinGestureConfigMBS

c1.ID = c1.kGestureIDPan
c1.Want = c1.kPan
c1.Block = 0

dim c2 as new WinGestureConfigMBS
c2.ID = c2.kGestureIDRotate
c2.Want = c2.kRotate
c2.Block = 0

dim configs() as WinGestureConfigMBS
configs.Append c1
configs.Append c2

// and add to window
if WinPointerEventsMBS.SetGestureConfig(window1, configs) then
MsgBox "OK"
end if
```

Notes:

It is impossible to disable two-finger panning and keep single finger panning. You must set the want bits for GC_PAN before you can set them for GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY or GC_PAN_WITH_SINGLE_FINGER_VERTICALLY.
An inertia vector is included in the GID_PAN message with the GF_END flag if inertia was disabled by a call to SetGestureConfig.
When you pass this structure, the dwID member contains information for a set of gestures. This determines what the other flags will mean. If you set flags for pan messages, they will be different from those flags that are set for rotation messages.
The following table indicates the various identifiers for gestures that are supported by the dwID member of the GESTURECONFIG structure. Note that setting dwID to 0 indicates that global gesture configuration flags are set.

The following flags are used when dwID is set to 0.

Name	Value	Description
GID_ZOOM	3	Indicates configuration settings for the zoom gesture.
GID_PAN	4	Indicates the pan gesture.
GID_ROTATE	5	Indicates the rotation gesture.
GID_TWOFINGERTAP	6	Indicates the two-finger tap gesture.
GID_PRESSANDTAP	7	Indicates the press and tap gesture.

Name	Value	Description
GC_ALLGESTURES	0x00000001	Indicates all of the gestures.

The following flags are used when dwID is set to GID_ZOOM.

Name	Value	Description
GC_ZOOM	0x00000001	Indicates the zoom gesture.

The following flags are used when dwID is set to GID_PAN.

Note Setting the GID_PAN flags in SetGestureConfig will affect the default gesture handler for panning. You should not have both dwWant and dwBlock set for the same flags; this will result in unexpected behavior. See Windows Touch Gestures for more information on panning and legacy panning support; see SetGestureConfig for examples of enabling and blocking gestures.

The following flags are used when dwID is set to GID_ROTATE.

The following flags are used when dwID is set to GID_TWOFINGERTAP.

The following flags are used when dwID is set to GID_PRESSANDTAP.

183.35.2 Blog Entries

- Windows Touch Events

183.35.3 Properties

183.35.4 Block as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The messages to disable.
Example:

Name	Value	Description
GC_PAN	0x00000001	Indicates all pan gestures.
GC_PAN_WITH_SINGLE_FINGER_VERTICALLY	0x00000002	Indicates vertical pans with one finger.
GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY	0x00000004	Indicates horizontal pans with one finger.
GC_PAN_WITH_GUTTER	0x00000008	Limits perpendicular movement to primary direction until a threshold is reached to break out of the gutter.
GC_PAN_WITH_INERTIA	0x00000010	Indicates panning with inertia to smoothly slow when pan gestures stop.

Name	Value	Description
GC_ROTATE	0x00000001	Indicates the rotation gesture.

```
// make a config for accepting some pan gestures
dim c as new WinGestureConfigMBS

c.ID = kGestureIDPan
c.Want = c.kPanWithSingleFingerVertically + c.kPanWithGutter + c.kPanWithInteria
c.Block = c.kPanWithSingleFingerHorizontally
```

Notes: (Read and Write property)

183.35.5 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identifier for the type of configuration that will have messages enabled or disabled.
Example:

```
// make a config for accepting some pan/rotate gestures
dim c1 as new WinGestureConfigMBS

c1.ID = 0
c1.Want = c1.kAllGestures
c1.Block = 0

dim configs() as WinGestureConfigMBS
configs.Append c1

// and add to window
if WinPointerEventsMBS.SetGestureConfig(window1, configs) then
MsgBox "OK"
end if
```

Notes: (Read and Write property)

Name	Value	Description
GC_TWOFINGERTAP	0x00000001	Indicates the two-finger tap gesture.

Name	Value	Description
GC_PRESSANDTAP	0x00000001	Indicates the press and tap gesture.

183.35.6 Want as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The messages to enable.
Example:

```
// make a config for accepting all gestures
dim c as new WinGestureConfigMBS

c.ID = 0 // catch all IDs
c.Want = c.kAllGestures
```

Notes: (Read and Write property)

183.35.7 Constants

183.35.8 kAllGestures = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates all of the gestures. (for ID = 0)

183.35.9 kGestureIDBegin = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Begin of gesture.

183.35.10 kGestureIDEnd = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: End of a gesture

183.35.11 kGestureIDPan = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Pan gesture

183.35.12 kGestureIDPressAndTap = 7

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Press and Tap gesture

183.35.13 kGestureIDRotate = 5

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Rotate gesture

183.35.14 kGestureIDTwoFingerTap = 6

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Two-Finger Tap

183.35.15 kGestureIDZoom = 3

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Zoom gesture

183.35.16 kPan = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates all pan gestures.

183.35.17 kPanWithGutter = 8

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Limits perpendicular movement to primary direction until a threshold is reached to break out of the gutter.

183.35.18 kPanWithInteria = 16

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates panning with inertia to smoothly slow when pan gestures stop.

183.35.19 kPanWithSingleFingerHorizontally = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates horizontal pans with one finger.

183.35.20 kPanWithSingleFingerVertically = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates vertical pans with one finger.

183.35.21 kPressAndTap = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates the press and tap gesture.

183.35.22 kRotate = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates the rotation gesture.

183.35.23 kTwoFingerTap = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates the two-finger tap gesture.

183.35.24 kZoom = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture option flags.
Notes: Indicates the zoom gesture. (for ID = kGestureIDZoom)

183.36 class WinGestureInfoMBS

183.36.1 class WinGestureInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Stores information about a gesture.
Notes:

Parameters for touches:
If kFlagBegin flag is set, save Location so you have first point. And save argument to check later.

For Zoom, get second point from this class. Than you can calculate center point and zoom factor is OldArgumentsLower/NewArgumentsLower.

For Pan, check difference between last point and new point to know how much moved.

For Rotate, please check difference between old RotateAngle and new RotateAngle.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- Windows Touch Events

183.36.3 Methods

183.36.4 Constructor

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

183.36.5 Properties

183.36.6 Arguments as Int64

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A 64-bit unsigned integer that contains the arguments for gestures that fit into 8 bytes.
Notes: (Read only property)

183.36.7 ArgumentsHigher as UInt32

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The higher 32bits from Arguments.
Notes: (Read only property)

183.36.8 ArgumentsLower as UInt32

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The lower 32bits from Arguments.
Notes:

Most events just use lower bits.
(Read only property)

183.36.9 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The state of the gesture.
Notes:

See kFlagBegin/kFlagInertia/kFlagEnd constants.
(Read only property)

183.36.10 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identifier of the gesture command.
Notes:

see kGestureID* constants.
(Read only property)

183.36.11 InstanceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An internally used identifier for the structure.
Notes: (Read only property)

183.36.12 LocationInWindowX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A x coordinate associated with the gesture.
Notes:

This is LocationX relative to target window.
(Read only property)

183.36.13 LocationInWindowY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A x coordinate associated with the gesture.
Notes:

This is LocationY relative to target window.
(Read only property)

183.36.14 LocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A x coordinate associated with the gesture.
Notes:

These coordinates are always relative to the origin of the screen.
(Read only property)

183.36.15 LocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A x coordinate associated with the gesture.
Notes:

These coordinates are always relative to the origin of the screen.
(Read only property)

183.36.16 RotateAngle as Double

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The argument as angle for rotate gesture.

Notes: (Read only property)

183.36.17 SequenceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An internally used identifier for the sequence.
Notes: (Read only property)

183.36.18 TargetWindow as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A handle to the window that is targeted by this gesture.
Notes: (Read only property)

183.36.19 Constants

183.36.20 kFlagBegin = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag values.
Notes: A gesture is starting.

183.36.21 kFlagEnd = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag values.
Notes: A gesture has finished.

183.36.22 kFlagInertia = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag values.
Notes: A gesture has triggered inertia.

183.36.23 kGestureIDBegin = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Begin of a gesture

183.36.24 kGestureIDEnd = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: End of a gesture

183.36.25 kGestureIDPan = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Pan gesture

183.36.26 kGestureIDPressAndTap = 7

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Press and Tap gesture

183.36.27 kGestureIDRotate = 5

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Rotate gesture

183.36.28 kGestureIDTwoFingerTap = 6

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Two-Finger Tap

183.36.29 kGestureIDZoom = 3

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the gesture IDs.
Notes: Zoom gesture

183.37 class WinPointerEventsMBS

183.37.1 class WinPointerEventsMBS

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class to capture touch events on Windows.
Notes: The plugin can only deliver events the Xojo runtime doesn't consume.

183.37.2 Blog Entries

- Windows Touch Events
- MBS Xojo / Real Studio Plugins, version 17.0pr4

183.37.3 Methods

183.37.4 Close

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Cleans up.
Notes:

Optional and does same as destructor, but now.
You can call this in a window's close event to shutdown the event handler class.

183.37.5 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The constructor events to a control.
Notes: Call in a control's open event to attach event listener to the control.
See also:

- 183.37.6 Constructor(win as window) 22963
- 183.37.7 Constructor(WindowHandle as Integer) 22964

183.37.6 Constructor(win as window)

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The constructor events to a window.
Notes: Call in a window's open event to attach event listener to the window.
See also:

- 183.37.5 Constructor(control as RectControl) 22963
- 183.37.7 Constructor(WindowHandle as Integer) 22964

183.37.7 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The constructor.
Notes:

This method allows you to attach to any window.
So this works in console projects, too.
With any window, not just xojo windows.
See also:

- 183.37.5 Constructor(control as RectControl) 22963
- 183.37.6 Constructor(win as window) 22963

183.37.8 EnableMouseInPointer(enable as boolean) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Enables the mouse to act as a pointer input device and send pointer events.
Notes:

Requires Windows 8 or newer.

If the function succeeds, the return value is true.
If the function fails, the return value is false.
To get extended error information, call GetLastError.

This function can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All other desktop applications run with mouse-in-pointer disabled.

On the first call in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls, the state will not change. If the current state is not equal to the specified state, the call fails.

Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

183.37.9 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: Same as other GetGestureConfig, but for a control, not a window.
See also:

- 183.37.10 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 22965

183.37.10 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes:

win: The window to get the gesture configuration from.
Flags: A gesture command flag value indicating options for retrieving the gesture configuration. Can be 1 to return consolidated configuration for the specified window and its parent window chain.
Config: an array of gesture configuration structures that specify the gesture configuration.

Please pass an empty array and the plugin appends config objects.

Return function returns number of configs found.
Returns -1 in case of error.
See also:

- 183.37.9 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 22965

183.37.11 IsMouseInPointerEnabled as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates whether EnableMouseInPointer is set for the mouse to act as a pointer input device and send pointer events.
Notes:

Requires Windows 8 or newer.

If EnableMouseInPointer is set, the return value is true.
If EnableMouseInPointer is not set, the return value is false.

EnableMouseInPointer can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All other desktop applications run with mouse-in-pointer disabled.
On the first call to EnableMouseInPointer in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls to EnableMouseInPointer, the state will not change. If the current state is not equal to the specified state, the call fails.
Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

183.37.12 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 17.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Same as other SetGestureConfig, but for a control, not a window.
See also:

- 183.37.13 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 22966

183.37.13 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Configures the messages that are sent from a window for Windows Touch gestures.
Notes:

Win: The window to set the gesture configuration on.
config: An array of gesture configuration structures that specify the gesture configuration.

If the function succeeds, the return value is true, else false.

If you don't expect to change the gesture configuration, call SetGestureConfig at window creation time. If you want to dynamically change the gesture configuration, call SetGestureConfig in response to GestureNotify event.
See also:

- 183.37.12 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 22966

183.37.14 Properties

183.37.15 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The window handle.
Notes: (Read only property)

183.37.16 Events

183.37.17 Gesture(info as WinGestureInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Passes information about a gesture.
Notes: Return true, if you processed the message, else false.

183.37.18 GestureNotify

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Gives you a chance to set the gesture configuration.
Notes: When the GestureNotify event is received, the application can use SetGestureConfig to specify the gestures to receive.

183.37.19 PointerDeviceChange(Change as Integer, Param as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sent to a window when there is a change in the settings of a monitor that has a digitizer attached to it.
Notes:

This message contains information regarding the scaling of the display mode.
See kDeviceChange* constants.

183.37.20 PointerDeviceInRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sent to a window when a pointer device is detected within range of an input digitizer.
Notes:

This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

183.37.21 PointerDeviceOutOfRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sent to a window when a pointer device has departed the range of an input digitizer.
Notes:

This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

183.37.22 PointerDown(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Posted when a pointer makes contact over the client area of a window.
Notes:

This input message targets the window over which the pointer makes contact, and the pointer is implicitly captured to the window so that the window continues to receive input for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Important When a window loses capture of a pointer and it receives the PointerCaptureChanged notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A WM_POINTERLEAVE message may also be generated when a non-captured pointer moves outside the bounds of a window.

To convert the lParam parameter to a POINTS structure, use the MAKEPOINTS macro.
To retrieve further information associated with the message, use the GetPointerInfo function.
To determine the keyboard modifier key states associated with this message, use the GetKeyState function.
For example, to detect that the ALT key was pressed, check whether GetKeyState(VK_MENU) <0.
Note that if the application does not process this message, DefWindowProc may generate one or more WM_GESTURE messages if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest to DefWindowProc, the resulting behavior is undefined.
When a window loses capture of a pointer and receives the WM_POINTERCAPTURECHANGED notification, it will typically not receive any further notifications. Therefore, it is important that a window does not make any assumptions of its pointer status, regardless of whether it receives evenly paired DOWN / UP or ENTER / LEAVE notifications.

183.37.23 PointerEnter(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sent to a window when a new pointer enters detection range over the window (hover) or when an existing pointer moves within the boundaries of the window.
Notes:

We provide Pointer ID, Flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	Indicates whether this message is the first message generated by a new pointer entering detection range (hover).
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is always set for PointerEnter messages.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

Contains the point location of the pointer.
Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerEnter notification can be used by a window to provide feedback to the user while the pointer is over its surface or to otherwise react to the presence of a pointer over its surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A new pointer enters detection range (hover).	kFlagNew and kFlagInRange	Window over which the pointer enters detection range.
A hovering pointer crosses within the window boundaries.	kFlagInRange	Window within which the pointer has crossed.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

When inputs come from the mouse, as a result of mouse and pointer message integration, PointerEnter is not sent.

183.37.24 PointerHWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Posted to the window with foreground keyboard focus when a horizontal scroll wheel is rotated.
Notes:

We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application's window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

183.37.25 PointerLeave(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Sent to a window when a pointer leaves detection range over the window (hover) or when a pointer moves outside the boundaries of the window.
Notes:

We provide the pointer ID, Flags, X and Y values.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is not set when the pointer leaves the detection range of the window.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerLeave notification can be used by a window to change mode or stop any feedback to the user while the pointer is over the window surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A hovering pointer crosses window boundaries.	BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Window outside of whose boundary the pointer moved.
A pointer goes out of detection range.	N/A	Window for which the pointer leaves detection range.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

If contact is maintained with the input digitizer and the pointer moves outside the window, PointerLeave is not generated. PointerLeave is generated only when a hovering pointer crosses window boundaries or contact is terminated.
PointerLeave is posted to the posted message queue if the input is originated from a mouse device.

183.37.26 PointerUp(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Posted when a pointer that made contact over the client area of a window breaks contact.
Notes:

This input message targets the window over which the pointer makes contact and the pointer is, at that point, implicitly captured to the window so that the window continues to receive input messages including the WM_POINTERUP notification for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

See Pointer Flags for more details.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate event while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a WM_POINTERLEAVE message.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.
To obtain the horizontal and vertical position of a pointer, use the following:

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.

183.37.27 PointerUpdate(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Posted to provide an update on a pointer that made contact over the client area of a window or on a hovering uncaptured pointer over the client area of a window.
Notes:

While the pointer is hovering, the message targets whichever window the pointer happens to be over. While the pointer is in contact with the surface, the pointer is implicitly captured to the window over which the pointer made contact and that window continues to receive input for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down.

A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

See Pointer Flags for more details.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse

buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnterevent is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, Windows may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.
If the application does not process these messages as fast as they are generated, some moves may be coalesced. The history of inputs that were coalesced into this message can be retrieved using the GetPointerInfoHistory function.

183.37.28 PointerWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Posted to the window with foreground keyboard focus when a vertical scroll wheel is rotated.
Notes:

We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application's

window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

183.37.29 Constants

183.37.30 kDeviceChangeArrival = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: A new device is attached.

183.37.31 kDeviceChangeAspectRatioPreserved = 2048

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: The display aspect ratio.

183.37.32 kDeviceChangeMapping = 256

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: The change in display to digitizer mapping.

183.37.33 kDeviceChangeModeCentered = 128

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Centered display mode.

183.37.34 kDeviceChangeModeDefault = 64

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: The default display mode.

183.37.35 kDeviceChangeOrientation0 = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Orientation of the device: 0°

183.37.36 kDeviceChangeOrientation180 = 16

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Orientation of the device: 180°

183.37.37 kDeviceChangeOrientation270 = 32

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Orientation of the device: 270°

183.37.38 kDeviceChangeOrientation90 = 8

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Orientation of the device: 90°

183.37.39 kDeviceChangeOrigin = 1024

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: The display origin.

183.37.40 kDeviceChangeRemoval = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: A device has been detached.

183.37.41 kDeviceChangeResolution = 512

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the device change flags.
Notes: Display resolution.

183.38 class WinPointerInfoMBS

183.38.1 class WinPointerInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for pointer input details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.38.2 Blog Entries

- Windows Touch Events

183.38.3 Methods

183.38.4 Constructor

MBS Win Plugin, Plugin Version: 16.2, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

183.38.5 Properties

183.38.6 ButtonChangeType as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Specifies the change in button state between this input and the previous input.
Notes:

See kPointerChange* constants.
(Read only property)

183.38.7 frameId as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An identifier common to multiple pointers for which the source device reported an update in a single input frame.
Notes:

For example, a parallel-mode multi-touch digitizer may report the positions of multiple touch contacts in a single update to the system.

Note that frame identifier is assigned as input is reported to the system for all pointers across all devices. Therefore, this field may not contain strictly sequential values in a single series of messages that a window receives. However, this field will contain the same numerical value for all input updates that were reported in the same input frame by a single device.
(Read only property)

183.38.8 HimetricLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The screen coordinates of the pointer, in HIMETRIC units.
Notes:

For adjusted screen coordinates, see HimetricLocation.
(Read only property)

183.38.9 HimetricLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The screen coordinates of the pointer, in HIMETRIC units.
Notes:

For adjusted screen coordinates, see HimetricLocation.
(Read only property)

183.38.10 HimetricLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

183.38.11 HimetricLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

183.38.12 historyCount as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Count of inputs that were coalesced into this message.
Notes:

This count matches the total count of entries that can be returned by a call to GetPointerInfoHistory. If no coalescing occurred, this count is 1 for the single input represented by the message.
(Read only property)

183.38.13 hwndTarget as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Window to which this message was targeted.
Notes:

If the pointer is captured, either implicitly by virtue of having made contact over this window or explicitly using the pointer capture API, this is the capture window. If the pointer is uncaptured, this is the window over which the pointer was when this message was generated.
(Read only property)

183.38.14 InputData as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A value whose meaning depends on the nature of input.
Notes:

When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated forward and a negative value indicates that the wheel was rotated backward.
When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated to the right and a negative value indicates that the wheel was rotated to the left.
(Read only property)

183.38.15 KeyStates as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates which keyboard modifier keys were pressed at the time the input was generated.
Notes:

May be zero or a combination of the following values:

8 A SHIFT key was pressed.
4 A CTRL key was pressed.

(Read only property)

183.38.16 PerformanceCount as Int64

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The value of the high-resolution performance counter when the pointer message was received (high-precision, 64 bit alternative to Time).
Notes:

The value can be calibrated when the touch digitizer hardware supports the scan timestamp information in its input report.
(Read only property)

183.38.17 PixelLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The screen coordinates of the pointer, in pixels.
Notes:

For adjusted screen coordinates, see PixelLocation.
(Read only property)

183.38.18 PixelLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The screen coordinates of the pointer, in pixels.
Notes:

For adjusted screen coordinates, see PixelLocation.
(Read only property)

183.38.19 PixelLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The predicted screen coordinates of the pointer, in pixels.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

183.38.20 PixelLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The predicted screen coordinates of the pointer, in pixels.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

183.38.21 pointerFlags as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** May be any reasonable combination of flags from the flags constants.
Notes:

See kFlag* constants.
(Read only property)

183.38.22 pointerId as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An identifier that uniquely identifies a pointer during its lifetime.
Notes:

A pointer comes into existence when it is first detected and ends its existence when it goes out of detection

range. Note that if a physical entity (finger or pen) goes out of detection range and then returns to be detected again, it is treated as a new pointer and may be assigned a new pointer identifier.
(Read only property)

183.38.23 pointerType as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The pointer type.
Notes:

See kType* constants.
(Read only property)

183.38.24 sourceDevice as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Handle to the source device that can be used in calls to the raw input device API and the digitizer device API.
Notes: (Read only property)

183.38.25 Time as Integer

MBS Win Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The time of the event.
Notes:

Value is 0 or the time stamp of the message, based on the system tick count when the message was received. The application can specify the input time stamp in either Time or PerformanceCount. The value cannot be more recent than the current tick count or QueryPerformanceCount (QPC) value of the injection thread. Once a frame is injected with a time stamp, all subsequent frames must include a timestamp until all contacts in the frame go to an UP state. The custom timestamp value must also be provided for the first element in the contacts array. The time stamp values after the first element are ignored. The custom timestamp value must increment in every injection frame.
When PerformanceCount is specified, the time stamp will be converted to the current time in .1 millisecond resolution upon actual injection. If a custom PerformanceCount resulted in the same .1 millisecond window from the previous injection, ERROR_NOT_READY is returned and injection will not occur. While injection will not be invalidated immediately by the error, the next successful injection must have a PerformanceCount value that is at least 0.1 millisecond from the previously successful injection. This is also true if Time is used.
If both Time and PerformanceCount are specified in InjectTouchInput, ERROR_INVALID_PARAMETER is returned.
InjectTouchInput cannot switch between Time and PerformanceCount once injection has started.
If neither Time and PerformanceCount are specified, InjectTouchInput allocates the timestamp based on the

timing of the call. If InjectTouchInput calls are repeatedly less than 0.1 millisecond apart, ERROR_NOT_READY might be returned. The error will not invalidate the input immediately, but the injection application needs to retry the same frame again for injection to succeed.
(Read only property)

183.38.26 Constants

183.38.27 kFlagCanceled = & h8000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that the pointer is departing in an abnormal manner, such as when the system receives invalid input for the pointer or when a device with active pointers departs abruptly. If the application receiving the input is in a position to do so, it should treat the interaction as not completed and reverse any effects of the concerned pointer.

183.38.28 kFlagCaptureChanged = & h200000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that this pointer was captured by (associated with) another element and the original element has lost capture.

183.38.29 kFlagConfidence = & h4000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Confidence is a suggestion from the source device about whether the pointer represents an intended or accidental interaction, which is especially relevant for touch pointers where an accidental interaction (such as with the palm of the hand) can trigger input. The presence of this flag indicates that the source device has high confidence that this input is part of an intended interaction.

183.38.30 kFlagDown = & h10000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that this pointer transitioned to a down state; that is, it made contact with the digitizer surface.

183.38.31 kFlagFifthButton = & h100

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Analogous to a second extended mouse (XButton2) button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the second extended mouse (XBUTTON2) button is down.

183.38.32 kFlagFirstButton = & h10

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Indicates a primary action, analogous to a left mouse button down.
A touch pointer has this flag set when it is in contact with the digitizer surface.
A pen pointer has this flag set when it is in contact with the digitizer surface with no buttons pressed.
A mouse pointer has this flag set when the left mouse button is down.

183.38.33 kFlagFourthButton = & h80

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Analogous to a first extended mouse (XButton1) button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the first extended mouse (XBUTTON1) button is down.

183.38.34 kFlagHasTransform = & h400000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that this pointer has an associated transform.

183.38.35 kFlagHWheel = & h100000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates input associated with a pointer h-wheel. For mouse pointers, this is equivalent to the action of the mouse horizontal scroll wheel.

183.38.36 kFlagInContact = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Indicates that this pointer is in contact with the digitizer surface.
When this flag is not set, it indicates a hovering pointer.

183.38.37 kFlagInRange = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Indicates that this pointer continues to exist. When this flag is not set, it indicates the pointer has left detection range.
This flag is typically not set only when a hovering pointer leaves detection range (kFlagUpdate is set) or when a pointer in contact with a window surface leaves detection range (kFlagUp is set).

183.38.38 kFlagNew = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates the arrival of a new pointer.

183.38.39 kFlagNone = 0

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Default

183.38.40 kFlagPrimary = & h2000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Indicates that this pointer has been designated as the primary pointer. A primary pointer is a single pointer that can perform actions beyond those available to non-primary pointers. For example, when a primary pointer makes contact with a window's surface, it may provide the window an opportunity to activate by sending it a PointerActivate event.
The primary pointer is identified from all current user interactions on the system (mouse, touch, pen, and so on). As such, the primary pointer might not be associated with your app. The first contact in a multi-touch interaction is set as the primary pointer. Once a primary pointer is identified, all contacts must be lifted before a new contact can be identified as a primary pointer. For apps that don't process pointer input, only

the primary pointer's events are promoted to mouse events.

183.38.41 kFlagSecondButton = & h20

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Indicates a secondary action, analogous to a right mouse button down.
A touch pointer does not use this flag.
A pen pointer has this flag set when it is in contact with the digitizer surface with the pen barrel button pressed.
A mouse pointer has this flag set when the right mouse button is down.

183.38.42 kFlagThirdButton = & h40

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes:

Analogous to a mouse wheel button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the mouse wheel button is down.

183.38.43 kFlagUp = & h40000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that this pointer transitioned to an up state; that is, contact with the digitizer surface ended.

183.38.44 kFlagUpdate = & h20000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates that this is a simple update that does not include pointer state changes.

183.38.45 kFlagWheel = & h80000

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the flag constants.
Notes: Indicates input associated with a pointer wheel. For mouse pointers, this is equivalent to the action

of the mouse scroll wheel.

183.38.46 kPointerChangeFifthButtonDown = 9

MBS Win Plugin, Plugin Version: 16.2. **Function:** The fifth button transitioned to a pressed state.

183.38.47 kPointerChangeFifthButtonUp = 10

MBS Win Plugin, Plugin Version: 16.2. **Function:** The fifth button transitioned to a released state.

183.38.48 kPointerChangeFirstButtonDown = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** The first button transitioned to a pressed state.

183.38.49 kPointerChangeFirstButtonUp = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** The first button transitioned to a released state.

183.38.50 kPointerChangeFourthButtonDown = 7

MBS Win Plugin, Plugin Version: 16.2. **Function:** The fourth button transitioned to a pressed state.

183.38.51 kPointerChangeFourthButtonUp = 8

MBS Win Plugin, Plugin Version: 16.2. **Function:** The fourth button transitioned to a released state.

183.38.52 kPointerChangeNone = 0

MBS Win Plugin, Plugin Version: 16.2. **Function:** No change in button state.

183.38.53 kPointerChangeSecondButtonDown = 3

MBS Win Plugin, Plugin Version: 16.2. **Function:** The second button transitioned to a pressed state.

183.38.54 kPointerChangeSecondButtonUp = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** The second button transitioned to a released state.

183.38.55 kPointerChangeThirdButtonDown = 5

MBS Win Plugin, Plugin Version: 16.2. **Function:** The third button transitioned to a pressed state.

183.38.56 kPointerChangeThirdButtonUp = 6

MBS Win Plugin, Plugin Version: 16.2. **Function:** The third button transitioned to a released state.

183.38.57 kTypeMouse = 4

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the pointer types.
Notes: Mouse pointer type.

183.38.58 kTypePen = 3

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the pointer types.
Notes: Pen pointer type.

183.38.59 kTypePointer = 1

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the pointer types.
Notes:

Generic pointer type.
This type never appears in pointer messages or pointer data. Some data query functions allow the caller to restrict the query to specific pointer type. The kTypePointer type can be used in these functions to specify that the query is to include pointers of all types

183.38.60 kTypeTouch = 2

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the pointer types.
Notes: Touch pointer type.

183.38.61 kTypeTouchpad = 5

MBS Win Plugin, Plugin Version: 16.2. **Function:** One of the pointer types.
Notes: Touchpad pointer type (Windows 8.1 and later).

183.39 class WMIObjectMBS

183.39.1 class WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a WMI object.

183.39.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr6
- MBS Xojo / Real Studio Plugins, version 13.4pr2
- MBS Xojo / Real Studio Plugins, version 13.4pr1

- MBS Releases the MBS Real Studio plug-ins in version 12.0
- MBS Real Studio Plugins, version 11.4pr1

183.39.3 Methods

183.39.4 GetNames as string()

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the names of all properties in this object.

183.39.5 GetProperty(Name as string) as Variant

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a property as a variant.
Notes:

Objects, booleans, strings and numbers are supported directly. Also string arrays in version 13.1.
Other values are casted to string first.

183.39.6 GetPropertyBoolean(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 13.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a value as an integer.

Notes: Value must be of a numeric type.

183.39.7 GetPropertyDouble(Name as string) as Double

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a value as a double.
Notes: Value must be of a numeric type.

183.39.8 GetPropertyInt64(Name as string) as Int64

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a property as an integer value.

183.39.9 GetPropertyInteger(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a value as an integer.
Example:

```
dim w as WindowsWMIMBS // your WMI object

MsgBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
```

Notes: Value must be of a numeric type.

183.39.10 GetPropertyObject(Name as string) as WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a value as an object.
Notes: Value must be of an IUnknown type.

183.39.11 GetPropertyString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a property as a string.
Example:

```
dim w as WindowsWMIMBS
MsgBox w.GetPropertyString("Name") // string
```

183.39.12 GetPropertyStringArray(Name as string) as string()

MBS Win Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a property as a string array.
Example:

```
dim w as WindowsWMIMBS
MsgBox join(w.GetPropertyStringArray("Name"), ", ")
```

183.39.13 GetPropertyType(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the type of a property.
Notes: You can send in the value you get here and the plugin can be changed to handle this type, too. Currently only numbers and strings are handled.

183.39.14 GetPropertyTypeString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the type of a property as a string.
Notes: For example type 8 is returned as "string".

183.39.15 Properties

183.39.16 Handle as Integer

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Internal object reference.
Notes: (Read and Write property)

183.39.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported from one of the functions.
Notes:

-1 is the value used by the plugin if the function is not available.
(Read and Write property)

183.39.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The error message for the last error.
Notes:

This may help to debug the errors.
(Read only property)

Chapter 184

Windows Console

184.1 class ConsoleStateMBS

184.1.1 class ConsoleStateMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for handling a console window state.

184.1.2 Properties

184.1.3 BackColor as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The colorcode of the background.
Notes:

Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

184.1.4 CursorX as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The horizontal cursor position in characters.
Notes: (Read and Write property)

184.1.5 CursorY as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The vertical cursor position in characters.
Notes: (Read and Write property)

184.1.6 Height as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height of the window in characters.
Notes: (Read and Write property)

184.1.7 MaxHeight as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The maximum height of the window in characters.
Notes: (Read and Write property)

184.1.8 MaxWidth as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The maximum width of the window in characters.
Notes: (Read and Write property)

184.1.9 TextColor as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The colorcode of the text.
Notes:

Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

184.1.10 Width as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width of the window in characters.

Notes: (Read and Write property)

184.1.11 WindowHeight as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height of the console window.
Notes: (Read and Write property)

184.1.12 WindowLeft as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The left position of the console window.
Notes: (Read and Write property)

184.1.13 WindowTop as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The top position of the console window.
Notes: (Read and Write property)

184.1.14 WindowWidth as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width of the console window.
Notes: (Read and Write property)

184.2 class WindowsConsoleMBS

184.2.1 class WindowsConsoleMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for handling a console window in Windows.

184.2.2 Methods

184.2.3 Close

MBS Win Plugin, Plugin Version: 4.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

184.2.4 FlushConsole

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The FlushConsole function flushes the console input buffer.
Notes: All input records currently in the input buffer are discarded.

184.2.5 ReadConsole(maxcount as Integer) as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reads maximum of maxcount characters from the input stream.

184.2.6 SetCursorPosition(x as Integer,y as Integer)

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the cursor position inside the console window.

184.2.7 SetWindowPosition(absolute as boolean, left as Integer,top as Integer, right as Integer, bottom as Integer)

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the window position and size.

Notes: If absolute=false, the coordinates are relative to the current one.

184.2.8 State as ConsoleStateMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current state of the console window.

184.2.9 WriteConsole(message as string) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes the message to the console.
Notes: Returns true if successfull.

184.2.10 Properties

184.2.11 AutoScrollAtEOL as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Automatical scrolling at end of line?
Notes:

When writing with WriteConsole or echoing with ReadFile, the cursor moves to the beginning of the next row when it reaches the end of the current row. This causes the rows displayed in the console window to scroll up automatically when the cursor advances beyond the last row in the window. It also causes the contents of the screen buffer to scroll up (discarding the top row of the screen buffer) when the cursor advances beyond the last row in the screen buffer. If this mode is disabled, the last character in the row is overwritten with any subsequent characters.
(Read and Write property)

184.2.12 BackColor as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The text background color used.
Notes: (Read and Write property)

184.2.13 CursorSize as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The size of the cursor in percent (from 0 to 100).
Notes: (Read and Write property)

184.2.14 CursorVisible as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Is the cursor visible?
Notes: (Read and Write property)

184.2.15 EchoInput as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Echo the input on the screen?
Notes:

Characters read by the ReadFile function are written to the active screen buffer as they are read. This mode can be used only if the WaitForReturn mode is also enabled.
(Read and Write property)

184.2.16 GotConsole as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** whether the console was created inside the constructor.
Notes: (Read only property)

184.2.17 InputCodepage as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Codepage of the input stream.
Notes: (Read and Write property)

184.2.18 OutputCodepage as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Codepage of the output stream.

Notes: (Read and Write property)

184.2.19 ProcessInput as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Process input before reading?
Notes:

Ctrl+c is processed by the system and is not placed in the input buffer. If the input buffer is being read by ReadConsole, other control keys are processed by the system and are not returned in the ReadConsole buffer. If the WaitForReturn mode is also enabled, backspace, carriage return, and linefeed characters are handled by the system.
(Read and Write property)

184.2.20 ProcessOutput as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Process output before reading?
Notes:

Characters written by the WriteConsole function or echoed by the ReadFile or ReadConsole function are parsed for ASCII control sequences, and the correct action is performed. Backspace, tab, bell, carriage return, and linefeed characters are processed.
(Read and Write property)

184.2.21 TextColor as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The text color used.
Notes: (Read and Write property)

184.2.22 Title as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The title bar of the console window.
Notes: (Read and Write property)

184.2.23 WaitForReturn as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Wait for return key on reading?
Notes:

The ReadConsole function returns only when a carriage return character is read. If this mode is disabled, the functions return when one or more characters are available.
(Read and Write property)

184.2.24 Events

184.2.25 ConsoleClosed

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Console was closed.

184.2.26 ConsoleOpened

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Console was opened.

184.2.27 ControlBreak as boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Control-Break was pressed.
Notes:

Return true if you handled it yourself.
Return false for the default handler.

184.2.28 ControlC as boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Control-C was pressed.
Notes:

Return true if you handled it yourself.
Return false for the default handler.

184.2.29 Logoff as boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The user is logging off.
Notes:

Return true if you handled it yourself.
Return false for the default handler.

184.2.30 Shutdown as boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The user is shutting down the computer.
Notes:

Return true if you handled it yourself.
Return false for the default handler.

184.2.31 UserClose as boolean

MBS Win Plugin, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The user pressed the close button.
Notes:

Return true if you handled it yourself.
Return false for the default handler.

184.2.32 Constants

184.2.33 Black = 0

MBS Win Plugin. **Function:** The color code for Black.
Notes: Read only property with value 0.

184.2.34 Blue = 1

MBS Win Plugin. **Function:** The color code for Blue.
Notes: Read only property with value 2.

184.2.35 Green = 2

MBS Win Plugin. **Function:** The color code for Green.
Notes: Read only property with value 4.

184.2.36 Highlight = 8

MBS Win Plugin. **Function:** The color code for Highlight.
Notes: Read only property with value 8.

184.2.37 Red = 4

MBS Win Plugin. **Function:** The color code for Red.
Notes: Read only property with value 1.

Chapter 185

Windows ICM

185.1 class WindowsICMColorMBS

185.1.1 class WindowsICMColorMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a color value.
Notes:

A variable of type color may be accessed as any of the supported color space colors by accessing the appropriate member of the union.

see also:
http://msdn.microsoft.com/en-us/library/dd371932(v=VS.85).aspx

185.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.1.3 Properties

185.1.4 a as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The a color value of a Lab color.
Notes: (Read and Write property)

185.1.5 b as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The b color value of a Lab color.
Notes: (Read and Write property)

185.1.6 black as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The black color value of a CMYK color.
Notes: (Read and Write property)

185.1.7 blue as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The blue value.
Notes:

Range from 0 to 255.
(Read and Write property)

185.1.8 ch1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The first channel color value of a three channel color.
Notes: (Read and Write property)

185.1.9 ch2 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The second channel color value of a three channel color.
Notes: (Read and Write property)

185.1.10 ch3 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The third channel color value of a three channel color.

Notes: (Read and Write property)

185.1.11 cyan as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The cyan color value of a CMYK color.
Notes: (Read and Write property)

185.1.12 gray as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The gray color value.
Notes:

For grayscale color space.
(Read and Write property)

185.1.13 green as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The green value.
Notes:

Range from 0 to 255.
(Read and Write property)

185.1.14 Index as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The index value for an indexed color space.
Notes: (Read and Write property)

185.1.15 L as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The L color value of a Lab color.
Notes: (Read and Write property)

185.1.16 magenta as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The magenta color value of a CMYK color.
Notes: (Read and Write property)

185.1.17 red as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The red value.
Notes:

Range from 0 to 255.
(Read and Write property)

185.1.18 XYZ_X as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The X value of a XYZ color.
Notes: (Read and Write property)

185.1.19 XYZ_Y as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Y value of a XYZ color.
Notes: (Read and Write property)

185.1.20 XYZ_Z as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Z value of a XYZ color.
Notes: (Read and Write property)

185.1.21 yellow as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The yellow color value of a CMYK color.

Notes: (Read and Write property)

185.1.22 Yxy_x as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The x value of a Yxy color.
Notes: (Read and Write property)

185.1.23 Yxy_y as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The y value of a Yxy color.
Notes:

Yxy_YY is the first Y and Yxy_Y the second one in a Yxy color.
(Read and Write property)

185.1.24 Yxy_YY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The y value of a Yxy color.
Notes:

Yxy_YY is the first Y and Yxy_Y the second one in a Yxy color.
(Read and Write property)

185.1.25 Channel(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The channel value of a colorspaces with 3 to 8 channels.
Notes:

Index from 0 to 7.
(Read and Write computed property)

185.1.26 Constants

185.1.27 COLOR_3_CHANNEL = 6

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the GENERIC3CHANNEL color space.

185.1.28 COLOR_5_CHANNEL = 8

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in a five channel color space.

185.1.29 COLOR_6_CHANNEL = 9

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in a six channel color space.

185.1.30 COLOR_7_CHANNEL = 10

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in a seven channel color space.

185.1.31 COLOR_8_CHANNEL = 11

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in an eight channel color space.

185.1.32 COLOR_CMYK = 7

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the CMYKCOLOR color space.

185.1.33 COLOR_GRAY = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the GRAYCOLOR color space.

185.1.34 COLOR_Lab = 5

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the LabCOLOR color space.

185.1.35 COLOR_NAMED = 12

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in a named color space.

185.1.36 COLOR_RGB = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the RGBCOLOR color space.

185.1.37 COLOR_XYZ = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the XYZCOLOR color space.

185.1.38 COLOR_Yxy = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color type constants.
Notes: The COLOR is in the YxyCOLOR color space.

185.1.39 MAX_COLOR_CHANNELS = 8

MBS Win Plugin, Plugin Version: 11.1. **Function:** The maximum number of supported color channels.

185.2 class WindowsICMEnumMBS

185.2.1 class WindowsICMEnumMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The WindowsICMEnumMBS class contains information that defines the profile enumeration constraints.
Example:

```
dim c as new WindowsICMEnumMBS // no options set

dim a(-1) as string = WindowsICMModuleMBS.EnumColorProfiles(c)

for each s as string in a
MsgBox s
next
```

185.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.2.3 Properties

185.2.4 Attributes0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Attributes of profile that can be any of the following values.
Notes:

Constant	Meaning
ATTRIB_TRANSPARENCY	Turns transparency on. If this flag is not used, the attribute is reflective by default.
ATTRIB_MATTE	Turns matte display on. If this flag is not used, the attribute is glossy by default.

(Read and Write property)

185.2.5 Attributes1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Attributes of profile that can be any of the following values.
Notes:

Constant	Meaning
ATTRIB_TRANSPARENCY	Turns transparency on. If this flag is not used, the attribute is reflective by default.
ATTRIB_MATTE	Turns matte display on. If this flag is not used, the attribute is glossy by default.

(Read and Write property)

185.2.6 Classs as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the profile class.
Notes:

For a description of profile classes, see Using Device Profiles with WCS.
http://msdn.microsoft.com/en-us/library/dd372213(v=VS.85).aspx

A profile class may have any of the following values.

Profile Class	Signature
Input Device Profile	CLASS_SCANNER
Display Device Profile	CLASS_MONITOR
Output Device Profile	CLASS_PRINTER
Device Link Profile	CLASS_LINK
Color Space Conversion Profile	CLASS_COLORSPACE
Abstract Profile	CLASS_ABSTRACT
Named Color Profile	CLASS_NAMED
Color Appearance Model Profile	CLASS_CAMP
Color Gamut Map Model Profile	CLASS_GMMP

(Read and Write property)

185.2.7 CMMType as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identification number of the CMM that is used in the profile.

Notes:

Identification numbers are registered with the ICC.
(Read and Write property)

185.2.8 ConnectionSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A signature value that indicates the color space in which the profile connection space (PCS) is defined.
Notes:

Can be any of the following values: SPACE_XYZ or SPACE_Lab

When the Classs member is set to CLASS_LINK, the PCS is taken from the DataColorSpace member.
(Read and Write property)

185.2.9 Creator as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Signature of the software that created the profile.
Notes:

Signatures are registered with the ICC.
(Read and Write property)

185.2.10 DataColorSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A signature value that indicates the color space in which the profile data is defined.
Notes:

Can be any value from the SPACE_* Constants.
(Read and Write property)

185.2.11 DeviceClass as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the device class.
Notes:

A device class may have one of the following values.

Profile Class	Signature
Input Device Profile	CLASS_SCANNER
Display Device Profile	CLASS_MONITOR
Output Device Profile	CLASS_PRINTER

(Read and Write property)

185.2.12 DeviceName as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** User friendly name of the device.
Notes: (Read and Write property)

185.2.13 DitheringMode as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the style of dithering that will be used when an image is displayed.
Notes: (Read and Write property)

185.2.14 Fields as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates which fields in this class are being used.
Notes:

Can be set to any combination of the following constant values:

ET_DEVICENAME
ET_MEDIATYPE
ET_DITHERMODE
ET_RESOLUTION
ET_CMMTYPE
ET_CLASS
ET_DATACOLORSPACE
ET_CONNECTIONSPACE
ET_SIGNATURE
ET_PLATFORM
ET_PROFILEFLAGS

ET_MANUFACTURER
ET_MODEL
ET_ATTRIBUTES
ET_RENDERINGINTENT
ET_CREATOR
ET_DEVICECLASS
(Read and Write property)

185.2.15 Manufacturer as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identification number of the device profile manufacturer.
Notes:

All manufacturer identification numbers are registered with the ICC.
(Read and Write property)

185.2.16 MediaType as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates which type of media is associated with the profile, such as a printer or screen.
Notes: (Read and Write property)

185.2.17 Model as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The device manufacturer's device model number.
Notes:

All model identification numbers are registered with the ICC.
(Read and Write property)

185.2.18 Platform as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The primary platform for which the profile was created.
Notes:

The member can be set to any of the following values.

Platform	Value
Apple Computer, Inc.	'APPL'
Microsoft Corp.	'MSFT'
Silicon Graphics, Inc.	'SGI'
Sun Microsystems, Inc.	'SUNW'
Taligent	'TGNT'

(Read and Write property)

185.2.19 ProfileFlags as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Bit flags containing hints that the CMM uses to interpret the profile data and can be set to one of the following values.
Notes:

Constant	Meaning
FLAG_EMBEDDEDPROFILE	The profile is embedded in a bitmap file.
FLAG_DEPENDENTONDATA	The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

(Read and Write property)

185.2.20 RenderingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The profile rendering intent.
Notes:

The member can be set to one of the following values:

INTENT_PERCEPTUALINTENT_SATURATIONINTENT_RELATIVE_COLORIMETRICINTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=VS.85).aspx
(Read and Write property)

185.2.21 ResolutionX as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The horizontal resolution in pixels of the device on which the image will be displayed.
Notes: (Read and Write property)

185.2.22 ResolutionY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The vertical resolution in pixels of the device on which the image will be displayed.
Notes: (Read and Write property)

185.2.23 Signature as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reserved for internal use.
Notes: (Read and Write property)

185.2.24 Constants

185.2.25 ATTRIB_MATTE = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the attribute constants.
Notes: Turns matte display on. If this flag is not used, the attribute is glossy by default.

185.2.26 ATTRIB_TRANSPARENCY = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the attribute constants.
Notes: Turns transparency on. If this flag is not used, the attribute is reflective by default.

185.2.27 CLASS_ABSTRACT = & h61627374

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.

185.2.28 CLASS_CAMP = & h6C616D70

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.

185.2.29 CLASS_COLORSPACE = & h73706163

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.

185.2.30 CLASS_GMMP = & h676D6D70

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.

185.2.31 CLASS_LINK = & h6C696E6B

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.

185.2.32 CLASS_MONITOR = & h6D6E7472

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the constants to specify which property in this class is used.

185.2.49 ET_PROFILEFLAGS = & h00400

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the constants to specify which property in this class is used.

185.2.50 ET_RENDERINGINTENT = & h04000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the constants to specify which property in this class is used.

185.2.51 ET_RESOLUTION = & h00008

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the constants to specify which property in this class is used.

185.2.52 ET_SIGNATURE = & h00100

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the constants to specify which property in this class is used.

185.2.53 FLAG_DEPENDENTONDATA = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flag constants.
Notes: The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

185.2.54 FLAG_EMBEDDEDPROFILE = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flag constants.
Notes: The profile is embedded in a bitmap file.

185.2.55 FLAG_ENABLE_CHROMATIC_ADAPTATION = & h02000000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flag constants.

185.2.56 SigMacintosh = & h4150504C

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the platform signatures.
Notes: APPL = Apple Computer, Inc.

185.2.57 SigMicrosoft = & h4D534654

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the platform signatures.
Notes: MSFT = Microsoft Corp.

185.2.58 SigSGI = & h53474920

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the platform signatures.
Notes: SGI = Silicon Graphics, Inc.

185.2.59 SigSolaris = & h53554E57

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the platform signatures.
Notes: SUNW = Sun Microsystems, Inc.

185.2.60 SigTaligent = & h54474E54

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the platform signatures.
Notes: TGNT = Taligent

185.2.61 SPACE_Lab = & h4C616220

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Lab

185.2.62 SPACE_XYZ = & h58595A20

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: XYZ

185.3 class WindowsICMLogColorSpaceMBS

185.3.1 class WindowsICMLogColorSpaceMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This class contains information that defines a logical color space.
Notes:

If the CSType member is set to LCS_sRGB or LCS_WINDOWS_COLOR_SPACE, the other members of this structure are ignored, and WCS uses the sRGB color space. The Endpoints, GammaRed, GammaGreen, and GammaBlue members are used to describe the logical color space. The Endpoints member is a CIEXYZTRIPLE that contains the x, y, and z values of the color space's RGB endpoint.

The required DWORD bit format for the GammaRed, GammaGreen, and GammaBlue is an 8.8 fixed point interger left-shifted by 8 bits. The plugin takes care about that detail.

Whenever the Filename member contains a file name and the CSType member is set to LCS_CALIBRATED_RGB, WCS ignores the other members of this class. It uses the color space in the file as the color space to which this LOGCOLORSPACE structure refers.

The relation between tri-stimulus values X,Y,Z and chromaticity values x,y,z is as follows:

x = X/(X+Y+Z)
y = Y/(X+Y+Z)
z = Z/(X+Y+Z)

If the CSType member is set to LCS_sRGB or LCS_WINDOWS_COLOR_SPACE, the other members of this structure are ignored, and ICM uses the sRGB color space. Appliations should still initialize the rest of the structure since CreateProfileFromLogColorSpace ignores CSType member and uses Endpoints, GammaRed, GammaGreen, GammaBlue members to create a profile, which may not be initialized in case of LCS_sRGB or LCS_WINDOWS_COLOR_SPACE color spaces.

185.3.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.3.3 Properties

185.3.4 CSType as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Color space type.

Notes:

The member can be one of the following values.

Value	Meaning
LCS_CALIBRATED_RGB	Color values are calibrated RGB values. The values are translated using the endpoints specified by the lcsEndpoints member before being passed to the device.
LCS_sRGB	Color values are values are sRGB values.
LCS_WINDOWS_COLOR_SPACE	Color values are Windows default color space color values.

(Read and Write property)

185.3.5 EndpointsBX as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The X value of the Blue Endpoint.
Notes: (Read and Write property)

185.3.6 EndpointsBY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Y value of the Blue Endpoint.
Notes: (Read and Write property)

185.3.7 EndpointsBZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Z value of the Blue Endpoint.
Notes: (Read and Write property)

185.3.8 EndpointsGX as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The X value of the Green Endpoint.
Notes: (Read and Write property)

185.3.9 EndpointsGY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Y value of the Green Endpoint.
Notes: (Read and Write property)

185.3.10 EndpointsGZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Z value of the Green Endpoint.
Notes: (Read and Write property)

185.3.11 EndpointsRX as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The X value of the Red Endpoint.
Notes: (Read and Write property)

185.3.12 EndpointsRY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Y value of the Red Endpoint.
Notes: (Read and Write property)

185.3.13 EndpointsRZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Z value of the Red Endpoint.
Notes: (Read and Write property)

185.3.14 Filename as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string that names a color profile file.
Notes:

This member is typically set to "", but may be used to set the color space to be exactly as specified by the color profile. This is useful for devices that input color values for a specific printer, or when using an

installable image color matcher. If a color profile is specified, all other members of this class should be set to reasonable values, even if the values are not completely accurate.
(Read and Write property)

185.3.15 GammaBlue as Double

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Scale of the blue coordinate.
Notes: (Read and Write property)

185.3.16 GammaGreen as Double

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Scale of the green coordinate.
Notes: (Read and Write property)

185.3.17 GammaRed as Double

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Scale of the red coordinate.
Notes: (Read and Write property)

185.3.18 Intent as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The gamut mapping method.
Notes:

This member can be one of the following values.

Value	Value	Intent	ICC Name	Meaning
LCS_GM_BUSINESS	1	Graphic	Saturation	Maintain saturation. Used for business charts and other situations in which undithered colors are required.
LCS_GM_GRAPHICS	2	Proof	Relative Colorimetric	Maintain colorimetric match. Used for graphic designs and named colors.
LCS_GM_IMAGES	4	Picture	Perceptual	Maintain contrast. Used for photographs and natural images.
LCS_GM_ABS_COLORIMETRIC	8	Match	Absolute Colorimetric	Maintain the white point. Match the colors to their nearest color in the destination gamut.

(Read and Write property)

185.3.19 Constants

185.3.20 INTENT_ABSOLUTE_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain the white point. Match the colors to their nearest color in the destination gamut.

185.3.21 INTENT_PERCEPTUAL = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain contrast. Used for photographs and natural images.

185.3.22 INTENT_RELATIVE_COLORIMETRIC = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain colorimetric match. Used for graphic designs and named colors.

185.3.23 INTENT_SATURATION = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain saturation. Used for business charts and other situations in which undithered colors are required.

185.3.24 LCS_CALIBRATED_RGB = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space type constants.
Notes: Color values are calibrated RGB values. The values are translated using the endpoints specified by the Endpoints member before being passed to the device.

185.3.25 LCS_sRGB = & h73524742

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space type constants.
Notes: Color values are values are sRGB values.

185.3.26 LCS_WINDOWS_COLOR_SPACE = & h57696E20

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space type constants.
Notes: Color values are Windows default color space color values.

185.4 module WindowsICMModuleMBS

185.4.1 module WindowsICMModuleMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The main module for Windows Image Color Matching functions.

185.4.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.4.3 Methods

185.4.4 AssociateColorProfileWithDevice(ProfileName as string, DeviceName as string) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The AssociateColorProfileWithDevice function associates a specified color profile with a specified device.
Notes:

ProfileName: The file name of the profile to associate.
DeviceName: The name of the device to associate.

Returns true on success and false on failure.

The AssociateColorProfileWithDevice function will fail if the profile has not been installed on the computer using the InstallColorProfile function.

Note that under Windows (Windows 95 or later), the PostScript device driver for printers assumes a CMYK color model. Therefore, all PostScript printers must use a CMYK color profile. Windows 2000 does not have this limitation.

If the specified device is a monitor, this function updates the default profile.

Several profiles are typically associated with printers, based on paper and ink types. There is no default. The GDI selects the best one from the associated profiles when your application creates a device context (DC).

Scanners also have no default profile. However, it is atypical to associate more than one profile with a scanner.

AssociateColorProfileWithDevice always adds the specified profile to the current user's per-user profile as-

sociation list for the specified device. Before adding the profile to the list, AssociateColorProfileWithDevice determines whether the user has previously expressed the desire to use a per-user profile association list for the device. If so, then AssociateColorProfileWithDevice simply adds the specified profile to the existing per-user profile association list for the device. If not, then AssociateColorProfileWithDevice creates a new per-user profile association list for the device by copying the system-wide association list for that device. It then appends the specified profile to the per-user list. From that point on, the current user will be using a per-user profile association list for the specified device, as if SetUsePerUserProfiles had been called for Device with the usePerUserProfiles parameter set to TRUE.

185.4.5 DisassociateColorProfileFromDevice(ProfileName as string, DeviceName as string) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The DisassociateColorProfileFromDevice function disassociates a specified color profile with a specified device on a specified computer.
Notes:

Returns true on success and false on failure.

ProfileName: The file name of the profile to disassociate.
DeviceName: The name of the device to disassociate.

If more than one profile is associated with a device, WCS uses the last one associated as the default. That is, if your application sequentially associates three profiles with a device, WCS will use the last one associated as the default. If your application then calls the DisassociateColorProfileFromDevice function to disassociate the third profile (which is the default in this example), the WCS will use the second profile as the default.

If your application disassociates all profiles from a device, WCS uses the sRGB profile as the default.

DisassociateColorProfileFromDevice always removes the specified profile from the current user's per-user profile association list for the specified device. Before removing the profile from the list, DisassociateColorProfileFromDevice determines whether the user has previously expressed the desire to use a per-user profile association list for the device. If so, then DisassociateColorProfileFromDevice simply removes the specified profile from the existing per-user profile association list for the device. If not, then DisassociateColorProfileFromDevice creates a new per-user profile association list for the device by copying the system-wide association list for that device. It then removes the specified profile from the per-user list. From that point on, the current user will be using a per-user profile association list for the specified device, as if SetUsePerUserProfiles had been called for Device with the usePerUserProfiles parameter set to TRUE.

185.4.6 EnumColorProfiles(criterias as WindowsICMEnumMBS) as string()

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The EnumColorProfiles function enumerates all the profiles satisfying the given enumeration criteria.
Example:

```
dim c as new WindowsICMEnumMBS // no options set

dim a(-1) as string = WindowsICMModuleMBS.EnumColorProfiles(c)

for each s as string in a
MsgBox s
next
```

Notes:

On success the function returns an array of profile names.

Several profiles are typically associated with printers, based on the paper and ink types. There is a default profile for each device. For International Color Consortium (ICC) profiles, GDI selects the best one from the ICC-associated profiles when your application creates a device context (DC).

Do not attempt to use EnumColorProfiles to determine the default profile for a device. Instead, create a device context for the device and then invoke the GetICMProfile function. On Windows Vista and Windows 7, the WcsGetDefaultColorProfile function can also be used to determine a device's default color profile.

If the Fields member of WindowsICMEnumMBS that is pointed to by the criterias parameter is set to ET_DEVICENAME, this function will enumerate all of the color profiles associated with all types of devices attached to the user's computer, regardless of the device class. If the Fields member is set to ET_DEVICENAME or ET_DEVICECLASS and a device class is specified in the DeviceClass member, this function will only enumerate the profiles associated with the specified device class. If the Fields member is set only to ET_DEVICECLASS, the EnumColorProfiles function will enumerate all profiles that can be associated with that type of device.

Whenever EnumColorProfiles is examining the profiles associated with a specific device, the results depend on whether the user has chosen to use the system-wide list of profiles associated with that device, or his or her own ("per-user") list. Calling SetUsePerUserProfiles with its usePerUserProfiles parameter set to TRUE causes future calls to EnumColorProfiles to look at only the current user's per-user list of profile associations for the specified device. Calling WcsSetUsePerUserProfiles with its usePerUserProfiles parameter set to FALSE causes future calls to EnumColorProfiles to look at the system-wide list of profile associations for the specified device. If SetUsePerUserProfiles has never been called for the current user, EnumColorProfiles examines the system-wide list.

This function will provide the information for converting WCS-specific DMP information to the legacy

EnumType record in enable consistent profile enumeration. The defaults will be the same as ICC if this information is not present.

Per-user/LUA support

The enumeration is specific to current user. Both system wide and current user device associations are considered. For default profile configuration, current user settings override system wide ones.

185.4.7 GetColorDirectory as folderitem

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetColorDirectory function retrieves the path of the Windows COLOR directory on a specified machine.
Example:

```
dim f as FolderItem = WindowsICMModuleMBS.GetColorDirectory

if f=nil then
MsgBox "No path?"
else
MsgBox f.NativePath
end if
```

Notes: On success returns folderitem for color directory. Returns nil on any error.

185.4.8 GetStandardColorSpaceProfile(ProfileID as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetStandardColorSpaceProfile function retrieves the color profile registered for the specified standard color space.
Example:

```
MsgBox WindowsICMModuleMBS.GetStandardColorSpaceProfile(WindowsICMModuleMBS.LCS_WINDOWS_COLOR_S
```

Notes:

ProfileID: Specifies the ID value of the standard color space for which to retrieve the profile. The only valid values for this parameter are LCS_sRGB and LCS_WINDOWS_COLOR_SPACE.

This function supports Windows Color System (WCS) device model profiles (DMPs) in addition to International Color Consortium (ICC) profiles. It does not support WCS CAMP or GMMP profiles and will return

an error if such profiles are used.

Overview of Windows Vista Specific Functionality

This will support WCS DMPs in addition to ICC profiles. It will not support WCS CAMP or GMMP profiles and will return an error if such profiles are used with this API.

Per-user/LUA support

This will retrieve the color profile registered for the given standard color space for current user. If there is no such setting for the current user, it retrieves the system wide setting.

This uses WcsGetDefaultColorProfile with WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER.

This is executable in LUA context.

185.4.9 InstallColorProfile(file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The InstallColorProfile function installs a given profile for use on a specified machine.
Notes:

The profile is also copied to the COLOR directory.
Returns true on success and false on failure.

185.4.10 RegisterCMM(cmmID as Integer, file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** RegisterCMM associates a specified identification value with the specified color management module dynamic link library (CMM DLL).
Notes:

When this ID appears in a color profile, Windows can then locate the corresponding CMM so as to create a transform.

cmmID: Specifies the ID signature of the CMM registered with the International Color Consortium (ICC).

file: Points to the CMM DLL.

Returns true on success and false on failure.

185.4.11 SelectCMM(cmmID as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** SelectCMM allows an application to select the preferred color management module (CMM) to use.
Notes:

cmmID: Specifies the signature of the desired CMM as registered with the International Color Consortium (ICC).

Windows 2000 only: Setting this parameter to 0 causes the WCS system to select the default CMM.

Returns true on success and false on failure.

185.4.12 SetStandardColorSpaceProfile(ProfileID as Integer, ProfileName as folderitem) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetStandardColorSpaceProfile function registers a specified profile for a given standard color space.
Notes:

The profile can be queried using GetStandardColorSpaceProfile.

ProfileID: Specifies the ID value of the standard color space that the given profile represents.
Profilename: path to the profile file.

Returns true on success and false on failure.

The profile must already be installed on the system before it can be registered for a standard color space.

This function supports Windows Color System (WCS) device model profiles (DMPs) in addition to International Color Consortium (ICC) profiles. It does not support WCS CAMP or GMMP profiles and will return an error if such profiles are used.

Per-user/LUA support

This will register a specified profile for a given standard color space only for current user.

This uses SetDefaultColorProfile with WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER.

This is executable in LUA context if the profile is already installed, fails otherwise with access denied since install is system-wide and requires administrator privileges.

185.4.13 UninstallColorProfile(ProfileName as string, DeleteFile as boolean = true) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** UninstallColorProfile removes a specified color profile from a specified computer. Associated files are optionally deleted from the system.
Notes:

ProfileName: Points to the file name of the profile to uninstall.

DeleteFile: If set to true, the function deletes the profile from the COLOR directory. If set to false, this function has no effect.

Returns true on success and false on failure.

185.4.14 UnregisterCMM(cmmID as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The UnregisterCMM function dissociates a specified ID value from a given color management module dynamic-link library (CMM DLL).
Notes:

cmmID: Specifies the ID value identifying the CMM whose registration is to be removed. This is the signature of the CMM registered with the International Color Consortium (ICC).

Returns true on success and false on failure.

185.4.15 Constants

185.4.16 CMM_DESCRIPTION = 5

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: A text string that describes the color management module.

185.4.17 CMM_DLL_VERSION = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: Version number of the CMM DLL.

185.4.18 CMM_DRIVER_VERSION = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.

185.4.19 CMM_IDENT = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: The CMM identification signature registered with the International Color Consortium (ICC).

185.4.20 CMM_LOGOICON = 6

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: The logo icon for this CMM.

185.4.21 CMM_VERSION = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: Version of Windows supported.

185.4.22 CMM_WIN_VERSION = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: Backward compatibility with Windows 95.

185.4.23 LCS_sRGB = & h73524742

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile IDs for GetStandardColorSpaceProfile.
Example:

MsgBox WindowsICMModuleMBS.GetStandardColorSpaceProfile(WindowsICMModuleMBS.LCS_sRGB)

185.4.24 LCS_WINDOWS_COLOR_SPACE = & h57696E20

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile IDs for GetStandardColorSpaceProfile.
Example:

MsgBox WindowsICMModuleMBS.GetStandardColorSpaceProfile(WindowsICMModuleMBS.LCS_WINDOWS_COLOR_S

185.5 class WindowsICMNamedProfileInfoMBS

185.5.1 class WindowsICMNamedProfileInfoMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This class is used to store information about a named color profile.

185.5.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.5.3 Properties

185.5.4 Count as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Total number of named colors in the profile.
Notes: (Read and Write property)

185.5.5 CountDevCoordinates as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Total number of device coordinates for each named color.
Notes: (Read and Write property)

185.5.6 Flags as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Flags for this information record.
Notes:

Not currently used by the default CMM.
(Read and Write property)

185.5.7 Prefix as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string containing the prefix for each color name.

Notes: (Read and Write property)

185.5.8 Suffix as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string containing the suffix for each color name.
Notes: (Read and Write property)

185.6 class WindowsICMProfileHeaderMBS

185.6.1 class WindowsICMProfileHeaderMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This class contains information that describes the contents of a device profile file.
Notes: This header occurs at the beginning of a device profile file.

185.6.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.6.3 Properties

185.6.4 Attributes0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Attributes of profile.
Notes: (Read and Write property)

185.6.5 Attributes1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Attributes of profile.
Notes: (Read and Write property)

185.6.6 Classs as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Indicates the profile class.
Example:

```
// some profile file
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")

// open profile read only
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PRO-
FILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXIST-
ING)
```

```
// get headers
dim h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

// show color space name
Select case h.Classs
case WindowsICMProfileHeaderMBS.CLASS_MONITOR
msgbox "Monitor"
case WindowsICMProfileHeaderMBS.CLASS_PRINTER
msgbox "Printer"
case WindowsICMProfileHeaderMBS.CLASS_SCANNER
msgbox "Scanner"
case WindowsICMProfileHeaderMBS.CLASS_LINK
msgbox "Link"
case WindowsICMProfileHeaderMBS.CLASS_ABSTRACT
msgbox "Abstract"
case WindowsICMProfileHeaderMBS.CLASS_COLORSPACE
msgbox "Colorspace"
case WindowsICMProfileHeaderMBS.CLASS_NAMED
msgbox "Named"
case WindowsICMProfileHeaderMBS.CLASS_CAMP
msgbox "Camp"
case WindowsICMProfileHeaderMBS.CLASS_GMMP
msgbox "GNMP"
else
msgbox "Unknown: "+hex(h.Classs)
end Select
```

Notes:

For a description of profile classes, see Using Device Profiles with WCS:
http://msdn.microsoft.com/en-us/library/dd372213(v=VS.85).aspx

A profile class may have any of the values from the CLASS_* constants.

Class is written with three s here as Class is a reserved word in Xojo.
(Read and Write property)

185.6.7 CMMType as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identification number of the CMM that is used in the profile.
Notes:

Identification numbers are registered with the ICC.

(Read and Write property)

185.6.8 ConnectionSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A signature value that indicates the color space in which the profile connection space (PCS) is defined.
Notes:

The member can be any of the following values: SPACE_XYZ or SPACE_Lab.
(Read and Write property)

185.6.9 Creator as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Signature of the software that created the profile.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PRO-
FILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXIST-
ING)
dim h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

MsgBox hex(h.Creator)
```

Notes:

Signatures are registered with the ICC.
(Read and Write property)

185.6.10 DataColorSpace as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A signature value that indicates the color space in which the profile data is defined.
Example:

```
function Name() as string
dim w as WindowsICMProfileMBS // your profile
dim h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

if h=nil then Return "?"
```

```
Select case h.DataColorSpace
case WindowsICMProfileHeaderMBS.SPACE_XYZ
Return "XYZ"
case WindowsICMProfileHeaderMBS.SPACE_Lab
Return "Lab"
case WindowsICMProfileHeaderMBS.SPACE_Luv
Return "Luv"
case WindowsICMProfileHeaderMBS.SPACE_YCbCr
Return "YCbCr"
case WindowsICMProfileHeaderMBS.SPACE_Yxy
Return "Yxy"
case WindowsICMProfileHeaderMBS.SPACE_RGB
Return "RGB"
case WindowsICMProfileHeaderMBS.SPACE_GRAY
Return "GRAY"
case WindowsICMProfileHeaderMBS.SPACE_HSV
Return "HSV"
case WindowsICMProfileHeaderMBS.SPACE_HLS
Return "HLS"
case WindowsICMProfileHeaderMBS.SPACE_CMYK
Return "CMYK"
case WindowsICMProfileHeaderMBS.SPACE_CMY
Return "CMY"
case WindowsICMProfileHeaderMBS.SPACE_2_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_3_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_4_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_5_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_6_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_7_CHANNEL
Return "2 Channel"
case WindowsICMProfileHeaderMBS.SPACE_8_CHANNEL
Return "2 Channel"
else
Return "Unknown: "+hex(h.DataColorSpace)
end Select
end function
```

Notes:

The member can be any of value from the SPACE_* Constants.
(Read and Write property)

185.6.11 DateTime0 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The data and time that the profile was created.
Notes: (Read and Write property)

185.6.12 DateTime1 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The data and time that the profile was created.
Notes: (Read and Write property)

185.6.13 DateTime2 as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The data and time that the profile was created.
Notes: (Read and Write property)

185.6.14 IlluminantX as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** X value of the Profile illuminant.
Notes: (Read and Write property)

185.6.15 IlluminantY as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Y value of the Profile illuminant.
Notes: (Read and Write property)

185.6.16 IlluminantZ as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Z value of the Profile illuminant.
Notes: (Read and Write property)

185.6.17 Manufacturer as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The identification number of the device profile manufacturer.
Notes:

All manufacturer identification numbers are registered with the ICC.
(Read and Write property)

185.6.18 Model as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The device manufacturer's device model number.
Notes:

All model identification numbers are registered with the ICC.
(Read and Write property)

185.6.19 Platform as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The primary platform for which the profile was created.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PRO-
FILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXIST-
ING)
dim h as WindowsICMProfileHeaderMBS = w.ColorProfileHeader

MsgBox DecodingFromHexMBS(hex(h.Platform)) // shows platform, e.g. "APPL"
```

Notes:

The primary platform can be set to any of the following values.

Platform	Value
Apple Computer, Inc.	'APPL'
Microsoft Corp.	'MSFT'
Silicon Graphics, Inc.	'SGI'
Sun Microsystems, Inc.	'SUNW'
Taligent	'TGNT'

(Read and Write property)

185.6.20 ProfileFlags as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Bit flags containing hints that the CMM uses to interpret the profile data.
Notes:

The member can be set to the following values.

Constant	Meaning
FLAG_EMBEDDEDPROFILE	The profile is embedded in a bitmap file.
FLAG_DEPENDENTONDATA	The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

(Read and Write property)

185.6.21 RenderingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The profile rendering intent.
Notes:

The member can be set to one of the following values:

INTENT_PERCEPTUALINTENT_SATURATIONINTENT_RELATIVE_COLORIMETRICINTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=VS.85).aspx
(Read and Write property)

185.6.22 Signature as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Reserved for internal use.
Notes: (Read and Write property)

185.6.23 Version as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The version number of the profile.
Notes:

The version number is determined by the ICC. The current major version number is & h02. The current minor version number is & h10. The major and minor version numbers are in binary coded decimal (BCD). They must be stored in the following format.

Byte Number	Contents
0	Major version number in BCD.
1	Minor version number in the most significant nibble of this byte. Bug fix version number in the least significant nibble.
2	Reserved. Must be set to 0.
3	Reserved. Must be set to 0.

(Read and Write property)

185.6.24 Constants

185.6.25 ATTRIB_MATTE = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the attribute constants.
Notes: Turns matte display on. If this flag is not used, the attribute is glossy by default.

185.6.26 ATTRIB_TRANSPARENCY = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the attribute constants.
Notes: Turns transparency on. If this flag is not used, the attribute is reflective by default.

185.6.27 CLASS_ABSTRACT = & h61627374

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Abstract Profile

185.6.28 CLASS_CAMP = & h6C616D70

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Color Appearance Model Profile

185.6.29 CLASS_COLORSPACE = & h73706163

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Color Space Conversion Profile

185.6.30 CLASS_GMMP = & h676D6D70

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Color Gamut Map Model Profile

185.6.31 CLASS_LINK = & h6C696E6B

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Device Link Profile

185.6.32 CLASS_MONITOR = & h6D6E7472

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Display Device Profile

185.6.33 CLASS_NAMED = & h6E6D636C

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Named Color Profile

185.6.34 CLASS_PRINTER = & h70727472

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Output Device Profile

185.6.35 CLASS_SCANNER = & h73636E72

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile class constants.
Notes: Input Device Profile

185.6.36 FLAG_DEPENDENTONDATA = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flags.
Notes: The profile can't be used independently of the embedded color data. Used for profiles that are embedded in bitmap files.

185.6.37 FLAG_EMBEDDEDPROFILE = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flags.
Notes: The profile is embedded in a bitmap file.

185.6.38 FLAG_ENABLE_CHROMATIC_ADAPTATION = & h02000000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile flags.

185.6.39 SPACE_2_CHANNEL = & h32434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 2 channel

185.6.40 SPACE_3_CHANNEL = & h33434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 3 channel

185.6.41 SPACE_4_CHANNEL = & h34434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 4 channel

185.6.42 SPACE_5_CHANNEL = & h35434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 5 channel

185.6.43 SPACE_6_CHANNEL = & h36434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 6 channel

185.6.44 SPACE_7_CHANNEL = & h37434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 7 channel

185.6.45 SPACE_8_CHANNEL = & h38434C52

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Generic 8 channel

185.6.46 SPACE_CMY = & h434D5920

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: CMY

185.6.47 SPACE_CMYK = & h434D594B

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: CMYK

185.6.48 SPACE_GRAY = & h47524159

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Gray scale

185.6.49 SPACE_HLS = & h484C5320

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: HLS

185.6.50 SPACE_HSV = & h48535620

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: HSV

185.6.51 SPACE_Lab = & h4C616220

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Lab

185.6.52 SPACE_Luv = & h4C757620

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Luv

185.6.53 SPACE_RGB = & h52474220

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: RGB

185.6.54 SPACE_XYZ = & h58595A20

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: XYZ

185.6.55 SPACE_YCbCr = & h59436272

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: YCbCr

185.6.56 SPACE_Yxy = & h59787920

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the color space constants.
Notes: Yxy

185.7 class WindowsICMProfileMBS

185.7.1 class WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a color profile.

185.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr4
- MBS Xojo / Real Studio Plugins, version 14.1pr3
- MBS Real Studio Plugins, version 11.1pr11

185.7.3 Methods

185.7.4 ConvertColorNameToIndex(name as string) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CMConvertColorNameToIndex function converts color names in a named color space to index numbers in a color profile.
Notes:

name: The name of the color.

Returns the color index.

This function is required in the default CMM. It is optional for all other CMMs.

185.7.5 ConvertIndexToColorName(index as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ConvertIndexToColorName transforms indices in a color space to an array of names in a named color space.
Notes: This function is required in the default CMM. It is optional for all other CMMs.

185.7.6 CountColorProfileElements as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetCountColorProfileElements function retrieves the number of tagged elements in a given color profile.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MsgBox "CountColorProfileElements: "+str(w.CountColorProfileElements)
```

Notes:

Returns number of tagged elements in the profile or 0 on any error.
This function will fail if hProfile is not a valid ICC profile.
This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP.

185.7.7 CreateIccProfile(options as Integer = 0) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 14.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Converts a WCS profile into an International Color Consortium (ICC) profile.
Notes:

Options: A flag value that specifies the profile conversion options.By default, the original WCS profiles used for the conversion are embedded in the output ICC profile in a Microsoft private tag, ProfilesTag (with signature "MS000". This produces an ICC profile that is compatible with ICC software, yet retains the original WCS profile data available to code designed to parse it.The possible values of this parameter are as follows. Any bits not defined in this list are reserved and should be set to zero:

WCS_DEFAULT	Specifies that the new ICC profile contains the original WCS profile in a private ProfilesTag.
WCS_ICCONLY	Specifies that the new ICC profile does not contain either the ProfilesTag or the original WCS profile.

Returns new profile object.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd372239(v=vs.85).aspx

185.7.8 GetColorProfileElement(tag as Integer) as string

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetColorProfileElement function copies data from a specified tagged profile element of a specified color profile into a buffer.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("sRGB Profile.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MsgBox w.GetColorProfileElement(& h64657363) // that's the code for desc, the description
```

Notes:

tag: Identifies the tagged element from which to copy.

This function will fail if Profile is not a valid International Color Consortium (ICC) profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with, and hard coded to, ICC tag types and there exist many robust XML parsing libraries.

185.7.9 GetColorProfileElementTag(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetColorProfileElementTag function retrieves the tag name specified by dwIndex in the tag table of a given International Color Consortium (ICC) color profile, where Index is a one-based index into that table.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)
dim list(-1) as string
dim c as Integer = w.CountColorProfileElements-1

for i as Integer = 0 to c
list.Append DecodingFromHexMBS(hex(w.GetColorProfileElementTag(i)))
next

MsgBox "Tags: "+Join(list, ", ")
```

Notes:

Index: Specifies the one-based index of the tag to retrieve.

This function will fail if Profile is not a valid ICC profile.

GetColorProfileElementTag can be used to enumerate all tags in a profile after getting the number of tags in the profile using GetCountColorProfileElements.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with, and hard coded to, ICC tag types and there exist many robust XML parsing libraries.

185.7.10 GetNamedProfileInfo as WindowsICMNamedProfileInfoMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetNamedProfileInfo function retrieves information about the International Color Consortium (ICC) named color profile that is specified in the first parameter.
Notes:

This function will fail if hProfile is not a valid ICC profile.
This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because named profiles are explicit ICC profile types.
Returns nil on any error.

185.7.11 GetProfileData as string

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Given valid color profile, the GetProfileData function will return the contents of the profile.
Notes:

If the object is a Windows Color System (WCS) handle, then the DMP is returned and the CAMP and GMMP associated with the HPROFILE are ignored.

Returns the data or an empty string on any error.
See GetColorProfileFromHandle in MSDN documentation.

185.7.12 IsColorProfileTagPresent(tag as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The IsColorProfileTagPresent function reports whether a specified International Color Consortium (ICC) tag is present in the specified color profile.
Notes:

tag: Specifies the ICC tag to check.

Returns true if the tag is valid and false if not.

This function will fail if Profile is not a valid ICC profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with and hard coded to ICC tag types and there exist many robust XML parsing libraries.

185.7.13 IsValid as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The IsValid function reports whether the given profile is a valid ICC profile that can be used for color management.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.icc")
dim w as WindowsICMProfileMBS = WindowsICMProfileMBS.OpenProfileFile(file, WindowsICMProfileMBS.PROFILE_READ, WindowsICMProfileMBS.FILE_SHARE_READ, WindowsICMProfileMBS.OPEN_EXISTING)

MsgBox "Valid: "+str(w.IsValid)
```

Notes:

Returns true if the profile is valid.

Only the Windows default CMM is required to export this function; it is optional for all other CMMs.

If a CMM does not support this function, Windows uses the default CMM to validate the profile.

185.7.14 OpenProfileData(data as string, DesiredAccess as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The OpenColorProfile function opens or create a color profile.
Notes:

file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

185.7.15 OpenProfileFile(file as folderitem, DesiredAccess as Integer, ShareMode as Integer, CreationMode as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The OpenColorProfile function opens or create a color profile.
Notes:

file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

ShareMode: Specifies how the profile should be shared, if the profile is contained in a file. A value of zero prevents the profile from being shared at all. The parameter can contain one or both of the following constants (combined by addition or logical OR).

Value	Meaning
FILE_SHARE_READ	Other open operations can be performed on the profile for read access.
FILE_SHARE_WRITE	Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

CreationMode: Specifies which actions to take on the profile while opening it, if it is contained in a file. This parameter must take one of the following constant values.

Value	Meaning
CREATE_NEW	Creates a new profile. Fails if the profile already exists.
CREATE_ALWAYS	Creates a new profile. Overwrites the profile if it exists.
OPEN_EXISTING	Opens the profile. Fails if it does not exist
OPEN_ALWAYS	Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.
TRUNCATE_EXISTING	Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

CreationMode flags CREATE_NEW, CREATE_ALWAYS, and TRUNCATE_EXISTING, will always return blank ICC HPROFILEs. If other CreationMode flags are present, InternalOpenColorProfile is called (using the flags as provided by the API) to determine whether the profile is ICC or WCS XML.

Within the ICC code path, an ICC Profile is returned using the requested sharing, access and creation flags as specified in the tables above.

Within the WCS path, the CreationMode flag OPEN_ALWAYS will fail if the profile doesn't exist, since WCS profiles cannot be created or edited within the WCS architecture (they must be edited outside of it, using MSXML6). For the same reason, dwShareMode flag FILE_SHARE_WRITE, and dwDesiredAccess flag PROFILE_READWRITE are ignored within the WCS path.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

185.7.16 OpenProfilePath(path as string, DesiredAccess as Integer, ShareMode as Integer, CreationMode as Integer) as WindowsICMProfileMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The OpenColorProfile function opens or create a color profile.
Notes:

file: The file where to load profile from.
DesiredAccess: Specifies how to access the given profile. This parameter must take one the following constant values.

Value	Meaning
PROFILE_READ	Opens the profile for read access.
PROFILE_READWRITE	Opens the profile for both read and write access. Has no effect for WCS XML profiles.

ShareMode: Specifies how the profile should be shared, if the profile is contained in a file. A value of zero prevents the profile from being shared at all. The parameter can contain one or both of the following constants (combined by addition or logical OR).

Value	Meaning
FILE_SHARE_READ	Other open operations can be performed on the profile for read access.
FILE_SHARE_WRITE	Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

CreationMode: Specifies which actions to take on the profile while opening it, if it is contained in a file. This parameter must take one of the following constant values.

Value	Meaning
CREATE_NEW	Creates a new profile. Fails if the profile already exists.
CREATE_ALWAYS	Creates a new profile. Overwrites the profile if it exists.
OPEN_EXISTING	Opens the profile. Fails if it does not exist
OPEN_ALWAYS	Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.
TRUNCATE_EXISTING	Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

Returns the profile on success and nil on error.

For ICC and WCS profiles, a CAMP and GMMP are provided by the function based on the current default CAMP and GMMP in the registry.

When OpenColorProfile encounters an ICC profile with an embedded WCS profile, and if the dwType member within the Profile structure does not take the value DONT_USE_EMBEDDED_WCS_PROFILES, it should extract and use the WCS profile(s) contained in this WcsProfilesTag. The HPROFILE returned would be a WCS HPROFILE.

CreationMode flags CREATE_NEW, CREATE_ALWAYS, and TRUNCATE_EXISTING, will always return blank ICC HPROFILEs. If other CreationMode flags are present, InternalOpenColorProfile is called (using the flags as provided by the API) to determine whether the profile is ICC or WCS XML.

Within the ICC code path, an ICC Profile is returned using the requested sharing, access and creation flags as specified in the tables above.

Within the WCS path, the CreationMode flag OPEN_ALWAYS will fail if the profile doesn't exist, since WCS profiles cannot be created or edited within the WCS architecture (they must be edited outside of it, using MSXML6). For the same reason, dwShareMode flag FILE_SHARE_WRITE, and dwDesiredAccess flag PROFILE_READWRITE are ignored within the WCS path.

When the function opens the ICC profile, it will look for a WcsProfilesTag and, if there is one, it will extract and use the original WCS profiles contained therein. (See WcsCreateIccProfile.)

An profile with WCS profile information is derived from a DMP by acquiring the default CAMP and default GMMP from the registry. An HPROFILE is a composition of a DMP, CAMP and GMMP.

185.7.17 SetColorProfileHeader(header as WindowsICMProfileHeaderMBS) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The SetColorProfileHeader function sets the header data in a specified ICC color profile.
Notes:

Header: the profile header data to write to the specified profile.

Returns true on success.

This function will fail if Profile is not a valid ICC profile.

If the color profile was not opened with read/write permission, SetColorProfileHeader fails.

SetColorProfileHeader overwrites the current header in the ICC profile.

This function does not support Windows Color System (WCS) profiles CAMP, DMP, and GMMP; because profile elements are implicitly associated with and hard coded to ICC tag types and there exist many robust XML parsing libraries.

185.7.18 Properties

185.7.19 ColorProfileHeader as WindowsICMProfileHeaderMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetColorProfileHeader function retrieves or derives ICC header structure from either ICC color profile or WCS XML profile.
Notes:

Drivers and applications should assume returning TRUE only indicates that a properly structured header is returned. Each tag will still need to be validated independently using either legacy ICM2 APIs or XML schema APIs.

To determine whether the header is derived from an ICC or DMP profile handle, check the header signature (header bytes 36-39). If the signature is "acsp" (big endian) then an ICC profile was used. If the signature is "cdmp" (big-endian) then a DMP was used.

The distinguishing features that identify a header as having been "synthesized" for a WCS DMP are:

WindowsICMProfileHeaderMBS.Signature = 'pmdc' (little endian = big endian 'cdmp')

WindowsICMProfileHeaderMBS.CMMType = '1scw' (little endian = big endian 'wcs1').
(Read only property)

185.7.20 Handle as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal reference to the object.
Notes:

Value is a HPROFILE.
(Read and Write property)

185.7.21 Constants

185.7.22 CREATE_ALWAYS = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the creation mode constants.
Notes: Creates a new profile. Overwrites the profile if it exists.

185.7.23 CREATE_NEW = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the creation mode constants.
Notes: Creates a new profile. Fails if the profile already exists.

185.7.24 FILE_SHARE_READ = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile sharing flags.
Notes: Other open operations can be performed on the profile for read access.

185.7.25 FILE_SHARE_WRITE = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile sharing flags.
Notes: Other open operations can be performed on the profile for write access. Has no effect for WCS XML profiles.

185.7.26 OPEN_ALWAYS = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the creation mode constants.
Notes: Opens the profile if it exists. For ICC profiles, if the profile does not exist, creates the profile. For WCS XML profiles, if the profile does not exist, returns an error.

185.7.27 OPEN_EXISTING = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the creation mode constants.
Notes: Opens the profile. Fails if it does not exist

185.7.28 PROFILE_READ = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile access flags.
Notes: Opens the profile for read access.

185.7.29 PROFILE_READWRITE = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the profile access flags.
Notes: Opens the profile for both read and write access. Has no effect for WCS XML profiles.

185.7.30 TRUNCATE_EXISTING = 5

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the creation mode constants.
Notes: Opens the profile, and truncates it to zero bytes, returning a blank ICC profile. Fails if the profile doesn't exist.

185.7.31 WCS_DEFAULT = 0

MBS Win Plugin, Plugin Version: 14.1. **Function:** One of the flags for the CreateICCProfile.
Notes: Specifies that the new ICC profile contains the original WCS profile in a private WcsProfilesTag.

185.7.32 WCS_ICCONLY = & h00010000

MBS Win Plugin, Plugin Version: 14.1. **Function:** One of the flags for the CreateICCProfile.
Notes: Specifies that the new ICC profile does not contain either the WcsProfilesTag or the original WCS

profile.

185.8 class WindowsICMSetupMBS

185.8.1 class WindowsICMSetupMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This class is made to query color matching setup information from the user.
Notes: This class contains information that the Setup function uses to initialize the ColorManagement dialog box. After the user closes the dialog box, Setup returns information about the user's selection in this class.

185.8.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.8.3 Methods

185.8.4 Setup as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Setup function creates a Color Management dialog box that lets the user choose whether to enable color management, and if so, provides control over the color profiles used and over the rendering intent.
Notes: Returns true if the user clicked OK and false on any error or when dialog was cancelled.

185.8.5 Properties

185.8.6 DisplayName as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string naming the monitor to be used for color management.
Notes:

If this is not the name of a valid monitor, the first enumerated monitor is used.
(Read and Write property)

185.8.7 Flags as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A set of bit flags used to initialize the dialog box.
Notes:

If set to 0 on entry, all controls assume their default states.

When the dialog box returns, these flags are set to indicate the user's input.

See CMS_* flag constants.
(Read and Write property)

185.8.8 MonitorProfile as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string in which to place the name of the user-selected monitor profile.
Notes:

If the CMS_SETMONITORPROFILE flag is used, this flag can also be used to select a profile other than the monitor default when the dialog is first displayed.
(Read and Write property)

185.8.9 Parent as Window

MBS Win Plugin, Plugin Version: 11.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The parent window.
Notes: (Read and Write property)

185.8.10 PrinterName as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string naming the printer on which the image is to be rendered.
Notes:

If this is not a valid printer name, the default printer is used and named in the dialog.
(Read and Write property)

185.8.11 PrinterProfile as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string in which to place the name of the user-selected printer profile.
Notes:

If the CMS_SETPRINTERPROFILE flag is used, this flag can also be used to select a profile other than the printer default when the dialog is first displayed.
(Read and Write property)

185.8.12 ProofingIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The type of color management desired for the proofed image.
Notes:

Valid values are:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=vs.85).aspx
(Read and Write property)

185.8.13 RenderIntent as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The type of color management desired.
Notes:

Valid values are:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

For more information, see Rendering Intents.
http://msdn.microsoft.com/en-us/library/dd372183(v=vs.85).aspx
(Read and Write property)

185.8.14 SourceName as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An application-specified string which describes the source profile of the item for which color management is to be performed.
Notes:

If this is "", the Image Source control displays the name of the Windows default color profile.

(Read and Write property)

185.8.15 TargetProfile as String

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A string in which to place the name of the user-selected target profile for proofing.
Notes:

If the CMS_SETTARGETPROFILE flag is used, this flag can also be used to select a profile other than the printer default when the dialog is first displayed.
(Read and Write property)

185.8.16 Events

185.8.17 Apply

MBS Win Plugin, Plugin Version: 11.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** This event is invoked when the Apply button of the Color Management dialog box is selected.

185.8.18 Idle

MBS Win Plugin, Plugin Version: 11.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** This event is called regularly if the CMS_USEHOOK flag is used.

185.8.19 Constants

185.8.20 CMS_DISABLEICM = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the "Enable Color Management" check box is cleared, disabling all other controls. If set on exit, it means that the user does not wish color management performed.

185.8.21 CMS_DISABLEINTENT = 1024

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.

185.8.22 CMS_DISABLERENDERINTENT = 2048

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.

185.8.23 CMS_ENABLEPROOFING = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the Proofing controls are to be enabled, and the Proofing check box is checked. If set on exit, it means that the user wishes to perform color management for a different target device than the selected printer.

185.8.24 CMS_SETMONITORPROFILE = 16

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the color management profile named in the MonitorProfile member is to be the initial selection in the monitor profile control. If the specified profile is not associated with the monitor, this flag is ignored, and the default profile for the monitor is used.

185.8.25 CMS_SETPRINTERPROFILE = 32

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the color management profile named in the PrinterProfile member is to be the initial selection in the printer profile control. If the specified profile is not associated with the printer, this flag is ignored, and the default profile for the printer is used.

185.8.26 CMS_SETPROOFINTENT = 5

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: Ignored unless CMS_ENABLEPROOFING is also set. If set on entry, and CMS_ENABLEPROOFING is also set, this flag indicates that the ProofingIntent member is to be used to initialize the Target Rendering Intent control. Otherwise, the control defaults to Picture rendering. This flag is set on exit if proofing is enabled.

185.8.27 CMS_SETRENDERINTENT = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the RenderIntent member contains the value to use to initialize

the Rendering Intent control. Otherwise, the control defaults to Picture rendering. This flag is set on exit if WCS is enabled.

185.8.28 CMS_SETTARGETPROFILE = 64

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the color profile named in the TargetProfile member is to be the initial selection in the target profile control. If the specified profile is not installed, this flag is ignored, and the default profile for the printer is used. If the printer has no default profile, then the first profile in alphabetical order will be displayed.

185.8.29 CMS_USEAPPLYCALLBACK = 256

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag indicates that the SetupColorMatching function should call the Apply event.

185.8.30 CMS_USEDESCRIPTION = 512

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: If set on entry, this flag instructs the Setup function to retrieve the profile description contained in the profile description tags (See ICC Profile Format Specification v3.4). It will insert them into the Monitor Profile, Printer Profile, Emulated Device Profile edit boxes in the Color Management common dialog box.

185.8.31 CMS_USEHOOK = 128

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flag constants.
Notes: The idle event is called regularly if this flag is set.

185.8.32 INTENT_ABSOLUTE_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain the white point. Match the colors to their nearest color in the destination gamut.

185.8.33 INTENT_PERCEPTUAL = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain contrast. Used for photographs and natural images.

185.8.34 INTENT_RELATIVE_COLORIMETRIC = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain colorimetric match. Used for graphic designs and named colors.

185.8.35 INTENT_SATURATION = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain saturation. Used for business charts and other situations in which undithered colors are required.

185.9 class WindowsICMTransformMBS

185.9.1 class WindowsICMTransformMBS

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for a color transformation.

185.9.2 Blog Entries

- MBS Real Studio Plugins, version 11.1pr11

185.9.3 Methods

185.9.4 CheckColors(InputColors() as WindowsICMColorMBS, ctInput as Integer, Results() as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CheckColors function determines whether the colors in an array lie within the output gamut of a specified transform.
Notes:

InputColors: an array of colors.
ctInput: Specifies the input color type.
Results: An array of nColors bytes that receives the results of the test.

If this function succeeds, the return value is TRUE.

If this function fails, the return value is FALSE. For extended error information, call GetLastError.

Remarks

If the input color type is not compatible with the color transform, CheckColors fails.

The function places results of the tests in the array pointed to by paResult. Each byte in the array corresponds to a COLOR element in the array pointed to by paInputColors and has an unsigned value between 0 and 255. The value 0 denotes that the color is in gamut, while a nonzero value denotes that it is out of gamut. For any integer n such that 0 <n <255, a result value of n+1 indicates that the corresponding color is at least as far out of gamut as would be indicated by a result value of n.

The out-of-gamut information in the gamut tags created in WCS use the perceptual color distance in CIECAM02, which is the mean square root in CIECAM02 Jab space. The distance in the legacy ICC

profile gamut tags is the mean square root in CIELAB space. We recommend that you use the CIECAM02 space when it is available because it provides more perceptually accurate distance metrics.

185.9.5 Constructor(LogColorSpace as WindowsICMLogColorSpaceMBS, DestProfile as WindowsICMProfileMBS, TargetProfile as WindowsICMProfileMBS, Flags as Integer)

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateColorTransform function creates a color transform that applications can use to perform color management.
Notes:

LogColorSpace: The input colorspace.

DestProfile: The profile of the destination device. The function determines whether the profile contains International Color Consortium (ICC) or Windows Color System (WCS) profile information.

TargetProfile: The profile of the target device. The function determines whether the profile contains ICC or WCS profile information.

Flags: Specifies flags to used control creation of the transform. See Remarks.

On success the handle property is not zero.

If the target profile is nil, the transform goes from the source logical color space to the destination profile. If the target profile is given, the transform goes from the source logical color space to the target profile and then to the destination profile. This allows previewing output meant for the target device on the destination device.

The values in Flags are intended as hints only. The color management module must determine the best way to use them.

Windows Vista: Three new flags have been added that can be used with dwFlags:

PRESERVEBLACK	If this bit is set, the transform engine inserts the appropriate black generation GMMP as the last GMMP in the transform sequence. This flag only works in a pure WCS transform.
SEQUENTIAL_TRANSFORM	If this bit is set, each step in the WCS processing pipeline is performed for every pixel in the image and no optimized color transform is built. This flag only works in a pure WCS transform.

Restrictions: A transform created with the SEQUENTIAL_TRANSFORM flag set may only be used in the thread on which it was created and only for one color translation call at a time. COM must be initialized prior to creating the sequential transform and must remain initialized for the lifetime of the transform object.

WCS_ALWAYS If this bit is set, even all-ICC transforms will use the WCS code path.

For details, see CMM Transform Creation Flags. All of the flags mentioned there are supported for all types of transforms, except for FAST_TRANSLATE, which only works in a pure ICC-to-ICC transform.

The CreateColorTransform function is used outside of a device context. Colors may shift when transforming from a color profile to the same color profile. This is due to precision errors. Therefore, a color transform should not be performed under these circumstances.

The B2Ax tags are required for any profile that is the target of a transform.

WCS transform support for ICC ColorSpace profiles is limited to RGB colorspace profiles. The following ICC profile types cannot be used in a CITE-processed transform, either a mixed WCS/ICC transform or an all-ICC transform with WCS_ALWAYS set:

Non-RGB ColorSpace profiles
NamedColor profiles
n-channel profiles (where n >8)
DeviceLink profiles
Abstract profiles
See also:

- 185.9.6 Constructor(Profiles() as WindowsICMProfileMBS, Intents() as Integer, Flags as Integer, indexPreferredCMM as Integer) 23076

185.9.6 Constructor(Profiles() as WindowsICMProfileMBS, Intents() as Integer, Flags as Integer, indexPreferredCMM as Integer)

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The CreateMultiProfileTransform function accepts an array of profiles or a single device link profile and creates a color transform that applications can use to perform color mapping.
Notes:

Profiles: An array of profiles to be used. The function determines whether the HPROFILEs contain International Color Consortium (ICC) or Windows Color System (WCS) profile information and processes them appropriately. When valid WCS profiles are returned by OpenColorProfile, these profiles contain the combination of DMP, CAMP, and GMMP profiles.
Intent: An array of intents to use. Each intent is one of the following values:

INTENT_PERCEPTUAL
INTENT_SATURATION
INTENT_RELATIVE_COLORIMETRIC
INTENT_ABSOLUTE_COLORIMETRIC

GMMPs are a generalization of intents. There are two possible sources of intents: the "destination" profile and the intent list parameter to CreateMultiProfileTransform. The term "destination" is not used since all but two of the profiles in the profile list parameter will serve as first destination and then source.

For more information, see Rendering Intents.

nIntents
Specifies the number of elements in the intents array: can either be 1 or the same value as nProfiles. For profile arrays that contain any WCS profiles, the first rendering intent is ignored and only nProfiles -1 elements are used for these profile arrays. The maximum number of nIntents is 10.

Flags: Specifies flags used to control creation of the transform.

indexPreferredCMM: Specifies the one-based index of the color profile that indicates what color management module (CMM) to use. The application developer may allow Windows to choose the CMM by setting this parameter to INDEX_DONT_CARE. See Using Color Management Modules (CMM) Third party CMMs are only available for ICC workflows. Profile arrays containing WCS profiles will ignore this flag. It is also ignored when only ICC profiles are used and when the WCS_ALWAYS flag is used.

On success the handle property is not zero.

If a device link profile is being used, the function will fail if Profiles contains more than one value.

The array of intents specifies how profiles should be combined. The nth intent is used for combining the nth profile in the array. If only one intent is specified, it is used for the first profile, and all other profiles are combined using Match intent.

The values in Flags are intended as hints only. The color management module must determine the best way to use them.

Windows Vista: Three new flags have been added that can be used with dwFlags:

Restrictions: A transform created with the SEQUENTIAL_TRANSFORM flag set may only be used in the thread on which it was created and only for one color translation call at a time. COM must be initialized prior to creating the sequential transform and must remain initialized for the lifetime of the transform object.

PRESERVEBLACK	If this bit is set, the transform engine inserts the appropriate black generation GMMP as the last GMMP in the transform sequence. This flag only works in a pure WCS transform.
SEQUENTIAL_TRANSFORM	If this bit is set, each step in the WCS processing pipeline is performed for every pixel in the image and no optimized color transform is built. This flag only works in a pure WCS transform.

WCS_ALWAYS If this bit is set, even all-ICC transforms will use the WCS code path.

For details, see CMM Transform Creation Flags. All of the flags mentioned there are supported for all types of transforms, except for FAST_TRANSLATE and USE_RELATIVE_COLORIMETRIC, which only work in a pure ICC-to-ICC transform.

The CreateMultiProfileTransform function is used outside of a device context. Colors may shift when transforming from a color profile to the same color profile. This is due to precision errors. Therefore, a color transform should not be performed under these circumstances.

We recommend that there be only one GMMP between a source and destination DMP. Gamut boundary descriptions (GBDs) are created from the DMP/CAMP combinations. The subsequent GMMPs use the GDBs prior to them in the processing chain until there exists a DMP/CAMP GBD next in the sequence to be used. For example, assume a sequence DMP1, CAMP1, GMMP1, GMMP2, GMMP3, DMP2, CAMP2, GMMP4, GMMP5, CAMP3, DMP3. Then GMMP1, GMMP2 use GBD1 as their source and destination. Then GMMP3 uses GBD1 as source and GBD2 as destination. Then GMMP4 uses GBD2 as source and destination. Finally GMMP5 uses GBD2 as source and GBD3 as destination. This assumes no GMMP is identical to one next to it.

For WCS profiles, we recommend that the rendering intents be set to DWORD_MAX in order to use the GMMP within the WCS profile handle. This is because the array of rendering intents takes precedence over the rendering intents or gamut mapping models specified or contained in the profiles specified by the PROFILEs. The array of rendering intents references the default GMMP for those rendering intents. Ideally, only one gamut mapping is performed between a source and destination device by setting one or the other GMMP to NULL when creating the HPROFILE with WCS profile information. Any legacy application that uses a WCS DMP will invoke a sequence of GMMPs. GDBs are chosen based on DMPs and CAMPs. For intermediate GMMP gamut boundaries, the source and destination GBDs are used.

In summary, if ubound(Intents)=0, then the first GMM is set based on the GMMP that is set as default* for the padwIntent value, unless that value is DWORD_MAX, in which case the embedded GMM information from the second profile is used (The embedded GMM information is either a GMMP or, in the case of an ICC profile, the baseline GMM corresponding to** the intent from the profile header). The remainder of the GMMs are set based on the GMMP that is set as default* for RelativeColorimetric.

If ubound(Intents) = ubound(Profiles) - 1, then each GMM is set based on the GMMP that is set as default* for the value in the padwIntent array at the corresponding index, except where padwIntent values are

DWORD_MAX. For values in the padwIntent array that are DWORD_MAX, the GMMs at corresponding positions are set based on the embedded GMM information from the second of the two profiles whose gamuts are mapped by the GMM. (Again, the embedded GMM information is either a GMMP or, in the case of an ICC profile, the baseline GMM corresponding to** the intent from the profile header).

If ubound(Intents) = ubound(Profiles), then first intent is ignored and funtion behaves as it does in the case when ubound(Intents) = ubound(Profiles) - 1.

Any other combination of padwIntents and nIntents will return an error.

- "set as default" means that the default GMMP is queried using WcsGetDefaultColorProfile with its profileManagementScope parameter set to WCS_PROFILE_MANAGEMENT_SCOPE_CURRENT_USER. This may return either current-user or system-wide defaults as described in the documentation for WcsGetDefaultColorProfile.

- "GMM corresponding to" does not mean "GMM from the GMMP set as default for". Instead it means "a constant association between ICC profile intents and baseline GMM algorithms."

WCS transform support for ICC ColorSpace profiles is limited to RGB colorspace profiles. The following ICC profile types cannot be used in a CITE-processed transform, either a mixed WCS/ICC transform or an all-ICC transform with WCS_ALWAYS set:

- Non-RGB ColorSpace profiles
- NamedColor profiles
- n-channel profiles (where n >8)
- DeviceLink profiles
- Abstract profiles

See also:

- 185.9.5 Constructor(LogColorSpace as WindowsICMLogColorSpaceMBS, DestProfile as WindowsICMProfileMBS, TargetProfile as WindowsICMProfileMBS, Flags as Integer) 23075

185.9.7 GetCMMInfo(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The GetCMMInfo function retrieves various information about the color management module (CMM) that created the specified color transform.
Notes:

Value	Meaning
CMM_WIN_VERSION	Retrieves the version of Windows targeted by the color management module (CMM).
CMM_DLL_VERSION	Retrieves the version number of the CMM.
CMM_IDENT	Retrieves the CMM signature registered with the International Color Consortium (ICC).

what: Specifies the information to be retrieved. This parameter can take one of the following constant values.

If this function succeeds, the return value is the information specified in What.
If this function fails, the return value is zero.

185.9.8 TranslateBitmapBits(SrcBits as memoryblock, InputType as Integer, Width as Integer, Height as Integer, InputRowBytes as Integer, DestBits as memoryblock, DestType as Integer, DestRowBytes as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The TranslateBitmapBits function translates the colors of a bitmap having a defined format so as to produce another bitmap in a requested format.
Notes:

SrcBits: Pointer to the bitmap to translate.
InputType: Specifies the format of the input bitmap. Use one of the BM_* constants.
Width: Specifies the number of pixels per scan line in the input bitmap.
Height: Specifies the number of scan lines in the input bitmap.
InputRowBytes: Specifies the number of bytes from the beginning of one scan line to the beginning of the next in the input bitmap; if set to zero, the function assumes that scan lines are padded so as to be DWORD-aligned.
DestBits: Pointer to the buffer in which to place the translated bitmap.
DestType: Specifies the format of the output bitmap. Use one of the BM_* constants.
DestRowBytes: Specifies the number of bytes from the beginning of one scan line to the beginning of the next in the output bitmap; if set to zero, the function assumes that scan lines should be padded to be DWORD-aligned.

If this function succeeds, the return value is TRUE.
If this function fails, the return value is FALSE.

Remarks

If the input and output formats are not compatible with the color transform, this function fails.

When either of the floating point BMFORMATs, BM_32b_scARGB or BM_32b_scRGB are used, the color data being translated should not contain NaN or infinity. NaN and infinity are not considered to represent legitimate color component values, and the result of translating pixels containing NaN or infinity is meaningless in color terms. NaN or infinity values in the color data being processed will be handled silently, and an error will not be returned.

185.9.9 TranslateColors(InputColors() as WindowsICMColorMBS, ctInput as Integer, OutputColors() as WindowsICMColorMBS, ctOutput as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The TranslateColors function translates an array of colors from the source color space to the destination color space as defined by a color transform.
Notes:

InputColors: The input color.
ctInput: Specifies the input color type.
OutputColors: The output color.
ctOutput: Specifies the output color type.

Returns true on success and false on failure.

185.9.10 TranslatePictures(InputPicture as picture, OutputPicture as picture) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The TranslateBitmapBits function translates the colors of a bitmap having a defined format so as to produce another bitmap in a requested format.
Notes:

InputPicture: input picture
OutputPicture: output picture

If this function succeeds, the return value is TRUE.
If this function fails, the return value is FALSE.

Make sure the pictures have the same size.

If the input and output formats are not compatible with the color transform, this function fails.

185.9.11 Properties

185.9.12 Handle as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal handle for the transformation.
Notes: (Read and Write property)

185.9.13 Events

185.9.14 Progress(Maximum as Integer, Current as Integer) as boolean

MBS Win Plugin, Plugin Version: 11.1, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The progress event for long operations.

185.9.15 Constants

185.9.16 BEST_MODE = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: Transform will be used for the display of the highest-quality image possible on the target device.

185.9.17 BM_10b_G3CH = & h0404

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 10 bits are used for each color channel. The 2 most significant bits are ignored.

185.9.18 BM_10b_Lab = & h0403

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 10 bits are used for each color channel. The 2 most significant bits are ignored.

185.9.19 BM_10b_RGB = 9

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 10 bits are used for each color channel. The 2 most significant bits are ignored.

185.9.20 BM_10b_XYZ = & h0401

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 10 bits are used for each color channel. The 2 most significant bits are ignored.

185.9.21 BM_10b_Yxy = & h0402

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 10 bits are used for each color channel. The 2 most significant bits are ignored.

185.9.22 BM_16b_G3CH = & h0504

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. Each of the three color channels uses 16 bits.

185.9.23 BM_16b_GRAY = & h0505

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. All other bits are ignored.

185.9.24 BM_16b_Lab = & h0503

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. Each of the three color channels uses 16 bits.

185.9.25 BM_16b_RGB = 10

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. Each of the three color channels uses 16 bits.

185.9.26 BM_16b_XYZ = & h0501

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. Each of the three color channels uses 16 bits.

185.9.27 BM_16b_Yxy = & h0502

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 16 bits are used for the gray-scale value. Each of the three color channels uses 16 bits.

185.9.28 BM_32b_scARGB = & h0602

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 128 bits per pixel. 32 bits are used for each color channel, as defined by the IEEE 32-bit floating point standard.

185.9.29 BM_32b_scRGB = & h0601

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 96 bits per pixel. 32 bits are used for each color channel, as defined by the IEEE 32-bit floating point standard.

185.9.30 BM_565RGB = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. 5 bits are used for red, 6 for green, and 5 for blue.

185.9.31 BM_5CHANNEL = & h0205

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 40 bits per pixel. 8 bits apiece are used for each channel.

185.9.32 BM_6CHANNEL = & h0206

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 48 bits per pixel. 8 bits apiece are used for each channel.

185.9.33 BM_7CHANNEL = & h0207

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 56 bits per pixel. 8 bits apiece are used for each channel.

185.9.34 BM_8CHANNEL = & h0208

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. 8 bits apiece are used for each channel.

185.9.35 BM_BGRTRIPLETS = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel colors, such as red, green, and blue, the total size is 24 bits per pixel. For single channel colors, such as gray, the total size is 8 bits per pixel.

185.9.36 BM_CMYKQUADS = & h0020

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 8 bits are used for each color channel.

185.9.37 BM_G3CHTRIPLETS = & h0204

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel values, the total size is 24 bits per pixel. For single channel gray scale, the total size is 8 bits per pixel.

185.9.38 BM_GRAY = & h0209

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. Only the 8 bit gray-scale value is used.

185.9.39 BM_KYMCQUADS = & h0305

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 8 bits are used for each color channel.

185.9.40 BM_LabTRIPLETS = & h0203

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel, L, a, and b values, the total size is 24 bits per pixel. For single channel gray scale, the total size is 8 bits per pixel.

185.9.41 BM_NAMED_INDEX = & h0405

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. Named color indices. Index numbering begins at one.

185.9.42 BM_R10G10B10A2 = & h0701

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: Only in Windows Vista.

185.9.43 BM_R10G10B10A2_XR = & h0702

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: Only in Windows Vista.

185.9.44 BM_R16G16B16A16_FLOAT = & h0703

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: Only in Windows Vista.

185.9.45 BM_RGBTRIPLETS = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel colors, such as red, green, and blue, the total size is 24 bits per pixel. For single channel colors, such as gray, the total size is 8 bits per pixel.

185.9.46 BM_S2DOT13FIXED_scARGB = & h0604

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 64 bits per pixel. Color data is stored as one 16-bit word per channel, with a fixed range of -4 to +4, inclusive. A signed format is used, with 1 bit for the sign, 2 bits for the integer portion, and 13 bits for the fractional portion.

185.9.47 BM_S2DOT13FIXED_scRGB = & h0603

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 48 bits per pixel. Color data is stored as one 16-bit word per channel, with a fixed range of -4 to +4, inclusive. A signed format is used, with 1 bit for the sign, 2 bits for the integer portion, and 13 bits for the fractional portion.

185.9.48 BM_x555G3CH = & h0104

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. G3CH color space. 5 bits per channel. The most significant bit is ignored.

185.9.49 BM_x555Lab = & h0103

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. Lab color space. 5 bits per channel. The most significant bit is ignored.

185.9.50 BM_x555RGB = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. RGB color space. 5 bits per channel. The most significant bit is ignored.

185.9.51 BM_x555XYZ = & h0101

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. Yxy color space. 5 bits per channel. The most significant bit is ignored.

185.9.52 BM_x555Yxy = & h0102

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 16 bits per pixel. Yxy color space. 5 bits per channel. The most significant bit is ignored.

185.9.53 BM_xBGRQUADS = & h0010

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 8 bits are used for each color channel. The most significant byte is ignored.

185.9.54 BM_xG3CHQUADS = & h0304

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 8 bits are used for each color channel. The most significant byte is ignored.

185.9.55 BM_xRGBQUADS = & h0008

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 32 bits per pixel. 8 bits are used for each color channel. The most significant byte is ignored.

185.9.56 BM_XYZTRIPLETS = & h0201

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel colors, such as red, green, and blue, the total size is 24 bits per pixel. For single channel colors, such as gray, the total size is 8 bits per pixel.

185.9.57 BM_YxyTRIPLETS = & h0202

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the bitmap format constants.
Notes: 24 bits per pixel maximum. For three channel, Y, x, and y values, the total size is 24 bits per pixel.

For single channel gray scale, the total size is 8 bits per pixel.

185.9.58 CMM_DESCRIPTION = 5

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: A text string that describes the color management module.

185.9.59 CMM_DLL_VERSION = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the values for the GetCMMInfo function.
Notes: Retrieves the version number of the CMM.

185.9.60 CMM_DRIVER_VERSION = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.

185.9.61 CMM_FROM_PROFILE = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.

185.9.62 CMM_IDENT = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the values for the GetCMMInfo function.
Notes: Retrieves the CMM signature registered with the International Color Consortium (ICC).

185.9.63 CMM_LOGOICON = 6

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: The logo icon for this CMM.

185.9.64 CMM_VERSION = 4

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.
Notes: Version of Windows supported.

185.9.65 CMM_WINDOWS_DEFAULT = & h57696E20

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the info selectors for GetInfo.

185.9.66 CMM_WIN_VERSION = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the values for the GetCMMInfo function.
Notes: Retrieves the version of Windows targeted by the color management module (CMM).

185.9.67 ENABLE_GAMUT_CHECKING = & h10000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: Use this transform for gamut checking.

185.9.68 FAST_TRANSLATE = & h40000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: Look up color only. Do not interpolate the color.

185.9.69 INDEX_DONT_CARE = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** A special value for index in constructor.
Notes: The application developer may allow Windows to choose the CMM by setting the indexPreferredCMM parameter to INDEX_DONT_CARE for the constructor.

185.9.70 INTENT_ABSOLUTE_COLORIMETRIC = 3

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain the white point. Match the colors to their nearest color in the destination gamut.

185.9.71 INTENT_PERCEPTUAL = 0

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain contrast. Used for photographs and natural images.

185.9.72 INTENT_RELATIVE_COLORIMETRIC = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain colorimetric match. Used for graphic designs and named colors.

185.9.73 INTENT_SATURATION = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the rendering intent constants.
Notes: Maintain saturation. Used for business charts and other situations in which undithered colors are required.

185.9.74 NORMAL_MODE = 2

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: Transform will be used for normal image display. Average image quality.

185.9.75 PRESERVEBLACK = & h100000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: If this bit is set, the transform engine inserts the appropriate black generation GMMP as the last GMMP in the transform sequence. This flag only works in a pure WCS transform.

185.9.76 PROOF_MODE = 1

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes: Transform will be used to preview the image. Low image quality.

185.9.77 SEQUENTIAL_TRANSFORM = & h80800000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.
Notes:

If this bit is set, each step in the WCS processing pipeline is performed for every pixel in the image and no optimized color transform is built. This flag only works in a pure WCS transform.
Restrictions: A transform created with the SEQUENTIAL_TRANSFORM flag set may only be used in the thread on which it was created and only for one color translation call at a time. COM must be initialized prior to creating the sequential transform and must remain initialized for the lifetime of the transform object.

185.9.78 USE_RELATIVE_COLORIMETRIC = & h20000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation.

185.9.79 WCS_ALWAYS = & h200000

MBS Win Plugin, Plugin Version: 11.1. **Function:** One of the flags passed when creating a transformation. **Notes:** If this bit is set, even all-ICC transforms will use the WCS code path.

Chapter 186

Windows Media Foundation

186.1 class MFPMediaItemMBS

186.1.1 class MFPMediaItemMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An item to playback.
Notes:

Can be loaded asynchronously before playing, so you can preload the next file while another is playing.
For Windows 7, Windows Server 2008 R2 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr4

186.1.3 Methods

186.1.4 Constructor

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The private constructor.

186.1.5 PresentationAttribute(UUID as String) as Variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the media item for a presentation attribute.
Notes:

see
https://docs.microsoft.com/windows/win32/medfound/presentation-descriptor-attributes

If needed a future MBS Plugin version could include explicit properties for some of those values.

186.1.6 StreamAttribute(index as Integer, UUID as String) as Variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the media item for a stream attribute.
Notes:

see
https://docs.microsoft.com/windows/win32/medfound/stream-descriptor-attributes

186.1.7 Properties

186.1.8 CanPause as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The media item can pause.
Notes:

If this flag is absent, the Pause method will likely fail.
(Read only property)

186.1.9 CanSeek as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The media item supports seeking.
Notes:

If this flag is absent, setting the Position property will fail.
(Read only property)

186.1.10 Duration as Double

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the duration of the media item.
Notes: (Read only property)

186.1.11 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

186.1.12 HasAudio as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether the media item contains an audio stream.
Notes:

Returns the value true if the media item contains at least one audio stream, or false otherwise.
(Read only property)

186.1.13 HasAudioSelected as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether the media item contains an audio stream.
Notes:

Returns the value true if at least one audio stream is selected, or false otherwise.

To select or deselect streams before playback starts, set StreamSelection(index).
(Read only property)

186.1.14 HasSlowSeek as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Seeking can take a long time.
Notes:

For example, the source might download content through HTTP.
(Read only property)

186.1.15 HasVideo as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether the media item contains a video stream.
Notes:

Returns the value true if the media item contains at least one video stream, or false otherwise.
(Read only property)

186.1.16 HasVideoSelected as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether the media item contains a video stream.
Notes:

Returns the value true if at least one video stream is selected, or false otherwise.

To select or deselect streams before playback starts, set StreamSelection(index).
(Read only property)

186.1.17 IsLive as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The media item represents a live data source, such as video camera.
Notes:

If playback is stopped and then restarted, there will be a gap in the content.
(Read only property)

186.1.18 IsProtected as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries whether the media item contains protected content.
Notes:

If true then the media item contains protected content. Attempting to play this media item will cause a playback error.
(Read only property)

186.1.19 Metadata as Dictionary

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets a dictionary that contains metadata for the source, such as author or title.
Notes: (Read only property)

186.1.20 NumberOfStreams as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the number of streams (audio, video, and other) in the media item.
Notes: (Read only property)

186.1.21 StartPosition as Double

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The start time for the media item.
Notes:

The adjusted start and stop times are used the next time that SetMediaItem is called with this media item. If the media item is already set on the player, the change does not happen unless you call SetMediaItem again.
(Read and Write property)

186.1.22 StopPosition as Double

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The stop time for the media item.
Notes:

The adjusted start and stop times are used the next time that SetMediaItem is called with this media item. If the media item is already set on the player, the change does not happen unless you call SetMediaItem again.
(Read and Write property)

186.1.23 Tag as Variant

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The tag value associated with this plugin object.
Notes:

Can be used freely by you.
(Read and Write property)

186.1.24 URL as String

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the URL that was used to create the media item.
Notes: (Read only property)

186.1.25 StreamSelection(index as Integer) as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Selects or deselects a stream.
Notes:

Zero-based index of the stream. To get the number of streams, call NumberOfStreams.

Set to true: The stream is selected. During playback, this stream will play.
Set to false: The stream is not selected. During playback, this stream will not play.
(Read and Write computed property)

186.2 class MFPMediaPlayerExceptionMBS

186.2.1 class MFPMediaPlayerExceptionMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The class for an error with MFPMediaPlayerMBS class.
Notes:

See ErrorCode and Message properties.
Subclass of the RuntimeException class.

186.2.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr4

186.3 class MFPMediaPlayerMBS

186.3.1 class MFPMediaPlayerMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The Windows Media Foundation Media Player class.
Notes:

An alternative movie and audio player for Xojo.
For Windows 7, Windows Server 2008 R2 or newer.

186.3.2 Blog Entries

186.3.4 Methods

186.3.5 ClearMediaItem

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Clears the current media item.
Notes:

This method stops playback and releases the player object's references to the current media item.
This method completes asynchronously. When the operation completes, the MediaItemCleared event is invoked. The event type is

186.3.6 Constructor(URL as String = """, StartPlayback as Boolean = false)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new instance of the MFPlay player object for audio only.
Notes:

URL: The string that contains the URL of a media file to open. This parameter can be empty. If the parameter is empty, StartPlayback must be false.

If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Please call this in main thread of application only.
See also:

- 186.3.7 Constructor(URL as String, StartPlayback as Boolean, control as RectControl) 23101
- 186.3.8 Constructor(URL as String, StartPlayback as Boolean, Handle as Integer) 23102
- 186.3.9 Constructor(URL as String, StartPlayback as Boolean, win as Window) 23102

186.3.7 Constructor(URL as String, StartPlayback as Boolean, control as RectControl)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new instance of the MFPlay player object.
Notes:

URL: The string that contains the URL of a media file to open. This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Control: A reference to a control where the video will appear. For audio-only playback, this parameter can be nil.

The control specified is used for the first selected video stream in the source.
If control is nil, MFPlay will not display any video.

Please call this in main thread of application only.
See also:

- 186.3.6 Constructor(URL as String = """, StartPlayback as Boolean = false) 23100
- 186.3.8 Constructor(URL as String, StartPlayback as Boolean, Handle as Integer) 23102
- 186.3.9 Constructor(URL as String, StartPlayback as Boolean, win as Window) 23102

186.3.8 Constructor(URL as String, StartPlayback as Boolean, Handle as Integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new instance of the MFPlay player object.
Notes:

URL: The string that contains the URL of a media file to open. This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Handle: A handle to a window or control where the video will appear. For audio-only playback, this parameter can be nil.

The window specified is used for the first selected video stream in the source.

If windows is nil, MFPlay will not display any video.

Please call this in main thread of application only.
See also:

- 186.3.6 Constructor(URL as String = ””, StartPlayback as Boolean = false) 23100
- 186.3.7 Constructor(URL as String, StartPlayback as Boolean, control as RectControl) 23101
- 186.3.9 Constructor(URL as String, StartPlayback as Boolean, win as Window) 23102

186.3.9 Constructor(URL as String, StartPlayback as Boolean, win as Window)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new instance of the MFPlay player object.
Notes:

URL: The string that contains the URL of a media file to open. This parameter can be empty. If the parameter is empty, StartPlayback must be false.
If this parameter is empty, you can open a URL later by calling CreateMediaItemFromURL.

StartPlayback: If true, playback starts automatically. If false, playback does not start until the application calls Play method. If URL is empty, this parameter is ignored.

Win: A reference to a window where the video will appear. For audio-only playback, this parameter can be

nil.

The window specified is used for the first selected video stream in the source.

If windows is nil, MFPlay will not display any video.

Please call this in main thread of application only.
See also:

- 186.3.6 Constructor(URL as String = "", StartPlayback as Boolean = false) 23100
- 186.3.7 Constructor(URL as String, StartPlayback as Boolean, control as RectControl) 23101
- 186.3.8 Constructor(URL as String, StartPlayback as Boolean, Handle as Integer) 23102

186.3.10 CreateMediaItemFromURL(URL as String, Sync as Boolean = true, tag as Variant = nil) as MFPMediaItemMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a media item from a URL.
Notes:

URL: String that contains the URL of a media file.
Sync: If true, the method blocks until it completes. If false, the method does not block and completes asynchronously.

If fSync is true, we return the item on success.

This method does not queue the media item for playback. To queue the item for playback, set MediaItem property.

The CreateMediaItemFromURL method can be called either synchronously or asynchronously:

If Sync is true, the method completes synchronously and returns the new item.
If Sync is false, the method completes asynchronously. When the operation completes, the MediaItemCreated event is invoked. The event call passes the new media item.

If you make multiple asynchronous calls to CreateMediaItemFromURL, they are not guaranteed to complete in the same order. Use the tag to pass data to the event.

Currently, this method raises an error if the URL specifies any of the following protocols: rtsp*, mms*, or mcast.

186.3.11 FrameStep

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Steps forward one video frame.
Notes:

This method completes asynchronously. When the operation completes, the FrameStepped event is raised.

The player object does not support frame stepping during reverse playback (that is, while the playback rate is negative).

186.3.12 GetVideoSourceRect(byref Left as Single, byref Top as Single, byref Right as Single, byref Bottom as Single)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the video source rectangle.
Notes:

This rectangle defines which portion of the video is displayed. It is specified in normalized coordinates, which are defined as follows:
The upper-left corner of the video image is (0, 0).
The lower-right corner of the video image is (1, 1).
If the source rectangle is { 0, 0, 1, 1 } , the entire image is displayed. This is the default value.

186.3.13 InsertEffect(CLSID as String, isOptional as boolean = false) as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Applies an audio or video effect to playback.
Notes:

Please pass class id of a Media Foundation transform (MFT) that implements the effect. MFTs expose the IMFTransform interface.

isOptional specifies whether the effect is optional.

Value	Meaning
True	The effect is optional. If the MFPlay player object cannot add the effect, it ignores the effect and continues playback.
False	If the MFPlay player object cannot add the effect, a playback error occurs.

Returns index of the effect, which you pass for RemoveEffect later if needed.

The effect is applied to any media items set after the method is called. It is not applied to the current media item.

For each media item, the effect is applied to the first selected stream of the matching type (audio or video). If a media item has two selected streams of the same type, the second stream does not receive the effect. The effect is ignored if the media item does not contain a stream that matches the effect type. For example, if you set a video effect and play a file that contains just audio, the video effect is ignored, although no error is raised.

The effect is applied to all subsequent media items, until the application removes the effect. To remove an effect, call RemoveEffect or RemoveAllEffects.

If you set multiple effects of the same type (audio or video), they are applied in the same order in which you call InsertEffect.

Remote Playback Optimizations

Audio and video effects might be incompatible with optimizations that are used for remote playback. The following remarks apply only to audio or video effects that are actually used during playback:
If you mark an audio or video effect as required, by setting fOptional to false, MFPlay disables remote playback optimizations.
Otherwise, if all audio/video effects are marked as optional, MFPlay might drop the effects, in order to enable remote playback optimizations.
In other words, required effects have priority over remote optimizations, but optional effects do not.

Non-audio, non-video effects do not affect remote optimizations. Also, if you insert a required effect but the source does not contain any streams of that type, remote optimizations are not disabled.

186.3.14 Pause

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Pauses playback.
Notes:

While playback is paused, the most recent video frame is displayed, and audio is silent.

This method completes asynchronously. When the operation completes, the application's Paused event is invoked.

186.3.15 Play

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Starts playback.
Notes: This method completes asynchronously. When the operation completes, the Started event is raised.

186.3.16 RemoveAllEffects

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes all effects that were added with the InsertEffect method.
Notes: The change applies to the next media item that is set on the player. The effects are not removed from the current media item.

186.3.17 RemoveEffect(Handle as Integer)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes an effect that was added with the InsertEffect method.
Notes:

Please pass the number returned by InsertEffect.

The change applies to the next media item that is set on the player. The effect is not removed from the current media item.

186.3.18 SetVideoSourceRect(Left as Single, Top as Single, Right as Single, Bottom as Single)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the video source rectangle.
Notes:

MFPlay clips the video to this rectangle and stretches the rectangle to fill the video window.

This rectangle defines which portion of the video is displayed. It is specified in normalized coordinates, which are defined as follows:
The upper-left corner of the video image is (0, 0).
The lower-right corner of the video image is (1, 1).

To display the entire image, set the source rectangle to { 0, 0, 1, 1 } . This is the default value.

MFPlay stretches the source rectangle to fill the entire video window. By default, MFPlay maintains the source's correct aspect ratio, letterboxing if needed. The letterbox color is controlled by the BorderColor property.

This method fails if no media item is currently set, or if the current media item does not contain video.
To set the video position before playback starts, call this method inside your MediaItemSet event.

186.3.19 Shutdown

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Shuts down the MFPlay player object and releases any resources the object is using.
Notes:

After this method is called, most IMFPMediaPlayer methods raise exception about shutdown. Also, any media items created from this instance of the player object are invalidated and most IMFPMediaItem methods also raise exceptions.

The player object automatically shuts itself down when its reference count reaches zero. You can use the Shutdown method to shut down the player before all of the references have been released.

186.3.20 Stop

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Stops playback.
Notes: This method completes asynchronously. When the operation completes, the Stopped event is raised.

186.3.21 UpdateVideo

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Updates the video frame.
Notes: This method makes sure the video is updated now, not later.

186.3.22 Properties

186.3.23 AspectRatioMode as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current aspect-ratio correction mode.
Notes:

This mode controls whether the aspect ratio of the video is preserved during playback.
See VideoARMode* constants.
(Read and Write property)

186.3.24 Balance as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current audio balance.
Notes:

The value can be any number in the following range (inclusive).

Value	Meaning
-1.0	The left channel is at full volume; the right channel is silent.
+1.0	The right channel is at full volume; the left channel is silent.

If the value is zero, the left and right channels are at equal volumes. The default value is zero.
(Read and Write property)

186.3.25 BorderColor as Color

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current color of the video border.
Notes:

The border color is used to letterbox the video.
(Read and Write property)

186.3.26 Duration as Double

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the playback duration of the current media item.
Notes:

This method calculates the playback duration, taking into account the start and stop times for the media item. To set the start and stop times, use StartPosition and StopPosition properties on the media item. To get the actual duration of the underlying media file, regardless of start and stop times, use Duration property on the item.

For example, suppose that you load a 30-second audio file and set the start time equal to 2 seconds and stop time equal to 10 seconds. The MFPMediaItemMBS.Duration method will return 30 seconds, but the MFPMediaPlayerMBS.Duration method will return 8 seconds.
(Read only property)

186.3.27 FastestSupportedRateForward as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the fastest supported forward playback rates.
Notes:

Playback rates are expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback speed, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.
(Read only property)

186.3.28 FastestSupportedRateReverse as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the fastest supported reverse playback rates.
Notes:

Playback rates are expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback speed, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.
(Read only property)

186.3.29 Handle as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The internal object reference.
Notes: (Read only property)

186.3.30 IdealVideoMaxHeight as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the maximum height of video size that can be displayed without significantly degrading performance or image quality.
Notes: (Read only property)

186.3.31 IdealVideoMaxWidth as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the maximum width of video sizes that can be displayed without significantly degrading performance or image quality.
Notes: (Read only property)

186.3.32 IdealVideoMinHeight as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the minimum height of video sizes that can be displayed without significantly degrading performance or image quality.
Notes: (Read only property)

186.3.33 IdealVideoMinWidth as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the minimum width of video sizes that can be displayed without significantly degrading performance or image quality.
Notes: (Read only property)

186.3.34 Looping as Boolean

MBS Win Plugin, Plugin Version: 20.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether to loop video.
Notes:

If set to true, the plugin will call Play automatically when playback ended.
(Read and Write property)

186.3.35 MediaItem as MFPMediaItemMBS

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Current media item.
Notes:

Setting the MediaItem property is asynchronous. Therefore, while set is pending, get will not return the media item that was just set. Instead, the application should implement MediaItemSet event to know when it is done.

(Read and Write property)

186.3.36 Mute as Boolean

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the audio is muted.
Notes: (Read and Write property)

186.3.37 NativeVideoAspectRateHeight as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The picture aspect ratio of the video.
Notes: (Read only property)

186.3.38 NativeVideoAspectRateWidth as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The picture aspect ratio of the video.
Notes: (Read only property)

186.3.39 NativeVideoHeight as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height of the video, in pixels.
Notes: (Read only property)

186.3.40 NativeVideoWidth as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width of the video, in pixels.
Notes: (Read only property)

186.3.41 Position as Double

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The playback position.

Notes:

If you call this method while playback is stopped, the new position takes effect after playback resumes.

This method completes asynchronously. When the operation completes, the PositionSet event is raised.
If playback was started before SetPosition is called, playback resumes at the new position. If playback was paused, the video is refreshed to display the current frame at the new position.

If you make two consecutive calls to SetPosition, and the second call is made before the first call has completed, the second call supersedes the first. The status code for the superseded call is set to false in the event data for that call. This behavior prevents excessive latency from repeated calls to SetPosition, as each call may force the media source to perform a relatively lengthy seek operation.
(Read and Write property)

186.3.42 Rate as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current playback rate.
Notes:

The playback rate is expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.
(Read and Write property)

186.3.43 SlowestSupportedRateForward as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the slowest supported forward playback rates.
Notes:

Playback rates are expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback speed, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.
(Read only property)

186.3.44 SlowestSupportedRateReverse as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Queries the slowest supported reverse playback rates.
Notes:

Playback rates are expressed as a ratio of the current rate to the normal rate. For example, 1.0 indicates normal playback speed, 0.5 indicates half speed, and 2.0 indicates twice speed. Positive values indicate forward playback, and negative values indicate reverse playback.
(Read only property)

186.3.45 State as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The current playback state of the MFPlay player object.
Notes:

See State* constants.

This property can be read after the player object has been shut down.

Many of the player methods complete asynchronously. While an asynchronous operation is pending, the current state is not updated until the operation completes. When the operation completes, the application receives an event.
(Read only property)

186.3.46 VideoWindow as Integer

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gets the window where the video is displayed.
Notes:

Returns HWND as integer.
(Read only property)

186.3.47 Volume as Single

MBS Win Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The audio volume.
Notes:

Volume is expressed as an attenuation level, where 0.0 indicates silence and 1.0 indicates full volume (no attenuation).

If you call this method before playback starts, the setting is applied after playback starts.
This method does not change the master volume level for the player's audio session. Instead, it adjusts the per-channel volume levels for audio stream(s) that belong to the current media item. Other streams in the

audio session are not affected.
(Read and Write property)

186.3.48 Events

186.3.49 Ended

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Playback has ended.
Notes: The player object sends this event when playback reaches the end of the media file.

186.3.50 Error

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A playback error has occurred.

186.3.51 FrameStepped

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A frame-step operation has completed.
Notes: This event is sent when the FrameStep method completes.

186.3.52 MediaItemCleared

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The current media item was cleared.
Notes: This event is sent when the ClearMediaItem method completes.

186.3.53 MediaItemCreated(MediaItem as MFPMediaItemMBS, Tag as variant)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A new media item was created.
Notes: This event is sent when the CreateMediaItemFromURL method completes.

186.3.54 MediaItemSet

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** A media item is ready for playback.
Notes: This event is sent when the SetMediaItem method completes.

186.3.55 Paused

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Playback has paused.
Notes: This event is sent when the Pause method completes.

186.3.56 PositionSet

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The MFPlay player object has seeked to a new playback position.
Notes: This event is sent when the Position setter completes.

186.3.57 RateSet(rate as Single)

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The playback rate has changed.
Notes: This event is sent when the rate setter completes.

186.3.58 Started

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Playback has started.
Notes: This event is sent when the Play method completes.

186.3.59 Stopped

MBS Win Plugin, Plugin Version: 20.0, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Playback has stopped.
Notes: This event is sent when the Stop method completes.

186.3.60 Constants

186.3.61 StateEmpty = 0

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the player states.
Notes: Initial state. No media items have been set on the player object.

186.3.62 StatePaused = 3

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the player states.
Notes: Playback is paused.

186.3.63 StatePlaying = 2

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the player states.
Notes: Playback is in progress.

186.3.64 StateShutdown = 4

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the player states.
Notes: The player object was shut down. This state is returned after the application calls Shutdown method.

186.3.65 StateStopped = 1

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the player states.
Notes: Playback is stopped.

186.3.66 VideoARModeMask = 7

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the aspect ratio modes.
Notes: Bitmask to validate flag values. This value is not a valid flag.

186.3.67 VideoARModeNone = 0

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the aspect ratio modes.
Notes: Do not maintain the aspect ratio of the video. Stretch the video to fit the output rectangle.

186.3.68 VideoARModeNonLinearStretch = 4

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the aspect ratio modes.
Notes:

Apply a non-linear horizontal stretch if the aspect ratio of the destination rectangle does not match the aspect ratio of the source rectangle.

The non-linear stretch algorithm preserves the aspect ratio in the middle of the picture and stretches (or shrinks) the image progressively more toward the left and right. This mode is useful when viewing 4:3 content full-screen on a 16:9 display, instead of pillar-boxing. Non-linear vertical stretch is not supported, because the visual results are generally poor.

This mode may cause performance degradation.

If this flag is set, you must also set the VideoARModePreservePixel and VideoARModePreservePicture flags.

186.3.69 VideoARModePreservePicture = 1

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the aspect ratio modes.
Notes: Preserve the aspect ratio of the video by letterboxing or within the output rectangle.

186.3.70 VideoARModePreservePixel = 2

MBS Win Plugin, Plugin Version: 20.0. **Function:** One of the aspect ratio modes.
Notes:

Correct the aspect ratio if the physical size of the display device does not match the display resolution. For example, if the native resolution of the monitor is 1600 by 1200 (4:3) but the display resolution is 1280 by 1024 (5:4), the monitor will display non-square pixels.

If this flag is set, you must also set the VideoARModePreservePicture flag.

Chapter 187

Windows Mutex

187.1 class WindowsMutexMBS

187.1.1 class WindowsMutexMBS

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for a mutex.
Notes:

As a mutex must have a unique name you can use this class to find out if an application is allready running. Try to create a mutex with an unique name and if it allready exists your application was launched twice.

187.1.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr2

187.1.3 Methods

187.1.4 close

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

187.1.5 Create(name as string)

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new mutex.
Notes:

The name must be unique and should not contain a backslash.
Use only ASCII strings for this.
Lasterror is set.

187.1.6 Lock

MBS Win Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Locks the
Notes:

Blocks until we got the lock.
Lasterror is set.

187.1.7 Open(name as string)

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Trys to open a mutex with the given name.
Notes:

Fails if the mutex does not exist.
Lasterror is set.

187.1.8 TryLock as Boolean

MBS Win Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Tries to lock the mutex.
Notes:

Returns true if we got the lock or false if not.
Lasterror is set.

187.1.9 Unlock

MBS Win Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Unlocks the mutex.

Notes: Lasterror is set.

187.1.10 Properties

187.1.11 Handle as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The handle of the Mutex for use with Declares.
Notes: (Read and Write property)

187.1.12 Lasterror as Integer

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The last error code reported.
Notes:

A windows error code.
Or 0 for okay and -1 for "Function not available or parameters wrong."
(Read and Write property)

187.1.13 Name as String

MBS Win Plugin, Plugin Version: 3.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The name used to create or open the mutex.
Notes: (Read only property)

Chapter 188

Windows Registry

188.1 class RegistryFileTypeMBS

188.1.1 class RegistryFileTypeMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** An easy way to register an document icon for Windows.
Notes:

You set up the properties of this class and than you call create.
I suggest that you do it like QuickTime or Winzip. Ask the user on first run if he want's your application to register its file types.
And also provide two buttons in the Preferencesdialog to register or unregister the types.

This class works on Windows 7 only if you run the app as administrator.

This function may fail to run if permissions are denied.
Or it may only affect the shadow registry used by Windows to protect itself from having unauthorized apps editing the real registry.

188.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

- Plugin notes

188.1.3 Methods

188.1.4 Create as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates this file type.
Example:

```
dim r as RegistryFileTypeMBS
' set properties for r
dim errorcode as Integer
errorcode=r.create
```

Notes:

Returns:

-1 - Run on Mac OS
0 - OK
1 - Failed to create main extension key.
2 - Failed to create the description key for file type.
3 - Failed to create the key for the icon.
4 - Failed to create the key for the open description.
5 - Required parameters not provided.

This function may fail to run if permissions are denied.
Or it may only affect the shadow registry used by Windows to protect itself from having unauthorized apps editing the real registry.

188.1.5 Remove as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes this file type.
Example:

```
dim r as RegistryFileTypeMBS
dim errorcode as Integer

errorcode=r.remove
```

Notes:

Returns:

-1 - Run on Mac OS or parameters bad.
0 - OK
x - A Windows error code like 5 for permissions denied.

Note: The return values changed in MBS Plugin 3.2 to now return Windows error codes!

This function may fail to run if permissions are denied.
Or it may only affect the shadow registry used by Windows to protect itself from having unauthorized apps editing the real registry.

188.1.6 Properties

188.1.7 AppFile as Folderitem

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The application to launch to open the file.
Example:

```
dim r as new RegistryFileTypeMBS
r.Appfile=app.applicationfilembs // it is my file ;-)
```

Notes: (Read and Write property)

188.1.8 Description as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The description for this file type.
Example:

```
dim r as new RegistryFileTypeMBS
r.description="Monkeybread File"
```

Notes:

The text to show in the explorer in column view.
(Read and Write property)

188.1.9 Extension as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The extension for this file type.
Example:

```
dim r as new RegistryFileTypeMBS

r.extension=".MBS"
```

Notes:

The extension should start with a dot follow by 3 uppercase letters and it should be unique. But as there are more file types than combinations of 3 letters this may be difficult...
(Read and Write property)

188.1.10 FileType as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A internal unique signature for this file type.
Example:

```
dim r as new RegistryFileTypeMBS

r.FileType="MBSFile"
```

Notes:

May contain any character except chr(0) and should be ANSI encoded.
(Read and Write property)

188.1.11 Iconfile as Folderitem

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The file with the icon.
Example:

```
dim r as new RegistryFileTypeMBS

r.iconfile=app.applicationfileMBS // it is my file ;-)
```

Notes:

You can get the icon out of your application (ID 0 is the default icon).
But you can also use DLL files like "Shell32.dll" for some nice icons.
Last but not least you can use an ICO file which Iconographer can create for you from your Mac Icons.
(Read and Write property)

188.1.12 IconID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ID of the Icon to use.
Example:

```
dim r as new RegistryFileTypeMBS

r.iconid=3
```

Notes:

Your icon file may contain more than one icon. Here you can specify which one to use. First is ID 0.
(Read and Write property)

188.1.13 OpenDescription as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The text to show in the context menu for Open.
Example:

```
dim r as new RegistryFileTypeMBS

r.OpenDescription="Open MBS file"
```

Notes:

If you don't provide an OpenDescription you'll get "Open".
Here you can describe the default action.
e.g. Stuffit Expander could say "Expand file".
(Read and Write property)

188.2 class RegistryKeyMBS

188.2.1 class RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you access to a Windows Registry Key.

188.2.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 17.4
- MBS Xojo Plugins, version 17.4pr6
- MBS REALbasic Plugins, version 10.4pr11

188.2.3 Methods

188.2.4 CopyTree(keyname as string, Dest as RegistryKeyMBS) as boolean

MBS Win Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Copies the specified registry key, along with its values and subkeys, to the specified destination key.
Notes: Returns true on success and false on failure.

188.2.5 CreateKey(name as string, Use64bitRegistry as boolean = false) as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a new subkey.
Notes:

If the key is allready present it is just opened.
Returns a registry key or nil on any error.

Use64bitRegistry: Pass true to create key in 64 bit view of the Registry instead of 32 bit view.

188.2.6 Delete(keyname as string) as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes the specified subkey key.
Notes:

Windows 95: The Delete function deletes a subkey and all its descendants.
Windows NT: The Delete function deletes the specified subkey. The subkey to be deleted must not have subkeys.

With plugin version 3.2 the NT behavior is worked around to match the Windows 95 behavior. So all sub keys are deleted!

188.2.7 DeleteTree(keyname as string) as boolean

MBS Win Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes the subkeys and values of the specified key recursively.
Example:

```
dim t as RegistryKeyMBS = RegistryMBS.CurrentUser

// create some keys
dim n as RegistryKeyMBS = t.CreateKey("Hello")
dim w as RegistryKeyMBS = n.CreateKey("World")

w.Value("Test").asString = "Hello"

break // see in regedit

// delete it
if t.DeleteTree("Hello") then
MsgBox "deleted. ok"
else
MsgBox "delete failed"
end if
```

Notes: Returns true on success and false on failure.

188.2.8 Flush

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Writes all the attributes of the specified open key into the RegistryMBS.

188.2.9 Item(index as Integer) as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the key at the specified index.
Notes:

May return nil on any error like missing access rights.
Some keys can't be opened, but ItemName() may return the name of the key.
See also:

- 188.2.10 Item(name as string) as RegistryKeyMBS 23130

188.2.10 Item(name as string) as RegistryKeyMBS

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the key with the specified name.
Notes:

May return nil on any error like missing access rights.
Some keys can't be opened, but ItemName() may return the name of the key.
See also:

- 188.2.9 Item(index as Integer) as RegistryKeyMBS 23130

188.2.11 ItemName(index as Integer) as string

MBS Win Plugin, Plugin Version: 6.3, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name of the key at the specified index.
Notes: May return "" on any error.

188.2.12 Value(index as Integer) as RegistryValueMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value at the specified index.
See also:

- 188.2.13 Value(name as string) as RegistryValueMBS 23130

188.2.13 Value(name as string) as RegistryValueMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value item with the specified name.
Notes:

The value must not exists. So use this function to make a new key.
Use an empty name (e.g. "") for the default key value.

This method was named ValueItem in plugin version before 10.4.
See also:

- 188.2.12 Value(index as Integer) as RegistryValueMBS 23130

188.2.14 ValueName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name of the value with the given index.
Notes: May return "" on any error.

188.2.15 Properties

188.2.16 ItemCount as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the count of subkeys.
Example:

```
dim i,c as Integer
dim key as RegistryKeyMBS // the registry item

c=key.ItemCount-1
for i=0 to c
// do something
next
```

Notes:

This property calls a System function to get the value. So save it in a local variable instead of calling it in a for loop. See the example.
(Read only property)

188.2.17 name as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name of the Key.

Notes: (Read only property)

188.2.18 ValueCount as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the count of values.
Example:

```
dim i,c as Integer
dim key as RegistryKeyMBS

c=key.ValueCount
for i=1 to c
// do something
next
```

Notes:

This property calls a System function to get the value. So save it in a local variable instead of calling it in a for loop. See the example.
(Read only property)

188.3 class RegistryMBS

188.3.1 class RegistryMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you access to the Windows Registry.
Notes: Please send me an email if you need some functions which are now not included.

188.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr10
- MBS REALbasic Plugins, version 10.4pr11

188.3.3 Methods

188.3.4 classesRoot as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the ClassesRoot Tree.

188.3.5 CurrentConfig as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the CurrentConfig Tree.

188.3.6 CurrentUser as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the CurrentUser Tree.

188.3.7 getBinaryValue(keypath as string,valuename as string, Use64bitRegistry as boolean = false) as Memoryblock

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you a Memoryblock of the value called valuename in the key found at keypath.
Example:

```
const path="HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion"
dim r as new RegistryMBS
msgBox "This OS is: "+r.getBinaryValue(path, "ProductName").cstring(0)
```

Notes:

Returns nil on any error.
Use64bitRegistry: Pass true to create key in 64 bit view of the Registry instead of 32 bit view.

188.3.8 getStringValue(keypath as string,valuename as string, Use64bitRegistry as boolean = false) as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you a String of the value called valuename in the key found at keypath.
Example:

```
const path="HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion"
dim r as new RegistryMBS
msgBox "This OS is: "+r.getStringValue(path, "ProductName")
```

Notes:

Returns "" on any error.
Use64bitRegistry: Pass true to create key in 64 bit view of the Registry instead of 32 bit view.

188.3.9 Key(keypath as string, Use64bitRegistry as boolean = false) as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the given path of a key.
Example:

```
const path="HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion"
dim r as new RegistryMBS
msgBox r.Key(path).Name
```

Notes:

If you need you can recreate this function in Xojo code to have some error checking. This function here will return nil on any error.

Use64bitRegistry: Pass true to create key in 64 bit view of the Registry instead of 32 bit view.

188.3.10 LocalMachine as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the LocalMachine Tree.

188.3.11 PerformanceData as RegistryKeyMBS

MBS Win Plugin, Plugin Version: 10.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the PerformanceData Tree.

188.3.12 Users as RegistryKeyMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you an RegistryKeyMBS object for the Users Tree.

188.4 class RegistryValueMBS

188.4.1 class RegistryValueMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Gives you access to a value of a RegistryMBS Key.

188.4.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr6
- MBS REALbasic Plugins, version 10.4pr11

188.4.3 Methods

188.4.4 Delete as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Deletes this value.
Notes: The RegistryValueMBS object should be destroyed after deleting.

188.4.5 SetBinaryMem(typ as Integer,data as Memoryblock)

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the value to the content of the memoryblock.
Notes:

Type may be one of this values:

188.4.6 SetBinaryStr(typ as Integer,data as String)

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Sets the value to the content of the string.
Notes:

Type may be one of this values:

0	No value type
1	Nul terminated string
2	Nul terminated string (with environment variable references)
3	Free form binary
4	32-bit number (LittleEndian)
5	32-bit number (BigEndian)
6	Symbolic Link (unicode)
7	Multiple Unicode strings
8	Resource list in the resource map
9	Resource list in the hardware description
10	Resource requirements list
11	64-bit number

188.4.7 Properties

188.4.8 asBinary as Memoryblock

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value as a memoryblock.
Notes:

Can also be used to set the value.
(Read and Write property)

188.4.9 asBinaryString as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value as a string with binary content.
Notes:

This string may include chr(0).
Can also be used to set the value.
(Read and Write property)

188.4.10 asLong32 as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value as a 32bit integer.
Notes:

0	No value type
1	Nul terminated string
2	Nul terminated string (with environment variable references)
3	Free form binary
4	32-bit number (LittleEndian)
5	32-bit number (BigEndian)
6	Symbolic Link (unicode)
7	Multiple Unicode strings
8	Resource list in the resource map
9	Resource list in the hardware description
10	Resource requirements list
11	64-bit number

Can also be used to set the value.
(Read and Write property)

188.4.11 asLong64 as Int64

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value as a 64bit integer.
Example:

```
dim v as RegistryValueMBS
v.aslong64=v.aslong64+1 // add one
```

Notes:

Can also be used to set the value.
(Read and Write property)

188.4.12 asString as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the value as a string.
Notes:

Can also be used to set the value.
(Read and Write property)

188.4.13 isBinary as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the value is binary data.
Notes: (Read only property)

188.4.14 isLong32 as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the value is a 32 bit integer.
Notes: (Read only property)

188.4.15 isLong64 as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the value is a 64 bit Integer.
Notes: (Read only property)

188.4.16 isString as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns true if the value is a string.
Notes: (Read only property)

188.4.17 name as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the name of the Value.
Notes: (Read only property)

188.4.18 size as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the size of this value.
Notes: (Read only property)

188.4.19 type as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Returns the type of the value.
Notes:

Type may be one of this values:

0	No value type
1	Nul terminated string
2	Nul terminated string (with environment variable references)
3	Free form binary
4	32-bit number (LittleEndian)
5	32-bit number (BigEndian)
6	Symbolic Link (unicode)
7	Multiple Unicode strings
8	Resource list in the resource map
9	Resource list in the hardware description
10	Resource requirements list
11	64-bit number

(Read only property)

Chapter 189

Windows Shortcuts

189.1 class WindowsInternetShortcutMBS

189.1.1 class WindowsInternetShortcutMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to create internet shortcuts on Windows.
Example:

```
# if targetwin32
dim w as WindowsInternetShortcutMBS

w=new WindowsInternetShortcutMBS

w.URL="http://www.monkeybreadsoftware.de"
w.Command=3
w.Icon=windowsSystemFolder.child("shell32.dll")
w.iconID=41
w.Location=SpecialFolder.Desktop.child("A new link to explorer.lnk")
w.Working=volume(0)

if w.CreateInternetShortCut then
if w.AddInternetShortCutIcon then
msgBox "Shortcut created."
else
msgBox "Failed to add icon."
end if
else
msgBox "Failed to create shortcut."
end if
# endif
```

189.1.2 Methods

189.1.3 CreateInternetShortCut as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a shortcut on the specified location.
Notes: Version 10.1: Now adds the icon, too.

189.1.4 Properties

189.1.5 Command as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The code for the showing of the application.
Notes:

Use e.g. 3 for full screen.
(Read and Write property)

189.1.6 Icon as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The location of the icon file.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.1.7 IconID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ID of the icon inside the icon file.
Notes: (Read and Write property)

189.1.8 Location as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The location where the shortcut is created or modified.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.1.9 url as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The URL where the shortcut will point to.
Notes: (Read and Write property)

189.1.10 WorkingDirectory as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The working directory for the browser.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.2 class WindowsShortCutMBS

189.2.1 class WindowsShortCutMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to create shortcuts on Windows.
Example:

```
dim w as WindowsShortCutMBS

w = new WindowsShortCutMBS

w.Arguments = ""
w.Command = 3
w.Icon = specialfolder.system.child("shell32.dll").NativePath
w.iconID = 41
w.Location = SpecialFolder.Desktop.child("A new link to explorer.lnk").NativePath
w.Target = SpecialFolder.Windows.child("explorer.exe").NativePath
w.WorkingDirectory = volume(0).NativePath

if w.CreateShortCut then
msgBox "Shortcut created."
else
msgBox "Failed to create shortcut."
end if
```

189.2.2 Methods

189.2.3 CreateShortCut as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a shortcut on the specified location.
Notes:

Returns true on success and false on any error.
Version 10.1: Now adds the icon, too.

189.2.4 ResolveShortCut(DisableGUI as boolean=false, DisableSearch as boolean=false) as boolean

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Resolves the shortcut.

Notes:

Fills the properties target, description, Argument, WorkingDirectory, Icon and IconID.
Returns false on any error.

Parameters added in plugin version 7.4:

DisableGUI:
Do not display a dialog box if the link cannot be resolved. The time-out duration will be set to the default value of 3,000 milliseconds (3 seconds).

DisableSearch:
Do not execute the search heuristics.

For more details check this page in Microsoft's documentation:
http://msdn.microsoft.com/en-us/library/bb774952(v=vs.85).aspx

189.2.5 Properties

189.2.6 Arguments as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Arguments to the application which is linked to the shortcut.
Notes: (Read and Write property)

189.2.7 Command as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The code for the showing of the application.
Notes:

Constants which may be useful:

(Read and Write property)

189.2.8 Description as String

MBS Win Plugin, Plugin Version: 3.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The description of the shortcut.

SW_HIDE	= 0
SW_NORMAL	= 1
SW_SHOWMINIMIZED	= 2
SW_SHOWMAXIMIZED	= 3
SW_MAXIMIZE	= 3
SW_SHOWNOACTIVATE	= 4
SW_SHOW	= 5
SW_MINIMIZE	= 6
SW_SHOWMINNOACTIVE	= 7
SW_SHOWNA	= 8
SW_RESTORE	= 9
SW_SHOWDEFAULT	= 10
SW_FORCEMINIMIZE	= 11

Notes: (Read and Write property)

189.2.9 Icon as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The location of the icon file.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.2.10 IconID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The ID of the icon inside the icon file.
Notes: (Read and Write property)

189.2.11 Location as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The location where the shortcut is created or modified.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.2.12 ParentWindow as Window

MBS Win Plugin, Plugin Version: 3.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The parent window used when a dialog must be opened.
Notes: (Read and Write property)

189.2.13 Target as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The target where the shortcut will point to.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

189.2.14 WorkingDirectory as String

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The working directory of this shortcut.
Notes:

(Changed from Folderitem to String in plugin version 3.4)
(Read and Write property)

Chapter 190

Windows System Tray

190.1 Globals

190.1.1 HIconFromFileMBS(IconFile as Folderitem, IconID as Integer) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a Windows Icon Handle for an icon loaded fromt he given icon file.
Notes:

What image depths are used and supported depends on the Windows version.
IconID = 0 points to the first icon in the file.
Returns 0 on failure.

The icon file can be .ico, .exe, .dll or similar files with windows icon resource.
This function is useful for declares where you have to pass a HICON parameter.

190.1.2 HIconFromPicturesMBS(Icon as picture, Mask as picture) as Integer

MBS Win Plugin, Plugin Version: 11.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Creates a Windows Icon Handle with the given pictures.
Notes:

What image depths are used and supported depends on the Windows version.
Returns 0 on failure.
This function is useful for declares where you have to pass a HICON parameter.

190.2 class WindowsSystemTrayMBS

190.2.1 class WindowsSystemTrayMBS

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class to create an item in the system tray.

190.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr10
- MBS REALbasic Plugins, version 10.4pr8

190.2.3 Methods

190.2.4 Add as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Adds the item to the system tray.
Example:

```
dim e as WindowsSystemTrayMBS // your system tray object

if e.add then
list.addrow "Added icon."
else
list.addrow "Failed to add icon."
end if
```

Notes:

Returns true if successfull.
You can change the Icon& Mask or the Tooltip string.

190.2.5 Available as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the system tray functions are available.
Notes:

Returns true on Windows 95 and newer.
Returns false on Mac OS and Linux.

190.2.6 Modify as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Modifies the item to the system tray.
Notes:

Returns true if successfull.
You can change the Icon& Mask or the Tooltip string.

190.2.7 Remove as boolean

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Removes the item from the system tray.
Notes: Returns true if successfull.

190.2.8 SetFocus as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** This method resets focus back to the system try area.
Notes: May be useful to call as cleanup after some context menu was shown.

190.2.9 SetIconFile(IconFile as Folderitem, IconID as Integer) as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Loads an icon from the given file.
Example:

```
dim wst as WindowsSystemTrayMBS // your system tray

call wst.SetIconFile(file,1)
```

Notes:

Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.
IconID = 0 points to the first icon in the file.

The icon file can be .ico, .exe, .dll or similar files with windows icon resource.

190.2.10 SetIconPicture(Icon as picture, Mask as picture) as boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Loads the icon from the given picture with mask.
Example:

```
dim myicon as picture // your picture
dim mymask as picture // the mask for the picture
dim wst as WindowsSystemTrayMBS // your system tray

call wst.SetIconPicture(myicon, mymask)
```

Notes:

Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.

190.2.11 Properties

190.2.12 BalloonMode as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The balloon mode.
Example:

```
dim s as WindowsSystemTrayMBS

s.BalloonText = "The text for the balloon."
s.BalloonTitle = "The title for the balloon"
s.BalloonMode = 0 // Error mode
```

Notes:

0 is Error, 1 is Info and 2 is warning.
(Read and Write property)

190.2.13 BalloonText as string

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The balloon text to show.
Example:

```
dim wst as WindowsSystemTrayMBS // your system tray object

wst.BalloonTitle="Warning"
wst.BalloonText="You have not clicked on me the last 10 minutes."
call wst.modify
```

Notes:

If BalloonTitle or BalloonText are not empty the balloon is shown when you call modify.
(Read and Write property)

190.2.14 BalloonTimeout as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The balloon timeout in milliseconds.
Example:

```
dim s as WindowsSystemTrayMBS

s.BalloonText = "The text for the balloon."
s.BalloonTitle = "The title for the balloon"
s.BalloonMode = 0 // Error mode
s.BalloonTimeout = 30000
```

Notes:

A value between 10000 and 30000.
Note that Timeout is valid only in Windows 2000 and Windows XP.
(Read and Write property)
See also:

- 190.2.23 BalloonTimeout(id as Integer, MouseX as Integer, MouseY as Integer) 23156

190.2.15 BalloonTitle as string

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The title of the balloon tooltip.

Example:

```
dim s as WindowsSystemTrayMBS

s.BalloonText = "The text for the balloon."
s.BalloonTitle = "The title for the balloon"
s.BalloonMode = 0 // Error mode
```

Notes:

If BalloonTitle or BalloonText are not empty the balloon is shown when you call modify.
(Read and Write property)

190.2.16 IconHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The icon handle currently used for the tray object.
Notes:

zero if no handle is there.
(Read and Write property)

190.2.17 ID as Integer

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** If you have more than one icon in the system tray, use this ID to see which one is referred to inside an event.
Notes: (Read and Write property)

190.2.18 Tooltip as string

MBS Win Plugin, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The help string for the tooltip.
Example:

```
dim e as WindowsSystemTrayMBS // global

e=new WindowsSystemTrayMBS
e.ID=12345678
e.Tooltip="some text"
e.BalloonText="some text"
e.BalloonTitle="some text"
e.BalloonMode=0
```

Notes:

Limited to 63 characters.
(Read and Write property)

190.2.19 UsingNewEvents as Boolean

MBS Win Plugin, Plugin Version: 7.4, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** Whether the new events are enabled.
Notes:

The plugin tries to enable new events if possible. That will only work on Windows 2000 or newer.

New events are:
BalloonTimeout
PopupOpen
ContextMenu
BalloonHide
KeySelected
BalloonUserClick
BalloonShow
Selected
(Read only property)

190.2.20 Events

190.2.21 BalloonHide(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The balloon has been hidden.

190.2.22 BalloonShow(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The balloon was shown.
Notes: You will get one balloon event when it disappears: BalloonHide, BalloonUserClick or BalloonTimeout.

190.2.23 BalloonTimeout(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The balloon was removed because of a timeout.
See also:

- 190.2.14 BalloonTimeout as Integer 23153

190.2.24 BalloonUserClick(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The user clicked on the balloon to make it away.

190.2.25 ContextMenu(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** You should show a context menu.

190.2.26 KeySelected(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The system tray item was selected by the keyboard.

190.2.27 MouseLeftButtonDoubleClick(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the left mouse button is pressed for a double click on the system tray icon.

190.2.28 MouseLeftButtonDown(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the left mouse button is pressed on the system tray icon.

190.2.29 MouseLeftButtonUp(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the left mouse button is released on the system tray icon.

190.2.30 MouseMiddleButtonDoubleClick(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the middle mouse button is pressed for a double click on the system tray icon.

190.2.31 MouseMiddleButtonDown(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the middle mouse button is pressed on the system tray icon.

190.2.32 MouseMiddleButtonUp(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the middle mouse button is released on the system tray icon.

190.2.33 MouseMove(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the mouse is moved over the system tray icon.

190.2.34 MouseRightButtonDoubleClick(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the right mouse button is pressed for a double click on the system tray icon.

190.2.35 MouseRightButtonDown(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the right mouse button is pressed on the system tray icon.

190.2.36 MouseRightButtonUp(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** Called if the right mouse button is pressed on the system tray icon.

190.2.37 PopupOpen(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** You should show a popup menu on the mouse position.

190.2.38 Selected(id as Integer, MouseX as Integer, MouseY as Integer)

MBS Win Plugin, Plugin Version: 7.4, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Function:** The system tray item was selected.

Chapter 191

Windows Taskbar State

191.1 class WindowsTaskbarStateMBS

191.1.1 class WindowsTaskbarStateMBS

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** A class for information about the settings for the Windows taskbar.

191.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.2pr6

191.1.3 Properties

191.1.4 AlwaysOnTop as Boolean

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** True if the taskbar should be always on the top.
Notes:

Value is false on any error.
Settable in plugin version 12.2 and newer.
(Read and Write property)

191.1.5 AutoHide as Boolean

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** True if the taskbar automatically hides itself.
Notes:

Value is false on any error.
Settable in plugin version 12.2 and newer.
(Read and Write property)

191.1.6 Bottom as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The bottom value of the taskbar dimensions.
Notes:

Value is 0 on any error.
(Read and Write property)

191.1.7 Height as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The height value of the taskbar dimensions.
Notes:

Value is 0 on any error.
(Read and Write property)

191.1.8 Left as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The left value of the taskbar dimensions.
Notes:

Value is 0 on any error.
(Read and Write property)

191.1.9 Right as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The right value of the taskbar dimensions.

Notes:

Value is 0 on any error.
(Read and Write property)

191.1.10 Top as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The top value of the taskbar dimensions.
Notes:

Value is 0 on any error.
(Read and Write property)

191.1.11 Width as Integer

MBS Win Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: No, Win: Yes, Linux: No. **Function:** The width value of the taskbar dimensions.
Notes:

Value is 0 on any error.
(Read and Write property)

Chapter 192

WiringPi

192.1 module WiringPiMBS

192.1.1 module WiringPiMBS

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The module to work with wiring pi library.
Deprecated: This item is deprecated and should no longer be used. **Notes:** Deprecated as underlaying C library is deprecated.

192.1.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1
- MBS Xojo / Real Studio Plugins, version 15.3pr2

192.1.3 Methods

192.1.4 analogRead(pin as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns the value read on the supplied analog input pin.
Notes: You will need to register additional analog modules to enable this function for devices such as the Gertboard, quick2Wire analog board, etc.

192.1.5 analogWrite(pin as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This writes the given value to the supplied analog pin.
Notes: You will need to register additional analog modules to enable this function for devices such as the Gertboard.

192.1.6 delay(HowLong as UInt32)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This causes program execution to pause for at least howLong milliseconds.
Notes: Due to the multi-tasking nature of Linux it could be longer. Note that the maximum delay is an unsigned 32-bit integer or approximately 49 days.

192.1.7 delayMicroseconds(HowLong as UInt32)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This causes program execution to pause for at least howLong microseconds.
Notes:

Due to the multi-tasking nature of Linux it could be longer. Note that the maximum delay is an unsigned 32-bit integer microseconds or approximately 71 minutes.

Delays under 100 microseconds are timed using a hard-coded loop continually polling the system time, Delays over 100 microseconds are done using the system nanosleep() function – You may need to consider the implications of very short delays on the overall performance of the system, especially if using threads.

192.1.8 digitalRead(pin as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This function returns the value read at the given pin.
Notes: It will be kHIGH or kLOW (1 or 0) depending on the logic level at the pin.

192.1.9 digitalWrite(pin as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Writes the value kHIGH or kLOW (1 or 0) to the given pin which must have been previously set as an output.

Notes: WiringPi treats any non-zero number as kHIGH, however 0 is the only representation of kLOW.

192.1.10 digitalWriteByte(value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This writes the 8-bit byte supplied to the first 8 GPIO pins.
Notes: It's the fastest way to set all 8 bits at once to a particular value, although it still takes two write operations to the Pi's GPIO hardware.

192.1.11 gpioClockSet(pin as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sets the clock.

192.1.12 I2CRead(fd as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device read.
Notes:

Some devices present data when you read them without having to do any register transactions.
If the return value is negative then an error has happened and you should consult errno.

192.1.13 I2CReadReg16(fd as Integer, reg as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device read.
Notes:

Some devices present data when you read them without having to do any register transactions.
Read a 16-bit value from the device register indicated.

If the return value is negative then an error has happened and you should consult errno.

192.1.14 I2CReadReg8(fd as Integer, reg as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device read.

Notes:

Some devices present data when you read them without having to do any register transactions.
Read an 8-bit value from the device register indicated.

If the return value is negative then an error has happened and you should consult errno.

192.1.15 I2CSetup(devId as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This initialises the I2C system with your given device identifier.
Notes:

The ID is the I2C number of the device and you can use the i2cdetect program to find this out. I2CSetup() will work out which revision Raspberry Pi you have and open the appropriate device in /dev.

The return value is the standard Linux filehandle, or -1 if any error – in which case, you can consult errno as usual.

E.g. the popular MCP23017 GPIO expander is usually device Id 0x20, so this is the number you would pass into wiringPiI2CSetup().

192.1.16 I2CSetupInterface(device as string, devId as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This initialises the I2C system with your given device identifier and name.

192.1.17 I2CWrite(fd as Integer, Data as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device write.
Notes:

Some devices accept data this way without needing to access any internal registers.
If the return value is negative then an error has happened and you should consult errno.

192.1.18 I2CWriteReg16(fd as Integer, reg as Integer, Data as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device write.
Notes:

Some devices accept data this way without needing to access any internal registers.
Write a 16-bit data value into the device register indicated.

If the return value is negative then an error has happened and you should consult errno.

192.1.19 I2CWriteReg8(fd as Integer, reg as Integer, Data as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Simple device write.
Notes:

Some devices accept data this way without needing to access any internal registers.
Write a 8-bit data value into the device register indicated.

If the return value is negative then an error has happened and you should consult errno.

192.1.20 LoadLibrary(File as FolderItem) as boolean

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Loads the library.
Notes:

Returns true on success or false on failure.
LoadError is set in case of failure.
See also:

- 192.1.21 LoadLibrary(Path as string) as boolean 23167

192.1.21 LoadLibrary(Path as string) as boolean

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Loads the library.
Notes:

Returns true on success or false on failure.
LoadError is set in case of failure.

See also:

- 192.1.20 LoadLibrary(File as FolderItem) as boolean 23167

192.1.22 micros as UInt32

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns a number representing the number of microseconds since your program called one of the wiringPiSetup functions.
Notes: It returns an unsigned 32-bit number which wraps after approximately 71 minutes.

192.1.23 millis as UInt32

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns a number representing the number of milliseconds since your program called one of the wiringPiSetup functions.
Notes: It returns an unsigned 32-bit number which wraps after 49 days.

192.1.24 physPinToGpio(physPin as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns the BCM_GPIO pin number of the supplied physical pin on the P1 connector.

192.1.25 piBoardId(byref model as Integer, byref Rev as Integer, byref Mem as Integer, byref Maker as Integer, byref OverVolted as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries board identifiers.
Notes:

Mem is memory in Megabytes.
Maker, Model and Rev are value which match the constants in this module.

192.1.26 piBoardRev as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns the board revision of the Raspberry Pi.
Notes: It will be either 1 or 2. Some of the BCM_GPIO pins changed number and function when moving from board revision 1 to 2, so if you are using BCM_GPIO pin numbers, then you need to be aware of the

differences.

192.1.27 piHiPri(pri as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This attempts to shift your program (or thread in a multi-threaded program) to a higher priority and enables a real-time scheduling.
Notes:

The priority parameter should be from 0 (the default) to 99 (the maximum). This won't make your program go any faster, but it will give it a bigger slice of time when other programs are running. The priority parameter works relative to others – so you can make one program priority 1 and another priority 2 and it will have the same effect as setting one to 10 and the other to 90 (as long as no other programs are running with elevated priorities)

The return value is 0 for success and -1 for error. If an error is returned, the program should then consult the errno global variable, as per the usual conventions.

Note: Only programs running as root can change their priority. If called from a non-root program then nothing happens.

192.1.28 piLock(Key as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Locks a synchronization lock.
Notes:

These allow you to synchronise variable updates from your main program to any threads running in your program. keyNum is a number from 0 to 3 and represents a "key". When another process tries to lock the same key, it will be stalled until the first process has unlocked the same key.

You may need to use these functions to ensure that you get valid data when exchanging data between your main program and a thread – otherwise it's possible that the thread could wake-up halfway during your data copy and change the data – so the data you end up copying is incomplete, or invalid.

192.1.29 piMakerNames(index as Integer) as string

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Maps maker numbers to names.

192.1.30 piModelNames(index as Integer) as string

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Maps model numbers to names.

192.1.31 pinMode(pin as Integer, mode as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This sets the mode of a pin to either INPUT, OUTPUT, PWM_OUTPUT or GPIO_CLOCK.
Notes:

Note that only wiringPi pin 1 (BCM_GPIO 18) supports PWM output and only wiringPi pin 7 (BCM_GPIO 4) supports CLOCK output modes.

This function has no effect when in Sys mode. If you need to change the pin mode, then you can do it with the gpio program in a script before you start your program.

192.1.32 piRevisionNames(index as Integer) as string

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Maps revision numbers to names.

192.1.33 piUnlock(Key as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Unlocks a synchronization lock.
Notes:

These allow you to synchronise variable updates from your main program to any threads running in your program. keyNum is a number from 0 to 3 and represents a "key". When another process tries to lock the same key, it will be stalled until the first process has unlocked the same key.

You may need to use these functions to ensure that you get valid data when exchanging data between your main program and a thread – otherwise it's possible that the thread could wake-up halfway during your data copy and change the data – so the data you end up copying is incomplete, or invalid.

192.1.34 pullUpDnControl(pin as Integer, pud as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This sets the pull-up or pull-down resistor mode on the given pin, which should be set as an input.
Notes:

Unlike the Arduino, the BCM2835 has both pull-up an down internal resistors. The parameter pud should be; kPUD_OFF, (no pull up/down), kPUD_DOWN (pull to ground) or kPUD_UP (pull to 3.3v) The internal pull up/down resistors have a value of approximately 50KΩ on the Raspberry Pi.

This function has no effect on the Raspberry Pi's GPIO pins when in Sys mode. If you need to activate a pull-up/pull-down, then you can do it with the gpio program in a script before you start your program.

192.1.35 pwmSetClock(divisor as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This sets the divisor for the PWM clock.

192.1.36 pwmSetMode(mode as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The PWM generator can run in 2 modes – "balanced" and "mark:space".
Notes: The mark:space mode is traditional, however the default mode in the Pi is "balanced". You can switch modes by supplying the parameter: kPWM_MODE_BAL or kPWM_MODE_MS.

192.1.37 pwmSetRange(range as UInt32)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This sets the range register in the PWM generator.
Notes: The default is 1024.

192.1.38 pwmToneWrite(pin as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Writes a tone.

192.1.39 pwmWrite(pin as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Writes the value to the PWM register for the given pin.
Notes:

The Raspberry Pi has one on-board PWM pin, pin 1 (BMC_GPIO 18, Phys 12) and the range is 0-1024. Other PWM devices may have other PWM ranges.

This function is not able to control the Pi's on-board PWM when in Sys mode.

192.1.40 Read(fd as Integer, count as UInt64) as Memoryblock

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Read attempts to read count bytes of data from the object referenced by the descriptor fildes into a buffer.
Notes:

Returns the memoryblock on success (if we got more than zero bytes).
Errno is set in case of error.

192.1.41 serialClose(fd as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Closes the device identified by the file descriptor given.

192.1.42 serialDataAvail(fd as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns the number of characters available for reading, or -1 for any error condition, in which case errno will be set appropriately.

192.1.43 serialFlush(fd as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This discards all data received, or waiting to be send down the given device.

192.1.44 serialGetchar(fd as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns the next character available on the serial device.
Notes: This call will block for up to 10 seconds if no data is available (when it will return -1)

192.1.45 serialOpen(device as String, Baud as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This opens and initialises the serial device and sets the baud rate.
Notes: It sets the port into "raw" mode (character at a time and no translations), and sets the read timeout to 10 seconds. The return value is the file descriptor or -1 for any error, in which case errno will be set as appropriate.

192.1.46 serialPutchar(fd as Integer, c as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sends the single byte to the serial device identified by the given file descriptor.

192.1.47 serialPutData(fd as Integer, data as Memoryblock)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sends the nul-terminated string to the serial device identified by the given file descriptor.
Notes: This sends text with any encoding.

192.1.48 serialPuts(fd as Integer, text as string)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Sends the nul-terminated string to the serial device identified by the given file descriptor.
Notes: This sends text with UTF-8 encoding.

192.1.49 setPadDrive(group as Integer, value as Integer)

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This sets the "strength" of the pad drivers for a particular group of pins.
Notes: There are 3 groups of pins and the drive strength is from 0 to 7. Do not use this unless you know what you are doing.

192.1.50 SPIDataRW(channel as Integer, data as Memoryblock) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This performs a simultaneous write/read transaction over the selected SPI bus.
Notes:

Data that was in your buffer is overwritten by data returned from the SPI bus.

That's all there is in the helper library. It is possible to do simple read and writes over the SPI bus using the standard read() and write() system calls though – write() may be better to use for sending data to chains of shift registers, or those LED strings where you send RGB triplets of data. Devices such as A/D and D/A converters usually need to perform a concurrent write/read transaction to work.

192.1.51 SPIGetFd(channel as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Queries the file descriptor for a channel.

192.1.52 SPISetup(channel as Integer, speed as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This is the way to initialise a channel (The Pi has 2 channels; 0 and 1).
Notes:

The speed parameter is an integer in the range 500,000 through 32,000,000 and represents the SPI clock speed in Hz.

The returned value is the Linux file-descriptor for the device, or -1 on error. If an error has happened, you may use the standard errno global variable to see why.

192.1.53 SPISetupMode(channel as Integer, speed as Integer, mode as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This is the way to initialise a channel (The Pi has 2 channels; 0 and 1).
Notes:

The speed parameter is an integer in the range 500,000 through 32,000,000 and represents the SPI clock speed in Hz.

The returned value is the Linux file-descriptor for the device, or -1 on error. If an error has happened, you

may use the standard errno global variable to see why.

192.1.54 wiringPiSetup as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Initializes the library.
Notes:

This initialises wiringPi and assumes that the calling program is going to be using the wiringPi pin numbering scheme. This is a simplified numbering scheme which provides a mapping from virtual pin numbers 0 through 16 to the real underlying Broadcom GPIO pin numbers. See the pins page for a table which maps the wiringPi pin number to the Broadcom GPIO pin number to the physical location on the edge connector.

This function needs to be called with root privileges.

One of the setup functions must be called at the start of your program or your program will fail to work correctly. You may experience symptoms from it simply not working to segfaults and timing issues.

192.1.55 wiringPiSetupGpio as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Initializes the library.
Notes:

This is identical to wiringPiSetup, however it allows the calling programs to use the Broadcom GPIO pin numbers directly with no re-mapping.

As above, this function needs to be called with root privileges, and note that some pins are different from revision 1 to revision 2 boards.

One of the setup functions must be called at the start of your program or your program will fail to work correctly. You may experience symptoms from it simply not working to segfaults and timing issues.

192.1.56 wiringPiSetupPhys as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Initializes the library.
Notes:

Identical to wiringPiSetup, however it allows the calling programs to use the physical pin numbers on the P1 connector only.

As above, this function needs to be called with root priviliges.

One of the setup functions must be called at the start of your program or your program will fail to work correctly. You may experience symptoms from it simply not working to segfaults and timing issues.

192.1.57 wiringPiSetupSys as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Initializes the library.
Notes:

This initialises wiringPi but uses the /sys/class/gpio interface rather than accessing the hardware directly. This can be called as a non-root user provided the GPIO pins have been exported before-hand using the gpio program. Pin numbering in this mode is the native Broadcom GPIO numbers – the same as wiringPiSetupGpio() above, so be aware of the differences between Rev 1 and Rev 2 boards.

Note: In this mode you can only use the pins which have been exported via the /sys/class/gpio interface before you run your program. You can do this in a separate shell-script, or by using the system() function from inside your program to call the gpio program.

Also note that some functions have no effect when using this mode as they're not currently possible to action unless called with root privileges. (although you can use system() to call gpio to set/change modes if needed)

One of the setup functions must be called at the start of your program or your program will fail to work correctly. You may experience symptoms from it simply not working to segfaults and timing issues.

192.1.58 wpiPinToGpio(wpiPin as Integer) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** This returns the BCM_GPIO pin number of the supplied wiringPi pin.
Notes: It takes the board revision into account.

192.1.59 Write(fd as Integer, data as Memoryblock) as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Write to a file descriptor.
Notes:

Write attempts to write bytes to the object referenced by the descriptor fildes from the memoryblock pointed to by data.
Upon successful completion the number of bytes which were written is returned. Otherwise, a -1 is returned and the global variable errno is set to indicate the error.

192.1.60 Properties

192.1.61 ErrNo as Integer

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** The last error code from the underlaying linux functions.
Notes:

must be called directly after a function to have the result from that function.
Calling any other function including writing a debug log, may cause this value to be reset.
(Read only property)

192.1.62 LoadError as String

MBS Linux Plugin, Plugin Version: 15.3, Console & Web: Yes, Mac: No, Win: No, Linux: Yes. **Function:** Returns the last load error.
Notes: (Read only property)

192.1.63 Constants

192.1.64 kGPIO_CLOCK = 3

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: GPIO Clock

192.1.65 kHIGH = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** The constant for high value.

192.1.66 kINPUT = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: Input

192.1.67 kINT_EDGE_BOTH = 3

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the interrupt level constants.
Notes: Both

192.1.68 kINT_EDGE_FALLING = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the interrupt level constants.
Notes: Failing

192.1.69 kINT_EDGE_RISING = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the interrupt level constants.
Notes: Rising

192.1.70 kINT_EDGE_SETUP = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the interrupt level constants.
Notes: Setup

192.1.71 kLOW = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** The constant for low value.

192.1.72 kOUTPUT = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: Output

192.1.73 kPI_MAKER_EGOMAN = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the maker values.
Notes: Egoman

192.1.74 kPI_MAKER_MBEST = 4

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the maker values.
Notes: MBest

192.1.75 kPI_MAKER_QISDA = 3

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the maker values.
Notes: QISDA

192.1.76 kPI_MAKER_SONY = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the maker values.
Notes: Sony

192.1.77 kPI_MAKER_UNKNOWN = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the maker values.
Notes: Unknown

192.1.78 kPI_MODEL_2 = 6

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model 2

192.1.79 kPI_MODEL_A = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model A

192.1.80 kPI_MODEL_AP = 5

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model AP

192.1.81 kPI_MODEL_B = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model B

192.1.82 kPI_MODEL_BP = 3

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model BP

192.1.83 kPI_MODEL_CM = 4

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: Model CM

192.1.84 kPI_MODEL_UNKNOWN = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the model constants.
Notes: unknown

192.1.85 kPI_VERSION_1 = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the version constants.
Notes: Version 1

192.1.86 kPI_VERSION_1_1 = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the version constants.
Notes: Version 1.1

192.1.87 kPI_VERSION_1_2 = 3

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the version constants.
Notes: Version 1.2

192.1.88 kPI_VERSION_2 = 4

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the version constants.
Notes: Version 2

192.1.89 kPI_VERSION_UNKNOWN = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the version constants.
Notes: Unknown version

192.1.90 kPUD_DOWN = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pull up/down constants.
Notes: pull to ground

192.1.91 kPUD_OFF = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pull up/down constants.
Notes: no pull up/down

192.1.92 kPUD_UP = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pull up/down constants.
Notes: pull to 3.3v

192.1.93 kPWM_MODE_BAL = 1

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the PWM generator modes.
Notes: Balanced

192.1.94 kPWM_MODE_MS = 0

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the PWM generator modes.
Notes: Mark:Space

192.1.95 kPWM_OUTPUT = 2

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: PWM Output

192.1.96 kPWM_TONE_OUTPUT = 6

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: Tone Output

192.1.97 kSOFT_PWM_OUTPUT = 4

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: PWM Output

192.1.98 kSOFT_TONE_OUTPUT = 5

MBS Linux Plugin, Plugin Version: 15.3. **Function:** One of the pin mode constants.
Notes: Tone Output

Chapter 193

Wordfile

193.1 class WordFileMBS

193.1.1 class WordFileMBS

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Word file editing.
Example:

```
dim f as FolderItem = GetFolderItem("test.docx")
dim b as BinaryStream = BinaryStream.Open(f)
dim d as string = b.Read(b.Length)
dim w as WordFileMBS = WordFileMBS.OpenData(d)

if w.ReplaceTag("FirstName", "Peter") then
if w.ReplaceTag("LastName", "Miller") then

f = GetFolderItem("output.docx")
if w.WriteFile(f) then
MsgBox "OK"
end if
end if
end if
```

Notes:

This is a class for reading word files and replacing text to customize document files.
Works for xml and docx files. Does not support old doc file format.

Please report document files where plugin corrupted file or failed to replace text.

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

193.1.4 Methods

193.1.5 addMediaFile(name as string, content as string)

MBS XL Plugin, Plugin Version: 19.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a media file image.
Notes:

You can use this function to add a new image.
You need to add the reference in XML yourself to let the image appear somewhere in the document.

193.1.6 Append(other as WordFileMBS, AddPageBreak as boolean = false) as Boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends one word file text to other.
Notes:

This function takes document part from other word file and copies it's xml nodes to the current document. Please only copy from one document to other if they both are made from same template, so internal IDs for styles match.
Returns true on success or false on failure.

Added AddPageBreak parameter in version 19.2. If true, we add a page break between the old and new parts.

193.1.7 AppendTableRow(tag as string) as Integer

MBS XL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Duplicates a table row containing a placeholder.
Notes:

If you have tables in your template word file and you like to duplicate it, this function can do that and add the new row on the end of the table.

Returns Values

0	success
1	Tag not found.
2	Tag found, but not in a table.
3	Missing main document part.

193.1.8 Constructor

MBS XL Plugin, Plugin Version: 15.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

193.1.9 DuplicateTableRow(tag as string) as Integer

MBS XL Plugin, Plugin Version: 17.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Duplicates a table row containing a placeholder.
Notes:

If you have tables in your template word file and you like to duplicate it, this function can do that and add the new row on just after the row to copy.

Returns Values

0	success
1	Tag not found.
2	Tag found, but not in a table.
3	Missing main document part.

193.1.10 FieldNames as String()

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries field names in the file.
Notes: This looks for form fields in a word file.

193.1.11 GetFieldText(fieldName as string, byref text as String) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries field value.
Notes:

The plugin looks for the field with given name and queries it's text.
Returns true if field was found.

193.1.12 HasTag(tag as string) as boolean

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks if a tag exists.
Notes:

The place holder in the document must start with « and end with » characters. The place holder you pass here, should not have those quotes.
Returns true on success or false on failure.

If you change font or style of the text within the marker, it will not be recognized. So please keep all text between and including the « and » markers (or whatever is configured) within the same font style.

193.1.13 MediaFiles as String()

MBS XL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Lists the media files in the word document.
Notes: e.g. image1.png

193.1.14 OpenData(Data as MemoryBlock) as WordFileMBS

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens data as document.
Notes:

You can pass here XML or Docx file content.
Returns nil in case of an error.
See also:

- 193.1.15 OpenData(Data as String) as WordFileMBS 23187

193.1.15 OpenData(Data as String) as WordFileMBS

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens data as document.
Example:

```
dim f as FolderItem = GetFolderItem("test.docx")
dim b as BinaryStream = BinaryStream.Open(f)
dim d as string = b.Read(b.Length)
dim w as WordFileMBS = WordFileMBS.OpenData(d)

if w.ReplaceTag("FirstName", "Peter") then
if w.ReplaceTag("LastName", "Miller") then

f = GetFolderItem("output.docx")
if w.WriteFile(f) then
MsgBox "OK"
end if
end if
end if
```

Notes:

You can pass here XML or Docx file content.
Returns nil in case of an error.
See also:

• 193.1.14 OpenData(Data as MemoryBlock) as WordFileMBS 23187

193.1.16 OpenXML(XML as String) as WordFileMBS

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens XML file from text string.
Notes: Returns nil in case of error.

193.1.17 Parts as String()

MBS XL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries names of the parts of the document.
Example:

```
dim f as FolderItem = GetFolderItem("test.docx")
dim b as BinaryStream = BinaryStream.Open(f)
dim d as string = b.Read(b.Length)
dim w as WordFileMBS = WordFileMBS.OpenData(d)

MsgBox w.XML("footer1")
```

Notes:

This may tell you how many headers/footers we found in a docx file.
e.g. "footer1", "header1", "document".

193.1.18 RemoveTableRow(tag as string) as Integer

MBS XL Plugin, Plugin Version: 17.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a table row containing a placeholder.
Notes:

If you have tables in your template word file and you only fill some rows, you can remove superfluous rows using this function.

Returns Values

0	success
1	Tag not found.
2	Tag found, but not in a table.
3	Missing main document part.

193.1.19 ReplaceTag(tag as string, text as string = """, All as boolean = false) as boolean

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replaces a placeholder with text.
Example:

```
dim f as FolderItem = GetFolderItem("test.docx")
dim b as BinaryStream = BinaryStream.Open(f)
dim d as string = b.Read(b.Length)
dim w as WordFileMBS = WordFileMBS.OpenData(d)

if w.ReplaceTag("FirstName", "Peter") then
if w.ReplaceTag("LastName", "Miller") then

f = GetFolderItem("output.docx")
if w.WriteFile(f) then
MsgBox "OK"
end if
end if
end if
```

Notes:

The place holder in the document must start with « and end with » characters. The place holder you pass here, should not have those quotes.
Returns true on success or false on failure.
If you need to replace multi line text like addresses, please use several placeholders, at least one per line.

Version 17.0 and newer can handle multi line text better for normal paragraphs. It creates for you new paragraphs for each line in the new text.

If you change font or style of the text within the marker, it will not be recognized. So please keep all text between and including the « and » markers (or whatever is configured) within the same font style.

193.1.20 SetFieldText(fieldName as string, text as String) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets field value.
Notes:

The plugin looks for the field with given name and sets it's text.
Returns true if field was found.

193.1.21 SetMarkers(openMarker as String, closeMarker as String) as boolean

MBS XL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the markers to look for before/after a tag.
Notes:

Default are « and ».
Should be different and not empty.
Returns true on success or false on failure.

193.1.22 WriteFile(path as folderItem) as boolean

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a file to disk.
Example:

```
dim f as FolderItem = GetFolderItem("test.docx")
dim b as BinaryStream = BinaryStream.Open(f)
dim d as string = b.Read(b.Length)
dim w as WordFileMBS = WordFileMBS.OpenData(d)

if w.ReplaceTag("FirstName", "Peter") then
if w.ReplaceTag("LastName", "Miller") then

f = GetFolderItem("output.docx")
if w.WriteFile(f) then
MsgBox "OK"
end if
end if
end if
```

Notes: File extension should be correct, either docx or xml depending on what you loaded.

193.1.23 Properties

193.1.24 Caseless as Boolean

MBS XL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to compare tag names case insensitive.
Notes:

Set to true for case insensitive comparison of ASCII characters.
Default is false.
(Read and Write property)

193.1.25 CloseMarker as String

MBS XL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The close marker text.
Notes:

Default value is "».
(Read only property)

193.1.26 OpenMarker as String

MBS XL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The open marker text.
Notes:

Default value is "«".
(Read only property)

193.1.27 Text as String

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts text of word file.
Notes:

Plugin inserts a few newline characters for detected line ends.

May not give all text. If you miss something, please send us test files.
(Read only property)

193.1.28 XML as String

MBS XL Plugin, Plugin Version: 15.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XML found in the document.
Notes: (Read and Write property)
See also:

- 193.1.30 XML(part as String) as String 23192

193.1.29 MediaFile(name as string) as String

MBS XL Plugin, Plugin Version: 16.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries or replaces the content of a media file.
Notes:

You can use this to extract images from word file.
Or to replace a placeholder image with the real image.
For replacement please make sure file type and dimensions match.
Raises KeyNotFoundException if media file with given name is not found.
(Read and Write computed property)

193.1.30 XML(part as String) as String

MBS XL Plugin, Plugin Version: 16.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries/Sets XML for a part.
Notes:

See Parts array for possible parts.
(Read and Write computed property)
See also:

- 193.1.28 XML as String 23192

Chapter 194

X-Face

194.1 Globals

194.1.1 PictureFromXFaceMemoryBlockMBS(xface as memoryblock) as picture

MBS Picture Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture from a X-Face string inside a memoryblock.
Notes:

Returns nil on any error.
The returned picture is 32 bit depth.
See also:

- 194.1.2 PictureFromXFaceMemoryBlockMBS(xface as memoryblock, size as Integer) as picture 23193

194.1.2 PictureFromXFaceMemoryBlockMBS(xface as memoryblock, size as Integer) as picture

MBS Picture Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture from a X-Face string inside a memoryblock with the given size.
Notes:

Returns nil on any error.
The returned picture is 32 bit depth.
See also:

- 194.1.1 PictureFromXFaceMemoryBlockMBS(xface as memoryblock) as picture 23193

194.1.3 PictureFromXFaceStringMBS(xface as string) as picture

MBS Picture Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new picture from a X-Face string.
Notes:

Returns nil on any error.
The returned picture is 32 bit depth.

194.1.4 XFaceStringFromPictureMBS(pic as picture) as string

MBS Picture Plugin, Plugin Version: 3.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a X-Face encoded string with the picture as content.
Notes:

The picture is first converted to a 32 bit picture. Than it's encoded. A Pixel like c=rgb(r,g,b) is white if (r+g+b) >= 3*128.

Returns "" on any error.

Chapter 195

XL

195.1 class XLAutoFilterMBS

195.1.1 class XLAutoFilterMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for auto filter.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

195.1.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr9

195.1.3 Methods

195.1.4 Column(colId as Integer) as XLFilterColumnMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the AutoFilter column by zero-based index.
Notes: Creates it if it doesn't exist.

195.1.5 ColumnByIndex(colId as Integer) as XLFilterColumnMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the specified AutoFilter column which have a filter information by index.

195.1.6 Constructor

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

195.1.7 GetRef(byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as Boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the cell range of AutoFilter with header.
Notes: Returns false if error. Get error info with XLBookMBS.errorMessage.

195.1.8 GetSort(byref columnIndex as Integer, byref descending as Boolean) as Boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the zero-based index of sorted column in AutoFilter and its sort order.
Notes: Returns false if error. Get error info with XLBookMBS.errorMessage.

195.1.9 GetSortRange(byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as Boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the whole range of data to sort.
Notes: Returns false if error. Get error info with XLBookMBS.errorMessage.

195.1.10 SetRef(rowFirst as Integer, rowLast as Integer, colFirst as Integer, colLast as Integer)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the cell range of AutoFilter with header.

195.1.11 SetSort(columnIndex as Integer, descending as Boolean)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the sorted column in AutoFilter by zero-based index and its sort order.
Notes: Returns false if error. Get error info with XLBookMBS.errorMessage.

195.1.12 Properties

195.1.13 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent object.
Notes:

Usually the XLFilterColumnMBS object.
(Read only property)

195.1.14 ColumnSize as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of specified AutoFilter columns which have a filter information.
Notes: (Read only property)

195.1.15 Handle as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.2 class XLBookMBS

195.2.1 class XLBookMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The central class for a workbook.
Notes:

The MBS Xojo XL Plugin is based on LibXL, a powerful library to handle Excel files.

You'll need your own license for LibXL. For more information go here:
https://www.monkeybreadsoftware.de/xojo/plugin-xls.shtml

When you have obtained license file inside your XOJO project place XLBookMBS.SetKeyGlobal call with LibXL license in app.open.

195.2.4 Methods

195.2.5 AddCustomNumFormat(customNumFormat as string) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new custom number format to the workbook.
Notes: The format string customNumFormat indicates how to format and render the numeric value of a cell. See custom format strings guidelines (in FAQ). Returns the custom format identifier. It's used in XLFormatMBS.NumFormat. Returns 0 if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.6 AddFont(initFont as XLFontMBS = nil) as XLFontMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new font to the workbook, initial parameters can be copied from other font.
Notes: Returns NULL if error occurs.

195.2.7 AddFormat(initFormat as XLFormatMBS = nil) as XLFormatMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new format to the workbook, initial parameters can be copied from other format.
Example:

```
// define a format for red fill
Dim redBackgroundFormat As XLFormatMBS = book.AddFormat
Dim c As Color = & cFF0000
// will give back numeric value of color for RGB mode or color index
Dim n As Integer = book.PackColor(c)
// we set forecolor of the pattern to fill background!
redBackgroundFormat.PatternForegroundColor = n
redBackgroundFormat.PatternBackgroundColor = n
redBackgroundFormat.FillPattern = XLFormatMBS.FillPatternSolid

Dim row As Integer = 5 // 6th row
Dim col As Integer = 1 // Column B
Dim value As Double = 123

Call sheet.WriteNumber row, col, value, redBackgroundFormat
```

Notes: Returns NULL if error occurs.

195.2.8 AddPicture(path as folderitem) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a picture to the workbook.
Notes: Returns a picture identifier. Supports BMP, DIB, PNG, JPG and WMF picture formats. Use picture identifier with XLSheetMBS.setPicture(). Returns -1 if error occurs. Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.2.9 AddPicture(path as string) as Integer 23200

195.2.9 AddPicture(path as string) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a picture to the workbook.
Notes: Returns a picture identifier. Supports BMP, DIB, PNG, JPG and WMF picture formats. Use picture identifier with XLSheetMBS.setPicture(). Returns -1 if error occurs. Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.2.8 AddPicture(path as folderitem) as Integer 23200

195.2.10 AddPictureData(data as string) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a picture to the workbook from memory buffer:
Notes: Returns a picture identifier. Use picture identifier with XLSheetMBS.setPicture(). Returns -1 if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.11 AddRichString as XLRichStringMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new rich string to be used in the book.

195.2.12 AddSheet(name as string = """, initSheet as XLSheetMBS = nil) as XLSheetMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new sheet to this book, returns the sheet.
Notes:

Use initSheet parameter if you wish to copy an existing sheet.
Returns NULL if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.13 AddStyledText(StyledText as StyledText) as XLRichStringMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds styled text to the book to later assign to a cell.
Notes: We convert attributes like bold, italic, underline, color, font name and size.

195.2.14 available as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the library is available.
Notes: Returns false on PPC targets.

195.2.15 BookVersion as Integer

MBS XL Plugin, Plugin Version: 13.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the version number of this book.
Example:

```
dim b as new XLBookMBS
dim v as Integer = b.BookVersion

dim h as Integer = v \256 \256 \256
dim m as Integer = v \256 \256 mod 256
dim l as Integer = v \256 mod 256

MsgBox "libXL "+str(h)+"."+str(m)+"."+str(l)
```

Notes: Version number is encoded as hex number with major version, minor version and bugfix.

195.2.16 Constructor(xml as boolean = false)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new XLBookMBS object.
Notes: xml: If true, creates a book in xlsx format (xml), else one in xls format (binary).

195.2.17 CopyContent(dest as XLBookMBS, Options as XLCopyOptionsMBS = nil)

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies all content from one book to other book.
Notes:

The plugin loops through all sheets and creates matching sheets on new book.
Formats and fonts are created on the fly.

This allows you to convert from XLS to XLSX or back.
Please report if something is not copied. Of course plugin can only copy what libXL supports, so stuff like movies or diagrams are not copied.

195.2.18 CustomNumFormat(fmt as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a custom format string for specified custom format identifier fmt.
Notes: See custom format string guidelines (in FAQ). Returns NULL if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.19 DefaultFont(byref fontSize as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a default font name and size for this workbook.
Notes: Returns "" if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.20 DelSheet(index as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes a sheet with specified index.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.21 Font(index as Integer) as XLFontMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a font with defined index.
Notes: Index must be less than return value of fontCount method.

195.2.22 FontCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of fonts in this book.

195.2.23 Fonts as XLFontMBS()

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array with all defined fonts.

195.2.24 Format(index as Integer) as XLFormatMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a format with defined index.
Notes: Index must be less than return value of formatCount method.

195.2.25 FormatCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of formats in this book.

195.2.26 Formats as XLFormatMBS()

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array with all defined formats.

195.2.27 InsertSheet(index as Integer, name as string = """, initSheet as XLSheetMBS = nil) as XLSheetMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts a new sheet to this book at position index, returns the sheet.
Notes: Use initSheet parameter if you wish to copy an existing sheet. Returns NULL if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.28 LibVersion as string

MBS XL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns version of library as string.
Example:

MsgBox XLBookMBS.LibVersion

Notes:

Returns for example "3.8.0".
With plugin version 17.4 or newer, this returns 4 numbers, so you may see another .0 on the end.

195.2.29 LibVersionNumber as Integer

MBS XL Plugin, Plugin Version: 17.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns version of library as number.
Example:

MsgBox str(XLBookMBS.LibVersionNumber)

Notes: Returns for example 3 * 256*256*256 + 8 * 256*256 + 0 * 256 + 0.

195.2.30 Load(path as folderitem) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file into memory.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

With the constructor of the XLBookMBS object you decide if you want to load XML format or older binary format. If the format of the book object doesn't match the file, it will fail.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.31 Load(path as string) as boolean

195.2.31 Load(path as string) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file into memory.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

With the constructor of the XLBookMBS object you decide if you want to load XML format or older binary format. If the format of the book object doesn't match the file, it will fail.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.30 Load(path as folderitem) as boolean 23204

195.2.32 Load2(path as folderitem) as XLBookMBS

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from file.
Notes:

Autodetects if format is old (binary) or new (xml).
Returns nil if error occurs. On success returns a valid book.
Optionally returns error with ErrorMessage parameter.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.33 Load2(path as folderitem, byref ErrorMessage as String) as XLBookMBS 23205
- 195.2.34 Load2(path as string) as XLBookMBS 23206
- 195.2.35 Load2(path as string, byref ErrorMessage as String) as XLBookMBS 23207

195.2.33 Load2(path as folderitem, byref ErrorMessage as String) as XLBookMBS

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("XING contacts.xlsx")
dim e as string
```

```
dim b as XLBookMBS = XLBookMBS.Load2(f,e)

if b = nil then
MsgBox e
Return
end if

dim s as XLSheetMBS = b.Sheet(0)
MsgBox s.ReadString(1,1)
```

Notes:

Autodetects if format is old (binary) or new (xml).
Returns nil if error occurs. On success returns a valid book.
Optionally returns error with ErrorMessage parameter.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.32 Load2(path as folderitem) as XLBookMBS 23205
- 195.2.34 Load2(path as string) as XLBookMBS 23206
- 195.2.35 Load2(path as string, byref ErrorMessage as String) as XLBookMBS 23207

195.2.34 Load2(path as string) as XLBookMBS

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("XING contacts.xlsx")
dim b as XLBookMBS = XLBookMBS.Load2(f)

if b = nil then
MsgBox e
Return
end if

dim s as XLSheetMBS = b.Sheet(0)
MsgBox s.ReadString(1,1)
```

Notes:

Autodetects if format is old (binary) or new (xml).
Returns nil if error occurs. On success returns a valid book.
Optionally returns error with ErrorMessage parameter.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.32 Load2(path as folderitem) as XLBookMBS 23205
- 195.2.33 Load2(path as folderitem, byref ErrorMessage as String) as XLBookMBS 23205
- 195.2.35 Load2(path as string, byref ErrorMessage as String) as XLBookMBS 23207

195.2.35 Load2(path as string, byref ErrorMessage as String) as XLBookMBS

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from file.
Notes:

Autodetects if format is old (binary) or new (xml).
Returns nil if error occurs. On success returns a valid book.
Optionally returns error with ErrorMessage parameter.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.32 Load2(path as folderitem) as XLBookMBS 23205
- 195.2.33 Load2(path as folderitem, byref ErrorMessage as String) as XLBookMBS 23205
- 195.2.34 Load2(path as string) as XLBookMBS 23206

195.2.36 LoadError as String

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The last error message from LoadLibrary call.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.dylib")

if XLBookMBS.LoadLibrary(f) then
MsgBox "OK"
else
MsgBox XLBookMBS.LoadError
```

```
end if
```

195.2.37 LoadLibrary(File as FolderItem) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the libXL library file.
Example:

```
MsgBox "Version before: "+XLBookMBS.LibVersion

dim f as FolderItem = SpecialFolder.Desktop.Child("libxl.dylib")

if XLBookMBS.LoadLibrary(f) then
MsgBox "Version after: "+XLBookMBS.LibVersion
else
MsgBox XLBookMBS.LoadError
end if
```

Notes:

Returns true on success or false on failure.

While the plugin comes with an internal libXL library, you can use this method to load a different version of the library.
See also:

- 195.2.38 LoadLibrary(Path as string) as boolean 23208

195.2.38 LoadLibrary(Path as string) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads the libXL library file.
Notes:

Returns true on success or false on failure.

While the plugin comes with an internal libXL library, you can use this method to load a different version of the library.
See also:

- 195.2.37 LoadLibrary(File as FolderItem) as boolean 23208

195.2.39 LoadMT(path as folderitem) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads from file.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.40 LoadMT(path as string) as boolean 23209

195.2.40 LoadMT(path as string) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads from file.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

- 195.2.39 LoadMT(path as folderitem) as boolean 23209

195.2.41 LoadPartially(path as folderitem, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file only with specified sheet index and row range into memory.
Notes: Returns false if error occurs or true on success.. Get error info with errorMessage function.
See also:

- 195.2.42 LoadPartially(path as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean 23210

195.2.42 LoadPartially(path as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file only with specified sheet index and row range into memory.
Notes: Returns false if error occurs or true on success.. Get error info with errorMessage function.
See also:

- 195.2.41 LoadPartially(path as folderitem, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean 23209

195.2.43 LoadPartiallyUsingTempFile(path as folderitem, sheetIndex as Integer, firstRow as Integer, lastRow as Integer, TempFile as folderitem) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file only with specified sheet index and row range into memory.
Notes:

Specify a temporary file for reducing memory consumption.
Returns false if error occurs or true on success.. Get error info with errorMessage function.
See also:

- 195.2.44 LoadPartiallyUsingTempFile(path as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer, TempFile as String) as boolean 23210

195.2.44 LoadPartiallyUsingTempFile(path as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer, TempFile as String) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file only with specified sheet index and row range into memory.
Notes:

Specify a temporary file for reducing memory consumption.
Returns false if error occurs or true on success.. Get error info with errorMessage function.
See also:

- 195.2.43 LoadPartiallyUsingTempFile(path as folderitem, sheetIndex as Integer, firstRow as Integer, lastRow as Integer, TempFile as folderitem) as boolean 23210

195.2.45 LoadRaw(data as MemoryBlock) as boolean

MBS XL Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from user's memory buffer.
Notes:

Returns false if error occurs. Get error info with errorMessage property.

With the constructor of the XLBookMBS object you decide if you want to load XML format or older binary format. If the format of the book object doesn't match the file, it will fail.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.
See also:

- 195.2.46 LoadRaw(data as string) as boolean 23211

195.2.46 LoadRaw(data as string) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from user's memory buffer.
Notes:

Returns false if error occurs. Get error info with errorMessage property.

- 195.2.50 LoadRaw2(data as string, byref ErrorMessage as String) as XLBookMBS 23213

195.2.48 LoadRaw2(data as MemoryBlock, byref ErrorMessage as String) as XLBookMBS

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a xls-file from user's memory buffer.
Notes:

Autodetects if format is old (binary) or new (xml).
Returns nil if error occurs. On success returns a valid book.
Optionally returns error with ErrorMessage parameter.

Loading a file into the book object clears existing formats, sheets and fonts from previous book. You can recreate the ones you need or search them in the existing formats, fonts or sheets.

- 195.2.49 LoadRaw2(data as string) as XLBookMBS 23212

195.2.51 LoadRawMT(data as MemoryBlock) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads from memoryblock.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.52 LoadRawMT(data as string) as boolean 23213

195.2.52 LoadRawMT(data as string) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads from string.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will

block, but keep other background threads running.
See also:

- 195.2.51 LoadRawMT(data as MemoryBlock) as boolean 23213

195.2.53 LoadRawPartially(data as MemoryBlock, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file from user's memory buffer.
Notes:

data: Data buffer
sheetIndex: loads a file only with specified sheet index, -1 loads all sheets
firstRow: the first row of loaded range, -1 loads all rows until lastRow
lastRow: the last row of loaded range, -1 loads all rows after firstRow.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.54 LoadRawPartially(data as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean 23214

195.2.54 LoadRawPartially(data as string, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads a file from user's memory buffer.
Notes:

data: Data buffer
sheetIndex: loads a file only with specified sheet index, -1 loads all sheets
firstRow: the first row of loaded range, -1 loads all rows until lastRow
lastRow: the last row of loaded range, -1 loads all rows after firstRow.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.53 LoadRawPartially(data as MemoryBlock, sheetIndex as Integer, firstRow as Integer, lastRow as Integer) as boolean 23214

195.2.55 LoadUsingTempFile(path as folderitem, TempFile as folderitem) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an entire file into memory.
Notes:

Specify a temporary file for reducing memory consumption.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.56 LoadUsingTempFile(path as string, TempFile as String) as boolean 23215

195.2.56 LoadUsingTempFile(path as string, TempFile as String) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Loads an entire file into memory.
Notes:

Specify a temporary file for reducing memory consumption.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.55 LoadUsingTempFile(path as folderitem, TempFile as folderitem) as boolean 23214

195.2.57 MoveSheet(SourceIndex as integer, DestIndex as Integer) as boolean

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Takes a sheet with SourceIndex and insert it in front of a sheet with DestIndex.
Notes: Returns false if error occurs and true on success.

195.2.58 PackColor(ColorValue as color) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packs red, green and blue components in color type.
Example:

```
// define a format for red fill
Dim redBackgroundFormat As XLFormatMBS = book.AddFormat
Dim c As Color = & cFF0000
// will give back numeric value of color for RGB mode or color index
Dim n As Integer = book.PackColor(c)
// we set forecolor of the pattern to fill background!
redBackgroundFormat.PatternForegroundColor = n
redBackgroundFormat.PatternBackgroundColor = n
redBackgroundFormat.FillPattern = XLFormatMBS.FillPatternSolid

Dim row As Integer = 5 // 6th row
Dim col As Integer = 1 // Column B
Dim value As Double = 123
```

Call sheet.WriteNumber row, col, value, redBackgroundFormat

See also:

- 195.2.59 PackColor(red as Integer, green as Integer, blue as Integer) as Integer 23216

195.2.59 PackColor(red as Integer, green as Integer, blue as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packs red, green and blue components in color type.
See also:

- 195.2.58 PackColor(ColorValue as color) as Integer 23215

195.2.60 PackDate(d as date) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packs date and time information into double type.
See also:

- 195.2.61 PackDate(year as Integer, month as Integer, day as Integer, hour as Integer = 0, min as Integer = 0, sec as Integer = 0, msec as Integer = 0) as Double 23216

195.2.61 PackDate(year as Integer, month as Integer, day as Integer, hour as Integer = 0, min as Integer = 0, sec as Integer = 0, msec as Integer = 0) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packs date and time information into double type.
See also:

- 195.2.60 PackDate(d as date) as Double 23216

195.2.62 Picture(index as Integer, byref data as string) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a picture at position index in memory buffer.
Notes:

Parameters:
index: position in the workbook

data: reference to buffer

Returns type of picture. See PictureType* constants.

195.2.63 PictureCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of pictures in this workbook.

195.2.64 Save(path as folderitem) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves current workbook into xls-file.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.2.65 Save(path as folderitem, UseTempFile as Boolean) as boolean 23217
- 195.2.66 Save(path as string) as boolean 23217
- 195.2.67 Save(path as string, UseTempFile as Boolean) as boolean 23218

195.2.65 Save(path as folderitem, UseTempFile as Boolean) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves current workbook into the file.
Notes:

Use a temporary file for reducing memory consumption.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.64 Save(path as folderitem) as boolean 23217
- 195.2.66 Save(path as string) as boolean 23217
- 195.2.67 Save(path as string, UseTempFile as Boolean) as boolean 23218

195.2.66 Save(path as string) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves current workbook into xls-file.

Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.2.64 Save(path as folderitem) as boolean 23217
- 195.2.65 Save(path as folderitem, UseTempFile as Boolean) as boolean 23217
- 195.2.67 Save(path as string, UseTempFile as Boolean) as boolean 23218

195.2.67 Save(path as string, UseTempFile as Boolean) as boolean

MBS XL Plugin, Plugin Version: 17.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves current workbook into the file.
Notes:

Use a temporary file for reducing memory consumption.
Returns false if error occurs or true on success. Get error info with errorMessage function.
See also:

- 195.2.64 Save(path as folderitem) as boolean 23217

- 195.2.66 Save(path as string) as boolean 23217

195.2.68 SaveMT(path as folderitem) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves document to file on disk.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.69 SaveMT(path as string) as boolean 23218

195.2.69 SaveMT(path as string) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves document to file on disk.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.68 SaveMT(path as folderitem) as boolean 23218

195.2.70 SaveRaw(byref data as MemoryBlock) as boolean

MBS XL Plugin, Plugin Version: 14.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a xls-file to internal memory buffer.
Notes: Returns false if error occurs. Get error info with errorMessage property.
See also:

- 195.2.71 SaveRaw(byref data as string) as boolean 23219

195.2.71 SaveRaw(byref data as string) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves a xls-file to internal memory buffer.
Notes: Returns false if error occurs. Get error info with errorMessage property.
See also:

- 195.2.70 SaveRaw(byref data as MemoryBlock) as boolean 23219

195.2.72 SaveRawMT(byref data as MemoryBlock) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves document to memoryblock.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.73 SaveRawMT(byref data as string) as boolean 23220

195.2.73 SaveRawMT(byref data as string) as boolean

MBS XL Plugin, Plugin Version: 17.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Saves document to string.
Notes:

Same as the other method without MT in name, except:

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 195.2.72 SaveRawMT(byref data as MemoryBlock) as boolean 23219

195.2.74 SetDefaultFont(fontName as string, fontSize as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a default font name and size for this workbook.

195.2.75 SetKey(name as string, key as string)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets customer's license key.
Notes:

Call this once for each XLBookMBS object and before you read or write data.

If you have keys for more than one platform, please use # if condition to make sure you pass right key for current platform.

195.2.76 SetKeyGlobal(name as string, key as string)

MBS XL Plugin, Plugin Version: 18.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Private method to avoid you call this on an object.
Notes:

Please call shared method in app.open.
Because if you make a new object and set key, it's too late.
See also:

- 195.2.77 SetKeyGlobal(name as string, key as string) 23221

195.2.77 SetKeyGlobal(name as string, key as string)

MBS XL Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets customer's license key.
Example:

```
// add this to app.open

# if TargetMacOS then
// Mac license
XLBookMBS.SetKeyGlobal("Your Name", "Your Key")
# elseif TargetLinux then
// Linux license
XLBookMBS.SetKeyGlobal("Your Name", "Your Key")
# elseif TargetWin32 then
// Win license
XLBookMBS.SetKeyGlobal("Your Name", "Your Key")
# else
// missing
# endif
```

Notes:

You can call this before using the other plugin functions to set key on application startup. Simply call it in app.open event.

If you have keys for more than one platform, please use # if condition to make sure you pass right key for current platform.
See also:

- 195.2.76 SetKeyGlobal(name as string, key as string) 23220

195.2.78 SetLocale(locale as string)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the locale.
Example:

```
dim book as new XLBookMBS(false)
book.SetLocale "en_US.UTF-8"
```

Notes: Sets the locale for this library. It has no effect for unicode projects.

195.2.79 Sheet(index as Integer) as XLSheetMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the sheet with specified index.
Notes: Returns NULL if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.2.80 SheetCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of sheets in this book.

195.2.81 Sheets as XLSheetMBS()

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns array with all sheets.
Example:

```
Function SheetByName(book as XLBookMBS, name as string) As XLSheetMBS
dim sheets() as XLSheetMBS = book.Sheets
for each s as XLSheetMBS in sheets
if s.Name = name then
Return s
end if
next
End Function
```

195.2.82 SheetType(index as Integer) as Integer

MBS XL Plugin, Plugin Version: 13.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries type of the sheet.

195.2.83 UnpackColor(ColorValue as Integer) as color

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks color type to red, green and blue components.
See also:

- 195.2.84 UnpackColor(ColorValue as Integer, byref red as Integer, byref green as Integer, byref blue as Integer)

195.2.84 UnpackColor(ColorValue as Integer, byref red as Integer, byref green as Integer, byref blue as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks color type to red, green and blue components.
See also:

- 195.2.83 UnpackColor(ColorValue as Integer) as color 23222

195.2.85 UnpackDate(Value as Double) as date

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks date and time information from double type.
Notes: Returns nil if error occurs.
See also:

- 195.2.86 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer) as boolean 23223
- 195.2.87 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer) as boolean 23224
- 195.2.88 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer, byref msec as Integer) as boolean 23224

195.2.86 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks date and time information from double type.
Notes: Returns false if error occurs.
See also:

- 195.2.85 UnpackDate(Value as Double) as date 23223
- 195.2.87 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer) as boolean 23224
- 195.2.88 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer, byref msec as Integer) as boolean 23224

195.2.87 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks date and time information from double type.
Notes: Returns false if error occurs.
See also:

- 195.2.85 UnpackDate(Value as Double) as date 23223
- 195.2.86 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer) as boolean 23223
- 195.2.88 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer, byref msec as Integer) as boolean 23224

195.2.88 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer, byref msec as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Unpacks date and time information from double type.
Notes: Returns false if error occurs.
See also:

- 195.2.85 UnpackDate(Value as Double) as date 23223
- 195.2.86 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer) as boolean 23223
- 195.2.87 UnpackDate(Value as Double, byref year as Integer, byref month as Integer, byref day as Integer, byref hour as Integer, byref min as Integer, byref sec as Integer) as boolean 23224

195.2.89 Properties

195.2.90 ActiveSheet as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Active sheet index in this workbook.
Notes: (Read and Write property)

195.2.91 BiffVersion as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns BIFF version of binary file.
Notes:

Used for xls format only.
(Read only property)

195.2.92 CalcMode as integer

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The calculation mode of workbook.
Notes:

Cal be manual, auto or automatic except for data tables.
See CalcMode* constants.
(Read and Write property)

195.2.93 ErrorMessage as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the last error message.
Notes: (Read only property)

195.2.94 Handle as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.2.95 IsDate1904 as boolean

MBS XL Plugin, Plugin Version: 13.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether dates are 1904 based.
Notes:

A boolean value that indicates whether the date systems used in the workbook starts in 1904.
True indicates the date system starts in 1904, where January 1, 1904 is the first day in the system.
False indicates the workbook uses the 1900 date system, where January 1, 1900 is the first day in the system.

(Read and Write property)

195.2.96 IsTemplate as boolean

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the workbook is template.
Notes:

The template flag: true - workbook is template, false - workbook is not template (default).
This flag must have a value "true" for template files (xlt and xltx).
(Read and Write property)

195.2.97 RefR1C1 as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the R1C1 reference mode is active.
Notes: (Read and Write property)

195.2.98 RgbMode as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the RGB mode is active. Used for xlsx format only.
Notes:

true - RGB mode, false - Index mode (default).
In RGB mode use colorPack() and colorUnpack() methods for getting/setting colors. Used for xlsx format only.
(Read and Write property)

195.2.99 Constants

195.2.100 CalcModeAuto = 1

MBS XL Plugin, Plugin Version: 20.2. **Function:** One of the call mode constants.
Notes: automatic calculation

195.2.101 CalcModeAutoNoTable = 2

MBS XL Plugin, Plugin Version: 20.2. **Function:** One of the call mode constants.
Notes: automatic except for data tables

195.2.102 CalcModeManual = 0

MBS XL Plugin, Plugin Version: 20.2. **Function:** One of the call mode constants.
Notes: manual calculation

195.2.103 PictureTypeDIB = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: DIB format

195.2.104 PictureTypeEMF = 5

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: EMF format

195.2.105 PictureTypeError = & hFF

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: Error. Check XLBookMBS.ErrorMessage method.

195.2.106 PictureTypeGIF = 2

MBS XL Plugin, Plugin Version: 15.3. **Function:** One of the picture format constants.
Notes: GIF format.

195.2.107 PictureTypeJPEG = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: JPEG format

195.2.108 PictureTypePICT = 6

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: Mac PICT format.

195.2.109 PictureTypePNG = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: PNG format

195.2.110 PictureTypeTIFF = 7

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: TIFF format

195.2.111 PictureTypeWMF = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the picture format constants.
Notes: WMF format

195.2.112 SheetTypeChart = 1

MBS XL Plugin, Plugin Version: 13.1. **Function:** One of the sheet type constants.
Notes: Sheet is a chart.

195.2.113 SheetTypeSheet = 0

MBS XL Plugin, Plugin Version: 13.1. **Function:** One of the sheet type constants.
Notes: This is a normal sheet.

195.2.114 SheetTypeUnknown = 2

MBS XL Plugin, Plugin Version: 13.1. **Function:** One of the sheet type constants.
Notes: Type is unknown.

195.3 class XLCopyOptionsMBS

195.3.1 class XLCopyOptionsMBS

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The options for copying.

195.3.2 Blog Entries

195.3.4 Methods

195.3.5 Constructor

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor.
Notes: Initializes object and sets all properties to true.

195.3.6 Properties

195.3.7 CopyColHidden as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy column hidden flags.
Notes:

Defaults to true.
(Read and Write property)

195.3.8 CopyComments as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy comments.
Notes:

Defaults to true.
(Read and Write property)

195.3.9 CopyFormat as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy formats.
Notes:

Defaults to true.
(Read and Write property)

195.3.10 CopyHorPageBreak as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy horizontal page breaks.
Notes:

Defaults to true.
(Read and Write property)

195.3.11 CopyMerge as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy merge cells.
Notes:

Defaults to true.
(Read and Write property)

195.3.12 CopyNamedRanges as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy named ranges.
Notes:

Defaults to true.
(Read and Write property)

195.3.13 CopyPicture as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy pictures.
Notes:

Defaults to true.
(Read and Write property)

195.3.14 CopyPrintArea as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy print area.
Notes:

Defaults to true.
(Read and Write property)

195.3.15 CopyPrintFit as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy print fit settings.
Notes:

Defaults to true.
(Read and Write property)

195.3.16 CopyPrintRepeat as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy print repeat settings.
Notes:

Defaults to true.
(Read and Write property)

195.3.17 CopyRowHidden as Boolean

MBS XL Plugin, Plugin Version: 19.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to copy row hidden flags.
Notes:

Defaults to true.
(Read and Write property)

195.4 class XLFilterColumnMBS

195.4.1 class XLFilterColumnMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for filter column.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

195.4.2 Blog Entries

- MBS Xojo Plugins, version 18.4pr9

195.4.3 Methods

195.4.4 AddFilter(Filter as String)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds the filter value.

195.4.5 Clear

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clear the filter criteria.

195.4.6 Constructor

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

195.4.7 Filter(index as Integer) as String

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the filter value by index.

195.4.8 GetCustomFilterEx(byref Op1 as Integer, byref Value1 as String, byref Op2 as Integer, byref Value2 as String, byref andOp as Boolean) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the custom filter criteria:
Notes:

op1 - operator used by the filter comparison in the first filter criteria;
Value1 - value used in the first filter criteria;
op2 - operator used by the filter comparison in the second filter criteria;
Value12 - value used in the second filter criteria;
andOp - flag indicating whether the two criterias have an "and" relationship. True indicates "and", false indicates "or".
Returns false if error. Get error info with XLBookMBS.errorMessage.

195.4.9 GetTop10(byref value as Double, byref top as boolean, byref percent as boolean) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the number of top or bottom items:
Notes:

value - number of items;
top - top items if true otherwise bottom items;
percent - using percent instead of number items.
Returns false if error. Get error info with XLBookMBS.errorMessage.

195.4.10 SetCustomFilter(Op as Integer, Value as String)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the custom filter criteria:
Notes:

op - operator used by the filter comparison in the filter criteria;
Value - value used in the filter criteria;

195.4.11 SetCustomFilterEx(Op1 as Integer, Value1 as String, Op2 as Integer, Value2 as String, andOp as Boolean = false)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the custom filter criteria:

Notes:

op1 - operator used by the filter comparison in the first filter criteria;
Value1 - value used in the first filter criteria;
op2 - operator used by the filter comparison in the second filter criteria;
Value2 - value used in the second filter criteria;
andOp - flag indicating whether the two criterias have an "and" relationship. True indicates "and", false indicates "or".

195.4.12 SetTop10(value as Double, top as boolean = true, percent as boolean = false)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the number of top or bottom items:
Notes:

value - number of items;
top - top items if true otherwise bottom items;
percent - using percent instead of number items.

195.4.13 Properties

195.4.14 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The owner object.
Notes: (Read only property)

195.4.15 FilterSize as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of filter values.
Notes: (Read only property)

195.4.16 FilterType as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the filter type of this AutoFilter column.
Notes:

can be constants FilterColor, FilterCustom, FilterDynamic, FilterExt, FilterIcon, FilterNotSet, FilterTop10 or FilterValue.
(Read only property)

195.4.17 Handle as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.4.18 Index as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the zero-based index of this AutoFilter column.
Notes: (Read only property)

195.4.19 Constants

195.4.20 FilterColor = 4

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Specifies the color to filter by.

195.4.21 FilterCustom = 2

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Custom filter with specified criteria.

195.4.22 FilterDynamic = 3

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Specifies dynamic filter criteria.

195.4.23 FilterExt = 6

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Defines flexible storage extensions.

195.4.24 FilterIcon = 5

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Specifies the icon to filter by.

195.4.25 FilterNotSet = 7

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: No filter.

195.4.26 FilterTop10 = 1

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: The top N (percent or number of items) to filter by.

195.4.27 FilterValue = 0

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the filter types.
Notes: Filter by specified values.

195.4.28 OperatorEqual = 0

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Equal

195.4.29 OperatorGreaterThan = 1

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Greater than

195.4.30 OperatorGreaterThanOrEqual = 2

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Greater than or equal

195.4.31 OperatorLessThan = 3

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Less than

195.4.32 OperatorLessThanOrEqual = 4

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Less than or equal

195.4.33 OperatorNotEqual = 5

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the compare operators.
Notes: Not equal

195.5 class XLFontMBS

195.5.1 class XLFontMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a font definition.
Example:

```
dim book as XLBookMBS // your book
dim textFont as XLFontMBS = book.addFont()
textFont.size = 8
textFont.name = "Century Gothic"
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

195.5.2 Blog Entries

- StyledText for Excel files with LibXL 3.9 in Xojo
- MBS Xojo Plugins, version 18.4pr9

195.5.3 Methods

195.5.4 Constructor

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

195.5.5 Properties

195.5.6 Bold as Boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the font is bold.
Notes: (Read and Write property)

195.5.7 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The owner object.
Notes:

As a font is only valid with the owning book, we keep a back reference here.
(Read only property)

195.5.8 ColorRGB as Color

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font color as color value.
Notes:

While ColorValue may return indexed color, this property converts to a Xojo color value.
(Read and Write property)

195.5.9 ColorValue as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the font.
Example:

```
dim book as XLBookMBS // your book
dim textFont as XLFontMBS = book.addFont()
textFont.size = 8
textFont.ColorValue = XLFontMBS.ColorGray25
```

Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.5.10 Handle as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.

Notes: (Read and Write property)

195.5.11 Italic as Boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the font is italic.
Notes:

If italic doesn't show, maybe check whether the chosen font supports italic.
(Read and Write property)

195.5.12 Name as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the font.
Notes:

Default name is "Arial".
(Read and Write property)

195.5.13 Script as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The script style of the font.
Notes: (Read and Write property)

195.5.14 Size as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The size of the font in points.
Notes: (Read and Write property)

195.5.15 StrikeOut as Boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the font is strikeout.
Notes: (Read and Write property)

195.5.16 Underline as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The underline style of the font.
Notes:

See Underline* constants.
(Read and Write property)

195.5.17 Constants

195.5.18 ColorAqua = 49

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the color constants.

195.5.19 ColorAuto = & h7Fff

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the color constants.

195.5.20 ColorBlack = 8

195.5.85 UnderlineSingle = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the underline style constants.

195.5.86 UnderlineSingleacc = & H21

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the underline style constants.

195.6 class XLFormatMBS

195.6.1 class XLFormatMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for a format.
Example:

```
dim book as XLBookMBS // your book
// add font
dim boldFont as XLFontMBS = book.addFont()
boldFont.StrikeOut = true

// add format
dim boldFormat as XLFormatMBS = book.addFormat
boldFormat.font = boldFont

// write on a cell in first sheet
sheet = book.Sheet(0)
call sheet.WriteString(1, 1, "Sales Receipt", boldFormat)
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the border style.
Notes: See BorderStyle* constants.

195.6.6 SetBorderColor(ColorValue as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the border color.
Notes: If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.

195.6.7 SetFont(font as XLFontMBS) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the font for the format.
Notes: To create a new font use XLBookMBS.addFont(). Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.6.8 SetRotation(rotation as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the text rotation.
Notes:

Must be a value from the following table:

Value	Meaning
0 - 90	Text rotated counterclockwise 0 to 90 degrees
91 - 180	Text rotated clockwise 1 to 90 degrees
255	Vertical text

195.6.9 Properties

195.6.10 AlignH as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The horizontal alignment.
Notes:

See AlignH* constants.
(Read and Write property)

195.6.11 AlignV as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The vertical alignment.
Notes:

See AlignV* constants.
(Read and Write property)

195.6.12 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The object owning this format object.
Notes:

As a format is only valid with the owning book, we keep a back reference here.
(Read only property)

195.6.13 BorderBottom as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bottom border style.
Notes:

See BorderStyle* constants.
(Read and Write property)

195.6.14 BorderBottomColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the bottom border.
Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.15 BorderDiagonal as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The diagonal border.
Notes:

see BorderDiagonal* constants.
(Read and Write property)

195.6.16 BorderDiagonalColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the diagonal border.
Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.17 BorderDiagonalStyle as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The diagonal border style.
Notes:

See BorderDiagonal* constants.
(Read and Write property)

195.6.18 BorderLeft as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The left border style.
Notes:

See BorderStyle* constants.
(Read and Write property)

195.6.19 BorderLeftColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the left border.
Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.20 BorderRight as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The right border style.
Notes:

See BorderStyle* constants.
(Read and Write property)

195.6.21 BorderRightColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the right border.
Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.22 BorderTop as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The top border style.
Notes:

See BorderStyle* constants.
(Read and Write property)

195.6.23 BorderTopColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The color of the top border.
Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.24 FillPattern as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The fill pattern.
Notes:

See fill pattern constants.
(Read and Write property)

195.6.25 Font as XLFontMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The font for the format.
Example:

```
// your book
dim book as XLBookMBS

// add font
dim StrikeOutFont as XLFontMBS = book.addFont()
StrikeOutFont.StrikeOut = true

// add format
dim StrikeOutFormat as XLFormatMBS = book.addFormat
StrikeOutFormat.font = StrikeOutFont

// write on a cell in first sheet
sheet = book.Sheet(0)
call sheet.WriteString(1, 1, "Sales Receipt", StrikeOutFormat)
```

Notes:

To create a new font use XLBookMBS.addFont(). Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
(Read and Write property)

195.6.26 Handle as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.6.27 Hidden as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the hidden protection property is set to true.
Notes: (Read and Write property)

195.6.28 Indent as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The text indentation level.
Notes:

Must be less than or equal to 15.
(Read and Write property)

195.6.29 Locked as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the locked protection property is set to true.
Notes:

Needs to be used together with XLSheetMBS.Protect property and XLSheetMBS.SetProtectEx method to prevent editing in locked cells.
(Read and Write property)

195.6.30 NumFormat as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The number format identifier.
Notes:

The identifier must be a valid built-in number format identifier or the identifier of a custom number format. To create a custom format use XLBookMBS.addCustomNumFormat(). Or use one of the NumFormat* constants.
(Read and Write property)

195.6.31 PatternBackgroundColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The background color of the fill pattern.
Example:

```
// define a format for red fill
Dim redBackgroundFormat As XLFormatMBS = book.AddFormat
Dim c As Color = & cFF0000
// will give back numeric value of color for RGB mode or color index
Dim n As Integer = book.PackColor(c)
// we set forecolor of the pattern to fill background!
redBackgroundFormat.PatternForegroundColor = n
redBackgroundFormat.PatternBackgroundColor = n
redBackgroundFormat.FillPattern = XLFormatMBS.FillPatternSolid

Dim row As Integer = 5 // 6th row
Dim col As Integer = 1 // Column B
Dim value As Double = 123

Call sheet.WriteNumber row, col, value, redBackgroundFormat
```

Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.32 PatternForegroundColor as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The foreground color of the fill pattern.
Example:

```
// define a format for red fill
Dim redBackgroundFormat As XLFormatMBS = book.AddFormat
Dim c As Color = & cFF0000
// will give back numeric value of color for RGB mode or color index
Dim n As Integer = book.PackColor(c)
// we set forecolor of the pattern to fill background!
redBackgroundFormat.PatternForegroundColor = n
redBackgroundFormat.PatternBackgroundColor = n
redBackgroundFormat.FillPattern = XLFormatMBS.FillPatternSolid

Dim row As Integer = 5 // 6th row
Dim col As Integer = 1 // Column B
Dim value As Double = 123

Call sheet.WriteNumber row, col, value, redBackgroundFormat
```

Notes:

If book is in RGB mode, you need to use UnpackColor to get red, green and blue color components or color value from the returned number. If book is not in RGB mode, you receive a color number (see XLFontMBS color constants).
If you set value and book is in RGB mode you can use PackColor function to get a numeric value for a color or color components. If the book is not in RGB mode, you can use color constants in XLFontMBS classes.
(Read and Write property)

195.6.33 Rotation as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the text rotation.
Notes:

Must be a value from the following table:

(Read only property)

Value	Meaning
0 - 90	Text rotated counterclockwise 0 to 90 degrees
91 - 180	Text rotated clockwise 1 to 90 degrees
255	Vertical text

195.6.34 ShrinkToFit as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the cell is shrink-to-fit.
Notes: (Read and Write property)

195.6.35 Wrap as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the cell text is wrapped.
Notes: (Read and Write property)

195.6.36 Constants

195.6.37 AlignHCenter = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Center

195.6.38 AlignHDistributed = 7

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Distributed

195.6.39 AlignHFill = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Fill

195.6.40 AlignHGeneral = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Default

195.6.41 AlignHJustify = 5

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Justify

195.6.42 AlignHLeft = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Left

195.6.43 AlignHMerge = 6

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Center over several cells.

195.6.44 AlignHRight = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the horizontal alignment constants.
Notes: Right

195.6.45 AlignVBottom = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the vertical alignment constants.
Notes: Bottom

195.6.46 AlignVCenter = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the vertical alignment constants.
Notes: Center

195.6.47 AlignVDistributed = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the vertical alignment constants.
Notes: Distributed

195.6.48 AlignVJustify = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the vertical alignment constants.
Notes: Justify

195.6.49 AlignVTop = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the vertical alignment constants.
Notes: Top

195.6.50 BorderDiagonalBoth = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the diagonal border style constants.

195.6.51 BorderDiagonalDown = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the diagonal border style constants.

195.6.52 BorderDiagonalNone = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the diagonal border style constants.

195.6.53 BorderDiagonalUp = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the diagonal border style constants.

195.6.54 BorderStyleDashdot = 9

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: dash and dot

195.6.55 BorderStyleDashdotdot = 11

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: dash and dots

195.6.56 BorderStyleDashed = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: dashed

195.6.57 BorderStyleDotted = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: dotted

195.6.58 BorderStyleDouble = 6

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: double

195.6.59 BorderStyleHair = 7

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: hair style

195.6.60 BorderStyleMedium = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: medium

195.6.61 BorderStyleMediumdashdot = 10

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: medium dash and dot

195.6.62 BorderStyleMediumdashdotdot = 12

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: medium dash and dots

195.6.63 BorderStyleMediumdashed = 8

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: medium dashed

195.6.64 BorderStyleNone = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: no border

195.6.65 BorderStyleSlantdashdot = 13

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: dash and dot

195.6.66 BorderStyleThick = 5

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: thick

195.6.67 BorderStyleThin = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the border style constants.
Notes: thin

195.6.68 FillPatternDiagcrosshatch = 9

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.69 FillPatternDiagstripe = 8

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.70 FillPatternGray12P5 = 17

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.71 FillPatternGray25 = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.72 FillPatternGray50 = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.73 FillPatternGray6P25 = 18

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.74 FillPatternGray75 = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.75 FillPatternHorstripe = 5

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.76 FillPatternNone = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.77 FillPatternRevdiagstripe = 7

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.78 FillPatternSolid = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.
Example:

```
// define a format for red fill
Dim redBackgroundFormat As XLFormatMBS = book.AddFormat
Dim c As Color = & cFF0000
// will give back numeric value of color for RGB mode or color index
Dim n As Integer = book.PackColor(c)
// we set forecolor of the pattern to fill background!
redBackgroundFormat.PatternForegroundColor = n
redBackgroundFormat.PatternBackgroundColor = n
redBackgroundFormat.FillPattern = XLFormatMBS.FillPatternSolid

Dim row As Integer = 5 // 6th row
Dim col As Integer = 1 // Column B
Dim value As Double = 123

Call sheet.WriteNumber row, col, value, redBackgroundFormat
```

195.6.79 FillPatternThickdiagcrosshatch = 10

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.80 FillPatternThindiagcrosshatch = 16

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.81 FillPatternThindiagstripe = 14

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the fill pattern style constants.

195.6.82 FillPatternThinhorcrosshatch = 15

Notes: number with thousands separator, negative in brackets: (4,000)

195.6.118 NumformatNumberSepNegbraRed = 38

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the number format constants.
Notes: number with thousands separator, negative is red in brackets: (4,000)

195.6.119 NumformatPercent = 9

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the number format constants.
Notes: percent value, multiply the cell value by 100: 75%

195.6.120 NumformatPercentD2 = 10

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the number format constants.
Notes: percent value with decimal point, multiply the cell value by 100: 75.00%

195.6.121 NumformatScientificD2 = 11

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the number format constants.
Notes: scientific value with E character and decimal point: 10.00E+1

195.6.122 NumformatText = 49

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the number format constants.
Notes: text value

195.7 class XLRichStringMBS

195.7.1 class XLRichStringMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the rich text.
Notes: This class allows to have more than one font within one cell.

195.7.2 Blog Entries

- StyledText for Excel files with LibXL 3.9 in Xojo
- MBS Xojo Plugins, version 20.2pr4

195.7.3 Methods

195.7.4 AddFont as XLFontMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a new font to the RichString for using with the addText() method.

195.7.5 AddStyledText(StyledText as StyledText)

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds styled text to the rich string.
Notes: We convert attributes like bold, italic, underline, color, font name and size.

195.7.6 AddText(text as String, font as XLFontMBS = nil)

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a piece of text (run) with the specified font to the RichString for mixing different fonts in a single cell.

195.7.7 Constructor(book as XLBookMBS)

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a new rich text to be used in the book.

195.7.8 Text(Index as Integer) as String

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a piece of text (run) with the specified index from the RichString.
See also:

- 195.7.14 Text as String 23277
- 195.7.9 Text(Index as Integer, byref font as XLFontMBS) as String 23276

195.7.9 Text(Index as Integer, byref font as XLFontMBS) as String

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a piece of text (run) and font with the specified index from the RichString.
See also:

- 195.7.14 Text as String 23277
- 195.7.8 Text(Index as Integer) as String 23276

195.7.10 Properties

195.7.11 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The reference to the owning book.
Notes: (Read only property)

195.7.12 Handle as Integer

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.7.13 StyledText as StyledText

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries styled text with attributes of the rich string.
Notes:

We convert attributes like bold, italic, underline, color, font name and size.
(Read only property)

195.7.14 Text as String

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries all text from the rich string.
Notes: (Read only property)
See also:

- 195.7.8 Text(Index as Integer) as String 23276
- 195.7.9 Text(Index as Integer, byref font as XLFontMBS) as String 23276

195.7.15 TextCount as Integer

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of text (run) in the RichString.
Notes: (Read only property)

195.8 class XLSheetMBS

195.8.1 class XLSheetMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an Excel worksheet.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

195.8.3 Methods

195.8.4 AddDataValidation(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as String, value2 as String)

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a data validation for the specified range (only for xlsx files).
Notes:

type: the type of data validation.
op: the relational operator of data validation.
rowFirst: the first row of range;
rowLast: the last row of range;
colFirst: the first column of range;
colLast: the last column of range;

value1: the first value for relational operator;
value2: the second value for ValidationOpBetween or ValidationOpNotBetween operator;
See also:

- 195.8.5 AddDataValidation(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as String, value2 as String, allowBlank as Boolean, hideDropDown as Boolean = false, showInputMessage as Boolean = true, showErrorMessage as Boolean = true, promptTitle as String = "", prompt as String = "", errorTitle as string = "", error as string = "", errorStyle as integer = 0) 23279

195.8.5 AddDataValidation(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as String, value2 as String, allowBlank as Boolean, hideDropDown as Boolean = false, showInputMessage as Boolean = true, showErrorMessage as Boolean = true, promptTitle as String = "", prompt as String = "", errorTitle as string = "", error as string = "", errorStyle as integer = 0)

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a data validation for the specified range (only for xlsx files).
Notes:

type: the type of data validation.
op: the relational operator of data validation.
rowFirst: the first row of range;
rowLast: the last row of range;
colFirst: the first column of range;
colLast: the last column of range;
value1: the first value for relational operator;
value2: the second value for ValidationOpBetween or ValidationOpNotBetween operator;
allowBlank: a boolean value indicating whether the data validation treats empty or blank entries as valid, 'true' means empty entries are OK and do not violate the validation constraints;
hideDropDown: a boolean value indicating whether to display the dropdown combo box for a list type data validation (ValidationTypeList);
showInputMessage: a boolean value indicating whether to display the input prompt message;
showErrorMessage: a boolean value indicating whether to display the error alert message when an invalid value has been entered, according to the criteria specified;
promptTitle: title bar text of input prompt;
prompt: message text of input prompt;
errorTitle: title bar text of error alert;
error: message text of error alert;
errorStyle: the style of error alert used for this data validation:
See also:

- 195.8.4 AddDataValidation(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as String, value2 as String) 23278

195.8.6 AddDataValidationDouble(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as Double, value2 as Double)

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a data validation for the specified range with double or date values for the relational operator (only for xlsx files).
Notes: See parameters in the addDataValidation() method.
See also:

- 195.8.7 AddDataValidationDouble(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as Double, value2 as Double, allowBlank as Boolean, hideDropDown as Boolean = false, showInputMessage as Boolean = true, showErrorMessage as Boolean = true, promptTitle as String = """, prompt as String = """, errorTitle as string = """, error as string = """, errorStyle as integer = 0) 23280

195.8.7 AddDataValidationDouble(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as Double, value2 as Double, allowBlank as Boolean, hideDropDown as Boolean = false, showInputMessage as Boolean = true, showErrorMessage as Boolean = true, promptTitle as String = """, prompt as String = """, errorTitle as string = """, error as string = """, errorStyle as integer = 0)

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds a data validation for the specified range with double or date values for the relational operator (only for xlsx files).
Notes: See parameters in the addDataValidation() method.
See also:

- 195.8.6 AddDataValidationDouble(type as Integer, op as integer, rowFirst as integer, colFirst as integer, rowLast as integer, colLast as integer, value1 as Double, value2 as Double) 23280

195.8.8 AddHyperlink(hyperlink as string, rowFirst as Integer, rowLast as Integer, colFirst as Integer, colLast as Integer)

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds the new hyperlink.

195.8.9 AddIgnoredError(rowFirst as Integer, colFirst as Integer, rowLast as Integer, colLast as Integer, iError as Integer)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Adds the ignored error for specified range.
Notes: It allows to hide green triangles on left sides of cells. For example, if a cell is formatted as text but contains a numeric value, this is considered to be a potential error because the number won't be treated as a number, for example, in calculations. It is possible to combine a few IgnoredError values with operator | . Returns false if error occurs. Get error info with XLBookMBS.errorMessage.

195.8.10 AddrToRowCol(addr as string, byref row as Integer, byref col as Integer, byref rowRelative as boolean, byref colRelative as boolean)

MBS XL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts a cell reference to row and column.
Example:

```
// create new xls file
dim book as new XLBookMBS(false)

// create sheet
dim sheet as XLSheetMBS = book.AddSheet("Sheet1")

dim row, col as Integer
dim rowRelative, colRelative as boolean

sheet.AddrToRowCol("F7", row, col, rowRelative, colRelative)
MsgBox str(row)+" "+str(col) // shows 6 5
```

195.8.11 ApplyFilter

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies the AutoFilter to the sheet.

195.8.12 CellType(row as Integer, col as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns cell's type.
Notes: See CellType constants.

195.8.13 Clear(rowFirst as Integer = 0, rowLast as Integer = 1048575, colFirst as Integer = 0, colLast as Integer = 16383) as Boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears cells in specified area.

195.8.14 ClearPrintArea

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears the print area.

195.8.15 ClearPrintRepeats

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Clears repeated rows and columns on each page.

195.8.16 ColWidth(col as Integer) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns column width.

195.8.17 ColWidthPx(col as integer) as Integer

MBS XL Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns column width in pixels.

195.8.18 Constructor

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

195.8.19 CopyCell(rowSrc as Integer, colSrc as Integer, rowDst as Integer, colDst as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies cell with format from (rowSrc, colSrc) to (rowDst, colDst).
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.20 CopyRow(dest as XLSheetMBS, SourceRow as Integer, DestRow as Integer, Options as XLCopyOptionsMBS = nil)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies a row from one sheet to another.
Notes:

Sheets can be in different books.
This copies most properties and all cells.
If something is missing, please let us know.

195.8.21 CopySheet(dest as XLBookMBS, Options as XLCopyOptionsMBS = nil)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies a sheet to the other book.
Notes:

This copies most properties and all cells.
If something is missing, please let us know.
See also:

- 195.8.22 CopySheet(dest as XLSheetMBS, Options as XLCopyOptionsMBS = nil) 23283

195.8.22 CopySheet(dest as XLSheetMBS, Options as XLCopyOptionsMBS = nil)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Copies the sheet content to the other sheet.
Notes:

This copies most properties and all cells.
If something is missing, please let us know.
See also:

- 195.8.21 CopySheet(dest as XLBookMBS, Options as XLCopyOptionsMBS = nil) 23283

195.8.23 DelHyperlink(index as Integer) as Boolean

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes hyperlink by index.
Notes: Index: The index from 0 to HyperlinkSize.

195.8.24 DelMerge(row as Integer, col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes merged cells.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.25 DelMergeByIndex(index as Integer) as Boolean

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes merged cells by index.
Notes: Index: From 0 to MergeSize-1.

195.8.26 DelNamedRange(name as string, scopeId as Integer = -2) as boolean

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes the named range by name.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.errorMessage().
scopeId - index of sheet for local named range or ScopeWorkbook for global named range.

195.8.27 GetHorPageBreak(index as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns row with horizontal page break at position index.

195.8.28 GetMerge(row as Integer, col as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets merged cells for cell at row, col.

Notes:

Result is written in rowFirst, rowLast, colFirst, colLast.
Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.29 GetNamedRange(name as string, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the named range coordianates by name.
Notes: Returns false if specified named range isn't found or error occurs. Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.8.30 GetNamedRange(name as string, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer, ScopeID as Integer, byref Hidden as Integer) as boolean 23285

195.8.30 GetNamedRange(name as string, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer, ScopeID as Integer, byref Hidden as Integer) as boolean

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the named range coordianates by name.
Notes:

scopeId - index of sheet for local named range or SCOPE_WORKBOOK for global named range.
hidden - true if named range is hidden and false if isn't.
Returns false if specified named range isn't found or error occurs. Get error info with XLBookMBS.errorMessage.
See also:

- 195.8.29 GetNamedRange(name as string, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as boolean 23285

195.8.31 GetPicture(index as Integer, byref rowTop as Integer, byref colLeft as Integer, byref rowBottom as Integer, byref colRight as Integer, byref width as Integer, byref height as Integer, byref offsetX as Integer, byref offsetY as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a workbook picture index at position index in worksheet.
Notes:

Output parameters:
(rowTop, colLeft) - top left position of picture;
(rowBottom, colRight) - bottom right position of picture;
width - width of picture in pixels;
height - height of picture in pixels;
offset_x - horizontal offset of picture in pixels;
offset_y - vertical offset of picture in pixels.

Use XLBookMBS.getPicture() for extracting binary data of picture by workbook picture index.
Returns -1 if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.32 GetPrintArea(byref rowFirst as Integer, byref colFirst as Integer, byref rowLast as Integer, byref colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the print area.
Notes: Returns false if print area isn't found.

195.8.33 GetPrintFit(byref wPages as Integer, byref hPages as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns whether fit to page option is enabled.
Notes:

Output parameters:
wPages - number of pages the sheet width is fit to;
hPages - number of pages the sheet height is fit to.

195.8.34 GetPrintRepeatCols(byref colFirst as Integer, byref colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets repeated columns on each page from colFirst to colLast.
Notes: Returns false if repeated columns aren't found.

195.8.35 GetPrintRepeatRows(byref rowFirst as Integer, byref rowLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets repeated rows on each page from rowFirst to rowLast.
Notes: Returns false if repeated rows aren't found.

195.8.36 GetTopLeftView(byref row as Integer, byref col as Integer)

MBS XL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Extracts the first visible row and the leftmost visible column of the sheet.
Example:

```
// create new xls file
dim book as new XLBookMBS(false)

// create sheet
dim sheet as XLSheetMBS = book.AddSheet("Sheet1")

// set top left view
sheet.SetTopLeftView(2,3)

// read values
dim col, row as Integer
sheet.GetTopLeftView(row, col)

MsgBox str(Row)+", "+str(col) // shows 2, 3
```

195.8.37 GetVerPageBreak(index as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns column with vertical page break at position index.

195.8.38 GroupCols(colFirst as Integer, colLast as Integer, collapsed as boolean = true) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Groups columns from colFirst to colLast.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.39 GroupRows(rowFirst as Integer, rowLast as Integer, collapsed as boolean = true) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Groups rows from rowFirst to rowLast.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.40 Hyperlink(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as String

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the hyperlink and its coordianates by index.

195.8.41 InsertCol(colFirst as Integer, colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts columns from colFirst to colLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Updates existing named ranges.

195.8.42 InsertColAndKeepRanges(colFirst as integer, colLast as integer) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts columns from colFirst to colLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Doesn't update existing named ranges.

195.8.43 InsertRow(rowFirst as Integer, rowLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts rows from rowFirst to rowLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Updates existing named ranges.

195.8.44 InsertRowAndKeepRanges(rowFirst as integer, rowLast as integer) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Inserts rows from rowFirst to rowLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Doesn't update existing named ranges.

195.8.45 IsDate(row as Integer, col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks that cell contains a date or time value.

195.8.46 IsFormula(row as Integer, col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks that cell contains a formula.

195.8.47 IsRichString(row as integer, col as integer) as Boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Checks that the cell contains a rich string with multiple fonts.
Notes: If return value is true read it with the readRichString() method.

195.8.48 Merge(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref colFirst as Integer, byref colLast as Integer) as Boolean

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the merged cells by index.

195.8.49 NamedRange(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref ColFirst as Integer, byref ColLast as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the named range coordianates by index.
See also:

- 195.8.50 NamedRange(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref ColFirst as Integer, byref ColLast as Integer, byref scopeId as Integer, byref Hidden as Boolean) as string 23290

195.8.50 NamedRange(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref ColFirst as Integer, byref ColLast as Integer, byref scopeId as Integer, byref Hidden as Boolean) as string

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the named range coordianates by index.
Notes:

scopeId - index of sheet for local named range or ScopeWorkbook for global named range.
hidden - true if named range is hidden and false if isn't.
See also:

- 195.8.49 NamedRange(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref ColFirst as Integer, byref ColLast as Integer) as string 23290

195.8.51 ReadBlank(row as Integer, col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads format from blank cell.
Notes:

Returns false if specified cell isn't blank or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.52 ReadBlank(row as Integer, col as Integer, byref format as XLFormatMBS) as boolean 23290

195.8.52 ReadBlank(row as Integer, col as Integer, byref format as XLFormatMBS) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads format from blank cell.

Notes:

Returns false if specified cell isn't blank or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.51 ReadBlank(row as Integer, col as Integer) as boolean 23290

195.8.53 ReadBoolean(row as Integer, col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a boolean value and its format from cell.
Notes:

If nil format is returned then an error occured. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.54 ReadBoolean(row as Integer, col as Integer, byref format as XLFormatMBS) as boolean 23291

195.8.54 ReadBoolean(row as Integer, col as Integer, byref format as XLFormatMBS) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a boolean value and its format from cell.
Notes:

If nil format is returned then an error occured. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.53 ReadBoolean(row as Integer, col as Integer) as boolean 23291

195.8.55 ReadComment(row as Integer, col as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a comment from specified cell.
Notes:

Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.56 ReadDate(row as Integer, col as Integer) as date

MBS XL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a date/time and its format from cell.
Notes:

Internally uses XLBookMBS.dateUnpack() for extract date/time parts from double.
If format is returned as nil, then error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.57 ReadDate(row as Integer, col as Integer, byref format as XLFormatMBS) as date 23292

195.8.57 ReadDate(row as Integer, col as Integer, byref format as XLFormatMBS) as date

MBS XL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a date/time and its format from cell.
Notes:

Internally uses XLBookMBS.dateUnpack() for extract date/time parts from double.
If format is returned as nil, then error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.56 ReadDate(row as Integer, col as Integer) as date 23292

195.8.58 ReadError(row as Integer, col as Integer) as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads error from cell.
Notes:

See ErrorType* constants.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.59 ReadFormula(row as Integer, col as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a formula string and its format from cell.
Notes:

Returns nil if specified cell doesn't contain formula or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.60 ReadFormula(row as Integer, col as Integer, byref format as XLFormatMBS) as string 23293

195.8.60 ReadFormula(row as Integer, col as Integer, byref format as XLFormatMBS) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a formula string and its format from cell.
Notes:

Returns nil if specified cell doesn't contain formula or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.59 ReadFormula(row as Integer, col as Integer) as string 23292

195.8.61 ReadNumber(row as Integer, col as Integer) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a number or date/time and its format from cell.
Notes:

Use XLBookMBS.dateUnpack() for extract date/time parts from double.
If format is returned as nil, then error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.62 ReadNumber(row as Integer, col as Integer, byref format as XLFormatMBS) as Double 23293

195.8.62 ReadNumber(row as Integer, col as Integer, byref format as XLFormatMBS) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a number or date/time and its format from cell.
Notes:

Use XLBookMBS.dateUnpack() for extract date/time parts from double.
If format is returned as nil, then error occurs. Get error info with XLBookMBS.ErrorMessage property.

Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.61 ReadNumber(row as Integer, col as Integer) as Double 23293

195.8.63 ReadRichString(row as integer, col as integer) as XLRichStringMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a rich string with multiple fonts and its format from the cell.
Notes:

It's possible to check if the specified cell contains a rich string with the isRichString() method.
Returns nil if the specified cell doesn't contain a string or error occurs.
Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.8.64 ReadRichString(row as integer, col as integer, byref format as XLFormatMBS) as XLRichStringMBS 23294

195.8.64 ReadRichString(row as integer, col as integer, byref format as XLFormatMBS) as XLRichStringMBS

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a rich string with multiple fonts and its format from the cell.
Notes:

It's possible to check if the specified cell contains a rich string with the isRichString() method.
Returns nil if the specified cell doesn't contain a string or error occurs.
Get error info with XLBookMBS.ErrorMessage property.
See also:

- 195.8.63 ReadRichString(row as integer, col as integer) as XLRichStringMBS 23294

195.8.65 ReadString(row as Integer, col as Integer) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a string and its format from cell.
Notes:

Returns "" if specified cell doesn't contain string or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.66 ReadString(row as Integer, col as Integer, byref format as XLFormatMBS) as string 23295

195.8.66 ReadString(row as Integer, col as Integer, byref format as XLFormatMBS) as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads a string and its format from cell.
Notes:

Returns "" if specified cell doesn't contain string or error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
See also:

- 195.8.65 ReadString(row as Integer, col as Integer) as string 23294

195.8.67 ReadStyledText(row as integer, col as integer) as StyledText

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads rich string of a cell and converts to StyledText.
Notes: We convert attributes like bold, italic, underline, color, font name and size.
See also:

- 195.8.68 ReadStyledText(row as integer, col as integer, byref format as XLFormatMBS) as StyledText 23295

195.8.68 ReadStyledText(row as integer, col as integer, byref format as XLFormatMBS) as StyledText

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Reads rich string from a cell and returns as StyledText.
Notes: We convert attributes like bold, italic, underline, color, font name and size.
See also:

- 195.8.67 ReadStyledText(row as integer, col as integer) as StyledText 23295

195.8.69 RemoveCol(colFirst as Integer, colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes columns from colFirst to colLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Updates existing named ranges.

195.8.70 RemoveColAndKeepRanges(colFirst as integer, colLast as integer) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes columns from colFirst to colLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Doesn't update existing named ranges.

195.8.71 RemoveComment(row as Integer, col as Integer)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a comment from the cell (only for xls format).

195.8.72 RemoveDataValidations

MBS XL Plugin, Plugin Version: 17.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes all data validations for the sheet (only for xlsx files).

195.8.73 RemoveFilter

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes the AutoFilter from the sheet.

195.8.74 RemovePicture(row as integer, col as integer) as Boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a picture in the specified position.
Notes: Returns false if an error occurs.

195.8.75 RemovePictureByIndex(index as integer) as Boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes a picture by specified index. Returns false if an error occurs.

195.8.76 RemoveRow(rowFirst as Integer, rowLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes rows from rowFirst to rowLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Updates existing named ranges.

195.8.77 RemoveRowAndKeepRanges(rowFirst as integer, rowLast as integer) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Removes rows from rowFirst to rowLast.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Doesn't update existing named ranges.

195.8.78 RowColToAddr(row as Integer, col as Integer, rowRelative as boolean = true, colRelative as boolean = true) as string

MBS XL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Converts row and column to a cell reference.
Example:

```
// create new xls file
dim book as new XLBookMBS(false)

// create sheet
dim sheet as XLSheetMBS = book.AddSheet("Sheet1")

MsgBox sheet.RowColToAddr(5,5) // shows F6
MsgBox sheet.RowColToAddr(5,5,false,false) // shows $ F$ 6
```

195.8.79 RowHeight(row as Integer) as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns row height.

195.8.80 RowHeightPx(row as integer) as Integer

MBS XL Plugin, Plugin Version: 20.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns row height in pixels.

195.8.81 SetAutoFitArea(rowFirst as Integer = 0, colFirst as Integer = 0, rowLast as Integer = -1, colLast as Integer = -1)

MBS XL Plugin, Plugin Version: 15.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the borders for autofit column widths feature.
Notes: The method setCol with -1 width value will affect only to the specified limited area.

195.8.82 SetCol(colFirst as Integer, colLast as Integer, width as Double, format as XLFormatMBS = nil, hidden as boolean = false) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets column width and format for all columns from colFirst to colLast.
Notes:

If format is nil then format is ignored. Columns may be hidden. Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

Column width measured as the number of characters of the maximum digit width of the numbers 0, 1, 2, ..., 9 as rendered in the normal style's font. Value -1 is used for autofit column widths. If format equals 0 then format is ignored. Columns may be hidden.

195.8.83 SetFooter(footer as string, margin as Double) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the footer text for the sheet when printed.
Notes:

The footer text appears at the bottom of every page when printed. The length of the text must be less than or equal to 255. The footer text can contain special commands, for example a placeholder for the page

number, current date or text formatting attributes. See setHeader for details. Margin is specified in inches.

Code	Description
& L	specifies the beginning of the left section
& P	specifies the current page number
& N	specifies the total number of pages
& \d { 1,3 }	specifies the text font size, where font size is measured in points, for example: & 9 or & 36
& S	specifies whether the strikethrough text style is on or off
& X	specifies whether the superscript text style is on or off
& Y	specifies whether the subscript text style is on or off
& C	specifies the beginning of the center section
& D	specifies a date
& T	specifies a time
& G	specifies a picture
& U	specifies whether the single underline text style is on or off
& E	specifies whether the double underline text style is on or off
& R	specifies the beginning of the right section
& Z	specifies a workbook file path
& F	specifies a workbook file name
& A	specifies a sheet name
& "fontname"	specifies the text font, for example: & "Comic Sans MS"
& B	specifies whether the bold text style is on or off
& I	specifies whether the italic text style is on or off
& &	specifies an ampersand character (&)

195.8.84 SetHeader(header as string, margin as Double) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the header text of the sheet when printed.
Notes:

The text appears at the top of every page when printed. The length of the text must be less than or equal to 255. The header text can contain special commands, for example a placeholder for the page number, current date or text formatting attributes. Special commands are represented by single letter with a leading ampersand ("& "). Margin is specified in inches.

Code	Description
& L	specifies the beginning of the left section
& P	specifies the current page number
& N	specifies the total number of pages
& \d { 1,3 }	specifies the text font size, where font size is measured in points, for example: & 9 or & 36
& S	specifies whether the strikethrough text style is on or off
& X	specifies whether the superscript text style is on or off
& Y	specifies whether the subscript text style is on or off
& C	specifies the beginning of the center section
& D	specifies a date
& T	specifies a time
& G	specifies a picture
& U	specifies whether the single underline text style is on or off
& E	specifies whether the double underline text style is on or off
& R	specifies the beginning of the right section
& Z	specifies a workbook file path
& F	specifies a workbook file name
& A	specifies a sheet name
& "fontname"	specifies the text font, for example: & "Comic Sans MS"
& B	specifies whether the bold text style is on or off
& I	specifies whether the italic text style is on or off
& &	specifies an ampersand character (&)

195.8.85 SetHorPageBreak(row as Integer, pageBreak as boolean = true) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets/removes a horizontal page break.
Example:

```
// new document
dim x as new XLBookMBS

// add a sheet
dim s as XLSheetMBS = x.AddSheet

// write a cell
call s.WriteString(5,5, "Hello")

// now put a page break there
if s.SetHorPageBreak(5, true) then
// and now we have one at row 5
MsgBox str(s.GetHorPageBreakCount)+" "+str(s.GetHorPageBreak(0))
```

end if

Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.86 SetMerge(rowFirst as Integer, rowLast as Integer, colFirst as Integer, colLast as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets merged cells for range: rowFirst - rowLast, colFirst - colLast.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.87 SetNamedRange(name as string, rowFirst as Integer, rowLast as Integer, colFirst as Integer, colLast as Integer, scopeId as Integer = -2) as boolean

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the named range.
Notes:

scopeId - index of sheet for local named range or ScopeWorkbook for global named range.
Returns false if error occurs. Get error info with XLBookMBS.errorMessage.

195.8.88 SetPicture(row as Integer, col as Integer, PictureID as Integer, scale as Double = 1.0, OffsetX as Integer = 0, OffsetY as Integer = 0, pos as Integer = 0)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a picture with pictureId identifier at position row and col with scale factor.
Notes: Use XLBookMBS.addPicture() for getting picture identifier.
See also:

- 195.8.89 SetPicture(row as Integer, col as Integer, PictureID as Integer, width as Integer, height as Integer, OffsetX as Integer = 0, OffsetY as Integer = 0, pos as Integer = 0) 23302

195.8.89 SetPicture(row as Integer, col as Integer, PictureID as Integer, width as Integer, height as Integer, OffsetX as Integer = 0, OffsetY as Integer = 0, pos as Integer = 0)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets a picture with pictureId identifier at position row and col with custom size.
Notes:

Use XLBookMBS.addPicture() for getting a picture identifier.

Width and height can be -1 for default size of picture.
See also:

- 195.8.88 SetPicture(row as Integer, col as Integer, PictureID as Integer, scale as Double = 1.0, OffsetX as Integer = 0, OffsetY as Integer = 0, pos as Integer = 0) 23301

195.8.90 SetPrintArea(rowFirst as Integer, rowLast as Integer, colFirst as Integer, colLast as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the print area.

195.8.91 SetPrintFit(wPages as Integer, hPages as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Fits sheet width and sheet height to wPages and hPages respectively.

195.8.92 SetPrintRepeatCols(colFirst as Integer, colLast as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets repeated columns on each page from colFirst to colLast.

195.8.93 SetPrintRepeatRows(rowFirst as Integer, rowLast as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets repeated rows on each page from rowFirst to rowLast.

195.8.94 SetProtectEx(protect as boolean = true, password as string = "", enhancedProtection as Integer = -1)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Protects/unprotects the sheet with password and enchanced parameters below.
Notes: It is possible to combine a few EnhancedProtection values with operator BitwiseOr.

195.8.95 SetRow(row as Integer, height as Double, format as XLFormatMBS = nil, hidden as boolean = false) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets row height and format.
Notes:

If format is nil then format is ignored. Row may be hidden. Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

Height is in points. If you want to convert from pixels to points you can use this calculation: points = pixels * 72 / 96. So for a height of 72 pixel, you pass 54 points.

195.8.96 SetTabColor(colorValue as Integer)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the color for the sheet's tab.

195.8.97 SetTabRgbColor(red as Integer, green as Integer, blue as Integer)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the color for the sheet's tab.

195.8.98 SetTopLeftView(row as Integer, col as Integer)

MBS XL Plugin, Plugin Version: 12.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the first visible row and the leftmost visible column of the sheet.
Example:

```
// create new xls file
dim book as new XLBookMBS(false)
```

```
// create sheet
dim sheet as XLSheetMBS = book.AddSheet("Sheet1")

// set top left view
sheet.SetTopLeftView(2,3)

// read values
dim col, row as Integer
sheet.GetTopLeftView(row, col)

MsgBox str(Row)+", "+str(col) // shows 2, 3
```

195.8.99 SetVerPageBreak(row as Integer, pageBreak as boolean = true) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets/removes a vertical page break.
Notes: Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.100 Split(row as Integer, col as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Splits a sheet at position (row, col).
Notes: Splits a sheet at position (row, col) or specifies the position of frozen pane. This function allows to freeze a header at top position or freeze some columns on the right.

195.8.101 SplitInfo(byref row as Integer, byref col as Integer) as Boolean

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the split information (position of frozen pane) in the sheet.
Notes:

row: vertical position of the split;
col: horizontal position of the split.
Returns true on success.

195.8.102 Table(index as Integer, byref rowFirst as Integer, byref rowLast as Integer, byref ColFirst as Integer, byref ColLast as Integer, byref headerRowCount as Integer, byref totalsRowCount as Integer) as string

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Gets the table parameters by index.
Notes:

headerRowCount - the number of header rows showing at the top of the table. 0 means that the header row is not shown.
totalsRowCount - the number of totals rows that shall be shown at the bottom of the table. 0 means that the totals row is not shown.
Returns a string representing the name of the table.

195.8.103 WriteBlank(row as Integer, col as Integer, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes blank cell with specified format.
Notes:

Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.104 WriteBoolean(row as Integer, col as Integer, value as boolean, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a bool value into cell with specified format.
Notes:

If format is nil then format is ignored.
Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.105 WriteComment(row as Integer, col as Integer, value as string, author as string, width as Integer, height as Integer)

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a comment to the cell.
Notes:

row and col: cell's position
value: comment string
author: author string
width: width of text box in pixels
height: height of text box in pixels

Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.106 WriteDate(row as Integer, col as Integer, value as date, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a date/time into cell with specified format.
Notes:

If format is nil then format is ignored. Internally uses XLBookMBS.datePack() for packing date/time parts to double.
Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.107 WriteError(row as Integer, col as Integer, Error as Integer, format as XLFormatMBS = nil)

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes error into the cell with specified format.
Notes: If format equals nil then format is ignored.

195.8.108 WriteFormula(row as Integer, col as Integer, value as string, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a formula into cell with specified format.
Notes:

If format is nil then format is ignored. Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.
As LibXL does not calculate the result of the formula, it will not encode the result in the Excel file. It does only store the formula, so an app opening the file will have to do the calculation. But QuickLook on Mac OS X does not calculate, so results do not show there.
Examples for formulas are: "TODAY()", "IF(C1>0;ABS(C1*D1);"""")", "SUM(E16:E38)" or "E39+E39*E40".

195.8.109 WriteFormulaBool(row as Integer, col as Integer, Expression as string, value as Boolean, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a formula expression with precalculated bool value into cell with specified format.
Notes:

If format equals nil then format is ignored.
Returns false if error occurs. Get error info with XLBookMBS.errorMessage.

195.8.110 WriteFormulaNum(row as Integer, col as Integer, Expression as string, value as Double, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a formula expression with precalculated double value into cell with specified format.
Notes: If format equals nil then format is ignored. Returns false if error occurs. Get error info with XLBookMBS.errorMessage.

195.8.111 WriteFormulaString(row as Integer, col as Integer, Expression as string, value as String, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a formula expression with precalculated string value into cell with specified format.
Notes: If format equals nil then format is ignored. Returns false if error occurs. Get error info with XLBookMBS.errorMessage.

195.8.112 WriteNumber(row as Integer, col as Integer, value as Double, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a number or date/time into cell with specified format.
Notes:

If format is nil then format is ignored. Use XLBookMBS.datePack() for packing date/time parts to double.
Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.113 WriteRichString(row as integer, col as integer, RichString as XLRichStringMBS, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a rich string with multiple fonts into the cell with the specified format.
Notes:

Add a new rich string with the addRichString() method. If format equals nil then format is ignored.
Returns false if an error occurs. Get error info with XLBookMBS.ErrorMessage property.

195.8.114 WriteString(row as Integer, col as Integer, value as string, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a string into cell with specified format.
Notes:

If format is nil then format is ignored.
Returns false if error occurs. Get error info with XLBookMBS.ErrorMessage property.
Col and Row are zero based.
Please remember that Excel files have limits like 65536 rows and 256 columns.

195.8.115 WriteStyledText(row as integer, col as integer, StyledText as StyledText, format as XLFormatMBS = nil) as boolean

MBS XL Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Writes a styled text to a cell.
Notes:

Same as building a rich string based in the StyledText and assigning it to the cell.

We convert attributes like bold, italic, underline, color, font name and size.

195.8.116 Properties

195.8.117 AutoFilter as XLAutoFilterMBS

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the AutoFilter.
Notes:

Creates it if it doesn't exist.
Only for xml based files.
(Read only property)

195.8.118 Book as XLBookMBS

MBS XL Plugin, Plugin Version: 15.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The parent book.
Notes:

As a sheet is only valid with the owning book, we keep a back reference here.
(Read only property)

195.8.119 DisplayGridlines as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the gridlines are displayed.
Notes:

True if gridlines are displayed and false if aren't.
(Assigning a value to this property calls setDisplayGridlines internally)
(Read and Write property)

195.8.120 FirstCol as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the first column in the sheet that contains a used cell.
Notes: (Read only property)

195.8.121 FirstRow as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the first row in the sheet that contains a used cell.
Notes: (Read only property)

195.8.122 Footer as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The footer text of the sheet when printed.
Notes:

The footer text appears at the bottom of every page when printed. The length of the text must be less than or equal to 255. The footer text can contain special commands, for example a placeholder for the page number, current date or text formatting attributes. Margin is specified in inches.

(Read only property)

195.8.123 FooterMargin as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The footer margin in inches.
Notes: (Read only property)

195.8.124 GetHorPageBreakCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of horizontal page breaks in the sheet.
Example:

```
// new document
dim x as new XLBookMBS

// add a sheet
```

Code	Description
& L	specifies the beginning of the left section
& P	specifies the current page number
& N	specifies the total number of pages
& \d { 1,3 }	specifies the text font size, where font size is measured in points, for example: & 9 or & 36
& S	specifies whether the strikethrough text style is on or off
& X	specifies whether the superscript text style is on or off
& Y	specifies whether the subscript text style is on or off
& C	specifies the beginning of the center section
& D	specifies a date
& T	specifies a time
& G	specifies a picture
& U	specifies whether the single underline text style is on or off
& E	specifies whether the double underline text style is on or off
& R	specifies the beginning of the right section
& Z	specifies a workbook file path
& F	specifies a workbook file name
& A	specifies a sheet name
& "fontname"	specifies the text font, for example: & "Comic Sans MS"
& B	specifies whether the bold text style is on or off
& I	specifies whether the italic text style is on or off
& &	specifies an ampersand character (&)

```
dim s as XLSheetMBS = x.AddSheet

// write a cell
call s.WriteString(5,5, "Hello")

// now put a page break there
if s.SetHorPageBreak(5, true) then
// and now we have one at row 5
MsgBox str(s.GetHorPageBreakCount)+" "+str(s.GetHorPageBreak(0))
end if
```

Notes: (Read only property)

195.8.125 GetVerPageBreakCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of vertical page breaks in the sheet.
Notes: (Read only property)

195.8.126 GroupSummaryBelow as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether grouping rows summary is below.
Notes:

True if summary is below and false if isn't.
(Read and Write property)

195.8.127 GroupSummaryRight as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether grouping columns summary is right.
Notes:

Returns true if summary is right and false if isn't.
(Read and Write property)

195.8.128 Handle as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The internal object reference.
Notes: (Read and Write property)

195.8.129 HCenter as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the sheet is centered horizontally when printed.
Notes: (Read and Write property)

195.8.130 Header as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header text of the sheet when printed.
Notes:

The text appears at the top of every page when printed. The length of the text must be less than or equal to 255. The header text can contain special commands, for example a placeholder for the page number, current date or text formatting attributes. Special commands are represented by single letter with a leading ampersand ("& "). Margin is specified in inches.

Code	Description
& L	specifies the beginning of the left section
& P	specifies the current page number
& N	specifies the total number of pages
& \d { 1,3 }	specifies the text font size, where font size is measured in points, for example: & 9 or & 36
& S	specifies whether the strikethrough text style is on or off
& X	specifies whether the superscript text style is on or off
& Y	specifies whether the subscript text style is on or off
& C	specifies the beginning of the center section
& D	specifies a date
& T	specifies a time
& G	specifies a picture
& U	specifies whether the single underline text style is on or off
& E	specifies whether the double underline text style is on or off
& R	specifies the beginning of the right section
& Z	specifies a workbook file path
& F	specifies a workbook file name
& A	specifies a sheet name
& "fontname"	specifies the text font, for example: & "Comic Sans MS"
& B	specifies whether the bold text style is on or off
& I	specifies whether the italic text style is on or off
& &	specifies an ampersand character (&)

(Read only property)

195.8.131 HeaderMargin as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The header margin in inches.
Notes: (Read only property)

195.8.132 Hidden as Integer

MBS XL Plugin, Plugin Version: 12.1, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Specifies the visible state of this sheet.
Notes:

See constants: SheetStateHidden, SheetStateVeryHidden, SheetStateVisible.
(Read and Write property)

195.8.133 HyperlinkSize as Integer

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of hyperlinks in the sheet.
Notes: (Read only property)

195.8.134 Landscape as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether to use landscape or portrait mode for printing.
Notes:

true - pages are printed using landscape mode, false - pages are printed using portrait mode.
(Read and Write property)

195.8.135 LastCol as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the zero-based index of the column after the last column in the sheet that contains a used cell.
Example:

```
dim book as XLBookMBS // your book instance

// get first sheet
dim sheet as XLSheetMBS = book.Sheet(0)

// show index of last column
dim LastCol as Integer = sheet.LastCol

MsgBox "LastCol: " + str(LastCol)
```

Notes: (Read only property)

195.8.136 LastRow as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the zero-based index of the row after the last row in the sheet that contains a used cell.
Example:

```
dim book as XLBookMBS // your book instance

// get first sheet
dim sheet as XLSheetMBS = book.Sheet(0)

// show index of last row
dim LastRow as Integer = sheet.LastRow

MsgBox "LastRow: " + str(LastRow)
```

Notes: (Read only property)

195.8.137 MarginBottom as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The bottom margin of the sheet in inches.
Notes: (Read and Write property)

195.8.138 MarginLeft as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The left margin of the sheet in inches.
Notes: (Read and Write property)

195.8.139 MarginRight as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The right margin of the sheet in inches.

Notes: (Read and Write property)

195.8.140 MarginTop as Double

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The top margin of the sheet in inches.
Notes: (Read and Write property)

195.8.141 MergeSize as Integer

MBS XL Plugin, Plugin Version: 14.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of merged cells in this worksheet.
Notes: (Read only property)

195.8.142 Name as string

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The name of the sheet.
Notes: (Read and Write property)

195.8.143 NamedRangeCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of named ranges in the sheet.
Notes: (Read only property)

195.8.144 Paper as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The paper size.
Notes:

See Paper* constants.
(Read and Write property)

195.8.145 PictureCount as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns a number of pictures in this worksheet.
Notes: (Read only property)

195.8.146 PrintGridlines as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the gridlines are printed.
Notes:

True if gridlines are printed and false if aren't.
(Read and Write property)

195.8.147 PrintRowCol as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the row and column headers are printed.
Notes: (Read and Write property)

195.8.148 PrintZoom as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scaling factor for printing as a percentage.
Notes: (Read and Write property)

195.8.149 Protect as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether sheet is protected.
Notes: (Read and Write property)

195.8.150 RightToLeft as boolean

MBS XL Plugin, Plugin Version: 14.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the text is displayed in right-to-left mode.
Notes:

true - the text is displayed in right-to-left mode,
false - the text is displayed in left-to-right mode.
(Read and Write property)

195.8.151 TableSize as Integer

MBS XL Plugin, Plugin Version: 16.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the number of tables in the sheet.
Notes: (Read only property)

195.8.152 VCenter as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether the sheet is centered vertically when printed.
Notes: (Read and Write property)

195.8.153 Zoom as Integer

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The zoom level of the current view.
Notes:

100 is a usual view.
(Read and Write property)

195.8.154 CellFormat(row as Integer, col as Integer) as XLFormatMBS

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The cell's format.
Notes: (Read and Write computed property)

195.8.155 ColHidden(col as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether column is hidden.
Notes: (Read and Write computed property)

195.8.156 RowHidden(row as Integer) as boolean

MBS XL Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether row is hidden.
Notes: (Read and Write computed property)

195.8.157 Constants

195.8.158 CellTypeBlank = 4

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: blank

195.8.159 CellTypeBoolean = 3

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: boolean value

195.8.160 CellTypeEmpty = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: empty

195.8.161 CellTypeError = 5

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: error

195.8.162 CellTypeNumber = 1

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: number value

195.8.163 CellTypeStrictDate = 6

MBS XL Plugin, Plugin Version: 20.2. **Function:** One of the cell type constants.
Notes: strict date

195.8.164 CellTypeString = 2

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the cell type constants.
Notes: string value

195.8.165 ErrorTypeDiv0 = 7

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: DIV/0!

195.8.166 ErrorTypeNA = & h2A

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: N/A

195.8.167 ErrorTypeName = & h1D

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: NAME?

195.8.168 ErrorTypeNoError = & hFF

MBS XL Plugin, Plugin Version: 14.3. **Function:** One of the error type constants.
Notes: No Error.

195.8.169 ErrorTypeNull = 0

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: NULL!

195.8.170 ErrorTypeNum = & h24

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: NUM!

195.8.171 ErrorTypeRef = & h17

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: REF!

195.8.172 ErrorTypeValue = & h0F

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the error type constants.
Notes: VALUE!

195.8.173 IgnoreErrorDataValidation = 128

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when a cell's value in a Table does not comply with the Data Validation rules specified.

195.8.174 IgnoreErrorEmptyCellref = 2

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when formulas refer to empty cells.

195.8.175 IgnoreErrorEvalError = 1

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when cells contain formulas that result in an error.

195.8.176 IgnoreErrorInconsistFormula = 16

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when a formula in a region of your worksheet differs from other formulas in the same region.

195.8.177 IgnoreErrorInconsistRange = 8

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when formulas omit certain cells in a region.

195.8.178 IgnoreErrorNoError = 0

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: No error.

195.8.179 IgnoreErrorNumberStoredAsText = 4

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when numbers are formatted as text or are preceded by an apostrophe.

195.8.180 IgnoreErrorTwodigTextyear = 32

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when formulas contain text formatted cells with years represented as 2 digits.

195.8.181 IgnoreErrorUnlockFormula = 64

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the ignore error constants.
Notes: Ignore errors when unlocked cells contain formulas.

195.8.182 Paper10X11 = 45

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.183 Paper10X14 = 16

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: 10 x 14 in

195.8.184 Paper10X17 = 17

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: 11 x 17 in

195.8.185 Paper12X11 = 90

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.186 Paper15X11 = 46

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.187 Paper9X11 = 44

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.188 PaperA2 = 66

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.189 PaperA3 = 8

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: A3 297 x 420 mm

195.8.190 PaperA3Extra = 63

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.191 PaperA3ExtraTransverse = 68

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.192 PaperA3Rotated = 76

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.193 PaperA3Transverse = 67

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.194 PaperA4 = 9

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: A4 210 x 297 mm

195.8.195 PaperA4Extra = 53

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.196 PaperA4Plus = 60

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.197 PaperA4Rotated = 77

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.198 PaperA4Small = 10

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: A4 Small 210 x 297 mm

195.8.199 PaperA4Transverse = 55

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.200 PaperA5 = 11

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: A5 148 x 210 mm

195.8.201 PaperA5Extra = 64

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.202 PaperA5Rotated = 78

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.203 PaperA5Transverse = 61

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.204 PaperA6 = 70

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.205 PaperA6Rotated = 83

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.206 PaperB4 = 12

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.
Notes: B4 (JIS) 250 x 354

195.8.207 PaperB4Iso = 42

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.208 PaperB4Rotated = 79

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

195.8.209 PaperB5 = 13

MBS XL Plugin, Plugin Version: 11.3. **Function:** One of the paper format constants.

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the protection levels.
Notes: Selection of unlocked cells is locked when the sheet is protected.

195.8.315 ProtectSort = 2048

MBS XL Plugin, Plugin Version: 16.5. **Function:** One of the protection levels.
Notes: Sorting is allowed when the sheet is protected.

195.8.316 ScopeUndefined = -2

MBS XL Plugin, Plugin Version: 14.0. **Function:** One of the scope constants.
Notes: Undefined scope

195.8.317 ScopeWorkbook = -1

MBS XL Plugin, Plugin Version: 14.0. **Function:** One of the scope constants.
Notes: Workbook scope.

195.8.318 SheetStateHidden = 1

MBS XL Plugin, Plugin Version: 12.1. **Function:** One of the constants for the visible state of a sheet.
Notes: Sheet is hidden, but can be shown via the user interface.

195.8.319 SheetStateVeryHidden = 2

MBS XL Plugin, Plugin Version: 12.1. **Function:** One of the constants for the visible state of a sheet.
Notes: Sheet is hidden and cannot be shown in the user interface.

195.8.320 SheetStateVisible = 0

MBS XL Plugin, Plugin Version: 12.1. **Function:** One of the constants for the visible state of a sheet.
Notes: Sheet is visible

195.8.321 ValidationErrstyleInformation = 2

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the error styles.
Notes: This data validation error style uses an information icon in the error alert.

195.8.322 ValidationErrstyleStop = 0

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the error styles.
Notes: This data validation error style uses a stop icon in the error alert.

195.8.323 ValidationErrstyleWarning = 1

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the error styles.
Notes: This data validation error style uses a warning icon in the error alert.

195.8.324 ValidationOpBetween = 0

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is between two other values.

195.8.325 ValidationOpEqual = 2

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is equal to a specified value.

195.8.326 ValidationOpGreaterthan = 6

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is greater than a specified value.

195.8.327 ValidationOpGreaterthanorequal = 7

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is greater than or equal to a specified value.

195.8.328 ValidationOpLessthan = 4

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is less than a specified value.

195.8.329 ValidationOpLessthanorequal = 5

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is less than or equal to a specified value.

195.8.330 ValidationOpNotbetween = 1

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is not between two other values.

195.8.331 ValidationOpNotequal = 3

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the validation operations.
Notes: Data validation which checks if a value is not equal to a specified value.

195.8.332 ValidationTypeCustom = 7

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation.
Notes: Data validation which uses a custom formula to check the cell value.

195.8.333 ValidationTypeDate = 4

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation.
Notes: Data validation which checks for date values satisfying the given condition.

195.8.334 ValidationTypeDecimal = 2

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** Data validation which checks for decimal values satisfying the given condition.

195.8.335 ValidationTypeList = 3

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** Data validation which checks for a value matching one of list of values.

195.8.336 ValidationTypeNone = 0

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** No data validation.

195.8.337 ValidationTypeTextLength = 6

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** Data validation which checks for text values, whose length satisfies the given condition.

195.8.338 ValidationTypeTime = 5

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** Data validation which checks for time values satisfying the given condition.

195.8.339 ValidationTypeWhole = 1

MBS XL Plugin, Plugin Version: 17.2. **Function:** One of the constants for the types of data validation. **Notes:** Data validation which checks for whole number values satisfying the given condition.

Chapter 196

XML

196.1 class XMLValidatorMBS

196.1.1 class XMLValidatorMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the XML validator.
Notes: Using the validator in LibXML.

196.1.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr5
- MBS Xojo Plugins in version 19.2
- MBS Xojo Plugins, version 19.2pr8
- New XML Validator class for Xojo

196.1.3 Xojo Developer Magazine

- 17.4, page 10: News

196.1.4 Methods

196.1.5 Constructor(File as FolderItem)

MBS Util Plugin, Plugin Version: 20.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor taking file path to XML file.

Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("schema.txt")
Dim v As New XMLValidatorMBS(f)
```

Notes: May raise an XMLException if the XML can't be parsed or the validator can't be initialized.
See also:

- 196.1.6 Constructor(XMLSchema as String) 23346

196.1.6 Constructor(XMLSchema as String)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The constructor taking XML text.
Notes:

May raise an XMLException if the XML can't be parsed or the validator can't be initialized.

For MBS Plugin 20.2 this function accepts also a file name/path to initialize.
See also:

- 196.1.5 Constructor(File as FolderItem) 23345

196.1.7 Destructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

196.1.8 Message(index as Integer) as XMLValidatorMessageMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries a message by index.
Notes: Index from 0 to MessageCount-1.

196.1.9 Messages as XMLValidatorMessageMBS()

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries array of messages recorded while validating.

196.1.10 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets current working directory for the application.
Notes:

The library looks in current directory to find related files.
So if your schema or the XML file to check references other files, please set the diretory.

Returns true on success or false on failure.
See also:

- 196.1.11 SetCurrentWorkingDirectory(path as String) as boolean 23347

196.1.11 SetCurrentWorkingDirectory(path as String) as boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets current working directory for the application.
Notes:

The library looks in current directory to find related files.
So if your schema or the XML file to check references other files, please set the diretory.

Returns true on success or false on failure.
See also:

- 196.1.10 SetCurrentWorkingDirectory(path as folderitem) as boolean 23347

196.1.12 ValidateFile(file as FolderItem) as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Validates XML file against a XML schema.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("schema.txt")
Dim v As New XMLValidatorMBS(f)

Dim t As FolderItem = SpecialFolder.Desktop.Child("test.xml")
Dim r As Integer = v.ValidateFile(t)
```

Notes:

Validate a document tree in memory.
Returns 0 if the document is schemas valid, a positive error code number otherwise and -1 in case of internal

or API error.

See messages array for the logged error and warning messages.
Please pass in XML file path and a valid XSD schema.

Use SetCurrentWorkingDirectory with file.parent to set working directory if needed.
See also:

- 196.1.13 ValidateFile(path as string) as Integer 23348

196.1.13 ValidateFile(path as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Validates XML file against a XML schema.
Notes:

Validate a document tree in memory.
Returns 0 if the document is schemas valid, a positive error code number otherwise and -1 in case of internal or API error.

See messages array for the logged error and warning messages.
Please pass in XML file path and a valid XSD schema.

Use SetCurrentWorkingDirectory with file.parent to set working directory if needed.
See also:

- 196.1.12 ValidateFile(file as FolderItem) as Integer 23347

196.1.14 ValidateString(text as string) as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Validates XML text against a XML schema.
Notes:

Validate a document tree in memory.
Returns 0 if the document is schemas valid, a positive error code number otherwise and -1 in case of internal or API error.

See messages array for the logged error and warning messages.

196.1.15 Properties

196.1.16 MessageCount as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Queries number of messages we recorded in validation.
Notes: (Read only property)

196.1.17 Events

196.1.18 Error(message as XMLValidatorMessageMBS)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error event called for validation errors.

196.1.19 Warning(message as XMLValidatorMessageMBS)

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The warning event called for validation warnings.

196.2 class XMLValidatorMessageMBS

196.2.1 class XMLValidatorMessageMBS

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for an error or warning message in XML validator.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

196.2.2 Blog Entries

- New XML Validator class for Xojo

196.2.3 Methods

196.2.4 Constructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The private constructor.

196.2.5 Destructor

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The destructor.

196.2.6 Properties

196.2.7 Code as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The error code.
Notes: (Read only property)

196.2.8 FileName as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The filename if available.

Notes: (Read only property)

196.2.9 IsError as Boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this was reported as error and not as warning.
Notes: (Read only property)

196.2.10 IsWarning as Boolean

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether this was reported as warning and not as error.
Notes: (Read only property)

196.2.11 Line as Integer

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The line number in the XML file if available.
Notes: (Read only property)

196.2.12 Message as String

MBS Util Plugin, Plugin Version: 19.2, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The message text.
Notes: (Read only property)

Chapter 197

XMP

197.1 class XMPAssertNotifyMBS

197.1.1 class XMPAssertNotifyMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This class provides a way to get notified for Assertion.
Notes: Only one instance can be registered at a given time.

197.1.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr2

197.1.3 Events

197.1.4 Assert(text as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An assertion was reported.
Example:

```
Sub Assert(text as string)
MsgBox text
End Sub
```

Notes: Display it to the user or just log it for debugging.

197.2 class XMPDateTimeMBS

197.2.1 class XMPDateTimeMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The expanded type for a date and time.
Notes:

Dates and time in the serialized XMP are ISO 8601 strings. The XMPDateTimeMBS class allows easy conversion with other formats.

DateTime values are occasionally used in cases with only a date or only a time component. A date without a time has zeros in the XMPDateTimeMBS class for all time fields. A time without a date has zeros for all date fields (year, month, and day).

197.2.2 Methods

197.2.3 ClearTimeZone

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Resets the timezone by setting all time zone properties to zero.

197.2.4 Clone as XMPDateTimeMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of this date.
Notes: Not just a new reference to the same object, but a real copy.

197.2.5 Compare(other as XMPDateTimeMBS) as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compare the order of two date/time values.
Notes:

Returns:
-1 if self is before other or other=nil
0 if self matches other
+1 if self is after other

197.2.6 Constructor

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Obtain the current date and time.
Notes: The returned time is UTC, properly adjusted for the local time zone. The resolution of the time is not guaranteed to be finer than seconds.
See also:

- 197.2.7 Constructor(text as string) 23355

197.2.7 Constructor(text as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to date/time.
See also:

- 197.2.6 Constructor 23355

197.2.8 ConvertToLocalTime

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Make sure a time is local.
Notes: If the time zone is not the local zone, the time is adjusted and the time zone set to be local.

197.2.9 ConvertToUTCTime

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Make sure a time is UTC.
Notes: If the time zone is not UTC, the time is adjusted and the time zone set to be UTC.

197.2.10 IsDateOnly as Boolean

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether only the date is defined for this datetime object.

197.2.11 IsTimeOnly as Boolean

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether only the time is defined for this datetime object.

197.2.12 Operator_Convert as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from date/time to string.
See also:

- 197.2.13 Operator_Convert(text as string) 23356

197.2.13 Operator_Convert(text as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to date/time.
See also:

- 197.2.12 Operator_Convert as string 23356

197.2.14 SetTimeZone

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Set the local time zone.
Notes: Any existing time zone value is replaced, the other date/time fields are not adjusted in any way.

197.2.15 Str as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from date/time to string.

197.2.16 Properties

197.2.17 Day as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The day of the month in the range 1..31.
Notes: (Read and Write property)

197.2.18 hasDate as Boolean

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A property to tell if the date is defined in this object.

Notes: (Read and Write property)

197.2.19 hasTime as Boolean

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A property to tell if the time is defined in this object.
Notes: (Read and Write property)

197.2.20 hasTimeZone as Boolean

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Whether there is a time zone set.
Notes: (Read and Write property)

197.2.21 Hour as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The hour in the range 0..23.
Notes: (Read and Write property)

197.2.22 Minute as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The minute in the range 0..59.
Notes: (Read and Write property)

197.2.23 Month as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The month in the range 1..12.
Notes: (Read and Write property)

197.2.24 NanoSecond as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Nanoseconds within a second, often left as zero.

Notes: (Read and Write property)

197.2.25 Second as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The second in the range 0..59.
Notes: (Read and Write property)

197.2.26 TimezoneHour as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time zone hour in the range 0..23.
Notes: (Read and Write property)

197.2.27 TimezoneMinute as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The time zone minute in the range 0..59.
Notes: (Read and Write property)

197.2.28 TimezoneSign as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The "sign" of the time zone, 0 means UTC, -1 is west, +1 is east.
Notes:

The "sign" of the time zone, kTimeIsUTC (0) means UTC, kTimeWestOfUTC (-1) is west, kTimeEastOfUTC (+1) is east.
(Read and Write property)

197.2.29 Year as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The year, can be negative.
Notes: (Read and Write property)

197.2.30 Constants

197.2.31 kXMP_TimeEastOfUTC = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the TimezoneSign property. **Notes:** UTC time.

197.2.32 kXMP_TimeIsUTC = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the TimezoneSign property. **Notes:** Time zone is east of UTC.

197.2.33 kXMP_TimeWestOfUTC = -1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the TimezoneSign property. **Notes:** Time zone is west of UTC.

197.3 class XMPExceptionMBS

197.3.1 class XMPExceptionMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The exception class for the other XMP classes.
Notes:

For current plugins (6.4): Windows and MachO works, Carbon/Classic PEF crashes on an exception. Linux not tested.

Nearly every method or function may raise this exception, so catch it!
Subclass of the RuntimeException class.

197.4 class XMPFilesMBS

197.4.1 class XMPFilesMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for access to the main (document-level) metadata in a file.
Notes:

The Adobe XMP Toolkit's file handling component, XMPFiles, is a front end to a set of format-specific file handlers that support file I/O for XMP. The file handlers implement smart, efficient support for those file formats for which the means to embed XMP is defined in the XMP Specification. Where possible, this support allows:

* Injection of XMP where none currently exists

- Expansion of XMP without regard to existing padding
- Reconciliation of the XMP and other legacy forms of metadata.

TXMPFiles is designed for use by clients interested in the metadata and not in the primary file content; the Adobe Bridge application is a typical example. TXMPFiles is not intended to be appropriate for files authored by an application; that is, those files for which the application has explicit knowledge of the file format.

Supported file formats:
PDF, PostScript, EPS, JPEG, JPEG2K, TIFF, GIF, PNG, SWF, FLA, FLV, MOV, AVI, CIN, WAV, MP3, SES, CEL, MPEG, MPEG2, MPEG4, WMAV, AIFF, P2, XDCAM_FAM, XDCAM_SAM, XDCAM_EX, AVCHD, SonyHDV, HTML, XML, Text, Photoshop, Illustrator, InDesign, AEProject, AEProjTemplate, AEFilterPreset, EncoreProject, PremiereProject, PremiereTitle and UCF.

Based on the XMP-Toolkit-SDK from Adobe.

This constructor crashes on Linux with 14.0 plugins and Xojo 2011r1 and 2011r3. Some change in 2011r4 makes it work, so up to Xojo 2014 we don't see the crash.

197.4.2 Blog Entries

197.4.3 Methods

197.4.4 CanPutXMP(xmpPacket as string) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CanPutXMP() reports whether this file can be updated with a specific XMP packet.
Notes: Use to determine if the file can probably be updated with a given set of XMP metadata. This depends on the size of the packet, the options with which the file was opened, and the capabilities of the handler for the file format. The function obtains the length of the serialized packet for the provided XMP, but does not keep it or modify it, and does not cause the file to be written when closed.
See also:

- 197.4.5 CanPutXMP(xmpPacket as XMPMetaMBS) as boolean 23362

197.4.5 CanPutXMP(xmpPacket as XMPMetaMBS) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:**

CanPutXMP() reports whether this file can be updated with a specific XMP packet,
passed in a string object.
See also:

- 197.4.4 CanPutXMP(xmpPacket as string) as boolean 23362

197.4.6 CheckFileFormat(path as string) as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CheckFileFormat() tries to determine the format of a file.
Notes:

CheckFileFormat tries to determine the format of a file, returning an format value. It uses the same logic as OpenFile will use to select a smart handler.

path: The path for the file, appropriate for the local operating system. Passed as a UTF-8 string. The path is the same as would be passed to OpenFile.

Returns the file's format if a smart handler would be selected, otherwise kUnknownFile.

197.4.7 CheckPackageFormat(path as string) as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CheckPackageFormat() tries to determine the format of a "package" folder.
Notes:

CheckPackageFormat tries to determine the format of a ”package” given the name of the top level folder, returning an XMP_FileFormat value. Examples of recognized packages include the video formats P2, XDCAM, or Sony HDV. These packages contain collections of ”clips”, stored as multiple files in specific subfolders.

Path: The path for the top level folder, appropriate for the local operating
system. Passed as an UTF-8 string. The path is not the same as would be passed to OpenFile. For example the path passed to CheckPackageFormat might be ”.../MyMovie”, while the path passed to OpenFile would be ”.../MyMovie/SomeClip”.

Returns the package’s format if a smart handler would be selected, otherwise kUnknownFile.

197.4.8 CloseFile(closeFlags as Integer)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** CloseFile() explicitly closes an opened file.
Notes:

Performs any necessary output to the file and closes it. Files that are opened for update are written to only when closing.

If the file is opened for read-only access (passing kOpenForRead), the disk
file is closed immediately after reading the data from it; the XMPFiles object, however, remains in the open state. You must call CloseFile() when finished using it. Other methods, such as GetXMP(), can only be used between the OpenFile() and CloseFile() calls. The XMPFiles destructor does not call CloseFile(); if you call it without closing, any pending updates are lost.

If the file is opened for update (passing kOpenForUpdate), the disk file remains
open until CloseFile() is called. The disk file is only updated once, when CloseFile() is called, regardless of how many calls are made to PutXMP().

closeFlags: Option flags for optional closing actions. This bit-flag constant is
defined:

- kUpdateSafely - Write into a temporary file then swap for crash safety.

197.4.9 Constructor

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Default constructor initializes an object that is associated with no file.

Notes: The destructor does not call CloseFile(); pending updates are lost when the destructor is run.
See also:

- 197.4.10 Constructor(path as folderitem, format as Integer=& h20202020, OpenFlags as Integer=0) 23364
- 197.4.11 Constructor(path as string, format as Integer=& h20202020, OpenFlags as Integer=0) 23365

197.4.10 Constructor(path as folderitem, format as Integer=& h20202020, OpenFlags as Integer=0)

MBS XMP Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file for metadata access.
Notes:

Opens a file for the requested forms of metadata access. Opening the file at a minimum causes the raw XMP packet to be read from the file. If the file handler supports legacy metadata reconciliation then legacy metadata is also read, unless kOpenOnlyXMP is passed. If the file handler supports native thumbnails and kOpenCacheTNail is passed, the native thumbnail is cached.
If the file is opened for read-only access (passing kOpenForRead), the disk file is closed immediately after reading the data from it; the XMPFiles object, however, remains in the open state. You must call CloseFile() when finished using it. Other methods, such as GetXMP(), can only be used between the OpenFile() and CloseFile() calls. The XMPFiles destructor does not call CloseFile(); if you call it without closing, any pending updates are lost.
If the file is opened for update (passing kOpenForUpdate), the disk file remains open until CloseFile() is called. The disk file is only updated once, when CloseFile() is called, regardless of how many calls are made to PutXMP().
Typically, the XMP is not parsed and legacy reconciliation is not performed until GetXMP() is called, but this is not guaranteed. Specific file handlers might do earlier parsing of the XMP. Delayed parsing and early disk file close for read-only access are optimizations to help clients implementing file browsers, so that they can access the file briefly and possibly display a thumbnail, then postpone more expensive XMP processing until later.

path: The path for the file, appropriate for the local operating system.
format: The format of the file. If the format is unknown (kUnknownFile) the format is determined from the file content. The first handler to check is guessed from the file's extension. Passing a specific format value is generally just a hint about what file handler to try first (instead of the one based on the extension). If kOpenStrictly is set, then any format other than kUnknownFile requires that the file actually be that format; otherwise an exception is thrown.
openFlags: A set of option flags that describe the desired access. By default (zero) the file is opened for read-only access and the format handler decides on the level of reconciliation that will be performed. A logical OR of these bit-flag constants:

- kOpenForRead - Open for read-only access.
- kOpenForUpdate - Open for reading and writing.

- kOpenOnlyXMP - Only the XMP is wanted, no reconciliation.
- kOpenCacheTNail - Cache thumbnail if possible, GetThumbnail will be called.
- kOpenStrictly - Be strict about locating XMP and reconciling with other forms. By default, a best effort is made to locate the correct XMP and to reconcile XMP with other forms (if reconciliation is done). This option forces stricter rules, resulting in exceptions for errors. The definition of strictness is specific to each handler, there might be no difference.
- kOpenUseSmartHandler - Require the use of a smart handler.
- kOpenUsePacketScanning - Force packet scanning, do not use a smart handler.

Throws an exception for serious problems.
See also:

- 197.4.9 Constructor 23363
- 197.4.11 Constructor(path as string, format as Integer=& h20202020, OpenFlags as Integer=0) 23365

197.4.11 Constructor(path as string, format as Integer=& h20202020, OpenFlags as Integer=0)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Alternate constructor associates the new XMPFiles object with a specific file.
Notes:

Calls OpenFile() to open the specified file after performing a default construct.

path: The path for the file, specified as an UTF-8 string. (On MacOSX use UnixpathMBS)
format: A format hint for the file, if known.
openFlags: Options for how the file is to be opened (for read or read/write, for example). Use a logical OR of these bit-flag constants:

- kOpenForRead
- kOpenForUpdate
- kOpenOnlyXMP
- kOpenCacheTNail
- kOpenStrictly
- kOpenUseSmartHandler
- kOpenUsePacketScanning
- kOpenLimitedScanning

- kOpenInBackground

The destructor does not call CloseFile(); pending updates are lost when the destructor is run.
See also:

- 197.4.9 Constructor 23363
- 197.4.10 Constructor(path as folderitem, format as Integer=& h20202020, OpenFlags as Integer=0) 23364

197.4.12 GetFileInfo(byref path as string, byref openFlags as UInt32, byref format as UInt32, byref handlerFlags as UInt32) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetFileInfo() retrieves basic information about an opened file.
Notes:

path: A buffer in which to return the path passed to OpenFile(). Can be
null if value is not wanted.

openFlags: A variable in which to return the option flags passed to
OpenFile.
format: A variable in which to return the file format.
handlerFlags: [out] A variable in which to return the handler's capability flags.

Returns true if the file object is in the open state; that is, OpenFile() has been called but CloseFile() has not. False otherwise. Even if the file object is open, the actual disk file might be closed in the host file-system sense; see OpenFile().

197.4.13 GetFormatInfo(format as Integer, byref handlerFlags as UInt32) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetFormatInfo() reports what features are supported for a specific file format.
Example:

```
dim flags as UInt32
if XMPFilesMBS.GetFormatInfo(XMPFilesMBS.kJPEGFile, flags) then

if BitwiseAnd(flags, XMPFilesMBS.kCanInjectXMP) <>0 then
MsgBox "Can inject first-time XMP into an existing file."
end if

if BitwiseAnd(flags, XMPFilesMBS.kCanExpand) <>0 then
```

```
MsgBox "Can expand XMP or other metadata in an existing file."
end if

if BitwiseAnd(flags, XMPFilesMBS.kCanRewrite) <>0 then
MsgBox "Can copy one file to another, writing new metadata (as in SaveAs)."
end if

if BitwiseAnd(flags, XMPFilesMBS.kCanReconcile) <>0 then
MsgBox "Supports reconciliation between XMP and other forms."
end if

if BitwiseAnd(flags, XMPFilesMBS.kAllowsOnlyXMP) <>0 then
MsgBox "Allows access to just the XMP, ignoring other forms."
end if

if BitwiseAnd(flags, XMPFilesMBS.kReturnsTNail) <>0 then
MsgBox "File handler returns native thumbnail information."
end if

if BitwiseAnd(flags, XMPFilesMBS.kReturnsRawPacket) <>0 then
MsgBox "File handler returns raw XMP packet information and string."
end if

end if
```

Notes:

The file handlers for different file formats vary considerably in what features they support. Support depends on both the general capabilities of the format and the implementation of the handler for that format.

format: The file format whose support flags are desired.
handlerFlags: A variable in which to return a logical OR of option bit flags.
The following constants are defined:

- kCanInjectXMP - Can inject first-time XMP into an existing file.
- kCanExpand - Can expand XMP or other metadata in an existing file.
- kCanRewrite - Can copy one file to another, writing new metadata (as in SaveAs)
- kCanReconcile - Supports reconciliation between XMP and other forms.
- kAllowsOnlyXMP - Allows access to just the XMP, ignoring other forms.

This is only meaningful if kCanReconcile is set.

- kReturnsTNail - File handler returns native thumbnail information.
- kReturnsRawPacket - File handler returns raw XMP packet information and string.

Even if kReturnsRawPacket is set, the returned packet information might have an
offset of -1 to indicate an unknown offset. While all file handlers should be able to return the raw packet, some might not know the offset of the packet within the file. This is typical in cases where external libraries are used. These cases might not even allow return of the raw packet.

Returns true if the format has explicit "smart" support, false if the format is handled by the default packet scanning plus heuristics.

197.4.14 GetVersionInfo as XMPVersionInfoMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetVersionInfo() retrieves version information for the XMPFiles component.

197.4.15 GetXMP(byref xmp as XMPMetaMBS, byref xmppacket as string, byref PacketInfo as XMPPacketInfoMBS) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetXMP() retrieves the XMP metadata from an open file.
Notes:

The function reports whether XMP is present in the file; you can choose to retrieve any or all of the parsed XMP, the raw XMP packet, or information about the raw XMP packet. The options provided when the file was opened determine if reconciliation is done with other forms of metadata.

xmp: An XMP object in which to return the parsed XMP metadata.
xmppacket: An string in which to return the raw XMP packet as stored in
the file. The encoding of the packet is given in the packetInfo. Returns an
empty string if the low level file handler does not provide the raw packet.
packetInfo: A packetinfo object in which to return the location and form of the raw XMP in the file. PacketInfo.charForm and PacketInfo.writeable reflect the
raw XMP in the file. The parsed XMP property values are always UTF-8. The writeable flag is taken from the packet trailer; it applies only to "format ignorant" writing. The PacketInfo object always reflects the state of the XMP in the file. The offset, length, and character form do not change as a result of calling PutXMP() unless the file is also written. Some file handlers might not return location or contents of the raw packet string. To determine whether one does, check the kReturnsRawPacket bit returned by GetFormatInfo(). If the low-level file handler does not provide the raw packet location, PacketInfo.offset and PacketInfo.length are both 0, PacketInfo.charForm is UTF-8, and PacketInfo.writeable is false.

197.4.16 OpenFile(path as folderitem, format as Integer=& h20202020, OpenFlags as Integer=0) as boolean

MBS XMP Plugin, Plugin Version: 10.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Alternate constructor associates the new XMPFiles object with a specific file.
Notes:

Calls OpenFile() to open the specified file after performing a default construct.

path: The path for the file, specified as folderitem.
format: A format hint for the file, if known.
openFlags: Options for how the file is to be opened (for read or read/write, for example). Use a logical OR of these bit-flag constants:

- kOpenForRead
- kOpenForUpdate
- kOpenOnlyXMP
- kOpenCacheTNail
- kOpenStrictly
- kOpenUseSmartHandler
- kOpenUsePacketScanning
- kOpenLimitedScanning
- kOpenInBackground

The destructor does not call CloseFile(); pending updates are lost when the destructor is run.
See also:

- 197.4.17 OpenFile(path as string, format as Integer=& h20202020, OpenFlags as Integer=0) as boolean 23369

197.4.17 OpenFile(path as string, format as Integer=& h20202020, OpenFlags as Integer=0) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Opens a file for metadata access.
Notes:

Opens a file for the requested forms of metadata access. Opening the file at a minimum causes the raw XMP packet to be read from the file. If the file handler supports legacy metadata reconciliation then legacy

metadata is also read, unless kOpenOnlyXMP is passed. If the file handler supports native thumbnails and kOpenCacheTNail is passed, the native thumbnail is cached.
If the file is opened for read-only access (passing kOpenForRead), the disk file is closed immediately after reading the data from it; the XMPFiles object, however, remains in the open state. You must call CloseFile() when finished using it. Other methods, such as GetXMP(), can only be used between the OpenFile() and CloseFile() calls. The XMPFiles destructor does not call CloseFile(); if you call it without closing, any pending updates are lost.
If the file is opened for update (passing kOpenForUpdate), the disk file remains open until CloseFile() is called. The disk file is only updated once, when CloseFile() is called, regardless of how many calls are made to PutXMP().
Typically, the XMP is not parsed and legacy reconciliation is not performed until GetXMP() is called, but this is not guaranteed. Specific file handlers might do earlier parsing of the XMP. Delayed parsing and early disk file close for read-only access are optimizations to help clients implementing file browsers, so that they can access the file briefly and possibly display a thumbnail, then postpone more expensive XMP processing until later.

path: The path for the file, specified as an UTF-8 string. (On MacOSX use UnixpathMBS)
format: The format of the file. If the format is unknown (kUnknownFile) the format is determined from the file content. The first handler to check is guessed from the file's extension. Passing a specific format value is generally just a hint about what file handler to try first (instead of the one based on the extension). If kOpenStrictly is set, then any format other than kUnknownFile requires that the file actually be that format; otherwise an exception is thrown.
openFlags: A set of option flags that describe the desired access. By default (zero) the file is opened for read-only access and the format handler decides on the level of reconciliation that will be performed. A logical OR of these bit-flag constants:

- kOpenForRead - Open for read-only access.
- kOpenForUpdate - Open for reading and writing.
- kOpenOnlyXMP - Only the XMP is wanted, no reconciliation.
- kOpenCacheTNail - Cache thumbnail if possible, GetThumbnail will be called.
- kOpenStrictly - Be strict about locating XMP and reconciling with other forms. By default, a best effort is made to locate the correct XMP and to reconcile XMP with other forms (if reconciliation is done). This option forces stricter rules, resulting in exceptions for errors. The definition of strictness is specific to each handler, there might be no difference.
- kOpenUseSmartHandler - Require the use of a smart handler.
- kOpenUsePacketScanning - Force packet scanning, do not use a smart handler.

Returns true if the file is succesfully opened and attached to a file handler. False for anticipated problems, such as passing kOpenUseSmartHandler but not having an appropriate smart handler. Throws an exception for serious problems.

- 197.4.16 OpenFile(path as folderitem, format as Integer=& h20202020, OpenFlags as Integer=0) as boolean 23369

197.4.18 PutXMP(xmpPacket as string)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** PutXMP() updates the XMP metadata in this object without writing out the file,
Notes: Overloads the basic form of the function, allowing you to pass the metadata as a string object instead of an XMP object. It is otherwise identical; see details in the canonical form.
See also:

- 197.4.19 PutXMP(xmpPacket as XMPMetaMBS) 23371

197.4.19 PutXMP(xmpPacket as XMPMetaMBS)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** PutXMP() updates the XMP metadata in this object without writing out the file.
Notes: This function supplies new XMP for the file. However, the disk file is not written until the object is closed with CloseFile(). The options provided when the file was opened determine if reconciliation is done with other forms of metadata.
See also:

- 197.4.18 PutXMP(xmpPacket as string) 23371

197.4.20 Events

197.4.21 Abort as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** This event is called periodically to allow a user to cancel time-consuming operations.
Notes:

The event should return true to signal an abort, which results in an
exception being thrown.

197.4.22 Constants

197.4.23 kAEFilterPresetFile = & h46465820

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.24 kAEProjectFile = & h41455020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.25 kAEProjTemplateFile = & h41455420

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: After Effects Project Template

197.4.26 kAIFFFile = & h41494646

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.27 kAllowsOnlyXMP = & h00000020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Allows access to just the XMP, ignoring other forms.

197.4.28 kAllowsSafeUpdate = & h00000200

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: The file handler allows crash-safe file updates.

197.4.29 kArrayLastItem = -1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The index constant for the last item.

197.4.30 kAVCHDFile = & h41564844

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.31 kAVIFile = & h41564920

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Cineon

197.4.32 kCanExpand = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Can expand XMP or other metadata in an existing file.

197.4.33 kCanInjectXMP = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Can inject first-time XMP into an existing file.

197.4.34 kCanReconcile = & h00000010

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Supports reconciliation between XMP and other forms.

197.4.35 kCanRewrite = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Can copy one file to another, writing new metadata.

197.4.36 kCELFile = & h43454C20

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Audition loop

197.4.37 kChar16BitBig = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format.
Notes: 16-bit big-endian

197.4.38 kChar16BitLittle = 3

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format. **Notes:** 16-bit little-endian

197.4.39 kChar16BitMask = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format.

197.4.40 kChar32BitBig = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format. **Notes:** 32-bit big-endian

197.4.41 kChar32BitLittle = 5

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format. **Notes:** 32-bit little-endian

197.4.42 kChar32BitMask = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format.

197.4.43 kChar8Bit = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format. **Notes:** 8-bit

197.4.44 kCharLittleEndianMask = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format.

197.4.45 kCharUnknown = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to define the character format.
Notes: Variable or not-yet-known cases

197.4.46 kCINFile = & h43494E20

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.47 kEncoreProjectFile = & h4E434F52

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.48 kEPSFile = & h45505320

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: encapsulated PostScript

197.4.49 kFLAFile = & h464C4120

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.50 kFLVFile = & h464C5620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.51 kFolderBasedFormat = & h00001000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: The format is folder oriented, for example the P2 video format.

197.4.52 kGIFFile = & h47494620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.53 kHandlerOwnsFile = & h00000100

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: The file handler does the file open and close.

197.4.54 kHTMLFile = & h48544D4C

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.55 kIllustratorFile = & h41492020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.56 kInDesignFile = & h494E4444

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.57 kJPEG2KFile = & h4A505820

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: JPEG 2000, ISO 15444-1

197.4.58 kJPEGFile = & h4A504547

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.59 kMOVFile = & h4D4F5620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Quicktime

197.4.60 kMP3File = & h4D503320

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.61 kMPEG2File = & h4D503220

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.62 kMPEG4File = & h4D503420

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: ISO 14494-12 and -14

197.4.63 kMPEGFile = & h4D504547

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.64 kNeedsReadOnlyPacket = & h00000400

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: The file format needs the XMP packet to be read-only.

197.4.65 kNoOptions = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The constant to specify to use no options.

197.4.66 kOpenCacheTNail = 8

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Cache thumbnail if possible, TXMPFiles::GetThumbnail() will be called.

197.4.67 kOpenForRead = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Open for read-only access.

197.4.68 kOpenForUpdate = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Open for reading and writing.

197.4.69 kOpenInBackground = & h10000000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Set if calling from background thread.

197.4.70 kOpenLimitedScanning = & h00000080

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Only packet scan files "known" to need scanning.

197.4.71 kOpenOnlyXMP = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Only the XMP is wanted, allows space/time optimizations.

197.4.72 kOpenRepairFile = & h00000100

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Attempt to repair a file opened for update, default is to not open (throw an exception).

197.4.73 kOpenStrictly = & h00000010

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Be strict about locating XMP and reconciling with other forms.

197.4.74 kOpenUsePacketScanning = & h00000040

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Force packet scanning, do not use a smart handler.

197.4.75 kOpenUseSmartHandler = & h00000020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for OpenFile().
Notes: Require the use of a smart handler.

197.4.76 kP2File = & h50322020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: a collection not really a single file

197.4.77 kPDFFile = & h50444620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.78 kPhotoshopFile = & h50534420

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.79 kPNGFile = & h504E4720

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.80 kPostScriptFile = & h50532020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: general PostScript following DSC conventions

197.4.81 kPrefersInPlace = 8

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: Can expand, but prefers in-place update.

197.4.82 kPremiereProjectFile = & h5052504A

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.83 kPremiereTitleFile = & h5052544C

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.84 kReturnsRawPacket = & h00000040

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: File handler returns raw XMP packet information.

197.4.85 kReturnsTNail = & h00000080

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: File handler returns native thumbnail.

197.4.86 kSESFile = & h53455320

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Audition session

197.4.87 kSonyHDVFile = & h53484456

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: a collection not really a single file

197.4.88 kSWFFile = & h53574620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.89 kTextFile = & h74657874

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.90 kTIFFFile = & h54494646

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.91 kUCFFile = & h55434620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Universal Container Format

197.4.92 kUnknownFile = & h20202020

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Unknown file format constant

197.4.93 kUnknownLength = -1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** Constant for an unknown packet length within a file.

197.4.94 kUnknownOffset = -1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** Constant for an unknown packet offset within a file.

197.4.95 kUpdateSafely = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for CloseFile().

Notes: Write into a temporary file and swap for crash safety.

197.4.96 kUseNullTermination = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The length constants for a string to determinate the length automatically.

197.4.97 kUsesSidecarXMP = & h00000800

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for GetFormatInfo
Notes: The file handler uses a "sidecar" file for the XMP.

197.4.98 kWAVFile = & h57415620

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.4.99 kWMAVFile = & h574D4156

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: Windows Media Audio and Video

197.4.100 kXDCAM_EXFile = & h58444358

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: a collection not really a single file

197.4.101 kXDCAM_FAMFile = & h58444346

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: a collection not really a single file

197.4.102 kXDCAM_SAMFile = & h58444353

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.
Notes: a collection not really a single file

197.4.103 kXMLFile = & h584D4C20

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants to specify a file type.

197.5 class XMPIteratorMBS

197.5.1 class XMPIteratorMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XMPIteratorMBS class provides a uniform means to iterate over several XMP data structures, including the schema and properties within an XMP object plus global tables such as registered namespaces.
Notes:

Note: Only XMP object iteration is implemented at this time. There are no table iterators yet.

Iteration over the schema and properties within an XMP object is the most important and complex use of XMPIteratorMBS. It is helpful to have a thorough understanding of the XMP data tree. One way to learn this is to create some complex XMP and examine the output of XMPMetaMBS.DumpObject. This is also described in the XMP Specification, in the XMP Data Model chapter.
The top of the XMP data tree is a single root node. This does not explicitly appear in the dump and is never visited by an iterator (that is, it is never returned from XMPIteratorMBS.Next). Beneath the root are schema nodes. These are just collectors for top level properties in the same namespace. They are created and destroyed implicitly. Beneath the schema nodes are the property nodes. The nodes below a property node depend on its type (simple, struct, or array) and whether it has qualifiers.

A XMPIteratorMBS constructor defines a starting point for the iteration and options that control how it proceeds. By default the iteration starts at the root and visits all nodes beneath it in a depth first manner. The root node is not visited, the first visited node is a schema node. You can provide a schema name or property path to select a different starting node. By default this visits the named root node first then all nodes beneath it in a depth first manner.

The XMPIteratorMBS.Next method delivers the schema URI, path, and option flags for the node being visited. If the node is simple it also delivers the value. Qualifiers for this node are visited next. The fields of a struct or items of an array are visited after the qualifiers of the parent.

The options to control the iteration are:

kXMP_IterJustChildren	Visit just the immediate children of the root. Skip the root itself and all nodes below the immediate children. This omits the qualifiers of the immediate children, the qualifier nodes being below what they qualify.
kXMP_IterJustLeafNodes	Visit just the leaf property nodes and their qualifiers.
kXMP_IterJustLeafName	Return just the leaf component of the node names. The default is to return the full path name.
kXMP_IterIncludeAliases	Include aliases as part of the iteration. Since aliases are not actual nodes the default iteration does not visit them.
kXMP_IterOmitQualifiers	Do not visit the qualifiers of a node.

197.5.2 Methods

197.5.3 Constructor

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Empty constructor which does nothing.
See also:

- 197.5.4 Constructor(meta as XMPMetaMBS, options as Integer=0) 23385
- 197.5.5 Constructor(meta as XMPMetaMBS, schemaNS as string, options as Integer=0) 23386
- 197.5.6 Constructor(meta as XMPMetaMBS, schemaNS as string, propName as string, options as Integer=0) 23386
- 197.5.7 Constructor(schemaNS as string, propName as string, options as Integer) 23387

197.5.4 Constructor(meta as XMPMetaMBS, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an iterator for the global tables of the XMP toolkit.
Notes:

options: Option flags to control the iteration.

The available option flags are:

kXMP_IterJustChildren	= & h100	Just visit the immediate children of the root, default is subtree.
kXMP_IterJustLeafNodes	= & h200	Just visit the leaf nodes, default visits all nodes.
kXMP_IterJustLeafName	= & h400	Return just the leaf part of the path, default is the full path.
kXMP_IterOmitQualifiers	= & h1000	Omit all qualifiers.

Note: Not yet implemented in the XMP SDK.

- 197.5.6 Constructor(meta as XMPMetaMBS, schemaNS as string, propName as string, options as Integer=0) 23386
- 197.5.7 Constructor(schemaNS as string, propName as string, options as Integer) 23387

197.5.5 Constructor(meta as XMPMetaMBS, schemaNS as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an iterator for the global tables of the XMP toolkit.
Notes:

schemaNS: Optional schema namespace URI to restrict the iteration. Omitted (visit all schema) by passing "".
options: Option flags to control the iteration.

The available option flags are:

kXMP_IterJustChildren	= & h100	Just visit the immediate children of the root, default is subtree.
kXMP_IterJustLeafNodes	= & h200	Just visit the leaf nodes, default visits all nodes.
kXMP_IterJustLeafName	= & h400	Return just the leaf part of the path, default is the full path.
kXMP_IterOmitQualifiers	= & h1000	Omit all qualifiers.

Note: Not yet implemented in the XMP SDK.

197.5.6 Constructor(meta as XMPMetaMBS, schemaNS as string, propName as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an iterator for the global tables of the XMP toolkit.
Notes:

schemaNS: Optional schema namespace URI to restrict the iteration. Omitted (visit all schema) by passing "".
propName: Optional property name to restrict the iteration. May be an arbitrary path expression. Omitted (visit all properties) by passing "". If not empty a schema URI must also be provided.
options: Option flags to control the iteration.

The available option flags are:

kXMP_IterJustChildren	= & h100	Just visit the immediate children of the root, default is subtree.
kXMP_IterJustLeafNodes	= & h200	Just visit the leaf nodes, default visits all nodes.
kXMP_IterJustLeafName	= & h400	Return just the leaf part of the path, default is the full path.
kXMP_IterOmitQualifiers	= & h1000	Omit all qualifiers.

Note: Not yet implemented in the XMP SDK.

197.5.7 Constructor(schemaNS as string, propName as string, options as Integer)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an iterator for the properties within an XMP object.
Notes:

On success handle is not 0.

schemaNS: Optional schema namespace URI to restrict the iteration. Omitted (visit all schema) by passing "".
propName: Optional property name to restrict the iteration. May be an arbitrary path expression. Omitted (visit all properties) by passing "". If not empty a schema URI must also be provided.
options: Option flags to control the iteration.

The available option flags are:

kXMP_IterJustChildren	= & h100	Just visit the immediate children of the root, default is subtree.
kXMP_IterJustLeafNodes	= & h200	Just visit the leaf nodes, default visits all nodes.

197.5.8 NextItem() as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Visit the next node in the iteration.
See also:

- 197.5.9 NextItem(byref schemaNS as string) as boolean 23388
- 197.5.10 NextItem(byref schemaNS as string, byref propPath as string) as boolean 23389
- 197.5.11 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string) as boolean 23389
- 197.5.12 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string, byref options as Integer) as boolean 23390

197.5.9 NextItem(byref schemaNS as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Visit the next node in the iteration.
Notes:

Parameters:

schemaNS	A string that is assigned the schema namespace URI of the current property.
propPath	A string that is assigned the XPath name of the current property.
propValue	A string that is assigned the value of the current property.
options	An integer that is assigned the flags describing the current property.

See also:

- 197.5.12 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string, byref options as Integer) as boolean 23390

197.5.10 NextItem(byref schemaNS as string, byref propPath as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Visit the next node in the iteration.
Notes:

Parameters:

schemaNS	A string that is assigned the schema namespace URI of the current property.
propPath	A string that is assigned the XPath name of the current property.

See also:

- 197.5.8 NextItem() as boolean 23388
- 197.5.9 NextItem(byref schemaNS as string) as boolean 23388
- 197.5.11 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string) as boolean 23389
- 197.5.12 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string, byref options as Integer) as boolean 23390

197.5.11 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Visit the next node in the iteration.
Notes:

Parameters:

schemaNS	A string that is assigned the schema namespace URI of the current property.
propPath	A string that is assigned the XPath name of the current property.
propValue	A string that is assigned the value of the current property.

See also:

- 197.5.8 NextItem() as boolean 23388
- 197.5.9 NextItem(byref schemaNS as string) as boolean 23388
- 197.5.10 NextItem(byref schemaNS as string, byref propPath as string) as boolean 23389

- 197.5.12 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string, byref options as Integer) as boolean 23390

197.5.12 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Visit the next node in the iteration.
Notes:

Parameters:

schemaNS	A string that is assigned the schema namespace URI of the current property.
propPath	A string that is assigned the XPath name of the current property.
propValue	A string that is assigned the value of the current property.
options	An integer that is assigned the flags describing the current property.

See also:

- 197.5.8 NextItem() as boolean 23388
- 197.5.9 NextItem(byref schemaNS as string) as boolean 23388
- 197.5.10 NextItem(byref schemaNS as string, byref propPath as string) as boolean 23389
- 197.5.11 NextItem(byref schemaNS as string, byref propPath as string, byref propValue as string) as boolean 23389

197.5.13 Skip(options as Integer)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Skip some portion of the remaining iterations.
Notes:

The available option flags are:

kXMP_IterSkipSubtree	= 1	Skip the subtree below the current node.
kXMP_IterSkipSiblings	= 2	Skip the subtree below and remaining siblings of the current node.

197.6 class XMPMetaMBS

197.6.1 class XMPMetaMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The main class for the Adobe XMP SDK.

197.6.2 Blog Entries

- Tip of the day: Change EXIF metadata
- MBS Real Studio Plugins, version 12.5pr2

197.6.3 Methods

197.6.4 AppendArrayItem(schemaNS as string, arrayName as string, arrayOptions as Integer, itemValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Appends an item to an array.
Notes:

AppendArrayItem simplifies construction of an array by not requiring that you pre-create an empty array. The array that is assigned is created automatically if it does not yet exist. Each call to AppendArrayItem appends an item to the array. The corresponding parameters have the same use as SetArrayItem. The arrayOptions parameter is used to specify what kind of array. If the array exists, it must have the specified form.

Parameters:

schemaNS	The namespace URI for the array. Has the same usage as in GetProperty.
arrayName	The name of the array. May be a general path expression, must not be null or the empty string. Has the same namespace prefix usage as propPath in GetProperty.
arrayOptions	Option flags describing the array form. The only valid bits are those that are part of kXMP_PropArrayFormMask: kXMP_PropValueIsArray (& h200), kXMP_PropArrayIsOrdered (& h400), kXMP_PropArrayIsAlternate (& h800), or kXMP_PropArrayIsAltText (& h1000).
itemValue	An UTF-8 string that is the value of the array item, if the array item has a value. Has the same usage as propValue in GetProperty.
itemOptions	Option flags describing the item.

197.6.5 ApplyTemplate(WorkingXMP as XMPMetaMBS, template as XMPMetaMBS, actions as Integer)

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Applies an xmp template.

197.6.6 CatenateArrayItems(schemaNS as string, arrayName as string, separator as string, quotes as string, options as Integer) as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Create a single edit string from an array of strings.
Notes:

xmpObj	The XMP object containing the array to be catenated.
schemaNS	The schema namespace URI for the array. Must not be an empty string.
arrayName	The name of the array. May be a general path expression, must not be an empty string. Each item in the array must be a simple string value.
separator	The string to be used to separate the items in the catenated string. Defaults to "; ", ASCII semicolon and space (U+003B, U+0020).
quotes	The characters to be used as quotes around array items that contain a separator. Defaults to '"', ASCII quote (U+0022).
options	Option flags to control the catenation.

returns the string with the catenated array items.

197.6.7 Clone as XMPMetaMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates a copy of the XMPMeta Object.
Notes:

Deep copy, not just a new reference.
Returns nil on any error.

197.6.8 ComposeArrayItemPath(schemaNS as string, arrayName as string, itemIndex as Integer) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the path expression for an item in an array.
Notes:

schemaNS	The namespace URI for the array. Must not be null or the empty string.
arrayName	The name of the array. May be a general path expression, must not be an empty string.
itemIndex	The index of the desired item. Arrays in XMP are indexed from 1. The constant kXMP_ArrayLastItem always refers to the last existing array item.

Returns the composed path. This will be of the form <tt>ns:arrayName [i] </tt>, where "ns" is the prefix for schemaNS and "i" is the decimal representation of itemIndex. If the value of itemIndex is kXMP_ArrayLastItem, the path is <tt>ns:arrayName [last()] </tt>.

197.6.9 ComposeFieldSelector(schemaNS as string, arrayName as string, fieldNS as string, fieldName as string, fieldValue as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the path expression to select an alternate item by a field's value.
Notes:

The path syntax allows two forms of "content addressing" that may be used to select an item in an array of alternatives. The form used in ComposeFieldSelector lets you select an item in an array of structs based on the value of one of the fields in the structs. The other form of content addressing is shown in ComposeLangSelector.

For example, consider a simple struct that has two fields, the name of a city and the URI of an FTP site in that city. Use this to create an array of download alternatives. You can show the user a popup built from the values of the city fields. You can then get the corresponding URI as follows:

path=ComposeFieldSelector (schemaNS, "Downloads", fieldNS, "City", chosenCity)
exists = GetStructField (schemaNS, path, fieldNS, "URI", uri)

schemaNS	The namespace URI for the array. Must not be null or the empty string.
arrayName	The name of the array. May be a general path expression, must not be an empty string.
fieldNS	The namespace URI for the field used as the selector. Must not be an empty string.
fieldName	The name of the field used as the selector. Must be a simple XML name, must not be an empty string. It must be the name of a field that is itself simple.
fieldValue	The desired value of the field.

Returns the string with the composed path. This will be of the form <tt>ns:arrayName [fNS:fieldName='fieldValue'] </tt>, where "ns" is the prefix for schemaNS and "fNS" is the prefix for fieldNS.

197.6.10 ComposeLangSelector(schemaNS as string, arrayName as string, langName as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the path expression to select an alternate item by language.
Notes:

The path syntax allows two forms of "content addressing" that may be used to select an item in an array of alternatives. The form used in ComposeLangSelector lets you select an item in an alt-text array based on the value of its <tt>xml:lang</tt>qualifier. The other form of content addressing is shown in ComposeFieldSelector.

ComposeLangSelector does not supplant SetLocalizedText or GetLocalizedText.
They should generally be used, as they provide extra logic to choose the appropriate language and maintain consistency with the 'x-default' value. ComposeLangSelector gives you an path expression that is explicitly and only for the language given in the langName parameter.

schemaNS	The namespace URI for the array. Must not be null or the empty string.
arrayName	The name of the array. May be a general path expression, must not be an empty string.
langName	The RFC 3066 code for the desired language.

Returns the composed path. This will be of the form <tt>ns:arrayName [\@xml:lang='langName'] </tt>, where "ns" is the prefix for schemaNS.

197.6.11 ComposeQualifierPath(schemaNS as string, structName as string, qualNS as string, qualName as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the path expression for a qualifier.
Notes:

schemaNS The namespace URI for the property to which the qualifier is attached. Must not be an empty string.
propName The name of the property to which the qualifier is attached. May be a general path expression, must not be an empty string.
qualNS The namespace URI for the qualifier. May be an empty string if the qualifier is in the XML empty namespace.
qualName The name of the qualifier. Must be a simple XML name, must not be an empty string.
Returns the composed path. This will be of the form <tt>ns:propName/?qNS:qualName</tt>, where "ns"

is the prefix for schemaNS and "qNS" is the prefix for qualNS.

197.6.12 ComposeStructFieldPath(schemaNS as string, structName as string, fieldNS as string, fieldName as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Compose the path expression for a field in a struct.
Notes:

schemaNS	The namespace URI for the struct. Must not be null or the empty string.
structName	The name of the struct. May be a general path expression, must not be an empty string.
fieldNS	The namespace URI for the field. Must not be an empty string.
fieldName	The name of the field. Must be a simple XML name, must not be an empty string.

Returns the composed path. This will be of the form <tt>ns:structName/fNS:fieldName</tt>, where "ns" is the prefix for schemaNS and "fNS" is the prefix for fieldNS.

197.6.13 Constructor

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Default constructor, creates an empty object.
See also:

- 197.6.14 Constructor(data as memoryblock, Offset as Integer, Size as Integer) 23395
- 197.6.15 Constructor(data as string) 23396

197.6.14 Constructor(data as memoryblock, Offset as Integer, Size as Integer)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an object and parse one buffer of RDF into it.
Notes: This constructor creates a new TXMPMeta object and populates it with metadata from a buffer containing serialized RDF. This buffer must be a complete RDF parse stream. Pass "" to construct an empty XMPMetaMBS object. The result of an actual parse is identical to creating an empty object then calling XMPMetaMBS.ParseFromBuffer. The RDF must be complete. If you need to parse with multiple buffers, create an empty object and use XMPMetaMBS.ParseFromBuffer.
See also:

- 197.6.13 Constructor 23395

• 197.6.15 Constructor(data as string) 23396

197.6.15 Constructor(data as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Construct an object and parse one buffer of RDF into it.
Notes: This constructor creates a new TXMPMeta object and populates it with metadata from a buffer containing serialized RDF. This buffer must be a complete RDF parse stream. Pass "" to construct an empty XMPMetaMBS object. The result of an actual parse is identical to creating an empty object then calling XMPMetaMBS.ParseFromBuffer. The RDF must be complete. If you need to parse with multiple buffers, create an empty object and use XMPMetaMBS.ParseFromBuffer.

197.6.16 ConvertFromBool(value as boolean) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from Boolean to string.

197.6.17 ConvertFromDate(value as XMPDateTimeMBS) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from date/time to string.

197.6.18 ConvertFromFloat(value as Double, format as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from floating point to string.
Notes: format: Optional C sprintf format for the conversion. Defaults to "% f".

197.6.19 ConvertFromInt(value as Integer, format as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from integer to string.
Notes: format: Optional C sprintf format for the conversion. Defaults to "% d".

197.6.20 ConvertFromInt64(value as Int64, format as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from integer to string.
Notes: format: Optional C sprintf format for the conversion. Defaults to "% d".

197.6.21 ConvertToBool(value as string) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to Boolean.

197.6.22 ConvertToDate(value as string) as XMPDateTimeMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to date/time.

197.6.23 ConvertToFloat(value as string) as Double

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to floating point.

197.6.24 ConvertToInt(value as string) as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to integer.

197.6.25 ConvertToInt64(value as string) as Int64

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from string to 64 bit integer.

197.6.26 CountArrayItems(schemaNS as string, arrayName as string) as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Counts array items of given array.

Notes: Returns 0 on any error.

197.6.27 CurrentDateTime as XMPDateTimeMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Current date and time as a XMPDateTimeMBS object.
Notes: Returns nil on any error.

197.6.28 DecodeFromBase64(text as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Decode from Base64 encoded string to raw data.
Example:

```
dim x as XMPMetaMBS
x=new XMPMetaMBS
MsgBox x.DecodeFromBase64("dGVzdA==") // test
```

Notes: This is a global method which does not need a valid handle.

197.6.29 DeleteArrayItem(schemaNS as string, arrayName as string, itemIndex as Integer)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DeleteArrayItem deletes the given XMP subtree rooted at the given array item.
Notes:

It is not an error if the array item does not exist.

Parameters:

schemaNS	The namespace URI for the array. Has the same usage as in GetProperty.
arrayName	The name of the array. May be a general path expression, must not "". Has the same namespace prefix usage as propName in GetProperty.
itemIndex	The index of the desired item. Arrays in XMP are indexed from 1. The constant kXMP_ArrayLastItem (-1) always refers to the last existing array item.

197.6.30 DeleteLocalizedText(schemaNS as string="", altTextName as string="", genericLang as string="", specificLang as string="")

MBS XMP Plugin, Plugin Version: 11.0, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes localized text.

197.6.31 DeleteNamespace(namespaceURI as string)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Deletes a namespace from the registry.
Notes:

Not implemented?

Does nothing if the URI is not registered, or if the parameter is null or the empty string.

namespaceURI: The URI for the namespace.

197.6.32 DeleteProperty(schemaNS as string, propName as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DeleteProperty deletes the given XMP subtree rooted at the given property.
Notes:

It is not an error if the property does not exist.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.

197.6.33 DeleteQualifier(schemaNS as string, structName as string, qualNS as string, qualName as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DeleteQualifier deletes the given XMP subtree rooted at the given qualifier.
Notes:

It is not an error if the qualifier does not exist.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
propName	The name of the property to which the qualifier is attached. Has the same usage as in GetProperty.
qualNS	The namespace URI for the qualifier. Has the same URI and prefix usage as the schemaNS parameter.
qualName	The name of the qualifier. Must be a single XML name, must not be "" Has the same namespace prefix usage as the propName parameter.

197.6.34 DeleteStructField(schemaNS as string, structName as string, fieldNS as string, fieldName as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DeleteStructField deletes the given XMP subtree rooted at the given struct field.
Notes:

It is not an error if the field does not exist.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
structName	The name of the struct. May be a general path expression, must not be "". Has the same namespace prefix usage as propName in GetProperty.
fieldNS	The namespace URI for the field. Has the same URI and prefix usage as the schemaNS parameter.
fieldName	The name of the field. Must be a single XML name, must not be "". Has the same namespace prefix usage as the structName parameter.

197.6.35 DoesArrayItemExist(schemaNS as string, arrayName as string, itemIndex as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DoesArrayItemExist tells if the array item exists.
Notes:

Returns true if the array item exists.

Parameters:

schemaNS	The namespace URI for the array. Has the same usage as in GetProperty.
arrayName	The name of the array. May be a general path expression, must not be "". Has the same namespace prefix usage as propName in GetProperty.
itemIndex	The index of the desired item. Arrays in XMP are indexed from 1. The constant kXMP_ArrayLastItem (-1) always refers to the last existing array item.

197.6.36 DoesPropertyExist(schemaNS as string, propName as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DoesPropertyExist tells if the property exists.
Notes:

Returns true if the property exists.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.

197.6.37 DoesQualifierExist(schemaNS as string, structName as string, qualNS as string, qualName as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DoesQualifierExist tells if the qualifier exists.
Notes:

Returns true if the qualifier exists.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
propName	The name of the property to which the qualifier is attached. Has the same usage as in GetProperty.
qualNS	The namespace URI for the qualifier. Has the same URI and prefix usage as the schemaNS parameter.
qualName	The name of the qualifier. Must be a single XML name, must not be "". Has the same namespace prefix usage as the propName parameter.

197.6.38 DoesStructFieldExist(schemaNS as string, structName as string, fieldNS as string, fieldName as string) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DoesStructFieldExist tells if the struct field exists.
Notes:

Returns true if the field exists.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
structName	The name of the struct. May be a general path expression, must not be "". Has the same namespace prefix usage as propName in GetProperty.
fieldNS	The namespace URI for the field. Has the same URI and prefix usage as the schemaNS parameter.
fieldName	The name of the field. Must be a single XML name, must not be "". Has the same namespace prefix usage as the structName parameter.

197.6.39 DumpNamespaces(output as XMPTextOutputMBS) as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DumpNamespaces dumps the list of registered namespace URIs and prefixes.
Notes:

This is a global method which does not need a valid handle.
Returns status code. (0=success and -1=error)

197.6.40 DumpObject(output as XMPTextOutputMBS) as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** DumpObject dumps the content of an XMP object.
Notes: Returns status code. (0=success and -1=error)

197.6.41 DuplicateSubtree(dest as XMPMetaMBS, sourceNS as string, sourceRoot as string, destNS as string=””, destRoot as string=””, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Replicate a subtree from one XMP object into another, possibly at a different location.
Notes:

Parameters:

self	The source XMP object.
dest	The destination XMP object.
sourceNS	The schema namespace URI for the source subtree.
sourceRoot	The root location for the source subtree. May be a general path expression, must not be null or the empty string.
destNS	The schema namespace URI for the destination. Defaults to the source namespace.
destRoot	The root location for the destination. May be a general path expression. Defaults to the source location.
options	Option flags to control the separation.

197.6.42 EncodeToBase64(text as string) as string

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Convert from raw data to Base64 encoded string.
Example:

```
dim x as XMPMetaMBS
x=new XMPMetaMBS
MsgBox x.EncodeToBase64("test") // dGVzdA==
```

Notes: This is a global method which does not need a valid handle.

197.6.43 Erase

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Restores the object to a "just constructed" state.

197.6.44 GetArrayItem(schemaNS as string, arrayName as string, itemIndex as Integer, byref itemValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetArrayItem provides access to items within an array.
Notes:

The index is passed as an integer, you need not worry about the path string syntax for array items, convert a loop index to a string, etc.

Returns true if the array item exists.

Parameters:

schemaNS	The namespace URI for the array. Has the same usage as in GetProperty.
arrayName	The name of the array. May be a general path expression, must not be "". Has the same namespace prefix usage as propName in GetProperty.
itemIndex	The index of the desired item. Arrays in XMP are indexed from 1. The constant kXMP_ArrayLastItem (-1) always refers to the last existing array item.
itemValue	A string that is assigned the value of the array item, if the array item has a value. Arrays and non-leaf levels of structs do not have values.
options	An integer variable that is assigned option flags describing the array item.

197.6.45 GetLocalizedText(schemaNS as string, altTextName as string, genericLang as string, specificLang as string, byref actualLang as string, byref itemValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetLocalizedText returns information about a selected item in an alt-text array.
Notes:

The array item is selected according to the rules given above.

Returns true if an appropriate array item exists.

Parameters:

schemaNS	The namespace URI for the alt-text array. Has the same usage as in GetProperty.
altTextName	The name of the alt-text array. May be a general path expression, must not be "". Has the same namespace prefix usage as propName in GetProperty.
genericLang	The name of the generic language as an RFC 3066 primary subtag. May be "" if no generic language is wanted.
specificLang	The name of the specific language as an RFC 3066 tag. Must not be null or the empty string.
actualLang	A string that is assigned the language of the selected array item, if an appropriate array item is found.
itemValue	A string that is assigned the value of the array item, if an appropriate array item is found.
options	An integer variable that is assigned option flags describing the array item.

197.6.46 GetNamespacePrefix(namespaceURI as string, byref namespacePrefix as string) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Obtain the prefix for a registered namespace URI.
Notes:

It is not an error if the namespace URI is not registered. The output namespacePrefix string is "" if the namespace URI is not registered.

Parameters:

namespaceURI	The URI for the namespace. Must not be null or the empty string.
namespacePrefix	Returns the prefix registered for this URI, with a terminating ':'.

Returns true if the namespace URI is registered.

This is a global method which does not need a valid handle.

197.6.47 GetNamespaceURI(namespacePrefix as string, byref namespaceURI as string) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Obtain the URI for a registered namespace prefix.
Notes:

It is not an error if the namespace prefix is not registered. The output namespaceURI string is "" if the namespace prefix is not registered.

Parameters:

namespacePrefix	The prefix for the namespace. Must not be "".
namespaceURI	Returns the URI registered for this prefix.

Returns true if the namespace prefix is registered.

This is a global method which does not need a valid handle.

197.6.48 GetProperty(schemaNS as string, propName as string, byref propValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetProperty is the simplest property getter, mainly for top level simple properties or after using the path composition functions.
Notes:

Returns true if the property exists.

Parameters:

197.6.49 GetPropertyBoolean(schemaNS as string, propName as string, byref propValue as boolean) as boolean

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyBoolean returns the value of a Boolean property as a boolean.
Notes:

Returns true if the property exists.

schemaNS	The namespace URI for the property. May be an empty string if the first component of the propName path contains a namespace prefix. The URI must be for a registered namespace.
propName	The name of the property. May be a general path expression, must not be an empty string. Using a namespace prefix on the first component is optional. If present without a schemaNS value then the prefix specifies the namespace. The prefix must be for a registered namespace. If both a schemaNS URI and propName prefix are present, they must be corresponding parts of a registered namespace.
propValue	A string that is assigned the value of the property, if the property has a value. Arrays and non-leaf levels of structs do not have values.
options	An integer variable that is assigned option flags describing the property.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A boolean variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

See also:

- 197.6.50 GetPropertyBoolean(schemaNS as string, propName as string, byref propValue as boolean, byref options as Integer) as boolean 23407

197.6.50 GetPropertyBoolean(schemaNS as string, propName as string, byref propValue as boolean, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyBoolean returns the value of a Boolean property as a boolean.
Notes:

Returns true if the property exists.

Parameters:

See also:

- 197.6.49 GetPropertyBoolean(schemaNS as string, propName as string, byref propValue as boolean)

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A boolean variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

as boolean 23406

197.6.51 GetPropertyDate(schemaNS as string, propName as string, byref propValue as XMPDateTimeMBS, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetProperty_Date returns the value of a date/time property as an XMPDateTimeMBS object.
Notes:

Returns true if the property exists.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A XMPDateTimeMBS variable that is assigned the value of the property.
options	An integer variable that is assigned option flags describing the property.

197.6.52 GetPropertyFloat(schemaNS as string, propName as string, byref propValue as Double) as boolean

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyFloat returns the value of a flaoting point property as a double value.
Notes:

Returns true if the property exists.

Parameters:

See also:

- 197.6.53 GetPropertyFloat(schemaNS as string, propName as string, byref propValue as Double, byref options as Integer) as boolean 23409

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A double variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

197.6.53 GetPropertyFloat(schemaNS as string, propName as string, byref propValue as Double, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyFloat returns the value of a flaoting point property as a double value.
Notes:

Returns true if the property exists.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A double variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

See also:

- 197.6.52 GetPropertyFloat(schemaNS as string, propName as string, byref propValue as Double) as boolean 23408

197.6.54 GetPropertyInt64Double(schemaNS as string, propName as string, byref propValue as Double, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyInt64Double returns the value of a 64 bit integer property as a double value.
Notes:

Returns true if the property exists.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	A double variable that is assigned the value of the property.
options	An integer variable that is assigned option flags describing the property.

197.6.55 GetPropertyInteger(schemaNS as string, propName as string, byref propValue as Integer) as boolean

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyInteger returns the value of an integer property as an integer.
Notes:

Returns true if the property exists.

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	An integer variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

See also:

- 197.6.56 GetPropertyInteger(schemaNS as string, propName as string, byref propValue as Integer, byref options as Integer) as boolean 23410

197.6.56 GetPropertyInteger(schemaNS as string, propName as string, byref propValue as Integer, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetPropertyInteger returns the value of an integer property as an integer.
Notes:

Returns true if the property exists.

Parameters:

See also:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	An integer variable that is assigned the value of the property.
options	Optional, an integer variable that is assigned option flags describing the property.

- 197.6.55 GetPropertyInteger(schemaNS as string, propName as string, byref propValue as Integer) as boolean 23410

197.6.57 GetPropertyInteger64(schemaNS as string, propName as string, byref propValue as Int64, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves the value of an integer property as an Int64.
Notes:

Reports whether a property exists, and retrieves its binary value and property type information.

schemaNS: The namespace URI; see GetProperty().
propName: The name of the property. Can be a general path expression, must not be empty string; see GetProperty() for namespace prefix usage.

propValue: A variable in which to return the binary value.

options: A variable in which to return the option flags describing the property, a logical OR of allowed bit-flag constants; see kPropValueIsStruct and following.

Returns true if the property exists.

197.6.58 GetQualifier(schemaNS as string, propName as string, qualNS as string, qualName as string, byref qualValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetQualifier provides access to a qualifier attached to a property.
Notes:

The namespace for the qualifier is passed as a URI, you need not worry about the path string syntax. In many regards qualifiers are like struct fields.

The names of qualifiers should be XML qualified names, that is within an XML namespace. The path syntax for a qualified name uses the namespace prefix. This is unreliable since the prefix is never guaranteed. The URI is the formal name, the prefix is just a local shorthand in a given sequence of XML text.

Note: Qualifiers are only supported for simple leaf properties at this time. (in the XMP SDK)

Returns true if the qualifier exists.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
propName	The name of the property to which the qualifier is attached. May be a general path expression, must not be an empty string. Has the same namespace prefix usage as in GetProperty.
qualNS	The namespace URI for the qualifier. Has the same URI and prefix usage as the schemaNS parameter.
qualName	The name of the qualifier. Must be a single XML name, must not be an empty string. Has the same namespace prefix usage as the propName parameter.
qualValue	A string variable that is assigned the value of the qualifier, if the qualifier has a value. Arrays and non-leaf levels of structs do not have values.
options	An integer variable that is assigned option flags describing the qualifier.

197.6.59 GetStructField(schemaNS as string, structName as string, fieldNS as string, fieldName as string, byref itemValue as string, byref options as Integer) as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** GetStructField provides access to fields within a nested structure.
Notes:

The namespace for the field is passed as a URI, you need not worry about the path string syntax.

The names of fields should be XML qualified names, that is within an XML namespace. The path syntax for a qualified name uses the namespace prefix. This is unreliable since the prefix is never guaranteed. The URI is the formal name, the prefix is just a local shorthand in a given sequence of XML text.

Returns true if the field exists.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
structName	The name of the struct. May be a general path expression, must not be an empty string. Has the same namespace prefix usage as propName in GetProperty.
fieldNS	The namespace URI for the field. Has the same URI and prefix usage as the schemaNS parameter.
fieldName	The name of the field. Must be a single XML name, must not be an empty string. Has the same namespace prefix usage as the structName parameter.
fieldValue	An string variable that is assigned the value of the field, if the field has a value. Arrays and non-leaf levels of structs do not have values.
options	An integer variable that is assigned option flags describing the field. May be null if the flags are not wanted.

197.6.60 GetVersionInfo as XMPVersionInfoMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Retrieves runtime version information.

197.6.61 Iterator(schemaNS as string, propName as string, options as Integer) as XMPIteratorMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Creates an iterator for the properties within an XMP object.
Notes:

Returns nil on failure.

schemaNS: Optional schema namespace URI to restrict the iteration. Omitted (visit all schema) by passing "".
propName: Optional property name to restrict the iteration. May be an arbitrary path expression. Omitted (visit all properties) by passing "". If not empty a schema URI must also be provided.
options: Option flags to control the iteration.

The available option flags are:

kXMP_IterJustChildren	= & h100	Just visit the immediate children of the root, default is subtree.
kXMP_IterJustLeafNodes	= & h200	Just visit the leaf nodes, default visits all nodes.
kXMP_IterJustLeafName	= & h400	Return just the leaf part of the path, default is the full path.
kXMP_IterOmitQualifiers	= & h1000	Omit all qualifiers.

197.6.62 MergeFromJPEG(extendedXMP as XMPMetaMBS)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** merges standard and extended XMP retrieved from a JPEG file.
Notes:

When an extended partition stores properties that do not fit into the JPEG file limitationof 64K bytes, this function integrates those properties back into the same XMP object with those from the standard XMP packet.

self: An XMP object which the caller has initialized from the standard XMP packet in a JPEG file. The extended XMP is added to this object.

extendedXMP: An XMP object which the caller has initialized from the extended XMP packet in a JPEG file.

197.6.63 PackageForJPEG(byref standardXMP as string, byref extendedXMP as string, byref extendedDigest as string)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** creates XMP serializations appropriate for a JPEG file.
Notes:

The standard XMP in a JPEG file is limited to 64K bytes. This function serializes the XMP metadata in an XMP object into a string of RDF (see \c SerializeToBuffer) the data does not fit into the 64K byte limit, it creates a second packet string with the extended data.

self: The XMP object containing the metadata.
standardXMP: A string object in which to return the full standard XMP packet.

extendedXMP: A string object in which to return the serialized extended XMP, empty if not needed.

extendedDigest: A string object in which to return an MD5 digest of the serialized extended XMP, empty if not needed.

197.6.64 ParseFromBuffer(buffer as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** ParseFromBuffer parses RDF from a series of input buffers.
Notes:

The buffers may be any length. The buffer boundaries need not respect XML tokens or even Unicode characters.

Parameters:

buffer	Input data buffer. Termination of an input loop is convenient by passing kXMP_ParseMoreBuffers (2) for all real input, then having a final call with a zero length and kXMP_NoOptions.
options	Options controlling the parsing.

The available options are:

kXMP_ParseMoreBuffers	= 2	This is not the last buffer of input, more calls follow.
kXMP_RequireXMPMeta	= 1	The x:xmpmeta XML element is required around rdf:RDF.
kXMP_StrictAliasing	= 4	Do not reconcile alias differences, throw an exception.

Note: The kXMP_StrictAliasing option is not yet implemented.

197.6.65 RegisterNamespace(namespaceURI as string, suggestedPrefix as string, byref registeredPrefix as string) as boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Register a namespace URI with a suggested prefix.
Example:

```
dim x as new XMPMetaMBS
dim registeredPrefix as string

call x.RegisterNamespace ("xwnv", "xwnv", registeredPrefix)

x.SetProperty "xwnv","MZSTID","test"

MsgBox x.SerializeToBuffer
```

Notes:

It is not an error if the URI is already registered, no matter what the prefix is. If the URI is not registered but the suggested prefix is in use, a unique prefix is created from the suggested one. The actual registeed prefix is always returned. The function result tells if the registered prefix is the suggested one.

Parameters:

namespaceURI	The URI for the namespace. Must be a valid XML URI.
suggestedPrefix	The suggested prefix to be used if the URI is not yet registered. Must be a valid XML name.
registeredPrefix	Returns the prefix actually registered for this URI.

Returns true if the registered prefix matches the suggested prefix.

Note: No checking is presently done on either the URI or the prefix.

This is a global method which does not need a valid handle.

197.6.66 RemoveProperties(schemaNS as string="", propName as string="", options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Remove multiple properties from an XMP object.
Notes:

RemoveProperties was created to support the File Info dialog's Delete button, and has been been generalized somewhat from those specific needs. It operates in one of three main modes depending on the schemaNS and propName parameters:
Non-empty schemaNS and propName - The named property is removed if it is an external property, or if the kXMPUI_DoAllProperties option is passed. It does not matter whether the named property is an actual property or an alias.
Non-empty schemaNS and empty propName - The all external properties in the named schema are removed. Internal properties are also removed if the kXMPUI_DoAllProperties option is passed. In addition, aliases from the named schema will be removed if the kXMPUI_IncludeAliases option is passed.
Empty schemaNS and empty propName - All external properties in all schema are removed. Internal properties are also removed if the kXMPUI_DoAllProperties option is passed. Aliases are implicitly handled because the associated actuals are.
It is an error to pass and empty schemaNS and non-empty propName.

xmpObj	The XMP object containing the properties to be removed.
schemaNS	Optional schema namespace URI for the properties to be removed.
propName	Optional path expression for the property to be removed.
options	Option flags to control the deletion. The defined flags are: kXMPUI_DoAllProperties - Do internal properties in addition to external properties. kXMPUI_IncludeAliases - Include aliases in the "named schema" case above.

197.6.67 SeparateArrayItems(schemaNS as string, arrayName as string, options as Integer, catedStr as string)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Separate a single edit string into an array of strings.
Notes:

Parameters:

xmpObj	The XMP object containing the array to be updated.
schemaNS	The schema namespace URI for the array. Must not be null or the empty string.
arrayName	The name of the array. May be a general path expression, must not an empty string. Each item in the array must be a simple string value.
options	Option flags to control the separation.
catedStr	The string to be separated into the array items.

197.6.68 SerializeToBuffer(options as Integer, padding as Integer, newline as string, indent as string=""", baseIndent as Integer=0) as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SerializeToBuffer serializes an XMP object into a string as RDF.
Notes:

Returns the serialized RDF.

Parameters:

options	Option flags to control the serialization.
padding	The amount of padding to be added if a writeable XML packet is created. If zero is passed (the default) an appropriate amount of padding is computed.
newline	The string to be used as a line terminator. If empty it defaults to linefeed, U+000A, the standard XML newline.
indent	The string to be used for each level of indentation in the serialized RDF. If empty it defaults to two ASCII spaces, U+0020.
baseIndent	The number of levels of indentation to be used for the outermost XML element in the serialized RDF. This is convenient when embedding the RDF in other text.

The available option flags are:

kXMP_OmitPacketWrapper	= & h10	Do not include an XML packet wrapper.
kXMP_ReadOnlyPacket	= & h20	Create a read-only XML packet wapper.
kXMP_UseCompactFormat	= & h40	Use a highly compact RDF syntax and layout.
kXMP_WriteAliasComments	= & h400	Include XML comments for aliases.
kXMP_IncludeThumbnailPad	= & h100	Include typical space for a JPEG thumbnail in the padding if no xmp:Thumbnails property is present.
kXMP_ExactPacketLength	= & h200	The padding parameter provides the overall packet length. The actual amount of padding is computed. An exception is thrown if the packet exceeds this length with no padding.

The specified options must be logically consistent, an exception is thrown if not. You cannot specify both kXMP_OmitPacketWrapper along with kXMP_ReadOnlyPacket, kXMP_IncludeThumbnailPad, or kXMP_ExactPacketLength.
In addition, one of the following encoding options may be included:

kXMP_EncodeUTF8	= 0	Encode as UTF-8, the default.
kXMP_EncodeUTF16Big	= 2	Encode as big-endian UTF-16.
kXMP_EncodeUTF16Little	= 3	Encode as little-endian UTF-16.
kXMP_EncodeUTF32Big	= 4	Encode as big-endian UTF-32.
kXMP_EncodeUTF32Little	= 5	Encode as little-endian UTF-32.

See also:

- 197.6.69 SerializeToBuffer(options as Integer=0, padding as Integer=0) as string 23418

197.6.69 SerializeToBuffer(options as Integer=0, padding as Integer=0) as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SerializeToBuffer serializes an XMP object into a string as RDF.
Example:

```
dim x as new XMPMetaMBS
dim registeredPrefix as string

call x.RegisterNamespace ("xwnv", "xwnv", registeredPrefix)

x.SetProperty "xwnv","MZSTID","test"

MsgBox x.SerializeToBuffer
```

Notes: Same as other SerializeToBuffer method, but with newline="", indent=0 and baseIndent=0.
See also:

- 197.6.68 SerializeToBuffer(options as Integer, padding as Integer, newline as string, indent as string="", baseIndent as Integer=0) as string 23417

197.6.70 SetArrayItem(schemaNS as string, arrayName as string, itemIndex as Integer, itemValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetArrayItem provides access to items within an array.
Notes:

The index is passed as an integer, you need not worry about the path string syntax for array items, convert a loop index to a string, etc. The array passed to SetArrayItem must already exist. See also AppendArrayItem.

In normal usage the selected array item is modified. A new item is automatically appended if the index is the array size plus 1. A new item may be inserted before or after any item by using one of the following option flags:

kXMP_InsertBeforeItem	= & h4000	Insert a new array item before the selected one.
kXMP_InsertAfterItem	= & h8000	Insert a new array item after the selected one.

Parameters:

schemaNS	The namespace URI for the array. Has the same usage as in GetProperty.
arrayName	The name of the array. May be a general path expression, must not be an empty string. Has the same namespace prefix usage as propName in GetProperty.
itemIndex	The index of the desired item. Arrays in XMP are indexed from 1. The constant kXMP_ArrayLastItem always refers to the last existing array item.
itemValue	An UTF-8 string that is the value of the array item, if the array item has a value. Has the same usage as propValue in GetProperty.
options	Option flags describing the item. See the earlier description.

197.6.71 SetLocalizedText(schemaNS as string, altTextName as string, genericLang as string, specificLang as string, itemValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetLocalizedText modifies the value of a selected item in an alt-text array.
Notes:

Creates an appropriate array item if necessary, and handles special cases for the x-default item.

If the selected item is from a match with the specific language, the value of that item is modified. If the existing value of that item matches the existing value of the x-default item, the x-default item is also modified. If the array only has 1 existing item (which is not x-default), an x-default item is added with the given value.
If the selected item is from a match with the generic language and there are no other generic matches, the value of that item is modified. If the existing value of that item matches the existing value of the x-default item, the x-default item is also modified. If the array only has 1 existing item (which is not x-default), an x-default item is added with the given value.
If the selected item is from a partial match with the generic language and there are other partial matches, a new item is created for the specific language. The x-default item is not modified.
If the selected item is from the last 2 rules then a new item is created for the specific language. If the array only had an x-default item, the x-default item is also modified. If the array was empty, items are created for the specific language and x-default.

Parameters:

schemaNS	The namespace URI for the alt-text array. Has the same usage as in GetProperty.
altTextName	The name of the alt-text array. May be a general path expression, must not be an empty string. Has the same namespace prefix usage as propName in GetProperty.
genericLang	The name of the generic language as an RFC 3066 primary subtag.
specificLang	The name of the specific language as an RFC 3066 tag. Must not be an empty string.
itemValue	An UTF-8 string that is the new value for the appropriate array item.
options	Option flags, none are defined at present.

197.6.72 SetProperty(schemaNS as string, propName as string, propValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetProperty is the simplest property setter, mainly for top level simple properties or after using the path composition functions.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	An UTF-8 string that is the value of the property, if the property has a value. Arrays and non-leaf levels of structs do not have values.
options	Option flags describing the property.

197.6.73 SetPropertyBoolean(schemaNS as string, propName as string, propValue as boolean)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyBoolean sets the value of a Boolean property from a boolean.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The bool value to be assigned to the property.
options	An integer variable that is assigned option flags describing the property.

See also:

- 197.6.74 SetPropertyBoolean(schemaNS as string, propName as string, propValue as boolean, options as Integer) 23421

197.6.74 SetPropertyBoolean(schemaNS as string, propName as string, propValue as boolean, options as Integer)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyBoolean sets the value of a Boolean property from a boolean.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The bool value to be assigned to the property.
options	An integer variable that is assigned option flags describing the property.

See also:

- 197.6.73 SetPropertyBoolean(schemaNS as string, propName as string, propValue as boolean) 23421

197.6.75 SetPropertyDate(schemaNS as string, propName as string, propValue as XMPDateTimeMBS, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyDate sets the value of a date/time property from an XMPDateTimeMBS object.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The XMPDateTimeMBS object to be assigned to the property.
options	Option flags describing the property.

197.6.76 SetPropertyFloat(schemaNS as string, propName as string, propValue as Double)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyFloat sets the value of a floating point property from a double.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The double float value to be assigned to the property.
options	Option flags describing the property.

See also:

- 197.6.77 SetPropertyFloat(schemaNS as string, propName as string, propValue as Double, options as Integer) 23422

197.6.77 SetPropertyFloat(schemaNS as string, propName as string, propValue as Double, options as Integer)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyFloat sets the value of a floating point property from a double.

Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The double float value to be assigned to the property.
options	Option flags describing the property.

See also:

- 197.6.76 SetPropertyFloat(schemaNS as string, propName as string, propValue as Double) 23422

197.6.78 SetPropertyInt64Double(schemaNS as string, propName as string, propValue as Double, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyInt64Double sets the value of a 64 bit integer property from a double.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The double value to be assigned to the property.
options	Option flags describing the property.

197.6.79 SetPropertyInteger(schemaNS as string, propName as string, propValue as Integer)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyInteger sets the value of an integer property from an integer.
Notes:

Parameters:

See also:

- 197.6.80 SetPropertyInteger(schemaNS as string, propName as string, propValue as Integer, options as Integer) 23424

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The long integer value to be assigned to the property.
options	Option flags describing the property.

197.6.80 SetPropertyInteger(schemaNS as string, propName as string, propValue as Integer, options as Integer)

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetPropertyInteger sets the value of an integer property from an integer.
Notes:

Parameters:

schemaNS	The namespace URI for the property. Has the same usage as in GetProperty.
propName	The name of the property. Has the same usage as in GetProperty.
propValue	The long integer value to be assigned to the property.
options	Option flags describing the property.

See also:

- 197.6.79 SetPropertyInteger(schemaNS as string, propName as string, propValue as Integer) 23423

197.6.81 SetPropertyInteger64(schemaNS as string, propName as string, propValue as Int64, options as Integer=0)

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets the value of an integer property using an Int64.
Notes:

Sets a property with a binary value, creating it if necessary.

schemaNS: The namespace URI; see GetProperty().
propName: The name of the property. Can be a general path expression, must not be "" or the empty string; see GetProperty() for namespace prefix usage.
propValue: The new binary value.
options: Option flags describing the property; a logical OR of allowed bit-flag constants; see kPropValueIsStruct and following. Must match the type of a property that already exists.

197.6.82 SetQualifier(schemaNS as string, propName as string, qualNS as string, qualName as string, qualValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetQualifier provides access to a qualifier attached to a property.
Notes:

The namespace for the qualifier is passed as a URI, you need not worry about the path string syntax. In many regards qualifiers are like struct fields. See the introductory discussion of qualified properties for more information.

The names of qualifiers should be XML qualified names, that is within an XML namespace. The path syntax for a qualified name uses the namespace prefix, which is unreliable because the prefix is never guaranteed. The URI is the formal name, the prefix is just a local shorthand in a given sequence of XML text.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
propName	The name of the property to which the qualifier is attached. Has the same usage as in GetProperty.
qualNS	The namespace URI for the qualifier. Has the same URI and prefix usage as the schemaNS parameter.
qualName	The name of the qualifier. Must be a single XML name, must not be an empty string. Has the same namespace prefix usage as the propName parameter.
qualValue	An UTF-8 string that is the value of the qualifier, if the qualifier has a value. Has the same usage as propValue in GetProperty.
options	Option flags describing the qualifier.

197.6.83 SetStructField(schemaNS as string, structName as string, fieldNS as string, fieldName as string, fieldValue as string, options as Integer=0)

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** SetStructField provides access to fields within a nested structure.
Notes:

The namespace for the field is passed as a URI, you need not worry about the path string syntax.

The names of fields should be XML qualified names, that is within an XML namespace. The path syntax for a qualified name uses the namespace prefix, which is unreliable because the prefix is never guaranteed. The URI is the formal name, the prefix is just a local shorthand in a given sequence of XML text.

Parameters:

schemaNS	The namespace URI for the struct. Has the same usage as in GetProperty.
structName	The name of the struct. May be a general path expression, must not be an empty string. Has the same namespace prefix usage as propName in GetProperty.
fieldNS	The namespace URI for the field. Has the same URI and prefix usage as the schemaNS parameter.
fieldName	The name of the field. Must be a single XML name, must not be null or the empty string. Has the same namespace prefix usage as the structName parameter.
fieldValue	An UTF-8 string that is the value of the field, if the field has a value. Has the same usage as propValue in GetProperty.
options	Option flags describing the field.

197.6.84 Sort

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sorts the data model tree of an XMP object.
Notes:

Use this function to sort the data model of an XMP object into a canonical order. This can be convenient when comparing data models, (e.g. by text comparison of DumpObject output).

At the top level the namespaces are sorted by their prefixes. Within a namespace, the top level properties are sorted by name. Within a struct, the fields are sorted by their qualified name, i.e. their XML prefix:local form. Unordered arrays of simple items are sorted by value. Language Alternative arrays are sorted by the xml:lang qualifiers, with the "x-default" item placed first.

197.6.85 Properties

197.6.86 GlobalOptions as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Sets or retrieves the set of global option flags.
Notes: (Read and Write computed property)

197.6.87 Name as string

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The object name.
Notes: (Read and Write computed property)

197.6.88 Constants

197.6.89 kAllowCommas = & h10000000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Used by CatenateArrayItems and SeparateArrayItems.

197.6.90 kArrayLastItem = -1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The index constant for the last item.

197.6.91 kDeleteEmptyValues = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for RemoveProperties() and AppendProperties().
Notes: Delete properties if the new value is empty.

197.6.92 kDeleteExisting = & h20000000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants.
Notes: Used by SetXyz functions to delete any pre-existing property.

197.6.93 kDoAllProperties = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for RemoveProperties() and AppendProperties().
Notes: Do all properties, default is just external properties.

197.6.94 kEncodeUTF16Big = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use UTF16 big-endian encoding

197.6.95 kEncodeUTF16Little = 3

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use UTF16 little-endian encoding

197.6.96 kEncodeUTF32Big = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use UTF32 big-endian encoding

197.6.97 kEncodeUTF32Little = 5

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use UTF32 little-endian encoding

197.6.98 kEncodeUTF8 = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use UTF8 encoding

197.6.99 kEncodingMask = & h7

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Bit-flag mask for encoding-type bits

197.6.100 kExactPacketLength = & h200

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: The padding parameter is the overall packet length.

197.6.101 kImplReservedMask = & h70000000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants.

197.6.102 kIncludeAliases = & h800

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for RemoveProperties() and AppendProperties().
Notes: Include aliases, default is just actual properties.

197.6.103 kIncludeThumbnailPad = & h100

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Include a padding allowance for a thumbnail image.

197.6.104 kInsertAfterItem = & h8000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option for array item location.
Notes: Insert a new item after the given index.

197.6.105 kInsertBeforeItem = & h4000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option for array item location.
Notes: Insert a new item before the given index.

197.6.106 kIterAliases = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Iterate the global alias table.

197.6.107 kIterClassMask = & hFF

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: The low 8 bits are an enum of what data structure to iterate.

197.6.108 kIterIncludeAliases = & h800

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Include aliases, default is just actual properties.

197.6.109 kIterJustChildren = & h100

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Just do the immediate children of the root, default is subtree.

197.6.110 kIterJustLeafName = & h400

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Return just the leaf part of the path, default is the full path.

197.6.111 kIterJustLeafNodes = & h200

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Just do the leaf nodes, default is all nodes in the subtree.

197.6.112 kIterNamespaces = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Iterate the global namespace table.

197.6.113 kIterOmitQualifiers = & h1000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Omit all qualifiers.

197.6.114 kIterProperties = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for XMPIteratorMBS construction.
Notes: Iterate the property tree of a TXMPMeta object.

197.6.115 kIterSkipSiblings = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for Skip.
Notes: Skip the subtree below and remaining siblings of the current node.

197.6.116 kIterSkipSubtree = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for Skip.
Notes: Skip the subtree below the current node.

197.6.117 kLittleEndianBit = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().

197.6.118 kNoOptions = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The constant to specify to use no options.

197.6.119 kNS_AdobeStockPhoto = "http://ns.adobe.com/StockPhoto/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.120 kNS_ASF = "http://ns.adobe.com/asf/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.121 kNS_CameraRaw = "http://ns.adobe.com/camera-raw-settings/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.122 kNS_CreatorAtom = "http://ns.adobe.com/creatorAtom/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.123 kNS_DC = "http://purl.org/dc/elements/1.1/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.
Notes: The XML namespace for the Dublin Core schema.

197.6.124 kNS_DICOM = "http://ns.adobe.com/DICOM/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.125 kNS_DM = "http://ns.adobe.com/xmp/1.0/DynamicMedia/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.126 kNS_EXIF = "http://ns.adobe.com/exif/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for Adobe's EXIF schema.

197.6.127 kNS_EXIF_Aux = "http://ns.adobe.com/exif/1.0/aux/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.128 kNS_IPTCCore = "http://iptc.org/std/Iptc4xmpCore/1.0/xmlns/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.
Notes: The XML namespace for the IPTC Core schema.

197.6.129 kNS_JP2K = "http://ns.adobe.com/jp2k/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.130 kNS_JPEG = "http://ns.adobe.com/jpeg/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.131 kNS_PDF = "http://ns.adobe.com/pdf/1.3/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the PDF schema.

197.6.132 kNS_PDFA_Extension = "http://www.aiim.org/pdfa/ns/extension/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.133 kNS_PDFA_Field = "http://www.aiim.org/pdfa/ns/field# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.134 kNS_PDFA_ID = "http://www.aiim.org/pdfa/ns/id/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.135 kNS_PDFA_Property = "http://www.aiim.org/pdfa/ns/property# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.136 kNS_PDFA_Schema = "http://www.aiim.org/pdfa/ns/schema# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.137 kNS_PDFA_Type = "http://www.aiim.org/pdfa/ns/type# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.138 kNS_PDFX = "http://ns.adobe.com/pdfx/1.3/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.139 kNS_PDFX_ID = "http://www.npes.org/pdfx/ns/id/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.

197.6.140 kNS_Photoshop = "http://ns.adobe.com/photoshop/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the Photoshop custom schema.

197.6.141 kNS_PNG = "http://ns.adobe.com/png/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.142 kNS_PSAlbum = "http://ns.adobe.com/album/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.143 kNS_RDF = "http://www.w3.org/1999/02/22-rdf-syntax-ns# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.
Notes: The XML namespace for RDF.

197.6.144 kNS_SWF = "http://ns.adobe.com/swf/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.145 kNS_TIFF = "http://ns.adobe.com/tiff/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

Notes: The XML namespace for Adobe's TIFF schema.

197.6.146 kNS_WAV = "http://ns.adobe.com/xmp/wav/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.147 kNS_XML = "http://www.w3.org/XML/1998/namespace"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants from outside Adobe.
Notes: The XML namespace for XML.

197.6.148 kNS_XMP = "http://ns.adobe.com/xap/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the XMP "basic" schema.

197.6.149 kNS_XMP_BJ = "http://ns.adobe.com/xap/1.0/bj/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the job management schema.

197.6.150 kNS_XMP_Dimensions = "http://ns.adobe.com/xap/1.0/sType/Dimensions# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of the Dimensions type.

197.6.151 kNS_XMP_Font = "http://ns.adobe.com/xap/1.0/sType/Font# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.

197.6.152 kNS_XMP_Graphics = "http://ns.adobe.com/xap/1.0/g/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.

197.6.153 kNS_XMP_G_IMG = "http://ns.adobe.com/xap/1.0/g/img/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: Deprecated XML namespace constant.

197.6.154 kNS_XMP_IdentifierQual = "http://ns.adobe.com/xmp/Identifier/qual/1.0/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for qualifiers of the xmp:Identifier property.

197.6.155 kNS_XMP_Image = "http://ns.adobe.com/xap/1.0/g/img/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of a graphical image. Used for the Thumbnail type.

197.6.156 kNS_XMP_ManifestItem = "http://ns.adobe.com/xap/1.0/sType/ManifestItem# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.

197.6.157 kNS_XMP_MM = "http://ns.adobe.com/xap/1.0/mm/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the XMP digital asset management schema.

197.6.158 kNS_XMP_Note = "http://ns.adobe.com/xmp/note/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.159 kNS_XMP_PagedFile = "http://ns.adobe.com/xap/1.0/t/pg/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.

197.6.160 kNS_XMP_ResourceEvent = "http://ns.adobe.com/xap/1.0/sType/ResourceEvent# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of the ResourceEvent type.

197.6.161 kNS_XMP_ResourceRef = "http://ns.adobe.com/xap/1.0/sType/ResourceRef# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of the ResourceRef type.

197.6.162 kNS_XMP_Rights = "http://ns.adobe.com/xap/1.0/rights/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes: The XML namespace for the XMP copyright schema.

197.6.163 kNS_XMP_ST_Job = "http://ns.adobe.com/xap/1.0/sType/Job# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of the JobRef type.

197.6.164 kNS_XMP_ST_Version = "http://ns.adobe.com/xap/1.0/sType/Version# "

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.
Notes: The XML namespace for fields of the Version type.

197.6.165 kNS_XMP_T = "http://ns.adobe.com/xap/1.0/t/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes:

The XML namespace for the XMP text document schema.
Deprecated XML namespace constant.

197.6.166 kNS_XMP_Text = "http://ns.adobe.com/xap/1.0/t/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for qualifiers and structured property fields.

197.6.167 kNS_XMP_T_PG = "http://ns.adobe.com/xap/1.0/t/pg/"

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the XML namespace constants for standard XMP schema.
Notes:

The XML namespace for the XMP paged document schema.
Deprecated XML namespace constant.

197.6.168 kOmitAllFormatting = & h800

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Omit all formatting whitespace.

197.6.169 kOmitPacketWrapper = & h10

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Omit the XML packet wrapper.

197.6.170 kOmitXMPMetaElement = & h1000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Omit the x:xmpmeta element surrounding the rdf:RDF element.

197.6.171 kParseMoreBuffers = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** This is the not last input buffer for this parse stream.

197.6.172 kPropArrayFormMask = & h1E00

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Property type bit-flag mask for all array types

197.6.173 kPropArrayIsAlternate = & h800

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Implies kPropArrayIsOrdered, items are alternates. It is serialized using an rdf:Alt container.

197.6.174 kPropArrayIsAltText = & h1000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Implies kPropArrayIsAlternate, items are localized text. Each array element is a simple property with an xml:lang attribute.

197.6.175 kPropArrayIsOrdered = & h400

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Implies kPropValueIsArray, item order matters. It is serialized using an rdf:Seq container.

197.6.176 kPropArrayIsUnordered = & h200

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The item order does not matter.

197.6.177 kPropArrayLocationMask = & hC000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for the property setting functions.
Notes: Bit-flag mask for array-item location bits

197.6.178 kPropCompositeMask = & h1F00

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Property type bit-flag mask for composite types (array and struct)

197.6.179 kPropHasAliases = & h20000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: This property is the base value (actual) for a set of aliases.This is only returned by GetProperty() and then only if the property name is simple, not an path expression.

197.6.180 kPropHasLang = & h40

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Implies kPropHasQualifiers, property has xml:lang.

197.6.181 kPropHasQualifiers = & h10

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The property has qualifiers, includes rdf:type and xml:lang.

197.6.182 kPropHasType = & h80

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: Implies kPropHasQualifiers, property has rdf:type.

197.6.183 kPropIsAlias = & h10000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: This property is an alias name for another property. This is only returned by GetProperty() and then only if the property name is simple, not an path expression.

197.6.184 kPropIsDerived = & h200000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The value of this property is derived from the document content.

197.6.185 kPropIsInternal = & h40000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The value of this property is ”owned” by the application, and should not generally be editable in a UI.

197.6.186 kPropIsQualifier = & h20

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes:

This is a qualifier for some other property, includes rdf:type and xml:lang.
Qualifiers can have arbitrary structure, and can themselves have qualifiers. If the qualifier itself has a structured value, this flag is only set for the top node of the qualifier's subtree.

197.6.187 kPropIsStable = & h100000

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The value of this property is not derived from the document content.

197.6.188 kPropValueIsArray = & h200

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The value is an array (RDF alt/bag/seq). The "ArrayIs..." flags identify specific types of array; default is a general unordered array, serialized using an rdf:Bag container.

197.6.189 kPropValueIsStruct = & h100

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The value is a structure with nested fields.

197.6.190 kPropValueIsURI = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for the property accessor functions.
Notes: The XML string form of the property value is a URI, use rdf:resource attribute. DISCOURAGED

197.6.191 kPropValueOptionsMask = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants of the option bit flags for the property setting functions.
Notes: Bit-flag mask for property-value option bits

197.6.192 kReadOnlyPacket = & h20

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Default is a writeable packet.

197.6.193 kReplaceOldValues = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for RemoveProperties() and AppendProperties().
Notes: Replace existing values, default is to leave them.

197.6.194 kRequireXMPMeta = 1

MBS XMP Plugin, Plugin Version: 9.4. **Function:** Require a surrounding x:xmpmeta element.

197.6.195 kStrictAliasing = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the constants for the option bit flags for ParseFromBuffer().
Notes: Do not reconcile alias differences, throw an exception.

197.6.196 kUseCompactFormat = & h40

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Use a compact form of RDF.

197.6.197 kUseNullTermination = 0

MBS XMP Plugin, Plugin Version: 9.4. **Function:** The length constants for a string to determinate the length automatically.

197.6.198 kUTF16Bit = 2

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().

197.6.199 kUTF32Bit = 4

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().

197.6.200 kWriteAliasComments = & h400

MBS XMP Plugin, Plugin Version: 9.4. **Function:** One of the option bit flags for SerializeToBuffer().
Notes: Show aliases as XML comments.

197.6.201 kXMPFiles_IgnoreLocalText = 2

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the flags for XMPFiles initialize.
Notes: Ignore non-XMP text that uses an undefined "local" encoding.

197.6.202 kXMPFiles_ServerMode = 2

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the flags for XMPFiles initialize.
Notes: Combination of flags necessary for server products using XMPFiles.

197.6.203 kXMPTemplate_AddNewProperties = 8

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option constants for ApplyTemplate function.
Notes: Perform an Add operation, add properties if they don't already exist.

197.6.204 kXMPTemplate_ClearUnnamedProperties = & h10

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option constants for ApplyTemplate function.
Notes: Perform a Clear operation, keep named properties and delete everything else.

197.6.205 kXMPTemplate_IncludeInternalProperties = 1

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option constants for ApplyTemplate function.

Notes: Do all properties, default is just external properties.

197.6.206 kXMPTemplate_ReplaceExistingProperties = 2

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option constants for ApplyTemplate function.
Notes: Perform a Replace operation, add new properties and modify existing ones.

197.6.207 kXMPTemplate_ReplaceWithDeleteEmpty = 4

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option constants for ApplyTemplate function.
Notes: Similar to Replace, also delete if the template has an empty value.

197.6.208 kXMP_NS_BWF = "http://ns.adobe.com/bwf/bext/1.0/"

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.209 kXMP_NS_Script = "http://ns.adobe.com/xmp/1.0/Script/"

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the XML namespace constants for standard XMP schema.

197.6.210 kXMP_WriteAliasComments = & h400

MBS XMP Plugin, Plugin Version: 11.0. **Function:** One of the option flags for SerializeToBuffer.
Notes: Show aliases as XML comments.

197.6.211 Version = "5.5.0"

MBS XMP Plugin, Plugin Version: 11.0. **Function:** The version string of the XMP library.

197.7 class XMPPacketInfoMBS

197.7.1 class XMPPacketInfoMBS

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for information about a xmp packet.

197.7.2 Blog Entries

- Tip of the day: Change EXIF metadata

197.7.3 Properties

197.7.4 CharForm as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Character format using the values kChar8Bit, kChar16BitBig, etc.
Notes: (Read and Write property)

197.7.5 HasWrapper as Boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if there is a packet wrapper, the "<?xpacket...>" XML processing instructions.
Notes: (Read and Write property)

197.7.6 Length as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packet length in the file in bytes, -1 if unknown.
Notes: (Read and Write property)

197.7.7 Offset as Int64

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packet offset in the file in bytes, -1 if unknown.
Notes: (Read and Write property)

197.7.8 PadSize as Integer

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Packet padding size in bytes, zero if unknown.
Notes: (Read and Write property)

197.7.9 Writeable as Boolean

MBS XMP Plugin, Plugin Version: 9.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if there is a packet wrapper and the trailer says writeable by dumb packet scanners.
Notes: (Read and Write property)

197.8 class XMPScannerMBS

197.8.1 class XMPScannerMBS

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class to scan any file stream for XMP data.
Example:

```
dim c,n,i,l as Integer
dim xs as XMPScannerMBS
dim xn as XMPSnipMBS
dim s as string
dim x as XMPMetaMBS
dim b as BinaryStream
dim source as FolderItem

// get file
source=GetOpenFolderItem("any")
if source=nil then Return

b=source.OpenAsBinaryFile(false)

if b=nil then Return

// read file to memory
l=b.Length
s=b.Read(l)

// scan for xmp blocks
MsgBox "Scanning "+str(lenb(s))+" of "+str(l)+" bytes."

xs=new XMPScannerMBS(l)
xs.Scan(s,0)

MsgBox "Found "+str(xs.Report)+" blocks"

n=xs.Report-1

c=0
for i=0 to n

xn=xs.Snip(i)

if xn.State=3 then // found
if xn.Length>50 then
try
b.Position=xn.Offset
```

```
s=b.Read(xn.Length)

// debug output xmp data
'WriteInputXMP dest,s

// try to parse
x=new XMPMetaMBS(s)

// work with xmp meta data
catch r as XMPExceptionMBS
MsgBox "ExtractXMP failed on: "+r.message
end try
else
MsgBox "Found small xmp block? "+str(xn.Length)
end if
end if
next
```

197.8.2 Methods

197.8.3 Constructor

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Default constructor doing nothing.
See also:

- 197.8.4 Constructor(StreamLength as Integer) 23450

197.8.4 Constructor(StreamLength as Integer)

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Constructor to create a XMPScanner which reads the given number of bytes.
See also:

- 197.8.3 Constructor 23450

197.8.5 Report as Integer

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Produces a report of what is known about the input stream.
Notes: The snipps found are saved in an array which you can access using the snip() function. Returns the number of entries in this array.

197.8.6 Scan(Buffer as string, Offset as Int64)

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Scans the given part of the input, incorporating it in to the known snips.
Notes: The Offset is the offset of this block of input relative to the entire stream.

197.8.7 Snip(index as UInt32) as XMPSnipMBS

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns the snip with the given index.
Notes:

index is zero based.
Returns nil on any error.
You must call Report before this method.

197.8.8 SnipCount as UInt32

MBS XMP Plugin, Plugin Version: 11.3, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Number of snips found so far.

197.8.9 StreamAllScanned as boolean

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Returns true if all of the stream has been seen.

197.9 class XMPSnipMBS

197.9.1 class XMPSnipMBS

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The class for the XMP Snips found by the XMPScannerMBS class.

197.9.2 Properties

197.9.3 Access as Integer

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The read-only/read-write access from the end attribute.
Notes: (Read and Write property)

197.9.4 BytesAttr as Int64

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the bytes attribute, -1 if not present.
Notes: (Read only property)

197.9.5 CharForm as Integer

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** How the packet is divided into characters.
Notes:

The values allow easy testing for 16/32 bit and big/little endian.

eChar8Bit	= 0
eChar16BitBig	= 2
eChar16BitLittle	= 3
eChar32BitBig	= 4
eChar32BitLittle	= 5

(Read and Write property)

197.9.6 EncodingAttr as String

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The value of the encoding attribute, if any, with nulls removed.
Notes: (Read and Write property)

197.9.7 Length as Int64

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The length in bytes of this snip.
Notes: (Read only property)

197.9.8 Offset as Int64

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The byte offset of this snip within the input stream.
Notes: (Read only property)

197.9.9 OutOfOrder as Integer

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** If true, this snip was seen before the one in front of it.
Notes: (Read and Write property)

197.9.10 State as Integer

MBS XMP Plugin, Plugin Version: 6.5, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The state of this snip.
Notes:

constants:

eNotSeenSnip	0	This snip has not been seen yet.
ePendingSnip	1	This snip is an input buffer being processed.
eRawInputSnip	2	This snip is raw input, it doesn't contain any part of an XMP packet.
eValidPacketSnip	3	This snip is a complete, valid XMP packet.
ePartialPacketSnip	4	This snip contains the start of a possible XMP packet.
eBadPacketSnip	5	This snip contains a complete, but semantically incorrect XMP packet.

(Read and Write property)

197.10 class XMPTextOutputMBS

197.10.1 class XMPTextOutputMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** An event class for text output.
Notes: You may want to make a subclass which collects all the strings into one string or write them to a file.

197.10.2 Events

197.10.3 Output(text as string) as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Function:** New text arrived.
Notes:

You may get more than one event per line.
Return 0 for success or something else for failure.

197.11 class XMPVersionInfoMBS

197.11.1 class XMPVersionInfoMBS

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The XMP Version class.
Example:

```
dim v as XMPVersionInfoMBS
v=XMPMetaMBS.GetVersionInfo
MsgBox v.Message
```

Notes: Constructor sets values.

197.11.2 Properties

197.11.3 Build as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A rolling build number, monotonically increasing in a release.
Notes: (Read and Write property)

197.11.4 Flags as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** Individual feature implementation flags.
Notes: (Read and Write property)

197.11.5 IsDebug as boolean

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** True if this is a debug build.
Notes: (Read and Write property)

197.11.6 Major as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The primary release number, the "1" in version "1.2.3".

Notes: (Read and Write property)

197.11.7 Message as String

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** A comprehensive version information string.
Example:

```
dim v as XMPVersionInfoMBS
v=XMPMetaMBS.GetVersionInfo
MsgBox v.Message
```

Notes: (Read and Write property)

197.11.8 Micro as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The tertiary release number, the "3" in version "1.2.3".
Notes: (Read and Write property)

197.11.9 Minor as Integer

MBS XMP Plugin, Plugin Version: 6.4, Console & Web: Yes, Mac: Yes, Win: Yes, Linux: Yes. **Function:** The secondary release number, the "2" in version "1.2.3".
Notes: (Read and Write property)

Chapter 199

The FAQ

199.0.1 Can anyone help me convert seconds to time in this format hh:mm:ss?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Sure, here's a routine I use (which has an advantage over the previously-posted Date-based solution in that you don't have to rely on the creation of an object – all that happens is some division and string concatenation):
Example:

```
Function SecsToTimeString(timeInSecs as Integer, padHours as boolean, padMinutes as boolean) as string
// Given an amount time (in seconds), generates a string representing that amount
// of time. The padHours and padMinutes parameters determine whether to display
// hours and minutes if their values are zero.

// Examples:
// timeInSecs = 90, padHours = true; returns "00:01:30"
// timeInSecs = 1, padHours = false, padMinutes = true; returns "00:01"
// timeInSecs = 3601, padMinutes = false; returns "01:00:01"

dim hours, minutes, seconds as Integer
dim hoursString, minutesString as string

hours = timeInSecs / 3600
minutes = (timeInSecs mod 3600) / 60
seconds = timeInSecs mod 60

if hours = 0 then
if padHours then
hoursString = "00:"
else
hoursString = ""
end if
else
```

```
hoursString = Format(hours, "# # \:")
end if
if minutes = 0 then
if hours <>0 or padMinutes then
minutesString = "00:"
else
minutesString = ""
end if
else
minutesString = Format(minutes, "00\:")
end if

return hoursString + minutesString + Format(seconds, "00")
End Function
```

Notes: (from the rb mailinglist)

199.0.2 How do I get the proper highlight color on Mac OS X for active/inactive selection?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use functions from NSColor to get proper highlight color in RGB:
Example:

```
Function ProperHighlightColor(active as Boolean) As Color
# if TargetCocoa
Dim theColor As NSColorMBS
If active Then
theColor = NSColorMBS.alternateSelectedControlColor
Else
theColor = NSColorMBS.secondarySelectedControlColor
End If

Dim rgbColor As NSColorMBS = theColor.colorUsingColorSpaceName(NSColorSpaceMBS.NSCalibrate-
dRGBColorSpace)
If rgbColor <>Nil Then
Dim red as Integer = rgbColor.redComponent * 255.0
Dim green as Integer = rgbColor.greenComponent * 255.0
Dim blue as Integer = rgbColor.blueComponent * 255.0
Return RGB(red, green, blue)
Else
Return HighlightColor
End If
# else
```

```
return HighlightColor
# endif
End Function
```

Notes: As you see we convert color to Calibrated RGB for best results.

- 199.0.5 How to delete a folder? 23473
- 199.0.6 How to detect if CPU if 64bit processor? 23474
- 199.0.7 How to refresh a htmlviewer on Windows? 23474

199.0.3 How to catch delete key?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** The following is the code in keydown event catches delete or backspace keys.
Example:

```
Function KeyDown(Key As String) As Boolean
if asc(key) = 8 or asc(key) = 127 then
MsgBox "Delete"
Return true
end if
End Function
```

- 199.0.6 How to detect if CPU if 64bit processor? 23474
- 199.0.7 How to refresh a htmlviewer on Windows? 23474

199.0.4 How to convert cmyk to rgb?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

The following is the code to convert cmyk values to an RGB color datatype.
It's just a basic estimate of the color values. If you are looking for completely color accurate solution, this is not it. It should work for most people. :)
Example:

```
Function CMYKToRGB(c as Integer, m as Integer, y as Integer, k as Integer) As color
// converts c,m,y,k values (0-100) to color data type RGB
// place this in a method. Supply C,M,Y,K values-
// it returns color datatype

dim color_RGB as color
dim r, g, b as Integer

r=255-round(2.55*(c+k))
if r<0 then
r=0
end if
g=255-round(2.55*(m+k))
if g<0 then
g=0
end if
b=255-round(2.55*(y+k))
if b<0 then
b=0
end if

color_RGB=RGB(r,g,b)

return color_RGB

End Function
```

Notes: (from the rb mailinglist)

- 199.0.6 How to detect if CPU if 64bit processor? 23474
- 199.0.7 How to refresh a htmlviewer on Windows? 23474

199.0.5 How to delete a folder?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** The following is the code deletes a folder recursively.
Example:

```
Sub deletefolder(f as folderitem)
dim files(-1) as FolderItem

if f=nil then Return

// delete single file
if f.Directory=false then
f.Delete
Return
end if

// get a list of all items in that folder
dim i,c as Integer
c=F.Count
for i=1 to c
files.Append f.TrueItem(i)
next

// delete each item
for each fo as FolderItem in files
if fo=nil then
' ignore
elseif fo.Directory then
deletefolder fo
else ' file
fo.Delete
end if
next

f.Delete
End Sub
```

- 199.0.6 How to detect if CPU if 64bit processor? 23474
- 199.0.7 How to refresh a htmlviewer on Windows? 23474

199.0.6 How to detect if CPU if 64bit processor?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Via CPUID you can ask CPU:
Example:

```
dim c as new CPUIDMBS

if c.Flags(CPUIDMBS.kFeatureLM) then
MsgBox "64-bit CPU"
else
MsgBox "32-bit CPU"
end if
```

Notes: Should work on all intel compatible CPUs.

199.0.7 How to refresh a htmlviewer on Windows?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can ask the browser to reload the website with this code line:
Example:

```
call htmlViewer1.IERunJavaScriptMBS("javascript:document.location.reload()")
```

199.0.8 Is there an example for vector graphics in Xojo?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Try this example inside the paint event of a window:
Example:

```
dim v as Group2D
dim r as RectShape
dim s as StringShape

const pi=3.14

s=new StringShape
s.Text="Hello World!"
s.TextFont="Geneva"
s.TextSize=24
s.FillColor=rgb(0,0,255)
s.Italic=true
s.y=5
s.x=0

r=new RectShape

r.X=0
r.y=0
r.Height=100
r.Width=180
r.BorderColor=rgb(255,0,0)
r.FillColor=rgb(0,255,0)
r.BorderWidth=5
r.Border=50

v=new Group2d
v.Append r
v.Append s
v.Rotation=pi*-20.0/180.0
v.x=150
v.y=150

g.DrawObject v
```

199.0.9 Picture functions do not preserve resolution values?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, the picture functions return pictures with no/default resolution values.

Example:

```
dim l as Picture = LogoMBS(500)

l.HorizontalResolution = 300
l.VerticalResolution = 300

dim r as Picture = l.Rotate90MBS

MsgBox str(r.HorizontalResolution)+" x "+str(r.VerticalResolution)

r.HorizontalResolution = l.HorizontalResolution
r.VerticalResolution = l.VerticalResolution

MsgBox str(r.HorizontalResolution)+" x "+str(r.VerticalResolution)
```

Notes:

So please fix them yourself after calling a function.

Maybe in the future this changes, but currently you can't really set this easily from plugin code.

199.0.10 A toolbox call needs a rect - how do I give it one?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** Fill a memoryblock like this:
Example:

```
Dim MB As Memoryblock
MB = NewMemoryBlock(8)
MB.Short(0) = window1.Top
MB.Short(2) = window1.Left
MB.Short(4) = window1.Height+window1.Top // bottom
MB.Short(6) = window1.Width+window1.Left // right
```

199.0.11 API client not supported?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** If you get this exception message on SQLConnectionMBS.Connect, we may have a problem.
Notes:

First case is that the given thing is not supported (e.g. MS SQL directly on Mac).

Second case is that the plugin compilation went wrong and the support for the database was not linked into the plugin. Like MySQL missing or MS SQL on Windows missing. In that case please contact us to fix the plugin.

199.0.12 Can I access Access Database with Java classes?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** You can use ucanaccess to access databases created with Microsoft
Example:

```
dim options(-1) as string

// load all the jar files we have in a folder called java:

dim appFolder as FolderItem = GetFolderItem("")

Dim count as Integer = appFolder.Parent.Child("java").Count
dim libjs() as string
For i as Integer = 1 to count
Dim f As FolderItem = appFolder.Parent.Child("java").item(i)
If f <>Nil and f.Exists Then
libjs.append f.NativePath+";"
End If
Next

// now init virtual machine
dim librery as string = Join(libjs, "")
dim vm as new JavaVMMBS(librery)

if vm.Handle = 0 then
MsgBox "Failed to initialize virtual machine"
else
// now make a new database connection with ucanaccess
dim d as new JavaDatabaseMBS(vm,"net.ucanaccess.jdbc.UcanaccessDriver")
Dim DbFile as FolderItem = appFolder.Parent.Child("Database11.accdb")
dim j as JavaConnectionMBS = d.getConnection("jdbc:ucanaccess://"+DbFile.NativePath)

// select and show values
dim r as JavaResultSetMBS = j.MySelectSQL("Select * From test")
while r.NextRecord
MsgBox r.getString("FirstName") +" "+ r.getString("LastName")
wend

end if

Exception e as JavaExceptionMBS
```

```
MsgBox e.message+" errorcode: "+str(e.ErrorNumber)
```

Notes:

see website:
http://ucanaccess.sourceforge.net/site.html

199.0.13 Can I create PDF from Xojo Report using DynaPDF?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, we have a graphics class integration for DynaPDF.
Notes: Since MBS Plugin in version 19.2, we can integrate reports with Xojo.

199.0.14 Can I use AppleScripts in a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, but they run on the server, not on the client.
Example:

```
dim a as new AppleScriptMBS

// query my application name
a.Compile "tell application ""System Events"" to return name of current application"

// run
a.Execute

// show result
label1.text = a.Result

// shows something like "My Application.fcgi.debug"
```

Notes: This can be useful to control the server from remote, if and only if the your sever is running Mac OS X.

199.0.15 Can I use graphics class with DynaPDF?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Sorry, no. We can't provide a graphics subclass from plugin.

Notes:

The is a feature request to allow graphics subclasses:
Feedback case 11391: feedback://showreport?report_id=11391

199.0.16 Can I use sockets on a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, but they run on the server, not on the client.
Notes:

You can use HTTPSocket, SMTPSocket, POP3Socket, SMTPSecureSocket, SecurePOP3Socket, EasyTCPSocket, EasyUDPSocket, AutoDiscovery, our Bonjour classes or our CURL* classes. But all of them work on the server, not on the client.

This means if you search for a printer with Bonjour, you can find the printers in the local network on your server hosting site. Using SMTPSocket may be a good idea for sending emails from the server like notifications.

199.0.17 Can I use your ChartDirector plugin on a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, our ChartDirector plugin works just fine on the Xojo Web Edition.
Example:

```
// The data for the pie chart
dim data(-1) as Double=array(55.0, 18.0, 25.0, 22.0, 18.0, 30.0, 35.0)

// The labels for the pie chart, Words are choosen random to check font!
dim labels(-1) as string=array("Germany","Italy","France","Spain","UK","Poland","Russia")

// The colors to use for the sectors
dim colors(-1) as Integer

colors.Append & h66aaee
colors.Append & heebb22
colors.Append & hbbbbbb
colors.Append & h8844ff

if TargetLinux then
CDBaseChartMBS.SetFontSearchPath "/usr/share/fonts/truetype/msttcorefonts"
end if

// Create a PieChart object of size 360 x 300 pixels
```

```
dim c as new CDPieChartMBS(700, 600)

c.setBackground(c.linearGradientColor(0, 0, 0, c.getHeight(), & h0000cc, & h000044))
c.setRoundedFrame(& hffffff, 16)
dim tt as CDTextBoxMBS = c.addTitle("ChartDirector Demonstration", "timesbi.ttf", 18)
tt.setMargin(0, 0, 16, 0)
tt.setFontColor(& hFFFFFF)

// Set the center of the pie at (180, 140) and the radius to 100 pixels
c.setPieSize 350,300,150
// Set the sector colors
c.setColors(c.kDataColor, colors)

// Draw the pie in 3D with a pie thickness of 20 pixels
c.set3D(20)

dim t as CDTextBoxMBS = c.setLabelStyle("arialbd.ttf", 10, & h000000)
t.setBackground(CDPieChartMBS.kSameAsMainColor, CDPieChartMBS.kTransparent, CDPieChartMBS.soft-
Lighting(CDPieChartMBS.kRight, 0))
t.setRoundedCorners(8)

// Use local gradient shading for the sectors, with 5 pixels wide
// semi-transparent white (bbffffff) borders
c.setSectorStyle(CDPieChartMBS.kLocalGradientShading, & hbbffffff, 0)

// Set the pie data and the pie labels
c.setData data,labels
call c.setLabelStyle "arialbd.ttf",18

dim pic as picture = c.makeChartPicture
dim wp as new WebPicture(pic, Picture.FormatJPEG) // JPEG makes it smaller and faster

ImageView1.Picture=wp
```

Notes:

Be aware that our plugin produces pictures for you, which you assign to ImageViews. Tranfserring those pictures takes time, so you can optimize that with using WebPicture class. There you can decide between different compressions to improve speed (use JPEG instead of PNG).

e.g. if you use ubuntu, you can install the ttf-mscorefonts-installer package and call this method with "/usr/share/fonts/truetype/msttcorefonts" as the path. No backslash on the end of a path, please.

199.0.18 Can I use your DynaPDF plugin on a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, our DynaPDF plugin works just fine on the Xojo Web Edition.
Notes:

PDF files are created on the server. You may want to offer a preview to the user which uses reduced resolution images to reduce the time to download the PDF.

See our Create PDF example for the Xojo Web Edition.

199.0.19 Can I use your plugin controls on a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** No.

199.0.20 Can you get an unique machine ID?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** There is nothing like an unique machine ID.
Notes:

1:
You can use the MAC IDs of the network interfaces.
This can be changed by the user with software tools.
And the list of network interfaces changes if user reorder the interfaces.

2:
You can use the system folder creation date/time.
This may stay equal after cloning machines or after migration to new PC.

3:
You can use the Mac Serialnumber.
Mac only and it can happen that a Mac does not have a serial number.

4:
You can use the x86 CPU ID.
This is x86 CPU only and does not avoid running on the same CPU in different PCs.

199.0.21 ChartDirector: Alignment Specification

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Alignment Specification
Notes:

In many ChartDirector objects, you may specify the alignment of the object's content relative to its boundary. For example, for a TextBox object, you may specify the text's alignment relative to the box boundary by using TextBox.setAlignment.

The ChartDirector API defines several constants for the alignment options.

Constant	Value	Description
BottomLeft	1	The leftmost point on the bottom line.
BottomCenter	2	The center point on the bottom line.
BottomRight	3	The rightmost point on the bottom line.
Left	4	The leftmost point on the middle horizontal line.
Center	5	The center point on the middle horizontal line.
Right	6	The rightmost point on the middle horizontal line.
TopLeft	7	The leftmost point on the top line.
TopCenter	8	The center point on the top line.
TopRight	9	The rightmost point on the top line.
Bottom	2	The center point on the bottom line. Same as BottomCenter.
Top	8	The center point on the top line. Same as TopCenter.
TopLeft2	10	An alternative top-left position used in Axis.setTitlePos for axis title positioning only. For a vertical axis, TopLeft2 refers to refers to the left of the top side, while TopLeft refers to the top of the left side. The reverse applies for a horizontal axis.
TopRight2	11	An alternative top-right position used in Axis.setTitlePos for axis title positioning only. For a vertical axis, TopRight2 refers to refers to the right of the top side, while TopRight refers to the top of the right side. The reverse applies for a horizontal axis.
BottomLeft2	12	An alternative bottom-left position used in Axis.setTitlePos for axis title positioning only. For a vertical axis, BottomLeft2 refers to refers to the left of the bottom side, while BottomLeft refers to the bottom of the left side. The reverse applies for a horizontal axis.
BottomRight2	13	An alternative bottom-right position used in Axis.setTitlePos for axis title positioning only. For a vertical axis, BottomRight2 refers to refers to the right of the bottom side, while BottomRight refers to the bottom of the right side. The reverse applies for a horizontal axis.

199.0.22 ChartDirector: Color Specification

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Color Specification
Notes:

Many functions in the ChartDirector API accept colors as parameters. ChartDirector supports colors specified in web and HTML compatible ARGB format, in which ARGB refers to the Alpha transparency, Red, Green and Blue components of the color.

In addition to ARGB colors, ChartDirector supports "dynamic" colors. A dynamic color is a color that changes depending on the position of the pixels. The "dynamic" colors that ChartDirector supports include "pattern colors", "metal colors", "gradient colors", "zone colors" and "dash line colors".

ChartDirector supports specifying colors indirectly using "palette colors". When a "palette color" is used, the color is specified as an index to a palette. The actual color is looked up from the palette.ARGB Color
ARGB color consists of 4 components - alpha transparency, red, green and blue. The four components are encoded as a 32-bit number, with each component occupying 8 bits. In hexadecimal notation, it is AARRGGBB, where AA, RR, GG and BB are the alpha transparency, red, green and blue components.

Each component ranges from 00 - FF (0 - 255), representing its intensity. For example, pure red color is 00FF0000, pure green color is 0000FF00, and pure blue color is 000000FF. White color is 00FFFFFF, and black color is 00000000.

Most programming language requires you to put special prefix in front of hexadecimal characters. For C++, the prefix is "0x". For example, the syntax for the hexadecimal number 00FFFFFF is 0x00FFFFFF, or simply 0xFFFFFF.
For the alpha transparency component, a zero value means the color is not transparent all at. This is equivalent to traditional RGB colors. A non-zero alpha transparency means the the color is partially transparent. The larger the alpha transparency, the more transparent the color will be. If a partially transparent color is used to draw something, the underlying background can still be seen.

For example, 80FF0000 is a partially transparent red color, while 00FF0000 is a non-transparent red color.

Note that ChartDirector's ARGB color is web and HTML compatible. For example, red is FF0000, the same as in HTML. There are many resources on the web that provide tables in which you can click a color and it will show its HTML color code. These color codes can be used in ChartDirector.

If alpha transparency is FF (255), the color is totally transparent. That means the color is invisible. It does not matter what the RGB components are. So in ChartDirector, only one totally transparent color is used - FF000000. All other colors of the form FFnnnnnn are reserved to represent palette colors and dynamic colors, and should not be interpreted as the normal ARGB colors.

The totally transparent color FF000000 is often used in ChartDirector to disable drawing something. For example, if you want to disable drawing the border of a rectangle, you can set the border color to totally transparent.

For convenience, ChartDirector defines a constant called Transparent, which is equivalent to FF000000.Pattern Color
A pattern color is a dynamic color that changes according to a 2D periodic pattern. When it is used to fill an area, the area will look like being tiled with a wallpaper pattern.

Pattern colors are created using BaseChart.patternColor, BaseChart.patternColor2, DrawArea.patternColor and DrawArea.patternColor2. The patternColor method creates pattern colors using an array of colors as a bitmap. The patternColor2 method creates pattern colors by loading the patterns from image files.

These methods return a 32-bit integer acting as a handle to the pattern color. The handle can be used in any ChartDirector API that expects a color as its input.Metal Color
A metal color is a color of which the brightness varies smoothly across the chart surface as to make the surface looks shiny and metallic. ChartDirector supports using any color as the base color of the metal color. In particular, using yellow and grey as the base colors will result in metal colors that look gold and silver.

Metal colors are most often used as background colors of charts. They are created using CDBaseChartMBS.metalColor, CDBaseChartMBS.goldColor and CDBaseChartMBS.silverColor. The first method allows you to specify an arbitrary base color. The second and third methods use yellow and grey as the base colors, resulting in gold and silver metal colors.

These methods return a 32-bit integer acting as a handle to the gradient color. The handle can be used in any ChartDirector API that expects a color as its input.Gradient Color
A gradient color is a color that changes progressively across a direction.

Gradient colors are created using BaseChart.gradientColor, BaseChart.gradientColor2, DrawArea.gradientColor and DrawArea.gradientColor2. The gradientColor method creates a 2-point gradient color that changes from color A to color B. The gradientColor2 method creates a multi-point gradient colors that changes from color A to B to C ....

These methods return a 32-bit integer acting as a handle to the gradient color. The handle can be used in any ChartDirector API that expects a color as its input.

One common use of multi-point gradient colors is to define colors that have metallic look and feel. Please refer to DrawArea.gradientColor2 for details.Dash Line Colors
A dash line color is a color that switches on and off periodically. When used to draw a line, the line will appear as a dash line.

Dash line colors are created using BaseChart.dashLineColor and DrawArea.dashLineColor. They accept a

line color and a dash pattern code as arguments, and return a 32-bit integer acting as a handle to the dash line color. The handle can be used in any ChartDirector API that expects a color as its input.Zone Colors
A zone color is for XY charts only. It is a color that automatically changes upon reaching a data threshold value along the x-axis or y-axis. Zone colors are created using Layer.xZoneColor, Layer.yZoneColor, XYChart.xZoneColor or XYChart.yZoneColor.Palette Colors
Palette colors are colors of the format FFFFnnnn, where the least significant 16 bits (nnnn) are the index to the palette. A palette is simply an array of colors. For a palette color, the actual color is obtained by looking up the palette using the index. For example, the color FFFF0001 is the second color in the palette (first color is index 0).

The colors in the palette can be ARGB colors or "dynamic" colors (pattern, gradient and dash line colors).

The first eight palette colors have special significance. The first three palette colors are the background color, default line color, and default text color of the chart. The 4th to 7th palette colors are reserved for future use. The 8th color is a special dynamic color that is equal to the data color of the "current data set".

The 9th color (index = 8) onwards are used for automatic data colors. For example, in a pie chart, if the sector colors are not specified, ChartDirector will automatically use the 9th color for the first sector, the 10th color for the second sector, and so on. Similarly, for a multi-line chart, if the line colors are not specified, ChartDirector will use the 9th color for the first line, the 10th color for the second line, and so on.

The ChartDirector API defines several constants to facilitate using palette colors.

ConstantValueDescription

Palette	FFFF0000	The starting point of the palette. The first palette color is (Palette + 0). The nth palette color is (Palette + n - 1).
BackgroundColor	FFFF0000	The background color.
LineColor	FFFF0001	The default line color.
TextColor	FFFF0002	The default text color.
[Reserved]	FFFF0003 - FFFF0006	These palette positions are reserved. Future versions of ChartDirector may use these palette positions for colors that have special significance.
SameAsMainColor	FFFF0007	A dynamic color that is equal to the data color of the current data set. This color is useful for objects that are associated with data sets. For example, in a pie chart, if the sector label background color is SameAsMainColor, its color will be the same as the corresponding sector color.
DataColor	FFFF0008	The starting point for the automatic data color allocation.

When a chart is created, it has a default palette. You may modify the palette using BaseChart.setColor, BaseChart.setColors, or BaseChart.setColors2.

The advantages of using palette colors are that you can change the color schemes of the chart in one place. ChartDirector comes with several built-in palettes represented by the following predefined constants.

ConstantDescription

defaultPalette	An array of colors representing the default palette. This palette is designed for drawing charts on white backgrounds (or lightly colored backgrounds).
whiteOnBlackPalette	An array of colors useful for drawing charts on black backgrounds (or darkly colored backgrounds).
transparentPalette	An array of colors useful drawing charts on white backgrounds (or lightly colored backgrounds). The data colors in this palette are all semi-transparent.

199.0.23 ChartDirector: Font Specification

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Font Specification
Notes:

Font Name
In ChartDirector, the font name is simply the file name that contains the font. For example, under the Windows platform, the "Arial" font is "arial.ttf", while the "Arial Bold" font is "arialbd.ttf".

NOTE: Mac OS X Specific Information
In Mac OS X, in addition to ".ttf", ChartDirector also supports Mac OS X font file formats, such as Font Suitcase files and Datafork files (.dfont). These files often contain multiple fonts. For example, the "GillSans.dfont" file contains 6 fonts.

So in addition to the file name, an index is needed to determine the font. The index is specified by appending a " | " character to the font name, followed by the index number. For example, the third font in "GillSans.dfont" is denoted as "GillSans.dfont | 2". (Note: The first font starts at 0.) If no index number is provided, the first font is assumed.

ChartDirector also supports using Mac OS X Font Manager names. For example, one may use "Gill Sans Light Italic" instead of using "GillSans.dfont | 1" as the font name. However, the Mac OS X Font Manager is active only if someone has logged into the Mac GUI console, so this method is only recommended for developing applications that run on the GUI console.

The sample programs that come with ChartDirector are designed to run on all operating systems, so they use generic font file names (eg. "arial.ttf") instead of Mac OS X specific names. To allow them to run on Mac OS X, ChartDirector on Mac OS X has a built-in table to map common font file names to Mac OS X font names:

"arial.ttf", "arialbd.ttf", "ariali.ttf" and "arialbi.ttf" are mapped to "Arial | 0" (Arial), "Arial | 1" (Arial Bold), "Arial | 2" (Arial Italic) and "Arial | 3" (Arial Bold Italic)

”times.ttf”, ”timesbd.ttf”, ”timesi.ttf” and ”timesbi.ttf” are mapped to ”Times New Roman | 0” (Times New Roman), ”Times New Roman | 1” (Times New Roman Bold), ”Times New Roman | 2” (Times New Roman Italic) and ”Times New Roman | 3” (Times New Roman Bold Italic)

”cour.ttf”, ”courbd.ttf”, ”couri.ttf” and ”courbi.ttf” are mapped to ”Courier New | 0” (Courier New), ”Courier New | 1” (Courier New Bold), ”Courier New | 2” (Courier New Italic) and ”Courier New | 3” (Courier New Bold Italic)

Font Location
ChartDirector on Windows does not come with any font files. It relies on the operating system’s font files in the ” [windows] \Fonts” directory. To see what fonts are installed in your operating system and their file names, use the File Explorer to view that directory.

ChartDirector on Windows will also search for the font files in the ”fonts” subdirectory (if it exists) under the directory where the ChartDirector DLL ”chartdir.dll” is installed. This is useful for private fonts. Also, for some especially secure web servers, the web anonymous user may not have access to the ” [windows] \Fonts” directory. In this case, you may copy the font files to the above subdirectory.

ChartDirector on Mac OS X relies on operating system font files in ”/Library/Fonts” and ”/System/Library/Fonts”.

ChartDirector on Linux, FreeBSD and Solaris assume the fonts files are in the ”fonts” subdirectory under the directory where the ChartDirector shared object ”libchartdir.so” is installed. ChartDirector on Linux, FreeBSD and Solaris come with a number of font files in the ”fonts” subdirectory.

To keep the download size small, ChartDirector on Linux, FreeBSD and Solaris only come with some commonly used fonts. You may download additional fonts from the Internet. In particular, the Microsoft fonts at
http://sourceforge.net/project/showfiles.php?group_id=34153& release_id=105355
is highly recommended. Please refer to
http://www.microsoft.com/typography/faq/faq8.htm
on how you could use the fonts legally in your system.

ChartDirector supports True Type fonts (.ttf), Type 1 fonts (.pfa and .pfb) and Windows bitmap fonts (.fon). On Mac OS X, ChartDirector also supports Font Suitcase and Datafork (.dfont) files. On Linux, FreeBSD and Solaris, ChartDirector also supports Portable Compiled Fonts (.pcf fonts).

If you want ChartDirector to search other directories for the font files, you may list the directories in an environment variable called ”FONTPATH”.

If you specify an absolute path name for the font file, ChartDirector will use the absolute path name and will not search other directories.Artificial Boldening and Italicizing

Whereas most popular font comes with different styles for ”normal”, ”bold”, ”italic” and ”bold italic”, some fonts only come with one style (the normal style). For example, the Monotype Corsiva font that comes with MS Office only has the normal style (mtcorsva.ttf). For these cases, you may append the ”Bold” and/or ”Italic” words after the font file name (separated with a space) to ask ChartDirector to artificially bolden and/or italicize the font. For example, you may specify the font name as ”mtcorsva.ttf Bold”.Font List
Instead of specifying a single font file as the font name, you may specify a list of font files as the font name, separated by semi-colons. This is useful when using international characters that are only available in some fonts.

For example, if you would like to use the Arial font (”arial.ttf”) for western characters, and the MingLiu font ”mingliu.ttc” for Chinese characters (since the Arial font does not have Chinese characters), you may specify the font name as ”arial.ttf;mingliu.ttc”. In this case, ChartDirector will try the Arial font first. If it cannot find a certain character there, it will try the MingLiu font.Indirect Font Names
ChartDirector supports several special keywords for specifying the font name indirectly. When these keywords are used as font names, ChartDirector will look up the actual font names from a font table. The keywords are as follows:

KeywordsDescription	
”normal”	This default normal font, which is the first font in the font table. This is initially mapped to ”arial.ttf” (Arial).
”bold”	The default bold font, which is the second font in the font table. This is initially mapped to ”arialbd.ttf” (Arial Bold).
”italic”	The default italic font, which is the third font in the font table. This is initially mapped to ”ariali.ttf” (Arial Italic).
”boldItalic”	The default bold-italic font, which is the fourth font in the font table. This is initially mapped to ”arialbi.ttf” (Arial Bold Italic).
”fontN”	The (N + 1)th font in the font table (the first font is ”font0”).

The font table can be modified using BaseChart.setFontTable or DrawArea.setFontTable.

The advantage of using indirect font names is that you can change the fonts fonts in your charts in one place.Font Index
Most font files contain one font. However, it is possible a font file contains multiple fonts (that is, a font collection). For example, in True Type fonts, font files with extension ”.ttc” may represent a font collection.

If a font file contains multiple font, the font index can be used to specify which font to use. By default, the font index is 0, which means the first font in the font file will be used.Font Size
The font size decides how big a font will appear in the image. The font size is expressed in a font unit called points. This is the same unit used in common word processors.

Instead of specifying font size, some ChartDirector API (eg. TextBox.setFontSize) allow you to specify font

height and font width separately. You may use different point sizes for font height and font width to create special effects.Font Color
This is the color to draw the font. (See Color Specification on how colors are represented in ChartDirector.)Font Angle
This is the angle in degrees by which the font should be rotated anti-clockwise.Vertical Layout
By default, text are laid out horizontally, with characters being drawn from left to right.

ChartDirector also supports vertical layout, with characters being drawn from top to bottom. For example, you may use BaseChart.addText to add text that are laid out vertically. Vertical layout is common for oriental languages such as Chinese, Japanese and Korean.

199.0.24 ChartDirector: Mark Up Language

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Mark Up Language
Notes:

ChartDirector Mark Up Language (CDML) is a language for including formatting information in text strings by marking up the text with tags.

CDML allows a single text string to be rendered using multiple fonts, with different colors, and even embed images in the text.Font Styles
You can change the style of the text by using CDML tags. For example, the line:

<*font=timesi.ttf,size=16,color=FF0000>Hello <*font=arial.ttf,size=12,color=8000*>world!
will result in the following text rendered:

In general, all tags in CDML are enclosed by <* and *>. Attributes within the tags determine the styles of the text following the tags within the same block.

If you want to include <* in text without being interpreted as CDML tags, use «* as the escape sequence.

The following table describes the supported font style attributes in CDML. See Font Specification for details on various font attributes.

AttributeDescription

Set the following text to be in superscript style. This attribute does not need to have a value. (You may use ”super” as the attribute instead of ”super=1”.)

Note that unlike HTML tags, no double or single quotes are used in the tags. It is because CDML tags are

font	Starts a new style section, and sets the font name. You may use this attribute without a value (that is, use ”font” instead of ”font=arial.ttf”) to create a new style section without modifying the font name.
size	The font size.
width	The font width. This attribute is used to set the font width and height to different values. If the width and height are the same, use the size attribute.
height	The font height. This attribute is used to set the font width and height to different values. If the width and height are the same, use the size attribute.
color	The text color in hex format.
bgColor	The background color of the text in hex format.
underline	The line width of the line used to underline the following characters. Set to 0 to disable underline.
sub	Set the following text to be in subscript style. This attribute does not need to have a value. (You may use ”sub” as the attribute instead of ”sub=1”.)
super	Set the following text to be in superscript style.

xoffset	Draw the following the text by shifting the text horizontally from the original position by the specified offset in pixels.
yoffset	Draw the following the text by shifting the text vertically from the original position by the specified offset in pixels.
advance	Move the cursor forward (to the right) by the number of pixels as specified by the value this attribute.
advanceTo	Move the cursor forward (to the right) to the position as specified by the value this attribute. The position is specified as the number of pixels to the right of the left border of the block. If the cursor has already passed through the specified position, the cursor is not moved.

often embedded as string literals in source code. The double or single quotes, if used, will conflict with the string literal quotes in the source code. Therefore in CDML, no quotes are necessary and they must not be used.

Also, unlike HTML tags, CDML uses the comma character as the delimiter between attributes. It is because certain attributes may contain embed spaces (such as the font file name). So space is not used as the delimiter and the comma character is used instead.

Note the font attribute above starts a new style section, while other attributes just modify the current style section. You may use <*/font*>to terminate a style section, which will restore the font styles to the state before the style section.Blocks and Lines
In CDML, a text string may contain multiple blocks. A block may contain multiple lines of text by separating them with new line characters (”\n”) or with <*br*>. The latter is useful for programming languages

that cannot represent new line characters easily.

For example, the line:

<*size=15*><*block*><*color=FF*>BLOCK<*br*>ONE<*/*>and <*block*><*color=FF00*>BLOCK<*br*>TWO
will result in the following text rendered:

The above example contains a line of text. The line contains two blocks with the characters ” and ” in between. Each block in turn contains two lines. The blocks are defined using <*block*>as the start tag and <*/*>as the end tag.

When a block ends, font styles will be restored to the state before entering the block.Embedding Images
CDML supports embedding images in text using the following syntax:

<*img=my_image_file.png*>
where my_image_file.png is the path name of the image file.

For example, the line:

<*size=20*>A <*img=sun.png*>day
will result in the following text rendered:

ChartDirector will automatically detect the image file format using the file extension, which must either png, jpg, jpeg, gif, wbmp or wmp (case insensitive).

Please refer to BaseChart.setSearchPath or DrawArea.setSearchPath on the directory that ChartDirector will search for the file.

The <*img*>tag may optionally contain width and height attributes to specify its pixel width and height. In this case, ChartDirector will stretch or compress the image if necessary to the required width and height.Blocks Attributes
CDML supports nesting blocks, that is, a block can contain other sub-blocks. Attributes are supported in the <*block*>tag to control the alignment and orientation of the sub-blocks. The <*img=my_image_file.png*>is treated as a block for layout purposes.

For example, the line:

<*block,valign=absmiddle*><*img=molecule.png*><*block*>Hydrazino\nMolecule<*/*><*/*>
will result in the following text rendered:

The the above starts <*block,valign=absmiddle*>which specifies its content should align with each others in the vertical direction using the absolute middle alignment. The block contains an image, followed by a space characters, and then another block which has two lines of text.

The following table describes the supported attributes inside <*block*>tag:

AttributeDescription

width	The width of the block in pixels. By default, the width is automatically determined to be the width necessary for the contents of the block. If the width attribute is specified, it will be used as the width of the block. If the width is insufficient for the contents, the contents will be wrapped into multiple lines.
height	The height of the block in pixels. By default, the height is automatically determined to be the height necessary for the contents of the block. If the height attribute is specified, it will be used as the height of the block.
maxwidth	The maximum width of the block in pixels. If the content is wider than maximum width, it will be wrapped into multiple lines.
truncate	The maximum number of lines of the block. If the content requires more than the maximum number of lines, it will be truncated. In particular, if truncate is 1, the content will be truncated if it exceeds the maximum width (as specified by maxwidth or width) without wrapping. The last few characters at the truncation point will be replaced with "...".
linespacing	The spacing between lines as a ratio to the default line spacing. For example, a line spacing of 2 means the line spacing is two times the default line spacing. The default line spacing is the line spacing as specified in the font used.
bgColor	The background color of the block in hex format.
valign	The vertical alignment of sub-blocks. This is for blocks that contain sub-blocks. Supported values are baseline, top, bottom, middle and absmiddle.

The value baseline means the baseline of sub-blocks should align with the baseline of the block. The baseline is the underline position of text. This is normal method of aligning text, and is the default in CDML. For images or blocks that are rotated, the baseline is the same as the bottom.

The value top means the top line of sub-blocks should align with the top line of the block.

The value bottom means the bottom line of sub-blocks should align with the bottom line of the block.

The value middle means the middle line of sub-blocks should align with the the middle line of the block. The middle line is the middle position between the top line and the baseline.

The value absmiddle means the absolute middle line of sub-blocks should align with the absolute middle line of the block. The absolute middle line is the middle position between the top line and the bottom line.

halign The horizontal alignment of lines. This is for blocks that contain multiple lines. Supported values are left, center and right.

The value left means the left border of each line should align with the left border of the block. This is the default.

The value center means the horizontal center of each line should align with the horizontal center of the block.

The value right means the right border of each line should align with the right border of the block.

angle Rotate the content of the block by an angle. The angle is specified in degrees in counter-clockwise direction.

199.0.25 ChartDirector: Parameter Substitution and Formatting

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Parameter Substitution and Formatting
Notes:

ChartDirector charts often contain a lot of text strings. For example, sector labels in pie charts, axis labels for x and y axes, data labels for the data points, HTML image maps, etc, are all text strings.

ChartDirector uses parameter substitution to allow you to configure precisely the information contained in the text and their format.
Format Strings
In parameter substitution, format strings are used to specify the entities to be include into labels and how to format numbers and dates.

For example, when drawing a pie chart with side label layout, the default sector label format string is:

" { label } ({ percent } %)"

When the sector label is actually drawn, ChartDirector will replace " { label } " with the sector name, and " { percent } " with the sector percentage. So the above label format will result is a sector label similar to "ABC (34.56%)".

You may change the sector label format by changing the format string. For example, you may change it to:

" { label } : US$ { value | 2 } K ({ percent } %)"

The sector label will then become something like "ABC: US$ 123.00 (34.56%)".

In general, in ChartDirector parameter substitution, parameters enclosed by curly brackets will be substituted with their actual values when creating the texts.

For parameters that are numbers or dates/times, ChartDirector supports a special syntax in parameter substitution to allow formatting for these values. Please refer to the Number Formatting and Date/Time Formatting sections below for details.

Parameter Expressions

ChartDirector supports numeric expressions in format strings. They are denoted by enclosing the expression with curly brackets and using "=" as the first character. For example:

"USD { value } (Euro { = { value } *0.9 })"

In the above, " { value } " will be substituted with the actual value of the sector. The expression " { = { value } *0.9 } " will be substituted with the actual value of the sector multiplied by 0.9.

ChartDirector parameter expressions support operators "+", "-", "*", "/", "% " (modulo) and "^" (exponentiation). Operators "*", "/", "% ", "^" is computed first, followed by "+" and "-". Operators of the same precedence are computed from left to right). Parenthesis "(" and ")" can be used to change the computation order.

Parameters for Pie Charts

The following table describes the parameters available for pie charts.

Parameter	Description
sector	The sector number. The first sector is 0, while the nth sector is (n-1).
dataSet	Same as { sector } . See above.
label	The text label of the sector.
dataSetName	Same as { label } . See above.
value	The data value of the sector.
percent	The percentage value of the sector.
fieldN	The (N + 1)th extra field. For example, { field0 } means the first extra field. An extra field is an array of custom elements added using BaseChart.addExtraField or BaseChart.addExtraField2.

Parameters for All XY Chart Layers

The followings are parameters that are apply to all XY Chart layers in general. Some layer types may have

additional parameters (see below).

Note that certain parameters are inapplicable in some context. For example, when specifying the aggregate label of a stacked bar chart, the { dataSetName } parameter is inapplicable. It is because a stacked bar is composed of multiple data sets. It does not belong to any particular data set and hence does not have a data set name.

{ fieldN } means the extra field is indexed by the data point number. The Pth data point corresponds to the Pth element of the extra field.

Additional Parameters for Line Layers
The followings are parameters that are in additional to the parameters for all XY Chart layers.

Additional Parameters for Trend Layers
The followings are parameters that are in additional to the parameters for all XY Chart layers.

Additional Parameters for Box-Whisker Layers
The followings are parameters that are in additional to the parameters for all XY Chart layers.

Additional Parameters for HLOC and CandleStick Layers
The followings are parameters that are in additional to the parameters for all XY Chart layers.

Additional Parameters for Vector Layers
The followings are parameters that are in additional to the parameters for all XY Chart layers.

Parameters for All Polar Layers
The followings are parameters that are apply to all Polar Chart layers in general. Some layer types may have additional parameters (see below).

{ fieldN } means the extra field is indexed by the data point number. The Pth data point corresponds to the Pth element of the extra field.

Additional Parameters for PolarVector Layers
The followings are parameters that are in additional to the parameters for all Polar Chart layers.

Parameters for Axis
The following table describes the parameters available for pie charts.

Number Formatting
For parameters that are numbers, ChartDirector supports a number of formatting options in parameter substitution.

For example, if you want a numeric field { value } to have a precision of two digits to the right of the decimal point, use ',' (comma) as the thousand separator, and use '.' (dot) as the decimal point, and you may use { value | 2,. } . The number 123456.789 will then be displayed as 123,456.79.

For numbers, the formatting options are specified using the following syntax:

{ [param] | [a] [b] [c] [d] }

where:

If this field starts with "E" or "e", followed by a number, it means formatting the value using scientific notation with the specified number of decimal places. If the "E" or "e" is not followed by a number, 3 is assumed.

For example, { value | E4 } will format the value 10.3 to 1.0300E+1, and { value | e4 } will format the same value to 1.0300e+1.

If this field starts with "G" or "g", followed by a number, it means formatting the value using the scientific notation only if the value is large and requires more than the specified number of digits, or the value is less than 0.001. If scientific notation is used, the number following "G" or "g" also specifies the number of significant digits to use. If the "G" or "g" is not followed by a number, 4 is assumed.

For example, consider the format string { value | G4 } . The value 10 will be formatted to 10. The value 100000 will be formatted to 1.000E+5. Similarly, for { value | g4 } , the value 10 will be formatted to 10, while the value 100000 will be formatted to 1.000e+5.

If you skip this argument, ChartDirector will display the exact value using at most 6 decimal places.

You may skip [b] [c] [d] . In this case, the default will be used.

Date/Time Formatting
For parameters that are dates/times, the formatting options can be specified using the following syntax:

{ [param] | [datetime_format_string] }

where [datetime_format_string] must start with an english character (A-Z or a-z) that is not "G", "g", "E" or "e", and may contain any characters except ' } '. (If it starts with "G", "g", "E" or "e", it will be considered as a number format string.)

Certain characters are substituted according to the following table. Characters that are not substituted will be copied to the output.

For example, a parameter substitution format of { value | mm-dd-yyyy } will display a date as something similar to 09-15-2002. A format of { value | dd/mm/yy hh:nn:ss a } will display a date as something similar to 15/09/02 03:04:05 pm.

If you want to include characters in the format string without substitution, you may enclose the characters in single or double quotes.

For example, the format { value | mmm '<*color=dd0000*>'yyyy } will display a date as something like Jan <*color=dd0000*>2005 (the <*color=dd0000*>is a CDML tag to specify red text color). Note that the <*color=dd0000*>tag is copied directly without substitution, even it contains "dd" which normally will be substituted with the day of month.
Escaping URL/HTML/CDML characters
Parameter substitution is often used to create HTML image maps. In HTML, some characters has special meanings and cannot be used reliably. For example, the '>' is used to represent the end of an HTML tag.

Furthermore, if the field happens to be used as an URL, characters such as '?', '& ' and '+' also have special meanings.

By default, ChartDirector will escape template fields used in URL and query parameters when generating image maps. It will modify URL special characters to the URL escape format "% XX" (eg. "?" will become "% 3F"). After that, it will modify HTML special characters to the HTML escape format "& amps;# nn;" (eg. ">" will become "& amps;# 62;".). Similarly, it will escape other attributes in the image map using HTML escape format (but not URL escape format).

In addition to escaping HTML and URL special characters, ChartDirector will also remove CDML fields in creating image maps. It is because CDML is only interpreted in ChartDirector, should not be useful outside of ChartDirector (such as in browser tool tips).

In some cases, you may not want ChartDirector to escape the special characters. For example, if the parameters have already been escaped before passing to ChartDirector, you may want to disable ChartDirector from escaping them again.

ChartDirector supports the following special fields to control the escape methods - " { escape_url } ", " { noescape_url } ", " { escape_html } ", " { noescape_html } ", " { escape_cdml } " and { noescape_cdml } ". These fields enable/disable the escape methods used in the template fields that follow them.

199.0.26 ChartDirector: Shape Specification

Plugin Version: 8.2, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** ChartDirector: Shape Specification
Notes:

Several ChartDirector API accept shape specification as arguments. For example, BarLayer.setBarShape and BarLayer.setBarShape2 can be used to specify shapes of bars in bar charts, while DataSet.setDataSymbol, DataSet.setDataSymbol4, PolarLayer.setDataSymbol and PolarLayer.setDataSymbol4 can be used to specify shapes for data symbols.

Note that in addition to shapes, in many cases ChartDirector also accepts images or custom draw objects for data representation. For example, see DataSet.setDataSymbol2, DataSet.setDataSymbol3, PolarLayer.setDataSymbol2 and PolarLayer.setDataSymbol3.

Built-In Shapes

Built-in shapes are specified as integers. The integers can be explicit constants, or can be generated by a ChartDirector method for parameterized shapes. For example, a circle is represented by an explicit constant CircleShape (=7). On the other hand, the number representing a polygon depends on the number of sides the polygon has, so it is generated by using the PolygonShape method, passing in the number of sides as argument.

The following table illustrates the various ChartDirector shapes:

Custom Shapes

In ChartDirector, custom shapes are specified as an array of integers x0, y0, x1, y1, x2, y2 ... representing the coordinates of the vertices of the custom polygonal shape.

The polygon should be defined with a bounding square of 1000 x 1000 units, in which the x-axis is from -500 to 500 going from left to right, and the y-axis is from 0 to 1000 going from bottom to top.

ChartDirector will automatically scale the polygon so that 1000 units will become to the pixel size as requested by the various ChartDirector API.

As an example, the shape of the standard diamond shape in ChartDirector is represented as an array with 8 numbers:

0, 0, 500, 500, 0, 1000, -500, 500

199.0.27 Copy styled text?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** How to quickly copy styled text from one textarea to another?
Example:

```
# if TargetWin32 then
TextArea1.WinRTFDataMBS = TextArea2.WinRTFDataMBS
# elseif TargetMacOS then
TextArea1.NSTextViewMBS.textStorage.setAttributedString TextArea2.NSTextViewMBS.textStorage
# else
TextArea1.StyledText = TextArea2.StyledText
# endif
```

Notes: The code above uses special plugin functions on Mac and Windows and falls back to framework for Linux.

199.0.28 Do you have code to validate a credit card number?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can check the checksum to tell if a credit card number is not valid.
Example:

```
Dim strNumber As String
Dim nLength as Integer
Dim nValue as Integer
Dim nChecksum as Integer
Dim nIndex as Integer

strNumber = EditField1.Text
nLength = Len(strNumber)
nChecksum = 0

For nIndex = 0 To nLength - 2
nValue = Val(Mid(strNumber, nLength - (nIndex + 1), 1)) * (2 - (nIndex Mod 2))
If nValue <10 Then
nChecksum = nChecksum + nValue
Else
nChecksum = nChecksum + (nValue - 9)
End If
Next

If Val(Mid(strNumber, Len(strNumber), 1)) = (10 - (nChecksum Mod 10)) Mod 10 Then
MsgBox("The credit card number looks valid")
Else
```

```
MsgBox("The credit card number is invalid")
End IF
```

Notes:

Here's some code that will validate the checksum for a credit card. It works for Visa, MasterCard, American Express and Discover. Not sure about others, but I imagine they use the same basic algorithm. Of course, this doesn't actually mean that the credit card is valid, it's only useful for helping the user catch typos.

The above code doesn't have any error checking and it expects that the credit card number will be entered without spaces, dashes or any other non-numeric characters. Addressing those issues will be an exercise left to the reader. :)

(From Mike Stefanik)

199.0.29 Do you have plugins for X-Rite EyeOne, eXact or i1Pro?

Plugin Version: all, Console & Web: No. **Answer:** Our EyeOne plugin is available on request for licensees of the X-Rite SDKs.
Notes:

Please first go to X-Rite and get a SDK license.
Than we can talk about the plugin.

199.0.30 Does SQL Plugin handle stored procedures with multiple result sets?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Yes, the plugin can work with multiple recordsets.
Notes:

You need to use SQLCommandMBS class. When you get back results, you use FetchNext to walk over all records in the first result set. Than you simply start again with FetchNext to get the second record set.
Even the RecordSet functions should work, just use them twice to get all records from both record sets.

199.0.31 Does the plugin home home?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Yes, we like to know who is using the plugin, so the plugin may contact our server.
Example:

none.

Notes:

Please note that this does not affect your users as the plugin will only do this in the IDE and the relevant plugin part is never included in your applications.

The plugin if used for some hours, does contact our server to provide statistical data about Xojo version and OS versions. This way we know what versions are used. We can return the version number of the current plugin which may be visible in future versions somehow. And we transmit partial licenses data so we can track use of illegal license keys.

If you do not like to have this, you can block Xojo IDE from contacting our website via your Firewall.
Blocking the transfer will not disable the plugin or change the features.
Or contact us for a plugin version which explicitly does not contain this feature.

199.0.32 folderitem.absolutepath is limited to 255 chars. How can I get longer ones?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Paths on a Mac are not unique, so use them only to display them to the user.
Example:

```
Function AbsolutePath(f as FolderItem) As String
Dim s as string
Dim nf as FolderItem
nf = f
s = ""
while nf<>nil
s = nf.name + ":" + s
nf = nf.parent
wend
Return s
End Function
```

199.0.33 Has anyone played round with using CoreImage to do things like add dissolve transitions say when changing from one tab to another within a window?

Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** This code implements animations for a tabpanel change:
Example:

```
// in a tabpanel.change event:

dim r as CGSTransitionRequestMBS
dim co as new CGSConnectionMBS
dim cw as CGSWindowMBS
dim ct as CGSTransitionMBS
static OldTab as Integer

cw=co.CGSWindow(window1)
If cw = Nil Then
return // 10.3...
End If
r=new CGSTransitionRequestMBS
r.TransitionType=r.CGSFlip
r.HasBackGround=false
r.HasBackColor=false
r.Win=cw
// watch the value of the clicked tab versus the last tab
if tabpanel1.Value=0 or tabpanel1.Value <OldTab then
r.TransitionOption=r.CGSLeft
ct=co.NewTransition(r)
if ct<>Nil then
Refresh
ct.Invoke(1)
ct.Wait(1)
ct.Release
else
MsgBox "Error creating the transition."
end if
else
r.TransitionOption=r.CGSRight
ct=co.NewTransition(r)
if ct<>Nil then
Refresh
ct.Invoke(1)
ct.Wait(1)
ct.Release
else
MsgBox "Error creating the transition."
end if
```

```
end if
// Keep track of the last tab clicked
OldTab = tabpanel1.Value
```

Notes: See CGS* classes for more details.

199.0.34 How about Plugin support for older OS X?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** We support in general Mac OS X 10.5 and newer.
Notes:

All the 64-bit plugins on Mac require OS X 10.7.
Intel 32-bit plugins on Mac require OS X 10.5 or newer.

Currently the ChartDirector 6, GraphicsMagick and GameKit plugins requires Mac OS X 10.6.
Also for SQL Plugin the built in SQLite library requires 10.6.

199.0.35 How can I detect whether an Intel CPU is a 64bit CPU?

Plugin Version: all, Console & Web: No. **Answer:** Look on the CPU family returned by sysctl:
Example:

```
Function is64bit() As Boolean

# if TargetLittleEndian

dim m as MemoryBlock = NewMemoryBlock(8)
dim family as Integer
dim s as string

m=SystemControlNameToMIBMBS("hw.cpufamily")
m=SystemControlMBS(m)

if m<>nil then
m.LittleEndian=True
family=m.Long(0)

const CPUFAMILY_INTEL_6_14 = & h73d67300 //* "Intel Core Solo" and "Intel Core Duo" (32-bit Pentium-M with SSE3) */
const CPUFAMILY_INTEL_6_15 = & h426f69ef //* "Intel Core 2 Duo" */
const CPUFAMILY_INTEL_6_23 = & h78ea4fbc //* Penryn */
```

```
const CPUFAMILY_INTEL_6_26 = & h6b5a4cd2 //* Nehalem */

Select case family
case CPUFAMILY_INTEL_6_14
Return false
case CPUFAMILY_INTEL_6_15
Return true
case CPUFAMILY_INTEL_6_23
Return true
case CPUFAMILY_INTEL_6_26
Return true
// newer CPUs may be missing here
end Select

end if

# endif

Return false

Exception
Return false
End Function
```

Notes: This code is written for Mac OS X where you only have a limited number of possible CPUs.

199.0.36 How can I disable the close box of a window on Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** The following code will remove the close item from the system menu of the window.
Example:

```
# if TargetWin32 then
Declare Function GetSystemMenu Lib "user32" (hwnd as Integer, bRevert as Integer) as Integer
Declare Function RemoveMenu Lib "user32" (hMenu as Integer, nPosition as Integer, wFlags as Integer) as
Integer
Dim hSysMenu as Integer
hSysMenu = GetSystemMenu(me.WinHWND, 0)
RemoveMenu hSysMenu, & HF060, & H0
# endif
```

Notes: The window may not be updated directly.

199.0.37 How can I get all the environment variables from Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Example:

```
# if targetWin32
declare function GetEnvironmentStrings Lib "kernel32" () as ptr
dim m as memoryBlock
dim n as Integer

m=GetEnvironmentStrings()

n=0
do
msgBox m.cstring(n)
while m.byte(n)<>0
n=n+1
wend
n=n+1
loop until m.byte(n)=0
# endif
```

Notes: The MBS Plugin has an EnvironmentMBS class for this.

199.0.38 How can i get similar behavior to Roxio Toast or iTunes where clicking a 'burn' button allows the next inserted blank CD-R to bypass the Finder and be accepted by my application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You need to get a media reservation.
Example:

```
dim d as DRDeviceMBS // get a device
d.AcquireMediaReservation
```

Notes:

Use the plugin function AcquireMediaReservation and later release it using ReleaseMediaReservation.
See plugin examples on how to use it and check Apples DiscRecording framework documentation for more details.

199.0.39 How can I get text from a PDF?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Crossplatform you can use DynaPDF Pro.
Notes:

On Mac OS X you can also use PDFKit for the same job.
While DynaPDF Pro gives you each bit of text with rotation, font information and encoding details, PDFKit gives you only the text string for a PDF page.

199.0.40 How can I get text from a Word Document?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** to get the text string from a doc file, use the NSAttributedStringMBS class.
Notes:

The NSAttributedStringMBS class is Mac OS X only and we have currently no solution for Windows or Linux.

Use the NSAttributedStringMBS.initWithDocFormat(data as string) as boolean method.

199.0.41 How can I get the item string for a given file creator?

Plugin Version: all, Console & Web: No. **Answer:** Try this function:
Example:

```
Sub pullNativeDocs(aCREA As string)
Dim result as Integer
Dim m, k as memoryBlock
Dim f as folderItem
Dim newType as string
Dim anIcon As picture
Dim ofs as Integer

Declare Function GetFileTypesThatAppCanNativelyOpen Lib "Carbon" (appVRefNumHint as Short, appSignature as OSType, nativeTypes as Ptr) as Short Inline68K("701CABFC")
Declare Function GetDocumentKindString Lib "Carbon" (docVRefNum as Short, docType as OSType, docCreator as OSType, kindString as ptr) as Short Inline68K("7016ABFC")

listBox1.deleteAllRows

m = newMemoryBlock(1024)
result = GetFileTypesThatAppCanNativelyOpen(Volume(0).MacVRefNum, aCREA, m)
if result <>0 then
listBox1.addRow "<Not found.>"
```

```
return
end if

do
if m.byte(ofs*4) = 0 then
exit
else
newType = m.OSTypeMBS(ofs*4)
listBox1.addRow newType
k = newMemoryBlock(64)
result = GetDocumentKindString(Volume(0).MacVRefNum, newType, aCREA, k)
if result = 0 then
listBox1.cell(ofs,1) = k.pString(0)
ofs = ofs + 1
else
listBox1.cell(ofs,1) = "(unknown)"
end if

end if
loop

End Sub
```

Notes: Change "Translation" to "CarbonLib" for Mac OS X.

199.0.42 How can I launch an app using it's creator code?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Send an AppleEvent "odoc" with the creator code to the Finder ("MACS"):
Example:

```
Function LaunchByCreator(C As String) As Boolean
Dim A As AppleEvent
A = NewAppleEvent("aevt","odoc","MACS")
A.ObjectSpecifierParam("—-") = GetUniqueIDObjectDescriptor("appf",nil,C)
return A.Send
End Function
```

199.0.43 How can I learn what shared libraries are required by a plugin on Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Please use the ldd command in the terminal.
Notes:

You build an app on any platform, but for Linux.
For the resulting .so files in the libs folder, you can run the ldd command with the library path as parameter. It shows you references lib files and you can make sure you have those installed.

This is a sample run of our graphicsmagick plugin:

cs@Ubuntu32:
textasciitilde /MeinProgramm/MeinProgramm Libs$ ldd libMBSGraphicsMagickPlugin17744.so
linux-gate.so.1 =>(0xb76ee000)

libXdmcp.so.6 =>/usr/lib/i386-linux-gnu/libXdmcp.so.6 (0xb5eb4000)
cs@Ubuntu32:
textasciitilde /MeinProgramm/MeinProgramm Libs$
```

As you see all library have been found and their load address is printed behind the na,e.
If a library is missing, you usually see the address missing there or being zero.

199.0.44 How can I validate an email address?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can try this code: **Example:**

```
Dim re As RegEx
re = New RegEx
Dim rm As RegExMatch

re.SearchPattern = " [ a-z0-9!# $ % & '*+/=?^_' { | }
textasciitilde - ] +(?:\. [ a-z0-9!# $ % & '*+/=?^_' { | }
textasciitilde - ] +)*@(?: [ a-z0-9 ] (?: [ a-z0-9- ] * [ a-z0-9 ] )?\.)+ [ a-z0-9 ] (?: [ a-z0-9- ] * [ a-z0-9 ] )?"
rm = re.Search(editField1.Text)

if rm = Nil Then
StaticText2.text = editField1.Text + " not valid email"
Else
StaticText2.Text = editField1.Text + " is valid"
End if
```

Notes:

Adapted from:

http://www.regular-expressions.info/email.html

199.0.45 How do I decode correctly an email subject?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** The following code can be used to decode an email subject including several encodings including Base 64.
Example:

```
dim src as string // input

dim theRegex as Regex
dim theRegexMatch as RegexMatch
dim result, infoCharset, encodedPart as string
dim theStart as Integer

if instr(src, "=?") >0 then
theRegex = new Regex
theRegex.Options.Greedy = false
theRegex.searchPattern = "(.*)=\?(.+)\?(Q | B)\?(.+)\?="
theRegexMatch = theRegex.search(src)
while theRegexMatch <>nil
theStart = theRegexMatch.subExpressionStartB(0) + len(theRegexMatch.subExpressionString(0))

result = result + theRegexMatch.subExpressionString(1)
infoCharset = theRegexMatch.subExpressionString(2)
encodedPart = theRegexMatch.subExpressionString(4)
if theRegexMatch.subExpressionString(3) = "B" then
encodedPart = DecodeBase64(encodedPart)
elseif theRegexMatch.subExpressionString(3) = "Q" then
encodedPart = DecodeQuotedPrintable(encodedPart)
end if
if right(result, 1) = " " then
result = mid(result, 1, len(result)-1)
end if
encodedPart = encodedPart.DefineEncoding(GetInternetTextEncoding(infoCharset))
result = result + encodedPart

theRegex.SearchStartPosition = theStart
theRegexMatch = theRegex.search()
wend

result = result + mid(src, theStart+1)

else
result = src
end if
```

```
// theRegexMatch = theRegex.search

msgbox result
```

Notes:

May not look nice depending on the controls used.
This is no longer needed when using MimeEmailMBS class which decodes for you.

199.0.46 How do I enable/disable a single tab in a tabpanel?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use the TabpanelEnabledMBS method.
Example:

```
TabpanelEnabledMBS(tabpanel1, 1, false)
```

Notes:

Use Carbon for MachO and CarbonLib for Mac Carbon and AppearanceLib for Mac OS Classic as library.
For Cocoa, please use enabled property of NSTabViewItemMBS class.

199.0.47 How do I find the root volume for a file?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Try this function:
Example:

```
Function GetRootVolume(f as FolderItem) as FolderItem
dim root, dum as folderItem
if f <>nil then
root = f // f might be the volume
do
dum = root.parent
if dum <>nil then
root = dum
end if
loop until dum = nil
return root
end if
End Function
```

199.0.48 How do I get the current languages list?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
dim p as new CFPreferencesMBS
dim a as CFArrayMBS
dim s as CFStringMBS
dim o as CFObjectMBS
dim sa(-1) as string

o=p.CopyAppValue("AppleLanguages",".GlobalPreferences")

if o<>Nil then
a=CFArrayMBS(o)

dim i,c as Integer

c=a.Count-1
for i=0 to c
o=a.Item(i)

if o isa CFStringMBS then
s=CFStringMBS(o)
sa.Append s.str
end if
next
end if

MsgBox Join(sa,EndOfLine)
```

Notes:

On Mac OS X you can get the list of current languages like this list:

```
de
en
ja
fr
es
it
pt
pt-PT
nl
sv
nb
```

da
fi
ru
pl
zh-Hans
zh-Hant
ko

Which has German (de) on the top for a German user.
This code has been tested on Mac OS X 10.5 only.

199.0.49 How do I get the Mac OS Version?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
dim i as Integer
if system.gestalt("sysv", i) then
//do this in an 'If' in case you don't get any value back at all and system.gestalt returns boolean
if i = & h750 then //If OS is 7.5
//do stuff
elseif i = & h761 then //If OS is 7.6.1
//do stuff
end if
end if
```

Notes: The MBS Plugin has a function SystemInformationMBS.OSVersionString for this.

199.0.50 How do I get the printer name?

Plugin Version: all, Console & Web: No. **Answer:** For Mac OS Classic see the code below and for Mac OS X use the Carbon Print Manager Classes from the MBS Plugin.
Example:

```
dim s as String
dim i as Integer

s=app.ResourceFork.GetResource("STR ",-8192)
if s<>"" then
i=ascb(leftb(s,1))
s=mid(s,2,i)
```

```
MsgBox s
end if
```

Notes:

A note from Craig Hoyt:

After looking at your example I had a little deja-vu experience. Several years ago I played around with this same code if FutureBasic. I discovered that it did not and still doesn't provide the 'Printer Name', it does return the print driver name. If it returns 'LaserWriter 8' as the print driver you can look into this file and get the 'PAPA' resource # -8192 to get the actual Printer Name. Unfortunately this does not hold true for other printers. My Epson and HP Printers (the Epson has an Ethernet Card and the HP is USB) do not provide this info in their drivers. As far as I can tell it only returns the name by polling the printer itself.

199.0.51 How do I make a metal window if RB does not allow me this?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The following declare turns any window on Mac OS X 10.2 or newer into a metal one.
Example:

```
declare sub ChangeWindowAttributes lib "Carbon" (win as windowptr, a as Integer, b as Integer)

ChangeWindowAttributes window1,256,0
```

Notes: May not look nice depending on the controls used.

199.0.52 How do I make a smooth color transition?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

I'd like to show in a report some bars, which start with color A and end with color B.

The color change should be very smooth.

My problem: If I would start from 255,0,0 and end by 0,0,0, I would have 255 different colors. If the bars are longer than 255 pixels, would

this look nice?
Example:

```
// Window.Paint:
Sub Paint(g As Graphics)
dim w,w1,x,p as Integer
dim c1,c2,c as color
dim p1,p2 as Double

c1=rgb(255,0,0) // start color
c2=rgb(0,255,0) // end color

w=g.Width
w1=w-1

for x=0 to w1
p1=x/w1
p2=1.0-p1

c=rgb(c1.red*p1+c2.red*p2, c1.green*p1+c2.green*p2, c1.blue*p1+c2.blue*p2)

g.ForeColor=c
g.DrawLine x,0,x,g.Height

next
End Sub
```

Notes: Try the code above in a window paint event handler.

199.0.53 How do I read the applications in the dock app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use CFPreferencesMBS class like in this example:
Example:

```
// Reads file names from persistent dock applications and puts them into the list

dim pref as new CFPreferencesMBS

dim persistentapps as CFStringMBS = NewCFStringMBS("persistent-apps")
dim ApplicationID as CFStringMBS = NewCFStringMBS("com.apple.dock")
dim tiledata as CFStringMBS = NewCFStringMBS("tile-data")
dim filelabel as CFStringMBS = NewCFStringMBS("file-label")

// get the array of persistent applications from dock preferences
```

```
dim o as CFObjectMBS = pref.CopyValue(persistentapps, ApplicationID, pref.kCFPreferencesCurrentUser,
pref.kCFPreferencesAnyHost)

if o isa CFArrayMBS then
dim a as CFArrayMBS = CFArrayMBS(o)

// walk over all items in array
dim c as Integer = a.Count-1
for i as Integer = 0 to c

// get dictionary describing item
o = a.Item(i)

if o isa CFDictionaryMBS then
dim d as CFDictionaryMBS = CFDictionaryMBS(o)

// and pick tile data dictionary
o = d.Value(tiledata)
if o isa CFDictionaryMBS then
d = CFDictionaryMBS(o)

// and pick there the file label
o = d.Value(filelabel)
if o isa CFStringMBS then
// and display it
dim name as string = CFStringMBS(o).str
List.AddRow name
end if
end if
end if

next

else
MsgBox "Failed to read dock preferences."
end if
```

Notes: You can use the CFPreferencesMBS.SetValue to change a value and CFPreferencesMBS.Synchronize to write the values to disc. You may need to restart the Dock.app if you modified things.

199.0.54 How do I truncate a file?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** In a binarystream you can set the length property to truncate.

199.0.55 How do update a Finder's windows after changing some files?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
dim f as folderitem // some file
dim ae as appleevent
ae=newappleevent("fndr","fupd","MACS")
ae.folderitemparam("—-")=f
if not ae.send then
//something went wrong
end if
```

Notes: The folderitem.finderupdate from the MBS Plugin does something like this.

199.0.56 How to access a USB device directly?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** First, it depends on the device.
Notes:

Some devices can be talked directly from user mode code, but some require a kernel driver.

For some devices you can use plugins to access them like:

- Audio and Video sources using the QTGrabberClassMBS
- Mass storage devices using the folderitem class.
- Serial devices using the System.SerialPort function.
- HID USB devices can be used with MacHIDMBS, WinHIDMBS or LinuxHIDInterface class.
- Any USB device may be used with MacUSBMBS or WinUSBMBS classes.

In general it is always the best to take the most high level access to have others do the work for the details.

199.0.57 How to add icon to file on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use Folderitem.AddCustomIcon or NSWorkspaceMBS.setIcon functions.

Notes: Please close any open stream for the file you want to add an icon.

199.0.58 How to ask the Mac for the Name of the Machine?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Using Apple Events you can use this code:
Example:

```
Function Computername() As string

dim theEvent as AppleEvent
dim err as boolean

theEvent = newAppleEvent("mchn","getd","MACS")

err = theEvent.send

return theevent.ReplyString

End Function
```

Notes:

Code above is for Mac OS 9!
Also the MBS Plugin has a function for this which may be faster and work also on Macs without Filesharing (which handles this event).

199.0.59 How to automatically enable retina in my apps?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can run a build script on each build with this code:
Example:

```
Dim App As String = CurrentBuildLocation + "/" + CurrentBuildAppName + ".app"
Call DoShellCommand("/usr/bin/defaults write " + App + "/Contents/Info ""NSHighResolutionCapable""
YES")
```

Notes: This will set the NSHighResolutionCapable flag to YES.

199.0.60 How to avoid leaks with Cocoa functions?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can try this code on Mac OS X:
Example:

```
// in a Timer Action event:
Sub Action()
static LastPool as NSAutoreleasePoolMBS = nil
static CurrentPool as NSAutoreleasePoolMBS = nil

LastPool = CurrentPool
CurrentPool = new NSAutoreleasePoolMBS
End Sub
```

Notes:

With Xojo 2009r4 the code above should not be needed as Xojo runtime does automatically handle the NSAutoreleasePools for you. For older Xojo versions you need to use code with a timer with the action event above to avoid memory leaks.

Please do not use Xojo 2009r4 and newer with plugins before version 9.5. You can get crashes there which typically show a line with a objc_msgSend call.

199.0.61 How to avoid trouble connecting to oracle database with SQL Plugin?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** For oracle the most important thing is to point the plugin to the libraries from oracle.
Notes:

In environment variables, the paths like ORACLE_HOME must be defined.
On Mac OS X you also need to define DYLD_LIBRARY_PATH to point to the dylib files from oracle.

For that you need to modify /etc/launchd.conf for Mac OS X 10.8 and newer.
In older versions those variables in .MacOSX/environment.plist file in user's home.

Another way for the case you bundle things inside your app is to use the LSEnvironment key in info.plist.
In info.plist it looks like this:

```
<key>LSEnvironment</key>
<dict>
<key>test</key>
<string>Hello World</string>
```

</dict>

199.0.62 How to avoid ___NSAutoreleaseNoPool console messages in threads?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You need to use your own NSAutoreleasePool on a thread like this:
Example:

```
sub MyThread.run
dim pool as new NSAutoreleasePoolMBS
// do work here

pool=nil
end sub
```

Notes:

For more details read here:
http://developer.apple.com/mac/library/documentation/Cocoa/Reference/Foundation/Classes/NSAutoreleasePool_Class/Reference/Reference.html

199.0.63 How to bring app to front?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** On Mac you can use this code:
Example:

```
// First way:
app.FrontMostMBS = true

// second way:
dim p as new ProcessMBS
p.GetCurrentProcess
p.FrontProcess = true

// third way:
NSApplicationMBS.sharedApplication.activateIgnoringOtherApps(true)

// for Windows:
RemoteControlMBS.WinBringWindowToTop
```

Notes: This will bring a Mac app to the front layer.

199.0.64 How to bring my application to front?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** This makes SimpleText (Code ttxt) to the frontmost application:
Example:

```
Dim A As AppleEvent
A = NewAppleEvent("misc","actv","")
If Not A.Send then
Beep
end if
```

Notes: (Code is Mac only)

199.0.65 How to catch Control-C on Mac or Linux in a console app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use SignalHandlerMBS class for this.
Example:

```
// watch for Control-C on Mac
call SignalHandlerMBS.SetFlagHandler(2)

dim ende as boolean = false
do
if SignalHandlerMBS.IsFlagSet(2) then
Print "Flag 2 set. Existing..."
ende = true
end if

DoEvents 1
loop until ende
```

Notes: The signal is catched, a flag is set and you can ask later in your normal application flow for the result.

199.0.66 How to change name of application menu?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** Use this code to change the application menu name on Mac OS X:
Example:

```
dim mb as new MenubarMBS
dim m as MenuMBS = mb.item(1) // 1 is in my tests the app menu
if m<>Nil then
m.MenuTitle = "Hello World"
end if
```

Notes: This code is for Carbon only.

199.0.67 How to change the name in the menubar of my app on Mac OS X?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

You mean it screws up if the file name of the bundle itself is different than the name of the executable file in the MacOS folder within the bundle? If so, you should find something like this within your Info.plist file (or the 'plst' resource that the RB IDE builds for you):

```
<key>CFBundleExecutable</key>
<string>Executable file name here</string>
```

Just make sure that file name matches.

However, if your question involves how you can change the name of the app that appears in the menu and the dock, that's different. You can make this name different from the file name by changing the CFBundleName key:

```
<key>CFBundleName</key>
<string>Name for menu here</string>
```

Note that if you use my free AppBundler program, this second part is taken care of for you – just fill in a custom name in the right field. You can find AppBundler (from Thomas Reed) at http://www.bitjuggler.com/products/appbundler/ .

199.0.68 How to check if a folder/directory has subfolders?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use code like this to check all items in a folder:
Example:

```
Function HasSubFolder(folder as FolderItem) As Boolean
dim c as Integer = folder.Count

for i as Integer = 1 to c
dim item as FolderItem = folder.TrueItem(i)

if item<>Nil and item.Directory then
Return true
end if
next

End Function
```

Notes:

We use trueitem() here to avoid resolving alias/link files.
Also we check for nil as we may not have permission to see all items.
And if one is a directory, we return without checking the rest.

199.0.69 How to check if Macbook runs on battery or AC power?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Please use our IOPowerSourcesMBS class like this:
Example:

```
Function PowerSourceState() as Integer
dim p as new IOPowerSourcesMBS

// check all power sources
dim u as Integer = p.Count-1
for i as Integer = 0 to u
dim d as CFDictionaryMBS = p.Item(i)
if d<>nil then
// check if they have a power source state key:
dim o as CFObjectMBS = d.Value(NewCFStringMBS("Power Source State"))
if o isa CFStringMBS then
dim s as string = CFStringMBS(o).str

'MsgBox s
```

```
if s = "AC Power" then
Return 1
elseif s = "Battery Power" then
Return 2
end if
end if
end if
next
Return 0 // unknown
End Function
```

Notes: If you want to check the CFDictionaryMBS content, simply use a line like "dim x as dictionary = d.dictionary" and check the contents in the debugger.

199.0.70 How to check if Microsoft Outlook is installed?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** If you need Outlook for Scripting, you should simply check registry for the required Outlook.Application class:
Example:

```
Function OutlookInstalled() As Boolean
# if TargetWin32 then

try
dim r as new RegistryItem("HKEY_CLASSES_ROOT\Outlook.Application\CLSID", false)

Return true

catch r as RegistryAccessErrorException
// not installed
Return false

end try

# else

// Windows only, so false on other platforms
Return false

# endif

End Function
```

199.0.71 How to check on Mac OS which country or language is currently selected?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The code below returns a country value.
Example:

```
dim result as Integer

IF TargetMacOS THEN

CONST smScriptLang = 28
CONST smSystemScript = -1

DECLARE FUNCTION GetScriptManagerVariable LIB "Carbon" ( selector as Integer) as Integer
DECLARE FUNCTION GetScriptVariable LIB "Carbon" ( script as Integer, selector as Integer) as Integer

result=GetScriptVariable(smSystemScript, smScriptLang)

END IF
```

Notes:

Returns values like:

For more values, check "Script.h" in the frameworks.

199.0.72 How to code sign my app with plugins?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** When you try to code sign the application with plugin dylibs on Mac OS X, you may see error message that there is actually a signature included.
Notes:

Please use the -f command line parameter with codesign utility to overwrite our MBS signature.
We sign our plugins for Mac and Windows to make sure they have not been modified.

In terminal, you do like this:

```
cd <Path to folder of app>

xattr -cr <Appname>.app
codesign -f -s "Developer ID Application: <Your Name>" <Appname>.app/Contents/Frameworks/*.dylib
```

codesign -f -s "Developer ID Application: <Your Name>" <Appname>.app/Contents/Frameworks/*.framework
codesign -f -s "Developer ID Application: <Your Name>" <Appname>.app

Please use the name of your certificate (See keychain), the name of your app and the path to the app folder.
If you have helper apps you need to sign them first.
You can use a build step to automatically sign your app on build.

199.0.73 How to collapse a window?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use this function (Mac only):
Example:

```
Sub CollapseRBwindow(w as window, CollapseStatus as boolean)
dim state, err as Integer
dim wh as MemoryBlock

Declare Function CollapseWindow Lib "Carbon" (window as Integer,collapse as Integer) as Integer

IF CollapseStatus THEN
state = 1
ELSE
state = 0
END IF

err = CollapseWindow(w.MacWindowPtr, state)

End Sub
```

Notes:

Also the MBS Plugin has a window.collapsedmbs property you can set.
For Windows the MBS Plugin has a window.isiconicmbs property.

199.0.74 How to compare two pictures?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can try this code:
Example:

```
Function ComparePictures(p as picture,q as picture) as Integer
dim r,u as RGBSurface
dim x,y,n,m,h,w as Integer
```

```
dim w1,w2,h1,h2,d1,d2 as Integer
dim c1,c2 as color

h1=p.Height
h2=q.Height
w1=p.Width
w2=q.Width
d1=p.Depth
d2=q.Depth

if d1<>d2 then
Return 1
elseif w1<>w2 then
return 2
elseif h1<>h2 then
Return 3
else
r=p.RGBSurface
u=q.RGBSurface

if r=nil or u=nil then
Return -1
else
h=h1-1
w=w1-1
m=min(w,h)

for n=0 to m
c1=r.Pixel(n,n)
c2=u.Pixel(n,n)
if c1<>c2 then
Return 4
end if
next

for y=0 to h
for x=0 to w
c1=r.Pixel(x,y)
c2=u.Pixel(x,y)
if c1<>c2 then
Return 5
end if
next
next

// 0 for equal
// -1 for error (no RGBsurface)
// 1 for different depth
```

```
// 2 for different width
// 3 for different height
// 4 for different pixels (fast test)
// 5 for different pixels (slow test)
end if
end if

Exception
Return -1
End Function
```

Notes: Remember that this only works on bitmap pictures, so the picture.BitmapMBS function may be useful.

199.0.75 How to compile PHP library?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You have to download the source code and compile a static version of the library.
Notes:

This instructions were written based on PHP 5.2.6 on Mac OS X:

- Best take a new Mac with current Xcode version installed.
- Download the source code archive. e.g. "php-5.2.6.tar.bz2"
- Expand that archive on your harddisc.
- Open terminal window
- change directory to the php directory. e.g. "cd /php-5.2.6"
- execute this two lines to define the supported CPU types and the minimum Mac OS X version:
- export CFLAGS="-arch ppc -arch i386 -mmacosx-version-min=10.3"
- export CXXFLAGS="-arch ppc -arch i386 -mmacosx-version-min=10.3"
- the command "./configure help" does show the configure options.
- use configure with a line like this:
- ./configure –enable-embed –with-curl -enable-ftp –enable-zip –enable-sockets –enable-static –enable-soap –with-zlib –with-bz2 –enable-exif –enable-bcmath –enable-calendar
- start the compilation with "make all"

- other option is to use "make install" which first does the same as "make all" and than does some installation scripts.
- you may get an error about a duplicate symbole __yytext. Search the file "zend_ini_scanner.c", search a line with "char *yytext;" and change it to "extern char *yytext;".
- On the end you get a lot of error messages, but you have a working library (named libphp5.so) file in the invisible ".libs" folder inside your php source folder.

Possible problems and solutions:

- If the path to your files has spaces, you can get into trouble. e.g. "/RB Plugins/PHP" is bad as files will be searched sometimes in "/RB".
- If you have in /usr/local/lib libraries which conflict with the default libraries, you can get into trouble.
- If you installed some open source tools which compiled their own libraries, you can get into conflicts.
- if you have to reconfigure or after a problem, you may need to use "make clean" before you start "make all" again.

Feel free to install additional libraries and add more packages to the configure line.

199.0.76 How to convert a BrowserType to a String with WebSession.Browser?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like this:
Example:

```
Function GetBrowserName(s as WebSession.BrowserType) As string
Select case s
case WebSession.BrowserType.Android
Return "Andriod"
case WebSession.BrowserType.Blackberry
Return "Blackberry"
case WebSession.BrowserType.Chrome
Return "Chrome"
case WebSession.BrowserType.ChromeOS
Return "ChromeOS"
case WebSession.BrowserType.Firefox
Return "Firefox"
case WebSession.BrowserType.InternetExplorer
Return "InternetExplorer"
case WebSession.BrowserType.Opera
Return "Opera"
case WebSession.BrowserType.Safari
Return "Safari"
```

```
case WebSession.BrowserType.SafariMobile
Return "SafariMobile"
case WebSession.BrowserType.Unknown
Return "Unknown"
else
Return "Unkown: "+str(integer(s))
end Select

End Function
```

199.0.77 How to convert a EngineType to a String with WebSession.Engine?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like this: **Example:**

```
Function GetRenderingEngineName(s as WebSession.EngineType) As string
Select case s
case WebSession.EngineType.Gecko
Return "Gecko"
case WebSession.EngineType.Presto
Return "Presto"
case WebSession.EngineType.Trident
Return "Trident"
case WebSession.EngineType.Unknown
Return "Unknown"
case WebSession.EngineType.WebKit
Return "WebKit"
else
Return "Unkown: "+str(integer(s))
end Select

End Function
```

199.0.78 How to convert a PlatformType to a String with WebSession.Platform?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like this: **Example:**

```
Function GetPlatformName(s as WebSession.PlatformType) As string
Select case s
case WebSession.PlatformType.Blackberry
```

```
Return "Blackberry"
case WebSession.PlatformType.iPad
Return "iPad"
case WebSession.PlatformType.iPhone
Return "iPhone"
case WebSession.PlatformType.iPodTouch
Return "iPodTouch"
case WebSession.PlatformType.Linux
Return "Linux"
case WebSession.PlatformType.Macintosh
Return "Macintosh"
case WebSession.PlatformType.PS3
Return "PS3"
case WebSession.PlatformType.Unknown
Return "Unknown"
case WebSession.PlatformType.WebOS
Return "WebOS"
case WebSession.PlatformType.Wii
Return "Wii"
case WebSession.PlatformType.Windows
Return "Windows"
else
Return "Unkown: "+str(integer(s))
end Select

End Function
```

199.0.79 How to convert a text to iso-8859-1 using the TextEncoder?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

This code can help you althrough it's not perfect.
You need to set lc to the current color you use.
Example:

```
dim outstring as string
dim theMac, thePC as textencoding
dim Mac2PC as textconverter

theMac = getTextEncoding(0) // MacRoman
thePC = getTextEncoding(& h0201) // ISOLatin1

Mac2PC = getTextConverter(theMac, thePC)
// if you wanted to do the opposite just create a converter
// PC2Mac = getTextConverter(thePC, theMac)
```

```
outstring = Mac2PC.convert("Björn, this text should be converted")
Mac2PC.clear
```

Notes:

You have to call Mac2PC.clear after every conversion to reset the encoding engine.
See also newer TextConverterMBS class.

199.0.80 How to convert ChartTime back to Xojo date?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** We have this example code:
Example:

```
Function ChartTimeToDate(ChartTime as Double) As date
static diff as Double = 0.0

if diff = 0.0 then
dim d2 as Double = CDBaseChartMBS.chartTime(2015, 1, 1)
dim da as new date(2015, 1, 1)
dim ts as Double = da.TotalSeconds

diff = ts - d2
end if

dim d as new date
d.TotalSeconds = diff + ChartTime

Return d
End Function
```

Notes: As you see we calculate the difference in base date from Date and ChartTime and later use difference to convert.

199.0.81 How to convert line endings in text files?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can simply read file with TextInputStream and write with new line endings using TextOutputStream class.
Example:

```
dim inputfile as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim outputfile as FolderItem = SpecialFolder.Desktop.Child("output.txt")
```

```
dim it as TextInputStream = TextInputStream.Open(inputfile)
dim ot as TextOutputStream = TextOutputStream.Create(outputfile)

ot.Delimiter = EndOfLine.Windows // new line ending
while not it.EOF
ot.WriteLine it.ReadLine
wend
```

Notes: TextInputStream will read any input line endings and with delimiter property in TextOutputStream you can easily define your new delimiter.

199.0.82 How to convert picture to string and back?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use this plugin functions:
Notes:

JPEG:

JPEGStringToPictureMBS(buf as string) as picture
JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture
PictureToJPEGStringMBS(pic as picture,quality as Integer) as string

PNG:

PictureToPNGStringMBS(pic as picture, gamma as single) as string
PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single) as string
PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string
PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string
PNGStringToPictureMBS(data as string, gamma as single) as picture
PNGStringToPNGPictureMBS(data as string, gamma as single) as PNGpictureMBS

Tiff:

TIFFStringToPictureMBS(data as string) as picture
TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

BMP:

BMPStringtoPictureMBS(data as string) as picture
Picture.BMPDataMBS(ResolutionValueDPI as Integer=72) as string

GIF:

GifStringToGifMBS(data as string) as GIFMBS
GifStringToPictureMBS(data as string) as Picture

199.0.83 How to copy an array?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use a function like this to copy an array:
Example:

```
Function CopyArray(a() as Double) as Double()
dim r() as Double
for each v as Double in a
r.Append v
next
Return r
End Function
```

Notes:

If needed make several copies of this method with different data types, not just double.
For a deep copy of an array of objects, you need to change code to also make a copy of those objects.

199.0.84 How to copy an dictionary?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use a function like this to copy a dictionary:
Example:

```
Function CopyDictionary(d as Dictionary) As Dictionary
dim r as new Dictionary
for each key as Variant in d.keys
r.Value(key) = d.Value(key)
next
Return r
End Function
```

Notes:

If needed make several copies of this method with different data types, not just double.
For a deep copy of an dictionary of objects, you need to change code to also make a copy of those objects.

199.0.85 How to copy parts of a movie to another one?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** The code below copies ten seconds of the snowman movie to the dummy movie starting at the 5th second.
Example:

```
dim f as FolderItem
dim md as EditableMovie
dim ms as EditableMovie

f=SpecialFolder.Desktop.Child("Our First Snowman.mov")
ms=f.OpenEditableMovie

ms.SelectionStartMBS=5
ms.SelectionLengthMBS=10

f=SpecialFolder.Desktop.Child("dummy.mov")
md=f.CreateMovie

msgbox str(md.AddMovieSelectionMBS(ms))
```

Notes: If result is not 0, the method fails.

199.0.86 How to create a birthday like calendar event?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
// start a connection to the calendar database
dim s as new CalCalendarStoreMBS

// needed for the error details
dim e as NSErrorMBS

dim r as CalRecurrenceRuleMBS = CalRecurrenceRuleMBS.initYearlyRecurrence(1, nil) // repeat every year without end

dim a as new CalAlarmMBS // add alarm
```

```
a.action = a.CalAlarmActionDisplay
a.relativeTrigger = -3600*24 // 24 Hours before

// create a new calendar
dim c as new CalEventMBS

dim d as new date(2011, 04, 20) // the date

dim calendars() as CalCalendarMBS = s.calendars

// set properties
c.Title="Test Birthday"
c.startDate=d
c.recurrenceRule = r
c.calendar=calendars(0) // add to first calendar
c.addAlarm(a)
c.endDate = d
c.isAllDay = true

// save event
call s.saveEvent(c,s.CalSpanAllEvents, e)
if e<>nil then
MsgBox e.localizedDescription
else
MsgBox "New event was created."
end if
```

Notes: This adds an event to iCal for the given date with alarm to remember you and repeats it every year.

199.0.87 How to create a GUID?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the UUIDMBS class for this.

199.0.88 How to create a Mac picture clip file?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** You can use code like this one.
Example:

```
dim f As FolderItem
dim p As Picture
```

```
f=SpecialFolder.Desktop.Child("Test.pictClipping")
if f=nil then Return

p=new Picture(300,200,32) 'Make a sample picture
p.Graphics.ForeColor=RGB(0,255,255)
p.Graphics.FillOval 0,0,99,99
p.Graphics.ForeColor=RGB(255,0,0)
p.Graphics.DrawOval 0,0,99,99

dim r As ResourceFork 'ResourceFork is needed for a clip file

// Please define a file type Any
r=f.CreateResourceFork("Any")

// get PICT data using plugin function
dim pictdata as string = p.PicHandleDataMBS
r.AddResource(pictdata,"PICT",256,"Picture")

dim m as new MemoryBlock(8)

m.LittleEndian = false
m.Int16Value(0) = 0
m.Int16Value(2) = 0
m.Int16Value(4) = p.Width
m.Int16Value(6) = p.Height

r.AddResource(m,"RECT",256,"")

'Values taken from a sample file and irrelevant to the problem
dim data as string = DecodeBase64("AQAAAAAAAAAAAAAAAAACAFRDRVIAAAABAAAAAAAAAABUQ0lQAAAAA
r.AddResource(data,"drag",128,"") 'ditto
r.Close
```

Notes: In general Apple has deprecated this, but a few application still support clippings.

199.0.89 How to create a PDF file in Xojo?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Check our DynaPDF plugin and the examples.
Notes:

An alternative can be to use the CoreGraphics and Cocoa functions on Mac OS X.
For Windows, we can only suggest our DynaPDF plugin.

199.0.90 How to create EmailAttachment for PDF Data in memory?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use code like the one below:
Example:

```
Function EmailAttachmentFromPDFData(PDFData as string, filename as string) As EmailAttachment
dim a as new EmailAttachment

a.data = EncodeBase64(PDFData, 76)
a.ContentEncoding = "base64"
a.MIMEType = "application/pdf"
a.MacType = "PDF "
a.MacCreator = "prvw"
a.Name = filename

Return a
End Function
```

Notes:

Compared to sample code from Xojo documentation, we set the mime type correct for PDF.
The MacType/MacCreator codes are deprecated, but you can still include them for older Mac email clients. "prvw" is the creator code for Apple's preview app.

199.0.91 How to create PDF for image files?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use DynaPDF like this:
Example:

```
Function CreatePrintPDF(jpgFiles() as folderitem, pdfFile as FolderItem, PageWidth as Integer, PageHeight as Integer) As Boolean
// have files?
If pdfFile = Nil Then Return False
If jpgFiles = Nil Then Return False

If jpgFiles.Ubound <0 Then Return False

// new DynaPDF
Dim pdf As New MyDynapdfMBS

// page width/height in MilliMeter
Dim pdfWidth as Integer = PageWidth * 72 / 25.4
Dim pdfHeight as Integer = PageHeight * 72 / 25.4
```

```
// put your license here
Call pdf.SetLicenseKey "Starter"

// create pdf
Call pdf.CreateNewPDF pdfFile

// set a couple of options
Call pdf.SetPageCoords(MyDynaPDFMBS.kpcTopDown)
Call pdf.SetResolution(300)
Call pdf.SetUseTransparency(False)
Call pdf.SetSaveNewImageFormat(False)
Call pdf.SetGStateFlags(MyDynaPDFMBS.kgfUseImageColorSpace, False)
Call pdf.SetJPEGQuality(100)

// set page size
Call pdf.SetBBox(MyDynaPDFMBS.kpbMediaBox, 0, 0, pdfWidth, pdfHeight)
Call pdf.SetPageWidth(pdfWidth)
Call pdf.SetPageHeight(pdfHeight)

// append pages with one image per page
For i as Integer = 0 To jpgFiles.Ubound
Call pdf.Append
Call pdf.InsertImageEx(0, 0, pdfWidth, pdfHeight, jpgFiles(i), 1)
Call pdf.EndPage
Next

// close
Call pdf.CloseFile

Return True
End Function
```

Notes:

This is to join image files in paper size to a new PDF.
e.g. scans in A4 into an A4 PDF.

199.0.92 How to CURL Options translate to Plugin Calls?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Below a few tips on how to translate command line CURL calls to plugin calls.
Notes:

curl -vX PUT http://localhost:5984/appserials/78569238475/DocumentRegister.docx?rev=3-25634563456

–data-binary @DocumentRegister.docx -H ”Content-Type: application/msword”

- The option -v means verbose. You can use OptionVerbose and listen for messages in the DebugMessage event.
- The option -X PUT means we want to do a HTTP PUT Request. So set OptionPut to true. Also you will want to set OptionUpload to true as you upload data.
- We have the URL which you put into OptionURL property.
- The –data-binary option tells CURL to pass the given data. With the @ before the data, it is intrepreted as a file name, so the data is read from the given file. You'll need to open this file and pass data with the Read event as needed. (See CURLS ftp file upload example project)
- The last option -H specifies an additional header for the upload. Pas this additional header with the SetOptionHTTPHeader method.

curl -X PUT http://127.0.0.1:5984/appserials/f2f4e540bf8bb60f61cfcd4328001c59 -d ' { ”type”:”Product”,”description”:”Application Serial”,”acronym”:”AppSerial”,”dateAdded”:”2011-03-21 14:57:36” } '

- Option -X PUT like above.
- Pass the URL again in OptionURL
- This time data is passed in command line for CURL. You'd put this data in the quotes into a string and make it available in the Read event. (See CURLS ftp upload example project)

199.0.93 How to delete file with ftp and curl plugin?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can set post/pre quotes to have ftp commands executed before or after the download/upload.
Example:

```
dim d as CURLMBS // your curl object

// delete file
dim ws() As String
ws.Append "DELE Temp.txt"

d.SetOptionPostQuote(ws)
```

Notes:

Use SetOptionPostQuote, SetOptionPreQuote or SetOptionQuote.
The ftp commands you pass here are native ftp commands and not the commands you use with ftp applications. To delete use DELE and the file path.

199.0.94 How to detect display resolution changed?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** On Mac OS X simply listen for display changed notifications.
Notes: Use the "Distribution Notification Center.rbp" example project as a base and use it to listen to notifications with the name "O3DeviceChanged".

199.0.95 How to detect retina?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use Window.BackingScaleFactorMBS to query the factor.
Example:

```
msgbox str(window1.BackingScaleFactorMBS)
```

199.0.96 How to disable force quit?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

Please visit this website and get the control panel for Mac OS 9 there:
http://www3.sk.sympatico.ca/tinyjohn/DFQ.html

For Mac OS X use the MBS Plugin with the SetSystemUIModeMBS method.
Notes: Please use presentationOptions in NSApplicationMBS for Cocoa applications.

199.0.97 How to disable the error dialogs from Internet Explorer on javascript errors?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** You can use this code in the htmlviewer open event:
Example:

```
if targetwin32 then
htmlviewer1._ole.Content.value("Silent") = True
end if
```

Notes: This disables the error dialogs from Internet Explorer.

199.0.98 How to display a PDF file in Xojo?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** On Mac OS X you can use CoreGraphics or PDFKit to display a PDF.
Notes:

An alternative can be to load the PDF into a htmlviewer so the PDF plugin can display it.
On Windows you may need to use the Acrobat ActiveX control from Adobe or launch Acrobat Reader.

199.0.99 How to do a lottery in RB?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Try this function:
Example:

```
Sub Lotto(max as Integer,count as Integer,z() as Integer)
// Lotto count numbers of max put into the array z beginning at index 0
dim n(0) as Integer ' all the numbers
dim m as Integer ' the highest field in the current array
dim i,a,b,d as Integer ' working variables

'fill the array with the numbers
m=max-1
redim n(m)

for i=0 to m
n(i)=i+1
next

' unsort them by exchanging random ones
m=max*10
for i=1 to m
a=rnd*max
b=rnd*max

d=n(a)
n(a)=n(b)
n(b)=d
next

' get the first count to the dest array
m=count-1
redim z(m)
for i=0 to m
z(i)=n(i)
next
```

```
'sort the result
z.sort
End Sub

Sub Open()
// Test it

dim za(0) as Integer ' the array of the numbers

lotto 49,6,za ' 6 of 49 in Germany

' and display them
staticText1.text=str(za(0))+chr(13)+str(za(1))+chr(13)+str(za(2))+chr(13)+str(za(3))+chr(13)+str(za(4))+chr(13)+str(za
End Sub
```

199.0.100 How to do an asycron DNS lookup?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** use CFHostMBS class (Mac OS X only).
Notes:

Xojo internal functions and plugin DNS functions are sycronized.
You can use DNSLookupThreadMBS class for doing them asyncron.

199.0.101 How to draw a dushed pattern line?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can try this code:
Example:

```
// call like this: DrawDushedPatternLine g,0,0,width,height,10

Sub DrawDushedPatternLine(g as graphics,x1 as Integer,y1 as Integer,x2 as Integer,y2 as Integer, partlen
as Integer)
dim x,y,ox,oy as Double
dim dx,dy as Double
dim w,h,d as Double
dim b as Boolean

w=x2-x1
h=y2-y1

d=sqrt(w*w+h*h)
```

```
dx=w/d*partlen
dy=h/d*partlen

b=true
x=x1
while (x<x2) and (y<y2)
ox=x
oy=y

x=x+dx
y=y+dy

if b then
g.DrawLine ox,oy,x,y
end if

b=not b
wend

End Sub
```

Notes: It would be possible to add this to the plugin, but I think it's better if you do it in plain Xojo code, so it even works on Windows.

199.0.102 How to draw a nice antialiased line?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

This code can help you althrough it's not perfect.
You need to set lc to the current color you use.
Example:

```
Sub drawLine(xs as Integer, ys as Integer, xe as Integer, ye as Integer, face as RGBSurface, lineColor as color)
dim intX, intY, count, n, xDiff, yDiff as Integer
dim v, v1, floatX, floatY, xx, yy, xStep, yStep as Double
dim c as color

const st=1.0

xDiff=xe-xs
yDiff=ye-ys
count=max(abs(xDiff), abs(yDiff))
xStep=xDiff/count
```

```
yStep=yDiff/count
xx=xs
yy=ys
for n=1 to count
intX=xx
intY=yy
floatX=xx-intX
floatY=yy-intY

v=(1-floatX)*(1-floatY)*st
v1=1-v
c=face.pixel(intX, intY)
face.pixel(intX, intY)=rgb(v*lineColor.red+v1*c.red, v*lineColor.green+v1*c.green, v*lineColor.blue+v1*c.blue)
v=floatX*(1-floatY)*st
v1=1-v
c=face.pixel(intX+1, intY)
face.pixel(intX+1, intY)=rgb(v*lineColor.red+v1*c.red, v*lineColor.green+v1*c.green, v*lineColor.blue+v1*c.blue)
v=(1-floatX)*floatY*st
v1=1-v
c=face.pixel(intX, intY+1)
face.pixel(intX, intY+1)=rgb(v*lineColor.red+v1*c.red, v*lineColor.green+v1*c.green, v*lineColor.blue+v1*c.blue)
v=floatX*floatY*st
v1=1-v
c=face.pixel(intX+1, intY+1)
face.pixel(intX+1, intY+1)=rgb(v*lineColor.red+v1*c.red, v*lineColor.green+v1*c.green, v*lineColor.blue+v1*c.blue)

xx=xx+xStep
yy=yy+yStep
next

End Sub
```

Notes: PS: st should be 1 and face should be a RGBSurface or a Graphics object.

199.0.103 How to dump java class interface?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** In terminal you can use "javap -s <classname>" to display the class with the method names and parameters.
Notes: For example show ResultSet class: javap -s java.sql.ResultSet

199.0.104 How to duplicate a picture with mask or alpha channel?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use code like this function:
Example:

```
Function Duplicate(extends p as Picture) As Picture
# if RBVersion >= 2011.04 then
if p.HasAlphaChannel then

// create nw picture and copy content:
dim q as new Picture(p.Width, p.Height)
q.Graphics.DrawPicture p,0,0

Return q

end if
# endif

// create new picture
dim q as new Picture(p.Width, p.Height, 32)

// get mask
dim oldMask as Picture = p.mask(false)
if oldMask = nil then
// no mask, so simple copy
q.Graphics.DrawPicture p,0,0
Return q
end if

// remove mask
p.mask = nil

// copy picture and mask
q.Graphics.DrawPicture p, 0, 0
q.mask.Graphics.DrawPicture oldMask,0,0

// restore mask
p.mask = oldmask

Return q
End Function
```

Notes:

Simply copy it to a module and call it like this: q = p.duplicate.
The code above works with old Xojo versions because of the # if even if your RS version does not support

alpha channel pictures. This way it's future proof.

199.0.105 How to enable assistive devices?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use AppleScript code like below:
Notes:

```
tell application "System Events"
activate

set UI elements enabled to true

return UI elements enabled
end tell
```

You can run this with AppleScriptMBS class.

199.0.106 How to encrypt a file with Blowfish?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use code like this:
Example:

```
dim fi as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
dim fo as FolderItem = SpecialFolder.Desktop.Child("test.encrypted")

// read input
dim bi as BinaryStream = BinaryStream.Open(fi)
dim si as string = bi.Read(bi.Length)
bi.Close

// encrypt
dim so as string = BlowfishMBS.Encrypt("MyKey",si)

// write output
dim bo as BinaryStream = BinaryStream.Create(fo)
bo.Write so
bo.Close
```

Notes: Of course you can decrypt same way, just use Decrypt function and of course swap files.

199.0.107 How to extract text from HTML?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use both RemoveHTMLTagsMBS and DecodingFromHTMLMBS like this:
Example:

```
dim html as string = "<p><B>Gr& uuml;& szlig;e</B></P>"
dim htmltext as string = RemoveHTMLTagsMBS(html)
dim text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Grüße
```

Notes:

You can use it together with RemoveHTMLTagsMBS to remove html tags. What you get will be the text without tags.
DecodingFromHTMLMBS turns HTML escapes back to unicode characters. Like & auml; to ä.

199.0.108 How to find empty folders in a folder?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Try this code:
Example:

```
dim folder as folderitem // your folder

dim c as Integer = folder.count
for i as Integer = 1 to c
dim item as folderitem = folder.trueitem(i)
if item = nil then
// ignore
elseif item.directory then
// folder
if item.count = 0 then
// found empty folder
end if
end if
next
```

199.0.109 How to find iTunes on a Mac OS X machine fast?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can try Launch Services.
Example:

```
dim f as FolderItem

f=LaunchServicesFindApplicationForInfoMBS("hook","com.apple.iTunes","iTunes.app")

MsgBox f.NativePath
```

199.0.110 How to find network interface for a socket by it's name?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use our plugin to build a lookup table.
Example:

```
Function FindNetworkInterface(name as string) As NetworkInterface
name = name.trim

if name.len = 0 then Return nil

// search by IP/MAC
dim u as Integer = System.NetworkInterfaceCount-1
for i as Integer = 0 to u
dim n as NetworkInterface = System.GetNetworkInterface(i)
if n.IPAddress = name or n.MACAddress = name then
Return n
end if
next

// use MBS Plugin to build a mapping
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces
dim map as new Dictionary

for each n as NetworkInterfaceMBS in interfaces
dim IPv4s() as string = n.IPv4s
dim IPv6s() as string = n.IPv6s

for each IPv4 as string in IPv4s
map.Value(IPv4) = n.Name
next
for each IPv6 as string in IPv6s
map.Value(IPv6) = n.Name
```

```
next
if n.MAC<>"" then
map.Value(n.MAC) = n.Name
end if
next

// now search interfaces by name, IPv4 or IPv6
for i as Integer = 0 to u
dim n as NetworkInterface = System.GetNetworkInterface(i)
if map.Lookup(n.IPAddress, "") = name then
Return n
end if

if map.Lookup(n.MACAddress, "") = name then
Return n
end if
next

End Function
```

Notes: The code above uses a lookup table build using NetworkInterfaceMBS class to find the network interface by name.

199.0.111 How to find version of Microsoft Word?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use code like this:
Example:

```
// find Word
dim f as FolderItem = LaunchServicesFindApplicationForInfoMBS("","com.microsoft.Word","")

// open bundle
dim c as new NSBundleMBS(f)

// read info
dim d as Dictionary = c.infoDictionary

// show version
MsgBox d.Lookup("CFBundleVersion","")
```

Notes: Older versions of Word can be found with creator code "MSWD".

199.0.112 How to fix CURL error 60/53 on connecting to server?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You probably connect with SSL and you have no valid certificate.
Example:

```
dim d as new CURLSMBS

// Disable SSL verification
d.OptionSSLVerifyHost = 0 // don't verify server
d.OptionSSLVerifyPeer = 0 // don't proofs certificate is authentic

// With SSL Verification:
dim cacert as FolderItem = Getfolderitem("cacert.pem")
d.OptionCAInfo = cacert.UnixpathMBS
d.OptionSSLVerifyHost = 2 // verify server
d.OptionSSLVerifyPeer = 1 // proofs certificate is authentic
```

Notes:

You can either use the code above to disable the SSL verification and have no security.
Or you use the cacert file and enable the verification. Than you only get a connection if the server has a valid certificate.

see also:
http://curl.haxx.se/ca/

199.0.113 How to format double with n digits?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use the FormatMBS function for this.
Example:

```
dim d as Double = 123.4567890
listbox1.AddRow FormatMBS("% f", d)
listbox1.AddRow FormatMBS("% e", d)
listbox1.AddRow FormatMBS("% g", d)

listbox1.AddRow FormatMBS("% 5.5f", d)
listbox1.AddRow FormatMBS("% 5.5e", d)
listbox1.AddRow FormatMBS("% 5.5g", d)

d = 0.000000123456
listbox1.AddRow FormatMBS("% f", d)
listbox1.AddRow FormatMBS("% e", d)
```

```
listbox1.AddRow FormatMBS("% g", d)

listbox1.AddRow FormatMBS("% 5.5f", d)
listbox1.AddRow FormatMBS("% 5.5e", d)
listbox1.AddRow FormatMBS("% 5.5g", d)
```

Notes:

see FormatMBS for details.
In general % f is normal style, % e is scientific and % g is whichever gives best result for given space.

199.0.114 How to get a time converted to user time zone in a web app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the WebSession.GMTOffset property.
Example:

```
Sub Open()
// current date on server
dim d as new date
dim s as string = d.LongTime

// adjust to client GMT offset
d.GMTOffset = d.GMTOffset + Session.GMTOffset

dim t as string = D.LongTime

MsgBox s+EndOfLine+t
End Sub
```

199.0.115 How to get an handle to the frontmost window on Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** This function returns a handle for the frontmost window:
Example:

```
Function GetForegroundWindowHandle() as Integer
# if targetwin32 then
declare function GetForegroundWindow Lib "user32.dll" as Integer
Return GetForegroundWindow()
# endif
End Function
```

199.0.116 How to get CFAbsoluteTime from date?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** Use code like this:
Example:

```
dim d as new date
dim t as CFTimeZoneMBS = SystemCFTimeZoneMBS
dim g as new CFGregorianDateMBS
g.Day = d.Day
g.Month = d.Month
g.Year = d.Year
g.Minute = d.Minute
g.Hour = d.Hour
g.Second = d.Second

dim at as CFAbsoluteTimeMBS = g.AbsoluteTime(t)
dim x as Double = at.Value

MsgBox str(x)
```

Notes:

As you see we need a timezone and put the date values in a gregorian date record.
Now we can query absolute time for the given timezone.

199.0.117 How to get client IP address on web app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the WebSession.RemoteAddress property.
Example:

```
Sub Open()
Title = Session.RemoteAddress
End Sub
```

199.0.118 How to get fonts to load in charts on Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use the SetFontSearchPath method in the CDBaseChartMBS class to specify where your fonts are.
Example:

```
if TargetLinux then
CDBaseChartMBS.SetFontSearchPath "/usr/share/fonts/truetype"
else
// on Mac and Windows we use system fonts.
end if
```

Notes:

On Mac OS X and Windows, the fonts are loaded from the system's font folder.

e.g. if you use ubuntu, you can install the ttf-mscorefonts-installer package and call this method with "/usr/share/fonts/truetype/msttcorefonts" as the path. No backslash on the end of a path, please.

199.0.119 How to get fonts to load in DynaPDF on Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use the AddFontSearchPath method in the DynaPDFMBS class to specify where your fonts are.
Example:

```
dim d as new DynaPDFMBS
if TargetLinux then
call d.AddFontSearchPath "/usr/share/fonts/truetype", true
else
// on Mac and Windows we use system fonts.
end if
```

Notes:

On Mac OS X and Windows, the fonts are loaded from the system's font folder.

e.g. if you use ubuntu, you can install the ttf-mscorefonts-installer package and call this method with "/usr/share/fonts/truetype/msttcorefonts" as the path. No backslash on the end of a path, please.

199.0.120 How to get GMT time and back?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use the date class and the GMTOffset property.
Example:

```
// now
dim d as new date

// now in GMT
dim e as new date
e.GMTOffset = 0

// show
MsgBox str(d.TotalSeconds,"0.0")+" "+str(e.TotalSeconds, "0.0")

dim GMTTimeStamp as Double = e.TotalSeconds

// restore
dim f as new date

// add GMT offset here
f.TotalSeconds = GMTTimeStamp + f.GMTOffset*3600
// because here it's removed
f.GMTOffset = f.GMTOffset

MsgBox d.ShortTime+" ("+str(d.GMTOffset)+") "+str(d.TotalSeconds,"0.0")+EndOfLine+_
e.ShortTime+" ("+str(e.GMTOffset)+") "+str(e.TotalSeconds,"0.0")+EndOfLine+_
f.ShortTime+" ("+str(f.GMTOffset)+") "+str(f.TotalSeconds,"0.0")
```

Notes: It's sometimes a bit tricky with the date class as setting one property often changes the others.

199.0.121 How to get good crash reports?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Check this website from the webkit website:
Notes: http://webkit.org/quality/crashlogs.html

199.0.122 How to get list of all threads?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use the runtime module like in this function:

Example:

```
Function Threads() As Thread()
# pragma DisableBackgroundTasks
dim t() as Thread

Dim o as Runtime.ObjectIterator=Runtime.IterateObjects
While o.MoveNext
if o.Current isa Thread then
t.Append thread(o.current)
end if
Wend

Return t
End Function
```

Notes:

This returns an array of all thread objects currently in memory.
The pragma is important here as it avoids thread switches which may cause a thread to be created or deleted.

199.0.123 How to get parameters from webpage URL in Xojo Web Edition?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the Webpage.ParametersReceived event.
Example:

```
Sub ParametersReceived(Variables As Dictionary)
for each key as Variant in Variables.keys
MsgBox key+" ->"+Variables.Value(key)
next
End Sub
```

Notes: The text encodings of this strings is not defined in Xojo 2010r5. Please use DefineEncoding.

199.0.124 How to get the color for disabled textcolor?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Ask the appearance manager:
Example:

```
Function GetThemeTextColor(inColor as Integer, inDepth as Integer, inColorDev as Boolean) As Color
declare function GetThemeTextColor lib "Carbon" (inColor as Integer, inDepth as Integer, inColorDev as Boolean, outColor as Ptr) as Integer

dim i as Integer
dim col as MemoryBlock

col = newMemoryBlock(6)

i = GetThemeTextColor(inColor, inDepth, inColorDev, col)

return RGB(col.UShort(0)\256, col.UShort(2)\256, col.UShort(4)\256)
End Function
```

Notes:

The color for this is:

const kThemeTextColorDialogInactive = 2.

c = GetThemeTextColor(kThemeTextColorDialogInactive, Screen(0).Depth, true)

For Mac OS X you should use "CarbonLib" instead of "AppearanceLib" ...

199.0.125 How to get the current free stack space?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can something like the code below:
Example:

```
Sub ShowStackSize()
dim threadid as Integer
dim size as Integer

declare function GetCurrentThread lib "Carbon" (byref threadid as Integer) as short
declare function ThreadCurrentStackSpace lib "Carbon" (threadid as Integer, byref size as Integer) as short

if GetCurrentThread(threadid)=0 then
if 0=ThreadCurrentStackSpace(threadid,size) then
MsgBox str(size)
end if
end if
End Sub
```

Notes: For Mac OS 9, use "ThreadLib" instead of "CarbonLib". You can use # if if you like for that.

199.0.126 How to get the current timezone?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:**

You can use the TimeZoneMBS class or the CFTimeZoneMBS class.
Or code like below:
Example:

```
Function GMTOffsetInMinutes() as Integer
// Returns the offset of the current time to GMT in minutes.
// supports Mac OS and Windows, but not Linux yet (let me know if
// you have code for that, please)
//
// Note that the offset is not always an even multiple of 60, but
// there are also half hour offsets, even one 5:45h offset

// This version by Thomas Tempelmann (rb@tempel.org) on 25 Nov 2005
// with a fix that should also make it work with future Intel Mac targets.
//
// Using code from various authors found on the RB NUG mailing list

dim result, bias, dayLightbias as Integer
dim info as memoryBlock
dim offset as Integer

# if targetMacOS then

Declare Sub ReadLocation lib "Carbon" (location As ptr)

info = NewMemoryBlock(12)
ReadLocation info
if false then
// bad, because it does not work on Intel Macs:
'offset = info.short(9) * 256 + info.byte(11)
else
offset = BitwiseAnd (info.long(8), & hFFFFFF)
end

offset = info.short(9) * 256 + info.byte(11)
offset = offset \60
return offset
```

```
# endif

# if targetWin32 then

Declare Function GetTimeZoneInformation Lib "Kernel32" ( tzInfoPointer as Ptr ) as Integer
// returns one of
// TIME_ZONE_ID_UNKNOWN 0
// – Note: e.g. New Delhi (GMT+5:30) and Newfoundland (-3:30) return this value 0
// TIME_ZONE_ID_STANDARD 1
// TIME_ZONE_ID_DAYLIGHT 2

info = new MemoryBlock(172)
result = GetTimeZoneInformation(info)

bias = info.Long(0)
// note: the original code I found in the NUG archives used Long(84) and switched to Long(0)
// only for result=1 and result=2, but my tests found that Long(0) is also the right value for result=0

if result = 2 then
daylightBias = info.long(168)
end if
offset = - (bias + dayLightbias)
return offset

# endif

End Function
```

199.0.127 How to get the current window title?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The code below returns the current window title for the frontmost window on Mac OS X if Accessibilty services are
Example:

```
Function CurrentWindowTitle() As string
dim SystemWideElement,FocusedApplicationElement,FocusedWindowElement as AXUIElementMBS
dim FocusedApplication,FocusedWindow,Title as AXValueMBS
dim s as String
dim cs as CFStringMBS

SystemWideElement=AccessibilityMBS.SystemWideAXUIElement
if SystemWideElement<>nil then
FocusedApplication=SystemWideElement.AttributeValue(AccessibilityMBS.kAXFocusedApplicationAttribute)
if FocusedApplication.Type=AccessibilityMBS.kAXUIElementMBSTypeID then
FocusedApplicationElement=new AXUIElementMBS
```

```
FocusedApplicationElement.Handle=FocusedApplication.Handle
FocusedApplicationElement.RetainObject

FocusedWindow=FocusedApplicationElement.AttributeValue(AccessibilityMBS.kAXFocusedWindowAttribute)

if FocusedWindow<>nil and AccessibilityMBS.kAXUIElementMBSTypeID=FocusedWindow.Type then

FocusedWindowElement=new AXUIElementMBS
FocusedWindowElement.Handle=FocusedWindow.Handle
FocusedWindowElement.RetainObject

Title=FocusedWindowElement.AttributeValue(AccessibilityMBS.kAXTitleAttribute)
if Title<>nil and Title.Type=kCFStringMBSTypeID then
cs=new CFStringMBS
cs.handle=Title.Handle
cs.RetainObject
Return cs.str
end if
end if
end if
end if
End Function
```

199.0.128 How to get the cursor blink interval time?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** On Mac OS you can use GetCaretTime from the toolbox.
Example:

```
declare function GetCaretTime lib "Carbon" () as Integer

MsgBox str(GetCaretTime())+" ticks"
```

Notes: 60 ticks make one second.

199.0.129 How to get the list of the current selected files in the Finder?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

Use the AppleScript like this one:

```
tell application "finder"
return selection
end tell
```

Which translates into this AppleEvent:

```
Process("Finder").SendAE "core,getd,'—-':obj { form:prop, want:type(prop), seld:type(sele), from:'null'() }
"
```

and as Xojo code it looks like this:
Example:

```
dim ae as appleevent
dim o1 as appleeventObjectSpecifier
dim f as folderItem
dim aList as appleeventdescList
dim i as Integer
dim dateiname as string

// setup the AppleEvent
o1=getpropertyObjectDescriptor( nil, "sele")
ae= newappleEvent("core", "getd", "MACS")
ae.objectSpecifierParam("—-")=o1

// send it
if ae.send then
// got the list
alist=ae.replyDescList

// now show the list of filename into an editfield:

for i=1 to alist.count
f=alist.folderItemItem(i)

dateiname=f.name
// editfield1 with property "mulitline=true"!
editfield1.text=editfield1.text + dateiname + chr(13)
next
end if
```

199.0.130 How to get the Mac OS system version?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The following code queries the value and displays the version number:
Example:

```
dim first as Integer
dim second as Integer
dim third as Integer
dim l as Integer

if System.Gestalt("sysv",l) then

Third=Bitwiseand(l,15)
second=Bitwiseand(l\16,15)
first=Bitwiseand(l\256,15)+10*Bitwiseand(l\256\16,15)
end if

if First>=10 then
msgbox "Mac OS X "+str(First)+"."+str(Second)+"."+str(third)
else
msgbox "Mac OS "+str(First)+"."+str(Second)+"."+str(third)
end if
```

199.0.131 How to get the Mac OS Version using System.Gestalt?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
Dim s As String
Dim b As Boolean
Dim i, resp as Integer

// Systemversion
b = System.Gestalt("sysv", resp)
If b then
s = Hex(resp)
For i =Len(s)-1 DownTo 1
s=Left(s,i)+"."+Mid(s,i+1)
Next
MsgBox "Systemversion: Mac OS " + s
end if
```

Notes: The MBS Plugin has a SystemInformationMBS.OSVersionString function for this.

199.0.132 How to get the screensize excluding the task bar?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Notes: Use the Screen class with the available* properties.

199.0.133 How to get the size of the frontmost window on Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Notes:

Make yourself a class for the WindowRect with four properties:

```
Bottom as Integer
Left as Integer
Right as Integer
Top as Integer
```

Add the following method to your class:

```
Sub GetWindowRect(windowhandle as Integer)
dim err as Integer
dim mem as memoryBlock
# if targetwin32 then
Declare Function GetWindowRect Lib "user32.dll" (hwnd as Integer, ipRect As Ptr) as Integer

mem = newmemoryBlock(16)
err = GetWindowRect(windowhandle, mem)
Left = mem.long(0)
Top = mem.Long(4)
Right = mem.Long(8)
Bottom = mem.Long(12)
# endif
End Sub
```

Good to use for the MDI Master Window!

199.0.134 How to get the source code of a HTMLViewer?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
// for Windows:

msgbox HTMLViewer1.IEHTMLTextMBS

// for Mac OS X:

msgbox HTMLViewer1.mainFrameMBS.dataSource.data
```

199.0.135 How to get Xojo apps running Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You need to install some requuire packages.
Notes:

You need CUPS as well as GTK packages. On 64 bit systems also the ia32-libs package.

Please note that you need a x86 compatible Linux. So no PPC, Power, ARM or other CPUs.

199.0.136 How to handle really huge images with GraphicsMagick or ImageMagick?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Sometimes it may be better to use an extra application to process images.
Notes:

A typical 32 bit app made with Xojo can use around 1.8 GB on Windows and 3 GB on Mac OS X. Some images may be huge, so that processing them causes several copies of the image to be in memory. With a 500 MB image in memory, doing a scale or rotation may require a temp image. So with source, temp and dest images with each 500 MB plus your normal app memory usage, you may hit the limit of Windows with 1.8 GB.

In that case it may be worth running a tool like gm in the shell class. gm is the command line version of GraphicsMagick. There you can run the 64 bit version which is not limited in memory like your own application. Also you can monitor progress and keep your app responsive.

199.0.137 How to handle tab key for editable cells in listbox?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like this function:
Example:

```
Function HandleTabInList(list as listbox, row as Integer, column as Integer, key as String) As Boolean
// Handle tab character in Listbox.CellKeyDown event

Select case asc(key)
case 9
if Keyboard.AsyncShiftKey then
// back

// look for column left
for i as Integer = column-1 downto 0
if list.ColumnType(i) >= list.TypeEditable then
list.EditCell(row, i)
Return true
end if
next

// not found, so look in row before
row = row - 1
if row >= 0 then
for i as Integer = list.ColumnCount-1 downto 0
if list.ColumnType(i) >= list.TypeEditable then
list.EditCell(row, i)
Return true
end if
next
end if
else
// forward

// look for column right
for i as Integer = column+1 to list.ColumnCount-1
if list.ColumnType(i) >= list.TypeEditable then
list.EditCell(row, i)
Return true
end if
next

// not found, so look in row below
row = row + 1
if row <list.ListCount then
for i as Integer = 0 to list.ColumnCount-1
if list.ColumnType(i) >= list.TypeEditable then
```

```
list.EditCell(row, i)
Return true
end if
next
end if
end if
end Select
End Function
```

Notes:

You call it from CellKeyDown event like this:

```
EventHandler Function CellKeyDown(row as Integer, column as Integer, key as String) As Boolean
if HandleTabInList(me, row, column, key) then Return true
End EventHandler
```

As you see in the code, we handle tab and shift + tab for moving back and forward. Also we wrap to previous/next row if needed. Feel free to extend this to wrap from last to first row or create a new row for editing.

199.0.138 How to hard link MapKit framework?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Our MapKit classes weak link the framework. If you need hard linking it for the App Store, you can add this method to a class: **Example:**

```
Sub ReferenceMapKit()
// just put this in window or app class

# if TargetMachO and Target64Bit then
Declare sub testing Lib "MapKit" Selector "test" (id as ptr)
testing(nil)
# endif

End Sub
```

Notes:

No need to call the method.
Just having it in a window or app, will cause the compiler to hard link the framework.

199.0.139 How to have a PDF downloaded to the user in a web application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use a WebHTMLViewer control and load the PDF file with the PDF plugin from the browser.
Example:

```
dim CurrentFile as WebFile // a property of the WebPage

// define the PDF file
CurrentFile = new WebFile
CurrentFile.Filename = "test.pdf"
CurrentFile.MIMEType = "application/pdf"
CurrentFile.Data = "some pdf data" // MyDynaPDF.GetBuffer
CurrentFile.ForceDownload = true

// start the download
showurl(CurrentFile.url)
```

Notes: See our Create PDF example for the Xojo Web Edition.

199.0.140 How to hide all applications except mine?

Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The code below will on Mac OS hide all applications except your one:
Example:

```
dim p as new ProcessMBS

p.GetFirstProcess
do
if not p.FrontProcess then
p.Visible=false
end if
loop until not p.GetNextProcess
```

199.0.141 How to hide script errors in HTMLViewer on Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Set Internet Explorer to silent mode with code like this:
Example:

```
htmlviewer1.__ole.Content.value("Silent") = True
```

Notes: Simply put this code in the open event of your htmlviewer control (using me instead of htmlviewer1).

199.0.142 How to hide the grid/background/border in ChartDirector?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** If you want to hide something in a chart, simply assign the kTransparent constant as color.

199.0.143 How to hide the mouse cursor on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this declare:
Example:

```
Declare Sub HideCursor Lib "Carbon" () Inline68K("A852")

HideCursor
```

Notes: The MBS Plugin has this function and supports it on Windows, too.

199.0.144 How to insert image to NSTextView or TextArea?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** With NSTextViewMBS you can use this code to insert file:
Example:

```
// insert a file to textview

Public Sub InsertFile(textview as NSTextViewMBS, f as FolderItem)
// read to file
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)

// build wrapper
dim fileWrapper as NSFileWrapperMBS = NSFileWrapperMBS.initRegularFileWithContents(s)
fileWrapper.preferredFilename = f.name

// make attachment
dim fileAttachment as new NSTextAttachmentMBS(fileWrapper)
```

```
dim attributedString as NSAttributedStringMBS = NSAttributedStringMBS.attributedStringWithAttachment(fileAttachment)

// add to a NSTextViewMBS
textview.insertText attributedString

End Sub
```

Notes: For TextArea you can query the underlaying NSTextViewMBS object via TextArea.NSTextViewMBS method.

199.0.145 How to jump to an anchor in a htmlviewer?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** You can use javascript to change the current window's location.
Example:

```
// load website
htmlviewer1.LoadURL "http://www.monkeybreadsoftware.net/addressbook-abpersonmbs.shtml"

// later jump to anchor named "16":

if TargetWin32 then
call HTMLViewer1.IERunJavaScriptMBS "window.location = ""# 16"""
elseif TargetMacOS then
call HTMLViewer1.EvaluateJavaScriptMBS "window.location = ""# 16"""
else
// not supported
end if
```

199.0.146 How to keep a movieplayer unclickable?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** To keep the user away from clicking on a playing Movie you can just drop a Canvas in front of the Movieplayer and take the clicks there.
Example:

```
Function Canvas1.MouseDown(X as Integer, Y as Integer) as boolean
return true // take it and do nothing
End Function
```

199.0.147 How to keep my web app from using 100% CPU time?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** On Linux and Mac OS X you can use renice command in the terminal. On Windows use the task manager to reduce priority.
Notes:

If you launch your app with nohup on Linux or Mac OS X like this from the terminal or a script:

nohup /webapps/MyApp/MyApp &

you can simply have a second line saying this:

renice 20 $!

which tells the system to lower priority to lowest value for the latest background process.

199.0.148 How to kill a process by name?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can kill a process (or application) by name if you loop over all the processes and kill the one you need.
Example:

```
dim p as new ProcessMBS
p.GetfirstProcess ' get first
do
if p.name = "TextEdit" then
call p.KillProcess
Return
end if
loop until not p.GetNextProcess
```

Notes: You may want to check the result of killProcess function. Not every user is allowed to kill every application.

199.0.149 How to know how many CPUs are present?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this function:
Example:

```
Function GetCPUCount() as Integer
Declare Function MPProcessors Lib "Carbon" () as Integer
```

```
Return MPProcessors()
End Function
```

Notes: Your app will than need that library to launch on Classic. To avoid this the MBS plugin checks if this library is available and return 1 if it's not available.

199.0.150 How to know the calling function?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** On Mac you can use a helper function like this this code:
Example:

```
Public Function CallingFunction() as string
// Query name of calling function of a function

# Pragma BreakOnExceptions false

try

// raise a dummy exception
dim r as new NilObjectException
raise r

catch x as NilObjectException

// get stack
dim stack() as string = x.Stack

// pick function name and return
dim name as string = stack(2)
Return name

end try
End Function
```

Notes: You need to include function names in your application.

199.0.151 How to launch an app using it's creator code?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Send an AppleEvent "oapp" with the creator code to the Finder ("MACS"):
Example:

```
Dim a as AppleEvent
dim creator as string

creator = "MSIE" ' here the Internet Explorer

a = NewAppleEvent("aevt", "odoc", "MACS")
a.Timeout = -1

a.ObjectSpecifierParam("—-") = GetUniqueIDObjectDescriptor("appf", nil, creator)

if not a.send then
msgBox "An error has occured"
else

end if
```

199.0.152 How to launch disc utility?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use this code:
Example:

```
dim f as FolderItem = LaunchServicesFindApplicationForInfoMBS("","com.apple.DiskUtility","")

if f<>Nil then
f.Launch
end if
```

Notes: This works even if people renamed the disc utility or moved it to another folder.

199.0.153 How to make a lot of changes to a REAL SQL Database faster?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You may try to embed your changes to the database between two transaction calls.
Example:

```
dim db as Database // some database

db.SQLExecute "BEGIN TRANSACTION"
// Do some Stuff
db.SQLExecute "END TRANSACTION"
```

Notes: This can increase speed by some factors.

199.0.154 How to make a NSImage object for my retina enabled app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use code like this:
Example:

```
Function NewRetinaImage(pic as Picture, mask as Picture = nil) As NSImageMBS
// first make a NSImageMBS from it
dim n as new NSImageMBS(pic, mask)

// now set to half the size, so we have 2x pixels for the image
n.size = new NSSizeMBS(n.width/2, n.height/2)

// and return
Return n
End Function
```

Notes:

The thing to do is to have 2x the pixels, but assign a size to the image which gives it the right size in points. You can pass the NSImageMBS from here to NSMenuItemMBS. For Retina displays, the full resolution is used. For others it will be reduced.

199.0.155 How to make a window borderless on Windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this declares:
Example:

```
// Sets window to borderless popup type, and sets its initial dimensions.
// Call this method, then Win32SetBorderlessPos, and then RB's Show
// method. Use RB Frame type 7 (Global Floating Window).

Const SWP_NOMOVE = &H2
Const SWP_FRAMECHANGED = &H20
```

```
Const HWND_TOPMOST = -1
Const GWL_STYLE = -16
Const WS_POPUPWINDOW = & H80880000

Dim styleFlags as Integer

# If TargetWin32 Then

Declare Function SetWindowLong Lib "user32" Alias "SetWindowLongA" (hwnd as Integer, nIndex as Integer, dwNewLong as Integer) as Integer
Declare Function SetWindowPos Lib "user32" (hwnd as Integer, hWndInstertAfter as Integer, x as Integer, y as Integer, cx as Integer, cy as Integer, flags as Integer) as Integer

styleFlags = SetWindowLong( w.WinHWND, GWL_STYLE, WS_POPUPWINDOW )
styleFlags = BitwiseOr( SWP_FRAMECHANGED, SWP_NOMOVE )
styleFlags = SetWindowPos( w.WinHWND, HWND_TOPMOST, 0, 0, wd, ht, styleFlags )

# EndIf
```

199.0.156 How to make an alias using AppleEvents?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
Sub MakeAlias(folder as folderitem, target as folderitem, aliasname as string)
dim ev as AppleEvent
dim myResult as boolean
dim properties as AppleEventRecord

ev = NewAppleEvent("core","crel","MACS")
ev.MacTypeParam("kocl") = "alis"
ev.FolderItemParam("to ") = target
ev.FolderItemParam("insh") = folder

properties=new AppleEventRecord
properties.StringParam("pnam")=aliasname

ev.RecordParam("prdt")=properties

myResult = ev.send
// true on success, false on error
End Sub
```

Notes:

Call it like this:
MakeAlias SpecialFolder.Desktop, SpecialFolder.Desktop.Child("Gif Copy.rb"), "test.rb alias"

Seems to not work on Mac OS X 10.6

199.0.157 How to make AppleScripts much faster?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** use "ignoring application responses" like in this example:
Notes:

on run { fn,fpx,fpy }
ignoring application responses
tell app "Finder" to set the position of folder fn to fpx,fpy
end ignoring
end run

199.0.158 How to make double clicks on a canvas?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

Update: Newer Xojo versions support DoubleClick event, so you don't need this code.

Here's my tip from the tips list on how to add a double-click event to the Canvas control. The technique could easily be used for a window or any Rectcontrol:

Because of its built-in drawing methods, the Canvas control is often used to create custom interface controls. But while the Canvas control has event handlers for most mouse events, it doesn't have an event handler for DoubleClick events. Fortunately, you can add a double-click event handler to a Canvas control easily. Basically, you're going to create a new class based on Canvas and add a double-click event to that. You can then use the new class anytime you need a Canvas with a double-click event.

To create a new Canvas class with a DoubleClick event handler, do this:

1. Add a new class to your project.
2. Set the Super property of the new class to "Canvas".
3. Change the name of this new class to "DoubleClickCanvas".

A double-click occurs when two clicks occur within the users double-click time (set in the Mouse control panel on both Macintosh and Windows) and within five pixels of each other. So, you'll need a few properties to store when and where the last click occurred.

4. Add a new property with the following declaration and mark it as private: lastClickTicks as Integer
5. Add a new property with the following declaration and mark it as private: lastClickX as Integer
6. Add a new property with the following declaration and mark it as private: lastClickY as Integer

Since the Canvas control doesn't have a DoubleClick event, you will need to add one.

7. Add a new event to your class by choosing New Event from the Edit menu and enter "DoubleClick" as the event name.

Double-clicks occur on MouseUp. In order for the mouseUp event to fire, you must return True in the MouseDown event.

8. In the MouseDown event, add the following code:
Return True

In the MouseUp event, you will need to determine what the users double-click time is. This value is represented on both the Mac and Windows in ticks. A tick is 1/60th of a second. Since there isn't a built-in function for this, you'll need to make a toolbox call. The mouseUp event code below makes the appropriate toolbox call for both Macintosh and Windows. It then compares the time of the users last click to the time of the current click and compares the location of the users last click to the location of the current click.

9. Add the following code to the MouseUp event:

```
dim doubleClickTime, currentClickTicks as Integer

# if targetMacOS then
Declare Function GetDblTime Lib "Carbon" () as Integer
doubleClickTime = GetDblTime()
# endif

# if targetWin32 then
Declare Function GetDoubleClickTime Lib "User32.DLL" () as Integer
doubleClickTime = GetDoubleClickTime()/60 // convert to ticks from milliseconds
# endif

currentClickTicks = ticks
//if the two clicks happened close enough together in time
if (currentClickTicks - lastClickTicks) <= doubleClickTime then
//if the two clicks occured close enough together in space
if abs(X - lastClickX) <= 5 and abs(Y - LastClickY) <= 5 then
DoubleClick //a double click has occured so call the event
end if
```

end if
lastClickTicks = currentClickTicks
lastClickX = X
lastClickY = Y

10. Now to test out your new DoubleClickCanvas, drag the class from the Project window to a window in your project to create an instance of it.

11. Double-click on the canvas you just added to your window to open the Code Editor. Notice that the canvas has a DoubleClick event handler. In this event handler, add the following code:
BEEP

199.0.159 How to make my Mac not sleeping?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Just inform the Mac OS about some system activity with code like this:
Example:

```
Sub UpdateSystemActivity()

# if TargetCarbon
declare function myUpdateSystemActivity lib "Carbon" alias "UpdateSystemActivity" (activity as Integer)
as short

const OverallAct = 0 // Delays idle sleep by small amount */
const UsrActivity = 1 // Delays idle sleep and dimming by timeout time */
const NetActivity = 2 // Delays idle sleep and power cycling by small amount */
const HDActivity = 3 // Delays hard drive spindown and idle sleep by small amount */
const IdleActivity = 4 // Delays idle sleep by timeout time */

dim e as Integer

e=myUpdateSystemActivity(UsrActivity)

// you may react on an error if e is not 0 after the call.

# endif
End Sub
```

Notes:

You may use another constant if you prefer some different behavior.
Call it maybe every second.

199.0.160 How to make my own registration code scheme?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** There are excellent articles about how to make a registratin code scheme, but you can also simply use our RegistrationEngineMBS class.
Notes: If you need a license text, why not use the one from Xojo as a starting point?

199.0.161 How to make small controls on Mac OS X?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can try this code on Mac OS X:
Example:

```
'/*
'* Use the control's default drawing variant. This does not apply to
'* Scroll Bars, for which Normal is Large.
'*/
const kControlSizeNormal = 0

'/*
'* Use the control's small drawing variant. Currently supported by
'* the Check Box, Combo Box, Radio Button, Scroll Bar, Slider and Tab
'* controls.
'*/
const kControlSizeSmall = 1

'/*
'* Use the control's small drawing variant. Currently supported by
'* the Indeterminate Progress Bar, Progress Bar and Round Button
'* controls.
'*/
const kControlSizeLarge = 2

'/*
'* Control drawing variant determined by the control's bounds. This
'* ControlSize is only available with Scroll Bars to support their
'* legacy behavior of drawing differently within different bounds.
'*/
const kControlSizeAuto = & hFFFF

const kControlSizeTag = "size"

declare function SetControlData lib "Carbon" (controlhandle as Integer, part as short, tagname as OSType, size as Integer, data as ptr) as short

dim m as MemoryBlock
```

```
m=NewMemoryBlock(2)
m.UShort(0)=kControlSizeSmall

Title=str(SetControlData(CheckBox1.Handle, 0, kControlSizeTag, 2, m))
```

199.0.162 How to mark my Mac app as background only?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can run a build script on each build with this code:
Example:

```
Dim App As String = CurrentBuildLocation + "/" + CurrentBuildAppName + ".app"
Call DoShellCommand("/usr/bin/defaults write " + App + "/Contents/Info ""NSUIElement"" YES")
```

Notes: This will set the NSUIElement flag to YES.

199.0.163 How to move a file or folder to trash?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like below:
Example:

```
Function MoveToTrash(f as FolderItem) As Boolean
# if TargetMacOS then
dim r as FolderItem
dim e as Integer = MacFileOperationMBS.MoveObjectToTrashSync(f, r, MacFileOperationMBS.kFSFileOperationDefaultOptions)

if e = 0 then
Return true // Ok
end if

# elseif TargetWin32 then
dim w as new WindowsFileCopyMBS

dim flags as Integer = w.FileOperationAllowUndo + w.FileOperationNoErrorUI + w.FileOperationSilent + w.FileOperationNoConfirmation
if w.FileOperationDelete(f, flags) then
Return true // OK
end if

flags = w.FileOperationNoErrorUI + w.FileOperationSilent + w.FileOperationNoConfirmation
```

```
if w.FileOperationDelete(f, flags) then
Return true // OK
end if
# else
// Target not supported
break
Return false
# endif
End Function
```

Notes:

If you want to move a file to trash, you could use f.movefileto f.trashfolder, but that will overwrite existing files in the trash. You can use our MacFileOperationMBS class to move a file on Mac to the trash. And it uses the same code as the Finder, so files are renamed when the same name is already in use in the trash:

On Windows we use WindowsFileCopyMBS class.
Requires Mac OS X 10.5.

199.0.164 How to move an application to the front using the creator code?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** This makes SimpleText (Code ttxt) to the frontmost application:
Example:

```
dim a as appleevent

a=newappleEvent("misc","actv","ttxt")

if a.send then
end if
```

Notes: (Code is Mac only)

199.0.165 How to move file with ftp and curl plugin?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can set post/pre quotes to have ftp commands executed before or after the download/upload.
Example:

```
dim d as CURLMBS // your curl object

// rename/move file
dim ws() As String
ws.Append "RNFR Temp.txt"
ws.append "RNTO MyFile.txt"

d.SetOptionPostQuote(ws)
```

Notes:

Use SetOptionPostQuote, SetOptionPreQuote or SetOptionQuote.
The ftp commands you pass here are native ftp commands and not the commands you use with ftp applications. So rename is two commands. First RNFR to tell where to rename from and second RNTO with the new file name. To delete use DELE and the file path.

199.0.166 How to normalize string on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like below:
Example:

```
Function Normalize(t as string) As string
const kCFStringNormalizationFormD = 0 // Canonical Decomposition
const kCFStringNormalizationFormKD = 1 // Compatibility Decomposition
const kCFStringNormalizationFormC = 2 // Canonical Decomposition followed by Canonical Composition
const kCFStringNormalizationFormKC = 3 // Compatibility Decomposition followed by Canonical Composition

dim s as CFStringMBS = NewCFStringMBS(t)
dim m as CFMutableStringMBS = s.Normalize(kCFStringNormalizationFormD)

Return m.str
End Function
```

Notes: This uses Apple's CFString functions to normalize unicode variants.

199.0.167 How to obscure the mouse cursor on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this declare:
Example:

```
Declare Sub ObscureCursor Lib "Carbon" ()
```

ObscureCursor

Notes: The MBS Plugin has this function, but it's not supported for Windows.

199.0.168 How to open icon file on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use the NSImageMBS class like this:
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.ico")
dim n as new NSImageMBS(f)

window1.Backdrop = n.CopyPictureWithMask
```

199.0.169 How to open PDF in acrobat reader?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this code:
Example:

```
dim pdf as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// open PDF in Acrobat Reader on Mac:

// find app
dim bundleID as string = "com.adobe.Reader"
dim app as FolderItem = LaunchServicesFindApplicationForInfoMBS("", bundleID, "")

if app<>nil then

// launch app with parameters

dim docs() as FolderItem
docs.Append pdf

dim param as new LaunchServicesLaunchParameterMBS
param.Defaults = true
param.Application = app

dim x as FolderItem = LaunchServicesOpenXMBS(docs, param)
```

```
// on failure, simply launch it
if x = nil then
pdf.Launch(true)
end if

else
pdf.Launch(true)
end if
```

Notes: On Windows, simply use pdf.launch or WindowsShellExecuteMBS.

199.0.170 How to open printer preferences on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use our OpenMacOSXPreferencesPaneMBS function like this:
Example:

```
dim e as Integer = OpenMacOSXPreferencesPaneMBS("PrintAndFax")
if 0 = e then
MsgBox "OK"
elseif e = -43 then
MsgBox "File not found."
else
MsgBox "Error: "+str(e)
end if
```

199.0.171 How to open special characters panel on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** We have functions for that in Cocoa and Carbon.
Example:

```
dim a as new NSApplicationMBS
a.orderFrontCharacterPalette
```

Notes:

For Cocoa, you can use orderFrontCharacterPalette method in NSApplicationMBS class.

Or simply for Carbon and Cocoa the ShowCharacterPaletteMBS method.

199.0.172 How to optimize picture loading in Web Edition?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the WebPicture class.
Notes:

Take your picture and create a WebPicture object. Store this WebPicture in a property of the WebPage, Session or app (as global as possible). On the first time you use this picture on an user session, the browser will load it. Second time you use it, the browser will most likely pick it from the cache.
Having pictures in App or some module reuses the same picture for all sessions which reduces memory footprint.
This does not work well with pictures you change very often or use only for one webpage on one user.

If you like to see an example, check our Map example.

199.0.173 How to parse XML?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use code like this:
Example:

```
dim s as string = "<test><test /></test>"

try
dim x as new XmlDocument(s)
MsgBox "OK"
catch xe as XmlException
MsgBox "invalid XML"
end try
```

Notes: If you got an exception, you have a parse error.

199.0.174 How to play audio in a web app?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use the HTML5 audio tag and control it with javscript.
Notes:

This is just another example app I made today. It plays a christmas song. The audio file is provided by the

application to the server, so no external web server is needed and this application can run stand alone. To compile and run you need Xojo 2010r5.

In the open event we search the audio files and open them as binarystreams. We create the two webfile objects. Those webfiles are part of the app class, so we have them globally. There we set the data with the content of our streams. We also define file names and mime types. They are needed so browser know what we have here:

```
audioFileM4V = new WebFile
audioFileM4V.Data = bM.Read(BM.Length)
audioFileM4V.Filename = "music.m4a"
audioFileM4V.MIMEType = "audio/m4a"

audioFileOGG = new WebFile
audioFileOGG.Data = bO.Read(BO.Length)
audioFileOGG.Filename = "music.ogg"
audioFileOGG.MIMEType = "audio/ogg"
```

Next in the open event of the webpage we have a PageSource control. The location is set to be before content. In the open event we define the html code for this. First we pick the URLs for the audio files. Than we build the html to use the audio tag. As you see, we give it an ID for later use and have it preload automatically. If you add an autoplay tag, you can have the audio play right away. Inside the audio tag we have two sources so we provide audio for both Firefox (OGG) and Safari (MPEG4). Finally we have a text to display if HTML5 audio tag is not supported.

You can set the source in the EditSource event:

```
dim urlo as string = app.audioFileOGG.URL
dim urlm as string = app.audioFileM4V.URL
me.Source = "<audio id=""mymusic"" preload=""auto""><source src=""""+urlo+""""
type=""audio/ogg"" />
<source src=""""+urlm+""""
type=""audio/mpeg"" />Your browser does not support the audio element.</audio>"
```

Next in the Play button we execute code to play the audio. This is a short javascript code which searches in the html document for the element with the ID "mymusic" which is the ID of our audio tag above. Once we got the object, we call it's play method to start playback.

```
me.ExecuteJavaScript("document.getElementById('mymusic').play();")
```

same for pause:

```
me.ExecuteJavaScript("document.getElementById('mymusic').pause();")
```

and finally for changing volume:

me.ExecuteJavaScript("document.getElementById('mymusic').volume="+str(me.Value/100.0)+";")

199.0.175 How to pretty print xml?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use the XML Transform method with the right XLS.
Notes:

Learn more here:
http://docs.xojo.com/index.php/XMLDocument.Transform

199.0.176 How to print to PDF?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** This code below shows how to redirect printing to a PDF file on Mac OS X.
Example:

```
// get Xojo printer setup
dim p as new PrinterSetup

// now put it into NSPrintInfo to manipulate
dim n as new NSPrintInfoMBS
n.SetupString = p.SetupString

// change destination to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
n.SetSaveDestination(f)

// move back
p.SetupString = n.SetupString

// and print as usual
dim g as Graphics = OpenPrinter(p)
g.DrawString "Hello World", 20, 20
```

Notes: And you can use normal graphics class for that.

199.0.177 How to query Spotlight's Last Open Date for a file?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use a MDItemMBS objec to query this value:
Example:

```
Function LastOpenedDate(Extends F As FolderItem, DefaultOtherDates As Boolean = True) As Date
# If TargetMacOS Then
Dim xMDItem as New MDItemMBS(F)
Dim xDate as Variant

If xMDItem <>Nil Then
xDate = xMDItem.GetAttribute(xMDItem.kMDItemLastUsedDate).DateValue
If xDate IsA Date Then Return xDate
Else
If xDate <>Nil Then Break
End If
# EndIf

If DefaultOtherDates Then
If F.ModificationDate <>Nil Then Return F.ModificationDate
If F.CreationDate <>Nil Then Return F.CreationDate
End If
End Function
```

Notes: Thanks for Josh Hoggan for this example code.

199.0.178 How to quit windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Example:

```
# if targetwin32 then
dim i1,i2,r as Integer
declare function ExitWindowsEx lib "user32" (uFlags as Integer, dwReserved as Integer) as Integer
i1 = 2
i2 = 0
r = ExitWindowsEx(i1,i2)
if r<>0 then
' Error()
end if

# endif
```

Notes:

uFlags parameters:

'4 = EWX_Force
'0 = EWX_Logoff
'2 = EWX_Reboot
'1 = EWX_shutdown, should shut down computer

Also check the ExitWindowsMBS method.

199.0.179 How to read a CSV file correctly?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** With all the rules for quotes and delimiters, you can simply use the SplitCommaSeparatedValuesMBS method in our plugins like this:
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.csv")
dim t as TextInputStream = f.OpenAsTextFile

while not t.EOF
dim s as string = t.ReadLine(encodings.ASCII)

dim items() as string = SplitCommaSeparatedValuesMBS(s, ";", """")

List.AddRow ""
dim u as Integer = UBound(items)
for i as Integer = 0 to u
List.Cell(List.LastIndex,i) = items(i)
next

wend
```

Notes: Please make sure you choose the right text encoding.

199.0.180 How to read the command line on windows?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Example:

```
# if targetwin32 then
dim line as string
Dim mem as MemoryBlock

Declare Function GetCommandLineA Lib "kernel32" () As Ptr

mem=GetCommandLineA()
s=mem.cstring(0)

# endif
```

Notes: Newer Xojo versions have a system.commandline property.

199.0.181 How to render PDF pages with PDF Kit?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Try this code:
Example:

```
// choose a file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

// open it as PDF Document
dim sourceFile as New PDFDocumentMBS(f)

if sourceFile.handle <>0 then // it is a PDF file

// get upper bound of pages
dim c as Integer = sourceFile.pageCount-1

// from first to last page
for n as Integer = 0 to c

// pick that page
dim page as PDFPageMBS = sourceFile.pageAtIndex(n)

// render to image
dim p as NSImageMBS = page.Render

// and convert to RB picture and display
Backdrop = p.CopyPictureWithMask

next

end if
```

Notes: PDFKit works only on Mac OS X.

199.0.182 How to restart a Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Ask the Finder via Apple Events:
Example:

```
dim ae as appleevent
ae=newappleEvent("FNDR","rest","MACS")
if not ae.send then
msgBox "The computer couldn't be restarted."
end if
```

199.0.183 How to resume ftp upload with curl plugin?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** CURL supports that and you simply need to set the right options.
Notes:

First of course OptionUpload must be true. Second OptionFTPAppend must be true so the OptionResumeFrom is used. Store there (or in OptionResumeFromLarge) your start value.
Don't forget to implement the read event and return data there as requested.

199.0.184 How to rotate a PDF page with CoreGraphics?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** This code opens a PDF and draws the first page into a new PDF with 90° rotation.
Example:

```
// Rotate a PDF page

// our files
dim sourcefile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim destfile as FolderItem = SpecialFolder.Desktop.Child("rotated.pdf")

// open PDF
dim pdf as CGPDFDocumentMBS = sourcefile.OpenAsCGPDFDocumentMBS

// query media size of first page
```

```
dim r as CGRectMBS = pdf.MediaBox(1)

// create new PDF
dim c as CGContextMBS = destfile.NewCGPDFDocumentMBS(r,"title","Author","Creator")

// create rotated rectangle
dim nr as new CGRectMBS(0,0,r.Height,r.Width)

// create new page
c.BeginPage nr
c.SaveGState

const pi = 3.14159265

// rotate by 90°
c.RotateCTM pi*1.5

// fix origin
c.TranslateCTM -r.width,0

// draw PDF
c.DrawCGPDFDocument pdf,r,1

// cleanup
c.RestoreGState
c.EndPage

c = nil

// show in PDF viewer
destfile.Launch
```

Notes: This code is Mac only as it needs CoreGraphics.

199.0.185 How to rotate image with CoreImage?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use the code like the one below:
Example:

```
// Rotate image with CoreImage

// load image
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")
dim image as new CIImageMBS(f)
```

```
// rotate 45 degree
dim n as new NSAffineTransformMBS
n.rotateByDegrees(45)

dim TransformFilter as new CIFilterAffineTransformMBS
TransformFilter.inputImage = image
TransformFilter.inputTransform = n

// get result
dim resultImage as CIImageMBS = TransformFilter.outputImage

// for saving to file
dim outputImage as NSImageMBS = resultImage.RenderNSImage(false)

f = SpecialFolder.Desktop.Child("output.png")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write outputImage.PNGRepresentation

// as Xojo picture object for display
dim pic as Picture = outputImage.CopyPictureWithMask

Backdrop = pic
```

199.0.186 How to run a 32 bit application on a 64 bit Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Install 32 bit compatibility libraries.
Notes:

The package is called ia32-libs for ubuntu (and others).
Some applications need to be run on a 32 bit system as they need some hardware related libraries. Like libUSB or libHID for USB devices.

199.0.187 How to save HTMLViewer to PDF with landscape orientation?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use NSPrintInfoMBS to change the options for PrintToPDFFile function.
Example:

```
// make it landscape
dim n as NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
n.orientation = n.NSLandscapeOrientation
```

```
// save html to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
call HTMLViewer1.PrintToPDFFileMBS(f,10,30,10,30)
```

Notes:

You may want to reset options later.
This code is only for Mac OS X.

199.0.188 How to save RTFD?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** How to load PDF to htmlviewer on desktop?
Example:

```
Public Sub LoadPDFData(viewer as HTMLViewer, PDFData as string)
Dim base64string As String = EncodeBase64(PDFData)

// remove line endings to make it a big line
base64string = ReplaceLineEndings(base64string, "")

// build data URL
// https://en.wikipedia.org/wiki/Data_URI_scheme
Dim dataURL As String = "data:application/pdf; base64," + base64string

// show in webviewer
HTMLViewer1.LoadURL(dataURL)

// may not work everywhere due to URL length limit
// for Web projects, use WebFile instead!
End Sub
```

Notes:

This avoids a temporary file, which may also work.
For Web Apps, please use WebFile.

199.0.189 How to save RTFD?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** With NSTextViewMBS you can use this code to save to RTFD:
Example:

```
// save text as RTFD including image attachments
dim f as FolderItem = GetSaveFolderItem(FileTypes1.ApplicationRtfd, "test.rtfd")

if f = nil then Return

dim a as NSAttributedStringMBS = textView.textStorage
dim w as NSFileWrapperMBS = a.RTFDFileWrapperFromRange(0, a.length, DocumentAttributes)

dim e as NSErrorMBS
if w.writeToFile(f, e) then

else
MsgBox e.LocalizedDescription
end if
```

Notes: For TextArea you can query the underlaying NSTextViewMBS object via TextArea.NSTextViewMBS method.

199.0.190 How to scale a picture proportionally with mask?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** For a proportional scaling, we calculate the new picture size relative to the target maximum size.
Example:

```
Function ProportinalScaledWithMask(extends pic as Picture, Width as Integer, Height as Integer) As Picture
// Calculate scale factor

dim faktor as Double = min( Height / Pic.Height, Width / Pic.Width)

// Calculate new size
dim w as Integer = Pic.Width * faktor
dim h as Integer = Pic.Height * faktor

// create new picture
dim NewPic as new Picture(w,h,32)

// check if we have a mask and clear it
dim m as picture = pic.mask(False)
pic.mask = nil

// draw picture in the new size
NewPic.Graphics.DrawPicture Pic, 0, 0, w, h, 0, 0, Pic.Width, Pic.Height

if m <>nil then
```

```
// restore mask and scale it
pic.mask = m
NewPic.mask.Graphics.DrawPicture m, 0, 0, w, h, 0, 0, Pic.Width, Pic.Height
end if

// return result
Return NewPic
End Function
```

Notes: This version handles mask. As you see we actually have to remove mask in order to copy the picture part correctly.

199.0.191 How to scale a picture proportionally?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** For a proportional scaling, we calculate the new picture size relative to the target maximum size.
Example:

```
Function ProportionalScaled(extends pic as Picture, Width as Integer, Height as Integer) As Picture
// Calculate scale factor

dim faktor as Double = min( Height / Pic.Height, Width / Pic.Width)

// Calculate new size
dim w as Integer = Pic.Width * faktor
dim h as Integer = Pic.Height * faktor

// create new picture
dim NewPic as new Picture(w,h,32)

// draw picture in the new size
NewPic.Graphics.DrawPicture Pic, 0, 0, w, h, 0, 0, Pic.Width, Pic.Height

// return result
Return NewPic
End Function
```

Notes:

This does not handle mask, but you can scale the mask the same way and assign it to the new picture.
(see other FAQ entry with mask)

199.0.192 How to scale/resize a picture?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** There are several ways to scale or resize a picture. The easiest way may be the ScaleMBS function in the Picture class.
Example:

```
dim Original,Scaled as Picture

Original=LogoMBS(500)
Scaled=Original.ScaleMBS(100,100,true)
```

Notes:

The plugin ways:
- GraphicsMagick can scale/resize.
- CoreImage scale filter may result in the fastest and best images on Mac OS X 10.4.
- NSImageMBS can scale, but is Mac OS X only.
- CGImageMBS can scale, but is Mac OS X only.
- CIImageMBS can scale, but is Mac OS X only.
- QuickTime Graphics exporter and importer can be connected to scale. (this was used more often a few years ago)
- ImageMagick can scale very nice and crossplatform. But the ImageMagick libraries are big.
- The picture.ScaleMBS function is self written and results in equal output on Mac, Windows and Linux without any additional libraries installed.
- Picture.ScalingMBS does crossplatform scaling with several modes.

with pure Xojo:
- make a new picture and draw the old one with new size inside.

199.0.193 How to search with regex and use unicode codepoints?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can specify unicode characters in search string with backslash x and digits.
Example:

```
dim r as RegExMbs
dim s as string
dim c as Integer

s="123 äöü ABC 456"

r=new RegExMBS
if r.Compile(".ö.") then
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
```

```
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if

r=new RegExMBS
if r.Compile(".\xF6.") then // finds ö using Unicode codepoint
c=r.Execute(s,0)
MsgBox str(c)+" "+str(r.Offset(0))+" "+str(r.Offset(1))
// shows: 1 4 10
// 1 for ubound of the offset array
// 4 for 4 bytes before the matched pattern
// 10 for the 10 bytes before the end of the matched pattern
end if
```

199.0.194 How to see if a file is invisible for Mac OS X?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this function: **Example:**

```
Function Invisible(F As FolderItem) As Boolean
Dim TIS As TextInputStream
Dim S,All As String
Dim I as Integer
dim g as folderitem

If Left(F.Name,1)="." or not f.visible Then
Return True
End If

g=F.Parent.Child(".hidden")
If g.Exists Then
TIS=g.OpenAsTextFile
if tis<>Nil then
All=TIS.ReadAll
For I=1 to CountFields(All,Chr(11))
S=NthField(All, Chr(11), I)
If S=F.name Then
Return True
End If
Next
end if
End if
End Function
```

199.0.195 How to set cache size for SQLite or REALSQLDatabase?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You use the pragma cache_size command on the database.
Example:

```
// set cache size to 20000 pages which is about 20 MB for default page size
dim db as REALSQLDatabase
db.SQLExecute "PRAGMA cache_size = 20000"
```

Notes:

Default cache size is 2000 pages which is not much.
You get best performance if whole database fits in memory.
At least you should try to have a cache big enough so you can do queries in memory.
You only need to call this pragma command once after you opened the database.

199.0.196 How to set the modified dot in the window?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this declares:
Example:

```
window1.ModifiedMBS=true
```

199.0.197 How to show a PDF file to the user in a Web Application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use a WebHTMLViewer control and load the
Example:

```
dim CurrentFile as WebFile // a property of the WebPage

// define the PDF file
CurrentFile = new WebFile
CurrentFile.Filename = "test.pdf"
CurrentFile.MIMEType = "application/pdf"
CurrentFile.Data = "some pdf data" // MyDynaPDF.GetBuffer

// load into html viewer
```

HTMLViewer1.URL = CurrentFile.URL

Notes: See our Create PDF example for the Xojo Web Edition.

199.0.198 How to show Keyboard Viewer programmatically?

Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use Xojo or AppleScript to launch the KeyboardViewerServer.app.
Example:

```
dim a as new AppleScriptMBS
dim text as string
dim lines(-1) as string

lines.append "set theApplication to ""KeyboardViewerServer"""
lines.append "set thePath to ""/System/Library/Components/KeyboardViewer.component/Contents/Shared-Support/KeyboardViewerServer.app"""
lines.append ""
lines.append "set POSIXPath to ((POSIX file thePath) as string)"
lines.append "tell application ""System Events"" to set isRunning to 0 <(count (application processes whose name is theApplication))"
lines.append "if isRunning then tell application POSIXPath to quit"
lines.append "delay 0.15"
lines.append ""
lines.append "ignoring application responses"
lines.append " tell application POSIXPath to run"
lines.append "end ignoring"

text=join(lines,EndOfLine.macintosh)

a.Compile text
a.Execute
```

Notes:

AppleScript code:

```
set theApplication to "KeyboardViewerServer"
set thePath to "/System/Library/Components/KeyboardViewer.component/Contents/SharedSupport/KeyboardViewerServer.app"
```

```
set POSIXPath to ((POSIX file thePath) as string)
tell application "System Events" to set isRunning to 0 <(count (application processes whose name is theApplication))
if isRunning then tell application POSIXPath to quit
delay 0.15

ignoring application responses
tell application POSIXPath to run
end ignoring
```

199.0.199 How to show the mouse cursor on Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Try this declare:
Example:

```
Declare Sub ShowCursor Lib "Carbon" ()

ShowCursor
```

Notes: The MBS Plugin has this function and supports it on Windows, too.

199.0.200 How to shutdown a Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Ask the Finder via Apple Events:
Example:

```
dim ae as appleevent
ae=newappleEvent("FNDR","shut","MACS")
if not ae.send then
msgBox "The computer couldn't be shutdown."
end if
```

Notes:

Or toolbox call (Attention: This method will stop the computer immediataly: No document asked to be saved, all applications quitting without knowing).

```
Declare Sub ShutDwnPower Lib "Carbon" ()
ShutDwnPower
```

199.0.201 How to sleep a Mac?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Ask the Finder via Apple Events:
Example:

```
dim ae as appleevent
ae=newappleEvent("FNDR","slep","MACS")
if not ae.send then
msgBox "The computer doesn't want to sleep."
end if
```

199.0.202 How to speed up rasterizer for displaying PDFs with DynaPDF?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Here a few speed tips:
Notes:

- Use the DynaPDFRasterizerMBS function instead of our render functions.
- Reuse DynaPDFRasterizerMBS as long as the target picture size doesn't change.
- Import only the PDF pages you want to display.
- Let DynaPDF do zooming, rotating or other effects instead of you change it.

199.0.203 How to use PDFLib in my RB application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** The PDFlib plugin was discontinued in favor of our DynaPDF plugin.
Notes: If you need help to move, please contact us.

199.0.204 How to use quotes in a string?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Just double them.
Example:

```
msgbox "This String contains ""quotes""."
```

199.0.205 How to use Sybase in Web App?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use our MBS Xojo SQL Plugin to connect to a Sybase Database in your web application.
Notes:

If you see db.Connect giving the error message "cs_ctx_alloc ->CS_MEM_ERROR", than some things are not setup right for Sybase.
The Apache process may not have all the SYBASE environment variables being set when the CGI was launched.

Adding these lines to /etc/httpd/conf/httpd.conf stopped the faux memory errors for us:

SetEnv LD_LIBRARY_PATH /opt/sybase/OCS-15_0/lib:/opt/sybase/OCS-15_0/lib3p64:/opt/sybase/OCS-15_0/lib3p:
SetEnv SYBROOT /opt/sybase
SetEnv SYBASE_OCS /opt/sybase
SetEnv SYBASE /opt/sybase

199.0.206 How to use the Application Support folder?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

I was saving a registration code for an app to the Preferencefolder.
People on the list have suggested that it would be better in
the ApplicationSupportFolder. How do I save the file called CWWPrefs
into that folder using MBS?

I have checked for examples and the docs but can't see how to apply it

//f = SpecialFolder.Preferences.child("CWWPrefs")
f = ApplicationSupportFolderMBS(-32768)
Example:

```
dim folder,file as FolderItem

folder = createApplicationSupportFolderMBS(-32763)

if folder=nil then
// Some very old Mac OS Versions may not support it
// or the plugin may fail for any reason
folder=SpecialFolder.Preferences
end if
```

```
file=folder.Child("CWWPrefs")

MsgBox file.UnixpathMBS
```

Notes: You may not be able to write there with a normal user account!

199.0.207 How to use the IOPMCopyScheduledPowerEvents function in Xojo?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You can use the following code which does this using the SoftDeclareMBS class.
Example:

```
Sub Open()
dim c as CFDateMBS
dim t as CFAbsoluteTimeMBS

// get current date
c=NewCFDateMBS

// in absolute time (seconds since x)
t=c.AbsoluteTime

// add 600 seconds (= 10 Minutes)
t.Value=t.Value+600

// Make a Date from it
c=t.Date

// Schedule the event
// 0 on success
// E00002C1 for missing root rights
Title=hex(schedulePowerEvent(c, "wake"))

// Just for information, display the scheduled stuff
CFShowMBS CopyScheduledPowerEvents
End Sub

Function CopyScheduledPowerEvents() As cfarrayMBS
dim s as SoftDeclareMBS
dim m as MemoryBlock

s=new SoftDeclareMBS

if s.LoadLibrary("IOKit.framework") then
if s.LoadFunction("IOPMCopyScheduledPowerEvents") then
```

```
if s.CallFunction(0,nil) then
Return NewCFArrayMBSHandle(s.Result,true)
else
MsgBox "Failed to Call IOPMCopyScheduledPowerEvents."
end if
else
MsgBox "Failed to load IOPMCopyScheduledPowerEvents."
end if
else
MsgBox "Failed to load IOKit."
end if

Return nil
End Function

Function SchedulePowerEvent(time_to_wake as CFDateMBS, Type as CFStringMBS) as Integer
dim s as SoftDeclareMBS
dim m as MemoryBlock

'/*
'* Types of power event
'* These are potential arguments to IOPMSchedulePowerEvent().
'* These are all potential values of the kIOPMPowerEventTypeKey in the CFDictionaries
'* returned by IOPMCopyScheduledPowerEvents().
'*/
'/*!
'@define kIOPMAutoWake
'@abstract Value for scheduled wake from sleep.
'*/
'# define kIOPMAutoWake "wake"
'
'/*!
'@define kIOPMAutoPowerOn
'@abstract Value for scheduled power on from off state.
'*/
'# define kIOPMAutoPowerOn "poweron"
'
'/*!
'@define kIOPMAutoWakeOrPowerOn
'@abstract Value for scheduled wake from sleep, or power on. The system will either wake OR
'power on, whichever is necessary.
'*/
'
'# define kIOPMAutoWakeOrPowerOn "wakepoweron"
'/*!
'@define kIOPMAutoSleep
'@abstract Value for scheduled sleep.
'*/
```

```
'
'# define kIOPMAutoSleep "sleep"
'/*!
'@define kIOPMAutoShutdown
'@abstract Value for scheduled shutdown.
'*/
'
'# define kIOPMAutoShutdown "shutdown"

s=new SoftDeclareMBS

if s.LoadLibrary("IOKit.framework") then
if s.LoadFunction("IOPMSchedulePowerEvent") then

m=NewMemoryBlock(12)
m.Long(0)=time_to_wake.handle
m.Long(4)=0 // nil
m.Long(8)=type.Handle

if s.CallFunction(3,m) then
Return s.Result
end if
end if
end if

End Function
```

Notes: Requires Mac OS X and to execute root rights.

199.0.208 How to validate a GUID?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use this function below which uses a regular expression to verify that the string is a valid UUID/GUID:
Example:

```
Function IsGUID(guid as string) As Boolean
dim r as new RegEx

r.SearchPattern = "^(\{ { 0,1 } ( [ 0-9a-fA-F ] ) { 8 } -( [ 0-9a-fA-F ] ) { 4 } -( [ 0-9a-fA-F ] ) { 4 }
-( [ 0-9a-fA-F ] ) { 4 } -( [ 0-9a-fA-F ] ) { 12 } \} { 0,1 } )$ "

Return r.Search(guid)<>nil
End Function
```

Notes: Simply parsing the GUID with CFUUIDMBS does not give the same result as CFUUIDMBS will also take a string like "DDDD".

199.0.209 How to walk a folder hierarchie non recursively?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Use code like this one: **Example:**

```
Sub Walk(folder as FolderItem)
dim folders() as FolderItem

folders.Append folder

while UBound(folders)>=0

dim currentFolder as FolderItem = folders.pop

dim c as Integer = currentFolder.Count
for i as Integer = 1 to c
dim item as FolderItem = currentFolder.TrueItem(i)

if item = Nil then
// no permission
elseif item.Visible then // only visible

if item.Directory then
folders.Append item
else
// work with file here
end if

end if

next

wend
End Sub
```

Notes:

As you see we go with a long loop which runs until we don't have more folders to process.
We ignore items we can't access due to permission limits.
And we only work visible items.
If you like, check folderitem.isBundleMBS on item to handle packages and applications better on Mac OS X.

199.0.210 I got this error: PropVal, QDPictMBS.Name (property value), Type mismatch error. Expected CGDataProviderMBS, but got Variant, Name:QDPictMBS

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The plugins MacOSX and MacOSXCF belong together. If you use one part, please also install the other part.
Notes: We splitted the plugin because the Xojo IDE on Windows crashed on compilation.

199.0.211 I registered the MBS Plugins in my application, but later the registration dialog is shown.

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** There are two main reasons.
Notes:

1. you may use the plugin before registering them. This is often the case if you register in a window open event and use the plugin in a control open event.
On the console on Mac OS X or Windows, you may see a message like this "MBS Plugins were used by the application before the RegisterMBSPlugin function was called. Please fix this in your code!".

2. you may have mixed different plugin versions which are not compatible.
In this case you can see a message "Internal plugin registration error." on the console on Mac OS X. Newer plugins may show a message dialog reporting this. Older version simply think they are not registered.

If the installer just merges old and new applications, users may have libraries of older and newer plugin versions in the libs folder. If your application loads the wrong version, the registration fails.

If you use remote debugging, make sure you clear the tempory files there, too. Otherwise you may have old DLLs on your hard disc which may disturb your application.

You can run into issues if you use your registration code on different places of your app. Please register only once in app.open (or app Constructor). If you have several codes, simply call them one after the other.

Also check that you only call RegisterMBSPlugin with valid serial number. If you later call RegisterMBSPlugin with Demo like in example code above, you remove the license.

Next check if you can clear the Xojo caches and that helps. This incldues the Xojo Scratch folder and the Plugins & Project caches. Simply locate those folders and delete them. For Windows look in hidden AppData folder in your user folder. For Mac, please check

textasciitilde /Library/Caches and your temp folders.

Finally make sure you use the right serial number. Not an older one or a misspelled one.

199.0.212 I want to accept Drag & Drop from iTunes

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You need to accept AcceptMacDataDrop "itun" and Handle the DropObject.
Example:

```
Sub Open()
window1.AcceptMacDataDrop "itun"
End Sub

Sub DropObject(obj As DragItem)
dim s as string
dim f as folderItem
dim d as CFDictionaryMBS
dim o as CFObjectMBS
dim key as CFStringMBS
dim dl as CFDictionaryListMBS
dim i,c as Integer
dim u as CFURLMBS
dim file as FolderItem

if obj.MacDataAvailable("itun") then
s = obj.MacData("itun")

// Parse XML
o=NewCFObjectMBSFromXML(NewCFBinaryDataMBSStr(s))

// Make dictionary
if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)

// get Tracks Dictionary
key=NewCFStringMBS("Tracks")
o=d.Value(key)

if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)
dl=d.List

// Walk over all entries in the Tracks dictionary
c=dl.Count-1
for i=0 to c
```

```
o=dl.Value(i)

if o isa CFDictionaryMBS then
d=CFDictionaryMBS(o)

key=NewCFStringMBS("Location")
o=d.Value(key)
if o isa CFStringMBS then
u=NewCFURLMBSCFStringMBS(CFStringMBS(o),nil)

file=u.file
if file<>nil then
MsgBox file.UnixpathMBS
end if
end if
end if
next
end if
end if
end if
End Sub
```

Notes: The code above inside a window on Xojo 5.5 with MBS Plugin 5.3 will do it nice and show the paths.

199.0.213 I'm drawing into a listbox but don't see something.

Plugin Version: all, Console & Web: No. **Answer:** If you draw this in a listbox cellbackground, you need to draw on the correct position
Example:

```
Function CellBackgroundPaint(g As Graphics, row as Integer, column as Integer) As Boolean
dim f as FolderItem
f=SpecialFolder.Desktop
f.DrawWideIconMBS(g,listbox1.left,listbox1.top+row*20,16)
Return true
End Function
```

Notes: Try this in a listbox. The Graphics object there has a cliping and an offset which the plugin doesn't know about.

199.0.214 I'm searching for a method or so to move a window from position x.y to somewhere else on the screen.

Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

The code I produced in RB isn't smooth enough. Is there a call in MBS, if not, can it be done? The speed of it has to be like the show of a DrawerWindow.

Try the declare below for Carbon. With WindowLib it will work on Mac OS 8.5 and newer.
Notes: See Window.Transition functions.

199.0.215 If I use one of your plug-ins under windows, would this then impose the use of dll after compilation or my would my compiled soft still be a stand-alone single file software?

Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Stand alone.
Notes:

Xojo compiles all used plugins into the application binary.
Some plugin parts need external dlls but you will find that in the documentation. (e.g. pdflib for some classes)

199.0.216 Is the fn key on a powerbook keyboard down?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** I am unable to figure out how or if it is possible to detect if the fn key is down on a powerbook keyboard. Is it possible?
Example:

```
' Window.Open Event of a blank project:

dim i as Integer

for i=0 to 127
if keyboard.asynckeydown(i) then
title=str(i) // found
return
end if
next
title="" // not found
```

Notes: This test application shows the keycode (decimal) 63 for the fn key.

199.0.217 Is there a case sensitive Dictionary?

Plugin Version: all, Console & Web: No. **Answer:** The MBS Plugin has several classes which can work as a replacement.
Notes:

First you could use VariantToVariantHashMapMBS or VariantToVariantOrderedMapMBS.
If you know that all keys are Strings or Integers only, you can use the specialized classes which are a little bit faster due to avoiding variants:

IntegerToIntegerHashMapMBS class
IntegerToIntegerOrderedMapMBS class
IntegerToStringHashMapMBS class
IntegerToStringOrderedMapMBS class
IntegerToVariantHashMapMBS class
IntegerToVariantOrderedMapMBS class
StringToStringHashMapMBS class
StringToStringOrderedMapMBS class
StringToVariantHashMapMBS class
StringToVariantOrderedMapMBS class

199.0.218 Is there a way to use the MBS plugin to get only the visible item and folder count on a volume?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can use the DirectorySizeMBS class for this as in the example below:
Example:

```
dim d as DirectorySizeMBS

d=new DirectorySizeMBS

// volume(1) as my boot volume is very full
if d.update(volume(1),true,0) then
MsgBox str(d.VisibleItemCount)+" visible items, "+str(d.HiddenItemCount)+" invisible items."
end if
```

Notes:

Complete Question: Is there a way to use the MBS plugin to get only the visible item and folder count on a volume? The FileCount and FolderCount properties of
VolumeInformationMBS seem to provide the total # of items including
invisible items such as .DS_Store and more importantly .Trashes which
is causing me a great amount of difficulty during a recursive scan of a
volume. I've got a progress bar which uses the total of the filecount

and foldercount properties as the maximum value, but my routine needs to filter out all invisible items, as it is creating a catalog of a volume for archiving purposes. Any thoughts how I could get accurate number.

199.0.219 Is there an easy way I can launch the Displays preferences panel?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use the code below:
Example:

```
dim error as Integer

error=OpenMacOSXPreferencesPaneMBS("Displays")
if error<>0 then
MsgBox "Failed to launch QuickTime System Preferences panel."
end if
```

199.0.220 List of Windows Error codes?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** We have a list of windows error codes on our website.
Notes: http://www.monkeybreadsoftware.de/xojo/winerror.shtml

199.0.221 Midi latency on Windows problem?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** The issue is system related, not a problem with RB or the plugin.
Notes:

Two things will adversely affect the timing:

(1) latency of the software synthesizer output driver. The default Windows wavetable synthesizer has considerable latency. I don't know how many milliseconds, but it is noticeable.

(2) latency of the digital audio output driver. Different systems have different drivers for different audio hardware. My Dell laptop has a minimum 15ms latency in the audio driver.

These two things put together were causing a very sluggish MIDI response. I was able to verify these as the culprits by routing MIDI directly out of RB into a sample player, which only introduces the latency of (2)

and does not include latency of (1).

I don't know how widely known are these facts, if not then you may want to add this information to the documentation, since Windows programmers using the MIDI plugin may not know those problems, and might mistakenly blame your plugin, as I did :) Sorry about that!

(From Aaron Andrew Hunt)

199.0.222 My Xojo Web App does not launch. Why?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Here is a list of checks to do for linux apache installations with Xojo or Xojo Web applications:
Notes:

Just a list of checks to do for linux apache installations:

- You have 64bit linux? Than you need 32 bit compatibility libraries.
- The folder of your app is writable? Set permissions to 777.
- The cgi script is executable? Set permissions to 755.
- The app file itself is executable? Set permissions to 755.
- You uploaded cgi file as text, so it has unix line endings? (this often gives error "Premature end of script headers" in apache log)
- You uploaded config.cfg file and made it writable? Set permissions to 666.
- Your apache allows execution of cgi scripts? You enabled cgi for apache and uncommented addhandler command for CGI on a new apache installation?
- You uploaded the app file and libraries as binary files? Upload as text breaks them.
- You did upload the libs folder?
- You don't have code in app.open, session.open and other events which crashes app right at launch?
- You don"t have a print command in your app.open event? (see feedback case 23817)
- You allowed htaccess file to overwrite permissions?

199.0.223 SQLDatabase not initialized error?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Before you can use SQLDatabaseMBS, it must be initialized.
Example:

```
dim d as new SQLDatabaseMBS
```

Notes:

This happens normally when you use "new SQLDatabaseMBS".
But if you just have a SQLConnectionMBS and get a recordset there, the initialization may not have happend, yet.
So please simply add a line "dim d as new SQLDatabaseMBS" to your app.open code after registration, so the plugin part can initialize and late provide recordsets.

199.0.224 Textconverter returns only the first x characters. Why?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

Some older Xojo versions limit the Textconverter to around 1024 characters in input and output.
This should be fixed with RB5.
Notes: Xojo seems not to support Textconverters at all on Windows.

199.0.225 The type translation between CoreFoundation/Foundation and Xojo data types.

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** The plugin does conversion between Cocoa/Carbon data types and native Xojo data types. The following list help you knowing what the current plugins support:
Notes:

Cocoa NSObject to Variant:

nil ->nil
NSDictionary ->Dictionary
NSData ->MemoryBlock
NSString ->String
NSAttributedString ->NSAttributedStringMBS
NSDate ->Date
NSNumber ->double/integer/Int64/UInt64/UInt32/Boolean
NSURL ->String
NSValue with NSRect ->NSRectMBS
NSValue with NSPoint ->NSPointMBS
NSValue with NSSize ->NSSizeMBS
NSValue with NSRange ->NSRangeMBS
NSValue with QTTime ->QTTimeMBS
NSValue with QTTimeRange ->QTTimeRangeMBS
NSArray ->Array of Variant

QuartzFilter ->QuartzFilterMBS

- ->*MBS

Variant to Cocoa NSObject:

nil ->nil
Dictionary ->NSDictionary
Boolean ->NSNumber
Integer ->NSNumber
Color ->NSColor
Int64 ->NSNumber
Single ->NSNumber
Double ->NSNumber
Date ->NSDate
MemoryBlock ->NSData
String ->NSString
NSImageMBS ->NSImage
NSAttributedStringMBS ->NSAttributedString
NSColorMBS ->NSColor
NSRectMBS ->NSValue with NSRect
NSSizeMBS ->NSValue with NSSize
NSPointMBS ->NSValue with NSPoint
NSRangeMBS ->NSValue with NSRange
NSBurnMBS ->NSBurn
NSViewMBS ->NSView
NSFontMBS ->NSFont
NSParagraphStyleMBS ->NSParagraphStyle
NSAttributedStringMBS ->NSAttributedString
WebPolicyDelegateMBS ->WebPolicyDelegate
WebUIDelegateMBS ->WebUIDelegate
WebFrameLoadDelegateMBS ->WebFrameLoadDelegate
WebResourceLoadDelegateMBS ->WebResourceLoadDelegate
NSIndexSetMBS ->NSIndexSet
QTTimeMBS ->QTTime
QTTimeRangeMBS ->QTTimeRange
Array of Variant ->NSArray
Array of String ->NSArray
CFStringMBS ->NSString
CFNumberMBS ->NSNumber
CFDataMBS ->NSData
CFURLMBS ->NSURL
CFArrayMBS ->NSArray
CFDictionaryMBS ->NSDictionary
CFBinaryDataMBS ->NSDate

Carbon CFTypeRef to Variant:

CFDictionaryRef ->Dictionary
CFStringRef ->String
CFDataRef ->String
CFURL ->String
CFNumber ->Integer/Double/Int64
CFArray ->Array
CFDate ->date
nil ->nil
CGColorSpace ->CGColorSpaceMBS
CGColor ->CGColorMBS
CGImage ->CGImageMBS
CF* ->CF*MBS

Variant to Carbon CFTypeRef:

Dictionary ->CFDictionaryRef
Boolean ->CFBooleanRef
Color ->CFNumberRef
Integer ->CFNumberRef
Int64 ->CFNumberRef
Single ->CFNumberRef
Double ->CFNumberRef
String ->CFStringRef
Color ->CGColorRef
Date ->CFDateRef
nil ->nil
Memoryblock ->CFDataRef
Folderitem ->CFURLRef
Dictionary ->CFDictionaryRef
Array of Variant/String/Date/Double/Single/Int64/Integer ->CFArray
CGRectMBS ->CGRect as CFDataRef
CGSizeMBS ->CGSize as CFDataRef
CGPointMBS ->CGPoint as CFDataRef
CGColorMBS ->CGColor
CGColorSpaceMBS ->CGColorSpace
CGImageMBS ->CGImage
CGDataConsumerMBS ->CGDataConsumer
CGDataProviderMBS ->CGDataProvider
CF*MBS ->CF*

Strings without encodings should be put into dictionaries as memoryblocks.

199.0.226 Uploaded my web app with FTP, but it does not run on the server!

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** If you see errors like a simple "Segmentation Fault" on Linux or some other wired errors, you may want to check your FTP upload mode. It must be binary for web apps. ASCII mode corrupts the application.

199.0.227 What classes to use for hotkeys?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use CarbonHotKeyMBS class on Mac and WindowsKeyFilterMBS on Windows.
Notes: CarbonHotKeyMBS will also work fine in Cocoa apps.

199.0.228 What do I need for Linux to get picture functions working?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** In order to get our plugins working on Linux systems without GUI, the plugin loads graphics libraries dynamically.
Notes:

To get it working, the plugin tries to load gtk with this paths:

- libgtk-x11-2.0.so"
- libgtk-x11-2.0.so.0"
- /usr/lib/libgtk-x11-2.0.so"
- /usr/lib32/libgtk-x11-2.0.so"
- /usr/lib/libgtk-x11-2.0.so.0"
- /usr/lib32/libgtk-x11-2.0.so.0"

gdk is loaded with this paths:

- libgdk-x11-2.0.so"
- libgdk-x11-2.0.so.0"
- /usr/lib/libgdk-x11-2.0.so"
- /usr/lib32/libgdk-x11-2.0.so"
- /usr/lib/libgdk-x11-2.0.so.0"
- /usr/lib32/libgdk-x11-2.0.so.0"

For the paths without explicit path, the system will search in /lib, /usr/lib and all directories in the LD_LIBRARY_PATH environment variable.

199.0.229 What does the NAN code mean?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

199.0.230 What font is used as a 'small font' in typical Mac OS X apps?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

Xojo 4.5 has a constant "SmallSystem" to use for a font name.
For older versions try this code:
Example:

```
Sub GetThemeFont(fontType as Integer, ByRef fontName as String, ByRef fontSize as Integer, ByRef fontStyle as Integer)
dim err as Integer
dim theFont, theFontSize, theFontStyle as MemoryBlock

const smSystemScript = -1

Declare Function GetThemeFont Lib "Carbon" (inFontID as Integer, inScript as Integer, outFontName as Ptr, outFontSize as Ptr, outStyle as Ptr) as Integer

theFont = NewMemoryBlock(256) //Str255
theFontSize = NewMemoryBlock(2) //SInt16
theFontStyle = NewMemoryBlock(1) //Style

err = GetThemeFont(fontType, smSystemScript, theFont, theFontSize, theFontStyle)

if err = 0 then
fontName = theFont.PString(0)
fontSize = theFontSize.UShort(0)
fontStyle = theFontStyle.Byte(0)
else
fontName = ""
fontSize = 0
fontStyle = 0
end if
End Sub
```

199.0.231 What is last plugin version to run on Mac OS X 10.4?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Last Version with 10.4 support is version 15.4.
Notes:

With version 15.4 you can build applications for OS X 10.4 and newer.
For Version 16.0 we disabled 10.4 and moved minimum to 10.5. We may be able to enable it again to build a version of 16.x, but may need to charge for this by hour.

199.0.232 What is last plugin version to run on PPC?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Last Version with PPC is 15.4.
Notes:

With version 15.4 you can build PPC applications for OS X 10.4 and newer.
For Version 16.0 we disabled PPC. We may be able to enable it again to build a PPC version of 16.x, but may need to charge for this by hour.

199.0.233 What is the difference between Timer and WebTimer?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Time is server side and WebTimer client side.
Notes: Timer is the normal timer class in Xojo. It runs on the server. On the side the WebTimer runs on the client. It triggers a request to the server to perform the action. So a WebTimer is good to keep the connection running and the website updated regularly. A timer on the server is good to make regular jobs like starting a database backup every 24 hours.

199.0.234 What is the list of Excel functions?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Below a list of function names known by LibXL.
Notes:

LibXL parses the functions and writes tokens to the excel file. So even if Excel can do more functions, we can only accept the ones known by LibXL.

ABS, ABSREF, ACOS, ACOSH, ACTIVE.CELL, ADD.BAR, ADD.COMMAND, ADD.MENU, ADD.TOOLBAR, ADDRESS, AND, APP.TITLE, AREAS, ARGUMENT, ASC, ASIN, ASINH, ATAN, ATAN2, ATANH, AVEDEV, AVERAGE, AVERAGEA, BAHTTEXT, BETADIST, BETAINV, BINOMDIST, BREAK, CALL, CALLER, CANCEL.KEY, CEILING, CELL, CHAR, CHECK.COMMAND, CHIDIST, CHIINV, CHITEST,

CHOOSE, CLEAN, CODE, COLUMN, COLUMNS, COMBIN, CONCATENATE, CONFIDENCE, CORREL, COS, COSH, COUNT, COUNTA, COUNTBLANK, COUNTIF, COVAR, CREATE.OBJECT, CRITBINOM, CUSTOM.REPEAT, CUSTOM.UNDO, DATE, DATEDIF, DATESTRING, DATEVALUE, DAVERAGE, DAY, DAYS360, DB, DBCS, DCOUNT, DCOUNTA, DDB, DEGREES, DELETE.BAR, DELETE.COMMAND, DELETE.MENU, DELETE.TOOLBAR, DEREF, DEVSQ, DGET, DIALOG.BOX, DIRECTORY, DMAX, DMIN, DOCUMENTS, DOLLAR, DPRODUCT, DSTDEV, DSTDEVP, DSUM, DVAR, DVARP, ECHO, ELSE, ELSE.IF, ENABLE.COMMAND, ENABLE.TOOL, END.IF, ERROR, ERROR.TYPE, EVALUATE, EVEN, EXACT, EXEC, EXECUTE, EXP, EXPONDIST, FACT, FALSE, FCLOSE, FDIST, FILES, FIND, FINDB, FINV, FISHER, FISHERINV, FIXED, FLOOR, FOPEN, FOR, FOR.CELL, FORECAST, FORMULA.CONVERT, FPOS, FREAD, FREADLN, FREQUENCY, FSIZE, FTEST, FV, FWRITE, FWRITELN, GAMMADIST, GAMMAINV, GAMMALN, GEOMEAN, GET.BAR, GET.CELL, GET.CHART.ITEM, GET.DEF, GET.DOCUMENT, GET.FORMULA, GET.LINK.INFO, GET.MOVIE, GET.NAME, GET.NOTE, GET.OBJECT, GET.PIVOT.FIELD, GET.PIVOT.ITEM, GET.PIVOT.TABLE, GET.TOOL, GET.TOOLBAR, GET.WINDOW, GET.WORKBOOK, GET.WORKSPACE, GETPIVOTDATA, GOTO, GROUP, GROWTH, HALT, HARMEAN, HELP, HLOOKUP, HOUR, HYPERLINK, HYPGEOMDIST, IF, INDEX, INDIRECT, INFO, INITIATE, INPUT, INT, INTERCEPT, IPMT, IRR, ISBLANK, ISERR, ISERROR, ISLOGICAL, ISNA, ISNONTEXT, ISNUMBER, ISPMT, ISREF, ISTEXT, ISTHAIDIGIT, KURT, LARGE, LAST.ERROR, LEFT, LEFTB, LEN, LENB, LINEST, LINKS, LN, LOG, LOG10, LOGEST, LOGINV, LOGNORMDIST, LOOKUP, LOWER, MATCH, MAX, MAXA, MDETERM, MEDIAN, MID, MIDB, MIN, MINA, MINUTE, MINVERSE, MIRR, MMULT, MOD, MODE, MONTH, MOVIE.COMMAND, N, NA, NAMES, NEGBINOMDIST, NEXT, NORMDIST, NORMINV, NORMSDIST, NORMSINV, NOT, NOTE, NOW, NPER, NPV, NUMBERSTRING, ODD, OFFSET, OPEN.DIALOG, OPTIONS.LISTS.GET, OR, PAUSE, PEARSON, PERCENTILE, PERCENTRANK, PERMUT, PHONETIC, PI, PIVOT.ADD.DATA, PMT, POISSON, POKE, POWER, PPMT, PRESS.TOOL, PROB, PRODUCT, PROPER, PV, QUARTILE, RADIANS, RAND, RANK, RATE, REFTEXT, REGISTER, REGISTER.ID, RELREF, RENAME.COMMAND, REPLACE, REPLACEB, REPT, REQUEST, RESET.TOOLBAR, RESTART, RESULT, RESUME, RETURN, RIGHT, RIGHTB, ROMAN, ROUND, ROUNDBAHTDOWN, ROUNDBAHTUP, ROUNDDOWN, ROUNDUP, ROW, ROWS, RSQ, RTD, SAVE.DIALOG, SAVE.TOOLBAR, SCENARIO.GET, SEARCH, SEARCHB, SECOND, SELECTION, SERIES, SET.NAME, SET.VALUE, SHOW.BAR, SIGN, SIN, SINH, SKEW, SLN, SLOPE, SMALL, SPELLING.CHECK, SQRT, STANDARDIZE, STDEV, STDEVA, STDEVP, STDEVPA, STEP, STEYX, SUBSTITUTE, SUBTOTAL, SUM, SUMIF, SUMPRODUCT, SUMSQ, SUMX2MY2, SUMX2PY2, SUMXMY2, SYD, T, TAN, TANH, TDIST, TERMINATE, TEXT, TEXT.BOX, TEXTREF, THAIDAYOFWEEK, THAIDIGIT, THAIMONTHOFYEAR, THAINUMSOUND, THAINUMSTRING, THAISTRINGLENGTH, THAIYEAR, TIME, TIMEVALUE, TINV, TODAY, TRANSPOSE, TREND, TRIM, TRIMMEAN, TRUE, TRUNC, TTEST, TYPE, UNREGISTER, UPPER, USDOLLAR, USERDEFINED, VALUE, VAR, VARA, VARP, VARPA, VDB, VIEW.GET, VLOOKUP, VOLATILE, WEEKDAY, WEIBULL, WHILE, WINDOW.TITLE, WINDOWS, YEAR and ZTEST.

199.0.235 What is the replacement for PluginMBS?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Use the SoftDeclareMBS class to load libraries dynamically.

199.0.236 What to do on Xojo reporting a conflict?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

I get an error like "This item conflicts with another item of the same name" when using one of the plugin functions.

Xojo just wants to tell you that you dropped something in the plugins folder what is not a plugin.
Notes: Some users dropped the examples, the documentation or other files into the plugins folder. Don't do it.

199.0.237 What to do with a NSImageCacheException?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** You need to add exception handlers for NSExceptionMBS in order to catch this exception.
Notes:

You may also add code to write the stack of the exception into a log file for later locating the error source.

A NSImage has several image representations in memory. So basicly you pass in the base image and for whatever size an image is needed, the NSImage class will create a cache image representation of the requested size so on the next query it can use that cache for the same requested size.

199.0.238 What to do with MySQL Error 2014?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** You can get this error on MySQL if you have a recordset open while you create another one.

199.0.239 What ways do I have to ping?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** You have different ways
Notes:

1. Use the shell class and the ping utility.

2. Use the MBS Network Plugin and there the SuperSocket part:

a) On Windows the ICMPPingMBS works to ping.
b) On Mac OS X it uses OpenTransport and needs root rights. You need to use sudo to run this application.

This does not work on Intel Macs, because the plugin is not endian safe.

3. The DarwinPingMBS.Ping method:

Compiled for Mac OS X Macho target it works as a syncronized ping method.
The Windows version had a bug and was fixed in plugin version 8.2pr4. So it works now.

4. The DarwinPingMBS.SimplePing method:

Works on Mac OS X Macho target.

But this method can be called from a thread to make it working in background.

199.0.240 Where is CGGetActiveDisplayListMBS?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** This is now CGDisplayMBS.GetActiveDisplayList.

199.0.241 Where is CGGetDisplaysWithPointMBS?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** This is now CGDisplayMBS.GetDisplaysWithPoint.

199.0.242 Where is CGGetDisplaysWithRectMBS?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** This is now CGDisplayMBS.GetDisplaysWithRect.

199.0.243 Where is CGGetOnlineDisplayListMBS?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** This is now CGDisplayMBS.GetOnlineDisplayList.

199.0.244 Where is GetObjectClassNameMBS?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Please use this replacement method:
Example:

```
Function GetObjectClassNameMBS(o as Object) As string
dim t as Introspection.TypeInfo = Introspection.GetType(o)
Return t.FullName
End Function
```

Notes: GetObjectClassNameMBS was removed from the plugins.

199.0.245 Where is NetworkAvailableMBS?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** We removed NetworkAvailableMBS some versions ago. It was not working right and basicly it's not useful. If you want to check whether you have a network, than do a DNS resolve:
Example:

```
// two independend domain names
const domain1 = "www.google.com"
const domain2 = "www.macsw.de"

// resolve IPs
dim ip1 as string = DNSNameToAddressMBS(Domain1)
dim ip2 as string = DNSNameToAddressMBS(Domain2)

// if we got IPs and not the same IPs (error/login pages)
if len(ip1)=0 or len(ip2)=0 or ip1=ip2 then
MsgBox "no connection"
else
MsgBox "have connection"
end if
```

Notes: This way you can detect whether you got something from DNS. And you can make sure that a DNS redirection to a login page won't catch you.

199.0.246 Where is StringHeight function in DynaPDF?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Use the function GetFTextHeight or GetFTextHeightEx.
Notes: Be aware that GetFTextHeight works with format commands and you may want to escape your text if you don't use them.

199.0.247 Where is XLSDocumentMBS class?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** This class has been removed in favor of XLBookMBS class.
Notes: This classes have been removed XLSCellMBS, XLSDocumentMBS, XLSFormatRecordMBS, XLSMergedCellsMBS, XLSRowMBS and XLSSheetMBS.

199.0.248 Where to get information about file formats?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

Please visit this web page:
http://www.wotsit.org

199.0.249 Where to register creator code for my application?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:**

Register at Apple:
http://developer.apple.com/dev/cftype/information.html

199.0.250 Which Mac OS X frameworks are 64bit only?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Some frameworks from Mac OS X do not support 32 bit applications, so we can't provide plugins for Xojo until 64bit target is available.
Notes:

For Mac OS X 10.8:

- Accounts
- EventKit

- GLKit
- Social

and in 10.9:

- Accounts
- AVKit
- EventKit
- GameController
- GLKit
- MapKit
- MediaLibrary
- Social
- SpriteKit

In general Apple makes all new frameworks being 64 bit only.

199.0.251 Which plugins are 64bit only?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Some of our plugins work only in 64 bit modes as operation systems do not provide 32 bit code.
Notes: This effects currently: EventKit, Accounts, Social frameworks from Apple and our matching plugins.

199.0.252 Why application doesn't launch because of a missing ddraw.dll!?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Some RB versions require that you install DirectX from Microsoft on your Windows.

199.0.253 Why application doesn't launch because of a missing shlwapi.dll!?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Some RB versions require that you install the Internet Explorer from Microsoft on your Windows.
Notes: This bug is for several older Windows 95 editions.

199.0.254 Why do I hear a beep on keydown?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** When the user presses a key, RB goes through all keydown event handlers till on returns true.
Notes: If no keydown event handler returns true for the key, a beep is performed.

199.0.255 Why does folderitem.item return nil?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:** Because Xojo fails to make a folderitem for you. Reason may be an alias file which can't be resolved or simply that you don't have enough access rights to read the folder content.
Notes: A more rarely reason is that the directory changed and the file with the given index or name does no longer exist.

199.0.256 Why doesn't showurl work?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: Yes. **Answer:**

There are three main reasons:

1. showurl is not supported by Xojo in 68k applications.
2. there is now application defined for the protocol (e.g. http) in the Internet Control panel.
3. You don't have Internet Config installed.

You can use the InternetConfigMBS class to check for this stuff.

199.0.257 Why don't the picture functions not work on Linux?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** Please make sure libcairo is installed.
Notes:

For accessing pictures on Linux, the MBS Plugin relays on the cairo library.
Please install the package if you don't have it already.
Our plugin looks for library called libcairo.so or libcairo.so.2.

199.0.258 Why have I no values in my chart?

Plugin Version: all, Console & Web: No, Mac: Yes, Win: Yes, Linux: No. **Answer:** You have no data points visible, there may be several reasons:
Notes:

For example one of the data values may be infinite or invalid.
Or the scaling may be out of range, so you simply see nothing.

199.0.259 Will application size increase with using plugins?

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** All plugins used by your application will be included in the application.
Notes:

If you use no plugins, your application will not change size.
And if you use one class from the plugins, your application size will increase by a few kilobytes.
The documentation of the plugins include a list of all plugin parts and their sizes for the different platforms.

199.0.260 XLS: Custom format string guidelines

Plugin Version: all, Console & Web: No, Mac: Yes, Win: No, Linux: No. **Answer:** You have to download the source code and compile a static version of the library.
Notes:

Up to four sections of format codes can be specified. The format codes, separated by semicolons, define the formats for positive numbers, negative numbers, zero values, and text, in that order. If only two sections are specified, the first is used for positive numbers and zeros, and the second is used for negative numbers. If only one section is specified, it is used for all numbers. Four sections example:

,# # # .00_); [Red] (# ,# # # .00);0.00;”sales ”@

The following table describes the different symbols that are available for use in custom number formats.

Specify colors

To set the text color for a section of the format, type the name of one of the following eight colors in square brackets in the section. The color code must be the first item in the section.

Instead of using the name of the color, the color index can be used, like this [Color3] for Red. Valid numeric indexes for color range from 1 to 56, which reference by index to the legacy color palette.
Specify conditions

To set number formats that will be applied only if a number meets a specified condition, enclose the condition in square brackets. The condition consists of a comparison operator and a value. Comparison operators include: = Equal to; >Greater than; <Less than; >= Greater than or equal to, <= Less than or equal to, and <>Not equal to. For example, the following format displays numbers that are less than or equal to 100 in a red font and numbers that are greater than 100 in a blue font.
[Red] [<=100] ; [Blue] [>100]
If the cell value does not meet any of the criteria, then pound signs ("# ") are displayed across the width of the cell.
Dates and times

Examples

199.0.261 Xojo doesn't work with your plugins on Windows 98.

Plugin Version: all, Console & Web: No, Mac: No, Win: Yes, Linux: No. **Answer:** Please upgrade your Windows version.

199.0.262 Xojo or my RB application itself crashes on launch on Mac OS Classic. Why?

Plugin Version: all, Console & Web: No. **Answer:**

You may check if the application has enough memory to be loaded.
RB should have on Mac OS Classic more than 20 MB of RAM.
I prefered to use 50 MB and for an application a 10 MB partition is a good way to start.

Parameter	Description
x	The x value of the data point. For an enumerated x-axis (see Axis.setLabels on what is an enumerated axis), the first data point is 0, and the nth data point is (n-1).
xLabel	The bottom x-axis label of the data point.
x2Label	The top x-axis label of the data point.
value	The value of the data point.
accValue	The sum of values of all data points that are in the same x position and same data group as the current data point, and with data set number less than or equal to the current data point. This is useful for stacked charts, such as stacked bar chart and stacked area chart.
totalValue	The sum of values of all data points that are in the same x position and same data group as the current data point. This is useful for stacked charts, such as stacked bar chart and stacked area chart.
percent	The percentage of the data point based on the total value of all data points that are in the same x position and same data group as the current data point. This is useful for stacked charts, such as stacked bar chart and stacked area chart.
accPercent	The accumulated percentage of the data point based on the total value of all data points that are in the same x position and same data group as the current data point. This is useful for stacked charts, such as stacked bar chart and stacked area chart.
gpercent	The percentage of the data point based on the total value of all data points in a layer.
dataSet	The data set number to which the data point belongs. The first data set is 0. The nth data set is (n-1).
dataSetName	The name of the data set to which the data point belongs.
dataItem	The data point number within the data set. The first data point is 0. The nth data point is (n-1).
dataGroup	The data group number to which the data point belongs. The first data group is 0. The nth data group is (n-1).
dataGroupName	The name of the data group to which the data point belongs.
layerId	The layer number to which the data point belongs. The first layer is 0. The nth layer is (n-1).
fieldN	The (N + 1)th extra field. For example, { field0 } means the first extra field. An extra field is an array of custom elements added using Layer.addExtraField, Layer.addExtraField2, BaseChart.addExtraField or BaseChart.addExtraField2.

diFieldN	Same as fieldN. See above.
dsFieldN	Similar to fieldN, except that dsFieldN means the extra field is indexed by data set number. The Pth data set corresponds to the Pth element of the extra field.
dsdiFieldN	Similar to fieldN, except that dsdiFieldN means the extra fields are indexed by both the data set number and data point number. The Pth data item of the Qth data set corresponds to the Pth element of the (N + Q)th extra field.

Parameter	Description
zx	The symbol scale in the x dimension. Applicable for layers with symbol scales set by LineLayer.setSymbolScale.
zy	The symbol scale in the y dimension. Applicable for layers with symbol scales set by LineLayer.setSymbolScale.
z	The symbol scale without distinguishing the dimension to use. Applicable for layers with symbol scales set by LineLayer.setSymbolScale.

Parameter	Description
slope	The slope of the trend line.
intercept	The y-intercept of the trend line.
corr	The correlation coefficient in linear regression analysis.
stderr	The standard error in linear regression analysis.

Parameter	Description
top	The value of the top edge of the box-whisker symbol.
bottom	The value of the bottom edge of the box-whisker symbol.
max	The value of the maximum mark of the box-whisker symbol.
min	The value of the minimum mark of the box-whisker symbol.
med	The value of the median mark of the box-whisker symbol.

Parameter	Description
high	The high value.
low	The low value.
open	The open value.
close	The close value.

Parameter	Description
dir	The direction of the vector.
len	The length of the vector.

Parameter	Description
radius	The radial value of the data point.
value	Same as { radius } . See above.
angle	The angular value of the data point.
x	Same as { angle } . See above.
label	The angular label of the data point.
xLabel	Same as { label } . See above.
name	The name of the layer to which the data point belongs.
dataSetName	Same as { name } . See above.
i	The data point number. The first data point is 0. The nth data point is (n-1).
dataItem	Same as { i } . See above.
z	The symbol scale. Applicable for layers with symbol scales set by PolarLayer.setSymbolScale.
fieldN	The (N + 1)th extra field. For example, { field0 } means the first extra field. An extra field is an array of custom elements added using Layer.addExtraField, Layer.addExtraField2, BaseChart.addExtraField or BaseChart.addExtraField2.
diFieldN	Same as fieldN. See above.
dsFieldN	Similar to fieldN, except that dsFieldN means the extra field is indexed by layer index. The Pth layer corresponds to the Pth element of the extra field.
dsdiFieldN	Similar to fieldN, except that dsdiFieldN means the extra fields are indexed by both the data set number and data point number. The Pth data item of the Qth layer corresponds to the Pth element of the (N + Q)th extra field.

Parameter	Description
dir	The direction of the vector.
len	The length of the vector.

Parameter	Description
value	The axis value at the tick position.
label	The axis label at the tick position.

Parameter	Description
[param]	The name of the parameter
[a]	If this field a number, it specifies the number of decimal places (digits to the right of the decimal point).

[b]

textasciitilde ' for no thousand separator. The default is '
textasciitilde ', which can be modified using BaseChart.setNumberFormat.

The thousand separator. Should be a non-alphanumeric character (not 0-9, A-Z, a-z). Use '

[c]

The decimal point character. The default is '.', which can be modified using BaseChart.setNumberFormat.

[d]

textasciitilde ' for no negative sign character. The default is '-', which can be modified using BaseChart.setNumberFormat.

The negative sign character. Use '

Parameter	Description
yyyy	The year in 4 digits (e.g. 2002)
yyy	The year showing only the least significant 3 digits (e.g. 002 for the year 2002)
yy	The year showing only the least significant 2 digits (e.g. 02 for the year 2002)
y	The year showing only the least significant 1 digits (e.g. 2 for the year 2002)
mmm	The month formatted as its name. The default is to use the first 3 characters of the english month name (Jan, Feb, Mar ...). The names can be configured using BaseChart.setMonthNames.
mm	The month formatted as 2 digits from 01 - 12, adding leading zero if necessary.
m	The month formatted using the minimum number of digits from 1 - 12.
MMM	The first 3 characters of the month name converted to upper case. The names can be configured using BaseChart.setMonthNames.
MM	The first 2 characters of the month name converted to upper case. The names can be configured using BaseChart.setMonthNames.
M	The first character of the month name converted to upper case. The names can be configured using BaseChart.setMonthNames.
dd	The day of month formatted as 2 digits from 01 - 31, adding leading zero if necessary.
d	The day of month formatted using the minimum number of digits from 1 - 31.
w	The name of the day of week. The default is to use the first 3 characters of the english day of week name (Sun, Mon, Tue ...). The names can be configured using BaseChart.setWeekDayNames.
hh	The hour of day formatted as 2 digits, adding leading zero if necessary. The 2 digits will be 00 - 23 if the 'a' option (see below) is not specified, otherwise it will be 01 - 12.
h	The hour of day formatted using the minimum number of digits. The digits will be 0 - 23 if the 'a' option (see below) is not specified, otherwise it will be 01 - 12.
nn	The minute formatted as 2 digits from 00 - 59, adding leading zero if necessary.
n	The minute formatted using the minimum number of digits from 00 - 59.
ss	The second formatted as 2 digits from 00 - 59, adding leading zero if necessary.
s	The second formatted using the minimum number of digits from 00 - 59.
a	Display either 'am' or 'pm', depending on whether the time is in the morning or afternoon. The text 'am' and 'pm' can be modified using BaseChart.setAMPM.

Shape Id	Value	Description
SquareShape	1	Square shape. See (1, 1) above.
DiamondShape	2	Diamond shape. See (2, 1) above.
TriangleShape	3	Triangle shape pointing upwards. See (3, 1) above.
RightTriangleShape	4	Triangle shape pointing rightwards. See (4, 1) above.
LeftTriangleShape	5	Triangle shape pointing leftwards. See (5, 1) above.
InvertedTriangleShape	6	Triangle shape pointing downwards. See (1, 2) above.
CircleShape	7	Circle shape. See (2, 2) above.
StarShape	[Method]	Star shapes of various points. See (2, 3), (2, 4), (2, 5), (3, 1), (3, 2), (3, 3), (3, 4), (3, 5) above for stars with 3 to 10 points.
PolygonShape	[Method]	Polygon shapes symmetrical about a vertical axis with a vertex at the top center position. See (4, 1), (4, 3), (4, 5), (5, 1) for polygons of 5 to 8 sides.
Polygon2Shape	[Method]	Polygon shapes symmetrical about a vertical axis but without any vertex at the top center position. See (4, 2), (4, 4) for polygons of 5 and 6 sides.
CrossShape	[Method]	'+' shapes. See (5, 2), (5, 3), (5, 4), (5, 5), (6, 1), (6, 2), (6. 3) for '+' shape with arm width of 0.1 - 0.7.
Cross2Shape	[Method]	'X' shapes. See (6, 4), (6, 5), (7, 1), (7, 2), (7, 3), (7, 4), (7, 5) for 'X' shapes with arm width of 0.1 - 0.7.

langEnglish	0	Roman script
langFrench	1	Roman script
langGerman	2	Roman script
langItalian	3	Roman script
langDutch	4	Roman script
langSwedish	5	Roman script
langSpanish	6	Roman script

Nan	Meaning
1	Invalid square root (negative number, usually)
2	Invalid addition (indeterminate such as infinity + (-infinity))
4	Invalid division (indeterminate such as 0/0)
8	Invalid multiplication (indeterminate such as 0*infinity)
9	Invalid modulo such as (a mod 0)
17	Try to convert invalid string to a number like val(”x7”)
33	Invalid argument in a trig function
34	Invalid argument in an inverse trig function
36	Invalid argument in a log function
37	Invalid argument in Pow function
38	Invalid argument in toolbox financial function
40	Invalid argument in hyperbolic function
42	Invalid argument in a gamma function

Symbol	Description and result
0	Digit placeholder. For example, if the value 8.9 is to be displayed as 8.90, use the format # .00
#	Digit placeholder. This symbol follows the same rules as the 0 symbol. However, the application shall not display extra zeros when the number typed has fewer digits on either side of the decimal than there are # symbols in the format. For example, if the custom format is # .# # , and 8.9 is in the cell, the number 8.9 is displayed.
?	Digit placeholder. This symbol follows the same rules as the 0 symbol. However, the application shall put a space for insignificant zeros on either side of the decimal point so that decimal points are aligned in the column. For example, the custom format 0.0? aligns the decimal points for the numbers 8.9 and 88.99 in a column.
. (period)	Decimal point.
%	Percentage. If the cell contains a number between 0 and 1, and the custom format 0% is used, the application shall multiply the number by 100 and adds the percentage symbol in the cell.
, (comma)	Thousands separator. The application shall separate thousands by commas if the format contains a comma that is enclosed by number signs (#) or by zeros. A comma that follows a placeholder scales the number by one thousand. For example, if the format is # .0,, and the cell value is 12,200,000 then the number 12.2 is displayed.
E- E+ e- e+	Scientific format. The application shall display a number to the right of the "E" symbol that corresponds to the number of places that the decimal point was moved. For example, if the format is 0.00E+00, and the value 12,200,000 is in the cell, the number 1.22E+07 is displayed. If the number format is # 0.0E+0, then the number 12.2E+6 is displayed.
$ -+/():space	Displays the symbol. If it is desired to display a character that differs from one of these symbols, precede the character with a backslash (\). Alternatively, enclose the character in quotation marks. For example, if the number format is (000), and the value 12 is in the cell, the number (012) is displayed.
\	Display the next character in the format. The application shall not display the backslash. For example, if the number format is 0\!, and the value 3 is in the cell, the value 3! is displayed.
*	Repeat the next character in the format enough times to fill the column to its current width. There shall not be more than one asterisk in one section of the format. If more than one asterisk appears in one section of the format, all but the last asterisk shall be ignored. For example, if the number format is 0*x, and the value 3 is in the cell, the value 3xxxxxx is displayed. The number of x characters that are displayed in the cell varies based on the width of the column.
_ (underline)	Skip the width of the next character. This is useful for lining up negative and positive values in different cells of the same column. For example, the number format _(0.0_);(0.0) aligns the numbers 2.3 and -4.5 in the column even though the negative number is enclosed by parentheses.
"text"	Display whatever text is inside the quotation marks. For example, the format 0.00 "dollars" displays 1.23 dollars when the value 1.23 is in the cell.
@	Text placeholder. If text is typed in the cell, the text from the cell is placed in the format where the at symbol (@) appears. For example, if the number format is "Bob "@" Smith" (including quotation marks), and the value "John" is in the cell, the value Bob John Smith is displayed.
